COMMISSION OF ENQUIRY
TO EXAMINE AND ENQUIRE INTO ALL OF THE
CIRCUMSTANCES WHICH LED TO THE TRAGIC
INCIDENTS WHICH OCCURRED ON FRIDAY FEBRUARY
25TH 2022 AT FACILITIES OWNED BY PARIA FUEL
TRADING CO. LTD LOCATED AT NO. 36 SEALINE RISER
ON BERTH NO. 6, WHICH LED TO THE DEATHS OF THE
FOUR (4) EMPLOYEES OF LMCS LIMITED

International Waterfront Centre
Level 11 Tower D
One Wrightson Road
Port of Spain

WEDNESDAY, SEPTEMBER 07, 2022

Commissioners:
The Hon. Jerome Lynch QC
Mr. Gregory Wilson

Commission Counsel:
Mr. Ramesh Lawrence Maharaj SC
Mr. Ronnie Bissessar
Ms. Vijaya Maharaj

Secretary:
Ms. Sarah Sinanan

PROCEDURAL HEARING

1 **10.36. a.m.:** *Procedural Hearing commenced.*

2 **Mr. Chairman:** Well, good morning, everyone. Can I say
3 something first of all about masks? The protocol, as you know, in and
4 out of this building still is that there should be masks to be worn by all
5 those who come and leave. In this room, I shall not wear a mask and I
6 do not require anyone to wear a mask. Of course, it is a matter
7 entirely for anyone to wear it if they choose. If you feel more
8 comfortable then you should, but if you wish to take it off please feel
9 free to do so. Anybody who has a difficulty with that, probably now
10 is a good time to leave, otherwise, as I say, that is going to be the
11 protocol that we will adopt for now. Please, turn off your telephones.
12 I've left mine in my chambers so I would ask you all to at least put it
13 on silent.

14 I wonder if, Mr. Maharaj, you'd be kind enough to make some
15 introductions of those that are sitting in the counsel's rows so that I
16 might know who everyone is.

17 **Mr. Maharaj SC:** Much obliged, Chairman [*Inaudible*]—

18 **Mr. Chairman:** You need to put the microphone on, I think, Mr.
19 Maharaj.

20 **Mr. Maharaj SC:** Sorry. The attorneys-at-law who are present and
21 the parties they represent, I would kindly ask the attorneys-at-law to
22 stand when their names are called. Paria Fuel Trading Company
23 Limited and Heritage Petroleum Company Limited represented by
24 Mr. Gilbert Peterson Senior Counsel, leading Mr. Jason Mootoo,
25 instructed by Gretel Baird.

26 **Mr. Chairman:** Good morning.

27 **Mr. Maharaj SC:** Ministry of Energy and Energy Industries,

1 represented by Mr. Colin Kangaloo as counsel instructed by Ms.
2 Danielle Inglefield.

3 **Mr. Chairman:** Good morning.

4 **Mr. Kangaloo:** Good morning.

5 **Ms. Inglefield:** Good morning.

6 **Mr. Chairman:** I see there's a lady with you.

7 **Mr. Maharaj SC:** Estate of Fyzal Kurban, Aliyah Henry, a child of
8 Yusuf Henry, represented by Mr. Prakash Ramadhar, assisted by Mr.
9 Ted Roopnarine and also appearing with them Kiel Taklalsingh,
10 Stefan Ramkissoo, Ved Trebouhansingh, but those last three are not
11 present today but they have asked me to apologize on their behalf,
12 instructed by Niara Boodan.

13 **Mr. Chairman:** Good morning.

14 **Mr. Maharaj SC:** Thank you.

15 **Mr. Chairman:** I believe, um—Mr. Maharaj, I believe that we do
16 not have any application for standing from the gentlemen from
17 Freedom Chambers, is it, and Ramadhar's chambers. Is that correct?

18 **Mr. Maharaj SC:** Yes. Yes, yes, yes Commissioner.

19 **Mr. Chairman:** Well in the absence of having any application for
20 standing I won't ordinarily hear anything from anybody who has not
21 been—either applied or been granted. I think the others have and I'm
22 certainly content that they should address us at the appropriate time
23 this morning. But let me just please deal with the opening session.

24 Today is our first day of this Enquiry and, um, it is a
25 Commission of Enquiry into all of the circumstances which led to the
26 tragic incidents which occurred on Friday the 25th of February of this
27 year at the facilities owned by Paria Fuel Trading Company Limited,

1 located at 36 sealine riser on berth number six at Pointe-a-Pierre
2 which led to the deaths of four employees of LMCS Limited. As I
3 say, this is the formal opening by me, the Chairman, on behalf of the
4 commission. So welcome.

5 Today is the 7th of September. It is the first day and I am its
6 Chairman, Jerome Lynch Queen's Counsel. This is the formal
7 opening into the death of those four divers and such an incident in a
8 modern country, used to dealing with the extraction of oil and gas and
9 the maintenance of machinery necessary to effect such extraction is
10 both surprising and tragic in the 21st Century.

11 A hundred and ninety-four days ago, four men died when
12 something happened that caused them to be sucked into a 30-inch
13 pipe, stretching across the sea bed from berth six to berth five. It is
14 right that we should remember them with sorrow and compassion, not
15 just them but their families and friends who grieve for them. I would
16 ask you please to join with me and observe a minute's silence as a
17 mark of our respect for those men who have died and for those whose
18 lives have been changed forever.

19 [*The Commission sat in silence*]

20 **Mr. Chairman:** Thank you. It is right that at the very outset of this
21 Enquiry that I should express on my own behalf and on behalf of all,
22 my fellow Commissioner, Mr. Gregory Wilson who sits to my left,
23 Counsel to the Commission of Enquiry who are sitting to my right and
24 the members of the Enquiry team our heartfelt sadness at the suffering
25 and despair caused by this loss of life. We are acutely aware that
26 these men were fathers and sons, brothers and cousins, friends and
27 colleagues. They were breadwinners and confidants who provided joy

1 and succour to many. This Enquiry cannot bring them back but it can
2 and it will provide answers to the inevitable questions of how a
3 tragedy of this kind could occur in today's society. In that, I hope that
4 we will be able to provide some small measure of solace to all.

5 The facts are undoubtedly tragic and there are bound to be
6 moments when emotion will get the better of some. Let us be
7 understanding and caring. Similarly, there are about to be lighter
8 moments of levity and humour which creeps into everyone's daily
9 routine. That does not mean that we do not take it very seriously
10 indeed or that we lack empathy. Nothing could be further from the
11 truth.

12 It is also right to observe that a disaster of this kind provided a
13 unique challenge to the emergency services as well as to those
14 charged with direct responsibility for those divers. There are many
15 aspects of the response to the tragedy that the Commission of Enquiry
16 will wish to examine but it is right that we should pay tribute to those
17 people who were ready to risk their lives to attempt a rescue of these
18 men. As you know, a fifth diver did manage to escape with the help
19 of at least one other on the site.

20 In response to that terrible event on the 25th of February, the
21 President of Trinidad and Tobago, at the behest of the government and
22 with no small contribution from members of the public, called for a
23 Commission of Enquiry. Initially the Chairman of the Commission
24 was to be the very experienced retired judge Dennis Morrison
25 Queen's Counsel but he had to withdraw creating something of a
26 hiatus and consequent delay in getting the Enquiry up and running.
27 We've lost four months. I regret to say that delay has been

1 compounded. I was appointed by the President to take over on the 6th
2 of July of this year. Mr. Wilson is still here with me, thankfully. Let
3 us be—let me say something please about the timing of this Enquiry.

4 This Commission of Enquiry, as with all such Commissions,
5 requires staff and facilities to carry out its work. I made clear at a
6 short press conference on the 7th of July that I, nay we, would do all
7 we could to expedite the matter with—whilst at the same time
8 ensuring—thoroughness. Sadly, apart from the stalwart Secretary,
9 Ms. Sarah Sinanan who sits in front of us, we had no administrative
10 support until Monday of this week, the 5th of September when we
11 were joined by our new manager, a Mr. Russell Seebaran together
12 with some IT and technical support. The office structure at SAPA
13 which was determined to be the place where we would have our
14 offices, was only completed on Friday the 26th of August, who, but
15 for the considerable efforts of Mr. Noel Garcia and his staff at
16 UDeCott we would still have an empty shell.

17 It's no part of my responsibility or any of us here to blame
18 anyone for this rather slow provision of the basics to carry out our
19 work. And I know that the honourable Minister Stuart Young MP has
20 been doing all he can to push this along. Happily, as a consequence, I
21 understand he plundered the offices of the Prime Minister in order to
22 provide us with some chairs and desks and the basics of office
23 furniture over the last weekend. He's apparently gone abroad with the
24 Prime Minister—the President.

25 I do not know if the honourable Keith Rowley is now sitting on
26 the floor as a result of having his offices plundered but the fact is we
27 got somewhere to sit which makes up for it in some way. I await with

1 some considerable concern for pens to write with, paper to write on,
2 printers to print on, scanners to scan with, the Internet to connect to.
3 The upshot is, is that we are falling behind and I wish to emphasize
4 that it is not the responsibility of any of those who are sitting here on
5 this side that we have had this slip in timing. I want to assure
6 everyone that we will do everything we can to make up that time.

7 To date we have received something in the order of 40 separate
8 statements from witnesses, over 30 separate documents resulting in a
9 total of some four and a half thousand pages of material, videos,
10 photographs and a plethora of correspondence. We have no one to
11 process it. There's a limit to what one lady can do. I hope that we
12 will be able to hear early legal submissions, either at this particular
13 hearing or at some future stage which might have affected the
14 witnesses, directions and all of the other things that you would have
15 expected of us, that that might have been achieved today, but it can't
16 be.

17 And so, it falls for me to tell you that whilst we stand ready to
18 do that which we are charged to do we cannot do so without the basic
19 tools to carry it out. To those whose responsibility it is to equip, I ask
20 publicly, please, help us do our job. Go the extra mile to provide us
21 with the necessary tools to carry out this Enquiry without further
22 delay. With your help, we can get to the bottom of this tragedy in
23 timely order. To those who had complied with our request to provide
24 evidence and documents in support in timely fashion, you have our
25 thanks and I regret that we've been unable to progress the matter
26 beyond reading and collating.

27 To those who await answers as to how and why their loved

1 ones died, and to the general public, you have our unreserved apology
2 that this Commission of Enquiry has been delayed yet again. It's not
3 fair, it's not right. However, as I say, I want to ensure, and I know
4 that I have the support of those around me, that we will make up that
5 lost time. Anyway, enough of my complaints because you'll
6 understand the sense of frustration that we have felt over here.

7 You'll appreciate that as the Chairman of this Enquiry the
8 responsibility is mine and you can find out about me on the website.
9 And I don't want to blush by telling you about my achievements. I'd
10 simply want to point out that you could find out who I am and what
11 I've done by going on the website. But I do want to say something
12 about the others.

13 Mr. Gregory Wilson, who sits to my left, has spent 25 years in
14 the subsea and construction industry at sea. His considerable
15 experience in crisis management and safety in the oil industry, and his
16 knowledge of processes, procedures and compliance within the energy
17 sector has already proved to be extremely valuable to all of us. He is
18 a great asset to this Commission of Enquiry and I'm very pleased to
19 have him as my co-Commissioner. Whilst I am a recreational diver,
20 that is a far cry from understanding some of the specialist work that
21 those engaged in the oil industry are required to undertake. It is his
22 expertise that I rely upon and that which no doubt will be provided to
23 us in the course of evidence.

24 We are assisted by a legal team headed by Mr. Ramesh Maharaj
25 who probably takes little introduction. He's Senior Counsel but we
26 are fortunate to have him, such an experienced practitioner, a veteran
27 of a number of other public enquiries around the Caribbean. He was

1 called to the Bar by the Inner Temple in 1966. Makes me feel very
2 old indeed. Since then, he's been in legal practice, served as a
3 Member of Parliament, Minister for Legal Affairs and as the Attorney
4 General. He has been more important—more importantly I should
5 say that he used to be associated with my chambers in London in
6 Cloisters. When I was still a pupil and had a full head of hair he was
7 known to associate our corridors.

8 He is in—I should say he's in turn assisted by Mr. Ronnie
9 Bissessar, also a very experienced lawyer and a member of my Inn in
10 the United Kingdom, Lincoln's Inn, the best Inn I should say. He is
11 head of his own chambers here in the Trinidad and Tobago and he
12 practices in the field of commercial law, both in litigation and
13 advisory. He also sits as an arbitrator. His charitable work covers a
14 wide cross-section involving not just the promotion of law and
15 training but also in the medical field.

16 Mrs. Vijaya Maharaj, unrelated to Mr. Ramesh, she is a highly
17 qualified lawyer, with over 18 years' experience in civil and public
18 law. They are an extremely good team. Anybody who needs their
19 assistance in the course of this Enquiry need but ask.

20 Our administrative staff is headed by the Secretary to the
21 Commission, Ms. Sarah Sinanan, who seems to have choked herself
22 drinking a glass of water a few moments ago, at least I hope that's all
23 it was, she has taken up her appointment to this Commission. She
24 was senior legal counsel to the Attorney General's chambers and had
25 advised various government departments. She has been the one sole
26 constant ensuring that such work as could be done has been done. As
27 I say, I'm so grateful to have such a competent team working with me

1 and Mr. Wilson on this very serious Enquiry.

2 The Commission of Enquiry's Terms of Reference have been
3 widely published and can be found on its website but it may be useful
4 if I just read them out for the benefit of everyone or anyone who has
5 not seen them. They are as follows so forgive me, it takes a moment
6 or two to read them.

7 One, to enquire into the circumstances which led to the tragic
8 incidents which occurred on Friday February the 25th, 2022 at
9 facilities owned by Paria Fuel Trading Company Limited.
10 Paria, located at the address I've already given and which led to
11 the deaths of four employees of the company, LMCS Limited.

12 The scope of works issued by Paria for the underwater
13 maintenance exercise on a 30-inch pipeline in which LMCS
14 divers were carrying out works on Friday the 25th within a
15 hyperbaric chamber on the said number 36 Sealine Riser at
16 berth number six;

17 And to ascertain the proposals and plans submitted by LMCS to
18 conduct the works at the said number 36 Sealine Riser;

19 And to examine generally the policies, procedures, practices
20 and conduct relating to Paria and LMCS' employees, organized
21 and contracted labour for those types of maintenance exercises;

22 And to identify the precise facts and circumstances which led
23 up to and resulted in the loss of life and whether that was
24 reasonable and justifiable in the circumstances appertaining;

25 And to examine all of the decisions and actions taken after it
26 became clear that the five LMCS divers went missing;

27 And to investigate the nature, extent and application of any

1 Standing Orders, policy considerations, legislation or other
2 instructions in dealing with the situation which gave rise to
3 these incidents;

4 And to identify whether Paria/LMCS had in place any life-
5 saving contingency plans in the event that life threatening
6 incidents occurred and, if so, whether such or any plans were
7 employed in response to those incidents.

8 Further, whether they employed sufficient safeguards and
9 measures to ensure the safety of their contracted employees
10 properly and to prevent—the prevention of those incidents and
11 to rescue the five LMCS divers;

12 And to determine adequacy and mechanical integrity of
13 equipment utilized by LMCS;

14 And to determine the adequacy of LMCS plans utilized for the
15 operation of the maintenance exercise;

16 And to identify whether by act or omission any identified or
17 unidentified person or entity directly or indirectly caused the
18 loss of life;

19 And to examine the role played by Paria/LMCS through their
20 respective units individually and collectively in dealing with
21 those incidents and to examine all other material circumstances
22 leading up to and surrounding the incidents which took place on
23 February the 25th led to the tragic deaths of the four LMCS
24 divers and continuing up to the recovery of their bodies.

25 Two, to make such findings, observations and
26 recommendations arising out of its deliberations as may be
27 deemed appropriate in relation to:

1 Whether there has been any breach of duty by any persons or
2 entities;

3 Whether there are any grounds for criminal proceedings to be
4 initiated against any persons or entities;

5 Whether criminal proceedings should be recommended to the
6 Director of Public Prosecutions for his consideration and the
7 appropriate and best practices and/or policies and/or procedures
8 to be utilized by companies such as Paria and LMCS for the
9 conduct of these types of maintenance exercises and in response
10 to these types of incidents;

11 The policies, measures, mechanisms and systems that should be
12 implemented to prevent the recurrence of the tragic incidents
13 which occurred on Friday, February the 25th this year and
14 continuing up to the recovery of the four bodies;

15 And, making any other recommendations that may be deemed
16 necessary in the circumstances in accordance with the
17 provisions of section 6 of the Commissions of Enquiry.
18 Forgive me, that was quite a mouthful.

19 The Terms of Reference are deliberately cast in very broad
20 terms in order for us to have the scope to pursue whatever lines of
21 enquiry seem likely to be fruitful to us. It is I think worth
22 emphasizing that the specific areas of investigation to which they refer
23 are intended to identify the main subjects of this Commission of
24 Enquiry, and whilst it might appear that they're fairly exhaustive, it's
25 not necessarily intended to be so nor constricted. It is for us to
26 determine and interpret what those Terms of Reference refer to. We
27 shall not be deflected from pursuing lines of enquiry which may lead

1 to information of value.

2 It is important to understand the nature of the task ahead. It
3 will require hard work, especially given the short timeline in obtaining
4 and analyzing thousands of documents and in the preparation of
5 statements from those who may be able to give valuable evidence. It
6 is not simply a case of Mr. Smith providing a statement and we
7 proceed on that basis. No, it is the task of my team, where necessary,
8 to take statements or augment them and ask appropriate questions so
9 that we have a complete picture. With the help of my team, I intend
10 to make sure, with Mr. Wilson, that the work proceeds as speedily as
11 possible, as I say, without foregoing thoroughness.

12 Let me say something briefly about legal representation. We
13 have received some correspondence from a number of different
14 lawyers asking for financial assistance to represent the families in
15 particular of the deceased and the sole survivor. I have made it clear
16 that I support counsel being instructed on their behalf and this
17 Commission of Enquiry has conveyed that much to them and the
18 Attorney General and the Minister, the honourable Stuart Young, and
19 just about anybody else who would listen.

20 We are governed by the Commission of Enquiry Act. It does
21 not empower us to grant any kind of legal aid or legal assistance or to
22 quantify any legal aid or assistance that may be given. That is the
23 responsibility of others. It is not a question of us abrogating any
24 responsibility. I've made it clear that as far as we're concerned, those
25 who represent the families of the deceased and the sole survivor could
26 and should be represented but I do not have in our power the
27 wherewithal to provide it. Seek it elsewhere, please?

1 But I want to be quite clear. Those who are directly involved
2 with the issues that concern this Enquiry cannot and will not be
3 permitted to thwart the Enquiry by making their cooperation with it
4 contingent upon receiving the legal assistance. It is important to
5 understand that the Commission of Enquiry process is not an
6 adversarial trial. Our task is to decide which—is not, forgive me, our
7 task is not to decide which or two or more competing parties has the
8 better case nor is it to punish anyone or to award anyone with
9 compensation. It is simply to get to the truth with the help of all those
10 who have relevant evidence to supply.

11 The process should be seen as essentially one of cooperation.
12 Accordingly, the role of counsel to the Commission of Enquiry is not
13 to promote any particular conclusion or result, still less to favour any
14 particular witness or class of witnesses, rather, it is to place before us,
15 that is Mr. Wilson and myself, and the public at large, evidence that
16 will enable us to make findings about what occurred and put forward
17 recommendations for the future in the hope that such
18 recommendations will meet with the approval of the President and her
19 government and be implemented and thereby prevent such a tragedy
20 from ever happening again.

21 Counsel to the Commission of Enquiry will do that by
22 presenting the evidence at this public hearing and others that will
23 follow, and I'll give you the dates in due course, by questioning those
24 witnesses whom we decide should be called to give oral evidence.
25 We have the power, where necessary, to subpoena witnesses to give
26 evidence, irrespective of whether they have legal counsel, and we
27 shall not hesitate to use that power in the event that there are any

1 recalcitrant witnesses whom we believe have valuable evidence to
2 provide.

3 All hearings will be conducted in public unless the particular
4 nature of the evidence or arguments require otherwise, and I make it
5 clear now that we will need some considerable persuading to agree to
6 hear any evidence in camera or privately. Moreover, notwithstanding
7 rule 26 as to confidentiality of the documents, that's the rule that are
8 part of the rules of this Commission. As to confidentiality of those
9 documents, this Commission will place every document we receive on
10 our website before the hearings of that evidence is heard, so that
11 everyone would have access to all of the material.

12 I make it clear now that if any party wishes to have any
13 document withheld from the public domain, they will need to
14 persuade us of the need for that to happen, and it better be a
15 substantial reason. Embarrassment will not count. It goes on the
16 website unless we say otherwise.

17 I'm well aware that the past months has seen a considerable
18 amount of press attention and speculation, over the weekend, in the
19 months that have gone by. Theories have been postulated as to the
20 lack of preparedness, who is or is not responsible., why more was not
21 done to rescue those men and many have expressed a great sense of
22 anger and betrayal, outrage, but this is—and that this is entirely
23 natural and understandable. Of course it is.

24 This Commission of Enquiry is here to get to the truth of what
25 actually happened. It must seek out all the relevant evidence and
26 examine it, calmly, dispassionately and rationally. Counsel acting for
27 the Commission of Enquiry will approach their task in that way, as I

1 hope would all the legal representatives of the various principal
2 participants. This will help us to discover where the truth really lies.

3 I should also remind everyone that it is no part of our duty on
4 this Commission of Enquiry to rule on or determine anyone's civil or
5 criminal liability. However, we're not to be inhibited by the
6 likelihood of liability being inferred from any findings or
7 recommendations that we may make. We shall therefore not shrink or
8 hesitate in making any findings or recommendations that are justified
9 by the evidence, simply because someone else may say at a later stage
10 that that forms the basis for civil or criminal liability. The police and
11 other agencies are of course conducting their own enquiries and
12 investigations into possible criminal offences or civil liability. It's no
13 part of our job.

14 This room was chosen for today's formal opening and
15 procedural hearing because it was necessary to find a space large
16 enough to accommodate all the various people that we thought might
17 wish to attend, and in that I wish to express my thanks to Judith
18 Gonzalez for making that possible. At present I am unclear as to
19 whether the entirety of the proceedings will be conducted here or
20 whether it may be conducted in some other place but certainly
21 interviews can and will be conducted at SAPA, the offices that are just
22 about being prepared, unless there's good reason to do otherwise.

23 A time and place of future hearings will be posted on the
24 Commission of Enquiry's website but I can provide you with the dates
25 that we have hitherto identified for the live hearings of this
26 Commission of Enquiry and they are:

27 The 21st to the 24th of November, four days inclusive.

1 The 5th to the 8th of December, four days inclusive.

2 The 12th to the 15th of December, four days inclusive.

3 And then, as a contingent, the 9th to the 13th of January of next
4 year.

5 I am hopeful that that will not be necessary but I put it in as a
6 contingent so that everyone keeps those dates free.

7 Any application not to sit on any particular day must be made
8 in writing in advance and I would expect any problems with the
9 witness orders that will be passed down in due course as to which
10 witnesses we want on which particular days, we must be notified if
11 there is a difficulty with that well in advance so that we can make
12 appropriate adjustments. I don't want days lost unnecessarily, please?

13 We will ordinarily sit from about 10.00 in the morning to about
14 3.30 each day with a short break in the morning around 11.30 for a
15 coffee or stretch your legs and a lunch break at around one o'clock for
16 an hour or so. I do expect flexibility to conclude witnesses to
17 minimize inconvenience to them. As I've said previously and
18 indicated previously, if necessary we'll sit one evening to
19 accommodate family members of the deceased who may wish to give
20 evidence and if that means sitting one evening, well, that's what we'll
21 have to do.

22 Can I say this, that, um, I don't want any witness to have to
23 come back the following day if it's unnecessary and if that means
24 sitting a little longer that's what I intend to do. At the conclusion of
25 each week, I may permit the press to ask a few questions of clarity,
26 not every day but at the end of each four-day session that I've
27 identified. Providing it's not abused, I see no reason why they should

1 not seek clarification of anything that's been dealt with in the course
2 of that week.

3 Information about how to make contact with the Commission of
4 Enquiry team could be obtained from those who are here. Come and
5 speak to us afterwards, masked or otherwise, and in due course you'll
6 be able to, of course, access any information and contact through the
7 Commission of Enquiry's website, www.coe2022.com. In due
8 course, as I say, a transcript of the proceedings, today's and at each
9 hearing, will be put on the website. Any rulings or directions that we
10 give will be put on the website. If there's anything anyone needs to
11 know it is on the website. If there's something that's not there and
12 you would need to know, then there is a contact through that website.

13 Now, unless there's a good reason not to do so in any particular
14 case, the hearings themselves will be streamed live through the
15 Commission of Enquiry's website and live on TTT so that the public
16 as a whole can follow the proceedings and, as I said, transcripts of
17 those hearings will be posted I think within about 24 hours or so.

18 The evidence given by witnesses at the hearings will, however,
19 be only part of the material which the Commission of Enquiry will
20 have to consider. Much of that material will be in the form of
21 documents and statements where we have determined that it is not
22 necessary for a witness to give live evidence. We therefore intend to
23 ensure that all the relevant documents can properly be made public are
24 scanned and on to an electronic database which will allow them to be
25 called up and displayed on a screen in this, whether it's in this
26 building or some other place, but everyone will see the document
27 that's being referred to.

1 Now, whether hearings will be streamed contemporaneously I
2 think it important that members of the public should be able to attend,
3 and if they wish to do so we need to be able to make sure that there is
4 sufficient place for them to do so. I shall therefore take steps to
5 ensure that there—our hearings of the evidence are held in rooms
6 large enough to accommodate at least some members of the public as
7 well as obviously members of the press and the media.

8 We propose to conduct giving evidence insofar as we're able in
9 four separate parts as follows. Firstly, what was done in preparation
10 of the work commencing. This will include industry standards,
11 government protocols, emergency procedures, contingency plans,
12 contracts, briefings, experience, all of those things will be dealt with
13 as the first part of our Enquiry.

14 I anticipate we would have a site visit. At this time both the
15 hyperbaric chamber itself and, I'm not sure where that is, no doubt
16 someone will tell me in the course of this morning, but we would like
17 to see, if at all possible, that hyperbaric chamber, and also to go to the
18 berths five and six. I would like to do that on day two of our sitting so
19 that, somebody remind me what date that is, um, that would be the
20 22nd of November. If that's at all possible.

21 **Mr. Maharaj SC:** The 22nd.

22 **Mr. Chairman:** Thank you. Yes, the 22nd of November, if at all
23 possible so that we have a picture in our minds of what we're dealing
24 with, before we start to hear the actual evidence. I anticipate that on
25 the first day we will have Mr. Maharaj open the case on behalf of the
26 Commission of Enquiry and then anyone else who applies and is
27 granted leave to say something at the outset will also make their

1 opening statements on that day. So, first day opening statements,
2 second day we sit, site visit, third day witnesses.

3 The second part of the evidence is really what happened during
4 the work itself. This will include what the work entailed, monitoring
5 of the men whilst they were working, what caused the men to be
6 sucked into the pipe and what the conditions were and what
7 precautions were taken and put in place to avoid any such incident.

8 The third part of the evidence will be what happened when it
9 was clear that there'd been a major incident. This will include how
10 one man escaped, the actions of the emergency services, the reaction
11 of the owners of the plant, the actions of the various contractors and
12 the others involved, family, friends and those at the scene, and then
13 the last part of the testimony will be what we characterize as any
14 expert evidence. At this time it is unclear whether there will be any
15 conflicting expert testimony but we will see what the evidence
16 produces, if predicated at the moment on a root cause analysis from at
17 least one expert in the field which we already have.

18 And, it's our intention that we should obtain written and oral
19 evidence from those who can give direct accounts of what occurred
20 before, during and after these tragic events. There will inevitably be
21 some overlap between those particular categories. They would
22 include employees of LMCS Limited who were contracted to carry
23 out the work, in particular Mr. Boodram the sole survivor, the rescue
24 divers who attempted a rescue, in particular, Ronald Ramoutar and
25 Cory Crawford who helped Mr. Boodram, Paria Fuel Trading
26 Company Limited whose people on the ground were coordinating
27 their response to the incident, and the families who attended at the site

1 when advised that their loved ones were trapped in a pipeline. All of
2 this evidence is likely to be of great value.

3 We shall also have access to photographs, video footage, the
4 various autopsy reports and other sensitive evidence. I know that
5 giving evidence, whether in the form of a statement or in person, can
6 be a stressful experience for anyone. So, I intend to ensure, so far as
7 possible, that those most closely associated with those who died are
8 treated sensitively and will be asked, where necessary, to give
9 evidence once and once only, coordinated to be convenient to them as
10 I said, if necessary, by sitting in the evening. But we are mindful that
11 for some the stress of giving evidence is likely to be magnified by the
12 continuing effects of what can only have been a most traumatic
13 experience. We are acutely aware of the challenge that presents itself.
14 I intend to do everything possible in our power to ensure that the
15 process of assessing and assisting the Commission of Enquiry does
16 not result in further unnecessary suffering.

17 To that end, I shall be looking for the help from all of those
18 who seek to represent the families and others directly involved in this
19 tragedy. I'm open to suggestions as to how that might best be
20 achieved in the most sensitive and appropriate way, and I'll be slow to
21 permit any cross-examination or undue unnecessary questions of any
22 of these witnesses.

23 The work of the Commission of Enquiry is urgent and there is
24 an obvious need to begin hearings as soon as possible and I recognize
25 that it is necessary to act with sensitivity and compassion and I shall
26 take whatever steps, as I say, are appropriate in line with current
27 practice to ensure witnesses give the best possible evidence. As I've

1 already said we're charged to seek answers to the very comprehensive
2 questions posed by those Terms of Reference I read at some length,
3 but it is the very nature of the process of this kind and I shall want to
4 follow up leads and any new lines of enquiry as they arise.

5 I wish to emphasize, it is for us to interpret the Terms of
6 Reference and the Commission of Enquiry is not limited to factual
7 questions surrounding the incident itself as I've already said and made
8 clear. It's my intention to look closely at best practices, procedures,
9 legislative provision, the emergency services, the decision-making
10 and to what extent these were taken into account and acted upon by
11 those responsible for the safety and welfare of workers in these sorts
12 of environments. This would entail considering what considerations
13 motivated them such as timing, pollution risk, cost, chain of command
14 and the like. That will be an integral part of understanding how and
15 why this incident occurred and what could or might have been done in
16 the immediate aftermath. It is only by that that we will learn the
17 lessons for the future.

18 This Commission of Enquiry has its rules. It has been
19 published on our website. We place certain duties upon those who are
20 engaged in this enterprise and upon us, in particular in relation to core
21 participants, lawyers having standing as recognized by the legal
22 representatives. I said at the outset that we have had two applications,
23 both of which have been granted. Anybody who wants standing must
24 ask for it. We will consider it. Procedures for applying for standing
25 were published on our website in mid-July in the *Trinidad and Tobago*
26 *Gazette* on the 15th of July and those who wish, as I say, to be part of
27 these proceedings need to apply—or paragraph 18 of the rules if

1 anybody hasn't seen them.

2 Anyway, witnesses who are to give evidence do not need to
3 apply for standing if they are—if they have counsel representing their
4 interest, just while they give evidence. If it's just to look after a
5 witness, we have no difficulty with that. You do not need to apply for
6 standing. If you want to be part of the overall proceedings, you do.
7 So far as possible we intend to seek voluntary cooperation in the
8 production of documents and other evidence such as witness
9 statements and the Commission of Enquiry will carry out that work.

10 I expect everyone to whom a request of that kind is made to
11 provide all the relevant material without the need for us to exercise
12 our statutory powers. And I wish to take this opportunity to ask you
13 all and the media present, today, now, if anyone is or thinks he has
14 information of any kind, evidence, documents, relevant matters that
15 pertain to this Enquiry, please come forward, preserve that material
16 and let us take a statement. Details of the way in which the
17 Commission of Enquiry proposes to deal with documents again can be
18 found within the rules for the receipt and handling of such documents.

19 I just pause there for a moment. These rules are not written for
20 fun. They're there for a purpose, and, if we're to conduct this Enquiry
21 in any semblance of order, those rules need to be followed. I should
22 like at this stage to say a little more about the procedure I intend to
23 adopt in carrying out our Terms of Reference. It is unlikely that it
24 will be necessary to hold more than any more procedural hearings. I
25 cannot for my part see the need to do that.

26 When this Commission of Enquiry resumes on the 21st of
27 November, as I said, we will be hearing the Commission of Enquiry's

1 counsel open the case. Mr. Maharaj will do that, and anyone else
2 who's applied will be permitted, where so permitted, to make their
3 opening. If there are some other applications, they can be
4 foreshadowed with skeleton arguments and put in writing so that we
5 can consider them in advance and I suspect that nearly everything of
6 that kind, provided it's compliant with the rules as set out, would be
7 able to be dealt with administratively in writing in advance so that we
8 do not lose time at the actual hearing of the evidence.

9 And frankly, nobody wants to hear all of that. What the public
10 want to hear is what the evidence is. They want to hear what the
11 witnesses have to say. And I suspect they will be not particularly
12 impressed in having to hear any legal arguments when that can be
13 dealt with by us, the lawyers, in advance. So please, if you have any
14 application, send them in advance to Ms. Sinanan and she will make
15 sure that we have them for our consideration.

16 At the beginning of the hearing at which the Commission of
17 Enquiry intends to take evidence counsel will be making, as I say,
18 their opening statement and that will set out in outline the nature of
19 the evidence that it is intended to be called, when it's going to be
20 called, and the order in which it's going to be called. All witnesses
21 who are called to give oral evidence will be the Commission of
22 Enquiry's witnesses. I repeat that. All witnesses who are required to
23 give oral evidence before this Commission of Enquiry are the
24 Commission of Enquiry's witnesses. They will therefore be called,
25 and, where necessary, examined by my legal team, Mr. Maharaj and
26 his associates.

27 The Commission of Enquiry will seek the assistance of

1 attorneys given standing in the preparation of witness statements. We
2 shall decide which statements are to form part of the record of
3 documentary evidence, which witnesses are to be called to give oral
4 evidence in addition to any written statements that they've already
5 provided. Our team will be closely involved in the process of
6 obtaining statements from potential witnesses. Where appropriate, the
7 secretary or counsel to the Commission of enquiry would explain the
8 topics which should be covered in a witness' statement.

9 As I said earlier, it's not simply a question of Mr. Smith writing
10 a statement and saying, "There you go", and then washing his hands
11 of it. That's not how it works. Mr. Smith will give us his statement,
12 we've had many as I've indicated, but if we think it's appropriate to
13 further interview them to augment what they say or to add anything to
14 a statement, we will do so but it is not our intention to catch anyone
15 out. We're not going to ambush anybody. Any documents we need
16 you to refer to we'll provide them in advance so that everyone will
17 have as much notice as is necessary for them to be able to provide the
18 best possible evidence to this Commission of Enquiry.

19 Whether I will permit, or Mr. Wilson will permit any
20 questioning of other witnesses by other parties and to what extent they
21 will be provided, um, allowed to do so, will be a matter of our
22 discretion. We will of course entertain anything that is, er, seems to
23 us sensible and will advance the purposes of this Enquiry.

24 I'm currently minded to invite final submissions in writing after
25 the conclusion of all of the evidence, and to give those with standing
26 and who have been permitted to do—to write such submissions, to
27 make an—give them an opportunity to make a brief oral summary or

1 précis, if you like, of what it is that they've set out in writing.
2 Whatever they do set out in writing will be on the website and, um—
3 but I would hear any argument as to whether or not that's appropriate
4 course once we've heard the evidence.

5 The process of gathering evidence has begun in earnest but
6 there is much more to do. Taking a statement from those important
7 witnesses will require care, but none of that can properly start until we
8 have the right equipment. Thus, I ask you all once again please to
9 exercise a degree of patience with us. We're doing everything we can
10 to move it forward but in order to ensure there's no further slippage, I
11 have insisted that this hearing should start, these hearings should start
12 no later than the 23rd of November for the hearing of evidence.

13 And when I was sworn in as the Commission of Enquiry—as
14 the Chair to this Commission of Enquiry, I hoped to have a draft
15 report available before Easter. That presents a challenging goal but
16 one which with everyone's goodwill we can still achieve. To achieve
17 it will require much hard work as well as the active cooperation of all
18 of those concerned, but I hope that we can count on the continuing
19 cooperation of the Minister and his staff to ensure that this
20 Commission of Enquiry has all that it needs to proceed as quickly and
21 as smoothly as possible.

22 It is in the interest of the families whose loved ones have died
23 that we do all that we can to give them the facts and bring such solace
24 as the truth can provide. It is in the public interest that our findings
25 which may affect the safety of the people who are still and necessarily
26 must work in this industry that our findings are published sooner
27 rather than later. We all share a common goal. We are all searching

1 after truth about what happened, the tragic loss of life that caused it
2 and what we can do to prevent it from ever happening again. We owe
3 it to those who died and to those whose lives have been turned upside
4 down to work together to achieve that goal.

5 Thank you very much indeed for coming. I look forward to
6 seeing many of you again at subsequent hearings. That is the opening
7 statement by me, the Chairman, on behalf of us, Mr. Wilson and
8 myself. Mr. Maharaj, is there anything else I need to deal with this
9 morning?

10 **Mr. Maharaj SC:** No, no, no Chairman. Unless I think, um, one or
11 two of the legal representatives—

12 **Mr. Chairman:** Certainly.

13 **Mr. Peterson SC:** Morning, Mr. Chairman. Gilbert Peterson on
14 behalf of Paria and Heritage. I want to thank you and your fellow
15 Commissioner for hearing us, and formally welcome you to the shores
16 of Trinidad and Tobago, Sir.

17 **Mr. Chairman:** Thank you.

18 **Mr. Peterson SC:** On behalf of Heritage and Paria, you can be
19 assured of our cooperation and assistance. We extend of course
20 sympathies to the families who have lost loved ones and we commit to
21 assisting you in arriving at possibly what could have caused this
22 unfortunate tragic event, so we stand ready to assist, Sir.

23 In light of that, we were advised—first of all let me thank you
24 for granting standing to both Heritage Petroleum and to Paria. We
25 have been lodging statements with the Commission, but
26 notwithstanding our efforts, we would need to seek your leave and
27 extension of time with respect to three items, Sir. We propose to

1 submit a further five or six statements. We were hoping to do so by
2 yesterday, but we seek your leave and extension to do so on the 30th
3 of September, 2022.

4 We also seek additionally an extension of time to submit the
5 statement of Mr. Mushtaq Mohammed, the General Manager of Paria
6 who unfortunately lost a close family member just about two or three
7 days ago, and, because of that we are unable to incorporate him into
8 the deadline of the 30th of September so we seek your leave to extend
9 the time for Mr. Mohammed's statement to the 14th of October.

10 We also seek an extension of time to submit a substantial
11 bundle of documents to the Commission which we anticipate we will
12 be able to do so by the 3rd of—Monday the 3rd of September, so
13 that's the third extension of time which we seek, Sir. And we pray
14 that you grant us those because we are very minded to put all the
15 material that we considered at this stage to be relevant to assist you
16 before your Commission, Sir.

17 But in your opening, Mr. Chairman, you did enquire and
18 sought, well if someone could assist you as to the location of the
19 hyperbaric chamber and we are able to say now, that chamber was
20 being removed after the incident on the 22nd of March by LMCS,
21 and, I want to use a neutral term, it ended up on the sea bed. It is still
22 there, I'm advised. Paria has taken no steps to interfere with it since
23 they're mindful that there is an ongoing police investigation and they
24 did not want to attempt to interfere with that chamber. So to answer
25 your question, Sir, that chamber is located on the sea bed.

26 **Mr. Chairman:** How deep?

27 **Mr. Peterson SC:** We can get instructions, Sir. My co-counsel is

1 unable to tell me the depth although he's a recreational diver, I think.

2 **Mr. Chairman:** Or he can come with me, then.

3 **Mr. Peterson SC:** I would not advise it until we can determine the
4 cause of this [*Inaudible*].

5 [*Commissioners and Commission Secretary confer*]

6 **Mr. Peterson SC:** I'm advised it's approximately 60 feet, Sir.

7 **Mr. Chairman:** Forgive me for one moment, please?

8 **Mr. Peterson SC:** Yes.

9 [*Commissioner Lynch confers with Commission Secretary*]

10 **Mr. Chairman:** Mr. Peterson, I have to say we're a little troubled by
11 the time that's being sought. As you know, we originally asked for all
12 material to be supplied by the 16th of August. I think you were given
13 an extension to the 1st or 2nd of September in the first instance when
14 you applied, or someone from your office applied, for an extension,
15 and I'm simply concerned that you're talking about a substantial body
16 of documents being supplied to us by the 3rd of October which is the
17 best part of four weeks away.

18 First of all, I'm bound to observe that there is a bundle of
19 documents. One assumes they exist somewhere already, these are not
20 documents where you're dependent upon taking a statement, and I'm
21 concerned that you see if we don't get them until the 3rd of October,
22 and we've conducted or my legal team have conducted a number of
23 interviews of potential witnesses only to find that in this bundle of
24 documents there is a document that we would wish that witness to
25 have a look at before he concludes his statement, we'll have to get
26 him back again and I want to avoid that process.

27 I wonder if I could invite you to consider whether it is not

1 achievable to have the bundle of documents in half of that time simply
2 because what we're talking about is, as I say, somebody presumably
3 going through all various files and papers putting them together in a
4 bundle and letting us have them, even if at that stage you can't
5 provide a witness statement necessarily dealing with each of them, at
6 least we have them, we can read them.

7 **Mr. Peterson SC:** That is, in fact, so, Mr. Chairman. I can assure
8 you that what is taking the time, we were going to put them in
9 categories and seek to do indices with respect to—but as far as the
10 existence of the documents, you are correct, but we were going to
11 grant further assistance by putting them in a particular order
12 categorizing them in particular order and putting indices with respect
13 to the documents, but that is what is taking the time, otherwise the
14 documents are available to ones submitted earlier.

15 **Mr. Chairman:** I mean, I assuming they've been available since this
16 or shortly after this incident and, and, you know, we were rather
17 hoping to have all of this by the 16th of August. That was then
18 delayed by a further two weeks and now you're asking for a further
19 four weeks, and really, I'm bound to say with your best efforts to
20 collate them in the way you've described, surely, we can have them in
21 the next two weeks.

22 **Mr. Peterson SC:** Well Sir, we'll do our best to do it within two
23 weeks or our best to where we are is two weeks we will make them
24 available.

25 **Mr. Chairman:** Mr. Peterson, your reputation precedes you. I'm
26 sure that with your persuasion you'll be able to ensure that we can
27 have all these documents in two weeks.

1 **Mr. Peterson SC:** We will be able to do that, Sir.

2 **Mr. Chairman:** I'm gratified to hear it.

3 **Mr. Peterson SC:** Yes.

4 **Mr. Chairman:** Thank you for that. So that, that, that's takes a—so
5 what—let's identify a date, shall we? Instead of the 3rd of October,
6 shall we say the, um, Monday the 19th of September? That gives you
7 one week—just a little—a day or two less, well I'm happy to say the
8 21st of September.

9 **Mr. Peterson SC:** I'm happy to say that too, Sir.

10 **Mr. Chairman:** Right. Shall we say then the 21st of September for
11 the supply of those documents? Now can we turn next to, um, the—
12 you say there are five or six statements yet to be taken and you've
13 asked for the 30th of September for those.

14 **Mr. Peterson SC:** Yes, Sir.

15 **Mr. Chairman:** All right. Can I, first of all, approach it this way?
16 Rather than waiting for you to have a bundle of five or six statements
17 and serving them all on one go on the 30th of September, could I not
18 inveigle you to take the statements, as you will no doubt do, one at a
19 time and as soon as you've got it send it to us?

20 **Mr. Peterson SC:** Sure. Yes, Sir, we'll do that.

21 **Mr. Chairman:** So, um, can we therefore have your assurance that
22 we're not going to get five or six statements served on us on the 30th
23 of September but, as each and every one is taken between now and
24 that date, that we will have them as soon as they are ready?

25 **Mr. Peterson SC:** You will have them that way, Sir. The 30th of
26 September was aimed on or before. That should have been my
27 application, not the 30th, on or before the 30th.

1 **Mr. Chairman:** When I'm emphasizing the word, "before".

2 **Mr. Peterson SC:** Yes, Sir.

3 **Mr. Chairman:** And I'd be grateful if you could do that, because, for
4 the same reasons that we've identified, and particularly with a witness
5 fare they may say something that we will want to put to other
6 witnesses, what I don't want to do is to be in a situation where our
7 legal team have been working with witnesses and taking statements
8 only to find they have to get them back again, so please, do all you
9 can and I'm reassured in your response that we will have them as and
10 when they arise.

11 **Mr. Peterson SC:** You have that undertaking.

12 **Mr. Chairman:** Thank you very much. As for Mr. Mohammed
13 who's the General Manager, I understand he's had a death in the
14 family and that is obviously tragic news for him and his family.
15 Nonetheless, you are asking for six weeks.

16 **Mr. Peterson SC:** That is because he is—well, he's out of the
17 jurisdiction, he was out of the jurisdiction with that family member
18 and the family member passed away two days ago, so there are a lot
19 of arrangements to get back into the jurisdiction, to get the body of the
20 person back into the jurisdiction, and it's not a near location, Sir, so
21 that—

22 **Mr. Chairman:** I can understand, yes. I wonder if we could more at
23 this stage have it at the same time as the others and in the event that it
24 just proves impossible, you write to us and let us know why that is so?

25 **Mr. Peterson SC:** We will do that, Sir.

26 **Mr. Chairman:** Could you—so can we say all witness statements to
27 be provided by the 30th of September, not necessarily on that day—

1 **Mr. Peterson SC:** Yes, Sir.

2 **Mr. Chairman:**—as many as possible before that day with a view to,
3 um, I have it in mind that you may apply for that particular witness to
4 provide his statement a couple of weeks later.

5 **Mr. Peterson SC:** That is fine.

6 **Mr. Chairman:** You'll set out why it's been necessary.

7 **Mr. Peterson SC:** Yes, Sir.

8 **Mr. Chairman:** Just a moment.

9 *[Mr. Chairman confers with Mr. Wilson]*

10 **Mr. Chairman:** Can I just ask Mr. Maharaj if he's content with that?
11 He's the one going to be doing all the work.

12 **Mr. Maharaj SC:** I'm much obliged. I'm okay with that.

13 **Mr. Chairman:** Thank you very much. All right, so the Order will
14 then be, just so that we're clear, the bundle of documents that we've
15 referred to will be supplied by the 21st of September. All witness
16 statements to be supplied by the 30th of September but as many as
17 possible before that date, and I look forward to receiving them before
18 that date.

19 **Mr. Peterson SC:** Yes, Sir.

20 **Mr. Chairman:** Thank you very much.

21 **Mr. Peterson SC:** Thank you for the indulgence, Sir. That's all I
22 wish—

23 **Mr. Chairman:** Not at all.

24 **Mr. Peterson SC:**—that's all I wish to say at this stage.

25 **Mr. Chairman:** Thank you very much. Anyone else?

26 **Mr. Kangaloo:** Mr. Chairman—

27 **Mr. Chairman:** Yes.

1 **Mr. Kangaloo:**—Colin Kangaloo from the Ministry of Energy and
2 Energy Industries. Mr. Chairman, Commissioner Wilson, we are in a
3 similar type position with respect to witness statements. I'm grateful
4 to learned Senior, Mr. Peterson, for cutting the track for me to run on
5 because I originally—

6 **Mr. Chairman:** Well be assured it's the same track.

7 **Mr. Kangaloo:** I think it might be the same track, Mr. Chairman.
8 Originally I had—I was going to ask for September 30th as well. I
9 think the Ministry—um, I have just been retained. We sent a letter
10 yesterday—

11 **Mr. Chairman:** I see.

12 **Mr. Kangaloo:**—to the Secretariat and we indicated that we had just
13 been retained. We are in the process of taking instructions. I believe
14 we did send a bundle of documents to the Commission before. I think
15 we have one or two that we got after that we would need to send. We
16 haven't sent it.

17 **Mr. Chairman:** I haven't seen any particular bundles from you. In
18 fact, the first I've heard from you was the letter yesterday.

19 **Mr. Kangaloo:** I see. Well I will check. My understanding was—
20 well, I will check with my client. I believe an email was sent on April
21 7th, I believe, I'm not sure but I will take instructions and I will
22 confirm.

23 **Mr. Chairman:** Well, let me be clear. I don't want to receive a large
24 pile of material on the 30th of September. I shall—

25 **Mr. Kangaloo:** No.

26 **Mr. Chairman:** I shall regard it as a discourtesy—

27 **Mr. Kangaloo:** Yes.

1 **Mr. Chairman:**—to this Commission of Enquiry.

2 **Mr. Kangaloo:** And I can understand that.

3 **Mr. Chairman:** If we receive large bundles of material on that day—
4 I will give you till the 30th September, but I expect as and when it
5 arises to let us have it. I don't want it to all arrive on one day.

6 **Mr. Kangaloo:** Well, Mr. Chairman if—I was actually going to say
7 because of the track that Mr. Peterson cut that I would be able to give
8 you the documents before. I was actually thinking of the 16th of
9 September but you had indicated to Mr. Peterson the 19th. I can do
10 on either day.

11 **Mr. Chairman:** Sixteenth please?

12 **Mr. Kangaloo:** Yes. Certainly, Mr. Chairman.

13 **Mr. Chairman:** Thank you.

14 **Mr. Kangaloo:** And with respect to statements, if any, if I could get
15 the 30th, I would be very grateful. Of course, I will try to do it before.

16 **Mr. Chairman:** Yes. I, I, mean, I—you know, I don't know how
17 many witness statements you're looking to provide but the fact is,
18 today is the 7th of September. Tomorrow and Friday are working
19 days and I hesitate to use the expression but, you know, let's get on
20 with it, shall we? I mean, start taking the statements and as you've
21 finished taking one, provide it us to, and then if you need to then
22 move on to the next one and provide that a few days later, I
23 understand, that but I am anxious that it is absolutely clear to
24 everybody who is—I address not just you but everybody—that might
25 be supplying information to this Commission of Enquiry that it
26 doesn't all arrive on the 30th of September because that is neither fair
27 nor reasonable to those who are working in preparing that material for

1 us as the Commissioners to then have to assimilate. So please, do all
2 you can and I do expect lawyers of your experience to be able to do
3 just that. Thank you very much.

4 **Mr. Kangaloo:** Certainly, Mr. Chairman.

5 **Mr. Chairman:** Um, can I, though, please return to one other matter?
6 I indicated—Mr. Peterson, I indicated that we would like to have a
7 view on the second day that this Enquiry sits, of the site, that is the
8 risers five and six and wherever the work took place that we can view
9 so we have a sense of what can be seen, can be seen, if you
10 understand what I mean. We're going to see what can be done about
11 the hyperbaric chamber. I appreciate that, you know, it's not in your
12 hands but if we can't see the original one I'm going to see if there is
13 one available somewhere so that we can have a look at what looks like
14 it. Thank you. Forgive me for one moment? Thank you.

15 *[Mr. Maharaj SC passed note to Mr. Chairman]*

16 **Mr. Chairman:** You know, Mr. Maharaj, I can't read your
17 handwriting at all.

18 **Mr. Maharaj SC:** I wonder, Chairman, whether you'd want to ask if
19 anyone is unrepresented, and they want to—

20 **Mr. Chairman:** Thank you for that, no, and I will. Thank you so
21 much, yes. Yes, I don't know if you're able to assist us with the
22 viewing the locus in quo, if I could put it like that, forgive me for
23 using Latin, but, um, you know, the site where this took place?

24 **Mr. Peterson SC:** Yes, Mr. Chairman. We were quite heartened that
25 you did say that because we discussed it in our team that we think it
26 would have been advisable and it's a course that we were proposing to
27 suggest to—

1 **Mr. Chairman:** Right.

2 **Mr. Peterson SC:**—the honourable Commission. We will make the
3 arrangements. I will get on that immediately—

4 **Mr. Chairman:** Sure.

5 **Mr. Peterson SC:**—with the clients to make, to make the second day,
6 which is supposed to be the 22nd of November—

7 **Mr. Chairman:** Yes; if you can liaise with Ms. Sinanan—

8 **Mr. Peterson SC:** Yes, we will do so—

9 **Mr. Chairman:**—and she will get that—

10 **Mr. Peterson SC:**—put all arrangements in place.

11 **Mr. Chairman:** Marvelous. Thank you very much. And I'm timely
12 reminded by Mr. Maharaj, orally if not in writing, that I should ask if
13 there is anybody here who is unrepresented and wanted to say
14 anything, um, who is an interested party in these proceedings. Please
15 don't be shy. Is there anyone who wishes to say anything? No? All
16 right. Well, if anybody thinks of anything you know who to contact
17 and how to do it. Thank you very much. Is there anything else from
18 anyone else?

19 **Mr. Ramadhar:** Chairman, I do not know if that's an invitation to us
20 having regard to what is—what you had indicated earlier that those
21 who have not applied for standing will not be heard.

22 **Mr. Chairman:** So can I ask you this? Is it your intention to apply
23 for standing?

24 **Mr. Ramadhar:** Yes it is.

25 **Mr. Chairman:** And without being too hard about it, why haven't
26 you?

27 **Mr. Ramadhar:** Well there is a very, very relevant reason in that we

1 are in the final stages of filing an action in the High Court and there is
2 a concern that matters may be put before the court that my friends
3 who may very well be the defendants in the matter, you know, we do
4 not know what they may make use of it and whether, in fact—

5 **Mr. Chairman:** Oh.

6 **Mr. Ramadhar:** Yes. So there is that dichotomy of interests here.

7 **Mr. Chairman:** Well that's going to be a matter for you not me.

8 **Mr. Ramadhar:** And there you go.

9 **Mr. Chairman:** If you're going to file for standing, please do so.
10 We will consider it. If you're not and are here as an observer, then, so
11 be it.

12 **Mr. Ramadhar:** I'm very grateful to the opportunity to have spoken
13 a bit and I will indicate Mr. Michael Kurban is present and in relation
14 to the other people we look after, Aliyah is only 11 years old but we
15 look after the interest of the estate in relation to her.

16 **Mr. Chairman:** All right. Thank you very much.

17 **Mr. Ramadhar:** May I also say this, Commissioner? We are
18 concerned somewhat in the Terms of Reference that there is literally
19 no reference to the actions or inactivity of the Coast Guard of Trinidad
20 and Tobago.

21 **Mr. Chairman:** Well, as I said to you in my opening, I take the view
22 that those Terms of Reference are a guide to the way in which we
23 should be approaching this matter. I do not regard them as the sole
24 basis upon which we shall be investigating the matter and I have well
25 in mind that there are areas, just as you have identified, which will
26 call for investigation and indeed we've already had some evidence
27 from them, so, fear not.

1 **Mr. Ramadhar:** I'm deeply heart—

2 **Mr. Chairman:** There will be no stone left unturned, probably more
3 than once.

4 **Mr. Ramadhar:** I am deeply heartened to hear that, Commissioner.
5 Thank you so much.

6 **Mr. Chairman:** All right. Anything else that we need to deal with?
7 No? That's very good. Thank you very much indeed, for everyone
8 who's come. I do—as I indicated at the outset, if there was a question
9 or two from the press or media I'm prepared to hear that. Whether I'll
10 answer it or not will depend on what the question is. No? I see one
11 hand going up. Yes, Sir.

12 **Mr. Daniel George:** Good morning, everyone. Daniel George from
13 SAWIC Media Mode and I am looking at the fact that 194 days ago
14 four men died, approximately 62 days ago the Commission of Enquiry
15 was formed, you were at SAPA and now we are hearing that because
16 of the death of a relative of someone whose death was only three to
17 four days ago, less than a week ago, we are hearing excuses why
18 information or data that should have been submitted already, we are
19 hearing excuse why it cannot be submitted on time and we are hearing
20 a request for a lengthy extension.

21 Sir, I am concerned about what was happening within that
22 space of time, that 194 days, and, you know, it makes me wonder
23 were these people totally unaware and they only found out last week
24 that they are supposed to face the Commission of Enquiry into the
25 deaths of the four divers who passed away at Paria? Thank you very
26 much.

27 **Mr. Chairman:** Well, as I've indicated, there are many, many

1 witness statements to be considered. I have a team at the moment of
2 four, three lawyers on that side, one in front of me over here and one
3 or two others. We have plenty of work to be doing and if there is a
4 difficulty with a particular witness I will allow them a degree of
5 latitude. We've done that. I expect to have their statement by the
6 30th of September unless there is any good reason for why it
7 shouldn't be. That's where we are. Thank you very much. One
8 more.

9 **Mr. Prior Beharry:** Good morning, Prior Beharry AZP News.
10 Chairman, I just wanted to get your sense. Do you think that there's
11 been a deliberate attempt to put delay into this Enquiry given the fact,
12 one, that you were starved for resources and now the—some of the
13 state organizations they still want time to file submissions?

14 **Mr. Chairman:** Right. Look, I don't know why it has taken little
15 time to get some of the facilities that we've asked for. It's, as I made
16 clear, not part of my responsibility or indeed Mr. Wilson's to
17 apportion blame on anyone. What I do know is that the Minister has
18 done all he can and has pushed as hard as he can to ensure that we
19 have those facilities. We've had a number of members of the civil
20 service trying to help us to have what we need.

21 I am clear that this Enquiry will proceed at a pace. It will not
22 be thwarted by delays, whichever way they may come, whether it is
23 by a witness being in some difficulty or whether it is by the lack of
24 provision of materials. We will ensure this proceeds at a proper pace
25 with a view to providing a draft report before Easter of next year,
26 before then, so that you, the public, and the families will have a report
27 in the hands of this Government in short order. Nothing is going to

1 deflect us from that happening. So, rest assured, whatever obstacles
2 are placed in our way, we will circumvent them, we'll go over them,
3 around them, whatever. Thank you very much indeed for coming
4 today. I will see you all in November.

5 **11.56 a.m.:** *Procedural Hearing adjourned.*

COMMISSION OF ENQUIRY
TO EXAMINE AND ENQUIRE INTO ALL OF THE
CIRCUMSTANCES WHICH LED TO THE TRAGIC
INCIDENTS WHICH OCCURRED ON FRIDAY FEBRUARY
25TH 2022 AT FACILITIES OWNED BY PARIA FUEL
TRADING CO. LTD LOCATED AT NO. 36 SEALINE RISER
ON BERTH NO. 6, WHICH LED TO THE DEATHS OF THE
FOUR (4) EMPLOYEES OF LMCS LIMITED

International Waterfront Centre
Level 11 Tower D
One Wrightson Road
Port of Spain

MONDAY NOVEMBER 21, 2022

Commissioners:
The Hon. Jerome Lynch KC
Mr. Gregory Wilson

Commission Counsel:
Mr. Ramesh Lawrence Maharaj SC
Mr. Ronnie Bissessar
Ms. Vijaya Maharaj

Secretary:
Ms. Sarah Sinanan

1 **EVIDENTIARY HEARING DAY 1**

2 **10.04 a.m.:** *Enquiry commenced.*

3 **Mr. Chairman:** Good morning, everybody. Welcome to the
4 first part of the oral hearings in this Enquiry. We started properly
5 today. Before I start, can I express a few gratitudes to a number of
6 people.

7 Last time you will probably recall, since it was splashed all
8 over the newspapers the next day, that I expressed my disquiet at the
9 lack of resources that had been provided to this Enquiry, and I am
10 very pleased to announce that we have been well stocked with paper
11 and pens and all the other accoutrement that we need. And I want to
12 thank the Honourable Stuart Young, Minister, for galvanizing that
13 action, and Mr. Garcia, in particular, of UDeCott, for making it
14 happen, and all of those who rose to the occasion. I also want to
15 thank my team and Co-Commissioner for the extraordinary effort that
16 they have put into what has been achieved in about two and a half
17 months. It is remarkable and I am grateful to all of them for getting us
18 ready; and we are ready.

19 As you will know, we have sought to speed the process by
20 taking witness statements from individuals who are concerned in this
21 Enquiry and, thereafter, taking any further interviews from them—the
22 principal witnesses in this Enquiry. Many have engaged with that
23 process; some have not. I cannot compel them to do so, and
24 consequently, they will need to be asked questions here from that
25 witness box, perhaps taking rather more time than we had hoped. It
26 means that there are delays that are likely to occur as a result of
27 having to take that evidence afresh from the witness box. Regrettably,

1 Paria, Heritage have chosen not to assist in that way, and there are a
2 considerable number of witnesses that we need to ask questions of.
3 So that will, I'm afraid, mean that it will take a little longer than we
4 had planned.

5 Let me say, I still expect to have a report, at least in draft form,
6 ready by Easter of next year. That will be about nine months from the
7 date from which I was commissioned as the Chairman of this
8 Commission of Enquiry.

9 So let me explain how our programme for this week and the
10 weeks ahead are going to work. Today we will hear Mr. Maharaj,
11 Senior Counsel for the Enquiry, outline the evidence and set out the
12 matter as he sees it. We will, I'm afraid, hear some footage of the
13 men who were alive in the pipe. It is harrowing to listen to. Anyone
14 who feels that that might be too much should leave when it's being
15 played, and Mr. Maharaj will signal the moment during his address
16 when that will happen. I have to tell you, there's no one who has
17 listened to it who has not been moved.

18 I anticipate he will conclude his opening remarks early this
19 afternoon, and then we will hear from two other Counsel, Mr. Gilbert
20 Peterson, Senior Counsel for Paria and Heritage and Ms. Persad-
21 Maraj representing the LMCS for what we have granted permission to
22 address us on this opening day. We refused other requests to speak at
23 this time, but I anticipate we will permit them to do so at the close of
24 this Enquiry.

25 I hope that this could all be achieved today, when we will then
26 adjourn for the day, even if that means sitting a little longer to get it
27 concluded so that we can have the evidence fresh tomorrow.

1 Tomorrow we have changed the order of witnesses to
2 accommodate Mr. Boodram. You will know that Mr. Boodram was
3 the sole survivor. We are anxious to accommodate, as I previously
4 explained, those who are the most directly affected by this tragedy.
5 Mr. Boodram has expressed the desire to be at this Enquiry
6 throughout, to be able to come and go as he pleases, and in order to
7 accommodate him, we're going to take his evidence first out of
8 sequence, so that he can do just that.

9 We—that is Mr. Wilson and myself—have asked to hear his
10 evidence in full, unlike the other witnesses. We think it right and
11 proper that he should be given an opportunity to express that which he
12 experienced. Let me say something about Mr. Boodram and his
13 evidence. You will all readily understand this is extremely difficult
14 for him. What he went through on the afternoon of the 25th February
15 this year was on any view a horrifying experience that lives with him
16 every day.

17 Extricating himself from that pipe—it's about the diameter of
18 that ring. [*Mr. Chairman demonstrated*] So that you have some idea
19 of what we are talking about; that is about an inch or two, smaller than
20 the inside of that pipe. That is what he was in when he was sucked in
21 on the 25th February. What he did in trying to help others and to
22 extricate himself was nothing short of heroic. Any cross-examination
23 of him must be done with sensitivity and limited to only that which is
24 necessary. I'm sure that those who are experienced Counsel will do
25 that. Please, exercise some restraint.

26 Let me say a couple of things about witnesses, please.
27 Witnesses are permitted in these hearing—for today during the

1 opening addresses and for today only, until they have given evidence
2 themselves—they are permitted to remain in this room after they have
3 given evidence. They are not permitted—I make it clear—they are
4 not permitted to be present here if they are due to give evidence, until
5 they have given their evidence. That means that they are not
6 permitted to watch it on screen either. This is a live feed for the
7 public to be able to see. I rely on Counsel here to make that clear to
8 them, that they should not do so. Please, do not undermine the
9 integrity of the evidence gathering in this Enquiry by allowing any of
10 your witnesses to do that. And I'm sure, as I say, with the
11 experienced Counsel that we have here, that that won't happen.

12 After Mr. Boodram's evidence other witnesses will be called.
13 The order and approximate date on which they are to give their
14 evidence will be placed on the website, and anybody can ask Counsel
15 after the Enquiry for any details that they might want. The plan is to
16 have Counsel explain who the witness is and give a short synopsis of
17 what they have told us, either in their statements or in their interviews,
18 or both. They will then be asked any additional questions that my
19 legal team feel is necessary before permitting cross-examination.

20 Let me say something about cross-examination. I don't repeat
21 what I said on the last occasion. I'm not going to permit cross-
22 examination which is designed to try and apportion blame. We're
23 seeking to attain the facts. Those who have standing and have applied
24 and been granted standing at this hearing will be permitted to cross-
25 examine, and I would suggest in this order, unless someone persuades
26 me otherwise—counsel for Paria; counsel for LMCS Limited; then
27 counsel for the Ministry of Energy; then counsel for OSHA—I see

1 they're not here. Perhaps they're not that interested in making any
2 representations; and then counsel for the Seamen Workers' Waterfront
3 Trade Union. And, finally, any counsel who wishes to ask questions
4 on behalf of the family members. I think there's more than one, and if
5 they wish to do so, they can, perhaps, work out between them who
6 goes when. I would have thought that one would have been sufficient
7 with each witness.

8 I'll remind everyone that all of the documents in this case, the
9 thousands of pages that we have now gathered that run to eight
10 volumes, are on the website. Anybody who wants them has them, can
11 see them, consider them, use them, access them at any time. We will,
12 where anyone is relying on a document, put them up on the screen so
13 that they're made available in this Court, so that they can see what's
14 being utilized and asked about.

15 We aim to sit between 10.00 and 3.30 each day. We will have a
16 morning break and take lunch around one o'clock. But we should all
17 approach these times flexibly, so as to minimize any disruption to and
18 inconvenience to witnesses. They must come first, and if that means
19 sitting a little later over lunch, we'll do that. If it means sitting a little
20 later at the end of the day, we'll do that.

21 We'll sit this week until Thursday and then resume again on
22 Monday 5th December. I think I'd foreshadowed that on the last
23 occasion. The sitting days are on our website. We will now go about
24 the task of determining what happened; not just what occurred and
25 what caused these men to die, but what happened thereafter, why they
26 could not have been or were not saved.

27 We know, as a matter of fact, that they were alive in that tube

1 for some hours. This is a public hearing. We are all approachable. I
2 hope that people feel I am, and if there's something that concerns
3 anyone, you have only to ask. I will permit, as I indicated on the last
4 occasion, at the end of each week that we sit, a few questions from the
5 media for clarification. Don't jump the gun. We got weeks of
6 evidence to hear. But if anybody wants to ask anything from the
7 media, at the end of the week.

8 At the close of business today there is an application to be made
9 by Counsel for Paria to discharge a witness summons that I have
10 issued. This will be in camera; that means it's in private. It means
11 everybody needs to clear out other than Counsel. So, I'll ask you,
12 please, if you would, to vacate the premises as quickly as you can at
13 the close of business today.

14 I also like, if you would, please, Mr. Peterson, to make enquires
15 of your client as to whether it's possible for the Commission of
16 Enquiry to conduct a view of the site. I know that there had been
17 some problems with maintenance or something of that kind that
18 needed to be done, so we weren't able to go, as we'd originally
19 planned, tomorrow. But we would like to go, if we can, please, on the
20 9th January. That's the day that we resume. So, if we could do that
21 I'd be very grateful; if you make that enquiry, and then we could
22 worry about the logistics of that later. But if that was a day that would
23 work for them, then I would be grateful, please, to being told.

24 Now, before I ask Mr. Maharaj, Senior Counsel, to open this
25 matter, are there any other issues that arise at this time that ought to be
26 dealt with now?

27 **Mr. Peterson SC:** Mr. Chairman, I mean, it's not for me to say, but I

1 would have thought that an earlier visit by the Commission would aid
2 the Commission with respect to questioning witnesses or have a better
3 view as to the plans that we are dealing with, as opposed to at the end
4 of the evidence.

5 **Mr. Chairman:** Well, the position is this, Mr. Peterson; I would have
6 thought so too, which is why we originally scheduled it for tomorrow.
7 I was told that that's not possible, but that you wished to bring it
8 forward to, I think, last week. And since I'm probably the only person
9 who doesn't live here, it was not possible for me to be back here in
10 time to do that. I'm anxious not to interrupt the flow of evidence that
11 we will be hearing. But if once you've consulted with your clients
12 that there is a date that we might do it in, say December, well, please,
13 let me know and then we'll see what we can rearrange to make that
14 work. I mean, for my part, I would have preferred to go tomorrow.
15 That's not been possible. But if there is another date earlier, then we
16 can consider that.

17 **Mr. Peterson SC:** Is Friday this week totally inconvenient to you
18 and the Commission?

19 **Mr. Chairman:** It is, I'm afraid. I'd say it is. Let me see.

20 **Mr. Peterson SC:** We'll try for that and then also we'll consider
21 looking at an early December date.

22 **Mr. Chairman:** If you can consider dates in December. As it
23 happens, I'm not flying out on Friday. The plan had been that we
24 would have Fridays with my team to go over the evidence and where
25 we are, and so on. So it may be that we could go on Friday. But I'll
26 have to see about that. All right?

27 **Mr. Peterson SC:** Sure.

1 **Mr. Chairman:** All right. Well, thank you very much for that.
2 Now, is there anything else that I need to deal with now before we
3 hear from Mr. Maharaj? That's delightful. Excellent. Well, Mr.
4 Maharaj, the floor is yours. Thank you very much.

5 **Mr. Maharaj SC:** Much obliged, Mr. Chairman and Commissioner
6 Wilson.

7 A tragic accident occurred on the afternoon of Friday 25th
8 February, 2022, when five divers employed with LMCS Limited were
9 doing sub-sea repair and maintenance works under water on a 30-inch
10 diameter pipeline owned by Paria Fuel Trading Company Limited.
11 This tragic accident led to the tragic deaths of four of the five divers.
12 One of the five divers, Christopher Boodram, survived. He was the
13 only eyewitness to what happened that afternoon.

14 Paria had contracted LMCS to do the said works which were
15 being done at Berth 6 at the Pointe-à-Pierre Harbour when the five
16 divers were sucked into the 30-inch diameter pipeline. These divers
17 were doing the works in what has been described as a hyperbaric
18 chamber, but it is also known as a habitat. This was a cubed eight feet
19 by eight feet shaped enclosure placed over the pipeline and it was
20 supplied with positive pressured air by a compressor. This permitted
21 the divers to do the works on the pipeline under water but in a water-
22 free environment. These divers accessed the habitat by diving from a
23 barge into the water and by swimming up into the habitat from below
24 the habitat.

25 Christopher Boodram was rescued that afternoon after he
26 swam, dragged himself, and crawled in the pipeline to berth 6. He
27 was then rescued from the top of the pipeline by Ronald Ramoutar

1 and Corey Crawford. The four other divers remained alive in the
2 underwater pipeline, and they were not rescued.

3 Their bodies, a few days later, were recovered from the
4 pipeline. Christopher Boodram, when he was rescued, stated to all
5 who were present that the other divers were alive in the pipeline and
6 Fyzal Kurban was just behind him in the pipeline. Both LMCS and
7 Paria gave evidence of the efforts made by them to rescue these divers
8 before and after Christopher Boodram was rescued. Later in my
9 statement I would give a summary of the evidence given by Paria and
10 LMCS of the efforts made by both of them to rescue the divers.

11 These divers who were not rescued were Kazim Ali Jr., Yusuf
12 Henry, Fyzal Kurban, Rishi Nagassar. The bodies of three of the
13 divers, namely Kazim Ali Jr., Yusuf Henry, and Fyzal Kurban were
14 recovered on Monday 28th February, 2022, and the body of Rishi
15 Nagassar was recovered on Wednesday 2nd March, 2022. The post-
16 mortem examinations on the bodies of the deceased divers were done
17 by two forensic pathologists.

18 Based on Professor Hubert Daisley's post-mortem report, he gave the
19 following dates and times of the death of the four divers. In respect of
20 Kazim Ali Jr., he could have been alive as late as midnight on
21 Saturday 26th February, 2022. In respect of Fyzal Kurban, he could
22 have been alive as late as 6.00 p.m. on Saturday, 26th February, 2022.
23 In respect of Yusuf Henry, he could have been alive as late as the
24 early hours of Saturday 26th February, 2022. And in respect of Rishi
25 Nagassar, he could have been alive as late as midnight on Friday the
26 25th February, 2022.

27 Based on the post-mortem report of Dr. Pramanik, he gave the

1 following dates and times of the deaths of the four divers. In respect
2 of Kazim Ali Jr., he could have been alive as late as midnight on
3 Sunday, 27th February, 2022. In respect of Fyzal Kurban, he could
4 have been alive as late as midnight on Sunday, 27th February, 2022.
5 In respect of Yusuf Henry, he could have been alive as late as
6 midnight on Sunday, 27th February, 2022. In respect of Rishi
7 Nagassar, he could have been alive as late as midnight on Monday,
8 28th February, 2022.

9 Let me give you the structure of my opening statement. My
10 opening statement would be in accordance with the following
11 structure. First, I would state the background facts to the appointment
12 of the Commission of Enquiry, and in doing so, I would illustrate with
13 diagrams on the screen, the pipeline, the habitat, and the other relevant
14 sections of the pipeline system in order for there to be a greater
15 understanding of what happened that day.

16 Second, I would refer to the appointment of the Commission of
17 Enquiry and give a summary of its Terms of Reference. Third, I
18 would identify the officers of the Commission of Enquiry. Fourth, I
19 would give an account of the investigative stage of the Enquiry. A lot
20 of work has been done at this stage, and I will give you an idea of the
21 evidence.

22 Also, at the fifth stage I would give you an overview of some of
23 the expert evidence gathered during the investigative stage of the
24 Enquiry, including the evidence of experts, the Occupational Safety
25 and Health Agency (OSHA), and the evidence of the rescue efforts
26 made by both Paria and LMCS, and, sixth, I would give a summary of
27 the other relevance gathered at the investigative stage of the Enquiry

1 in three compartments or categories, namely, the pre-accident stage,
2 the accident itself, and the post-accident stage.

3 Background facts to the appointment of the Commission of
4 Enquiry: The background facts are the pipeline on which the divers
5 were working were Sealine 36, which ran along the seabed
6 horizontally for approximately 1200 feet between berths 5 and 6 with
7 two vertical sections called risers at each end at berths 5 and 6. Berths
8 5 and 6 at the Pointe-à-Pierre Harbour were connected by Sealine 36
9 and Sealine 66 to the Pointe-à-Pierre Tank Farm which receives oil
10 from the oilfields in the country.

11 Ships which berth at Berths 5 and 6 receive crude oil from the
12 tank farms for export and they also refuel with bunker oil, those ships
13 which oil also comes from the tank farms. Sealine 36 had a defective
14 section on the risers. The riser at berth 6 was leaking below sea level.
15 The works which had to be done included the cutting of the defective
16 section of the riser and replacing it with a new section. The habitat
17 was placed over the riser which was under water and the works were
18 done in the habitat.

19 On the 13th February, 2022, LMCS inserted an inflatable plug
20 and a mechanical plug into the riser at Berth 6 and then install the
21 habitat on the riser at Berth 6. I am now going to show you on the
22 screen the mechanical plug and the inflatable plug and some
23 illustrative diagrams of the pipeline at Berths 5 and 6.

24 The mechanical plug and the inflatable plug are known as a
25 migration barrier. Figure 1 is a photograph of the mechanical plug
26 which was inserted into the riser at Berth 6. Figure 2 is a photograph
27 of the inflatable plug which was inserted in the riser at Berth 6.

1 Figure 3 is a photograph of the habitat which was installed over the
2 riser at Berth 6 below sea level. As you can see, it consists of a cube
3 at the bottom and a stovepipe to the top.

4 Figure 4 depicts both plugs installed in the riser at Berth 6. As
5 you can see, first, the inflatable plug was installed and then the
6 mechanical plug was installed over the inflatable plug.

7 **Mr. Chairman:** Mr. Maharaj, can I just be clear about this so that I
8 understand it? The inflatable plug is one which literally is pumped
9 full of air so that it has a psi, pressure inside it?

10 **Mr. Maharaj SC:** Yes, yes.

11 **Mr. Chairman:** And that expands on the inside of the pipe so that it
12 creates a seal. Is that right?

13 **Mr. Maharaj SC:** Correct, Mr. Chairman.

14 **Mr. Chairman:** And then the mechanical plug is quite separate, as
15 you've shown us, and that's put on top.

16 **Mr. Maharaj SC:** On top.

17 **Mr. Chairman:** With a gap in-between?

18 **Mr. Maharaj SC:** Yes, with a little gap in-between.

19 **Mr. Chairman:** Right. And that one is operated by tightening those
20 bolts that we've seen on the diagram.

21 **Mr. Maharaj SC:** Yes.

22 **Mr. Chairman:** And that squashes it so that it creates a seal again to
23 the inside of the pipe. Have I got that right?

24 **Mr. Maharaj SC:** Correct, Mr. Chairman.

25 **Mr. Chairman:** Thank you very much.

26 **Mr. Maharaj SC:** Both plugs are shown in red. Figure 5 depicts the
27 installed habitat on the riser at berth 6. The habitat is shown in purple.

1 The cube part of the habitat is below sea level and the stovepipe part
2 of the habitat is partly below sea level and partly above sea level.
3 And you'll see the two risers at both ends, and, um—

4 On the 15th February, 2022, LMCS cut the defective part of the
5 riser from within the habitat, lifted that defective part of the riser in
6 the stovepipe of the chamber and installed a slip-on flange on the
7 existing riser where the cut had been made.

8 Figure 6 depicts the following: It depicts the defective part of
9 the riser which had been cut and lifted a few feet up in the stovepipe
10 of the habitat. The cut part of the riser is shown in green. It was lifted
11 in the stovepipe of the chamber, with slings attached to a crane
12 located on a barge on the water. The slings are shown in brown. It
13 also depicts the location of the installation of the slip-on flange on the
14 existing pipe. This is shown in yellow.

15 On the 25th February, 2022, LMCS removed the defective part
16 of the riser from within the stovepipe of the habitat and inserted the
17 new riser section which also had a flange. The divers entered the
18 habitat after returning from lunch on the afternoon of the 25th
19 February, 2022, for the purpose of connecting the new section of the
20 riser to the existing riser. They removed the mechanical seal and
21 started to deflate the inflatable plug. The mechanical seal was the one
22 at the top which was bolted and the inflatable plug is the one which
23 could be deflated. The seawater then flooded the habitat, a vortex was
24 created, and the water sucked the divers and their equipment into the
25 30-inch diameter pipeline.

26 So, one would see in the risers and in the line running
27 horizontally the water in the pipeline and one would see the indication

1 of the vortex. Figure 7 shows the seawater flooding the habitat and
2 the seawater and everything else in the habitat including the divers
3 was sucked into the pipeline.

4 So, one could imagine those five divers were in that habitat.
5 They came after lunch, and as they were in the process of deflating or
6 removing the inflatable plug, there was this vortex. The water came
7 into the habitat, got in the pipe, created a vortex, and you would hear
8 later about something called “Delta P”, that is when you have
9 different pressures in the habitat and in the pipeline.

10 Following this tragic accident and the tragic deaths of these
11 four divers, there was widespread condemnation by the public and
12 sections of the media of what happened and what led to this tragic
13 accident and for the four divers to have died. The public demanded to
14 know all the circumstances which led to the tragic accident and the
15 deaths. The public also demanded to know the efforts made to rescue
16 the five divers, and the public wanted to find out why the other divers
17 could not have been rescued from the pipeline after Christopher
18 Boodram made his way unaided to the top of the riser of the pipeline
19 and was rescued from the top of the riser.

20 In April 2022 the Cabinet advised the President to establish a
21 Commission of Enquiry pursuant to the provisions of Section 2 of the
22 Commission of Enquiry Act of the Laws of Trinidad and Tobago.
23 The Commissioners, by their instrument of appointment on the 22nd
24 April, 2022, were given the mandate to enquire into all of the
25 circumstances which led to the tragic accident and the deaths of the
26 four divers employed with LMCS. I will give you a summary of the
27 Terms of Reference.

1 The Terms of Reference are published in the Trinidad and
2 Tobago Gazette, Extraordinary Volume 62, dated the 22nd April,
3 2022, and are also published on the website of the Commission. The
4 Terms of Reference mandated the Commissioners to enquire into,
5 among other matters, the following:

6 The circumstances which led to the tragic accident and the four
7 deaths, and whether that was reasonable and justifiable in the
8 circumstances; the scope of works issued by Paria for the said works
9 and the proposal and plans submitted by LMCS to conduct the said
10 works; the policies, procedures, practices, and conduct relating to
11 Paria and LMCS employees and contracted labour for these types of
12 maintenance exercises; all the decisions and actions taken after it
13 became clear that the five LMCS divers went missing; any lifesaving
14 contingency plans of Paria and LMCS to respond to such incidents;
15 And, finally, whether Paria and LMCS employed sufficient safeguards
16 and measures to ensure the safety of their contracted employees and
17 the prevention of these incidents and to rescue the five LMCS divers.

18 The Commissioners are also mandated to make such findings,
19 observations, and recommendations which they deem appropriate in
20 relation to the following: whether there was new breach of duty;
21 whether there are any grounds for criminal proceedings to be
22 instituted against any persons or entities, and whether criminal
23 proceedings should be recommended to the Director of Public
24 Prosecutions; the appropriate and best practices, and/or policies,
25 and/or procedures to be utilised by companies such as Paria and
26 LMCS for the conduct of these types of maintenance exercises and in
27 respect of these types of accidents; the policies, measures,

1 mechanisms, and systems which should be implemented to prevent
2 the recurrence of the tragic accident which occurred on the 25th
3 February, 2022 and continuing up to the recovery of the four LMCS
4 divers; and finally, to make any other recommendations that the
5 Commission may deem necessary in the circumstances.

6 After the appointment of the Commission of Enquiry, the first
7 Chairman from the Commission withdrew. The Honourable Mr.
8 Justice Cecil Dennis Morrison was appointed Chairman of the
9 Commission of Enquiry together with Mr. Gregory Wilson as his Co-
10 Commissioner. Justice Morrison, after his appointment, withdrew
11 from the Commission of Enquiry. The appointment of Mr. Jerome
12 Lynch, then QC now KC, as Chairman of the Commission of Enquiry.
13 On the 6th July, 2022, pursuant to section 15 of the Commission of
14 Enquiry Act, the President appointed the Honourable Mr. Jerome
15 Lynch, then QC now KC, as the Commissioner and Chairman of the
16 Commission of Enquiry.

17 The Commissioners: Mr. Chairman, permit me to say that
18 Trinidad and Tobago is privileged to have you as head of this
19 important Commission of Enquiry. Your distinguished legal career is
20 well-known. You have been engaged in the practice of civil law,
21 criminal law, and public law, and you are currently seconded to a
22 leading law firm in Bermuda, Trott & Duncan. Mr. Chairman, it is
23 also known that you are a recreational diver. This makes the task of
24 Counsel at this Commission easier as counsel would know that the
25 Chairman has knowledge of the technical issues relating to the diving
26 industry.

27 Mr. Chairman, the leadership which you have provided to this

1 Commission has made it possible for us to have this evidentiary
2 hearing today. This is a mere five months after you were appointed to
3 Head this Commission of Enquiry. I have not researched the point,
4 but I am optimistic that I'm speaking accurately that this is a historical
5 event in Trinidad and Tobago because it is the first time in Trinidad
6 and Tobago a Commission of Enquiry is having its evidentiary
7 hearing a mere five months following the appointment of the
8 Chairman.

9 Commissioner Gregory Wilson, you are a commercial diver and
10 a sub-sea specialist with 24 years of diversified experience and in-
11 depth knowledge of the sub-sea construction industry. You have also
12 served as President of the Association of Commercial Divers in
13 Trinidad and Tobago and you have extensive knowledge and
14 experience in offshore and onshore commercial diving operations.
15 The combination of the diving knowledge and experience of both the
16 Chairman of the Commission and Commissioner Wilson would be of
17 tremendous assistance to those who are appearing before this
18 Commission.

19 The Secretary and Secretariat:

20 The Secretary of the Commission and Head of the Secretariat is
21 Ms. Sarah Sinanan. She's an attorney-at-law for over 13 years called.
22 She's attached as a Senior Legal Counsel to the Ministry of the
23 Attorney General, and is assigned to this Commission on a full-time
24 basis. She's assisted at the Secretariat with eight competent members
25 of staff who were only appointed in September 2022. The
26 Secretariat's accommodation was only available from September
27 2022. The Secretary and the Secretariat have given to the

1 Commission competent administrative support to facilitate us to have
2 this evidentiary hearing today.

3 Role of Counsel to the Commission and the legal assistance he
4 has been given. In the performance of my duties as Counsel to the
5 Commission, I am ably assisted by attorneys-at-law Mr. Ronnie
6 Bissessar and Ms. Vijaya Maharaj. My primary duty as Counsel to
7 the Commission is to assist the Commissioners with the gathering and
8 compilation of the evidence and also to interview and question the
9 witnesses. In essence, my job and that of the legal team is to help the
10 Commissioners to lay before them the bare truth of what happened in
11 order to answer the issues and questions raised in the Terms of
12 Reference.

13 The proceedings before this Commission are not like civil or
14 criminal proceedings. I do not perform the role which a prosecutor
15 fulfills in a criminal case or which a claimant's or defendant's lawyer
16 performs in a civil case. The proceedings before the Commission of
17 Enquiry are totally different. They are not adversarial; they are
18 inquisitorial. I am required, as counsel to the Commission, in the
19 performance of my duties to be independent, objective, and fair-
20 minded. I'm also required to probe the evidence which has been
21 gathered, and which is being given at this evidentiary hearing with the
22 aim of the Commissioners ascertaining the truth of what happened.

23 The investigative stage of Enquiry.

24 There are three main stages of a Commission of Enquiry: The
25 investigative stage, the evidentiary stage, and the report stage; that is
26 when the Commissioners compile their report. Since the Commission
27 was appointed the Commissioners' Counsel to the Commission and

1 the legal team together with Secretary and the staff of the Secretariat
2 have been engaged in the investigative stage of the Enquiry. The
3 Commission received statements and representation from over 62
4 persons and/or entities. Counsel to the Commission and the legal
5 team have conducted over 33 interviews with witnesses in order to
6 obtain from them witness statements, and received over 20,000 pages
7 of documents.

8 The written statements received—the written statements
9 prepared after interviews were conducted and the documents received
10 by the Commission have been published on the Commission's
11 website. It is important at the investigative stage of any Commission
12 of Enquiry to uncover all relevant evidence to answer the Terms of
13 Reference so that the Commissioners can ascertain the truth of what
14 happened. The importance of the evidence obtained at the
15 investigative stage of Enquiry can become the life blood of the
16 Enquiry.

17 In the authoritative legal textbook on public enquiries by Jason
18 Beer, then QC now KC, at page 176 at paragraph 510, the learned
19 author stated the investigative work carried out by the Enquiry is of
20 the first importance in particular because the information, documents
21 and evidence that is uncovered become the life blood of the Enquiry.
22 If the investigative phase of the Enquiry is ineffective, the oral
23 hearings and the report will suffer correspondingly.

24 One second, Mr. Chairman. [*Pause*] I'm sorry; I'm sorry.
25 Overview of some of the expert evidence before the Commission of
26 Enquiry. Delta P. An issue which arises in this Enquiry is whether,
27 on the afternoon of Friday, 25th February, 2022, there was in the

1 habitat a latent differential condition known as Delta P, which became
2 active and caused the divers to be sucked into the 30-inch pipeline. It
3 does not appear from the evidence that there is any dispute that the
4 divers were sucked into the pipeline on the afternoon of 25th
5 February, 2022, as a result of a Delta P condition, which became
6 active when the divers attempted to deflate the inflatable plug from
7 within the riser.

8 It is clear from the evidence that it was at that stage the habitat
9 became flooded with seawater which entered the 30-inch diameter
10 pipeline and a vortex was created, which then sucked the divers with
11 their equipment into the pipeline. There is only one eyewitness to this
12 serious accident; Christopher Boodram. An examination of his
13 evidence as to what he saw and what he experienced is as follows.
14 The divers removed the mechanical plug from the pipeline and they
15 began to remove the inflatable plug from the pipeline which loosened
16 its seal on the pipeline.

17 Kazim Ali Jr. came into the chamber, the habitat, to check on
18 them, and Christopher saw the water level in the habitat suddenly start
19 to rise in the habitat. This is how Christopher Boodram described his
20 evidence and what he saw. And I quote:

21 "I remember jumping into the water to swim out from inside the
22 chamber, but strange enough, as I entered the water, I felt my
23 body was lifted by the water rather than allowing me to sink in
24 it. I felt like it had no gravity. Then I remember being swirled
25 inside the chamber like a tornado. The chamber was pitch
26 black and my body was spinning out of control in the water. I
27 was sucked into the pipe and I felt my body thrashing about in

1 the pipe. I remember my body was flying through the pipe like
2 what felt like a hundred miles per hour. I thought to myself that
3 I was destined to die, because I was inside the pipe, there was
4 no air, and I was going to drown. I could not see a thing, but I
5 felt my body hitting the inside of the pipe, and the slushy debris
6 on the walls of the pipe. I was holding my breath for as long as
7 I could. I remember hearing like my lungs were crackling, and
8 my throat was hurting from how hard I was trying to hold my
9 breath before I drowned.”

10 And after a few words that he stated.

11 “After what felt like a lifetime I ended up in an open area with
12 air. The water subsided and I was in complete darkness inside
13 the pipe. I was not sure if I was dead or alive. I was gasping
14 for ‘daar’ life—D-A-A-R—daar life.”

15 A GoPro camera belonging to Kasim Ali Jr. was recovered after the
16 accident. It contains various video footage included footage from
17 previous days. It also contains video footage and audio from when
18 Kazim Ali Jr. entered the water with the GoPro camera on his
19 forehead on the afternoon of Friday, 25th February, 2022, to when the
20 divers started to remove the inflatable plug.

21 The footage then goes black, but the audio continues. You can
22 hear the suction of the water and when the suction effect stopped, you
23 can hear the divers speaking about being aware that they were inside
24 the pipeline. The audio continues for about 29 minutes thereafter, and
25 during that time the conversation of the divers can be heard.

26 We wish to advise persons in the room and viewing virtually
27 that the footage and audio retrieved contains distressing and graphic

1 contents of the harrowing experiences of the divers. Viewer
2 discretion is therefore advised. As the Commissioner has advised this
3 morning, if anyone wishes to leave the room, they can do so now.
4 And those who are viewing or listening to the proceedings may wish
5 to turn their devices off for a few minutes. We will not play the entire
6 footage and audio. We will play 6 minutes and 55 seconds of contents
7 of what was retrieved.

8 The footage shows Kazim Ali Jr. entering the water, the divers
9 beginning to remove the inflatable plug, and the screen going black.
10 The audio will include the suction effect which can be heard and the
11 voices of the divers after the suction effect stops.

12 [Video shown]

13 **Mr. Chairman:** Pause. I just wanted to be clear of what we are
14 looking at, please, Mr. Maharaj. As I understand it, it's Kazim Ali
15 who is in the water with scuba equipment?

16 **Mr. Maharaj SC:** Yes, it's Ali—

17 **Mr. Chairman:** He's been passed a wrench?

18 **Mr. Maharaj SC:** A wrench.

19 **Mr. Chairman:** Presumably, that's the one that was going to be used
20 to undo the plug.

21 **Mr. Maharaj SC:** The plug; the mechanical plug.

22 **Mr. Chairman:** He has then dived down; he has come up inside the
23 habitat—we can see him coming up inside; and who is the man that
24 we see standing with his back—do we know who that is?

25 **Mr. Maharaj SC:** We don't know. But we think it is Christopher.

26 **Mr. Chairman:** It may be Christopher Boodram. All right. And
27 that's where we left. I wonder if we can go back then, please, so that

1 we know what we're looking at. Thank you.

2 [Video continued]

3 **Mr. Maharaj SC:** That is the suction effect.

4 [Video stopped]

5 Mr. Chairman and Commissioner Wilson, one of the expert reports
6 commissioned by the Occupational Safety and Health Authority
7 (OSHA) is the In-Corr Tech Report, which was signed by its President
8 and Chief Executive Officer Mr. Zaid Khan, who is a Mechanical
9 Engineer, Failure Analysis Consultant, Registered Professional
10 Engineer, and Certified Welding Inspector.

11 In-Corr Tech Limited is an established engineering and design
12 and quality engineering company in Trinidad and Tobago. The report
13 stated, among other things, as follows:

14 The root cause of the accident was the failure by both Paria and
15 LMCS to recognize that a latent hazardous differential pressure
16 condition, Delta P was created by the methods used in the execution
17 of the works, with particular reference to the removal of fuel oil from
18 Sealine 36. If this Delta P hazard was recognized, simple mitigation
19 steps and/or change in Methods of work could have been instituted to
20 eliminate this hazard.

21 It went on:

22 This latent hazardous differential pressure condition known as
23 Delta P existed at the onset of the work within the habitat and it
24 became active when the divers were attempting to remove the
25 inflatable plug from within the riser. Not being aware of this latent
26 differential pressure condition, incorporating a gaseous void, LMCS
27 divers proceeded to deflate the plug after the safe removal of the

1 mechanical seal. On reaching a deflated pressure of approximately
2 11.4 psi, the resistive force of the plug was then lower than the
3 downward force.

4 Simultaneously, the transient and sudden loss of habitat
5 pressure caused the sea water to rush into the habitat, pouring into the
6 30” diameter riser at a rate of 540 gallons per second at a velocity of
7 40 feet per second, creating a free vortex entraining all personnel and
8 loose equipment into the riser. Gravity, habitat supply air from the
9 compressor, a large gaseous void, and an endless supply of water from
10 the sea perpetuated this vortex in the riser until the differential
11 pressure equalized and the system stabilized.

12 The report went on state:

13 “Appropriate job safety analysis, risk assessments were not
14 seen for several key activities in LMCS proposal supplied to
15 OSHA from Paria with respect to safety issues. This reflected
16 the lack of thoroughness of the Bid Evaluation by Paria. Paria
17 stipulated in its scope of works that Method Statements and job
18 safety analysis had to be supplied for all key elements of the
19 project.”

20 And the report continued further:

21 “The removal of the inflatable plug, could have only been
22 applied safely, if a Delta P condition was not present. This was
23 also a grave oversight by both Paria and LMCS during this
24 evaluation and subsequent discussions with LMCS. It is
25 submitted that an important question for determination in this
26 Enquiry is whether a Delta P hazard was considered in the risk
27 assessment and evaluation by Paria and LMCS of the works to

1 be done.”

2 Mr. Chairman, we have obtained a helpful video which explains
3 how a Delta P occurs, and the hazards associated with a latent Delta P
4 hazard. The video was produced by the Association of Diving
5 Contractors International Incorporated, and it's available to all users
6 of the World Wide Web on the YouTube website. The entire video is
7 11 minutes and 28 seconds, but we will only be playing two minutes
8 and twenty-two seconds.

9 *[Video played]*

10 Mr. Chairman, another report commissioned by OSHA is from
11 an International Association. The Association of Diving Contractors
12 International Inc. (ADCI), based in Houston Texas. The video was
13 produced by this Association. The report is dated 29th July, 2022,
14 and it's signed by its Executive Director Phil Newsum. He has
15 experience as a commercial diver, and as a diving instructor. He was
16 trained as a commercial diver at the Divers' Institute of Technology.
17 Mr. Newsum also served as Co-Chair of the HDCI OSHA Differential
18 Pressure, Delta P Task Force, the primary mission of which is to
19 establish recommended safety practices for diving contractors and any
20 users in the United States of America when working in environments
21 where Delta P hazards are present.

22 The report defines Delta P as a differential pressure being the
23 difference in pressure between any two points in an open or closed
24 system, which can result in free flow creating a hazard to the diver.
25 The report also assesses on operational readiness and safety
26 management of LMCS as well as the failure of Paria officials and the
27 Trinidad and Tobago Coast Guard to respond to the emergency and to

1 effect a rescue operation.

2 The findings of the report included the following. Only two
3 members of the dive team were in possession of commercial diving
4 certification. The remainder of the dive team was in possession of
5 recreational scuba certification. Scuba certification was not intended
6 or designed to prepare divers for commercial diving. The diving
7 personnel, therefore, was inadequately trained for commercial diving,
8 specifically to perform an operation that involves differential pressure
9 hazards.

10 The contractor also failed to manage operational safety with
11 respect to dealing with differential pressure hazards. The operational
12 and safety management observations concerning the contractor and
13 the facility operators did not include umbilical management as the
14 dive operation was performed on scuba. Scuba-diving was absolutely
15 not the tool for the job for the type of operation, and the location
16 offshore from the main facility. With surface supply diving, there is
17 independent hardware communication between each of the divers and
18 their supervisor topside.

19 It would have been easier from a diver/retriever's standpoint as
20 the divers are tethered with dive umbilical. Surface supply diving
21 would have also afforded the divers with an unlimited supply of air to
22 accommodate any complications that might arise during the
23 emergency response.

24 Then the report stated:

25 "From all material reviewed it is apparent that no planning,
26 mitigation plan, emergency response plan, pre-dive checks, and
27 verifications as well as actions during the course of the dive

1 took into account the potential for a Delta P hazard.”

2 And it continued:

3 “The testimony of Christopher Boodram outlines the failure of
4 both Paria Officials and the coast guard to authorize the timely
5 rescue of the other four divers, which ultimately made it a
6 recovery operation.”

7 It is respectfully submitted that an issue which arises for
8 determination in this Enquiry is whether Paria and LMCS considered
9 or ought to have considered the use of commercial surface supply air
10 instead of scuba air in the preparation of the scope of works and in
11 development of an emergency response plan.

12 May I draw attention to the evidence which the coast guard
13 gave. I also draw attention to the evidence of Lt. Hargreaves of the
14 Trinidad and Tobago Coast Guard at paragraphs 10 and 11 of his
15 evidence, in which he stated that a rescue operation of the divers from
16 the pipeline required commercial equipment such as a dive helmet
17 with ship air supply. He also stated that the coast guard did not have
18 equipment of that nature. He informed Paria’s Catherine Balkissoon
19 that the coast guard were only trained and have the requisite aptitude
20 to perform operational scuba-diving and not commercial dives.

21 I also your draw attention, Mr. Chairman, to the evidence of
22 Paria’s Randolph Archbald at paragraphs 34 and 35 of his witness
23 statement, in which he said that he advised Paria’s Incident
24 Commander, Collin Piper, that it was unsafe for divers to dive within
25 the pipeline to perform a rescue without a continuous air supply with
26 surface and supply equipment.

27 The preliminary findings of OSHA in the OSHA Report dated

1 the 29th April, 2022 is relevant to this Enquiry. In that report it
2 stated: The issues—I'm sorry. It is respectfully submitted that the
3 issues whether they existed on Friday, 25th February, 2022 in the
4 habitat at the time the accident had occurred, a safe system of work
5 was in place. And in that context it is relevant to refer to the
6 preliminary findings of the report compiled by OSHA dated 29th
7 April, 2022.

8 OSHA, Mr. Chairman, is a statutory body, and its core tasks are
9 to encourage and ensure compliance with the Occupational Safety and
10 Health Act and its related regulations. It conducted an investigation
11 into this accident to determine whether there were any breaches of the
12 OSH Act. Its preliminary findings included the following:

13 The safe system of work employed for the sub-sea maintenance
14 works failed to ensure that persons working within the habitat
15 were not thereby exposed to risk to their safety and health.

16 The risk assessment and job safety analysis done by LMCS was
17 neither suitable nor sufficient for the task.

18 LMCS emergency plans revealed that the plans did not identify
19 and make provisions for emergency scenarios based on an assessment
20 of the potential risks of the works to be done. Based on the interviews
21 OSHA conducted with Paria Officials, OSHA made the following
22 findings at paragraph 6.2.4 of its report.

23 1. Paria's planner, Mr. Terrence Rampersadsingh stated that he
24 did not have experience in offshore sub-sea maintenance works.

25 2. Paria's maintenance technician, Mr. Houston Majardsingh
26 stated that he had seven months' experience in Paria, and his
27 prior work experience was in construction and pipe fitting. He

1 had no experience in offshore and sub-sea maintenance work.
2 And the custodian of the permit to work procedure, Paria HSEQ
3 Lead, Mr. Randolph Archbald stated, one, he served in different
4 capacities in his prior work experience in Petrotrin, but he did
5 not have any experience in offshore sub-sea maintenance work.
6 And two, he admitted that his team did not have the required
7 competency in offshore sub-sea maintenance work.

8 At paragraph 625 of that report, it states that a review of Paria's
9 fire and emergency response plan revealed that the plan did not
10 identify and make provisions for emergency scenarios based on an
11 assessment of potential risk the sub-sea maintenance works.

12 I will now deal, Mr. Chairman, with the rescue efforts of LMCS
13 and Paria. One of the Terms of Reference of the Commission is for
14 the Commission to enquire into whether Paria and LMCS employed
15 sufficient safeguards and measures to ensure the safety of the divers
16 and the measure employed to ensure the rescue of the divers. I would
17 summarize the evidence of the efforts made by LMCS and Paria to
18 rescue the divers.

19 LMCS efforts: Christopher Boodram, in his evidence, stated
20 that when he was rescued on the afternoon of Friday, 25th February,
21 2022, the other divers were alive and were waiting to be rescued. He
22 said that Fyzal was just behind him in an air pocket. The evidence of
23 LMCS, is that LMCS assessed that the divers were in the pipeline
24 after the accident occurred, and they devised a rescue plan at 3.20
25 p.m. on Friday, 25th February, 2022, utilizing scuba equipment.

26 This plan could have been implemented immediately according
27 to LMCS. LMCS stated that it was prevented from conducting such a

1 rescue in the pipeline by Paria, notwithstanding that LMCS had divers
2 and equipment available to conduct the rescue.

3 **Mr. Chairman:** Could I ask you to pause there for a minute, just that
4 I got the timings right? What time was it that Mr. Boodram came out
5 of the pipe, and when was he actually rescued?

6 **Mr. Maharaj SC:** He was rescued at sometime between 4.30 and
7 4.45 or 5.00 p.m. But these are efforts made before Boodram.

8 **Mr. Chairman:** So this is before that. Right. That's what I wanted
9 to understand. This is a rescue plan that was devised at 3.20pm.

10 **Mr. Maharaj SC:** Yes.

11 **Mr. Chairman:** So more than hour before.

12 **Mr. Maharaj SC:** Yes.

13 **Mr. Chairman:** Right. Thank you very much.

14 **Mr. Maharaj SC:** Much obliged, Mr. Chairman. This plan could
15 have been implemented immediately. LMCS stated that it was
16 prevented from conducting such a rescue in the pipeline by Paria,
17 notwithstanding that LMCS had divers and equipment available to
18 conduct the rescue. LMCS' evidence is that its rescue plan was
19 revised at about 6.30 p.m. to include the use of surface supply
20 equipment, which arrived at the site, which is a commercial supply
21 document.

22 LMCS evidence is that notwithstanding its appeals for Paria to
23 permit an attempted rescue, Paria refused to permit it to do so. LMCS
24 evidence is that when Christopher Boodram stated that all of the
25 divers were alive and LMCS divers sought to defy those instructions
26 and effect the rescue; LMCS divers were directed by the coast guard
27 to stand down.

1 Paria—that is before Christopher Boodram. According to the
2 evidence of Paria at about 3.06 p.m. it activated its incident command
3 system and convened its incident command team. It commenced open
4 water sea searches, notified the relevant support agencies of the
5 accident, and was seeking to obtain information about what occurred.
6 When Paria was informed that about 5.45 p.m. that Christopher
7 Boodram was rescued, Paria then considered the real possibility that
8 the divers could be in the pipeline and devised an action plan to obtain
9 video footage of inside of the pipeline to determine the exact location
10 of the divers, and to get experts to review the footage to advise it on a
11 possible rescue.

12 It also decided through its incident commander that LMCS be
13 informed that diving into the pipeline was not allowed because it was
14 too dangerous, and it requested the coast guard to enforce that
15 decision.

16 **Mr. Chairman:** Again, sorry to interrupt you; so that again I have
17 the time; when was it that the timing of the actual incident itself, when
18 the screen, as we saw it earlier, went blank?

19 **Mr. Maharaj SC:** Around 2.45p.m.

20 **Mr. Chairman:** That's at 2.45p.m. So we have the incident taking
21 place at 2.45p.m. And am I to understand you to say that it was three
22 hours or so from that moment before Paria or the coast guard
23 considered that the divers were actually in the pipe?

24 **Mr. Maharaj SC:** Yes.

25 **Mr. Chairman:** So for three hours' no one, or they, at least, did not
26 consider that any of the divers were actually inside the pipe?

27 **Mr. Maharaj SC:** Correct, Mr. Chairman.

1 **Mr. Chairman:** Because it was looking in the ocean.

2 **Mr. Maharaj SC:** According to the evidence. Correct.

3 **Mr. Chairman:** Three hours.

4 **Mr. Maharaj SC:** Yes.

5 **Mr. Chairman:** And what triggered them to believe that they might
6 be inside the pipe was the fact that Mr. Boodram came out of it?

7 **Mr. Maharaj SC:** Yes, Mr. Chairman.

8 **Mr. Chairman:** Thank you very much.

9 **Mr. Maharaj SC:** According to Paria, the video footage which it
10 obtained around midnight on Friday, 25th February, 2022 at 3.00 a.m.,
11 on Saturday 26th February, 2022 showed that there was equipment
12 and gear stuck in the pipeline. Paria also contends that the coast guard
13 and the dive companies it contacted declined to perform any rescue,
14 because they considered such an operation too risky. Paria also
15 explored the option of cutting the pipeline which it said would have
16 taken too long. At 5.00 p.m. on Saturday, 26th February, 2022, Collin
17 Piper, Incident Commander, and Mushtaq Mohammed General
18 Manager decided to move the operation to one of recovery.

19 **Mr. Chairman:** Sorry. What time is that?

20 **Mr. Maharaj SC:** Five fifteen p.m. on Saturday, 26th February.

21 **Mr. Chairman:** On the Saturday. Thank you.

22 **Mr. Maharaj SC:** The question which arises is whether reasonable
23 efforts were made by Paria and LMCS to rescue the five divers from
24 the pipeline. That is the efforts made before the rescue of Christopher
25 Boodram and the efforts made to rescue the four divers from the
26 pipeline after Christopher Boodram was rescued.

27 What I want to do now, Mr. Chairman, is to summarize some of

1 the other relevant evidence under the categories: pre-accident, the
2 accident and post-accident.

3 **Mr. Chairman:** Thank you. Pick your own moment when you think
4 it's appropriate to take a short break. All right?

5 **Mr. Maharaj SC:** Much obliged, Mr. Chairman. Pre-accident—and
6 this would—I would summarize the evidence about the Scope of
7 Works, Method Statement, Risk Assessments and Emergency
8 Response Plan.

9 The evidence shows that the Scope of Works for the contract
10 were developed and prepared by Paria. LMCS agreed with the Scope
11 of Works which was prepared by Paria. Paria also reviewed and
12 accepted LMCS' Method Statements for doing the works, the Risk
13 Assessments for the works, which were to be done by LMCS, and the
14 Emergency Response Plans for the works, in the event that any
15 emergency arose in LMCS doing the said works.

16 Prior to the contract to be entered into by Paria and LMCS
17 work, the scopes of the contract developed by Paria, there was a
18 tendering process which was conducted. Tenders were submitted and
19 Paria reviewed all the relevant documents, and then agreed for LMCS
20 to be the contractor for the works.

21 Sealine No. 36 had been out of service as its risers at Berths 5
22 and 6 had leaks. Works on the Sealine 36 section, at Berth 5 were
23 previously successfully undertaken by LMCS Limited in November
24 2020. The Scope of Works for the repair to the risers at Berths 5 and
25 6 on number 36 Sealine, I will refer collectively as to the project, was
26 prepared by Paria, using the 2020 Scope of Works. So, in effect, what
27 it seems that Paria did, it used the previous Scope of Works to

1 influence it in having the Scope of Works done for the subsequent job.

2 The Scope of Work for the project fit into three sections.
3 Section A related to the works which were being done on Friday, 25th
4 February. Section A was the works related to the change out of a
5 section of sub-sea riser and tying piping on Sealine No. 36 at Berth
6 No. 5 and Berth No 6. Paria then commenced the tendering process
7 by issuing an invitation to bid for the project by registered vendors,
8 and LMCS was one of the registered contractors.

9 LMCS tender bid included, among other things, a Method
10 Statement covering sections A to C, a Risk Assessment for each
11 section of the Scope of Works, and an Emergency Response Plan.
12 LMCS bid was found by Paria to be valid. It was reviewed by the
13 internal multi-department team comprising persons from Paria's
14 Health and Safety Executive, and maintenance and operations
15 department reviewed and accepted LMCS' Method Statement, Risk
16 Assessments, and Emergency Response Plan.

17 So Paria approved all the Risk Assessment done, all the Method
18 Statements and all the evaluations for the Emergency Response Plan.
19 On the 27th May, 2021, Paria's management tender's committee, then
20 approved the award of the contract for the project to LMCS. By
21 works and services purchase order number—dated 1st June, 2021,
22 Paria awarded the contract for the project to LMCS. According to
23 Paria, the works were governed by the purchase order and the
24 invitation to bid, and Paria's general conditions of contract dated the
25 10th May, 2021.

26 There was a previous incident on the 2nd June—and I'll just
27 mention this quickly. There was an accident on the 2nd July, 2021

1 resulting in an injury to LMCS employee during the fabrication of a
2 riser pile support at offshore services dock. OSHA issued a
3 prohibition notice to Paria, suspending all works on Sealine 36. After
4 the issues were addressed in the notice, OSHA lifted that prohibition
5 notice and works resumed in January 2022.

6 I will now deal with January/February 2022 when there was
7 removal of the liquid content from Sealine 36. The line contents of
8 the underwater pipeline between Berths 5 and 6 is an important issue
9 in this Enquiry. The absence of liquid content in the underwater
10 pipeline between Berths 5 and 6 is a relevant factor in determining
11 whether LMCS and/or Paria was responsible for the latent Delta P
12 situation, which became active when the inflatable plug was being
13 removed from the pipeline.

14 The first relevant aspect of Section A of the Scope of Works
15 involved the removal of the liquid content of Sealine 36. The exercise
16 was done from January to February 2022 over a period of time by air
17 blowing. This was done in two phases. The first phase involved the
18 liquid content being removed from the topside piping which was
19 above sea level and the removal of the tying piping between the
20 topside piping and the riser which is below sea level.

21 The second phase involved the removal of the second the liquid
22 from the underwater pipeline between Berths 5 and Berths 6.

23 In relation to the removal of liquid content, LMCS submitted a
24 Method Statement and a Job Hazard Analysis in relation to each phase
25 of that process. Paria also issued a work instruction for clearing of the
26 Sealine between Berth No. 5 and Berth No. 6.

27 According to LMCS' evidence based on its Method Statements,

1 the entire content of the topside piping was removed. With respect to
2 the underwater pipeline between Berths 5 and 6, the evidence of
3 LMCS is that the entire contents were not removed. LMCS says that
4 it only removed enough content in the riser at Berth 6 to achieve a 30-
5 feet ullage in that riser.

6 **11.34 a.m.:**

7 According to the Scope of Works prepared by Paria, however, Paria
8 required that line to be clear, and dry and I'll give the reference to
9 this, Addendum I at CD 598.

10 It is submitted that an issue which arises for determination
11 includes how much of the contents of the pipeline between Berths 5
12 and 6 was removed by LMCS and what was the contractual
13 understanding of Paria and LMCS as to the amount of the contents of
14 the pipeline to be removed. It is also submitted that the volume of the
15 liquid contents in the pipeline between Berths 5 and 6 at the time
16 when the inflatable plug was being deflated, is relevant for the
17 Commission to determine whether a latent differential pressure hazard
18 existed having regard to the method of removal of the line contents
19 and the quantity of the removal of the liquid contents of the
20 underwater pipeline between Berths 5 and 6.

21 I now go to the 13th of February, 2022 when there was the
22 installation of the plugs and the habitat. After the removal of the line
23 contents, the next task at Berth 6 was the installation of the plugs and
24 the habitat. This was necessary because the change-out of the riser at
25 Berth 6 was to be done below sea level from within the habitat. The
26 installation of the plugs and habitat was done on or about the 13th
27 offer February, 2022. According to LMCS, the inflatable plug, and

1 we have seen that photograph, was installed just above water level in
2 the riser at Berth 6 and the mechanical plug was installed above the
3 inflatable plug. The habitat was then installed over the riser at Berth
4 6.

5 The purpose of both plugs was to maintain a safe area for hot
6 works in the habitat. The plugs would prevent hydrocarbon vapours
7 from migrating into the habitat, and, at the same time, prevent molten
8 metal from the welding from falling into the pipeline. The plugs are
9 referred to as a migration barrier. We have seen the habitat and we
10 have already shown that it's tube-shaped at the bottom of the
11 enclosure and it's pumped with air with a compressor to permit the
12 divers to breathe and also a water-free environment. According to
13 LMCS' evidence, LMCS wanted to complete the subsea works within
14 a four-day window from the installation of the plugs to the completion
15 of the works. There is no dispute on the evidence so far as to the tasks
16 conducted on the 13th of February, 2022.

17 I now go to the 15th of February, 2022 which was the cutting of
18 the old part of the riser and the welding on of the slip-on flange. On
19 the 15th of February, 2022, the divers entered the habitat and cut the
20 defective part of the riser to be removed. The part of the riser which
21 was cut was lifted up approximately 4 feet within the stovepipe of the
22 habitat and secured with slings connected to a crane. A slip-on flange,
23 a ring placed over the pipe, would have been welded on the riser
24 where the cut had been made and a dive penetrant test performed on
25 the weld. A planned pressure test was deferred to the 17th of
26 February and a blind flange cover was installed in the meantime.
27 Also, there does not appear to be any dispute so far as to what was

1 conducted, what tasks were conducted on the 15th of February, 2022.

2 The 17th of February, 2022: work could not proceed on the
3 17th of February, 2022 as Paria suspended all works due to LMCS
4 mobilizing a barge to go to berth 6 while LMCS was waiting on
5 permits to work to be issued for work to be done that day. Again, no
6 dispute on the facts so far. I now come to that date, the 25th of
7 February, 2022. I wonder whether this may be a convenient time.

8 **Mr. Chairman:** It would be a very—

9 **Mr. Maharaj SC:** Good.

10 **Mr. Chairman:** —convenient time, thank you very much. All right,
11 we'll adjourn for, um—I've got 20 to 12.00. Shall we say twelve
12 o'clock?

13 **Mr. Maharaj SC:** Much obliged.

14 **Mr. Chairman:** Twelve o'clock? Very good. Thank you.

15 **11.38 a.m.:** *Commission suspended.*

16 **11.58 a.m.:** *Commission resumed.*

17 **Mr. Chairman:** Thank you. Mr. Gilbert Peterson—

18 **Mr. Peterson SC:** Yes.

19 **Mr. Chairman:** —I've been told that—

20 **Mr. Peterson SC:** Yes, we have an update.

21 **Mr. Chairman:** —you have a couple of options.

22 **Mr. Peterson SC:** Yes, Mr. Chairman, I have used my limited art of
23 persuasion and leaned on Paria to adjust the, um—

24 **Mr. Chairman:** You're being modest.

25 **Mr. Peterson SC:** —and we got Wednesday morning clear to, um—
26 but I must say, Sir, from speaking with everyone, there seemed to
27 have been a misunderstanding as to the cancellation of tomorrow

1 previously.

2 **Mr. Chairman:** Right.

3 **Mr. Peterson SC:** What we had—there is a great need for the repairs
4 on some of the lines—

5 **Mr. Chairman:** Right.

6 **Mr. Peterson SC:** —and I advised the client I did not want them
7 touching the infrastructure until the Commission had the opportunity
8 to view the structure.

9 **Mr. Chairman:** Right.

10 **Mr. Peterson SC:** So we were applying to bring forward your visit
11 so that we could commence the needed repairs.

12 **Mr. Chairman:** Well, we have—

13 **Mr. Peterson SC:** And then it was in the—yes. We—I spoke with
14 Counsel for the Commission and seeing that we were all of a
15 misunderstanding that the request to bring brought forward was a
16 cancellation of the 22nd.

17 **Mr. Chairman:** Right.

18 **Mr. Peterson SC:** So I just, um, leaned on Paria to clear the course
19 for Wednesday morning.

20 **Mr. Chairman:** Right.

21 **Mr. Peterson SC:** I am of the view, Sir, that it would be more useful
22 if the Commission were to visit prior to a lot of the evidence and
23 cross-examination and—

24 **Mr. Chairman:** Wednesday morning?

25 **Mr. Peterson SC:** Wednesday morning.

26 **Mr. Chairman:** Well, can I say for me that would be okay? I'm
27 particularly anxious not to disturb Mr. Boodram's evidence.

1 **Mr. Peterson SC:** Yeah, which is tomorrow.

2 **Mr. Chairman:** Yes, which is tomorrow. It's fine.

3 **Mr. Peterson SC:** Yeah, that's why—yeah, I thought of that too, Sir.
4 That's why I didn't press for tomorrow.

5 **Mr. Chairman:** The only other concern I have, because obviously
6 I'm here anyway, the other concern I have is that there have been a
7 number of people who have expressed an interest in being present,
8 and here I'm dealing really with the logistics of it because the position
9 is this. Those who've expressed an interest in attending, together with
10 the Commissioners, are now in excess of the 10 that you placed by
11 way of a limit. Right? First of all, I need to ask you whether or not
12 that can be increased by at least a couple or so.

13 **Mr. Peterson SC:** The English couple of two—of—a couple—

14 **Mr. Chairman:** An English couple of two, yes.

15 **Mr. Peterson SC:** Yes.

16 **Mr. Chairman:** Because the difficulty is that I don't want to bar any
17 particular team from coming.

18 **Mr. Peterson SC:** Yes.

19 **Mr. Chairman:** I can limit them to one. [*Commissioners confer*]
20 Sorry, yes.

21 **Mr. Peterson SC:** We were just trying to get some instructions. I
22 think Paria is saying it's a matter of security and it being a port and I
23 think that's what—that—they have a formula that they arrived at to
24 fix the number.

25 **Mr. Chairman:** Yes. Look, I understand, there's a need to do all of
26 that. I just wondered whether or not it's an inflexible number. If
27 you're suggesting it is inflexible we cannot have any more than 10,

1 and if that is the case we'll have to think about how we're going to
2 arrange that—

3 **Mr. Peterson SC:** Yes.

4 **Mr. Chairman:** —who I permit and don't permit to come. Secondly,
5 I don't know whether any of those who've expressed an interest to
6 come are going to be available on Wednesday, because obviously we
7 told them that it was not going to be tomorrow and that it will be a
8 date set, so they would have to think about that and let us know.
9 There are also issues, as I understand it, with things like cameras.

10 **Mr. Peterson SC:** Yes, Sir, because there—

11 **Mr. Chairman:** Meaning what, that he can't take a camera, or, do
12 we have to make sure that whatever camera we take is secure so that it
13 doesn't cause a spark or something of that kind?

14 **Mr. Peterson SC:** Well I know that when I visited I was instructed to
15 leave my cell phone in my vehicle.

16 **Mr. Chairman:** Yeah, well I'm perfectly happy to not bring the cell
17 phone but, I mean, it may be that one way of dealing with the issue of
18 the numbers being there that there's a sort of live feed or a filming of
19 it so that people can watch it—and I see your colleague shaking his
20 head. Well, I do note from the evidence that there was an awful lot of
21 camera going on during the course of the events that took place upon
22 which we are now discussing. It doesn't seem to have caused any
23 particular difficulty on that day. I just wondered whether or not we're
24 being a little overly cautious, and I do invite you to consider whether
25 it was possible, assuming that there is some sort of camera that can be
26 obtained, that will not cause the problems that you're concerned
27 about.

1 **Mr. Peterson SC:** We'll take instructions on that whilst, um, my
2 colleague, Mr. Maharaj—

3 **Mr. Chairman:** I'm the last person to want to be there, if there's
4 going to be a problem.

5 **Mr. Peterson SC:** Right.

6 **Mr. Chairman:** —be assured of that. But it does seem to me that
7 we're being a little overly cautious in a circumstance where we know,
8 as a matter of fact, that on the day and on other days there's been both
9 footage of it, there's been cameras taken, people were using their
10 mobile phones. And I'm not encouraging that. I'm simply asking
11 whether or not a limited version of the filming might be done by
12 someone who can perhaps put their camera in a cloak or something or
13 prevent that possibility. I, I, I—

14 **Mr. Peterson SC:** We'll take further instructions on that, Sir. I had
15 only spent the time cracking the whip, so to speak, to clear
16 Wednesday.

17 **Mr. Chairman:** All right. Well, all those who had expressed an
18 interest in attending, can you look at your diaries and see whether or
19 not that is—it's possible that we don't sit on that day but that we
20 attend this view on Wednesday? I have in mind at the moment to
21 limit each team to one person. I mean, obviously us two have to be
22 there. We will need someone to keep some sort of record and then
23 does this 10 include you?

24 **Mr. Peterson SC:** No, Sir. I don't need to attend.

25 **Mr. Chairman:** You're not coming?

26 **Mr. Peterson SC:** No, Sir.

27 **Mr. Chairman:** All right.

1 **Mr. Peterson SC:** Not that I would not enjoy the company of the
2 Commission, but—

3 **Mr. Chairman:** All right.

4 **Mr. Peterson SC:** —in order to keep the numbers—

5 **Mr. Chairman:** You've been already; I take it?

6 **Mr. Peterson SC:** In order to keep the numbers down, Sir, I
7 declined—

8 **Mr. Chairman:** Yes.

9 **Mr. Peterson SC:** —and I have been there before.

10 **Mr. Chairman:** All right. All right. Well, that's helpful. All right,
11 so we'll revisit this perhaps before the end of the day, then, please.
12 No one could just look at making sure that that's something they can
13 achieve and perhaps liaise with Sarah Sinanan behind me who can
14 make the arrangements.

15 **Mr. Peterson SC:** Yes, Sir.

16 **Mr. Chairman:** So, for the moment tentatively, yes, please, we'll go
17 on Wednesday.

18 **Mr. Peterson SC:** Thank you, Sir.

19 **Mr. Chairman:** Can I ask what he ought to be wearing? I'm not
20 good at attire on barges. But, um, can I—

21 **Mr. Peterson SC:** No, Sir, I think that's another thing. They might
22 be supplying—yeah, that's another thing. They were supplying PPE.

23 **Mr. Chairman:** Yes.

24 **Mr. Peterson SC:** And I got them to special order something for
25 about 6 feet 6 for you, Sir, and—size shoes—

26 **Mr. Chairman:** Well I'm tall.

27 **Mr. Peterson SC:** But, um, there will be supplied PPE for the

1 persons, so that's another thing.

2 **Mr. Chairman:** All right, yes. All right, good. Well then I shall
3 wear a—

4 **Mr. Peterson SC:** And PPE includes goggles, boots, coverall and
5 hard hats.

6 **Mr. Chairman:** All right, good. Thank you very much. Well we'll
7 revisit this at the end of the day, then. Thank you very much. Mr.
8 Maharaj.

9 **Mr. Maharaj SC:** Much obliged.

10 **Mr. Chairman:** You can bring your own hard hat if you like.

11 **Mr. Maharaj SC:** I wondered whether my learned friend is afraid of
12 the sea so he does not want to go in that vicinity.

13 **Mr. Chairman:** You mean like you are? [*Laughter*] Yes. All right,
14 thank you.

15 **Mr. Maharaj SC:** Okay. Mr. Chairman, I was discussing a
16 summary of the evidence pre-accident and then I had reached on the
17 date of the accident itself, the 25th of—

18 **Mr. Chairman:** Yes. There was something I just wanted to ask you
19 about that, please? Can you just tell me the date on which the plugs
20 were put in?

21 **Mr. Maharaj SC:** Plugs were put in on the 13th of February.

22 **Mr. Chairman:** The 13th of February?

23 **Mr. Maharaj SC:** February. And the habitat was also installed on
24 that day.

25 **Mr. Chairman:** Sorry, let me just make a note of that. Thirteenth of
26 February, plugs inserted.

27 **Mr. Maharaj SC:** And the habitat also.

1 **Mr. Chairman:** Did the habitat go on before the plugs?

2 **Mr. Maharaj SC:** After the plugs. After the plugs.

3 **Mr. Chairman:** So—after the plugs. Thank you very much.

4 **Mr. Maharaj SC:** And on the 15th the cut part of the riser was lifted
5 up.

6 **Mr. Chairman:** Yes, I got that.

7 **Mr. Maharaj SC:** So I come to the 25th of February—

8 **Mr. Chairman:** Thank you.

9 **Mr. Maharaj SC:** —and the work plan on the 25th of February. The
10 evidence shows that LMCS contends that the work plan for Friday,
11 the 25th of February, 2022 included the removal of both plugs. Paria,
12 however, disputes that the removal of both plugs was authorized to be
13 removed on that day because it contends that the work permit stated
14 that a migration barrier were to be used. Paria contends that the plugs
15 were to be removed after the habitat was removed. LMCS contends,
16 however, that at all material times it was the understanding between
17 LMCS and Paria that the work plan included the removal of the plugs
18 before the replacement riser was connected.

19 **Mr. Chairman:** Well this is the crucial issue, isn't it?

20 **Mr. Maharaj SC:** That's the crucial issue.

21 **Mr. Chairman:** Yeah it is. And are you going to address the
22 question of monitoring of that?

23 **Mr. Maharaj SC:** Yes, yes.

24 **Mr. Chairman:** Thank you.

25 **Mr. Maharaj SC:** On the morning of Friday, the 25th of February,
26 2022 Paria issued four permits to work. The main permit to work is
27 permit number 9320 which is in relation to the maintenance works to

1 be conducted on the pipeline. On that morning the evidence of LMCS
2 shows that it conducted a toolbox meeting where a safety talk was
3 given by LMCS safety officer Mr. Victor Dhillpaul and that Mr.
4 Kazim Ali Jr. also addressed the divers on safety as well as the job
5 to be done. According to the toolbox meeting form Andrew Dopson
6 and Houston Majardsingh of Paria were also present on behalf of
7 Paria. According to the evidence of LMCS, the work plan for that day
8 included first the removal of the plugs, then the connection of the
9 replacement riser.

10 Paria disputes that the work plan for that day included the
11 removal of the plugs. It contends that the removal of the plugs was
12 not authorized by it on this day in the permit to work. Paria points out
13 that the permit to work states that the migration barrier was to be used
14 for the works referred to in the permit to work. It contends that the
15 plugs were to be removed topside, that is, not in the habitat. It was to
16 be removed after the habitat was removed.

17 **Mr. Chairman:** Was this discussed in the toolbox meeting?

18 **Mr. Maharaj SC:** Well, according to LMCS.

19 **Mr. Chairman:** According to them it was, according to Paria it
20 wasn't?

21 **Mr. Maharaj SC:** We don't have the evidence from Paria.

22 **Mr. Chairman:** Ah, yes, because we haven't been able to interview
23 them. Sorry.

24 **Mr. Maharaj SC:** And it may be because we didn't get a chance to
25 interview the witnesses yet.

26 **Mr. Chairman:** Those witnesses at the time?

27 **Mr. Maharaj SC:** Yes.

1 **Mr. Chairman:** Yes. Well we'll hear from them in due course.
2 Lastly this. The toolbox meeting, that is a sort of standard type of
3 meeting between the various interested parties before the works are
4 carried out, is that right?

5 **Mr. Maharaj SC:** Yes.

6 **Mr. Chairman:** And what is the purpose of this toolbox meeting?
7 It's that odd phrase? You know? What is it about?

8 **Mr. Maharaj SC:** As I understand it, Mr. Chairman, it is for the
9 persons who are involved in the works and all the important people
10 who are associated with the works—

11 **Mr. Chairman:** Right.

12 **Mr. Maharaj SC:** —for it to be discussed, questions to be asked and
13 for it to be discussed exactly what is going on.

14 **Mr. Chairman:** Do they discuss safety issues, do they discuss—
15 what, what—both the programme of work and the safety issues? Is
16 that what they do?

17 **Mr. Maharaj SC:** I would—yes, yes, yes.

18 **Mr. Chairman:** That is—is that the purpose of it?

19 **Mr. Maharaj SC:** Yes.

20 **Mr. Chairman:** Right. Sorry, I think Mr. Wilson had a question.

21 **Commissioner Wilson:** I heard that there were two personnel on
22 behalf of Paria. Were their roles and responsibilities identified for
23 why they were there?

24 **Mr. Maharaj SC:** Not on the form, and we were expecting to
25 explore those things when they come in the box.

26 LMCS, on the other hand, contends that at all material
27 times it was the understanding between Paria that the work plan

1 included removal of the plugs before the replacement riser was
2 connected. It also said that the permit to work form does not have
3 enough space for every task to be written on it and that is why the
4 Method Statement for the works was attached to the permit to work
5 form, and I could give the reference to that, supplemental witness
6 statement of Ali Sr. at paragraph 78. The Method Statement attached
7 to the permit to work identified that the work method entail first
8 removing the plugs before the riser replacement is connected to the
9 existing pipeline.

10 **Mr. Chairman:** This Method Statement actually says that, does it?

11 **Mr. Maharaj SC:** Yes. It said that. It expressly stated that.

12 **Mr. Chairman:** And that's attached to the method of works?

13 **Mr. Maharaj SC:** Attached to the work permit.

14 **Mr. Chairman:** The work permit?

15 **Mr. Maharaj SC:** And that is not disputed on the evidence so far.

16 **Mr. Chairman:** Right, thank you.

17 **Mr. Maharaj SC:** Paria, however, contends that this Method
18 Statement was expressly accepted by LMCS to be subject to its permit
19 to work system, but Paria is saying that since the permit to work has
20 on it that it is subject—that notwithstanding that this was attached to
21 it, it means that it should not be done and priority should be given to
22 what is on the permit to work permit.

23 **Mr. Chairman:** Do we know what—well, what's the point of
24 attaching that document to the permit to work to it—

25 **Mr. Maharaj SC:** Well, well, Mr. Chairman, we were hoping to
26 explore all of that when Mr. Wei comes into the witness box.

27 **Mr. Chairman:** Sorry, I'm doing that which I have been imploring

1 others not to, jumping the gun.

2 **Mr. Maharaj SC:** We are in the same boat you are in, Chairman.

3 **Mr. Chairman:** All right, sorry.

4 **Mr. Maharaj SC:** Also, the evidence of Christopher Boodram was
5 that the work plan was discussed at the toolbox meeting on the
6 morning of the 25th of February, 2022 and included the removal of
7 the plugs to be done that day, and his evidence is WSB 1569
8 paragraph 22. It is therefore submitted that an issue arises therefore as
9 to what was the authorized work plan on Friday, the 25th of February,
10 2022. At another stage in my presentation I'll deal with the person
11 from Paria who was monitoring the works when the works were being
12 done, Mr. Chairman.

13 **Mr. Chairman:** Right.

14 **Mr. Maharaj SC:** The accident itself: according to the evidence of
15 Christopher Boodram, the following occurred after the safety meeting.
16 He, together with Fyzal Kurban, Rishi Nagassar and Yusuf Henry
17 entered the cube of the habitat. In the habitat, he and Yusuf Henry put
18 up a chain block, like a manual crane, to be able to lift up the blank
19 flange as it is half inches thick and about 150 to 200 pounds. Also,
20 they were working at chest height level in relation to the 30-inch
21 diameter pipeline. The inside of the pipeline was exposed so they
22 could have seen the mechanical plug in the pipeline.

23 Before the mechanical plug was removed, he exited the
24 habitat to check whether the CARBER testing was completed on
25 Berth 5. This was confirmed. He then went back into the habitat and
26 he and Yusuf unbolted the mechanical plug so that the CARBER
27 testing could be done. This was about 11.30 a.m. Pressure testing

1 was to be done with a CARBER plug but this equipment could not be
2 installed as Fyzal said it was too small.

3 The divers then went for lunch whilst Paria and LMCS
4 discussed the issue with the CARBER plug. Paria eventually made a
5 decision to cancel the CARBER testing and this has not been denied
6 by LMCS or Paria. On the contrary, it has been admitted. After
7 lunch, the divers, Fyzal, Yusuf, Rishi and Christopher, returned to the
8 habitat, and, as the inflatable plug was being deflated, Kazim Jr.
9 entered, the habitat started filling up rapidly with water and
10 Christopher described as a feeling like a tornado as the men were
11 sucked into the pipe.

12 Important part of this Enquiry, Mr. Chairman, is what
13 happened after the accident, and therefore I will now summarize
14 LMCS' response on the 25th and the 26th of February to the accident
15 itself and then I will summarize Paria's response. I'll put them in two
16 compartments, the rescue efforts made before Christopher Boodram
17 came out of the pipeline and the rescue efforts which were made after.
18 So LMCS' rescue efforts made before the rescue of Christopher
19 Boodram, the summary is as follows.

20 At about 2.45 p.m. on Friday, the 25th of February,
21 Andrew Farah, LMCS diver supervisor, observed a splash of water on
22 the screen—that is the screen which monitors what was happening—
23 in which he had been monitoring the works from topside, and then the
24 screen went black. He then searched the water around Berth 6 and
25 also entered the habitat. He observed that the men were missing from
26 the habitat and there was water in the riser about three to four feet
27 below the top of the pipeline. He concluded that the men were

1 probably in the pipeline.

2 At about 3.20 p.m., Kazim Ali Sr. arrived at Berth 6. He
3 also accepted that the men were in the pipeline and assumed that if
4 they were alive and each had a dive cam he estimated that they would
5 have lived for about one hour. Kazim Ali Sr., Dexter Guerra, who
6 was LMCS' supervisor, and Andrew Farah made a simple rescue plan
7 to be immediately implemented to rescue the men utilizing scuba
8 equipment.

9 The plan was that, one, Andrew Farah, a commercial
10 diver, would go in the pipeline, feet first, with an extra set of diving
11 gear. Two, Dexter Guerra would stay at the top in the habitat. Three,
12 Andrew Farah would be connected to a rope or a tagline which he
13 would use to communicate with Dexter Guerra who would assist to
14 pull him back up in the riser. Four, Andrew Farah also called
15 commercial diver Conrad Beddoe for commercial surface air supply
16 equipment and told him to call whoever else he could to make their
17 way down to Paria. The rescue plan was discussed with Paria
18 personnel present but Paria personnel kept on saying that LMCS had
19 to get permission from the management team of Paria, that the permits
20 to work were pulled by Paria and LMCS was not allowed to enter the
21 pipeline or dive.

22 Andrew Farah was then told that Collin Piper of Paria
23 wanted to have a meeting with him. He then left to go to meet Mr.
24 Piper. At about 4.20 p.m., knocking and shouting was heard coming
25 from inside the habitat.

26 **Mr. Chairman:** What time?

27 **Mr. Maharaj SC:** Four twenty p.m. Around this time, certified

1 commercial divers Michael Kurban, son of Fyzal Kurban, Corey
2 Crawford and Ronald Ramoutar arrived and they were preparing to
3 enter the water to attempt a rescue. Andrew Farah also returned to
4 Berth number 6, having turned around from going to meeting with
5 Collin Piper, upon him being informed that Dexter Guerra—um,
6 informed by Dexter Guerra of the knocking in the habitat. Paria's
7 representative present at Berth 6 stated that no one was to dive in the
8 pipeline but LMCS' Andrew Farah and Dexter Guerra told the Paria
9 representative they could not leave the men there.

10 Corey and Ronald then entered the habitat for that
11 purpose and found Christopher Boodram at the top of the riser. They
12 rescued him from the pipeline from the top of the riser. Christopher
13 told them that Fyzal was right behind him and the other divers were
14 alive in an air pocket. Michael says that Christopher was rescued at
15 about 4.30 p.m.

16 **Mr. Chairman:** Can I understand a little about that, please? Mr.
17 Boodram describes in his statement how he made his way to the sur—
18 up the pipe and that he was unable to climb out of the pipe himself. Is
19 that correct?

20 **Mr. Maharaj SC:** Correct.

21 **Mr. Chairman:** He was both exhausted, injured and of course the
22 pipe was very slippery. He was hanging, I believe, by a chain.

23 **Mr. Maharaj SC:** Chain.

24 **Mr. Chairman:** And he was hanging down—

25 **Mr. Maharaj SC:** He was holding on to a chain.

26 **Mr. Chairman:** —as long as he possibly could.

27 **Mr. Maharaj SC:** As long as he possibly could.

1 **Mr. Chairman:** Had there been no one in that habitat to pull him
2 out—

3 **Mr. Maharaj SC:** Not at that time.

4 **Mr. Chairman:** —what would have happened?

5 **Mr. Maharaj SC:** But what happened was that Kurban and the
6 other—well, Kurban—not Kurban, Ronald Ramoutar and Corey
7 Crawford, there was knocking and they attempted to go to—about the
8 knocking and that is how they went in the habitat—

9 **Mr. Chairman:** Right.

10 **Mr. Maharaj SC:** —as I understand it.

11 **Mr. Chairman:** But for them being in the habitat, he would have
12 been still hanging there for as long as he could—

13 **Mr. Maharaj SC:** Yes. Well, he could—

14 **Mr. Chairman:** —and then he might have fallen back away.

15 **Mr. Maharaj SC:** Yeah, he would have ultimately fell if no one had
16 gone.

17 **Mr. Chairman:** And they, they went in—

18 **Mr. Maharaj SC:** And they were—

19 **Mr. Chairman:** —defying those who were saying, “You shouldn’t”?

20 **Mr. Maharaj SC:** Yeah, and they rescued him.

21 **Mr. Chairman:** And that was as a result of knocking that they
22 heard?

23 **Mr. Maharaj SC:** Yes, knocking and shouting.

24 **Mr. Chairman:** And shouting.

25 **Mr. Maharaj SC:** Apparently, from Boodram’s evidence he was
26 knocking—

27 **Mr. Chairman:** And shouting.

1 **Mr. Maharaj SC:** —and he was shouting.

2 **Mr. Chairman:** Thank you very much.

3 **Mr. Maharaj SC:** Right. Now I deal with the rescue efforts from
4 LMCS' point of view after the rescue of Christopher Boodram. In the
5 light of Christopher being rescued from the pipeline and what
6 Christopher said about the other divers, Corey, Ronald, Andrew and
7 Dexter, again discussed the plans to rescue the other divers. The
8 originally formulated rescue plan utilizing scuba equipment was
9 revised in that Michael, assisted by Corey and Ronald, would enter
10 the pipeline instead of Andrew being the one to go into the pipeline
11 assisted by Dexter. Paria's representative again indicated to LMCS
12 personnel that Paria's management said they could not dive but
13 LMCS took the position that they had to attempt a rescue because they
14 knew that the men were alive based on what Christopher had stated.

15 Michael, Ronald and Corey then went into the habitat.
16 Corey and Ronald assisted Michael into the riser utilizing scuba
17 equipment. Michael reached the elbow inside the pipeline and entered
18 the horizontal section of the pipeline for about 10 to 15 feet, which as
19 far a hundred feet—which was as far his hundred feet airline could
20 have permitted him to go. Michael retrieved one empty tank, left
21 another in the pipeline as it still contained some air, in the event that
22 one of the divers needed it.

23 Around 5.45 p.m., certified commercial diver, Conan
24 Beddoe, arrived with his equipment, tanks and other gear to give
25 assistance. The rescue plan was then revived in that Conan would be
26 the one entering the pipeline, with scuba equipment, and Michael and
27 Ronald would be tending him with the line whilst he was in the

1 pipeline. According to Conan he, Michael and Ronald entered the
2 habitat, that Michael didn't appear to Conan to be in sound mind to
3 properly tend him, so Conan made a decision to wait until his brother,
4 Conrad, came so they could have commercial service supply air to use
5 for the dive and would not be long before he arrived. The coast guard,
6 however, told LMCS personnel to stand down and that no one was
7 allowed to go into the pipeline. Some of the coast guard officers
8 present had weapons, according to LMCS' evidence.

9 At about 6.30 p.m. Conan's brother, Conrad Beddoe,
10 arrived with commercial surface supply equipment. The rescue plan
11 was now modified so that Conan could enter with commercial service
12 supply equipment. About 7.30 p.m., approximately two other dive
13 support vessels arrived with additional commercial equipment to
14 assist with the rescue. Andrew Farah, Dexter Guerra and Michael
15 Kurban, according to their evidence, kept trying to convince Paria's
16 representatives present at Berth 6 to let them conduct a rescue and
17 they gave them the details of the rescue plan and the resources which
18 were available to them to do the rescue. They were back and forth
19 with Paria's representatives. The Paria representatives kept telling
20 him that they would rely—that they were going to relay their request
21 to their superiors and that they would report that they did not have—
22 and they reported that they did not have permission and they had to
23 stand down. Andrew Farah—

24 **Mr. Chairman:** Can I just, again, before you move on, two things.
25 So, it was—ultimately it was Paria who was saying stand down on
26 that revised plan?

27 **Mr. Maharaj SC:** Yes.

1 **Mr. Chairman:** Until they got—

2 **Mr. Maharaj SC:** According to the evidence.

3 **Mr. Chairman:** According to the LMCS, I appreciate that, but that's
4 as the evidence is at the moment?

5 **Mr. Maharaj SC:** Yes.

6 **Mr. Chairman:** And so it was, it was—well it was their pipeline,
7 they were saying stand down.

8 **Mr. Maharaj SC:** And they—

9 **Mr. Chairman:** —until they'd reported, until they—

10 **Mr. Maharaj SC:** —and, and they had pulled the work permits.
11 They had pulled the work permits.

12 **Mr. Chairman:** Right.

13 **Mr. Maharaj SC:** Paria had pulled the work permits from LMCS.

14 **Mr. Chairman:** Right, so they couldn't do anything at that point.
15 Right. The second thing is this: you said earlier that the coast guard
16 had told those LMCS potential rescuers also to stand down.

17 **Mr. Maharaj SC:** Yes. They said they had instructions from Paria
18 to.

19 **Mr. Chairman:** They said what, sorry?

20 **Mr. Maharaj SC:** They said they had instructions to prevent them.

21 **Mr. Chairman:** Well, what authority does the coast guard have in
22 this circumstance?

23 **Mr. Maharaj SC:** Well, the only authority I could think of that they
24 had instructions from Paria and I think that is the evidence. It is
25 subject to we reviewing it again but I think that is just it. Am I
26 correct? [*Mr. Maharaj SC confers with Mrs. Maharaj*] Yeah, as a
27 matter of fact, my learned Jr., Mrs. Maharaj, reminds me that it's

1 Paria's evidence that they gave the instructions to the coast guard.

2 **Mr. Chairman:** Right, so they, they were utilizing—

3 **Mr. Maharaj SC:** Yeah.

4 **Mr. Chairman:** —the coast guard to secure their site?

5 **Mr. Maharaj SC:** Yes.

6 **Mr. Chairman:** Thank you very much.

7 **Mr. Maharaj SC:** And Mr. Hargreaves, Lieutenant Hargreaves, in
8 his witness statement he admitted that he got instructions from Paria.
9 And he was the head of the coast guard.

10 **Mr. Chairman:** Right. So he says that that's what he was asked to
11 do by Paria. I mean, again, as I say, it's their site and they're entitled
12 to utilize such security as they thought appropriate.

13 **Mr. Maharaj SC:** Yes.

14 **Mr. Chairman:** But it was on their request that the coast guard were
15 exercising their authority, as they saw it, over the LMCS divers.

16 **Mr. Maharaj SC:** Based on LMCS' evidence.

17 **Mr. Chairman:** Yes.

18 **Mr. Maharaj SC:** And based on what Paria said Hargreaves,
19 Lieutenant Hargreaves said.

20 **Mr. Chairman:** Well, it's, it's—I mean, if Mr. Hargreaves is saying
21 that that's what happened, it's not just then LMCS' evidence, then, is
22 it?

23 **Mr. Maharaj SC:** Yes, it's LMCS' evidence but also Hargreaves'
24 evidence.

25 **Mr. Chairman:** All right. Again, well we'll hear from Paria of
26 course.

27 **Mr. Maharaj SC:** Yes, yes. And I'll be going through what Paria

1 has said as part of it.

2 **Mr. Peterson SC:** Mr. Chairman, I'm sorry to, I'm sorry, really sorry
3 to do this, but I can't leave what I respectfully consider to be
4 inaccuracies to go viral against—I will be failing in my duty.

5 **Mr. Chairman:** Right.

6 **Mr. Peterson SC:** I don't understand officer Hargreaves to be saying
7 that, and when one speaks just short of giving the rationale with
8 respect to anything that may have been said, all the statements are
9 pregnant with references as to the advice and the lack of knowledge as
10 to the conditions within the pipe. It's not just not to dive coldly with
11 persons possibly in the pipe. Those are inaccuracies, with the greatest
12 of respect.

13 **Mr. Chairman:** Well, I hear what you say, Mr. Gilberterson [*Sic*] and
14 of course your clients, um, many of the witnesses that are yet to come
15 to give evidence will be able to deal with this—

16 **Mr. Peterson SC:** Yes, Sir.

17 **Mr. Chairman:** —this issue. And I hope that it is clear to everyone
18 that what is being summarized by Mr. Maharaj at this stage is really
19 the evidence of LMCS which may or may not be accepted by these
20 Commissioners, including myself, in due course.

21 **Mr. Peterson SC:** Sir—

22 **Mr. Chairman:** It is simply outlining what they are saying was the
23 position, coupled with Mr. Hargreaves who was the coast guard or in
24 charge of, it is our understanding, who was saying that that's the
25 instruction that he was given. Is there anything wrong with that?

26 **Mr. Peterson SC:** Well, nothing is wrong, Sir, with what is ascribed
27 to LMCS as their evidence at this stage.

1 **Mr. Chairman:** That's right.

2 **Mr. Peterson SC:** But, my recollection of Mr. Hargreaves' statement
3 doesn't go as far as it's being released now, and, with respect, the fact
4 that the evidence is to come, impressions are being created and one
5 may—and first impressions are what tend to remain.

6 **Mr. Chairman:** Of course.

7 **Mr. Peterson SC:** And I think my client's image, if nothing else, at
8 this stage is potentially prejudiced by the way the evidence is being
9 summarized, with respect. I could be wrong, it wouldn't be my first
10 time, but—

11 **Mr. Chairman:** I hope that we—we'll be hearing in due course from
12 Mr. Maharaj the summary of the position so far as Paria is concerned
13 at the moment.

14 **Mr. Peterson SC:** Yes, Sir. And since I have your ear, I intended to
15 address it. It had been put out earlier this morning that my clients,
16 Paria and Heritage, refused to be interviewed. That was the end
17 position but that's not the whole story. There was a lot of exchanges
18 and rationale and offers to give supplemental statements in areas that
19 the Commission requires clarification, but what was put out there this
20 morning, Sir, is that was—there was a blanket mere refusal by Paria
21 and Heritage, which, with the greatest of respect, is not accurate.

22 **Mr. Chairman:** Right. Well, I don't necessarily accept that. I have
23 seen the correspondence and the net result was that there was a
24 blanket refusal by all of the staff not to be permitted to be interviewed
25 by my team, and where—how we got there, it seems to me, not
26 particularly important. What's important is that we had sought to try
27 and save time and to ensure a balance of the material at this stage,

1 and, for reasons which I suspect are either tactical, or, for time
2 reasons, you decided not to permit any of the witnesses to give that
3 additional material.

4 **Mr. Peterson SC:** Sir, with respect, that's not the entire picture. We
5 were trying to assist the Commission by even ascertaining how are
6 those interviews going to be categorized. We said the public will not
7 be privy to those interviews and we took your opening at a previous
8 hearing that the public should be kept in the loop on this, so one of our
9 positions was what would be the status of that private interview. We
10 gave statements. We thought the next hearing is that persons will be
11 questioned so that the public could see all the evidence, and that's
12 there we were at, Sir.

13 **Mr. Chairman:** Mr. Gilbert—

14 **Mr. Peterson SC:** It was not a blanket refusal.

15 **Mr. Chairman:** Right, well, Mr. Gilbertson, it would be [*Inaudible*]
16 of us to determine whether it is or not. You will have an opportunity,
17 as I have already permitted, for you to say whatever you want to say
18 as part of the opening in these, hearings.

19 **Mr. Peterson SC:** Well, I didn't want to address that opening, Sir. I
20 just thought it was—

21 **Mr. Chairman:** It's a matter for you whether you choose—

22 **Mr. Peterson SC:** Very well, Sir.

23 **Mr. Chairman:** —to address it or not, but I do think that there—it
24 is—we are left in the position that we are because, for whatever
25 reason, Paria's witnesses and Heritage's were not permitted or did not
26 seem to be willing to be interviewed. Those interviews were put into
27 a statement and into writing, they were then invite—each witness was

1 then invited to sign that as being an accurate representation of what
2 was said during those interviews, and they're online. Everyone can
3 see what's been said.

4 The fact that your witnesses, I say your witnesses, that
5 Paria's or Heritage witnesses that are to be called by this Commission
6 chose not to engage in that process is a matter entirely for them. I
7 can't force them, as I said earlier, to come and do that. Why they
8 have done it, I leave to others to come to a view about it themselves. I
9 take no view one way or the other.

10 **Mr. Peterson SC:** Thank you, Sir.

11 **Mr. Chairman:** What I do say is that we don't have it and my
12 complaint is not that they chose not to do it. My complaint is that
13 what it will do is to take more time than we wanted to spend in oral
14 hearings. That's my complaint.

15 **Mr. Peterson SC:** Your point is taken, Sir. Once it's not—the
16 impression is not created, that they are not cooperating or not—don't
17 wish to make further evidence, they are—

18 **Mr. Chairman:** Well, I've made clear, I'm not suggesting for a
19 minute that there is no cooperation.

20 **Mr. Peterson SC:** Thank you, Sir.

21 **Mr. Chairman:** If that had been the case, we'd have had to issue
22 subpoenas. We haven't done that at all.

23 **Mr. Peterson SC:** You can put it to rest, Sir. I will not revisit it in
24 my opening. I think we have explored it and it could rest there.

25 **Mr. Chairman:** Marvellous.

26 **Mr. Maharaj SC:** Mr. Chairman, I take strong objections to Counsel
27 to the Commission and the legal team being accused of telling this

1 Enquiry matters which are not accurate. In Paria's statement, witness
2 statement of Collin Piper, at paragraph 109, it states:

3 "After discussions between myself and the General Manager about the
4 apparently volatile situation developing at the scene, he and I agreed
5 that the TTTCG"—which is the Trinidad and Tobago Coast Guard—
6 "should take control of the site, safeguard Paria/Kenson personnel,
7 take control of the ongoing rescue operations. This would include
8 preventing the LMCS divers from entering the pipeline. Mushtaq,
9 who is the General Manager, therefore made this request to the TTTCG
10 in my presence."

11 That is the evidence of Paria.

12 **Mr. Chairman:** All right.

13 **Mr. Maharaj SC:** And Hargreaves, at paragraph 20 of his witness
14 statement said that:

15 "As far as I'm aware, the decision to prevent persons from attempting
16 a rescue was made by Paria personnel, not by either myself or any
17 member of the TT diving department or by any member of the TTDS.
18 Neither I or any member of the TTTCG diving nor any member of the
19 TTDF had the requisite authority to do so. The decision by Paria,
20 however, was based on the assessment by TTTCG diving department
21 that an attempt at a rescue can have several health and safety
22 implications as stated."

23 So the TTTCG was involved in stopping people from diving on Paria's
24 instructions.

25 **Mr. Chairman:** All right.

26 **Mr. Maharaj SC:** And—so I take strong objection because I have
27 been very impartial in assessing this evidence and everything that I

1 say here, Mr. Chairman, and Commissioner Wilson, can be checked
2 and they are accurate.

3 **Mr. Chairman:** No doubt, if it isn't, the great experience of Mr.
4 Gilbertson will be brought to bear upon you.

5 **Mr. Maharaj SC:** Yes.

6 **Mr. Chairman:** And—

7 **Mr. Peterson SC:** And it will be with all of respect and friendship.

8 **Mr. Maharaj SC:** Yes. I think I reached the stage where I said the
9 coast guard, however, told LMCS personnel to stand down and that no
10 one was allowed to go in the pipeline. Some of the coast guard
11 officers had weapons. At about 6.30 p.m. Conan's brother, Conrad
12 Beddoe, arrived with commercial service supply equipment, the
13 rescue plan was now modified so that Conan could enter with
14 commercial service supply equipment. At about 7.30 p.m.,
15 approximately, two other dive support vessels arrived with additional
16 commercial equipment to assist with the rescue.

17 Andrew Farah, Dexter Guerra and Michael Kurban kept
18 trying to convince Paria representatives present at Berth 6 to let them
19 conduct a rescue and they gave them the details of the rescue plan and
20 the resources which were available to them to do the rescue. They
21 were back and forth. Paria's representatives kept on telling them they
22 would relay their request to their superiors, and would report that they
23 did not have permission and to just stand down. Andrew Farah also
24 tried to convince the coast guard but they also said they could not dive
25 and they had to stand down until they got instructions.

26 All communications between LMCS, Andrew Farah and
27 Paria personnel present at the berth were cordial and good. The Paria

1 personnel told the LMCS person that they could not make the
2 decision. According to the evidence of LMCS, they had divers
3 available on site willing to conduct a rescue of the divers from the
4 pipeline with available equipment from the time of the accident on
5 Friday, the 25th of February, 2022 until Saturday the 26th of
6 February, 2022. Conan Beddoe says he remained on Berth 6 until
7 8.00 a.m. on Saturday. Andrew Farah was there until 8.00 p.m. on
8 Saturday. Dexter Guerra was there until 8.00 p.m. returning on
9 Sunday. Michael was there until midday on Saturday returning at a
10 later time. They had available to them scuba-diving equipment and
11 then later commercial diving equipment.

12 In response to the alleged reports by LMCS workers of
13 knocking at Berth 5 at about 6.15 p.m. on Friday, Kazim Ali Sr.
14 requested permission from Paria to connect the riser extension at
15 Berth 6 for the habitat to be removed and for the blank at Berth 5 riser
16 to be removed in the event the divers were at Berth 5. It is not in
17 dispute that the riser was connected at about 10.00 p.m. on Friday, the
18 25th of February, 2022 after permission was given.

19 However, permission to remove the blank at Berth 5 was
20 not given until Saturday, the 26th of February, 2022 at about 3.00 a.m.
21 According to Paria, this is because the incident command team of
22 Paria was concerned that the removal of the flange would upset the
23 balance in the line. According to their evidence of Kazim Ali Sr., he
24 went to Paria's compound on the morning of Saturday, the 26th of
25 February, 2022 to discuss the rescue plan which LMCS were trying to
26 get permission to do at Berth 6. He discussed the rescue plan mostly
27 with Catherine Balkissoon. She seemed amenable to the plan but said

1 that she would have to run it by Mushtaq Mohammed.

2 Kazim Ali Sr. met with Mushtaq Mohammed in the
3 afternoon and Mushtaq Mohammed requested to speak with the diver,
4 Conan Beddoe, but Conan was in Sangre Grande at that time. The
5 meeting was postponed for the next day, Sunday. According to Paria,
6 Kazim Ali Sr. at this meeting advised that he wanted to send a diver
7 down at Berth 5 which the incident command team did not think was
8 feasible. The evidence of Paria is that Kazim Ali Sr. indicated that he
9 was a practical man and he knew by then that it was a recovery. It is
10 submitted that the question which arises is whether the decisions
11 and/or actions taken by LMCS to rescue the divers were reasonable
12 and whether the decisions and/or actions of Paria were also reasonable
13 and justifiable in the circumstances.

14 Mr. Chairman, I now go to Paria's responses on the 25th
15 and 26th February to the accident. The following is a summary of that
16 response of the rescue made before Christopher Boodram of Paria.

17 **Mr. Chairman:** Before, sorry, yes, before Boodram, you're going to
18 do it in the same way as you did—

19 **Mr. Maharaj SC:** In the same way.

20 **Mr. Chairman:** Do it slowly so that—

21 **Mr. Maharaj SC:** Okay.

22 **Mr. Chairman:** —Paria can—

23 **Mr. Maharaj SC:** Okay.

24 **Mr. Chairman:** —take it on board.

25 **Mr. Maharaj SC:** One second, Mr. Chairman. I'm just taking some
26 water. At about 3.06 p.m., it activated its incident command system
27 in response to the information that the divers were missing.

1 Following the activation of the incident command system, key Paria
2 personnel were informed of the accident and the incident command
3 team was convened at the designated incident command post, namely
4 Paria Shipping building. Personnel from Heritage were also stationed
5 at the incident command post from soon after the incident until at least
6 Saturday, the 26th of February and they were involved in the incident
7 command team meetings and discussions.

8 Paria commenced sea searches at around 3.10 p.m. to
9 search for the missing divers. Paria also notified the coast guard,
10 OSHA, the fire service and the Ministry of Energy and Energy
11 Industries of the accident. An emergency triage was also set up on the
12 Paria compound. At 3.23 p.m. the incident commander, Collin Piper,
13 spoke to Kazim Ali Sr. who confirmed that the divers were missing
14 and that they had removed the inflatable plug when the accident
15 occurred. Kazim and Collin had several conversations during the day.
16 LMCS was requested to send a representative to the incident
17 command team but it did not comply with this request. This was
18 denied by LMCS.

19 At 4.45 p.m., the coast guard arrived at Berth 6 and
20 commenced a search and rescue pattern in the sea in the vicinity of
21 Berth 6. Lieutenant Hargreaves indicated the coast guard did not have
22 the appropriate equipment on site to enter the water or habitat, but a
23 dive crew was on the way. It is to be noted that Lieutenant
24 Hargreaves in his statement provided to the Commission says that he
25 arrived at 8.43 p.m. but Paria was saying he arrived at 4.45 p.m. so I
26 put the both pieces of evidence.

27 At 4.55 p.m. Collin Piper arrived at the incident

1 command post where he was required to be in accordance with the
2 incident command system. However, he had Catherine Balkissoon
3 and Visham Harrichan deployed to Berth 6 to provide him with
4 information and to communicate his instructions. According to Collin
5 Piper at paragraph 79 of his witness statement, at about 5.00 p.m. he
6 passed instructions to LMCS that further diving inside the pipeline
7 was not allowed at the time.

8 It was reported to the incident command team by Paria's
9 representative at Berth 6 that they tried to get information from LMCS
10 personnel but they were not responsive. As a result, at approximately
11 5.00 p.m. Collin Piper requested that LMCS dive supervisor, Andrew
12 Farah, to come ashore to the incident command post. Andrew Farah
13 departed at about 5.50 p.m. but was instructed to return when it was
14 reported that knocking and shouting was heard in the habitat. That is
15 the summary of the evidence up to when Christopher Boodram. Now
16 I'll deal with summary of the evidence after Christopher Boodram
17 was rescued.

18 At approximately 5.36 p.m., Collin Piper was informed
19 that Christopher Boodram was rescued. Christopher had said that the
20 other divers were in the pipeline and Fyzal was right behind him.
21 After the rescue of Christopher, it was evident to the incident
22 command team that there was a real possibility that the missing divers
23 were trapped within the pipeline but it was critical for the incident
24 command team to first ascertain the conditions within the pipeline
25 before it could properly and safely plan a rescue of the divers. This
26 was the position taken by Collin Piper at WSB 1363 paragraph 90.

27 Paria stated in the evidence of Collin Piper that it did not

1 have the required knowledge of or access to competent, experienced
2 divers, diving contractors and a confined space entry specialist. It
3 stated that this experience was required to assist its incident command
4 team to assess the feasibility of a rescue of the divers from inside the
5 pipeline and to advise the incident command team on the most
6 appropriate rescue options, methods, risks and precautions associated
7 with any of the said options and methods.

8 Its incident command team, therefore, relied on experts
9 which Heritage made contact with and made available to assess the
10 incident command team, namely Eastern Emergency Response
11 Services Limited, Eastern; Hull Support Services, Hull; Offshore
12 Technologies Limited, OTSL; Mitchell's Professional Diving
13 Services Limited, Mitchell's; and Humming Bird Helicopter Services
14 Limited, HHSL. That is in Collin Piper's witness statement WSB
15 1356 at paragraph 53.

16 The action plan then devised was to get video footage of
17 the inside of the pipeline, determine the type of equipment to be used
18 and the method of insertion of same into the pipeline, determine the
19 exact location of the divers within the pipeline, get experts on site to
20 review the footage and advise, assess the risk involved in entering the
21 pipeline and the means of managing those risks. Collin Piper's
22 statement WSB 1363 at paragraph 91. The incident command team
23 was informed that the coast guard said it was too risky for their divers
24 to enter the habitat and the pipeline since they were unaware of the
25 conditions, and also the tide and life conditions were changing. Collin
26 Piper's evidence WSB 1363 paragraph 94.

27 After the rescue of Christopher Boodram, the incident

1 command team was informed by its personnel at Berth number 6 that
2 Michael Kurban went into the pipeline in search of the missing divers.
3 Collin Piper then discussed this information with the incident
4 command team. They discussed several factors including, one, the
5 event which caused the divers to be taken into the pipeline was
6 unknown, two, it was also unknown what caused that event to subside,
7 three, the conditions in the pipeline was unknown, four, the LMCS
8 divers were diving into the pipeline in an unplanned manner without a
9 Method Statement or a Risk Assessment having been produced.

10 Heritage: Heritage's dive expert, Rolph Seales, advised
11 Collin Piper that it was too risky and Paria's Randy Archbald also
12 advised that it was unsafe to enter without commercial air supply.
13 Collin Piper also considered the position which had to be taken by the
14 coast guard. Collin Piper instructed Paria's Visham Harrichan and
15 Catherine Balkissoon to tell LMCS that diving into the pipeline was
16 not allowed because it was too dangerous. See Collin Piper's witness
17 statement WSB 1363 to 1364. However, no decision was made by
18 Paria to physically intervene and LMCS personnel continued to dive
19 into the pipeline and LMCS personnel reacted in a hostile manner to
20 that decision.

21 After discussion between Collin Piper and Mushtaq
22 Mohammed about the hostility of the LMCS divers, they both agreed
23 that the coast guard should take control of the site and safeguard
24 Paria/Kenson personnel and to also take control of the ongoing rescue
25 operations. That would include preventing the LMCS divers from
26 entering the pipeline. Mushtaq made this request to the coast guard in
27 the presence of Collin Piper. See Collin Piper's statement WSB 1365

1 at paragraph 109.

2 At around 7.35 p.m., representatives of Professional
3 Inspection Services Limited arrived on the LMCS barge with a
4 borescope camera but it could not be used as it did not have the
5 required intensity of lighting and the tether line was only a hundred
6 feet. At approximately 8.55 p.m., the incident command team was
7 advised that the coast guard divers and diving equipment arrived on
8 site. Lieutenant Hargreaves from the coast guard advised that the
9 rescue dive into the pipeline was too risky and the coast guard was not
10 trained nor have equipment to perform commercial diving.

11 At approximately 10.00 p.m. the coast guard was able to
12 speak to Christopher Boodram on telephone by speaker. According to
13 Collin Piper, Christopher said the following. He didn't think the
14 divers made it, though he crossed two weld seams on the way out of
15 the pipeline. He crossed Blacks who was unresponsive, Rishi
16 Nagassar is also known as Blacks. He indicated that four of them
17 were making their way out of the pipeline and they were helping
18 Kazim Ali Jr. who had a broken arms and legs. He came across an air
19 pocket after which there was one person left. He came across a
20 second air pocket after which they lost Kazim Ali. Fyzie was with
21 them until he reached the elbow and Fyzie said he couldn't make it.
22 Then the coast guard, in the light of the new information from
23 Christopher, maintained their position that they would not dive.

24 Now, we could not, when I say we I meant the
25 investigate—at the investigative stage, interview the Paria witnesses
26 on what this was alleged and this was even after Christopher Boodram
27 was interviewed by us. So we didn't have an opportunity and all these

1 would be explored at the evidentiary hearing.

2 **Mr. Chairman:** We're going to get that opportunity—

3 **Mr. Maharaj SC:** Yes.

4 **Mr. Chairman:** —in due course?

5 **Mr. Maharaj SC:** Yes. The coast guard decided to mobilize pumps
6 to pump water out of the pipeline in the event that a dry rescue of the
7 divers was considered possible. At approximately 10.39 p.m. Hull
8 indicated they will not be performing any rescue attempt in the
9 pipeline because it was too risky. That evidence is in WSB 1370 at
10 paragraph 138.

11 Saturday the 26th of February, 2022. Around midnight
12 to 12.00 a.m. on the 26th of February, 2022 an Atlantic LNG camera
13 was inserted into the riser at Berth number 6 and it was stated that it
14 encountered a scuba tank on the horizontal section of the pipeline
15 which obstructed it. A second attempt was made at the request of
16 Collin Piper but it was unsuccessful. Around this time, Rolph Seales,
17 Heritage dive expert, along with OTSL and Mitchells, went to review
18 the borescope camera footage at berth number 5. They reviewed the
19 footage and they indicated that they would not send divers into the
20 pipeline because it was considered too risky to do so. Rolph Seales
21 also agreed. That is at WSB 1370 at paragraph 145. The coast guard
22 also reviewed the footage and maintained their position.

23 At around 1.30 a.m. the coast guard had discussions with
24 Eastern about the possibility of a confined space rescue if the pipeline
25 was pumped. Eastern visited the berths to explore the possibility of
26 such a rescue. Eastern then went to their base to obtain equipment for
27 a possible rescue attempt. And that can be found, Collin Piper, WSB

1 1371, paragraph 150. At approximately 3.00 a.m., the HHSL crawler
2 was sent down through the riser at berth number 6 and it reached the
3 horizontal portion of the pipeline but could not progress further as
4 there was equipment and gear stuck in the pipeline. See Collin
5 Piper's statement 1371 paragraph one five two.

6 At about 5.00 a.m. the flange at berth 5 was removed and
7 the crawler inserted into the riser at berth 5. The crawler went in
8 vertically but the camera went blank due to the presence of oil at the
9 bottom of the riser. Collin Piper's witness statement WSB 1372 at
10 paragraph one five seven. The Commission has obtained from Paria's
11 footage, which the HHSL crawler obtained after it was sent through
12 the riser at Berth 6. It appears that the crawler encountered an object
13 which had the appearance of a scuba tank at approximately 166.6 feet
14 bearing the identification number M4002 together with an object
15 which had the appearance of a rope.

16 During that footage, it appears that the crawler was able
17 to push the objects to 200.3 feet at which stage it could not proceed
18 further and the footage ended. We will now show excerpts of the
19 video showing the crawler entering the pipeline, the objects
20 encountered by the crawler at 166.6 feet and the crawler's attempts to
21 move it from 166 feet to 200.3 feet.

22 **Mr. Chairman:** Which end is this coming in from?

23 **Mr. Maharaj SC:** Berth six.

24 [*Video shown*]

25 **Mr. Chairman:** Just looking at that, Mr. Maharaj, am I right in
26 thinking that this distance includes going down the riser and then
27 along the bottom?

1 **Mr. Maharaj SC:** That's what we saw initially—

2 **Mr. Chairman:** Yes.

3 **Mr. Maharaj SC:** —but the point from the pushing of the tank was
4 just that short distance, but we have the—the whole footage shows
5 from going down in the riser.

6 **Mr. Chairman:** Yes. What I'm saying is that the 200 feet that we
7 can see written on there—

8 **Mr. Maharaj SC:** Yes, yes, yes.

9 **Mr. Chairman:** —includes the 30 feet or so that—

10 **Mr. Maharaj SC:** Yes.

11 **Mr. Chairman:** —it takes to get down to the elbow bend at the
12 bottom?

13 **Mr. Maharaj SC:** Yes.

14 **Mr. Chairman:** So the distance approximately along the bottom is
15 170 feet—

16 **Mr. Maharaj SC:** Around 170 feet.

17 **Mr. Chairman:** —before it stopped at the obstacle that we can see?

18 **Mr. Maharaj SC:** Yes.

19 **Mr. Chairman:** Thank you.

20 **Mr. Maharaj SC:** I'm still continuing with the response of Paria
21 after Boodram. Eastern thereafter informed the incident team
22 commander that they will not perform the confined space rescue
23 because they considered the exercise a recovery and would not risk
24 their personnel for such an exercise. See Collin Piper's evidence
25 WSB 1372 at paragraph one five seven. Despite the position taken by
26 Eastern, the incident command team had not given up upon the
27 possibility of a rescue attempt being conducted in a dry land.

1 Randall Archbald continued to try and persuade Eastern
2 to reconsider its position and Paria that a forward plan for the
3 Saturday the 25th of February, 2022 to determine whether such a
4 rescue plan could be accomplished. See Catherine Balkissoon's
5 evidence CB 1334 at paragraph eight and Randolph Archbald's
6 evidence CB 13 at paragraph 64. By Saturday evening none of the
7 dive companies contacted by Paria were willing to dive into Berth 6 to
8 attempt a rescue. It was also determined that an option of cutting the
9 pipeline to create an escape or hatch for the divers would be too risky
10 and it would have taken too long. The evidence of Collin Piper WSB
11 pages 1457, 1458 at paragraphs 82 to 83.

12 At 5.15 p.m. on Saturday the 26th of February, 2022 a
13 joint decision was made by Collin Piper and Mushtaq Mohammed for
14 Paria to transition to recovery. WSB 1377 paragraphs 80, 1462 at
15 paragraph 98. Mushtaq Mohammed informed the families of the
16 divers on the evening of Saturday the 26th of February, 2022 about
17 Paria's decision to transition from rescue to recovery. Mushtaq
18 Mohammed WSB 1463 at paragraphs 104 to 107. It is submitted that
19 the following issues arise in the context of the evidence of LMCS and
20 Paria in relation to the responses to the accident on Friday the 25th of
21 February, 2022.

22 1: Whether a Delta P hazard was identified in the development of the
23 scope of works, the method statement, the risk assessment and
24 emergency response plans.

25 2: Whether LMCS and/or Paria employed sufficient safeguards and
26 measures to ensure the safety of the divers and the prevention of the
27 accident.

1 3: Whether the efforts made by LMCS and/or Paria for rescue were
2 reasonable in the circumstances to effect a rescue of the divers from
3 the pipeline.

4 I want to deal with Sunday, the 27th of February, 2022.

5 **Mr. Chairman:** Thank you. Before you deal with that, am I right in
6 understanding this? From Paria's point of view as we have it at the
7 moment, they consulted widely with the experts in the field and
8 ultimately all of those experts said it's too dangerous?

9 **Mr. Maharaj SC:** Yes, My Lord.

10 **Mr. Chairman:** Only potential rescue available was that which was
11 being proposed by LMCS?

12 **Mr. Maharaj SC:** From the evidence.

13 **Mr. Chairman:** From the evidence that we have so far, is that the
14 position?

15 **Mr. Maharaj SC:** Yes.

16 **Mr. Chairman:** Thank you.

17 **Mr. Maharaj SC:** On Sunday the 27th of February, 2022 at about
18 3.38 a.m., while LMCS was attempting to remove the habitat after
19 having been given permission to do so, the habitat fell to the sea floor.
20 At around 10.00 a.m. there was a meeting between LMCS and Paria.
21 The evidence of Paria is that at this meeting Kazim Ali Sr. stated that
22 he accepts that his son was dead and wanted to recover the bodies of
23 the divers for the families. He proposed an exercise to remove the
24 scuba tanks from the line. The diver Conan Beddoe in attendance was
25 willing to perform the exercise.

26 Paria requested a method statement, a risk assessment
27 and an emergency response plan for the exercise. Evidence of

1 Mushtaq Mohammed WSB 1464 to 1466. The evidence of LMCS is
2 that Mr. Kazim Ali Sr. was still proposing a rescue plan which was to
3 enter the pipeline and remove the tanks to determine whether the
4 divers were still alive. He told Paria that the divers may be dead but
5 LMCS still wanted a rescue plan, because, until it was proven that
6 they were not alive, it would be a rescue. Kazim Ali Sr. was shown
7 the footage of the tank in the line but LMCS indicated to Paria that the
8 bottles were empty and floating. LMCS asked for the video footage
9 to be sent so they could take it into account in the preparation of the
10 documents requested by Paria but it was never sent. LMCS then left
11 the meeting to prepare the written document. Kazim Ali Sr. evidence
12 WSB supplemental 2880.

13 Around mid-afternoon Michael Wei and Collin Piper of
14 Paria visited the field operations at Berths 5 and 6 and where the
15 filling of the riser at berth 6 was in progress for the recovery
16 operation. LMCS emailed the method assessment and risk assessment
17 about 2.19 p.m. At around 5.00 p.m., at a meeting between LMCS
18 and Paria, dive experts Rolph Seales and Krishna Fuentes as well as
19 Lieutenant Hargreaves of the coast guard advised that LMCS'
20 proposals were too risky and the incident command team heeded their
21 advice. Mushtaq Mohammed's evidence WSB 1465 at paragraph one
22 one nine.

23 It is submitted that a question arises as to whether on
24 Saturday the 26th and the 27th of February, 2022 Paria and/or LMCS
25 were still considering a rescue operation. It is further submitted that
26 the question also arises as to whether the decisions and/or actions
27 made by Paria and/or LMCS on Saturday the 26th and Sunday the

1 27th of February were reasonable and/or justifiable in the
2 circumstances. And then, to give a complete picture, on Monday the
3 28th the bodies of Kazim Ali, Yusuf Henry and Fyzal Kurban were
4 recovered. On Wednesday the 2nd of March the body of Rishi
5 Nagassar was recovered from the pipelines by Paria.

6 I want now to give a summary of the evidence of the
7 diving companies contacted by Paria and Heritage. Mitchells.
8 Mitchells were contacted at 4.30 p.m. on Friday the 25th of February
9 by Rolph Seales who requested Mitchells to mobilize a team to rescue
10 some divers. The Mitchells team arrived at Badger Dock at Paria at
11 around 8.40 p.m. on Friday with surface air supply equipment.

12 Rolph Seales told them to remain on standby. After 1.00
13 a.m. on Saturday the 26th of February, 2022 Mr. Seales asked them to
14 come around to the shipping facility at Berth 6. They went there and
15 viewed the footage of the underwater camera which showed blockage
16 in the pipeline. Based on what was seen by Mitchells, they
17 determined it was unsafe to send in one of their divers. At 2.00 a.m.
18 Mitchells was told to prepare a decompression chamber for Paria.

19 Eastern evidence—evidence of Eastern. According to
20 Andy Johnson, Eastern was contacted at 11.41 p.m. on Friday, the
21 25th of February, 2022 by Heritage and informed that there were four
22 persons trapped in a pipeline. Eastern arrived on Saturday morning at
23 12.30 a.m. At approximately 1.25 a.m., the team was briefed by the
24 incident commander. The incident commander advised that at the
25 time that the incident occurred and the possibility that Paria may want
26 to engage Eastern for a rescue. He also advised that due to the
27 variables around the incident that Eastern should prepare themselves

1 for a retrieval and not a rescue due to the possibility that the divers
2 may have expired.

3 Andy Johnson of Eastern asked to be taken to the site to
4 conduct a visual and risk assessment. At about 2.35 a.m. on Saturday
5 the 26th of February, 2022 his team arrived at berth 6 and conducted
6 an assessment. When they returned to the incident command post,
7 Andy Johnson then told the incident commander that his team would
8 not be able to make an entry to perform the rescue operation as
9 approximately 120 feet of the 1,200 foot pipeline was filled with
10 water based on what was seen on the video footage, and that the
11 rescue required a diving team. Eastern remained on standby offsite
12 for the next 12 hours. There was no further communication with
13 Eastern.

14 Hull support. Heritage did contact Hull on the afternoon
15 of Friday, the 25th of February to see if they could provide emergency
16 subsea services but did not provide the details. Hull was unable to
17 mobilize a crew. Arrangements were made with Hull for the
18 provision of a decompression chamber at Hull's facility on the 26th of
19 February, 2022. Hull also advised that the cutting of the pipeline was
20 too risky.

21 OTSL: on Friday, the 25th of February, 2022 in the
22 afternoon OTSL was contacted by Paria to provide diving support for
23 the missing divers. OTSL arrived at Paria at about 8.30 p.m. on
24 Friday, the 25th of February, 2022 and remained on standby until 5.30
25 a.m. on Saturday and were not called upon by Paria. On Friday night,
26 Michael Wei contacted Antonio Donawa of OTSL to enquire as to
27 what he thought happened and put him on speaker with the incident

1 command team. Mr. Donawa told the incident command team that he
2 believed it was a Delta P and he explained what such an incident was
3 because the incident command team did not appear to understand it.
4 Before the recovery of the bodies, Mr. Donawa was contacted to
5 determine whether he would do a penetration dive to look for
6 survivors. He declined because of safety issues.

7 I think we owed a duty to draw to the Commission's
8 attention the communications which the families of the divers had
9 from Friday, 25th February to the recovery of the bodies and I give a
10 summary, a short summary. It is submitted that an issue arises on the
11 evidence as to the manner in which the families of the deceased divers
12 were supported and communicated with following the incident.

13 The families of Rishi Nagassar, Yusuf Henry and Fyzal
14 Kurban were in the car park outside Paria's compound from Friday,
15 25th February, 2022 to Friday the Sunday the 27th of February, 2022
16 sickening information on the rescue efforts. Both the families of Rishi
17 and Fyzal indicated that they were informed of the decision to
18 transition to recovery on the news on the evening of Sunday, the 27th
19 of February, 2022. The evidence of LMCS is that they had difficulty
20 in contacting Rishi and Yusuf families but they gave the contact
21 details which they had to Paria. Paria's evidence is that the families
22 were updated through a meeting at the staff club on Saturday, the 26th
23 of February 2022 and thereafter by way of WhatsApp. Mushtaq
24 Mohammed's evidence is that the families were informed of the
25 decision to move to recovery on the evening of the 26th of February.
26 They were informed by him.

27 And a short conclusion. It is submitted in conclusion that

1 the following are some of the main issues which arise for
2 determination by the Commissioners from the evidence that we have
3 so far before the Commission.

- 4 1. Whether the scope of works was planned to account for
5 Delta P hazards.
- 6 2. Whether the method statements and/or the risk assessments
7 and/or the job safety hazards prepared by LMCS and
8 reviewed and accepted by Paria recognized and addressed
9 the possibility of a Delta P hazard.
- 10 3. Whether LMCS' and/or Paria's emergency response plan
11 recognized and/or made provisions for an emergency
12 scenario arising from a Delta P hazard.
- 13 4. Whether LMCS and/or Paria considered or ought to have
14 considered the use of commercial surface supply air instead
15 of scuba air in the performance of the scope of works and in
16 development of an emergency response plan.
- 17 5. How much line content was removed from sealine 36
18 between berth 5 and Berth 6.
- 19 6. What was the contractual arrangement between Paria and
20 LMCS as to the quantity of the line content to be moved
21 from Berth 5 and Berth 6.
- 22 7. Was LMCS authorized by Paria to remove on Friday, the
23 25th of February, 2022 the inflatable plug which was
24 removed by the divers before the Delta P incident occurred.
- 25 8. Did Paria and/or LMCS employ sufficient safeguards and/or
26 measures to ensure the safety of the divers and to prevent the
27 accident and the deaths.

1 9. Did Paria and/or LMCS employ sufficient safeguards and/or
2 measures to rescue the divers?

3 10. Did Paria and/or LMCS communicate with the families of
4 the divers following the accident and did they do so in a
5 compassionate and supportive manner?

6 Thank you very much Commissioner, Mr. Chairman and
7 Commissioner Wilson.

8 **Mr. Chairman:** Thank you. Thank you very much, indeed. Forgive
9 me for allowing Mr. Maharaj to go on to conclude his address eating
10 into our lunch hour. I shall ensure everybody gets a full hour, all
11 right, but, when we come back, can we just be clear what's next to
12 happen? I think the first thing that's going to happen is that we will
13 hear from Mr. Peterson, correct?

14 **Mr. Peterson SC:** Yes.

15 **Mr. Chairman:** I indicated previously that each address should be an
16 hour or less. I note that Mr. Peterson's brevity is to be commended
17 and I have had an advance copy of what he proposes to say. I'm
18 grateful for that. I see from you, Mrs. Persaud -Maraj that it's a rather
19 compendious, if I could put it like that, statement that you're
20 proposing to make. I wonder if you can do a—spend a little of your
21 lunch hour culling it in such a way that we can conclude yours today?
22 Because it looked to me like it was a little bit more than an hour.

23 **Mrs. Persaud - Maraj:** Certainly, Mr. Chairman. That was prepared
24 for we would have heard Sr. for the Commission give his opening.

25 **Mr. Chairman:** Right.

26 **Mrs. Persaud- Maraj:** So in light of what has already been
27 presented, which has covered the gamut of this entirety, both pre-

1 contract, what happened during and then afterwards and then spent an
2 enormous amount of time on the evidence presenting it as it is, I think
3 certainly I will be much briefer than I had anticipated.

4 **Mr. Chairman:** I am very gratified to hear that. You can be assured
5 that been given a copy of it, it will be taken into account in any event.
6 All right? So I'm grateful for that. So, I'm hopeful then that we'll be
7 able to conclude both of your addresses this afternoon and then we'll
8 move to the remaining issues and then Mr. Gilbertson has an
9 application to make, so I'll be grateful for that, thank you very much
10 indeed. Thank you. So we'll come back at 20 past 2.00 please?
11 Twenty past 2.00.

12 **1.19 p.m.:** *Enquiry suspended.*

13 **2.20 p.m.:** *Enquiry resumed.*

14 **Mr. Chairman:**...either film it or, um, take stills or both, er, and I
15 have said that whoever does that would give an undertaking to, er,
16 Paria and their counsel, that, er, they will get it first, and if they have
17 any objections to it being put on the website, they will indicate them
18 to us and I'm sure we will come to an accommodation so that if there
19 is any issue about security and things like that, we can be sure that, er,
20 that we don't trespass in that particular area. So I'm very pleased to
21 say that's what we're going to do on Wednesday. We will then
22 resume the evidence again on Thursday. So what was scheduled to be
23 on Wednesday will now be on Thursday, and then what was
24 scheduled for Thursday will be put to the 5th of December. All right?
25 So thank you very much for that.

26 **Mr. Maharaj SC:** Just one matter. I spoke to Mr. Peterson and he
27 has agreed that he will see about drafting the undertaking.

1 **Mr. Chairman:** He's going to do it, is he?

2 **Mr. Maharaj SC:** Yes.

3 **Mr. Chairman:** Good. Well, that's even better. Saves you having to
4 do work. Right. Marvellous. Well then I do ask Mr. Peterson if he'd
5 like to address the Commissioners.

6 **Mr. Peterson SC:** Thank you very much Mr. Chairman and your
7 fellow Commissioner. I will do so not as extensively as I would like
8 to. I would be short, but I first want to put on record and commend
9 Mr. Maharaj for putting all sides out there in the national community.
10 I must express that I was a bit anxious when he was doing some, but I
11 know he will—eventually he came to all which is, at the end of the
12 day, what is important. And as I say the end of the day, it reminds
13 me, Sir, that at the end of this Commission I hope that you would have
14 been able to fully discharge your Terms of Reference and be able to
15 assist in uncovering how this incident happened and make
16 recommendations for it not to recur, reoccur.

17 This Commission, as you have said, Mr. Chairman, this
18 morning, it's not about ascribing blame, it is about finding out what
19 transpired and how it could be prevented in the future. This Enquiry
20 largely concerns an examination of the circumstances which led to the
21 tragic loss of life of four employees of LMCS Limited, namely Kazim
22 Ali Jr., Rishi Nagassar, Yusuf Henry and Fyzal Kurban who were
23 working on a line at Paria on the 25th of February, 2022. Whilst these
24 men were working they were working as employees and under the
25 direction and control of their employer, LMCS Limited on that sealine
26 riser which is a facility owned by Paria trading Company Limited.

27 Those who attend these proceedings today would no

1 doubt recall that from the time the men were first reported as missing
2 at sea on February 25th, 2022, up until the 3rd of March, when the last
3 bodies of the four men was recovered, stories about them and the
4 ongoing attempts to find them and rescue them dominated both the
5 print and electronic media. As events unfolded, much to the nation's
6 collective despair, initial feelings of hope dissipated and ultimately
7 gave way to an immense sense of loss as the true nature and extent of
8 the tragedy became apparent. This loss was felt across the national
9 community and the grief occasioned by it endures even to today, and
10 the video this morning I'm sure went a long way in reviving sad
11 memories.

12 The sense of loss experienced by the families of these
13 men, their loved ones and their colleagues is undoubtedly
14 immeasurable. Mr. Chairman and fellow Commissioner, it is for this
15 reason and in honour and recognition of the lives of these men and the
16 surviving diver, Mr. Christopher Boodram, that both Paria and
17 Heritage have voluntarily given their commitments to participate in
18 this Commission of Enquiry to assist the Commission in getting to the
19 root cause of these unfortunate events.

20 I must say that, as earlier indicated, the eventual
21 declining of participating in the additional process of interviews is not
22 intended in any way to frustrate the work of this Commission. In fact,
23 my clear instructions are to assist fully with the Terms of Reference of
24 this Commission, because, as part of our consideration in not taking
25 up that interview process is that we were of the view that what we did
26 not say in the statement we knew an opportunity would be given to
27 say it live under oath in the witness box for the whole nation to see so

1 that the nation can ascertain what did transpire.

2 As the Commission well knows, what happened on that
3 fateful day and the reason or it falls squarely in the Terms of
4 Reference of this Enquiry and those, I have no doubt, will be
5 determined. In this regard, and in keeping with the commitment of
6 Paria and Heritage, the management and staff of these organizations
7 have already provided this Commission with what we respectfully
8 think are extensive statements and materials relative to the Terms of
9 Reference under which this Enquiry is operating.

10 In addition, those persons from Paria and Heritage have
11 also voluntarily given statements and have offered to come to the
12 Commission and answer under oath questions, any questions, posed to
13 them by the Commissioner and any other interested party given
14 standing to pose those questions. It is hoped, and we've expected,
15 that the testimony of these persons would be illuminating and helpful.
16 Their testimony will demonstrate not only to the Commission but also
17 to the national community that many of the unfortunate and accurate
18 reports in the media to date which heaped blame, that word again,
19 upon Paria or Heritage for the death of these men were wholly not
20 justified.

21 The evidence which Paria has provided and which is
22 supported by contemporaneous documentation will disclose a clear
23 picture and will take those listening to the proceedings of this Enquiry
24 along a careful, structured journey to the truth and that truth is to be
25 determined by you, Mr. Chairman, and your fellow Commissioner at
26 the end of the day, but that journey will begin, as Mr. Maharaj has
27 started to set it out, and I was attracted to the order in which he did it,

1 would begin with the process by which LMCS, the employer of the
2 deceased men, and Christopher Boodram, were selected as the
3 contractor to execute certain works on the pipeline in question. Then
4 it will proceed to the award of the contracts for those works to LMCS.

5 A point to note, Mr. Chairman and fellow Commissioner,
6 LMCS is a contractor with competencies in this area, or at least held
7 themselves out so to be, which executed similar works for Paria, a
8 point that we'll wish to emphasize throughout this Commission, and
9 also a predecessor of Paria. The evidence would explain Paria's
10 mandatory permits to work system which contractors, all contractors,
11 including LMCS, are required to abide by.

12 The evidence will treat in detail with events of the 25th
13 of February, 2022, when the men were first reported as missing. The
14 evidence would reveal that LMCS wrongfully departed from the
15 Paria's permits to work system. It will also reveal that the—what we
16 consider, and I don't know the extent to which it falls within your
17 Terms of Reference, to find negligence on the part of LMCS and its
18 personnel in the execution of the works on the 25th of February, 2022.
19 Thereafter it will treat with the extensive and sustained efforts, the
20 evidence will treat with the extensive and sustained efforts of Paria
21 and Heritage under trying conditions to explore what feasible
22 solutions were available to rescue these men, against a ticking clock in
23 circumstances where the clear responsibility for the safety of these
24 men while undertaking the works in question were squarely that of
25 LMCS, not Paria. And finally, that root of evidence will take us to the
26 unfortunate stage of having to recover the bodies of these men.

27 Paria's evidence will also highlight critical facts

1 concerning the true nature and extent of the relationship between it
2 and LMCS and the responsibility for the safety of these men, about
3 which there has been little national comment or attention thus far.
4 That evidence will demonstrate, among other things, one, that Paria
5 did not have and did not need to have the expertise to undertake the
6 specialist works which the deceased men were undertaking on the
7 pipeline. That Paria in the knowledge of it that it lacked such
8 knowledge and expertise and such skill, engaged a tendering process
9 with a view to retaining the services of a suitable qualified contractor
10 to execute the required works.

11 The evidence would also show, that, pursuant to that
12 process and at the time it was undertaken by LMCS, LMCS emerged
13 as an experienced and qualified contractor with a proven track record
14 of carrying out that type of work which the deceased men had
15 undertaken. The evidence will also show, that, pursuant to Paria's
16 contractual relationship with LMCS, LMCS was contractually
17 responsible for providing an adequate system, supervision, labour and
18 material to undertake the said works.

19 The evidence will demonstrate that the responsibility for
20 the safety of the deceased men and Mr. Christopher Boodram, while
21 they were carrying out their works, rested squarely on the shoulders of
22 LMCS, pursuant to its contractual obligations to Paria, and,
23 accordingly, any attempt to impose such responsibility upon Paria, in
24 my respectful view, will be misplaced.

25 Paria's witnesses will also provide the Commission with
26 a detailed understanding of the permits to work regime at Paria which
27 is intended to control risks associated with works being carried out on

1 Paria's compound and the works in particular that were carried out by
2 LMCS. The evidence will be led by Paria would show—the evidence
3 to be led by Paria will show that each issued permit to work
4 specifically identified the tasks which LMCS were required to
5 undertake and LMCS was required to operate within the parameters of
6 the permits issued.

7 All told, there were five permits to work, three of which
8 pertained to berth 6, one pertained to berth 5 and one pertained to the
9 Pointe-a-Pierre harbour. On the morning of the 25th of February,
10 2022 the permit of focus, in my respectful view, is permit to work
11 number 9320. Mr. Maharaj had alluded in his opening, that being the
12 main permit in relation to berth number 6 where the incident occurred
13 and that permit had list specific tasks to be undertaken. Some were to
14 remove and install the 50-inch flange, remove and install the 30-inch
15 riser pipe, remove 30-inch solid blank and conduct pressure tests and
16 flank weld, remove chamber and blank on the top of the new riser.

17 Most notably, however, Mr. Chairman and fellow
18 Commissioner, there was no job or task described on permit to work
19 9320 issued on that morning of the 25th of February, 2022 that
20 required the removal of either the mechanical plug or an inflatable
21 plug, both of which were installed in the pipeline in the preceding
22 days—Mr. Maharaj gave the exact dates this morning—in order to
23 allow for the maintenance and repair works on the pipeline to be
24 safely conducted.

25 Such plugs, once securely placed, were intended to
26 prevent the development of a combustible environment since hot
27 works were authorized under that permit to work. The plugs also

1 were intended to prevent a toxic environment from developing which
2 could have been caused by the escape of gases from in the pipeline
3 into the area of the hyperbaric chamber where the LMCS employees
4 would have been engaged in works.

5 Glaringly, and I say glaringly, Section B 1 to the Paria's
6 said permits to work specifically required that a migration barrier was
7 to be used. This precautionary requirement was an expressed and
8 direct instruction inserted on the permits to work 9320 which was
9 issued to LMCS workers by Paria site authority. Accordingly, it was
10 plainly not in Paria's contemplation and could not, in my respectful
11 view, reasonably be within Paria's contemplation that the mechanical
12 plug and/or the inflatable plug was to be removed by LMCS on the
13 25th of February, 2022. No approval to do so had been applied for,
14 no approval to do so had been given under Paria's permits to work
15 system. Put differently, Paria was entirely in the dark as to the
16 intended removal of the mechanical plug and the inflatable plug on
17 that fateful day.

18 Further, and in any event, Paria's evidence will
19 demonstrate, and I hope clearly, that LMCS personnel removed the
20 mechanical plug at the wrong time out of the proper or correct
21 sequence and that fact, taken together with the additional fact that the
22 attempts to remove the inflatable plug was done in a manner which
23 was totally contrary to the manufacturer's specifications and/or
24 instructions. These combination of events in my respectful
25 submission amounted to the main or dominant cause of the tragic loss
26 of life which occurred on that day, as well as the injuries sustained by
27 Mr. Boodram.

1 The rescue operations: such loss of life brought into
2 sharp focus the emergency response of LMCS and Paria which would
3 naturally fall for consideration in this Enquiry when you are
4 discharging your Terms of Reference, Sir. In this connection, Paria
5 will demonstrate that its tender process required LMCS, along with all
6 other tenderers, to submit an emergency response plan or policy as
7 part of its tender submissions. The evidence will disclose that the
8 tender process envisaged by LMCS as the contractor undertaking the
9 work was directly responsible for any immediate emergency response
10 with appropriate follow-up support from Paria thereafter.

11 To this end LMCS was required to have, among other
12 things, divers and other diving support equipment to facilitate an
13 emergency response, an effective emergency response. Significantly,
14 Paria's evidence will reveal that LMCS failed to notify Paria of the
15 incident at the time it occurred and that Paria, upon learning of the
16 incident, actively pursued LMCS for information with a view to
17 providing the support and any resources that it could have deployed.

18 Paria's representatives will testify that because of LMCS'
19 failure and/or blatant refusal to provide information to Paria,
20 significantly impaired Paria's participation in the rescue process in the
21 initial stages. Nonetheless, Paria mobilized its resources based on the
22 limited information it had, convened its incident command team, ICT,
23 strategically deployed assets offshore and stationed personnel on site
24 to provide real time situation reported to feed its ICT team.

25 Mr. Chairman, I pause from what I have submitted to say
26 this. When I was listening to Mr. Maharaj's presentation this morning
27 it dawned on me, if LMCS has, as they claimed, been forthcoming

1 with information and all knew, now everyone knew that the men were
2 in the pipe when the incident occurred. Why would everybody be
3 searching out in the sea, because there's clear evidence
4 uncontroverted, uncontradicted that there was a wide sea search, if it
5 was all common knowledge that when the incident occurred that the
6 men were sucked into the pipe, then it will be a mystery to explain
7 why there would have been that extensive search at sea.

8 The evidence will also show, Mr. Chairman, that Paria,
9 acting responsibly, notified the relevant state agencies including the
10 coast guard, the fire services and the Occupational Safety and Health
11 Agency. Further, Paria's evidence will demonstrate that after it was
12 discovered, after it was discovered that the divers were in the pipe, its
13 personnel tirelessly worked around the clock with a view to
14 developing a plan with the assistance of relevant experts, and, Mr.
15 Maharaj fully chronicled the extensive consultation that Paria
16 deployed in trying to ascertain the advice as to what was the best
17 method in order to rescue these men.

18 But, Mr. Chairman, the efforts at that time had to be
19 executed without putting other lives at risk at that stage, and that
20 probably would explain the paragraph in officer Hargreaves'
21 statement that they did not know the existing conditions in the
22 pipeline at the material time. Had they just gone ahead and deployed
23 men into that pipeline without knowledge or intel as to the condition
24 of that pipeline, the Terms of Reference of this Enquiry may be wider.

25 Ultimately, despite the solicitation of expert advice from
26 multiple sources, no safe or workable plan emerged which would have
27 allowed for the extraction of the divers before their untimely demise.

1 I pause here to say, when we were preparing submission to the
2 Tribunal and looking at some of the material that had been—for the
3 Commission and some of the material posted on the sites, I asked
4 members of the team, do we have anyone indicating in any statement
5 that on the evening of the 25th of February, 2022 that someone from
6 any entity in Trinidad came up with a plan and say, “This plan, I am
7 aware that this plan is bound to work, I am aware of the conditions
8 inside that pipe, I have done this before, I have seen men being
9 rescued from a 30-inch pipe before and this is how we go about it”, I
10 could find no such reference or evidence. But we still have some
11 time, Mr. Chairman. It may come.

12 In examining the actions of Paria’s personnel, it is to be
13 expected that this honourable Commission and the public at large will
14 have at the forefront of their respective minds that difficult decisions
15 fell to be made in unprecedented circumstances on the limited
16 information in a compressed time frame and in this situation which
17 was dynamic on that Friday evening. If the Commission examines the
18 conduct of Paria’s personnel through these lenses, as we submit it
19 should, Paria is confident that its actions over the relevant period
20 would be found to be reasonable, appropriate, well-intentioned and
21 well meaningful criticism if such a standard is to be achieved.

22 It is useful to observe, Mr. Chairman and fellow
23 Commissioner, that although the Commission will be told, consistent
24 with earlier reports appearing in the press, that Paria actually
25 prevented LMCS from conducting its own rescue operations in the
26 pipeline, this simply is not true. Paria’s witnesses will testify that
27 although Paria, in an effort to guard against risk of injury or loss of

1 lives of additional personnel, not knowing the conditions within the
2 pipeline, those conditions being unknown, did advise that individuals
3 should not be entering the pipeline. The truth be told that those
4 instructions were disregarded and LMCS continued their efforts
5 uninterrupted until nightfall. Indeed, it was during the course of this
6 extremely high-risk activity that Christopher Boodram was found.

7 Mindful of its responsibility and having solicited expert
8 advice widely, a decision ultimately, and this is no decision that
9 would be made lightly, ultimately had to make a decision to move
10 from and to transition from rescue to recovery. That is a decision
11 which many people will not wish they would ever have to make but
12 it's one that fell on that occasion on members of Paria's staff to make.

13 Paria were provided full details of the recovery efforts
14 utilized by its employees, and, most respectfully, the mechanism that
15 was used to displace the contents of the pipe which resulted in the
16 recovery of the last deceased person and on the 3rd of March, 2022.

17 In conclusion, Mr. Chairman, and fellow Commissioner
18 Mr. Wilson, while Paria and Heritage appreciate that this Commission
19 of Enquiry brings little to no comfort to Christopher Boodram and the
20 families of the deceased, they recognize that it's an important
21 exercise, that the facts as to what caused that tragic loss of life must
22 be discovered, because, as a nation we need to know that we don't
23 make this mistake again.

24 Both Paria and Heritage are committed to this goal,
25 accordingly affirmed their commitment to assist in this exercise and to
26 attend and give evidence. They do so in the sincere hope that the
27 findings of this honourable Commission will go some way towards

1 avoiding any similar incident in the future and expect that the
2 Commissioners, with the assistance of Counsel to the Commission,
3 will ensure that the fact-finding process which they engage in would
4 approach this exercise with an open mind. I mean nothing when I say
5 that. I just reaffirm it.

6 I have utmost respect for Counsel for the Commission
7 and confidence in the Commission that it will approach it with an
8 open mind and resist the natural inclination, because of the
9 circumstances or temptation, to ascribe blame and rush to judgment. I
10 say this with the greatest respect and deference to you, Mr. Chairman
11 and your fellow Commissioner. I thank you.

12 **Mr. Chairman:** Thank you very much, Mr. Gilbertson. I wonder if I
13 could, please, just ask you a couple of questions about the evidence
14 you're proposing to call because you'll understand that we don't have
15 the full picture at the moment and I'm assuming that you do.

16 So, you said earlier that, and I quote, you said Paria was
17 entirely dark as to the intended removal of the mechanical plug and
18 the inflatable plug on that fateful day.

19 **Mr. Peterson SC:** On that morning.

20 **Mr. Chairman:** And I understand what you're saying, so that is
21 obviously an issue that we're going to have to determine. Can I ask
22 you this, though? Is it going to be part of your case, in respect to your
23 client, that Paria didn't or were not obliged to exercise any oversight
24 over that particular job at that particular time?

25 **Mr. Peterson SC:** Well, Sir, the difficulty with that—and that is a
26 fair question—the difficulty with that, Sir, is that this is a highly
27 specialized exercise and Paria, realizing that it did not have the

1 internal knowledge and skill to execute the work, that's why they
2 went to the market and that is why LMCS, having a track record of
3 similar works, was retained.

4 **Mr. Chairman:** I'm not sure that really answers my question. I just
5 want to know whether or not it is part of your case or will be part of
6 your case that Paria did or did not have direct oversight on whether
7 the plugs were removed or not removed. I just want to know whether
8 you said they did or they didn't or they—

9 **Mr. Peterson SC:** Well—

10 **Mr. Chairman:** —they didn't feel they need to because they had
11 somebody else doing the job. I just don't know.

12 **Mr. Peterson SC:** Well, Sir that the difficulty that I'm having. I
13 understand the question, I understand the nature of the question, but
14 the term, "direct oversight", is it—well I don't want to be asking the
15 Commissioner questions, but I don't have—

16 **Mr. Chairman:** Feel free. We're not in court. This is an Enquiry, so
17 feel free please.

18 **Mr. Peterson SC:** Well that's what—they will have general—
19 because it's on their compound they will have general supervisory
20 oversight.

21 **Mr. Chairman:** Right.

22 **Mr. Peterson SC:** But with respect to the technical stages of how a
23 plug to be removed and when it is to be removed, I think that that was
24 totally within the bosom of LMCS.

25 **Mr. Chairman:** Right.

26 **Mr. Peterson SC:** But to answer your question, there will be some
27 residual supervisory oversight.

1 **Mr. Chairman:** Residual supervisory oversight.

2 **Mr. Peterson SC:** And that will be of a general nature, not with
3 highly technical aspects of the job.

4 **Mr. Chairman:** General nature.

5 **Mr. Peterson SC:** That's why they went out.

6 **Mr. Chairman:** Of a general nature. But you said generally
7 oversight of a residual supervisory.

8 **Mr. Peterson SC:** Yes. That's why they went out for technical
9 assistance. Thank you very much, Mr. Chairman. Unless I could—

10 **Mr. Chairman:** Thank you. No, no, I think there was one other.
11 Just give me one second. Um—oh yes, only this. You also said that
12 nobody really knew what the position was inside the pipe because—
13 well, we've heard already evidence about putting down various
14 cameras and crawlers and things of that kind to see what the
15 conditions were, and we've seen some of the footage, haven't we, but,
16 in a sense, when Mr. Boodram came out of the pipe and was telling
17 everybody, "Look, they're alive", what was done at that stage to try
18 and find out from him what the condition of the pipe was? I mean,
19 there you had somebody who literally travelled the length of the pipe.

20 **Mr. Peterson SC:** Well, he could not have travelled the length of the
21 pipe.

22 **Mr. Chairman:** Well the length of the pipe where they were,
23 because as we've heard, they were all pretty much together to start
24 with.

25 **Mr. Peterson SC:** Well, Sir, I heard that. I heard that, um, that
26 recording, that video for the first for the first time this morning, so I
27 need to digest that, but, um, Mr. Boodram came out and he was taken

1 to the hospital and that's when he was contacted by phone to try to
2 give some information and I'm sure what he said would have been a
3 factor that would have been factored in in putting together the picture
4 as to what the condition in that pipe was. And, in fact, the footage
5 that was shown, the last set of footage to my mind was clearly
6 demonstrative of the conditions within that pipe.

7 We saw debris, we saw blockage, we saw—I think that
8 tape or that video will be viewed again in this Commission to
9 determine what the conditions were. But that tape which came after
10 Mr. Boodram came out, all of those pieces put together would then be
11 developing the intelligence as to what the condition in the pipe would
12 have been, and that is probably why the coast guard was advising that
13 we are not sending in the men, Eastern decided they're not sending in
14 their men, it's too risky.

15 **Mr. Chairman:** Well I think we could all understand that. Thank
16 you. Well, thank you very much. Thank you. Much obliged. Yes,
17 um, Ms. Persaud Maraj, have you managed to condense this?

18 **Mrs. Persaud -Maraj:** I have certainly done so—

19 **Mr. Chairman:** Oh, marvellous.

20 **Mrs. Persaud -Maraj:** —for the benefit of all.

21 **Mr. Chairman:** I see that it's five to 3.00 and do you think you'll be
22 able to conclude by 3.30?

23 **Mrs. Persaud -Maraj:** Certainly. I don't intend to spend too long.
24 My learned friend for the council has done an excellent job in
25 summarizing all of the relevant—

26 **Mr. Chairman:** Don't overflatter him, all right?

27 **Mrs. Persaud -Maraj:** [*Laughter*]—all of the relevant information

1 that inevitably is also before the public via the site. So that, to those
2 interested who would like to investigate the gamut and the extent and
3 the intricacies of what has been said, certainly any interested person
4 can so—

5 **Mr. Chairman:** They can wade through the 20,000 pages as well.

6 **Mrs. Persaud -Maraj:**—so do, which is why we are here—

7 **Mr. Chairman:** Right.

8 **Mrs. Persaud -Maraj:**—and which is why I know the esteemed
9 Chairman has allowed the opportunity to give an opening.

10 **Mr. Chairman:** Yes.

11 **Mrs. Persaud- Maraj:** And I thank you for that opportunity.

12 LMCS was one of 259 applicants who applied for
13 permanent registration with Paria, and that is for the purpose of being
14 able to perform, to be considered for the purposes of contract awards.
15 There is no contention in relation to the fact that LMCS has been
16 awarded the contract that we—part of which forms the incident which
17 took place on the 25th of February at berth number 6.

18 What we all would wish to have an appreciation of is the
19 process involved in the performance of the work by LMCS or any
20 other persons for that matter. An award of the contract is not the end
21 or the beginning or all that matters in this type of—in the oil and gas
22 industry at Paria. In fact, there is a mechanism that is enabled and
23 both of my friends would have touched on that when they talk about
24 the method statement or when they would have alluded to the fact that
25 LMCS has not provided something or the other or they have not had
26 some detail or the other in this method statement. And what really is
27 that?

1 The mechanism that comes—that is triggered by the
2 proposal in the tender is such that the contractor would present a
3 methodology as to what works are to be done. That methodology is
4 what is called the method statement. It is not a statement that is
5 incredibly detailed and fleshed out and that—there is a process that
6 occurs after the award of the contract. So at the stage where the
7 tender or the proposal has been made to the tender, there would be a
8 general and broad methodology of what works are going, or how the
9 works are going to be performed.

10 Thereafter, there is a collaborative effort in the
11 development and fleshing out, if I may say so, of the method
12 statement. And what does that process entail? Well, with—along
13 with Paria, by means of meetings and emails, telephone calls, the
14 method statement in relation to what and how the work is to be done
15 is finalized and then approved. I pause to say this very clearly. No
16 work can be done in Paria, notwithstanding a methodology presented
17 with the proposal and the acceptance of that contract, without an
18 approved method statement.

19 The method statement is one of many documents that are
20 required to be prepared in relation to performance of the contract.
21 Along with the method statement there is a job hazard analysis and a
22 risk assessment, and these essentially would be formulated as a result
23 of what it is that they're supposed to do in terms of the methodology
24 stipulated in the method statement.

25 In addition, and in support of the method statement and
26 JHAs, the job hazard analysis, written aspect of the job performance
27 is, if I may call, an ancillary arm of the performance of the contract in

1 the format of HSC, that's health safety and environment monitoring
2 and risk system. And what do I mean by that?

3 Chairman would have recalled this morning Mr.—Sr.
4 explaining about something called the toolbox. That's essentially part
5 and parcel of what the HSC department is responsible for in relation
6 to the performance of the work. So now we have, when we have
7 already settled on the methodology, method statement and all of the
8 risk has been understood, we have now the performance to be done
9 based on what it is that we have in front of us in relation to the work
10 that we're contracted for.

11 In this regard, before any worker proceeds to go on to do
12 what he or she is being called upon to do on any given day, there is a
13 system of checks and balances as well as a detailed discussion that
14 takes place amongst personnel performing the work for the day. The
15 evidence of all of this process or all of the details of this process have
16 been outlined in the evidence of Ahmad Ali, Victor Dhillpaul,
17 Andrew Farah and Beverly Howe from LMCS. Those statements
18 taken as a whole and together would give us a clear picture of the
19 entirety or the gamut of that process and how it happens.

20 The HSC department is not only from the contractor,
21 meaning LMCS, but there is also a countervailing department from
22 Paria which is also armed with the information in relation to job to be
23 performed. And they are also part and parcel of the monitoring
24 system in relation to the work to be done, and it's important that an
25 appreciation of that is had because there is something called a stop
26 policy and what is the stop policy?

27 Essentially if there is a derogation, there's some kind of

1 variation from what has to be done, what was discussed to be carried
2 out or what ought to be done, then Paria or their—through their HSC
3 officer, monitoring the works to be done, has the right to stop all
4 works.

5 **Mr. Chairman:** Can I ask you—

6 **Mrs. Persaud -Maraj:** Yes.

7 **Mr. Chairman:**—what are you saying about that in relation to whose
8 responsibility it was? Are you able to identify whose responsibility—

9 **Mrs. Persaud -Maraj:** Well there are two aspects.

10 **Mr. Chairman:**—you say they had?

11 **Mrs. Persaud -Maraj:** They had the responsibility to stop if it is that
12 Paria is saying to this Commission that LMCS was doing something
13 that it ought not to be doing by, that is, the removal of the plugs.
14 They were there, they were present or some member of Paria was
15 present observing the works that were being carried out.

16 **Mr. Chairman:** Fine, but—

17 **Mrs. Persaud- Maharaj:**—within the chamber—

18 **Mr. Chairman:**—whoever that person was is it your case, then—

19 **Mrs. Persaud -Maraj:** That person was Mr. Kirk Scott.

20 **Mr. Chairman:** Right.

21 **Mrs. Persaud- Maraj:** Kirk Scott.

22 **Mr. Chairman:** Kirk Scott.

23 **Mrs. Persaud -Maraj:** I don't believe he had provided a—

24 **Mr. Chairman:** He's from Hansen or Henson, isn't he?

25 **Mrs. Persaud -Maraj:** Kenson.

26 **Mr. Chairman:** Kenson, close.

27 **Mrs. Persaud- Maraj:** Which is a contacted party for the purpose of

1 HSC—

2 **Mr. Chairman:** Right.

3 **Mrs. Persaud- Maraj:**—on behalf of Paria.

4 **Mr. Chairman:** Okay. So that I understand what you're saying—

5 **Mrs. Persaud Maraj:** Yes.

6 **Mr. Chairman:**—you're saying, contrary to what we've just heard,
7 that the responsibility for ensuring the stages of work is being
8 overseen by somebody and you say that's this Kirk Scott character
9 from Henson—

10 **Mrs. Persaud- Maraj:** It falls on Paria.

11 **Mr. Chairman:**—employed by, well I don't think directly, indirectly
12 employed by Paria is that right? He's a subcontractor also.

13 **Mrs. Persaud- Maraj:** Well there would be a structure within his
14 employment with Kenson.

15 **Mr. Chairman:** Right. Which is—

16 **Mrs. Persaud- Maraj:** But ultimately it pulls back and the arrow
17 points to—

18 **Mr. Chairman:** However it was and however it works—

19 **Mrs. Persaud- Maraj:**—to Paria.

20 **Mr. Chairman:**—your case is—

21 **Mrs. Persaud -Maraj:** Yes.

22 **Mr. Chairman:**—that that was under the control of Paria.

23 **Mrs. Persaud- Maraj:** Certainly.

24 **Mr. Chairman:** And that they have the power and should have
25 exercised it to stop. Is that what you're saying?

26 **Mrs. Persaud -Maraj:** Certainly I'm saying that, and the evidence
27 that is before this Commission we would demonstrate that Paria had,

1 in fact, utilized its stop work policy at various points in time, well at
2 least on one occasion, and had gone into an investigation of the, this is
3 the incident alluded to by my learned friend in relation to the barge
4 being taken out to berth without having permit. So it is directly
5 demonstrating that incident that Paria has that control mechanism and
6 they have used it in this contract.

7 **Mr. Chairman:** And you are saying they should have and they
8 didn't?

9 **Mrs. Persaud- Maraj:** Well they are saying that we ought not to
10 have pulled the plug.

11 **Mr. Chairman:** Right.

12 **Mrs. Persaud- Maraj:** So if it is that we're not supposed to—there
13 were two plugs and I don't wish to go back through what my learned
14 friend has said.

15 **Mr. Chairman:** I think I get the point.

16 **Mrs. Persaud- Maraj:** But we're aware that there were two plugs
17 and it's not a simple plug that we can just simply pull. These things
18 take process. There is an unbolting process and it takes some time
19 and the evidence will that when somebody is observing that, they had
20 the moment to say this is not work that ought not to be carried out.
21 But not—no such, no such stop was made at the point in time. It is
22 only upon the second plug being taken out that the incident occurred.
23 So one plug was already out when the incident had occurred.

24 **Mr. Chairman:** Well both plugs were out.

25 **Mrs. Persaud -Maraj:** One plug was completely out and had gone to
26 the seabed and they were in the process of taking out the inflatable
27 plug which is the first and the lower—

1 **Mr. Chairman:** Right.

2 **Mrs. Persaud -Maraj:**—of the two.

3 **Mr. Chairman:** Right.

4 **Mrs. Persaud- Maraj:** Yes?

5 **Mr. Chairman:** Yeah. They had been deflated.

6 **Mrs. Persaud- Maraj:** Pardon?

7 **Mr. Chairman:** It had been deflated.

8 **Mrs. Persaud -Maraj:** It was in the process of being deflated if I—if
9 I can recall the evidence correctly, please.

10 **Mr. Chairman:** Yeah. Well I think it went down a lot.

11 **Mrs. Persaud -Maraj:** Yes.

12 **Mr. Chairman:** Yes.

13 **Mrs. Persaud- Maraj:** We will also hear in the evidence in relation
14 to the assumptions that were made on that plug later on.

15 **Mr. Chairman:** Okay.

16 **Mrs. Persaud- Maraj:** And this is perhaps going into the details of
17 the evidence that the Commission would have to—

18 **Mr. Chairman:** I don't want to get—I'm sorry, I side-tracked you
19 from—I just want—because obviously I was asking Mr. Gilbertson
20 what the position was, er, what he said about oversight and you were
21 touching on it. I just want—

22 **Mrs. Persaud -Maraj:** Yes.

23 **Mr. Chairman:**—to be clear—

24 **Mrs. Persaud- Maraj:** Yes.

25 **Mr. Chairman:**—about what you're saying and he's saying.

26 **Mrs. Persaud- Maraj:** Yes.

27 **Mr. Chairman:** Do you follow? All right, so please, carry on where

1 you were.

2 **Mrs. Persaud- Maraj:** Yes. So, in addition to the system that I've
3 just outlined, there is the Paria permit to work system that we've
4 heard about. The Paria permit to work system, the PTW system, is
5 inherent to Paria's structure and procedure. Before the company can
6 have that, er, a permit to work, their officers need to be trained in the
7 permit to work system, so—in order to co-sign or countersign the
8 permit that is issued to them. So, Paria has its own training in relation
9 to the permit, their permit to work system, and this permit to work
10 system now is secondary or a second or additional to the systems in
11 place in relation to the statements and the job hazard and the work—
12 stop work policies that are usually employed in this kind of—in these
13 kinds of contracts.

14 The permit to work system incorporates, however, the
15 method statement and the JHAs, so that this permit to work is a
16 document and it is part and parcel of the proceedings before this
17 honourable Commission where the method statement for the works
18 and the details of the work that has to be carried out is usually in that
19 document together with whatever hazards whatever risks are
20 associated with the job to be done on that day. That is important for
21 us to understand because Paria is saying, by the evidence that they
22 have put and what counsel has said today, that the permit to work
23 system that they have and the permit that was issued did not authorize
24 the work that was done and we will demonstrate differently.

25 As explained earlier, in relation to the—in relation to the
26 methodology or the method statement that was presented, a
27 comprehensive understanding of the steps was discussed. In addition

1 to a discussion and having the steps pointed out in a document
2 attached to the permit to work, we have email correspondence and
3 there would have been telephone conversations, et cetera, in relation
4 to the mechanisms or the steps that had had to have been employed on
5 that day. So to say now that they were not supposed to pull that plug
6 would indeed be a surprise to us, having regard to all of the stages and
7 checks and balances that LMCS would have gone through during the
8 performance of this contract.

9 The incident happened. If it didn't, this honourable
10 Commission would not have been commissioned, perhaps, but an
11 incident happened and unfortunately the cause of that incident has to
12 be probed. Much has been placed before the Commission in relation
13 to something called Delta P or the differential pressure. In the
14 statement of Kazim Ali Sr., who was the lead in engineer and who has
15 considered in his method, in the preparation of the method statement
16 the methodology to be employed, he explains and he goes into his
17 evidence and has also supplied to the Commission a picture diagram
18 of a model created by him in relation to the information supplied to
19 LMCS, and the—during the course of the invitation to bid which
20 formed the basis of his preparation of the method statement.

21 That is important because there are certain assumptions
22 that have been made in relation to the expert opinion and the expert
23 report that has found itself before this Commission for its
24 consideration. The sole survivor of the incident, upon being saved,
25 said clearly to the persons present that the men were alive in an air
26 pocket. There are variations of what was said but what we
27 understand, from the evidence that is before the Commission, was that

1 the men were alive and there was an air pocket.

2 In that model prepared by Mr. Kazim Ali Sr., the
3 Commission would be able to follow his train of thought in relation to
4 the advent of air pockets in circumstances where there ought not to
5 have been any, given the model and the information provided by
6 the—in the scope of works by Paria. So, in relation to what or how it
7 has happened, we have not put before this Commission a root cause to
8 say this is exactly how it has happened, but what we have done, which
9 the expert report has thus far failed to address, is the issue of the air
10 pocket, and I bring that to the attention of the Commission because
11 this is an issue that has to be looked at in detail, in considering and in
12 discharging the Terms of Reference that is before the Commission.

13 **Mr. Chairman:** In relation to those air pockets—

14 **Mrs. Persaud Maraj:** Yes.

15 **Mr. Chairman:**—Mr. Boodram makes it clear—

16 **Mrs. Persaud -Maraj:** Yes.

17 **Mr. Chairman:**—that there's one section of the pipe that he was in
18 that was completely dry.

19 **Mrs. Persaud- Maraj:** Yes, yes. And the expert report that we have
20 before us has not factored that in any meaningful way if at all. And
21 that is something that certainly needs further investigation and
22 inquiry.

23 **Mr. Chairman:** Well, I shall be interested to hear your theory on it.

24 **Mrs. Persaud -Maraj:** Well it wouldn't be my theory I assure you. I
25 have no expertise in the area, which is why I have pointed Mr.
26 Commissioner to what Mr. Kazim Ali has said and certainly at the
27 time of him giving his evidence which is to be had, I think that would

1 be Thursday now, Mr. Ali would be here. He was scheduled for
2 Wednesday so it should now be Thursday, certainly that can be
3 explored in relation to the air pockets, those issues.

4 I don't intend to go back through what my learned
5 friends have said. I think the Commission has—

6 **Mr. Chairman:** Good.

7 **Mrs. Persaud- Maraj:**—has had a clear understanding and I think—
8 I, I assume that the public has an understanding of the layout and the
9 construct within which this contract and these workers were subjected
10 to, and it was done beautifully in manner that we can appreciate
11 through actual pictures and videos, et cetera.

12 What I would like to say in closing, however, is that this
13 Commission is tasked with looking into all of the circumstances
14 leading to the death of Kazim Ali, Faizal Kurban, Rishi Nagassar and
15 Yusuf Henry. Sometimes in looking at all of the circumstances, it's a
16 mere moment of one question or one decision or indecision on which
17 all of those circumstances hang. I meant that that circumstance or that
18 decision was in relation to the rescue of these men.

19 I appreciate that the Commission understands and has a
20 clear picture of the fact that a survivor from this incident is here and
21 present and who will tomorrow take the stand to say what happened,
22 and I see no reason why and the evidence of all of LMCS' persons,
23 together with persons who would have assisted LMCS but who are
24 not necessarily LMCS' employees or LMCS' witnesses corroborate
25 and would say one thing, that the likelihood of these men being alive
26 is greater than we want to expect, meaning that they could have been
27 here as well. Unless there is any other question—

1 **Mr. Chairman:** There is actually one.

2 **Mrs. Persaud- Maraj:** Yes.

3 **Mr. Chairman:** Can you help me about this? Is it your position for
4 your clients that the issue of Delta P was raised and, if so, where is it?

5 **Mrs. Persaud- Maraj:** So, the Delta P consideration and the
6 methodology undertaken by Kazim Ali was addressed without being
7 addressed. And if I can explain that?

8 **Mr. Chairman:** Please do?

9 **Mrs. Persaud -Maraj:** So, earlier my learned friend would have
10 explained the line clearing process whereby the liquid in the sealine
11 was taken out, in the riser was taken out.

12 **Mr. Chairman:** I'm going to stop you if I may?

13 **Mrs. Persaud- Maraj:** Yes.

14 **Mr. Chairman:** As I don't know the—I just want to know really at
15 this stage, because we're going to hear all this evidence—

16 **Mrs. Persaud -Maraj:** Yes.

17 **Mr. Chairman:**—I just want to know at this stage whether there is
18 any document that you can point to where LMCS, as part of its bid for
19 the work, raised the issue of Delta P as an issue at all?

20 **Mrs. Persaud- Maraj:** No. It was never raised as an issue at all.

21 **Mr. Chairman:** Right, not by you. And was it raised, as far as
22 you're aware, in executing this work by Paria or Heritage?

23 **Mrs. Persaud -Maraj:** No, no please, Mr. Chairman.

24 **Mr. Chairman:** Right. Thank you. Thank you. I'll, I'll give Mr.
25 Gilbert an opportunity to say something about that if he wants to, but
26 that, that, that, that—so it's not your case that there is a document that
27 we can look at anywhere which suggests that this issue of Delta P was

1 ever considered by either LMCS or Paria? That's your position?

2 **Mrs. Persaud- Maraj:** Or specifically addressed, no please?

3 **Mr. Chairman:** Right, thank you very much. I don't know if you
4 want to say anything about that, Mr. Gilbertson.

5 **Mr. Peterson SC:** No.

6 **Mr. Chairman:** No. Thank you very much. All right, well, look, I
7 appreciate you truncating your very comprehensive opening in the
8 way in which you have and I do appreciate it, but, as I say, I will
9 consider it in any event, all right?

10 **Mrs. Persaud- Maraj:** I'm most grateful.

11 **Mr. Chairman:** Thank you. All right, that brings us to the end of
12 today, unless there's anyone who wants to raise anything in particular.
13 Can I just remind everybody that the transcripts of each days hearings
14 will appear on the website once they're done, so, forgive me I've
15 forgotten the name of the person who's doing it—[*Mr. Chairman*
16 *confers with Ms. Sinanan*—Kathleen Mohammed well she's taking
17 down the details and we will have the transcripts hopefully within a
18 few days of each hearing, so, that will all appear on the website and
19 one can go and have a look at it, see what they said what they didn't
20 say. If they forgot what they said they can remind themselves, all
21 right? So, um, thank you very much or that.

22 I'll ask everyone please now, except counsel, to clear the
23 room so that we can hear the application to be made by Mr.
24 Gilbertson. I'm afraid I'm going to ask the cameras to be switched off
25 as well please, but we do need to record what is said for the purposes
26 of the Commission. So cameras off, please, but—and obviously not
27 to be dispatched to the airwaves. All right? Thank you very much.

1 So please can we clear the public gallery and anybody not interested?

2 Thank you very much. I'll give it a few minutes. I'll rise for two
3 minutes while everyone gets a chance to clear away, all right?

4 **3.18 p.m.:** *Enquiry concluded.*

IN CAMERA HEARING

3.28 p.m.: *In-Camera Hearing commenced.*

Mr. Chairman: Thank you. Yes, Mr. Gilbertson, I wonder if it will be helpful if I tell you what my thinking is first. It's this. Firstly, Mr. Rampersadsingh is, as far as this Commission is concerned, regarded as an important witness. He is someone who is basically in charge of overseeing the planning and scheduling of support for these sorts of jobs. I have seen, and I take it you have, a statement that he prepared in answer to questions by OSHA. I don't actually have a date for it. What I can say is that, reading it, it was completed a few days before the 15th of March of this year because that's when they asked him to make a more comprehensive statement by, which coincides with the date upon which he went to see his doctor.

Now, I don't know whether the two were related. They may well be. And as far as I'm aware he never did provide such a statement to OSHA. All we have is the question and answer session that he entered into with them where he answers to many of the questions. I want to suggest this, that you find out from your clients if it will be possible for one very sympathetic counsel, together with one from you, I was thinking of Ms. Vijaya Maharaj. She's particularly sympathetic I think. If we want—

Mr. Peterson SC: Yeah, I was, I was looking to see if Mr. Maharaj was still in the room.

Mr. Chairman: What, on the basis she's the only sympathetic counsel? Is that—*[Laughter]*. Well, I was just, I was thinking it might be possible if together, if necessary, with his psychologist or psychiatrist and one from your team perhaps to just have a word with

1 him. There aren't probably that many questions that we—because we
2 do have this [*Mr. Chairman raises a sheet of paper in the air*]. There
3 are some questions, obviously, which is why we've asked him to
4 come in for an interviewee. I don't want to put this man through any
5 more stress than he must be but I do regard it as important, and, if
6 there was any way at all in which we could do that without—I don't
7 want to have to drag him here if I can avoid that and I want to
8 minimize the stress to him, but he was clearly capable then to produce
9 not an incomprehensive document which says quite a lot. As I say,
10 there are a number of issues that arise that we would like to ask him
11 about. We could do it in the most gentle way in his own home if
12 necessary. You know, I wonder if you could make such inquiry—

13 **Mr. Peterson SC:** Yes, Sir.

14 **Mr. Chairman:**—rather than my just discharging it now or refusing
15 to discharge it now, can we see if any kind of accommodation can be
16 reached where he could be made to feel as comfortable as possible in
17 his own home, perhaps with a cup of tea, you know, with somebody
18 there to support him, and a very sympathetic and gentle asking of a
19 number of questions that he might be able to assist us with?

20 **Mr. Peterson SC:** That's a proposal that we are attracted to, Sir, and
21 we will explore it.

22 **Mr. Chairman:** If we could, if we could do that, I mean that
23 obviously puts some hearing in an application of this nature I'm not
24 anxious to take one course or the other in relation to it. I don't ask
25 him to attend as yet. We could make that inquiry.

26 **Mr. Peterson SC:** We would do that, Sir.

27 **Mr. Chairman:** Marvellous. All right, well, that was easy, wasn't

1 it? Thank you very much. We will resume tomorrow at ten o'clock.
2 Thank you.

1 **EVIDENTIARY HEARING DAY 2**

2 **10.05 a.m.:** *Enquiry commenced.*

3 **Mr. Chairman:** Good morning, all. Good morning. I spot a
4 change of personnel on the second row; not the same as it were
5 yesterday. Somebody own up.

6 **Mr. Pegus:** Good morning, Mr. Chairman—

7 **Mr. Chairman:** You need to put your microphone on. That's
8 it.

9 **Mr. Pegus:** Right. Morning, Mr. Chairman, I, Chase Pegus,
10 represent the interest of Kenson Operational Services
11 Limited—

12 **Mr. Chairman:** Ah, right. Okay. I thought you were a new
13 face I hadn't seen before. Okay. You weren't here yesterday,
14 were you?

15 **Mr. Pegus:** No, I was not.

16 **Mr. Chairman:** All right. Good. I'm not going mad, then.
17 Excellent. Well, I think—

18 **Mr. Dindial:** Sorry. Good morning, Mr. Chairman; Ché
19 Dindial with Mr. Boodram.

20 **Mr. Chairman:** Okay. Excellent. Thank you very much.
21 And I think, um, Mr. Maharaj, we're starting with Mr. Boodram
22 this morning, are we not?

23 **Mr. Maharaj SC:** Yes, Mr. Chairman.

24 **Mr. Chairman:** All right. Should we get on with it?

25 **Mr. Maharaj SC:** Yes, Mr. Chairman. Yes. Christopher
26 Boodram. Mr. Chairman, his evidence is in Volume IV of the
27 witness statement bundle, 1556, and that is statutory declaration

1 and witness statement taken from him at page 1565.

2 **Mr. Chairman:** Thank you. Just give me a minute to find
3 this. Thank you very much. Got it. All right. Thank you very
4 much.

5 **Mr. Maharaj SC:** Much obliged. [*Mr. Christopher Boodram*
6 *enters witness box*] You require him to be sworn in?

7 **Mr. Chairman:** Yes, please.

8 [*Mr. Christopher Boodram sworn*]

9 **Mr. Chairman:** Thank you very much. Mr. Boodram, please
10 feel free to sit now or stand, whichever you prefer; whichever
11 makes you feel more comfortable. We are all very conscious
12 here in this room—very big room with a lot of people, and
13 obviously, you're the focus of attention today, and we are
14 conscious of the fact this is not going to be easy for you. All
15 right? So you take your time. If at any stage you want to have
16 a break, just tell me, all right, and you will have a break. If you
17 need time to pause to think about what you're going to say,
18 please do so. I don't want you feel under any pressure at all.

19 We're very grateful for your being here this morning.
20 All right? So you take your time and you tell your story.
21 Answer the questions from Mr. Maharaj over there. All right?
22 And you just take your time. Any problem that you—you
23 speak to me, and I will deal with it. All right? Thank you very
24 much.

25 **Examination By Mr. Maharaj SC:**

26 Q. Okay, Mr. Boodram, you are an underwater diver.

27 A. Yeah.

1 Q. And for how long have you been an underwater diver?

2 A. Approximately 12 years.

3 Q. Approximately 12 years. And you are PADI certified as a
4 diver?

5 A. Yeah.

6 Q. That is a scuba-diver?

7 A. Yes.

8 Q. Do you have any experience in commercial diving?

9 A. Yeah; 12 years' experience.

10 Q. Twelve years' experience in commercial diving.

11 **Mr. Chairman:** Mr. Boodram, could I ask you, please, if you
12 bring your chair a little closer and bring that microphone a little
13 closer to you as well, then everybody in the room can hear what
14 you have to say, and you won't have to be asked twice, then.
15 You follow me?

16 **Mr. Boodram:** All right.

17 **Mr. Chairman:** Thank you very much.

18 **Continued Examination By Mr. Maharaj SC:**

19 Q. In respect of what happened on the 25th February, 2022 you
20 swore to a statutory declaration?

21 A. Yeah.

22 Q. And that was dated the 28th March, 2022?

23 A. I would like tuh believe so.

24 Q. Yes, you could take it from me; the 28th March, 2022. And the
25 contents of that Statutory Declaration are true and correct?

26 A. As far as I can recollect.

27 Q. Yes. And you also were interviewed at SAPA by the

1 Commission in the presence of your lawyer?

2 A. Yeah.

3 Q. And you gave answers, and you signed a statement.

4 A. [*Nodding*]

5 Q. And that was on the 19th October, 2022?

6 A. [*Nodding*]

7 Q. Okay?

8 A. Okay, yeah.

9 Q. And the contents of that statement you signed are also true and
10 correct?

11 A. Yeah. Correct.

12 Q. Now, I want to ask you some questions about the 25th
13 February, 2022, and I want to do this in a way that I would lead
14 you on, but I will give you the opportunity of saying it as you
15 remember it. Okay? Take your time and don't be afraid, and as
16 the Chairman of the Commission said, if at any time you want a
17 little break he will permit you to have that break. Okay?

18 A. [*Nodding*]

19 Q. On the 25th February, 2022, you were employed with LMCS
20 Limited.

21 A. Yeah.

22 Q. And you were employed as a diver.

23 A. Yeah.

24 Q. On that date, could you tell us what happened?

25 A. Um, how far you want it back? From de beginning or from
26 de—

27 Q. No, no. At the time when you went to work that day, could you

1 tell us what happened?

2 A. On de 25th?

3 Q. Yes. You remember on the morning of the 25th?

4 A. So—so, yeah, um—

5 Q. And you went to work?

6 A. Ah reach tuh work early because we was requested tuh reach
7 tuh work early.

8 Q. And you attended a meeting on that morning?

9 A. Ah believe so. We had a lil, um.

10 Q. Can I try to recall? You had a toolbox meeting that day about a
11 job?

12 A. Right. Dah is—yeah; dah is when we reach on de barge. Yeah.
13 Dah is when we was on de barge out on de job site.

14 **Mr. Chairman:** I'm going to ask the camera people, to be a
15 little more prudent in the number of pictures they take. There is
16 a limit to how many times that clattering should be proceeding.
17 Thank you very much.

18 **Continued Examination By Mr. Maharaj SC:**

19 Q. So you went to the toolbox meeting that day and that was in
20 respect of a job that had to be done.

21 A. Yeah. So de—we had de toolbox meeting concerning, um, this
22 riser job that was in—that in question. We gather round at that
23 toolbox meeting; toolbox meeting is more or less of de job
24 entails, wha' we going tuh do fuh de day, um, in de stages ah
25 how we going tuh do it. Um, de safety officer go also, um, talk
26 tuh us, ah lil safety, um, briefing, yuh know, de hazards ah de
27 job, and whatnot.

1 Q. Okay. Let me see if I could, um—and the job was to change a
2 riser, not so?

3 A. Yeah, yeah.

4 Q. What you had to do with the—

5 A. We actually—de job dat day was actually tuh—de job dat day
6 was actually to go—wha' we had tuh do dat day boy? Ah
7 apologize. Sometimes ah, um—

8 Q. No. I understand. You had to put in place a new riser, not so?

9 A. Right. Yeah, but it was in stages. Um, before puhing in de
10 riser, we had tuh unbolt de blank. Right? We had tuh take out
11 de mechanical plug, right, do a CARBER test, right, and after
12 de CARBER test was cleared or passed or however dey wanna
13 term it, then we would proceed, take out de plug, de inflatable
14 plug and install de riser. This is how dey—this is de steps in
15 how dey told us we had tuh, um, to do it.

16 **Examination By Mr. Chairman:**

17 Q. I wonder, can you just tell me. We know that there was a
18 habitat or a chamber over the top of this riser.

19 A. Right. Yes.

20 Q. And you your work colleagues were working inside that
21 chamber.

22 A. Right. Yes.

23 Q. And the first thing that you had to do on that day from what you
24 said is to remove the blank plug. Is that right?

25 A. Yeah.

26 Q. Not plug, but—

27 A. De blank. Yeah.

1 Q. Yes. That's like a cap—a top?

2 A. Right. Yeah.

3 Q. So that was the first thing you had to do, was it?

4 A. Yeah.

5 Q. All right. Well, you take it from there. After you'd done that—
6 who is it that did that?

7 A. Me—Yusuf and I. Yusuf and I, um—well, all of us was in de
8 chamber. Well, de habitat was Fyzie Kurban; he was like de
9 most experienced out ah all of us, so dah is like we lead diver;
10 um, Fyzie Kurban. Um, Rishi Nagassar, Blacks.

11 Q. That's his nickname? Blacks is—

12 A. Yeah. Yeah.

13 Q. Yes.

14 A. Yusuf Henry, myself. Kazim Ali was on de barge as a standby
15 rescue diver fuh in case something was to go wrong.

16 Q. Yes. So he was supposed to stay on the barge, and the four of
17 you were working, were you?

18 A. Yeah, yeah.

19 Q. Inside the chamber. Did it need all four of you?

20 A. Um, yeah, tuh ah sense. Yeah.

21 Q. Right. All right.

22 A. Um—

23 Q. So tell us, you've taken off the blanking then, then what
24 happened?

25 A. De blank is nuh like something dat yuh could just lift off. Yuh
26 know. De blank is—by itself, it may be about a hundred and
27 fifty pounds, because yuh talking about ah 30-inch diameter

1 pipe, yuh know, with, um, half-inch thick sheet plate wha' dey
2 go use tuh make the blank with.

3 Q. Right.

4 A. So dat by itself is nuh ah easy task. Yuh hah tuh hook up chain
5 blocks. Chain blocks is something like a manual crane. Right?
6 Um, yuh hah to hook up chain blocks stoffers [*Phonetic*] to
7 manoeuvre these heavy equipments, these heavy things tuh geh
8 it off. Yuh hah tuh take off; puh it down so. Fuh it tuh be done
9 safe, yuh need more than two men.

10 Q. Right.

11 A. Because yuh actually need two men tuh guide de flange—he
12 supposed tuh know wha' ah talking 'bout—tuh guide de flange
13 down while one man operate de chain block and ah next man
14 overview dat nobody doh puh dey hand in any pinch areas, dah
15 kinda—we, we—dey is not de first time we do dis job. We
16 never encounter no hazard on dis job—when I mean no hazard,
17 sorry, no—we never geh into any complications because all ah
18 we competent and know wha' we doing. Forget about wha' all
19 yuh may think about de type ah equipment or de certs. I've
20 been doing dis fuh years.

21 Q. All right. Mr. Boodram, Mr. Maharaj is going to pick up the
22 sequence of events. I know you're very anxious to, obviously,
23 get this out the way, and tell us your story. But it's quite
24 important that we have the sequence of events. Do you follow?
25 And you've told us now, so Mr. Maharaj is going to take it
26 from there. Thank you.

27 **Continued Examination By Mr. Maharaj SC:**

1 Q. Right. So after removing the blank, what is the next thing that
2 you all did?

3 A. After removing de blank, we had to remove de mechanical
4 plug. To remove de mechanical plug, yuh does have tuh use—
5 because it inside de pipe, right, you have to use a spanner. No
6 normal pipe wrench or crescent or spanner could work, because
7 ah de confined space inside de pipe—in de diameter ah de pipe.
8 So we made a tool with a socket, ah extension on it and ah cross
9 piece on top ah it; something resembling ah capital T, um, to
10 slacken de, de bolt. The mechanical plug does work that when
11 yuh tighten de bolts in series around it, it does expand and hug
12 de inside of de diameter ah de pipe, and cause a seal.

13 Q. Right. But in order to remove it, you—

14 A. Yuh hah to slacken out all those bolts. Hook up the chain block
15 on it.

16 Q. Okay.

17 A. Right? Take it out, jack it up with de chain block, bring it at de
18 side. Right? After taking dat out we didn't drop it tuh de
19 seabed, we went and shackle it up on de outside of de, um—we
20 fasten it to de outside of de, um, habitat. Right? And after
21 fastening it there, we came back and then Fyzie instructed mih
22 tuh, um, go and find out if dey finish de CARBER testing at
23 Berth 5.

24 Q. Okay, one second. So yuh came back. So yuh went fuh lunch
25 and then came back?

26 A. No.

27 Q. No. Okay.

1 A. No. This is before ah take lunch.

2 Q. Okay. So yuh came back, and what happened?

3 A. After going out—out ah de habitat, ah, um, ah ask Dexter if,
4 um, dey finish de CARBER test. Dexter tell mih, yes, de
5 CARBER test was done. At de same time ah saw de boat
6 coming back across—de pirogue coming back across. And ah
7 ask de guys dey self who did de job if de CARBER testing
8 finish, and dey confirmed it. Ah went back down. Ah confirm
9 with Fyzie, de CARBER test was finish over dey. Right? So
10 he say, well awright leh we take out de, um, de mechanical
11 plug. We take out de mechanical plug; we bolt it up. Right?

12 Q. When you say take out the—you then take out the mechanical
13 plug?

14 A. Yeah. Before we take out de mechanical plug, ah went and geh
15 dis information from outside tuh make sure we coulda do this.
16 Right?

17 Q. Okay. Okay. And what happened?

18 A. After we get de clearance, we take it out, right, we came out fuh
19 dey to do de CARBER testing, right, because ah, um, ah
20 external contractor or team or wha'ever was suppose tuh
21 oversee de CARBER testing. Um, Fyzie and I and de rest ah
22 team was suppose tuh just puh de equipment in place, and dem
23 woulda do de, um, de testing, right, since we are de divers.

24 Um, when we came I came out, I deliver de message dat
25 we ready fuh de CARBER testing, dey send down de, um,
26 thing; I was on de barge. Yusuf came back out and tell us that
27 it can't work; it too small. Fyzie and everybody come back out

1 and tell dem dat it not fitting; it cyah work. Dey ask fuh ah,
2 um, ah bigger one. When dey check it, notten bigger couldn'
3 work; is de pipe had a lil deformity. Paria and LMCS had some
4 discussions on whether or not they should go forward or wha'
5 ever. They tell us take lunch. We took lunch from there.

6 Q. Okay. You said the CARBER testing couldn't work. Could
7 you help us what it is couldn't work?

8 A. Tuh do de CARBER testing, yuh need a proper seal, right, and
9 because de pipe was deformed it couldn' geh a proper seal.
10 Correct?

11 Q. Okay. Right. So you all went for lunch, and you all came back
12 after lunch?

13 A. Well, yeah, we take lunch right on de, um—

14 Q. Now, I want you to take your time and tell us as far as you
15 remember when you came back from lunch what happened?
16 What was the first thing when you came back from lunch that
17 happened? [*Pause*] I could help you a little bit. You
18 remember about the mechanical plug what you said? What
19 happened?

20 A. So after we, um, after we take lunch—I doh know. Fuh some
21 reason mih mind just going blank. Um, after we take lunch we
22 came back out, um, Kazim Ali Jr. tell we that we geh de, um, de
23 clearance tuh continue de job without de CARBER testing.

24 Q. Correct.

25 A. We, um, we, awright, we had we lil talk with each other. We
26 say, well, awright, we just need tuh take out this inflatable plug,
27 install de riser, dah is a wrap fuh de day. We say, right, dah is

1 wha' we going and do. We went in—we went in de, um, de
2 habitat. As we went in, we, um, as we went in the habitat we
3 had tuh, um, then deflate de inflatable plug. Awright?

4 So because I wasn't there fuh de inflatable—fuh while
5 dey install it and all dem kinda ting, I took like a backseat while
6 dey was, um, deflating it and ting like dat. And, um, dey ask
7 fuh a spanner; dey ask fuh a spanner tuh—because apparently
8 the lever was jammed, or something like that, that dey couldn'
9 just, um, release de, de air. So at de same time, Kazim Ali Jr.
10 came in and we tell him we needed a spanner. He went out;
11 collect de spanner; bring it back in; give mih de spanner; I give
12 it to dem, and as he come back in and I turn—after I do dat and
13 I turn around—I ain even sure if ah collect de spanner—after ah
14 turn around, I saw de water in de chamber start to rise, and I say
15 like, all yuh wha' going on here? Look dis ting fulling up. Leh
16 we geh outta here.

17 And I jump; and when I jump tuh come out de, de
18 habitat, I feel like instead ah sinking in water, ah feel like ah
19 was floating; like it had no gravity. Yuh know, ah feel like—
20 and den after within a second it was like a tornado; everything
21 just spinning and beating yuh up and—it happen so fas', yuh
22 couldn' react. The onlies' ting ah remember able to do was
23 cover mih head like in the foetal position. After dat all ah
24 remember—ah didn' even remember actually getting pulled in
25 de pipe.

26 Ah just remember being hurled through de pipe at
27 unbelievable speeds. It does feel like if when yuh, yuh diving

1 ah car and yuh doing ah hundred or 120 on de highway, yuh
2 feel like if yuh was going through dah kind ah speed. Every
3 time ah try—after ah realize ah in de pipe and ah going through
4 de pipe, every time ah try tuh, tuh stop mihsel jamming de
5 walls ah de pipe, ah woulda feel mih hands burning through de
6 wetsuit. While going down yuh woulda feel lil debris hitting
7 yuh.

8 When, um, when um, when we kind ah stop—when de
9 water kind ah slow down and ah was able tuh stop mih self, at
10 dis time ah couldn' hold mih breath no longer. Mih throat—
11 when yuh holding yuh breath, when yuh holding yuh breath fuh
12 too long, after a while yuh body, yuh lungs does fight to try to
13 gasp fuh breath, and when yuh forcing yuh airways close, yuh
14 does hear ah noise. Ah was actually—dah is wha' I was
15 hearing. [*Gurgling sound made by Mr. Boodram*] Yuh body
16 suffering tuh pull air. And at dah point I tell mihsel ah was
17 going and dead. I tell my—I say, God, ah coming; ma, look out
18 fuh mih. Ah was expecting to be dead dey.

19 And all ah a sudden ah just out ah de water and ketch ah
20 breath. Ah was in ah, ah state ah panic, realizing dat, awright,
21 ah in de pipe. Ah just now nearly dead. Ah not sure if ah alive,
22 as ah matter ah fact. I ain sure whay ah is; if ah in hell; if ah in
23 heaven; if ah in ah pipe. It may sound funny tuh ah lot ah
24 people but dah is how I was going through my mind fuh ah
25 brief moment. And den ah heard, ah believe it was Kazim Ali
26 calling out tuh me. Dah was de first person ah hear calling, and
27 I assumed he was outside de pipe and calling me. I thinking dat

1 I fall down de pipe. And ah was like—well all yuh hear de
2 audio.

3 Yeah, boy, who is dat, boy? Yeah, boy, who is dat, boy?
4 Ah inside de pipe. Ah inside de pipe, boy. Yeah, boy, yeah
5 boy, I inside de pipe too. And from dey is when ah realize that
6 ah hah tuh go into survival mode here now; ah still living,
7 because ah hearing somebody talking, unless he dead too, ah
8 hah to find out. And ah start going tuh de voice closer and
9 closer. Ah still didn' actually make out who it was until ah
10 reach on him. When ah reach on him ah touch him—mih foot
11 touch him, because ah was going backwards, because ah geh
12 sucked in de pipe, and in my head I thought that ah geh sucked
13 in headfirst, because ah try jumping out foot first.

14 So de pipe up here, right, and if I jump here and ah end
15 up in the pipe, so I thought I geh sucked in headfirst. At least
16 dah is de maths I did at de time in my mind. Yuh know? And
17 ah tell mih self dat if ah geh sucked in headfirst, well foot first
18 is de way out. Yuh know? And Kazim Ali and whoever—well
19 whoever else was that—dey was closer tuh de riser, and it was
20 like right dey, right dey, because dah is how it soun'in. Yuh
21 know?

22 So when ah reach across now, and ah—mih foot touch
23 something soft and ah pull it back so because ah was in ah state
24 ah fright. Ah say, "Who is dah, boy?" He say, "Boy me, boy,
25 me, boy." Ah say, "Me who, boy?" He say, "Boy, Kaz boy."
26 Ah say, "Kaz, yuh awright?" He say, "No, boy; ah in real pain;
27 ah in real pain. I mash up; I mash up bad." I hear somebody

1 else bawling in the background. Ah say, “Who is dat?” Yusuf
2 answer. Ah say, “Who is dat, boy?” He say, “Boy me, boy,
3 Chris, boy, Yusuf boy.” Ah say, “Yusuf, you awright, boy?”
4 He say, “No, boy, bredda boy. My foot break, boy.” Ah say,
5 “Awright, boy, bredda, boy. I feel my hand and foot break too,
6 but we hah tuh geh out ah dis. We hah tuh come together and
7 we hah tuh geh out ah dis.”

8 I hear bawling in de background. Ah say, who is dat
9 now? Who is dat? The person ain’ answer. Ah say, “Who is
10 dat?” Yusuf say, “Boy, dah is Fyzie, boy.” Ah say, “Fyzie,
11 Fyzie.” He say, “Yeah, yeah.” Ah say, “Yuh awright?” He
12 say, yeah. Ah say, anyting wrong with yuh? He say, “No.”
13 “So wha’ yuh bawling for?” He say, “Ah doh know.” Ah say,
14 awright, watch mih. We hah tuh geh out ah dis. God is good.
15 We go come out ah dis. Leh we pray. Ah pray. Ah ask
16 Kazim—ah ask Kazim Jr. ah say, “Kaz, how we could come
17 out ah here? Wha’ we could do boy? Think. Wha’ we could
18 do? Wha’ we could do?” Kazim say, boy, we going and dead.
19 Ah say, no. Doh say dat. We nuh going and dead in here. Leh
20 we come out ah here, boy. We nuh going and dead in here,
21 boy. We coming out ah here.

22 Ah say awright, awright. Ah say, “All yuh, whay
23 Blacks?” Yusuf tell mih, boy, he di pass over Blacks lower
24 down when he was coming across. He say he ain sure wha’
25 going on with he. Ah say, “Boy, hear wha’ going on. We cyah
26 stay and wait fuh he. We hah tuh go and come back. Who
27 could move, leh we move. Ah say, “Fyze, you push. Yusuf,

1 Yusuf, you push Kaz and I go pull.”

2 Now, before dat, ah ask him, ah say I think we hah tuh go
3 backwards so, because I think I come in foot first. Kazim say,
4 no, we come in foot first. No. We come in foot—I think we
5 come in headfirst. Kazim say, no, we come in foot first. Ah
6 say, no we didn’ come in foot first. He say, yes. Yusuf say,
7 “Yes, boy, Chris, boy. I sure, I sure, I sure we come in foot
8 first Chris.” Fyzie say, yeah. Ah say, well awright boy, well
9 we done in dis, so I cyah fight all yuh. If all yuh say dah is it,
10 dah is it. If we hah tuh dead, we hah tuh dead. Leh we go. Ah
11 hah tuh go with wha’ all yuh say. If dem didn’t know what
12 direction we had tuh go, I woulda be dead today too.

13 We, um, we, we form a chain like. Ah tell dem, ah say,
14 listen, ah will puh mih foot underneath Kaz shoulder. Kaz, see
15 if you could lock on tuh Yusuf. Yusuf see if you could push—
16 Kaz—um, Fyze, see if you could push everybody. And we
17 going. Now, mind all yuh, inside dey was like an unbelievable
18 nightmare, eh. Yuh eyes burning. Every time yuh try tuh open
19 yuh eyes, it burning. Yuh pitch black, yuh can’t see notten.
20 Yuh throat burning. Yuh ears ringing. Yuh body sore.

21 Inside dey wasn’ no just crawl through ah pipe like wha’
22 plenty people might be thinking, eh. And me and dem fellas,
23 with all de pain we had, we link up together and we drag and
24 pull, drag and push and pull, and every now and again small
25 Kaz would ask fuh ah rest, because he apparently was in de
26 most amount ah pain. He was saying Chris, Chris, Chris, we
27 hah tuh rest, and ah hah tuh stop.

1 Ah could geh a minute to, um—

2 **Mr. Chairman:** Do you want to rise or you're happy to sit for
3 a moment? What you like to do?

4 **Mr. Boodram:** Ah want to walk outside for a minute, please.

5 **Mr. Chairman:** Of course, you can. Please, take him out for a
6 moment, please, somebody? We'll rise for a few minutes,
7 please. Thank you.

8 **10.39 a.m.:** *Enquiry suspended.*

9 **10.45 a.m.:** *Enquiry resumed.*

10 **Mr. Chairman:** Are you as all right as you're going to be, Mr.
11 Boodram? Don't feel inhibited in asking again if you need
12 another break, all right, at any point. All right? We don't mind
13 taking a few minutes. All right? So if you need it, you ask. All
14 right? Take your time.

15 **Mr. Boodram:** Ah owe dem men dat at least ah could be here
16 and do wha' ah hah to do fuh dem. I owe dem dat, because ah
17 fail dem in every other way. [*Mr. Boodram sobs*] Ah
18 apologize. Ah apologize.

19 **Mr. Chairman:** There is no need for an apology; absolutely
20 none at all. Do you think you need a little more time, Mr.
21 Boodram?

22 **Mr. Boodram:** No, leh we just geh over with it.

23 **Mr. Chairman:** Of course. Well, then take a moment. It's got
24 water there.

25 **Mr. Boodram:** Leh we geh over with it. Leh we geh over
26 with it. [*Mr. Boodram continues sobbing*]

27 **Continued Examination By Mr. Maharaj SC:**

1 Q. Okay. Mr. Boodram, what I will do, I will let you continue
2 from what you were saying. But then, with leave of the
3 Commission, I would show you your statements and ask you
4 whether what you said in those contents of the statements are
5 true and correct. Okay?

6 A. Uh-huh. Uh-huh.

7 Q. Okay. So the last thing you told us just before the break—take
8 your time—you said that there was—you all formed a human
9 chain, and Kazim was ill. Could you tell us what happened
10 after that as far as you can recall?

11 A. We was pulling and dragging through the—[*Mr. Boodram*
12 *sniffing*] we was pulling and dragging through the, um, the air
13 pocket.

14 **Examination By Mr. Chairman:**

15 Q. Could I ask you, this stage, was there any water or fluid in the
16 pipe at all, or were you in a dry area of the pipe?

17 A. Where I ended up, now I know dis, dat I was closer to de riser
18 than they was. Right?

19 Q. Right.

20 A. Wey I was—

21 Q. So you were at the front, effectively?

22 A. Right.

23 Q. So you must have been the last person to be sucked into the
24 pipe?

25 A. Correct.

26 Q. All right.

27 A. While I was there, there were some water; maybe, um, like

1 about 8 to 10 inches ah water.

2 Q. Right. And we're talking about a 30-inch pipe. We had a hoop
3 here somewhere I think; yeah.

4 A. Yeah.

5 Q. So it's not a great big amount of space. Do we still have the
6 hoop? [*Hoop held up for Mr. Boodram to view*] That is about
7 an inch smaller on either side for the sort of pipe that you were
8 in. That's the—so that we can get a visual, that's the diameter,
9 approximately, of the pipe that you were in. All right? So we
10 can now picture the situation. You're down there; it's
11 completely dark so you can't see anything, but you can hear, all
12 right, and you can touch. There is about, did you say, 8 inches
13 or so of water? Something like fluid.

14 A. Eight to six inches of, well, liquid.

15 Q. Yes, a mixture. Right.

16 A. Yeah. We couldn't really tell exactly if it was pure oil or—it
17 was mixed.

18 Q. Right.

19 A. Because ah understand wha' it was now. Yuh know?

20 Q. Right. And the walls of the inside of the pipe, were they
21 slippery? How did it feel?

22 A. They were thickened with oil.

23 Q. Right.

24 A. Oil residue.

25 Q. Right.

26 A. Was totally—

27 Q. They're quite old pipes, so obviously they will build up of that

1 material on the inside.

2 A. Yeah.

3 Q. So was it slippery as you were trying to crawl along?

4 A. Yeah, it was—it—every time yuh dragging, yuh feeling like
5 yuh nuh going no whay.

6 Q. Yes. Did you have any idea about how far away you were from
7 the vertical pipe? Any sense of that at all?

8 A. [*Shaking head from left to right*]

9 Q. No.

10 A. Ah could tell yuh it wasn' ah—I doh think it was ah short way.

11 Q. No. All right.

12 A. 'cause I feel like was fuh ever inside dey.

13 Q. Anyway, you were telling Mr. Maharaj and us what were you
14 doing; pushing and pulling and making your way along the
15 pipe. All right—

16 A. Yeah—

17 Q. And did you encounter any more fluid?

18 A. While going back to them, where I was, was like about six to
19 eight inches. When I reach back to dem, de pipe was totally
20 dry.

21 Q. Right.

22 A. Well, other than de gunk on de—

23 Q. Inside.

24 A. Inside; yeah.

25 Q. Right.

26 A. Right? So—

27 Q. So you'd gone backwards, first of all, shuffling backwards with

1 your feet first, as it were.

2 A. Um-hmm.

3 Q. Yes?

4 A. Yeah.

5 Q. And now you've made your chain, you've told us you're now
6 making your way forward again. All right?

7 A. Right.

8 Q. They'd persuaded you that that was the right way to go.

9 A. Yeah. Thank God.

10 Q. Okay. And then—and so off you did. Off you went.

11 A. Yeah.

12 Q. As you're going forward, you start going back into the fluid,
13 and then—then tell us—take it from there and tell—Mr.
14 Maharaj will help you along.

15 A. It wasn't like as just back into de fluid eh, dah is like de short
16 version of it. Yuh know in-between that we had a lot ah stops
17 and breaks and ah was praying with de guys; ah ask dem tuh
18 pray too. Yusuf prayed with mih; Fyzie say he praying. Kaz—
19 ah tell Kaz tuh pray. Kaz say, "Boy, my wife is a Catholic."
20 Ah say, "She nuh here, boy. She nuh here boy bredda boy, you
21 have tuh pray fuh yuhself boy. Nobody cyah help we here but
22 God, boy."

23 Q. All right.

24 A. Ah tell dem, well, leh we go again. He was constantly asking
25 for breaks and stops. I know that we couldn' inhale dis fuh
26 long, yuh know. I found a tank—

27 Q. Right.

1 A. While going back, ah find ah tank.

2 Q. Did the tank have the spiders on them still?

3 A. Yeah.

4 Q. You know the spider is the pipework, isn't it?

5 A. Yeah, yeah; the regulator.

6 Q. Yes. And the regulator, and the pressure gauge, and all of those
7 sort of things.

8 A. Yeah.

9 Q. You had all—that was still attached to the tank, was it?

10 A. Yeah.

11 Q. Right.

12 A. I found that—Fyzie found one while he was coming up earlier
13 on, because ah ask if anybody had any tank with dem or
14 anything like dat, and Fyzie told me he had one. Ah say,
15 “Awright, we go need it. Keep it with yuh.”

16 Q. Pausing there for a minute, when you were in the habitat,
17 everyone had taken their tanks off, hadn't they?

18 A. Yes, we—

19 Q. So you were all working, as it were, in the semi-dry?

20 A. So remember—so remember that—remember that these
21 equipment—ah tank is about 30 pounds. Right? You in this
22 dry space here now, right, you come out de water and climb up
23 on de scaffling; yuh on a dry space on de platform. Right?
24 You wouldn' have all ah dis weight on you.

25 Q. Right.

26 A. Even if yuh had an umbilical cord with a SuperLite, ah Kirby
27 Morgan SuperLite, right—dah is, um, de latest, de latest one; ah

1 think is 22 or 23 or something like dat; dat by itself is about 30
2 pounds too.

3 Q. Right.

4 A. So even if yuh had dat on, right, yuh cannot function; yuh can't
5 do pipe fitting work; yuh can't do no kind ah work with dah hat
6 on yuh. When yuh on a commercial job as this one and yuh
7 using surface supply, de rescue diver who on standby doh even
8 hah dah hat on. He would have wha' we call de toilet seat on
9 him.

10 Q. A what?

11 A. It's called de toilet seat—

12 Q. Okay.

13 A. Right—on him; and he would have dis hat on his—

14 Q. Lap.

15 A. —yeah, lap, because ah de sheer weight ah it out ah water, out
16 ah buoyancy, this—is a lot ah weight on yuh neck.

17 Q. Right.

18 A. Yuh understand?

19 Q. I got you; yes.

20 A. So even if yuh was using surface supply, when yuh enter inside
21 dey, is like a decompression chamber. When yuh come in a
22 decompression chamber and yuh take off all yuh gears and yuh
23 relax and yuh decompress. Right? Because yuh nuh going and
24 hah dat. Yuh hah breathable air in dis space.

25 Q. Right.

26 A. Right? So we take off we gears and was doing de job.

27 Q. But all of these tanks with the spiders attached to them, were

1 sucked in—

2 A. Everything—

3 Q. With you—yes.

4 A. Everything get sucked in.

5 Q. All right. So you found—so you're telling us, you found these
6 two tanks; Fyzie's got one and you come across one as you
7 were making your way out.

8 A. Right.

9 Q. Right? Take it from there, please. Mr. Maharaj will help you
10 there.

11 **Continued Examination By Mr. Maharaj SC:**

12 Q. Yes. You found the tanks, and you're making your way back.
13 Tell us what happened.

14 A. After ah find de tank, ah tell dem ah say yeow, watch mih,
15 breathing this air fuh long could geh we delirious and geh we
16 nauseous, and hah we start thinking all kine ah shit. We need
17 tuh start taking interval sips ah air from we tank tuh keep clear
18 oxygen in we system, and we cyah breathe it right through,
19 'cause we go need it, so we cyah just hold it and breathe it. So
20 ah tell dem, ah say I would give buddy breathe with Kazim.
21 Every now and again, after pulling and pushing and we
22 exhausted, we take two three pull ah de fresh air, right, de air in
23 de tank, not much, and we share it. So we doh know how long
24 we would need these tanks for. Yuh know? We doh even
25 know if it hah more inside, because at this stage it was in my
26 mindset, not knowing what going on outside, wha' cause this
27 incident. I not sure if was ah explosion. I not sure if de whole

1 Berth on fire. We doh know. Yuh know? And I understanding
2 and thinking all ah dat, and trying tuh stay calm tuh keep dem
3 fellas calm, was one ah de hardest thing I had tuh do in dis life.

4 Q. I could imagine. I could imagine.

5 A. Well, when I, um, ah tell dem well, awright, we go buddy
6 breathe a lil bit, and go. We cyah take long res' Kaz. Ah keep
7 telling Kaz dat. Yusuf was in pain, buh Yusuf was in fighter.
8 Yusuf had resiliency tuh a whole different level. He in pain and
9 he with mih. He say, "Chris, leh we go; ah with yuh; ah with
10 yuh." And he pushing; and he pushing. Well Fyzie as normal,
11 he strong and silent. He is nuh no big set a words, but yuh
12 know he there. Kazim was in a lot ah pain. He tell mih he
13 break up bad. Ah assume he was—ah assume he was cripple,
14 because every time ah try to move him, he couldn't move. He
15 say, Chris, ah cyah move; ah cyah move. And ah would be
16 dragging and ah was using one hand, because dis hand was
17 pinned [*Mr. Boodram indicates with his left hand*]; dis hand
18 was pinned behind mih back, and every time ah try bringing it
19 forward, it was in excruciating pain, so dah is why ah thought it
20 was broken.

21 So it was using one leg, cause mih ankle—mih ankle and
22 all too was damaged. Ah thought dah was broken too. I doh
23 know. And we was pulling and dragging and Kaz was trying
24 all he could try too but he is only human, and he was asking for
25 res', and sometimes ah wasn' giving him the res'; sometimes ah
26 was stopping fuh him. Sometimes ah feel dat nobody was
27 helping mih. Sometimes ah was telling dem—ah was bawling

1 at dem and say, “All yuh push, push, all yuh push; leh we go.
2 All yuh hah tuh help mih. All yuh nuh helping mih.” Ah was
3 feeling like dat.

4 Ah gi’ing dem words ah encouragement, telling dem,
5 “Yeow, God is good. He go take we out ah dis. All ah we
6 coming out ah dis, boy. We coming out ah here.” Ah say, boy,
7 who knows. “I sure Andrew Farah may be done inside dis pipe
8 halfway coming fuh we boy. So all yuh doh worry allyuh self,
9 we going and geh rescue, we going and come out ah here.”
10 And pulling and pushing, and pulling and pushing. Ah come
11 higher up ah found—ah found the GoPro. Dah is wha’ the
12 audio you all hear.

13 Q. Yes.

14 A. Ah found that and ah say well, boy, dey is de GoPro here boy.
15 I pick up de GoPro and ah was—within a res’ ah was thinking
16 ‘bout leaving ah message fuh mih family, because ah a’ready—
17 ah a’ready start to realize what was the outcome ah dis, and
18 with dah GoPro in mih hand something just tell mih, boy, doh
19 proclaim death on yuh life, boy. Trust in Jesus and just do wha’
20 yuh hah tuh do. And ah pray again. Ah tell dem, “Ey, all yuh,
21 ah find de GoPro.” Ah found one ah mih torchlight. Ah puh it
22 on. It on but yuh still cyah see notten. Yuh cyah open yuh eye
23 to watch anything.

24 Ah puh de torchlight on mih hand. Kaz tell mih, doh
25 take off de light. Doh take off the light. Ah say, Kaz, yuh
26 could see anything? He say, no, he cyah open he eye, but he
27 feeling de brightness. Leave de light on. Ah say, Kaz, I didn’t

1 take off de light; de light on. He say, “Chris, we going and
2 dead.” Ah say no, boy, we nuh going and dead boy. Leh we
3 go. We going.

4 **Examination By Mr. Chairman:**

5 Q. Move a little closer to the microphone, please? Thank you.

6 A. He say—ah apologize. To see a big man crying; I just—

7 Q. So you moved forward; you carried on moving forward with
8 your breaks. Did you come across any more fluid?

9 A. Yeah. We, um, when we bounce up, we bounce up water, we
10 keep going in de water. As de water start to full up, it geh a lil
11 easier to move, yuh know, so, ah was a bit relieved, too. But
12 knowing what coming up ahead would ah be more water
13 because ah realize de water start gehing higher and higher. So I
14 take a measurement from top ah mih nose to de top ah de pipe,
15 and I had six inches. Ah say Fyze, take a measurement from de
16 top ah de water to de top ah de pipe. Fyze tell me he had eight.
17 Ah say, awright. He say, wha’ happen? Ah say, boy, water
18 gehing higher and higher, boy.

19 It had a lil silence, because after ah saying dat like
20 everybody start to understand dat we going into water and we
21 only hah two tanks; doh know how much dey have in dem.
22 That survival situation is a real different one too. Yuh doh
23 know who going and panic on yuh. Yuh doh know if yuh pass
24 yuh regulator if dey go pass it back.

25 Q. Yes.

26 A. Yuh just hah to trust each other and say, well—

27 Q. Anyway, did you enter the water then together?

1 A. I went forward. I tell dem hold on. Ah need tuh go and check
2 tuh see how far dis water is tuh know if ah could pass dem
3 through. Ah didn't tell dem dat. So ah tell dem ah need tuh go
4 forward and check tuh see how far de water going. Ah coming
5 back now. Small Kaz was kine ah reluctant tuh leh go mih, and
6 ah tell small Kaz, ah say, "Kaz, doh worry. I not coming out
7 dis pipe without you. Ah not coming out dis pipe without none
8 ah all yuh. Ah guarantee sure ah coming out dis pipe with all
9 yuh. Ah will never leave all yuh." [*Mr. Boodram sobs*] Ah
10 went forward, maybe swim about maybe 15 feet, and as ah
11 went in more into the water, de whole pipe was totally—

12 Q. Filled?

13 A. Yeah, filled.

14 Q. Right. So did you take one of the tanks and the regulator with
15 you?

16 A. Yeah. Ah went in; a swim about 15 feet inwards, and ah realize
17 that ah can't drag dem with the pace we moving in 15 feet ah
18 water, and still ah ain find no access. I can't drag dem with dah
19 pace we moving. Dem fellas going to die there if I try to pull
20 dem through dat, and they may kill me too, because in panic
21 everybody go be fighting and—so I understand I had to go and
22 get help and come back fuh dem. So ah come back, prepare
23 mih mind mentally, because at this stage I still not sure if we
24 going in the correct direction.

25 Q. Right.

26 A. I still not sure if I going and swim to Berth 5 and bounce up a
27 blank, or if I swimming further away from the rescue, because

1 everything inside mih hoping a rescue going on. [*Mr. Boodram*
2 *sobs*] Everything inside me hoping a rescue was going on.
3 Nobody was making attempt to rescue we. Yuh know how dat
4 feel? [*Mr. Boodram sobs*] Sorry. I understand dat. I nuh sure
5 how far dis water going, and I done tell mih self I may not
6 come back from this swim, but ah had to know; ah hah tuh try,
7 because staying here is just as good as dying, and it doh make
8 sense ah just stay one place and dead. I would just be killing de
9 men and dem too, staying dey—[*Mr. Boodram sobs*]

10 Q. All right. Take a moment. Can we—

11 A. I always somebody who does know wha' going on, and I was
12 always somebody who could control and see things through,
13 and ah fail; ah fail dem. Ah tell dem ah was coming back fuh
14 dem and ah fail dem—[*Mr. Boodram sobs*]

15 Q. Mr. Boodram, you told us that you went back to where the
16 others were.

17 A. Yeah.

18 Q. And you are steeling yourself to tell them what you are going to
19 do.

20 A. Yeah.

21 Q. And could you do that?

22 A. So ah come back and after preparing myself mentally of wha'
23 ah had tuh do, I told them dat, “Yeow, we cyah go no more
24 further like this. There is a lot ah water ahead. We only have
25 two tanks. We not sure if the tanks full.” Ah make dem
26 understand de situation. Ah told dem dat I'd be there.
27 Somewhere in-between dat conversation, we heard knocking,

1 and ah was like, who knocking? Who knocking? Because
2 before that I ask dem to knock too. I was knocking and all too,
3 fuh somebody tuh hear. Ah say anybody knocking? Dey say,
4 no, nobody ain knocking. Ah say who knocking. Dey say boy
5 dey hear dat coming from by Blacks, boy. Dey ain sure. Buh
6 boy we cyah go back fuh he, boy. When we coming back fuh
7 rescue, we go come back. Ah tell dem fellas go back a little bit
8 whay dey go be comfortable, because how we in so much ah
9 water everybody hah to keep dey nose jammed on the—on de
10 top ah de pipes.

11 Q. So you were upside down? I'd say on your back, rather.

12 A. Yes; yeah.

13 Q. So you're all on your back at this stage.

14 A. Uh-huh.

15 Q. And, um, so you were saying to them go back to where there is
16 more air—a larger air pocket, where it's dry actually, where
17 they were?

18 A. Yeah.

19 Q. And you were going to go forward and get help.

20 A. And geh help.

21 Q. All right. So you've taken one of the tanks. What about Kazim
22 Ali; what happened to him?

23 A. Kazim Ali ask mih, he say, "Chris, doh go nah boy, doh go nah
24 boy." "Ah boy Kaz, boy, ah hah to go boy bredda, boy."

25 Q. He said to you not to go?

26 A. Yeah. He ask mih not tuh go. He ask mih tuh stay with him.

27 Q. Right.

1 A. He say, “Doh leave we here. Doh leave we here.” Ah say,
2 “Kaz, ah nuh leaving yuh boy. Ah just going tuh geh help and
3 ah coming back boy bredda, boy; coming back fuh yuh.” Yusuf
4 say, “Oh God, Chris, doh leave we.” Ah say, “Bredda, ah not
5 leaving yuh boy. All yuh know when I say something is dat,
6 boy. I not—I doh just talk ting boy. I coming back fuh all yuh,
7 boy.” Yusuf say, “Awright, nah bredda. Awright, nah bredda.”
8 Ah tell dem, ah say, “Ey, Fyzie hah to come too.” Ah say,
9 “Fyze, you hah to come too with dah tank, boy.” Ah say,
10 “Fyze, you know wha’ yuh hah to do.” And I tell dem ah gone.
11 Kazim tell mih, yeah, but he couldn’t leh go mih foot.

12 Q. So you left?

13 A. Ah hah to pull mih foot off ah Kazim.

14 Q. Right.

15 A. Kine ah kick it off ah him fuh him tuh leh go mih foot.
16 Because he telling mih, yeah, Chris, go ‘head, but he couldn’
17 leh go mih foot. Ah hah to yank it out; force it out ah him.
18 And I left. After I spin around—I spin around fuh mih hand—
19 mih hand was stretch out in the back so; I spin around and come
20 on mih belly.

21 Q. Right.

22 A. Ah hah de tank in front ah mih with de mouthpiece.

23 Q. So you’re pushing the tank—

24 A. Yeah.

25 Q. —with the regulator in your mouth?

26 A. Yeah.

27 Q. Right.

1 A. And as ah enter dah water—‘cause ah know ah doh hah much
2 air, or ah have a limited amount; ah doh know how far ah hah to
3 go. As ah enter dah water, ah muster up every piece ah
4 strength, everything in mih, to just push; just move as fast as ah
5 could move.

6 Q. Right.

7 A. Ah pray and ah ask God to gih mih de strength and ah just
8 gone, and ah start tuh just run through dah water, and ah start
9 tuh move through dah water. While going through, mih tank
10 start tuh go dry. Yuh does know, even if yuh doh have a gauge.
11 Ah experience diver does know when yuh regulator start tuh
12 geh hard on yuh.

13 Q. Yes.

14 A. Some regulator does make a lil singing noise. Mines—well, ah
15 doh even know if dah was mines. De tank dat I had wasn’
16 making any noise.

17 Q. Right.

18 A. But I know the tank was going. It was gehing hard. So when I
19 realize dat, I could ah only hope ah reaching into ah air pocket
20 or ah start feeling if ah could feel ah tank or anything like dat
21 too, so while I pushing, ah feeling, ah pushing, ah feeling, my
22 tank hit a next tank. Ah hear toong. At this stage ah forcing the
23 diaphragm. Ah know yuh does do recreational diving, so yuh
24 know wha’ yuh mean by forcing, if yuh ever do dat. Is like yuh
25 sucking out a bottle; like yuh wringing it dry; it does feel like
26 dat. [*Mr. Boodram demonstrates using his hand*] Ah forcing
27 the diaphragm to geh some air. The air done. Ah reach back in

1 a state and ah nearly drowning until ah hear ping. When ah
2 hear ping, ah leh go dis tank and ah run up and ah scramble dah
3 one, and ah feel, ah feel, ah feel fuh it. When ah feel and ah
4 geh de mouthpiece it had no—when ah get de second stage it
5 had no mouthpiece on it.

6 Q. Right.

7 A. Right? So ah push de whole thing in mih mouth. It was like
8 eating oil, pure oil inside. When ah purge it and ah geh air, yes;
9 thank you Lord. And ah just start to go again. Maybe about—

10 Q. Pause there for a minute. What did you do with the empty
11 tank? Did that pass by you?

12 A. Yeah, yeah, ah left it there and ah—

13 Q. There was enough room for it to pass by you?

14 A. Yeah, yeah.

15 Q. So you were able to leave it in the—and then carry on with this
16 new tank that you'd found?

17 A. Yeah. Now, remember, I looking tuh reach as fast as—where I
18 want to go as fast as possible. I doh need no extra baggage to
19 hold me back—

20 Q. No, quite. Yes, yes.

21 A. So just forward ah was going. Dah is all mih mind—dey have a
22 saying fuh fright or flight or something like dat; and was just
23 forward. And as ah keep going, ah enter ah air pocket. But dis
24 one wasn't totally dry like de last one. This one was like
25 halfway ah de pipe with water in it or liquid. Yuh know. And
26 ah hold up, ah saving mih air, and ah traversing through de
27 water now.

1 Q. Are you able to say how long that was for that there was this air
2 pocket?

3 A. At this stage, I'm being honest with yuh, after trying to use all
4 mih senses and understanding and wha'ever skill ah had tuh—
5 with dem fellas, at dis stage when I turn around and start tuh
6 move, it was like me running from a pit bull. Ah wasn't
7 thinking—

8 Q. How far it is.

9 A. How far or anything; ah was just—mih mind was just set on
10 forward, forward, forward.

11 Q. Yes.

12 A. So asking mih to judge de distance ah was in, apologize that ah
13 wasn't able tuh geh dah information, and ah only understand
14 how crucial it was only when ah outside de pipe. But fuh me
15 mentally it wasn't as easy as people might think.

16 Q. No, I understand. And so there was this air pocket. And did
17 that come to an end?

18 A. Yeah. So just before it came to ah end, ah heard Fyzie voice:
19 "Christopher, Christopher." "Yeah, Fyze. Is you?" Ah pause.
20 He say, "Whay yuh?" Ah say, "Ah right here, boy. Ah right
21 here." He say, "Right here whay?" Ah say, "Ah in de pipe,
22 horse. Ah right here. Ah some whay right here." He say,
23 "Wait fuh mih, nah." Ah say, Fyze, boy, ah cyah wait fuh yuh
24 boy, bredda boy. Ah breathing down here too long. We
25 staying down here too long. We need tuh move, boy, bredda
26 boy. We down here too long. If we hah to save anybody, we
27 hah tuh geh out ah here. Ah cyah stop. We cyah take no

1 breaks. If you need tuh take a break, stop and take ah break.
 2 Once I reach out and I geh rescue, ah coming back fuh all yuh.”
 3 He—“Chris, wait fuh mih nah, boy, Chris, wait fuh mih, nah
 4 boy?” And ah say, “Boy, Fyze, ah cyah wait, boy.”

5 Just before—when ah realize de pipeline flooding out at
 6 this stage Fyzie telling me dat: Boy, how dis thing happen,
 7 boy? And he talking and ah tell him, “Boy doh worry ‘bout dat
 8 nah boy, doh worry ‘bout dat.” He say, “Boy, we go come out
 9 ah dis; yeah boy we go come out ah dis boy; have faith, boy.”

10 Just before de pipe totally full ah water, ah stop and ah
 11 say, “Fyze, whay yuh?” He say, “Ah here.” Ah say, “Here
 12 whay?” He say, “Right here.” Ah say, “Fyze yuh coming?”
 13 He say, “Yeah, ah coming.” Ah say, “Fyze, buh me ain hearing
 14 water moving.” He say, “Yeah, ah coming. I coming.” Ah
 15 say, “Awright, good. Well, hear wha’ going on, I going.” He
 16 say, “Going whay?” Ah say, “Well, the pipe full here. I going
 17 underneath.” He say, “No, wait fuh mih, nah boy. Wait fuh
 18 me.” Ah say, “Bredda, I cyah wait fuh yuh, boy, horse boy.
 19 Ah need to go.”

20 Q. And did you?

21 A. I did.

22 Q. All right.

23 A. And as ah go, maybe about—fuh this one, because it was a
 24 short distance, ah could judge that it was maybe around 30 to
 25 40 feet, or what I may felt as 30 to 40 feet.

26 Q. No one’s going to hold you to it, Mr. Boodram. I understand.
 27 But anyway, you felt it was a lot shorter?

1 A. Yeah—from de bend. When I feel de bend, pause, cause now
2 ah going and face either death or life.

3 Q. Right.

4 A. Because remember ah still not sure if ah going to 5 or 6 here
5 now eh.

6 Q. Right. So it's either light above you or not?

7 A. Ah make up mih mind to die for the third time. And ah went
8 up. While going up—sorry, ah miss something. Ah found a
9 next tank while coming across, right, while we was in the
10 water. Dah is why ah ask Fyze—yeah, ah stop and ah ask Fyze:
11 “Fyze, yuh have air?” Fyze tell mih, yes, he have air. Ah say,
12 “Yuh sure?” He say, yes. Ah say, awright. I find ah next tank.
13 Ah keeping it. He say, “No, wait fuh mih, nah?” Boy, ah say,
14 “Fyze, ah cyah wait fuh yuh”; and ah went into the water.

15 Q. So is this a third tank, then?

16 A. Third. The first one wha' I had—excluding Fyzie own, right;
17 the third tank that I had in my possession, right, ah left dah one
18 in the—where de pipe was full ah water. The second one where
19 ah found, and then the third one whay ah found.

20 Q. So this was your third tank?

21 A. Yeah, dah is my third tank. So ah hold on to dah one, and ah
22 say, “Fyze, ah gone.” Now, dis is before ah meet the elbow.
23 Right? Ah swear to God if ah know the elbow was dey ah
24 would ah leave dah tank fuh somebody else. Ah didn't know.
25 Take the tank, and ah went in. Ah find the elbow, when ah find
26 the elbow, I still held on tuh de two tank because ah so much in
27 fear of that being a blank and ah may have to traverse back. So

1 when ah find dah tank ah was still in—okay, well ah have a
2 next tank. This might be a lifeline in case dat go wrong up dey.
3 So ah grab de next tank and ah went up. When ah reach up
4 dey—

5 Q. Did you see daylight?

6 A. Inside dey was pitch black.

7 Q. All right.

8 A. Ah feel like if ah coulda give up when ah reach up dey and ain
9 see nobody inside dey. None. None. None ah my—none ah
10 my, ah go call dem family was inside dey waiting fuh me;
11 Andrew, Dexter, no rescue diver, no nobody was inside dah
12 chamber. Boy, all yuh doh know, nah. When I see dat I wasn't
13 even sure if I was living still, because it was so unbelievable to
14 know dis happen and nobody here to assist we. Nobody. I
15 didn't see nobody inside de pipe trying tuh rescue we, nothing.
16 Every time ah open mih eyes, it burning. Ah cyah see anything.
17 Ah cyah hold up mih weight inside the pipe becor the pipe
18 gushy. Right?

19 Q. Yes; slippery.

20 A. One tank full. The next one maybe about half. Ah could tell
21 dat because ah de buoyancy. Ah experience diver would know
22 dat. So ah say, okay. Well, leh mih let down dis tank that
23 buoyant. Ah know it not going to drop hard, so even if Fyzie
24 behind me it not going to hit him. Right? It go take its time
25 and go down, or maybe just be neutrally buoyant. Right?

26 Q. Right.

27 A. So ah leh go dat and ah held on to the full one, and ah start to

1 feel around and ah felt a chain from on the chain block.

2 Q. It was hanging inside the pipe?

3 A. It was hanging inside the pipe. Ah use dat and ah wrap up mih
4 right hand on it here so. And ah say, awright, Chris, we hah to
5 geh out ah here. After ah trying to climb out several times, ah
6 realize ah couldn't climb out. Ah couldn't wedge mihself in—
7 the pipe was too small tuh try tuh wedge yuh self in de pipe tuh
8 climb up and it was too slippery. It was like about four to five
9 feet. Okay, so I in this and floating; the water reaching me
10 around neck height.

11 Q. So you were floating?

12 A. In the water; it will reach me around neck height. Dah is me
13 kicking and swimming, right; treading water.

14 Q. Treading water. Right. But could you see the top of the pipe?

15 A. Right. And that was like—

16 Q. Out of your reach?

17 A. Out ah my reach.

18 Q. Like the ceiling here?

19 A. Not dah high.

20 Q. Not even that high?

21 A. No, not dah high. Just barely out ah my reach; just barely. Yuh
22 understand the frustration?

23 Q. Yes, I can.

24 A. To reach this far and cyah come out. And ah hold on to de
25 chain and ah trying to pull up and ah forcing this arm to gih mih
26 some strength tuh try tuh hold on, so ah made three or four
27 attempts and when ah hold on and dis arm get the strain, it give

1 up on mih. So every time ah falling back down. So ah had no
2 strength to pull mihsself out of it. Ah take de chain, and ah
3 make ah knot on de chain with mih right hand where mih foot
4 could ah fit into it. Ah puh mih foot into it, and ah trying to
5 pull up on it now, and after all the attempts ah trying tuh climb
6 up without doing dat, like mih body now was too weak tuh
7 actually propel mihsself up dey now.

8 So from dey, the onlies' thing I realize I could do now is
9 just bawl and call and pray somebody upside dey, somebody; I
10 just and hope outside nah on fire; hope somebody actually care,
11 yuh know, to rescue we. And ah wrap de hook ah de chain, de
12 next end ah de chain on mih hand here so and ah was ponging
13 on de pipe and bawling and crying and bawling help, help, all
14 yuh help we. And ah ponging and ah ponging and den in-
15 between dat I hear a knock. After ah hear dah knock, a knock it
16 back once. Then the person like dey hear the knock and dey hit
17 mih two: dong, dong. Ah hit dem back two: tong, tong. So dey
18 could understand that is just not something swinging, is
19 somebody actually sending yuh a signal.

20 Q. Reacting to the knocks.

21 A. Right.

22 Q. Rather than just something loose hanging.

23 A. Yes.

24 Q. I got you.

25 A. And then ah start to hear a little sign ah bawling [*Sound made*
26 *by witness*] like humming. Yuh cyah really hear distinctively
27 wha' it is but ah understand dat, awright, dey hearing mih. And

1 ah hold on dey fuh mih dear life, feeling to faint, feeling to
2 black out, totally exhausted. And then all of a sudden I just see
3 a light—because every now and again ah pulling and ah raising
4 as far as ah could raise and gehing ah lil peep. But ah cyah see
5 down. Ah just seeing a lil over the—

6 Q. Uh-huh.

7 A. And ah start to see a lil light shadowing in the—

8 Q. In the habitat.

9 A. In the habitat.

10 Q. Yes.

11 A. Ah swear to God it was the angel ah death coming fuh me. Ah
12 tell mih self dis is the light people does be talking ‘bout. Ah
13 swear dis was death coming fuh mih. When the person come in
14 the chamber—now, I know Ronald Ramoutar personally. On
15 top ah he being a mentor to me in diving, he is my neighbour. I
16 grow up underneath him and I did not recognize him. He had
17 on his hoodie. Ah could ah barely see too. All ah seeing is just
18 like a lighted image. When I see him I drift back in the pipe
19 and I start to leh go de chain, because ah in fright and not
20 knowing what is this; if this is in my eyes; because, ah mean,
21 yuh could know ah is a strong Biblical person. I say is de angel
22 ah death or something.

23 Ah was like, who is dah boy? Who is dah, boy? He say,
24 “Boy, me, boy.” Ah say, “Boy me who, boy? Me who, boy?”
25 He say, “Rolly boy.” Ah say, “Rolly who, boy?” He say,
26 “Ramoutar, boy. Ramoutar boy.” Ah say, “Rolly, dah is you,
27 boy?” He say, “Yes, boy.” Ah say, “Boy, take out dah hoodie

1 leh mih see yuh, nah boy?” He take out he hoodie. Ah say,
2 “Boy, bredda, geh mih out ah here, nah boy? Save mih, nah
3 boy, please?” He say, “Yeah boy, yeah boy”, and he try pulling
4 mih up once or twice, but he alone couldn’t bring mih out,
5 because de height ah de, um, the pipe he didn’t have much
6 force from his height, because he not too tall neither. Yuh
7 know?

8 So he say, “Boy, I alone cyah do it, boy. Ah hah to go
9 and geh help. Ah say, “Oh gosh, doh leave mih, nah boy?” He
10 say, “Boy, ah hah to go and geh help and come back, boy.” Ah
11 say, “Boy, doh leave mih, boy. I doh know how long I could
12 hold on here again.” As ah tell him dat he say, “Awright, look
13 Corey coming.” Ah say, “Corey who?” He say, “Corey, boy.”
14 Ah say, “Awright, Corey.” Ah say, “Corey?” He say, “Yeah,
15 boy, Chris, boy.” Ah say, “Boy, save mih nah boy, horse? All
16 yuh geh mih out ah here, nah, boy, bredda, boy. Whay all yuh
17 was, boy? Geh mih out ah here, nah boy?” He say, “Awright.”
18 Corey hold mih with Rolly help and me trying to, wha’ ever
19 strength I had left to pull me out ah the pipe. Rolly ask mih if
20 ah awright. Ah say, yeah. Ah say, “Boy, dem fellas down dey,
21 boy. Dem fellas down dey, boy. Yuh hah to go down and help
22 dem.” He say, yeah, he just waiting fuh more equipment and
23 backup, buh we go geh dem. Ah say, “Boy, Fyzie not too far,
24 boy. Fyzie not too far, boy.”

25 Q. Pause there for a minute. Were you telling them that they were
26 alive still, when you left them?

27 A. Yes. I tell Rolly this. Rolly was the first person here that—

1 Ronald Ramoutar was the first person—

2 Q. Right.

3 A. —alongside Corey. Because when he came in he ask me, he
4 say, “Wha’ happen to dem fellas. Whay Fyzie?” Because
5 Fyzie is his brother-in-law also.

6 Q. Yeah.

7 A. Ah tell him Fyzie not too far from mih, boy. Everybody down
8 dey boy.

9 Q. Right.

10 A. “All yuh go fuh dem, nah boy?” He say, yeah, buh he just
11 waiting for equipment and backup, boy.

12 Q. All right.

13 A. Ah say, awright.

14 Q. All right.

15 **Mr. Chairman:** Mr. Boodram, what we’re going to do is have
16 a short break. All right? We’ll take a little break now. Just
17 have a cup of tea or something. Someone will look after you.
18 All right? And we’ll resume in about 20 minutes; 20 to, please;
19 20 to 12.00. Take your time. And then we’re going to deal
20 with the second phase. I’m going to let Mr. Maharaj deal with
21 the second phase. I’m really grateful for your evidence so far.
22 All right?. You take 20 minutes. All right? Thank you very
23 much. We’ll rise now. Thank you.

24 **11.27 a.m.:** *Enquiry suspended.*

25 **11.37 a.m.:** *Enquiry resumed.*

26 *[Audio breakdown]*

27 **Mr. Chairman:** I think we’re in business. Excellent. Thank

1 you very much. I was about to say, Mr. Maharaj, please don't
2 let me do your job for you anymore, will you?

3 **Mr. Maharaj SC:** Yes.

4 **Mr. Chairman:** You must interrupt me and tell me that you
5 are here for a reason—

6 **Mr. Maharaj SC:** Yeah—

7 **Mr. Chairman:**—so forgive me for taking over at one point,
8 but I, I just thought that Mr. Boodram and I seemed to have a
9 few comfortable moments together when I thought he might,
10 um, find it easier if I was asking him questions.

11 **Mr. Maharaj SC:** It may be because of the experience as a
12 diver also, I thought.

13 **Mr. Chairman:** Yes well, I—yes, mine is rather more limited
14 than his, but anyway, Mr. Maharaj will be asking you some
15 questions now. We got to the point, didn't we, where you're
16 out of the pipe, all right, so I hope that's the worst part—

17 **Mr. Maharaj SC:** Right.

18 **Mr. Chairman:**—of your ordeal. Thank you.

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. Mr. Boodram, when you came out of the pipeline, you told all
21 around you that the men in the pipeline were alive?

22 A. Before that.

23 Q. Before that?

24 A. Before I reach out the chamber, before I reach out the chamber
25 I came out the habitat, um, I asked Corey to find out from
26 Andrew Farah how long I was down there for because, as a
27 diver, overstaying your time could lead to decompression

1 sickness. So, I was unaware of the time that I was down there
2 for. I asked Ronald Ramoutar at the time. I think he told me—
3 I believe I told me six o'clock, I'm not sure. Right? After he
4 told me that I asked him to ask, and I tell Corey to find out from
5 Andrew Farah what is the—how long I've been down here and
6 do I need a decompression chamber? Corey came back, told
7 me Andrew say come out. I say how long? He say he just say
8 come out. I say go and ask him again if I need to go into a
9 chamber. I ain't work so hard to reach out here then to reach on
10 the top ah de surface and have decompression sickness, to no
11 stages of it. He went back, Andrew Farah told him I good,
12 come out. Corey ask me if I could come out, I say yeah. I went
13 in the water and I swim out, Corey swim out, we reach up to the
14 top. As I reach up to the top, um, I saw Andrew was on
15 Petrotrin's—no, no, no, I lie. He was on top, Andrew was on
16 Adventurer I

17 Q. Which is the boat?

18 A. Yeah.

19 Q. Which is the boat?

20 A. Yeah, their small boat, a aluminium boat.

21 Q. Uh-huh.

22 A. Um, he and somebody else was there. I can't remember who
23 else—

24 Q. Okay.

25 A. —at the point ah time, and, um, they tried to pull me out the
26 water and I told them not dah hand, not dah hand. Dah hand
27 broken. And dey geh mih out and al tell—as, as dey pull mih

1 up on de boat mih eye fell on Nicholas Kurban and ah see
2 Nicholas Kurban. Ah say, “Nicholas, go and save yuh fadder.
3 Go and save yuh fadder. He not far down. He right behind
4 mih. Go and save your father” and Nicholas say all right. Ah
5 know Nicholas is ah diver.

6 Andrew ask mih, Andrew, um, ask mih to turn around, so
7 ah turn around and I lie dong on mih back now. I tell him, I
8 say, “Boy, dem fellas in dey. All yuh go and save dem. All
9 yuh go and save dem.” Andrew was like, “Awright, awright
10 buh you relax, you relax.” Ah say, doh tell mih to relax. Do
11 what—better all yuh leh me go back and save dem, yuh know,
12 becor like, all yuh, all yuh ain’t want to do nutten.” And he
13 say, “Ey, relax yuhself. You in shock.” I say I not in shock.
14 Dem fellas dong dey, boy. Leh we geh dem.”

15 And den mih eye fell on top ah de chamber, Michael
16 Kurban where, after I see Michael Kurban, I know he’s a very
17 competent diver and his father being there I know he’s a kind a
18 no-nonsense type a guy too. Knowing him personally he is
19 family to me too. Ah say, “Michael, go and save yuh father”,
20 and Michael say, “All right” and he start to pace back and forth
21 on, on, on the, on, on the habitat, on top the habitat and I like,
22 “Boy wha you doing, boy? Go and save yuh”, um, I used some
23 profanities, “yuh fadder. Now boy, now!” And den he, he run
24 off de, de ting.

25 At de same time dey transfer me. They wanted to
26 transfer me from, from one, from one, um, boat to the other. So
27 dey, dey, dey transfer me. I think I kinda like walk for mih self.

1 Q. Okay, I know it's difficult to remember everything but they
2 transferred you. Did anyone take you to any decompression
3 unit that afternoon?

4 A. No, boy.

5 Q. No?

6 A. Nobody didn't—I felt like nobody cared for me or, or my
7 diving buddies, nobody. I, I was supposed to see a dive
8 specialist first or at least while going through emergency see a
9 dive specialist and be treated into a chamber. Right? When,
10 when they take me and they puh me on de boat, I let dem know,
11 I say, “Ey” because like everybody was a set a headless
12 chicken. I say, “Ey, cut off this wet suit off a mih and check to
13 see if all yuh seeing any wounds, any lacerations, anything, any
14 blood anything bleeding becor my body numb, I doh know, and
15 if all yuh seeing it all yuh ha to stop de bleeding.” I can't—I, I
16 don't know, right?

17 After dey cut open de wet suit, they ain't see nothing. I
18 believe it was a, either a Paria official or a Kenson official,
19 somebody within Paria organization assisted with cutting out
20 de, um, de wet suit. I say, “Now check mih head. Look under
21 de oil. Look good to see all yuh ain't see no, no buss head, no,
22 no, nothing ain't bleeding. Check good, check good.” And dey
23 check, dey say, nah, you good. After dey cut mih out I in mih
24 drawers. Dey take out mih bootie, they had to cut out mih, mih
25 bootie and ah believe dey reach to the landing stage and when
26 we reach to the landing stage I hop off de, de boat and come on
27 to the landing stage. They tried to puh mih on a stretcher two,

1 three times, I was only sliding off because you could guess mih
2 whole body drench dong with, with oil, sludge.

3 Q. Okay. They told you, you—well, you, you were not taken to a
4 decompression unit but where were you taken to?

5 A. The ambulance—we wait for de ambulance a few minutes,
6 maybe about three, four minutes de ambulance reach on de
7 jetty, I had to hop up de stairs, went into de ambulance, they
8 fasten mih dong and dey carry mih to San Fernando General
9 Hospital.

10 While we was going there I say, um, before that, sorry,
11 before that, well after I talk to Andrew and I tell dem dat I ask
12 dem to call mih wife. Within all ah dis happening, how much
13 hours I was dong there, nobody find it, nobody find it proper to
14 call my wife and tell my wife dat I stuck in a pipeline or I
15 missing. Nobody. My wife had to get third-hand information
16 to, to know wha going on. Dem call mih wife, ah tell dem
17 meet, meet mih at San Fernando hospital. Dey say dey carrying
18 mih at San Fernando hospital.

19 When I reach San Fernando hospital, no preparation was
20 in place. I mean, San Fernando, SWRHA did a good job, right,
21 but they wasn't prep. They didn't know is a guy coming with
22 oil. They don't know what to treat him for if is a dive accident.
23 Dey didn't know anything. They didn't even know 'bout de
24 accident. I had oil on my skin for three days. Three days I
25 trying to take oil out a my skin. SWRHA doh have the, the, the
26 chemicals to take dem oil off a my skin. When I, I, I, I settle up
27 and thing I was able to tell my wife what to bring to get de oil

1 off ah me. Oil up inside my nostrils, all in my sinus. They had
2 nothing.

3 SWRHA, doh geh mih wrong, SWRHA did the best that
4 they could do but dey wasn't prep. They wasn't—it wasn't a
5 advance phone call stating a—well we have a emergency with a
6 diver in Paria, he coming in with oil, he coming in with
7 nothing, no information, nothing. Is like if, is like if I get
8 damage at home and getting rush to the hospital. I, I—

9 Q. And I—

10 A. I don't understand how, how—I doh understand how a accident
11 could happen in the biggest state-owned company in Trinidad
12 and Tobago and a phone call to the hospital at least wasn't
13 made. You know? It—I ha so much emotions to deal with and
14 anger is on top of it because ah dis. No rescue attempt. To me.
15 For me. That's how I felt. No rescue attempt. When coming
16 out, I, I was treated like a normal casualty patient. Right?
17 They didn't puh anything in place. I—this oil on my skin for
18 three days was sickening me.

19 Q. At the San Fernando General Hospital you spoke to the nurses
20 and they spoke to you?

21 A. I, I spoke to mih wife and—

22 Q. At the hospital?

23 A. —I, I—yeah, I saw mih wife and I felt, after seeing my wife is
24 when I felt, how to say it, is when I felt like I was rescued, after
25 speaking to mih wife. My mother recently passed and that
26 was—she was the closest thing to comfort, you know, to me.
27 So is only then I felt I was rescued after seeing my wife and I

1 just say, well, all right, ah reach. I say “Babe, take dong some
2 information from mih” and I explain to she, um, the time I was
3 inside the pipe, I told her to call a friend of mine, Brian
4 Lezama, he suffered from decompression sickness and, um,
5 went through all the stages so he have a lot a experience in it.

6 I told him—I told she to ask him for Dr. Combs number
7 to geh on to him and ask advice. I told her all the relevant
8 information that I coulda remembered. I say liaise with Brian
9 Lezama and Jerome—um, sorry, well Jerome, that’s ah next
10 friend, dah is a alias name he has, liaise with two ah dem. Dey
11 would give you all the advice that you could need, take it and
12 make sure I get to a chamber because I believe I might be
13 suffering from decompression sickness.

14 And decompression sickness could hit you from a
15 numerous—stages, it could hit you instantly, it could hit you
16 slowly, it could kill you, it could cripple you, it could just be a
17 short pain. You can’t tell unless yuh under de scope.

18 Q. How long did you stay in the hospital, at the hospital, at the San
19 Fernando hospital? How long they kept you?

20 A. I think it was six days.

21 Q. Six days.

22 A. Six or seven days, I, I, I, I, I stay dey and it was—

23 Q. Okay. Mr. Boodram, I want to ask you a very important
24 question. If when you were rescued either Paria or LMCS
25 wanted to find out from you the condition in the pipe in order to
26 effect a rescue, would—were, were you in a position to tell
27 them what the condition of the pipeline was inside the pipe?

1 A. Before I—while—when I now come out de pipe my mind and
2 everything was focused and tune een to everything to save dem
3 fellas. If they had debriefed me there and then, they would a
4 geh everything they coulda get from me.

5 Q. Including the condition in the pipe?

6 A. Everything ah coulda tell them.

7 Q. Right.

8 A. After seeing mih wife and reaching to the hospital and telling
9 she dat last bit ah information I say, “Babes, yuh ha to take it
10 from here now.” I saw mih brother I told mih brother de same
11 ting. I say I need to relax. My mind on, on, on, on overdrive
12 right now and after dat de doctors do dey ting. Dey give me
13 some painkillers, dey do some things, I can’t remember exactly.
14 I remember dey telling mih that I had COVID and then I start to
15 fight.

16 I tell dem how I could have COVID? I now recovered
17 roam from COVID? How could I have COVID? This is
18 stupidity. All yuh trying to kill me. I now come out ah pipe
19 and all yuh putting me in ah COVID room on top a dat to
20 reinfect me? Dey is madness, yuh know? And dey, dey, dey
21 puh me in ah COVID room next to a woman dying. A woman
22 die next to me that night, while in CO—I fight—I had to fight
23 my way outside a pipe, right, come out here, right, go in a
24 hospital and puh mih in COVID? What, what dey was trying to
25 do mih? They didn’t even—all right, if I had COVID was
26 quarantine. These, these, these where Paria or LMCS or
27 whoever it is supposed to put something in place for me to be

1 quarantined in a separate room. At least gih mih dat, if you
2 believe I had COVID. I—my—I had to fight. I try getting off
3 ah dah bed three time in dah COVID room and fall dong.

4 De doctors didn't want to be there. They had one doctor,
5 I cah remember his name right now, a African guy. He saw me
6 and he say, "Chris wha going on with you?" I say, "Boy, I
7 cannot stay in here. I now fight COVID and COVID was hard
8 for me. I nearly die off a COVID too. I not going to stay in
9 this room. And he say, "So what's de problem?" I say I—boy
10 I don't have COVID. I say all yuh have to do a next test. I doh
11 have COVID. I can't remember dey even doing a soft test on
12 me, eh, and dey tell mih ah had COVID. I can't remember that
13 part if they did it, right, but ah know ah didn't had COVID.

14 I quarrel, mih brother, mih wife quarrel, everybody
15 quarrel until dey say, "Well, all right do a external test. Mih
16 brother did it in Victoria Labs, I believe, nursing home or
17 something like that and it came back negative. I spent, I don't
18 know, 12 or 15 hours, nearly 18 hours I would say inside a
19 COVID room. All that time too I waiting for—because I get in
20 contact with Kazim Ali through mih wife phone and tell him
21 that I need to go in a chamber because mih wife get in contact
22 with Dr. Combs and Dr. Combs tell she that he need
23 decompression sickness treatment. You need to go in a
24 chamber and she go check up. Dr. Combs now come and tell
25 me that, um, Mr. Boodram I talking to you, talking to you and I
26 talking to you for free. Nobody not saying I have other clients
27 and thing to do. I trying to get advice buh ah ha odder things to

1 do. I say, all right, nobody ain't paying yuh nothing. He say
2 no. Ah say all right. Ah call Kazim Ali. Ah say, "Kazim, what
3 all yuh really doing me, boy? All yuh trying to kill me here or
4 wha? Why nobody, why nobody not organizing this? Kazim
5 say, "Well boy he didn't know, he didn't know" and he call
6 Combs, they settle the matter. I call back Combs. Combs tell
7 mih yes, he working on it, they prepare a chamber for me in, in,
8 in, um, in, um—

9 Q. In La Romain?

10 A. La Romain by, um, All Support, all right? Up to now, up to
11 today dah ambulance ain't reach to carry mih dey. When de
12 ambulance reach—ah lie. When the ambulance did reach,
13 when the ambulance did reach, is because Dr. Combs call and
14 said, tell the doctor that the time pass for something. If, if
15 something had to happen to me if I had to suffer from
16 decompression sickness if—I would have already been showing
17 signs and symptoms of it. That meaning I would a already die
18 if it was to that stage, or paralyzed or, or, or, or maybe—

19 Q. I understand. Okay. Okay.

20 A. And when the ambulance did reach, the ambulance refused to
21 take me when they hear I had COVID. They say, um, "Well,
22 well the patient have COVID, we, we wasn't aware ah dat",
23 right? Ah call back Randy because mih wife get Randy
24 number, that's a Petrotrin person.

25 Q. Mr. Randy Archbald?

26 A. I don't know he title. I, I call him back and I say, "Mr. Randy,
27 wha going on here? Wha going on? I thought yuh tell mih yuh

1 sending de ambulance? De ambulance say dey not picking mih
2 up. Right?” He say, “Awright, awright, ah go see wha ah
3 could do. Ah call him back and he phone went unanswered,
4 unanswered, unanswered. Must be a hundred times I try calling
5 him because I panicking in dey in COVID. After fighting fuh
6 mih life dey, ah ha to come and defend mihsel inside COVID
7 here too on a virus that ah cannot see, ah cannot fight.

8 Q. Okay. Whilst you were in the pipeline and you were coming
9 out and you had promised the men that they would be rescued,
10 did you see anything in that pipeline during the time you were
11 in that pipeline to obstruct anyone from coming into that
12 pipeline to rescue the men?

13 A. If it had anything to obstruct them, how I come out?

14 Q. Yes.

15 A. How I come out?

16 **Commissioner Wilson:** Chris, um, you know, first of all,
17 thank you for sharing your story for us. I think it’s a
18 remarkable story, but, building off of Ramesh’s, um—um, what
19 I’m hearing from Ramesh, what I want to ascertain is really,
20 when you came out, any person whether LCMS or Paria,
21 attempted to get a debrief of what happened in the pipeline?
22 That’s one.

23 **Mr. Boodram:** I was, I was begging them to stay, man. I
24 didn’t wanted to leave de site, boy. I was begging dem to stay,
25 boy. I say, boy, leh me go back for de men and mihsel. I tell
26 dem that. I—and I sure Fyzie woulda be here if I did go back,
27 at least, ah hundred percent sure about dat. Nobody cah tell me

1 about all dah shit about cah rescue people. I dive in ah pipe
2 before dat and puh on, inside de riser on same Berth six, I went
3 eenside dat under Piper self, Collin Piper, I went een dat an put
4 een a, a, a, a soft paper gasket becor we couldn't install it from
5 de outside because the surges was slamming against it. I went
6 in de pipe under scuba self. Paria talking all that talk about
7 scuba and scuba, scuba. For all de years we diving in dey is
8 scuba. Every company come in dey was scuba for all de years.

9 **Examination By Mr. Chairman:**

10 Q. Can you help me with this, please, and it follows on from what
11 Mr. Wilson was saying? When, when you were being ferried in
12 the ambulance to go to hospital, all right, did anybody
13 accompany you in the ambulance? Obviously there was the
14 ambulance staff but was there anybody from Paria or—

15 A. No, Sir.

16 Q. —or LMCS?

17 A. No, Sir.

18 Q. Or anybody?

19 A. Ah tell yuh dey was headless chickens out dey.

20 Q. Pause for a minute, please, because I understand you're angry
21 and you're emotional, I do understand. I just want to be clear
22 so that we, we know what—and we can take this into account,
23 all right? Have you got your napkin? Yes, good. So, I think
24 what we're after is to know whether or not there was an attempt
25 at trying to get from you as much information as possible as
26 soon as possible? And obviously people would have thought it
27 was necessary—

1 A. The only—

2 Q. Wait, just a minute. People would have thought it was
3 necessary to take you to hospital, but there was nothing to stop
4 someone going with you in the ambulance to speak to you. Do
5 you see what I mean?

6 A. I know that, Sir.

7 Q. Right. What I understand from what you're saying is that there
8 wasn't anybody to accompany you in the ambulance to take
9 you to hospital.

10 A. The only person ask me anything was Andrew.

11 Q. Andrew?

12 A. Andrew asked me.

13 Q. Right.

14 A. I believe Andrew asked me how far dey inside and ah tell him
15 Fyzie not too far. The rest a them I don't know.

16 Q. Right. And, that aside, do you remember if you were put on a
17 call with Mr. Collin Piper, a man called Randolph Archbald
18 and, um, Mushtaq Mohammed? Do you know if you were put
19 on a phone call with them later that night?

20 A. I have no recollection—

21 Q. No recollection. All right.

22 A. —of speaking to anybody from Paria. The onlies' person other
23 than Randy for the ambulance and Kazim Ali.

24 Q. All right.

25 A. My wife and my—my wife was filtering phone calls also while
26 I was in the hospital—

27 Q. Right.

1 A. —because a lot a media people and a set a—

2 Q. Of course. Of course. You have no recollection of having a
3 conversation at about ten o'clock that night?

4 A. And I, and I very, very much doubt—

5 Q. Right.

6 A. —I would say that dem fellas died because I come out and I tell
7 everybody they was living.

8 Q. Right.

9 A. In front a—it doh have nobody could deny that I said
10 everybody was living who was dey.

11 Q. I don't think that's—

12 A. You, you could ask de whole hospital staff because on—
13 throughout this whole period I was just breaking down in de
14 hospital. Ask de—any one a de doctors you see bout me, they
15 will tell you, any one ah de nurses everybody there would—
16 they want to know why was I crying—

17 Q. Mr. Boodram, I think everybody, everybody accepts that you
18 made that clear. I don't think that's a challenge. I just wanted
19 to be clear in my own mind about whether you were
20 approached, do you follow me, by anybody from LMCS or,
21 or—I mean after you were put in the ambulance, all right,
22 anybody from LMCS or from Paria to speak and to, and you
23 have no recollection of that?

24 A. No.

25 Q. I'm putting to you that there was—it's alleged that there was a
26 conversation at around ten o'clock that night, but you have no
27 recollection of that?

1 A. No.

2 Q. All right, thank you very much.

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. I want to read something that Mr. Piper said in a conversation
5 he said he had with you at paragraph 131 of the witness
6 statement bundle at page 1368.

7 “I asked Boodram how he was doing. Mr. Boodram
8 responded by saying, ‘Mr. Piper, I want to say upfront I
9 ain’t think them fellas make it’, or words to that effect.
10 The phone was placed on speakerphone mode and Mr.
11 Boodram words were audible to persons around. Mr.
12 Boodram then indicated that he crossed two welded
13 sections on the way—sorry, two welded seams on the
14 way out of the pipeline. He said he then crossed Blacks
15 who was unresponsive. He indicated that four of them
16 were making their way out of the pipeline and they were
17 helping Kazim Ali Jr. who had a broken leg and arm. He
18 then said they came across an air pocket after which there
19 was one person left. He then said they came across a
20 second air pocket, after which they lost Kazim Jr.. He
21 further stated that Fyzie was with him until he reached
22 the elbow and then Fyzie said he couldn’t make it. Mr.
23 Boodram did not ask during that conversation whether
24 anyone else was rescued from the pipeline.”

25 Did you, did you tell Mr. Piper that?

26 A. I did not, at least to my recollection and I—not to my
27 recollection. I would not say something like that. You could

1 even—how—the series ah how he say it, it, it happened, I—
2 when I cross Blacks? When I cross Blacks? At no point a
3 time—I was in front a Blacks all the time. At no point a time I
4 felt Blacks body, I saw Blacks while inside dah pipe.

5 Q. So specifically you didn't tell Mr. Piper, "Mr. Piper, I want to
6 say upfront I ain't think dem fellas make it"?

7 A. That not making sense, Mr. Ramesh.

8 Q. Okay. Okay. Now—

9 A. Why I would just call Piper and say just so, "Ey, upfront boy,
10 dem fellas dead, boy"? Dah wha he trying to say I say?

11 Q. Okay. All right, I want to ask you another question. Now, this
12 must have been a very harrowing experience for you but I want
13 you to try and help us, okay? You—according to your account,
14 you promised your colleagues, your friends, that you would
15 come back or you would get help for them to come back to be
16 rescued. If when you came out you had the energy and the
17 strength from what you saw in that pipeline, would you have
18 gone into the pipeline to rescue them?

19 A. Yes. And I will tell you this from my experience. Even if I
20 was not in the situation and I was a diver outside the situation,
21 inside the pipeline you're safer than outside the pipeline. Inside
22 the pipeline there is no predators, there is no currents, there is
23 nothing to fall on you. Yuh inside a pipeline. You understand?
24 I have been inside a pipeline before as I just stated, and, going
25 in there, all the—all you need to do is take your tank off your
26 back and you're going in there. You carry down a rope or if
27 you could even—if you could get a hooker, you cannot use a

1 hat. You cannot use a hat. If you had tried to use a hat when
2 you end up in dey you would a end up in difficulties because
3 the weight ah de hat, when you reach in the air pocket you
4 wouldn't ah be able to raise up yuh head to assist or help
5 anybody.

6 Q. What is a hat?

7 A. The, er, surface supply hat to put on your head and—

8 Q. Okay.

9 A. —um, with communications and thing because I was reading
10 that they say you needed that to do the rescue. I challenge
11 anyone to do it out of water, in a pipe or in water to lie dong in
12 dah pipe with a hat on, with hose on, and communication to go
13 dong dey and try to perform a rescue. I challenge anyone to do
14 that and I could show I would, I—

15 Q. And, and, Mr. Boodram, Mr. Boodram, if you had gone in the
16 pipe to do the rescue, after the events, and if you had gone in to
17 do the rescue and you met a tank blocking, what would you
18 have done?

19 A. I would have done what I did while I was coming out damaged
20 and bruised, passed over de tank.

21 Q. Passed over the tank. Now, where is my—where is—I
22 borrowed that exhibit. Assuming this [*Demonstrating with a*
23 *striped hula hoop*] represents the pipeline, right, there is a tank,
24 okay?

25 A. A tank is approximately 6 inches in diameter. So if you have
26 something around 6 inches you could put it there and you could
27 see anybody, up to the biggest man in this courtroom could pass

1 through there with a tank there.

2 Q. So you could, you could go over the tank or you could go on
3 the side of the tank?

4 A. You could.

5 Q. Now, I want to show you on the screen the mechanical plug and
6 the inflatable plug and I want to ask you a few questions about
7 it. Is that okay?

8 **Mr. Chairman:** Can you see the screen all right?

9 **Mr. Boodram:** Yeah.

10 **Mr. Chairman:** Or do you want us to tilt it towards you a little
11 more?

12 **Mr. Boodram:** No, I could see.

13 **Mr. Maharaj:** You probably have to tilt it. I don't know.

14 **Mr. Chairman:** You can see it all right?

15 **Mr. Boodram:** Yeah, I think I could see it, yeah.

16 **Mr. Chairman:** All right.

17 **Mr. Maharaj SC:** I think there's one above there. It might be
18 easier for him.

19 **Mr. Boodram:** I'm seeing this one just fine.

20 **Mr. Maharaj SC:** Okay.

21 **Mr. Boodram:** I'm very familiar with the plug. I don't even
22 need a diagram. Ask me your question.

23 **Mr. Chairman:** Well, I think the idea is that everybody can
24 see. We're not all as familiar with that. For me it's a complete
25 novelty to see this plug, and it would help me to be able to see
26 it when you're giving your evidence, do you see?

27 **Mr. Boodram:** I understand.

1 **Continued Examination By Mr. Maharaj SC:**

2 Q. You see, Mr. Boodram, when you talk about a plug, one would
3 normally think it's something just to pull out and it could be
4 done quickly, so I want you to explain something to us, right?
5 This is a photograph of the mechanical plug that you talked
6 about.

7 A. Correct.

8 Q. If you had to take at that plug, as you all did it that day, right, as
9 you saw it was taken out, how—about how long will it take to
10 take out the plug? Because you said you have to unbolt and
11 you have to spanner or whatever it is. How long would it take
12 you?

13 A. Yusuf and I did it about—well I don't want to say Yusuf and I,
14 it was a team effort. The four of us did it in approximately 30
15 minutes give or take.

16 Q. Thirty minutes?

17 A. Yeah, yeah.

18 **Examination By Mr. Chairman:**

19 Q. Thirty, right?

20 A. Yeah.

21 Q. How many bolts were on there?

22 A. Sorry?

23 Q. How many bolts were on it?

24 A. Bolts?

25 Q. Yes.

26 A. I think it had 22, somewhere around there—1, 2, 3, 4, 5, 6, 7, 8,
27 9, 10, 11, 12, 13, 14, 15, I checking.

1 Q. All right.

2 A. Fifteen I checking. Depend on what size this plug is too, eh.
3 The bigger the plug is the more bolts you go have.

4 Q. Right. I have no idea whether this is the—this is just an
5 example as I understand it.

6 **Mr. Chairman:** Is that right, Mr. Maharaj?

7 **Mr. Maharaj SC:** I understand as it, it—

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Is this the, is this the type of plug that was—

10 A. It's the same type but what I'm saying, the bigger diameter the
11 pipe is—

12 Q. Oh, I see.

13 A. —is—the plug, the plug is, is the more bolts it would have on
14 it.

15 Q. I see. I see.

16 **Examination By Mr. Chairman:**

17 Q. Yeah. I mean, I get that, you know, the wider—obviously, the
18 wider the plug the more bolts there are around it.

19 A. Ummm.

20 Q. And do I understand you right, if you, if you tighten those bolts,
21 the rubber between the two metal plates spreads out?

22 A. Correct. So the bolt compress the two metal plates and cause
23 the rubber to spread—

24 Q. Yeah.

25 A. —and cause a sealing.

26 Q. A seal?

27 A. Yeah.

1 Q. Right. And, um, and you'd have to—in order to release that
2 from the pipe, you have to undo each bolt, do you?

3 A. Correct.

4 Q. And how—

5 A. You have to do it in sequence too.

6 Q. You say that in sequence. You said that would take about 30
7 minutes?

8 A. Or maybe a lil longer but yeah.

9 Q. All right.

10 A. Yeah, nothing less than that.

11 Q. Nothing less, so 30 minutes plus anyway?

12 A. Uh-huh.

13 **Mr. Chairman:** All right, thank you very much. Thank you,
14 Mr. Maharaj.

15 **Mr. Maharaj:** Thank you.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. The inflatable plug, which is the plug which is under the
18 mechanical plug, I know when it was started to be deflated then
19 the accident occurred?

20 A. Yes.

21 Q. What I wanted to ask you, if the accident did not occur, how
22 long would it have taken for that plug to be deflated? About?

23 A. That wouldn't take long because dah is air, so, as you open the
24 valve, as you, as you press it is shhhhhh and it slack enough. It
25 may not go—it doh need to go right down to be extracted.
26 Once it, it come off the walls of the pipe it would be extracted,
27 you know? So that wouldn't take long to take off the—

1 **Examination By Mr. Chairman:**

2 Q. I want to ask you about that if I may, please? You see on the
3 example that we have on the screen—

4 A. Uh-huh.

5 Q. —that there are two rings that protrude from what would be the
6 top of the plug. Am I right?

7 A. Yeah, and dah is for—

8 Q. So when you're de—and in the middle there's like what might
9 be described as a nipple or a bow?

10 A. Insect, yeah, yes.

11 Q. And is that—if you activate that in some way, does that release
12 the air?

13 A. Right so—

14 Q. Those of us who are familiar perhaps with inflating a car tyre—

15 A. Correct, yeah.

16 Q. —if you take the—if you—

17 A. Yeah.

18 Q. —let the air out of the tyre, that would be the same—

19 A. Correct.

20 Q. —sort of effect?

21 A. Correct, yeah.

22 Q. So it's, it's—once it's put in place it's inflated, that creates the
23 seal—

24 A. Right.

25 Q. —and then to break the seal you deflate it?

26 A. Correct, so—

27 Q. But is it quite heavy?

1 A. It have some weight. It have some weight because it, it, it, it
2 large and then the, the rubber is something like the same
3 material as a tyre.

4 Q. Yeah.

5 A. You know?

6 Q. So, like a tyre—

7 A. Yeah.

8 Q. —it would be quite heavy to handle?

9 A. Yeah.

10 Q. So those rings on the top, do they—I mean, did you have to
11 connect those rings to something—

12 A. Correct.

13 Q. —in order to pull the plug out?

14 A. Correct. So we had the, the, what we call a dead man. It's just
15 a cable connected to those rings and connected to under the
16 mechanical plug. Right?

17 Q. So it's connected to the mechanical plug?

18 A. Correct. So—

19 Q. All right.

20 A. —it's like a, a, a dead man. It—when we call a dead man
21 something that you chain down.

22 Q. Right.

23 A. It's just like a, um, how to put it, um—

24 Q. A sort of lever?

25 A. No, it's a cable. It's a wire rope—

26 Q. Right.

27 A. —connected from there to the underneath in case of you

1 slacken it dong, it doh fall out, so when you take out the
2 mechanical plug we take that out, right, and we'll hook it up.

3 Q. The mechanical plug?

4 A. No. After taking out the mechanical plug.

5 Q. Right.

6 A. You will take that cable now—

7 Q. Right.

8 A. —right, and hook it up on top we head.

9 Q. And is that what you did?

10 A. So you air it down and it become—and, and, it, it deflates, it
11 don't fall down.

12 Q. Yes, but is that what you did?

13 A. Yes, yes we did. We did that and—

14 Q. So, let me—I just need to understand. It's quite important, you
15 see? You've taken the mechanical plug out, right, you told us
16 earlier that you put that on the outside of the habitat?

17 A. Correct.

18 Q. There's a cable that's attached to those two eyes on the top of
19 this plug, correct?

20 A. Right.

21 Q. On those eyes—

22 A. Yeah, yeah.

23 Q. —that we can see the little eyelets, so there's a cable that passes
24 through both of them or two separate cables?

25 A. In, in this instance, I think they had one.

26 Q. Right.

27 A. They had one.

1 Q. Passing through both—

2 A. Yeah.

3 Q. —or just through one?

4 A. Just through one.

5 Q. One side, all right.

6 Q. Right?

7 A. It came up and it was hooked on to the mechanical.

8 Q. Right.

9 A. When we take out the mechanical plug now, as a safety feature
10 so this don't fall down while it's deflating and we take it and
11 we connect it overhead.

12 Q. Right.

13 A. All right? After connecting it overhead on a shackle to one of
14 the eyes welded into the habitat, right, we—there is now, which
15 part yuh seeing that place dey for a inset or whatever you want
16 to term it as—

17 Q. Uh-huh.

18 A. There was a hose, we had a hose connected to it with a gauge
19 on top, all right? The gauge telling you how much—

20 Q. Pressure?

21 A. —pressure we have in it, right.

22 Q. In the, in the—

23 A. In the tube, right? And there were also a, a valve to open and
24 close which they, as I understand, because I didn't install it, as I
25 understand as Blacks—um, Rishi Nagassar told me, they take
26 off the lever because they didn't wanted the lever to get damage
27 or, or opened by mistake. So we then needed a crescent wrench

1 to, or a spanner to open dah lever, right?

2 Q. Uh-huh.

3 A. In between that on dah same thing there's a next insect on dah
4 gauge where you could press—

5 Q. An insect, you mean like a valve?

6 A. Like a valve on a tyre—

7 Q. Right.

8 A. —to, to, to press and deflate it also. I wasn't aware a that and
9 dah is when, um, Kazim went for the spanner and bringing back
10 the spanner to me, right, is when I think is Blacks start to
11 deflate it—

12 Q. Right.

13 A. —the thing, but, is, it'll take a way longer period to, like,
14 releasing air from in a tyre.

15 Q. Um.

16 A. It will take a long period to do that than just using a valve and
17 opening it fully.

18 Q. Right, I understand. But when this happened, just before this
19 vortex was created, when you were all dragged into the pipe,
20 was that plug held up by a cable and attached to one of the eyes
21 inside—

22 A. Yes, Sir.

23 Q. —the, the habitat?

24 A. Yes, Sir.

25 Q. So were you aware whether that plug went into the pipe or was
26 still there?

27 A. It couldn't be still there. When I came out it wasn't there, and,

1 for, for there to have a vortex, a suction, it, it couldn't come out
2 so it had to go forward.

3 Q. So, so that I'm clear about this—

4 A. The wire rope failed.

5 Q. —is it your understanding that the cable must have broken—

6 A. Correct.

7 Q. —and that it pushed the plug in?

8 A. Correct.

9 Q. Well so there's—we're talking about some—what kind of cable
10 are we talking about? Something—a small wire or is it—

11 A. It, it's, it—I think it was a, um, either a quarter inch, quarter
12 inch or three-eighths because it wasn't—it's, it's not there for
13 more—strength, really.

14 Q. Right.

15 A. It's there just to keep—

16 Q. Stop it falling in?

17 A. For, yeah, from falling. So I think it was like quarter inch or
18 three-eighths. Ah—

19 Q. Right.

20 A. —ah not sure.

21 Q. All right.

22 **Mr. Chairman:** Yes, thank you. Thanks—

23 **Mr. Maharaj SC:** Much obliged.

24 **Mr. Chairman:**—Mr. Maharaj.

25 **Continued Examination By Mr. Maharaj SC:**

26 Q. Mr. Boodram, you said in your statement that whilst you all
27 were doing the works, Paria had a representative topside

1 monitoring the works?

2 A. Yes. He, he were—they had more than one.

3 Q. They had more than one?

4 A. Yes. One person was frequently monitoring the air quality that
5 we were breathing in the chamber also, in the habitat.

6 Q. And monitoring that and monitoring to ensure that you all
7 complied with the method of work and what was approved?

8 A. Correct, correct.

9 Q. Right.

10 A. Correct.

11 Q. And—

12 A. At all times we had to apply with Paria's, er—because we
13 working in their compound and we doing their job. Over all the
14 years at any point a time Paria see something, they stop the
15 work and they have their conversation, whatever is de plan and
16 we geh back on to it. Just like how when we had to stop de
17 work to do the CARBER testing to get, to get permission from
18 Paria to go forward or to cancel the job. You understand?

19 Q. So, from your experience, if you were working there for LMCS
20 doing works and you were doing works which not accordance
21 with what they agreed to, they would stop the work?

22 A. Of course.

23 Q. Yeah.

24 A. Undoubtedly.

25 **Examination By Mr. Chairman:**

26 Q. When you first started to remove that mechanical plug, to the
27 point in time when the vortex then dragged you all in, what sort

1 of time are we talking about from start to finish of that, that part
2 of the project?

3 A. From the period a time we start unbolting—

4 Q. Yeah.

5 A. —de mechanical plug from the—

6 Q. From, from right from the beginning to when you start to unbolt
7 the mechanical plug to the point in time when the waters come
8 up and drags you into the pipe, how long are we talking about?
9 I'm not going to hold you to it but give me some idea if you
10 will?

11 A. At least a hour and a half to two hours. At least a hour and a
12 half I would say, because, remember we—when, when we take
13 out de plug, ah came out and ask, ah came out to ask if the, the,
14 the CARBER testing was done on Berth 5. Right? And then
15 we come back in and we was doing we thing, but, while taking
16 out a mechanical plug, right, after we unbolt it and release it
17 and thing, right, we had to jack it up, right. It's not a light
18 thing.

19 Q. No.

20 A. The mechanical plug was rather heavy. Right? We had to Jack
21 it up, guide it down, move we scaffolding, bring it between the
22 pipe and the chamber, right and then fasten it to the outside of
23 the, the habitat.

24 Q. So did you have to put your scuba gear back on?

25 A. Correct. Right.

26 Q. Crawl out through the bottom?

27 A. Fyzie and I did that.

1 Q. With the, with this thing that weighs a lot?

2 A. Yeah.

3 Q. It didn't drag you down to the bottom?

4 A. Well we had—no, well had it hook up on to the, the chain
5 block.

6 Q. Already?

7 A. Right?

8 Q. Right.

9 A. So after we just tie it on to the—

10 Q. Got you.

11 A. —tie on to—

12 Q. But between an hour and a half and two hours from start to
13 conclusion of that start of the project—

14 A. Estimatedly [*sic*], yeah.

15 Q. Yeah. Estimated. I appreciate.

16 **Mr. Chairman:** Thank you very much indeed. I—again, I'm
17 sorry, Mr. Maharaj.

18 **Mr. Maharaj SC:** That's all right, My Lord.

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. I want to show you your statement signed on the 19th of
21 October, 2022. It's at page 1569, particular at page 1569,
22 paragraph 22. It's Volume IV, 12—it's 12, in Volume IV.
23 Okay; 1569. I wonder if the orderly would—paper bundle.

24 A. Go ahead, I have a good memory a mih statement too. Nothing
25 fabricated in it.

26 Q. I know.

27 A. I don't need it.

1 Q. I know. I just want to show it to you. And you said in that
2 statement, “We were told the following jobs would be done that
3 morning.”

4 **Mr. Chairman:** Which paragraph are we on, please?

5 **Mr. Maharaj SC:** At paragraph 22.

6 **Mr. Chairman:** Paragraph 22. All right.

7 **Mr. Maharaj SC:** At page 1569.

8 **Mr. Chairman:** Yes. Do you have that, Mr. Boodram?

9 **Continued Examination By Mr. Maharaj SC:**

10 A. “We were told the following jobs would be done...”.

11 Q. “We were told the following jobs would be done that
12 morning on the 25th of February, 2022 by Kazim Ali Jr.
13 in the presence of the Paria officials.”

14 A. Yes.

15 Q. “Extract the pipe from the top of the habitat. Install the
16 new one into the habitat. Add air to the habitat to remove
17 water. All the divers would enter the habitat. The divers
18 would take off the blank flange. The divers would unbolt
19 the mechanical plug. The divers would wait for
20 CARBER testing to be done on Berth 5. CARBER
21 testing would then be done on Berth 6. After testing the
22 weld, the divers would extract the inflatable plug and
23 install the new riser. Then the job would be done.”

24 A. Correct.

25 Q. Are those true and correct?

26 A. Correct. The onlies’—er, when I—when I meant by all the
27 divers, we were talking about the four of us.

1 Q. Right.

2 A. Kazim Ali Jr.—

3 Q. That's what we were trying to get—

4 A. —were always to—

5 Q. Yes, before that.

6 A. —to stay on the outside and, um, into, in, in conveniently check
7 on us to make sure none of us, because it's a confined space we
8 working in, to make sure none of us overfatigued or moving
9 any way unusual.

10 Q. Yeah. I think it is my mistake, we said the—you said the divers
11 so I'm glad you explained it. At paragraph 24, on that same
12 page:

13 “In terms of safety briefing, we were told by LMCS
14 safety officer in the presence of Paria's safety officer,
15 Mr. Dopson, that the hazard was malfunction of
16 equipment, our tanks had air and our gauges were
17 working. We were also warned about slips and trips and
18 the system for fatigue which was that anyone who
19 became fatigued whilst working in the habitat would be
20 taken out to get some rest.”

21 Next paragraph:

22 “The safety briefing which we were given did not
23 identify any hazard of entry into the pipe. We were
24 briefed on potential hazards of cutting. We did not use
25 any torches or grinders. There was a fire extinguisher in
26 the habitat. There is a gas monitor and a Paria official
27 who was regularly testing the air quality to make sure

1 that the air was safe and breathable.”

2 Are those matters correct in your—what you said in your
3 statement?

4 A. Correct.

5 Q. True and correct?

6 A. They are true and correct. They could also have, um, have
7 been, um, a few more details into the safety briefing that I may
8 have left out.

9 Q. Or.

10 A. Or not remembered in the safety briefing.

11 Q. All right. You, you want to tell us about any other thing that
12 they may have told you and you now remember?

13 A. I—after—to be honest, after that event happening there, my
14 mind on recollecting every little detail before the incident, it’s
15 hard. What I could recollect is to every detail because I’ve
16 been living it every single night since, every single hour since,
17 is inside the pipe, and coming out the pipe.

18 Q. Well I think I owe a duty to ask you specifically, did they ever
19 tell you anything of a risk of you being sucked into the
20 pipeline?

21 A. No.

22 Q. No.

23 A. They did not.

24 **Mr. Maharaj SC:** Much obliged, Chairman. I have no further
25 questions.

26 **Mr. Chairman:** Thank you. I’ll now permit any cross-
27 examination anyone wants to, um, undertake. Can I have some

1 idea, please, as to how long do you think you might be, Mr.
2 Gilbertson?

3 **Mr. Peterson SC:** About half an hour or just over that,
4 depending on, of course, the answers.

5 **Mr. Chairman:** Of course. Yes. Well, I'll ask others to think
6 about how long they're going to be before, once you're
7 concluded. I would like, if we can, to conclude this evidence
8 before we break for lunch. I appreciate that that's a tall order at
9 the moment but I would be willing to sit and will sit for an extra
10 half an hour so that Mr. Boodram could go, and rather than
11 having to have lunch and then having to come back again. So,
12 can I ask you all please to be as brief as you feel you can be? I
13 appreciate you will have questions, but, please be as brief as
14 you can be with an eye to the clock in the hope that we might
15 be able to achieve that? If we can't, we can't, but I appreciate
16 your go operation where we can.

17 **Mr. Peterson SC:** Thank you, Mr. Chairman.

18 **Mr. Chairman:** Thank you.

19 **Mr. Peterson SC:** Could I remain seated, at least for this
20 witness?

21 **Mr. Chairman:** Of course you can. Yes. Anyone's entitled to
22 remain seated if they wish. I know Mr. Maharaj likes to stand
23 but anybody else can remain seated of course.

24 **Cross-Examination By Mr. Peterson SC:**

25 Q. Morning , Mr. Boodram.

26 A. Morning, Sir.

27 Q. Thank you for being here. Could you help us as to what is

1 described as the CARBER test? What is that? I've been
2 hearing the term.

3 A. To my knowledge it's a test to check if the weld is done
4 properly—

5 Q. All right.

6 A. —and to make sure the weld itself has no leaks or cracks or—

7 Q. It had no leaks or cracks. That's the weld, in this case, in the
8 habitat, the weld that you all did to receive the new riser?

9 A. Correct, the flange, yeah.

10 Q. Flange.

11 A. Yeah.

12 Q. Yes. And that test was—when it could not be done they
13 dispensed with it and decided to proceed?

14 A. Correct.

15 Q. Yeah. When you bring the riser on to that flange, it's metal on
16 to metal, isn't it?

17 A. With a gasket between.

18 Q. But is there a need to exercise caution that there may be sparks
19 when the two metal, metal meets metal?

20 A. When they're installing it?

21 Q. Yes.

22 A. Um, not really. The, the, the spark is very irrelevant. It, it have
23 no sparks, is no—no, you didn't get any sparks.

24 Q. Is there a—there's a precaution that if you're using metal tools
25 or you're installing metal against metal that the likely—

26 A. Right, that's for a, that's for a—that's if they using a active gas
27 line and all these kind a things.

1 Q. Right.

2 A. Right? This is oil, right, and this is a—in this term this was a
3 condemned line for a certain amount a years.

4 Q. Right.

5 A. And what I believe, I not sure because—anyhow I shouldn't
6 talk what I not sure about, so—

7 Q. Okay, thanks for that. What's the purpose of installing the two
8 barriers, the mechanical and the inflatable?

9 A. Okay. So the mechanical plug is there to prevent debris when
10 doing hot work or any type a work to fall on the, the inflatable
11 because the inflatable as we say is like a tyre, it's a more
12 vulnerable plug but it's there to give you a proper seal for the,
13 for the—the inflatable plug is to prevent any gas or residual gas
14 from escaping, and the mechanical plug is there to keep the
15 debris, when cutting or using any hot work, from falling in to
16 damage the inflatable.

17 Q. The inflatable plug. And the inflatable plug is to also prevent
18 hydrocarbons from coming up in the line into the habitat?

19 A. Correct. But mind you, um, when you're on—even if you're, if
20 you take at the plug, usually, right—

21 Q. Which plug, when you say the plug?

22 A. The both a them.

23 Q. Yeah.

24 A. Right? Usually we put the plug against liquid. Right? So you
25 pump out up to just what you need and where the liquid stop
26 you put the inflatable, right?

27 Q. Yeah.

1 A. So even if you take out the inflatable plug, because the habitat
2 in a positive pressure, right, it's very unlikely for anything to
3 come up because there's a pressure on it.

4 Q. Right.

5 A. You understand what I saying to you?

6 Q. Yes. Right. You're familiar with the permission to work
7 permit, permit to work, PTW—

8 A. Yes.

9 Q. —that Paria had?

10 A. Yes.

11 Q. Because you had been recently trained in that?

12 A. Correct.

13 Q. Shortly before this job?

14 A. Correct.

15 Q. Right. The PTW is—well you understand it to be the permit to
16 work and that tells you what you are carded to do for that day?

17 A. Correct. Um, it, it, it don't tell you what you're carded to do. It
18 permits you—

19 Q. It permits you?

20 A. —to what you—what, what you have to do.

21 Q. What you're supposed to do?

22 A. Correct.

23 Q. Right.

24 A. The, the, the toolbox form or the JSA, dem kind a thing may
25 have steps, you know, what you're going to do.

26 Q. Right. So the—

27 A. But the permit to work is only something to permit you to go

1 and do the job.

2 Q. This allows you to work?

3 A. Correct.

4 Q. And what guides you is the toolbox form?

5 A. Correct. And—sorry.

6 Q. Or what you may call the toolbox meeting, meeting minutes.

7 Did you sign the toolbox—

8 A. Yes, Sir.

9 Q. —um, for that day?

10 A. Yes, Sir.

11 Q. Twenty-fifth of February—

12 A. Yes, Sir.

13 Q. —2022 at 9.15 a.m.?

14 A. Yes, Sir. At 9.15? Er, er, um, earlier than that we sign that I
15 believe.

16 Q. Earlier than that?

17 A. Uh-huh.

18 Q. Sure, yeah. Uh-huh.

19 **Mr. Peterson SC:** Mr. Chairman, in fairness, could I ask that
20 the witness be shown 10—1070 in the core bundle?

21 **Mr. Chairman:** One seven?

22 **Mr. Peterson SC:** One zero seven zero.

23 **Mr. Chairman:** Yes, of course.

24 **Mr. Peterson SC:** That's the toolbox meeting form.

25 **Mr. Maharaj SC:** Which bundle please?

26 **Mr. Peterson SC:** Core bundle. The core bundle. Core
27 bundle one. Core bundle one. [*Crosstalk*] All right, it's on the

1 screen, Sir.

2 **Mr. Chairman:** Yes.

3 **Continued Examination By Mr. Peterson SC:**

4 Q. At number five, that's your signature? Well I don't know if
5 you could see it from there.

6 A. I'm seeing the signature. I can't recognize the number it's on
7 though.

8 Q. Okay, it's the first—yes.

9 A. Yes.

10 Q. That's your signature?

11 A. Correct.

12 Q. Right. And if you could go up to the line of topics discussed?
13 No, next direction, thank you. I see COVID-19 protocols,
14 communication, choppy water, weather condition, slips
15 awareness or slippery awareness. Right.

16 A. Okay.

17 Q. There was never any discussion about, um—well in fairness to
18 you, do you know what Delta P is?

19 A. I do.

20 Q. There was no discussions surrounding Delta P?

21 A. No, Sir.

22 Q. Right.

23 A. The, the idea of, of—okay, go ahead. I apologize.

24 Q. A Delta P would arise if those plugs were removed at the
25 wrongs time, wouldn't it? Or is that outside your knowledge?

26 A. To my knowledge, again, I not supposed to say what I don't
27 know but to my knowledge usually how we do the job is that

1 we put the plug against liquid, so there's a force behind it. You
2 understand? So a Delta P was unable to happen because the
3 conditions would not have been correct if the line were filled
4 with liquid.

5 Q. All right.

6 A. That's how we usually do it.

7 Q. But in fair—

8 A. I—

9 Q. Or, sorry.

10 A. I wasn't there when—

11 Q. All right, that—

12 A. —the plugs was installed.

13 Q. Yeah. That's what I was taking in fairness, because you did say
14 that you weren't there days before because you were on
15 COVID, um—

16 A. Correct.

17 Q. —quarantine. So you can't help us as to the condition at the
18 time when the plugs were installed, whether they were installed,
19 as you say they ought to be installed in a particular way?

20 A. Correct.

21 Q. Did they have any discussions about the removal of the plugs at
22 that toolbox meeting?

23 A. Yes we did.

24 Q. Right.

25 A. On the toolbox—the toolbox meeting is also to address the
26 stages in how we would do the job.

27 Q. Right.

1 A. And if anybody in the team had any concerns, we'd a bring it
2 forward and to make the job easier if you had a idea in doing
3 something or somebody else had a idea, we would a navigate it
4 an explored it.

5 Q. But those discussions with respect to the removal of the plugs, I
6 cannot find it in the toolbox meeting minutes.

7 A. I can't account for that. I is not the person fulling out the form,
8 Sir.

9 Q. Right. Can you—you don't know who filled out this form?
10 Well if a—who presented it to you to sign, do you recall?

11 A. Sir, it would be all of us standing in a circle or a similar form.

12 Q. Yes.

13 A. And the safety officer would say what he have to say, the
14 supervisor will say what he have to say and after the meeting
15 they will pass the form around for somebody to sign it. To say
16 who was the person take it out de folder and pass it around, I
17 can't say that. I know it was passed around and I read it and
18 signed it.

19 Q. Okay. Who was giving the instructions as to the steps to be
20 taken to remove those plugs?

21 A. Kazim Ali Jr.

22 Q. He is the one who was telling you, I think, to use your words,
23 "What we are going to do and how we are going to do it"? I
24 think that's what you said this morning?

25 A. Where, when, in the toolbox meeting? Yes.

26 Q. Yes.

27 A. Yes.

1 Q. Is it the first time you were doing a job like this?

2 A. No, Sir.

3 Q. How long before this, if you can recall, that you did something
4 similar?

5 A. I, I did a job like this twice before and I can't recall how long
6 ago, maybe about three—two, three years. I'm not sure. And
7 then one like about six or seven years ago and—

8 Q. Was it with LMCS?

9 A. Both jobs with LMCS. Previous to this one, both a them with
10 LMCS.

11 Q. And was Delta P ever discussed in any of those tool meetings
12 on those jobs?

13 A. No, Sir. Not to my recollection.

14 Q. But Delta P is a serious risk—well, sorry to—

15 A. Well again it's, it's a risk if you, you don't do the proper steps.
16 If, if the line was empty, there's a risk for Delta P. If the line
17 was full, to my knowledge and understanding though—

18 Q. Right.

19 A. —if the line was full, it would not have the differential a
20 pressure because it's, it's water is like a type a solid gas—dah
21 level. Is liquid, but, you know, it, it dense.

22 Q. All right. I'm interested in the—a tool you described this
23 morning, I think you described it as a T—

24 A. A capital T.

25 Q. —capital T. How long is that tool, approximately?

26 A. I think it was about, about 2 feet, about 2 feet long.

27 Q. Two feet long. And that is to remove the bolts on the

1 mechanical plug?

2 A. Correct.

3 Q. Right.

4 A. Remember yuh in a confined space in the pipe.

5 Q. I appreciate that. I appreciate that.

6 **Mr. Peterson SC:** Mr. Chairman, that document could be
7 taken down. I wish to have document 1073 of the core bundle
8 again.

9 **Mr. Chairman:** Just before you take that document down
10 rather than having to come back to it again, would you mind if
11 I—I just want to know who Victor Dhillpaul is. Did you know
12 who that was?

13 **Mr. Boodram:** That's our safety.

14 **Mr. Chairman:** He's your safety officer?

15 **Mr. Boodram:** Yes.

16 **Mr. Chairman:** Works for LMCS, does he?

17 **Mr. Boodram:** Yes.

18 **Mr. Chairman:** Yes, thank you very much. Yes, thank you.

19 **Mr. Peterson SC:** Yes.

20 **Mr. Boodram:** Can I ask for, um, a quick washroom break?

21 **Mr. Chairman:** Yes, of course you can. Yes. Please, would
22 you mind taking him for a quick break? I shan't rise. We can
23 wait for a few minutes. Please go.

24 **12.44 p.m.:** *Mr. Christopher Boodram leaves Enquiry*
25 *room.*

26 **12.45 p.m.:** *Mr. Christopher Boodram re-enters enquiry*
27 *room.*

1 **Mr. Chairman:** All right. Mr. Gilbertson, apparently we need
2 a minute or two for the technician to get this system working.
3 *[Pause]* Is this resolvable in the next few minutes or not?
4 *[Pause]* Right, I think we're ready to go. Thank you.

5 **Mr. Peterson SC:** One zero seven four, please, Mr. Chairman,
6 core bundle.

7 **Mr. Chairman:** One zero?

8 **Mr. Peterson SC:** Seven four. *[Pause]*

9 **Mr. Chairman:** Is this going to work now? Yeah, thank you.

10 **Mr. Peterson SC:** Thank you, Mr. Chairman.

11 **Continued Examination By Mr. Peterson SC:**

12 Q. Mr. Boodram, could you look at the screen? You said in your
13 statement that you had seen the permits to work at the toolbox
14 meeting on the 25th of February, 2022. It's gone again.

15 **Mr. Chairman:** We're going to work from the hard copy
16 bundles now and I apologize to the public because they will not
17 be able to see these documents. Can we have a hard copy so
18 that we can get on, please? And could someone fix this
19 system? It was down yesterday as well, so can we get it
20 working, please?

21 **Mr. Peterson SC:** Proceed?

22 **Mr. Chairman:** Please, Mr. Gilbertson. I apologize—

23 **Mr. Peterson SC:** Sure.

24 **Mr. Chairman:**—that it's not working properly, but we all
25 have hard copies and, er, if the public want to look they can
26 access it via the Internet and they can find it there.

27 **Continued Examination By Mr. Peterson SC:**

1 Q. Mr. Boodram, right, do you recognize that permits to work or
2 work permits for the 25th of February, 2022?

3 A. Um—

4 Q. As you said in your statement that you had seen on the toolbox
5 meeting?

6 A. Yeah, this—yeah, this looking like it.

7 Q. Right. And you saw that there is a—there are specific tasks set
8 out in that—

9 A. Yeah, but, um, remember—I understand where yuh coming
10 at—but remember that, remember that I working under
11 instructions. I am a employer—

12 Q. Right.

13 A. —a employee, sorry.

14 Q. Yes.

15 A. You understand? And if my employer give me instructions, we
16 go about doing it with dah instructions, right? And what we
17 did, and why we didn't hear, we didn't deviate no way or the
18 other from the plans.

19 Q. You didn't deviate from?

20 A. The plans.

21 Q. When you say the plan you mean this permit to work?

22 A. Well, yeah. But, the, the permit to work as I tell you does give
23 you—it doh be detailed in, in every task, every kind of task, but
24 it's just guidelines in what you're about to do.

25 Q. But you agree it would deal with the main tasks, the main
26 things?

27 A. Yeah.

1 Q. Now, can you look under the section requirements for
2 equipment installation and clearance?

3 A. Requirement in—yeah, right.

4 Q. That's the section 1.

5 A. Right, yes.

6 Q. Yes. You see "Isolated by blind, flanges, blanks, spool
7 removal, no"? You see that there?

8 A. "Isolated by blanks, flanges. Right?"

9 Q. Yes.

10 A. "Spool removal."

11 Q. Yeah.

12 A. "No."

13 Q. Right.

14 A. Right, but—

15 Q. Right. And across in the next column the comment you see
16 "line drained"?

17 A. Before we go to that, yeah, but ent on the—look on the permit,
18 Sir, it say removing of solid blanks.

19 Q. Yes, yes. I'll, I'll come back to that. Yes.

20 A. Okay.

21 Q. Right under that you see, "Cleared of process, hazardous
22 material", yes"?

23 A. "Cleared process hazardous materials".

24 Q. Yes.

25 A. Yeah.

26 Q. And across in the comments "Migration barrier—

27 A. "Migration barrier", yeah.

1 Q. —to be used”?

2 A. Uh-huh.

3 Q. And migration barriers is another term for the mechanical plug
4 and the inflatable plug?

5 A. Right.

6 Q. Those are referred to commonly as migration barriers?

7 A. Right, we did use it, yeah.

8 Q. Right. But I now agree with you to take you up further that you
9 were taking me to earlier—

10 A. Right.

11 Q. —with respect to specific tasks that speaks about removing the
12 flange and to install the riser.

13 A. Uh-huh.

14 Q. You see that?

15 A. Yes.

16 Q. But you would agree with me that you took me to that there is
17 nothing there with respect to removing the barriers, otherwise
18 called mechanical inflatable plugs? You agree with that?

19 A. So, answer me this? If we—if—

20 Q. No, and I just want to deal with what is here first.

21 A. But if we install the riser how would we get out the inflatable
22 plug at that depth?

23 *[Male Voice: From on top]*

24 Q. Yeah.

25 A. So, yeah, from on top. How we'd a get that out? Because
26 remember going into the pipe, remember going into the pipe—

27 Q. Yes.

1 A. —is not part a we scopes. It—you're not supposed to go in the
2 pipe unless you get special clearance to do that.

3 Q. Right.

4 A. So how we'd a remove that?

5 Q. Yes. Maybe we'll have technical people coming who would
6 answer that. I just a law—I'm just a lawyer.

7 A. Okay.

8 Q. Only.

9 A. Okay.

10 Q. The—but what I was dealing with is where you had taken me
11 earlier—

12 A. But we ha to read between the lines too, eh. Sorry.

13 Q. Yeah, we go do that. I just was dealing with where you had
14 taken me to, that there is nothing there in the tasks to be
15 performed that instructed the barriers to be removed. You
16 agree with that?

17 A. Well as far as I reading. I don't know if this is the original
18 document or as far as I reading, yeah.

19 Q. The Commission will ensure that, because I got it—right.
20 And—but you agree that the migration barriers that they're
21 referring to there to be used are the two barriers, right? We call
22 it barriers but it's the mechanical plugs and the—

23 A. So, so you understand, you understand this permit don't be
24 revised every day? They does make a permit for the job and
25 every day they does have a signing in the back for every other
26 day?

27 Q. Yeah.

1 A. So this permit is the general permit for the whole job.

2 Q. Yeah. But this permit is dated the 25th? You realize up on
3 the—

4 A. Because dah is when we went back to start the job, right?

5 Q. Yeah.

6 A. But now this permit, right, does come with a next document in
7 the back with signatures for days and it to have all the
8 managery [*sic*] signatures out. All the signatures who give
9 permission to do the job—

10 Q. Yes.

11 A. —and in the back ah it every day, while you're on this job, they
12 giving you the same permit and you're signing it.

13 Q. Right.

14 A. Right? So, so, this being used, using the mechanical plug and
15 the thing plug—

16 Q. Right.

17 A. —right, is for all the same work prior.

18 Q. Yes.

19 A. Prior.

20 Q. But the permits you're speaking about where every day they
21 will have signatures, would e—have a earlier date than the
22 25th?

23 A. Sir, if I explain to you how Paria does work or Petrotrin or
24 whatever, right, honestly, they pull this permit for when they
25 start the job before and they just bring it—

26 Q. Uh-huh.

27 A. —update the date and give them to sign it.

1 Q. Uh-huh.

2 A. Right? This is how they does work.

3 Q. But a permit is issued, because remember you underwent the
4 training?

5 A. Yes, Sir. I—

6 Q. Permit is issued every day for that day to allow you to work?

7 A. The same permit. The same permit—

8 Q. I know.

9 A. —for the job does be issued every day and as the day go by—

10 Q. Yes.

11 A. —they just have—if they have any changes or alteration on it,
12 they may have a note or they may add something on to it, or—
13 but most of the time—

14 Q. It's the same permits that—

15 A. —same permit—

16 Q. —they just keep printing?

17 A. —that they just printing, regurgitating and you sign it.

18 Q. Okay. Well then could, could you turn the page to ten seven
19 five?

20 A. Ten seven five.

21 Q. The 13th of February, 2022.

22 A. Uh-huh.

23 Q. That is for the same job, isn't it?

24 A. I was—

25 Q. As you told us?

26 A. I was not working, er, I don't, I don't have no recollection of
27 working on the 13th a February—

1 Q. Yeah, I know. No.

2 A. —so—I cannot.

3 Q. I just—no, sorry. Don't misunderstand me. I'm not saying that
4 you were there because we know you had COVID and all of
5 that.

6 A. So then I can't say it's for the same job.

7 Q. Well, let's look at, let's look at the permit. To install migration
8 barriers, hyperbaric chamber, cut and remove some section.
9 You realize this is the same job we are talking about?

10 A. Correct.

11 Q. And this is the permit—

12 A. But because of the pause—I apologize.

13 Q. This is the permit that was used to install the barriers?

14 A. Right.

15 Q. All right?

16 A. Now if the job was continuous, we'd a seen everything on this
17 permit, but because the job had a pause between it, is where
18 they would change the permit and update if so.

19 Q. Right.

20 A. But if the job was continuous, it woulda been the same permit
21 in the back signed behind it to the date.

22 Q. Right. So fortunate for us it wasn't continuous. This permit,
23 you agree, provided for the installation of the migration
24 barriers, as you see highlighted there, the reddish part?

25 A. I can't agree to this. I don't know this. I didn't sign this
26 permit.

27 Q. I know. You don't sign permits, I know, but you agree that this

1 is for the installation of the barriers that you spoke about that
2 was—that were installed before you came back on the job, is
3 that so?

4 A. Pos—possibly and the course I did with Paria allows me to sign
5 permits.

6 Q. Okay. Right. But you didn't sign any on this job?

7 A. No, Sir.

8 Q. Right. I want to go back up to the page before, 1074, under
9 section 3, "Certificates/Checklist Required". You see that
10 heading?

11 A. Yes, Sir. Yes, Sir.

12 Q. "Hot works certificates, what are those?"

13 A. It's a permit.

14 Q. A permit that permits you—

15 A. To, to, to do hot work in itself. So everything, every—there's a
16 general permit, right, and then for certain specifications of work
17 like confined space, hot works, these kind a things will have a
18 separate permit for it.

19 Q. Right.

20 A. So it will be—if, if you're doing hot work with this permit you
21 will have permit with the general permit. You will have hot
22 work with the general permit.

23 Q. Right. So they have a general permit and if you—hot works as
24 part of the work to be done, they will issue a separate—

25 A. Correct.

26 Q. —one for hot—

27 A. Or confined space or height, or anything to deal with height,

1 that kind a thing, yeah.

2 Q. A hot works certificate.

3 A. Correct.

4 Q. And hot work certificate would require certain precautionary
5 steps to be employed because it's hot works?

6 A. Correct.

7 Q. And one such step would be to take precaution to eliminate the
8 presence of hydrocarbons?

9 A. Correct.

10 Q. And one way of eliminating—

11 A. Or, or if not eliminating, maybe, um, um, controlling to a safe,
12 to a safe—

13 Q. [*Inaudible*]

14 A. —working environment, yeah.

15 Q. All right. And one way of controlling hydrocarbons entering,
16 for example, the habitat, would be barriers, wouldn't that be so?

17 A. Yes, Sir.

18 Q. Right.

19 A. But that day we were not doing any hot works, Sir.

20 Q. I ain't get there yet. But—I dealing with the procedure,
21 because you could help us with this.

22 A. Okay.

23 Q. One way of keeping out hydrocarbons from the chamber would
24 be to keep the barriers in place?

25 A. Correct. The inflatable plug is for that reason.

26 Q. Right. This permit to work, you agree it had a hot works
27 certificate 2634 issued on this job?

1 A. Yeah.

2 Q. Right. And you also agree that one of the precautionary steps
3 inserted on this permit would be keeping the barriers in place?

4 A. No, Sir.

5 Q. Well, isn't it there?

6 A. The permit is there for a wide variety a reasons, right, in terms
7 as I explained to you—

8 Q. Which permit?

9 A. This permit, the general permit, right? They would add hot
10 work on it because they know ah—it have hot works to do on
11 the job, right, not meaning hot works to do in the, in the, in the,
12 in the, in the habitat. Right? It could have hot works to do on
13 the barge. It could have hot works to do on the boat—n the
14 Berth. You understand? So in relation for the job, the job is
15 not only in the hyperbaric chamber, in the, in the, in the habitat,
16 the job is entail the whole thing.

17 Q. Yes.

18 A. You understand?

19 Q. Yes, Mr. Boodram, I understand that. But we already accept
20 that this permit was for the 25th. At least this permit was for
21 the 25th of February?

22 A. Correct.

23 Q. But you said to us in your statement, and I think you said it
24 earlier, is that once the CARBER test has been done and the
25 riser installed, well, that—the job is done, isn't that so? You
26 said that.

27 A. To do so, we had to take out the plugs. That's part of the job.

1 Yeah.

2 Q. That's what, that's what I'm getting to.

3 A. Uh-huh.

4 Q. But when you install the riser, the job is done, according to
5 your statement?

6 A. Well, for that day, because you still have to come back the next
7 day and take out the habitat.

8 Q. Yes. Well, take out the habitat is removing your equipment that
9 you had used?

10 A. Well, that's—

11 Q. Yeah, sure.

12 A. —that's part a the job. Yeah you ha to have permit to do all
13 those sort a things.

14 Q. Okay.

15 A. Dah is part ah de job.

16 Q. So next day there will be a permit issued to remove the habitat?

17 A. The—this same permit will be renewed. I just tell you. They
18 does just renew the permit.

19 Q. But it will have on that permit the added task of removing the
20 habitat?

21 A. The permit will just be removed—renewed. Just what you're
22 seeing here, they will just renew it. It may be what they're
23 supposed to do but what they practice and what they do is
24 different. The permit will just be renewed.

25 Q. But it would have the following day's date so it will have the
26 26th?

27 A. Correct. They will just—on the permit, if you see the original, I

1 don't know if dey is de whole permit right, if you move to it,
2 right, look to the back ah de page number 1076—

3 Q. Yes.

4 A. —right, you go see contractor, dey signatures, the dates on top,
5 authorized signatures and all the dates it have there.

6 Q. Yes.

7 A. Right? So these days will just be updated. The same permit
8 will just be updated. If, if every permit was changed every day
9 they wouldn't have this space for different dates.

10 Q. Right. Well the only difference here is that you have one for
11 the 13th and one for the 25th?

12 A. Because there was a gap—

13 Q. Because there's a gap in—

14 A. —in doing the job.

15 Q. Right.

16 A. And on the day of this job now the reason why this permit stop
17 was because of the incident.

18 Q. Because of the incident. I accept that. So when the riser is
19 installed, don't you have to cut off the top of the riser to put
20 back a flange? When the—

21 A. Sorry?

22 Q. When the riser is attached—

23 A. Uh-huh.

24 Q. —do you have to cut the top of it—

25 A. No, no.

26 Q. —to connect the pipe?

27 A. No, no. You would, you would, you would have to, um, install

1 a elbow on it.

2 Q. Right. By welding that elbow on to it?

3 A. Bolting. Again, I wasn't there in the, in the beginning stages a
4 the job so I don't know what angle they, they, they—if they
5 prefab the whole spool and all these kind a things. I can't
6 remember if the top of the spool was prefab with a flange
7 already—

8 Q. Or if it was rough?

9 A. —or if it was rough and you had to do grinding and welding.
10 Right?

11 Q. He doesn't know. And if it's—right, and if it's rough, I agree
12 with you—

13 A. Uh-huh.

14 Q. —you have to do grinding and welding?

15 A. Correct.

16 Q. Which will require a hot work certificate?

17 A. Correct.

18 Q. Right. And after the—this permit on the resump—when the
19 work broke and resume on the 25th, you know of any hot works
20 that—

21 A. Sir, because of the, because of the length a time dah job was
22 being stalled for, right, those plugs would of had to come out
23 and reinstalled because of the time it was there.

24 Q. Just now, I didn't, I didn't go there yet, Mr. Boodram.

25 A. Well I know where yuh coming from, Sir.

26 Q. Oh, I didn't realize that. But let's just stick with the permit for
27 a minute?

1 A. Okay.

2 Q. Right. The permit—the resumption of the works that resulted
3 in this second permit being issued, you were involved in any
4 hot works pursuant to certificate two six three four?

5 A. Sorry?

6 Q. Hot works permit two six three four.

7 A. Two six three four?

8 Q. Yeah the—remember I took you and show you that we—there's
9 the certificate for hot works?

10 A. Right. Yeah.

11 Q. When you joined the work that day, the 25th, did you engage in
12 any hot works up to that stage?

13 A. No, Sir.

14 Q. But this—but there was certificate for hot works which would
15 have been either be welding or grinding I think it is?

16 A. As I explained for you, it would have on the type a job because
17 they could have welding going on on the barge, on the—

18 Q. Right.

19 A. —on the top, you understand?

20 Q. Right.

21 A. And on that day we had no welding to do in the—all the
22 welding and the, the cutting and any hot works was completed
23 inside the habitat—

24 Q. All right.

25 A. —already prior to that day.

26 Q. I was just interested in something you were taking us to which I
27 wasn't aware of. You said the, because of the break in the work

1 the plugs had to be removed and replaced?

2 A. Huh?

3 Q. Did you start to tell us—

4 A. No, no, no, no. You're presuming dey. I—what I told you, if
5 after that period a time, right, had passed, right—

6 Q. What period is that?

7 A. From the length a time they install the plugs, right, to installing
8 the flange, to installing the spools, right, to do works on top, the
9 length a time the, the plug was inside there, right, safe practice
10 is to check the plugs, make sure the plugs still to good quality,
11 right, and reinstall it. That is the practice because the job was
12 postponed on more than one occasion.

13 Q. All right. And the spool at that stage on the morning of the
14 25th had not yet been installed. Were you tasked to check those
15 plugs to see if they needed to be replaced?

16 A. At that point a time we could not disconnect the plugs as yet.
17 We had to do the process and the process was taking it out.

18 Q. When you say pro—well, sorry.

19 A. Well we had to unbolt the, the CARBER—

20 Q. No, I didn't follow you when you say you didn't do, didn't do
21 the—

22 A. Well remember the, the part a de job that day was to take out
23 the plugs.

24 Q. All right.

25 A. You understand? And after taking out the plugs, right—

26 Q. Yes.

27 A. —and installing the spool, they would have gone under

1 inspection. More than likely it would be just visual inspection.

2 Q. Yes.

3 A. Right?

4 Q. Yes.

5 A. And reinstall if needed.

6 Q. So if they were go—all right, because if you're going to do the
7 grinding and the cutting—

8 A. Correct they would, they would build scaffolding around it,
9 because the scaffolding at—the chamber ha' to remove,
10 scaffolding had to be built round it and then they would a
11 reinstall the plug in a reachable manner and then continue if
12 they had any more hot works to do on top.

13 Q. Right. And the instructions you got to remove those plugs
14 came from—what's the name of the person?

15 A. Kazim Ali Jr.

16 Q. Kazim Ali Jr.

17 **Mr. Chairman:** It doesn't appear to me that we're going to be
18 able to complete, um, this man's evidence before our lunch
19 break.

20 **Mr. Peterson SC:** We wouldn't, Sir. Yeah, my junior has
21 taken me to something else, Sir.

22 **Mr. Chairman:** Would, would you—I mean, do you think
23 you'll be able to finish in the next 5 minutes or do you think
24 you'll take—going to be a little longer?

25 **Mr. Peterson SC:** A little longer.

26 **Mr. Chairman:** All right, well I think perhaps if that's a
27 convenient moment—

1 **Mr. Peterson SC:** Yes, Sir.

2 **Mr. Chairman:**—we will take our break. I'm sorry, Mr.
3 Boodram, but you're, you're—we're going to have to break for
4 an hour for lunch then you're going to have to come back
5 afterwards, all right?

6 **Mr. Boodram:** I don't have a problem with this. I here for all
7 a my soldiers in that pipe.

8 **Mr. Chairman:** All right. One thing I can guarantee you is we
9 will not conclude today without finishing your evidence, all
10 right? Whatever happens.

11 **Mr. Boodram:** Thank you.

12 **Mr. Chairman:** All right? We'll make sure that that happens.
13 You won't have to return, as it were, to give evidence on
14 another day. All right, thank you very much. We're going to
15 take a lunch break now and we will return at ten past 2.00,
16 please? Ten past 2.00.

17 **1.11 p.m.:** *Enquiry suspended.*

18 **2.18 p.m.:** *Enquiry resumed.*

19 **Mr. Chairman:** Thank you very much. I'm sorry to have kept
20 everyone. It's my fault entirely. Sorry about that. You all
21 right?

22 **Mr. Boodram:** Yeah.

23 **Mr. Chairman:** Sure? Ready? We'll get you done today. All
24 right? I promise you. Please.

25 **Mr. Peterson SC:** Thank you, Mr. Chairman. Mr. Boodram, I
26 wouldn't be long with you again. Just bear with us.

27 **Continued Cross-Examination By Mr. Peterson SC:**

1 Q. Just tell me something, the riser that was being repaired and
2 replaced, could you tell us how long was that replacement riser?

3 A. I would say approximately 20 to 25 feet.

4 Q. Twenty to 25?

5 A. In length. The piece that going to replace?

6 Q. Yes.

7 A. Right?

8 Q. Yes.

9 A. Yes.

10 Q. But you're not aware of the size of the piece that was removed?

11 A. The length?

12 Q. Yes.

13 A. Or the piece removed? Yeah, approximately the same length
14 too, yes.

15 Q. Of the same thing. I thought so. How was that piece removed?
16 Is it cut?

17 A. Yes, Sir.

18 Q. And that would be a hot work certificate issued?

19 A. Yes, Sir.

20 Q. Right. So that cutting to remove it, the barriers would have
21 been placed—put in place before that cutting took place?

22 A. Yes, Sir.

23 Q. Right. What tool would have been used to—before the cutting
24 and removing of the old riser, if you could call it that, what tool
25 would be used to insert and protect—and install the inflatable
26 plug and the mechanical plug?

27 A. I would be assuming if I can answer that. I wasn't there.

1 Q. Yeah, I know, but—

2 A. If you'd like me to—

3 Q. —from exper—I leaning on your experience.

4 A. Okay, they, they would lower down the plug and they would
5 hook up a—if you bring back up a picture on the inflatable plug
6 you'd see there they'll hook up a hose—

7 Q. Yes.

8 A. —on to the nipple—

9 Q. Yes.

10 A. —and they would inflate it from—

11 Q. The air. Right.

12 A. Yeah.

13 Q. That's the other plug. That's the inflatable. I think we got that.

14 A. Right.

15 Q. Then the mechanical comes after that?

16 A. Right.

17 Q. And then the bolts—

18 A. They would—they—

19 Q. —the 20 or 15 or 22 bolts would be—

20 A. They, they would, they would lower it down using, um, the
21 crane—

22 Q. Yeah.

23 A. —or a chain block.

24 Q. Right.

25 A. They would have to make a—some apparatus to hold up the
26 crane block in the air if they're not using the crane—

27 Q. Not, right.

1 A. —um, they lower it down—

2 Q. Right.

3 A. —and they would have used a or makeshift longer T tool to—

4 Q. To tighten the 15 or 22 bolts, it doesn't matter whether it's 15
5 or 22?

6 A. Yeah, correct, Sir.

7 Q. And that's so the—those—that T tool, let's call it that—

8 A. Uh-huh.

9 Q. —it will vary depending on the length you need for a particular
10 job?

11 A. Well, yeah, if you, if you need it for longer you fabricate it.

12 Q. Right.

13 A. You would do some, um, modifications.

14 Q. Thank you very much. That's what I wanted. So, just to
15 summarize, so the inflatable plug is placed, the mechanical plug
16 is placed, the bolts are tightened and then you cut the old riser?

17 A. Yes, Sir. I understand where yuh coming from.

18 Q. I don't know where I going either, so where you know where I
19 coming from? I don't know where I am going.

20 A. If you say so.

21 Q. So—and then you bring the new riser to be installed?

22 A. Nah, you're mixing up yourself dey.

23 Q. The new? Sorry, you see?

24 A. We, we, we—

25 Q. I tell you I don't know.

26 A. We dealing with the old riser—

27 Q. No, we move that.

1 A. You remove that?

2 Q. You do all your work and all of that, the, um, the CARBER test
3 was to take place or—

4 A. We take out—

5 Q. —did take place.

6 A. —we take it out and then we install the new one.

7 Q. You bring in the new, you do the CARBER test or you waive
8 the CARBER test and you now bring in the new one?

9 A. Right.

10 Q. Right. The new one is to be installed?

11 A. Correct.

12 Q. And then—

13 A. But there's a—okay, go ahead.

14 Q. —the plugs are to be removed?

15 A. There's a easy way—there's, there's actually more than one
16 way to skin a goose, right? There's the easy way and then
17 there's the hard way and anybody with any sort a intelligence
18 would look to do the easy way.

19 Q. If it's safe?

20 A. Correct.

21 Q. Right. So let's go with the hard way. What you will suggest
22 from your experience is the hard way of skinning the goose?

23 Yes.

24 A. In my experience—

25 Q. Uh-huh.

26 A. —there wouldn't be any—there isn't a issue to worry about
27 sparks and thing by joining this next one because, remember—

1 Q. I not there yet.

2 A. Huh?

3 Q. I not, I not dealing with that yet. The hard way—well, let me
4 be—

5 A. Well, well dey is what I telling you.

6 Q. —wouldn't the hard way be—

7 A. So it wouldn't, it wouldn't be a issue to, to me, right, so it
8 wouldn't even be considered.

9 Q. Okay.

10 A. You understand? It wouldn't, it wouldn't be considered to have
11 to leave the plug for you to come back from on top to, in, in, in
12 my thoughts.

13 Q. Right. So removing the plugs before you do that where you
14 were going on top, that's the easy way, right, that you told us
15 about?

16 A. Right. That's what they—that was—that—dah is how they
17 planned it in this job.

18 Q. I didn't think—I just want the easy and hard. I want a
19 description—I trying to understand, because remember I don't
20 know, all right?

21 A. Well as a, as a employee, right I could use a term as easy and
22 hard as they—

23 Q. Yes, so that—

24 A. —use it, right, but if they tell me to do a job—

25 Q. Yeah.

26 A. —I going to do mih job. It's something that I love. So it don't
27 have ah easy and hard for me. If they tell me, boy, dah is how

1 you want to do it, dah how you have to do it—

2 Q. Right.

3 A. —I cah—I not a—at managery level in LMCS or in Paria to say
4 no—

5 Q. All right.

6 A. —leh we do this. I could maybe put across a idea, but—so if
7 they tell me they wha it like dat, dey wha it like that.

8 Q. All right. We got that. You were telling me about two ways to
9 do it, to use your colloquial expression, to skin the goose.

10 A. Uh-huh.

11 Q. The easy way is to, before you bring the new riser, is to remove
12 the plugs and then bring the new riser?

13 A. Right.

14 Q. That's the easy way?

15 A. Correct.

16 Q. And the hard less intelligent way, to use your term, would be to
17 bring the new riser and then seek to remove the plugs from on
18 top?

19 A. I didn't—

20 Q. That's the hard way?

21 A. I did not directly tell you it's the less intelligent way.

22 Q. No, I'm—I know that. I know that.

23 A. So, please don't assume.

24 Q. No. All right, you said the smart way. So the next way, the
25 hard way—

26 A. Uh-huh.

27 Q. —right? Don't hold me to the intelligent and so on.

1 A. Well, remember you holding me to everything I say. So—

2 Q. The Commission. The hard way—

3 A. Uh-huh.

4 Q. —would be to install the new riser and then seek to remove the
5 plugs from on top. That's the hard way?

6 A. To my discretion.

7 Q. Yes. And the same tool, help me here, the same tool that was
8 used to remove, to re—to in—to insert the plugs before the
9 cutting of the old riser, would be the same tool to use to remove
10 it after putting the new riser, isn't that so?

11 A. If they, if they choose to go—

12 Q. The hard way?

13 A. —the, um, yeah, I guess.

14 Q. That's because both pieces are approximately the same length?

15 A. Yeah, yes, correct.

16 Q. And the new riser, I think we may have gotten this before we
17 took the break, there may be or may not be welding to do at the
18 top of the new riser, because, if it's finished and fabricated
19 there's no welding to be done? If it's rough there's welding
20 and cutting to be done?

21 A. I, I am not even sure if that was part of LMCS' scope of work.

22 Q. That's a different thing. So I just want your experience.

23 A. Uh-huh.

24 Q. The new riser could either have cutting and welding to do?

25 A. Yeah, yeah, yeah.

26 Q. Or it may have been polished and finished—

27 A. Correct, yeah.

1 Q. —to connect to the elbow up on top.

2 A. Yeah.

3 Q. All right. But you can't help us as to the condition of the new
4 piece that was to be installed?

5 A. I cannot recall.

6 Q. Right. That, that's good enough, Mr. Boodram. [*Crosstalk*]
7 Dopson, you know someone called Dopson who was at the—

8 A. Yes, Sir.

9 Q. —the toolbox meeting. He—you said he's a, well, a Paria
10 official or a Kenson—well, in fact, he was a Kenson official but
11 enough to say that he was a Paria person?

12 A. Right.

13 Q. He was not an LMCS person?

14 A. Correct.

15 Q. He has given a report as to the—what was discussed at that
16 toolbox meeting on the morning of the 25th of February, 2022.
17 I'm not holding you to it. I just want to alert you to the fact
18 that—

19 **Mr. Peterson SC:** And, Mr. Chairman, that could be found at
20 electronic page 1022, core bundle one. [*Crosstalk*] We have it
21 as electronic Volume I, page 1022. It's on the screen? Is that?

22 **Mr. Chairman:** Yeah, I got that.

23 **Mr. Peterson SC:** Right. Could you scroll down a bit?

24 **Continued Examination By Mr. Peterson SC:**

25 Q. Mr. Boodram, this is not your document but I'm not holding
26 you to it, but what I wanted to show you is the list of activities
27 as reported at that toolbox meeting. So take a few minutes and

1 look at it and then we might understand. [*Crosstalk*] There are
2 10 items there and what was—

3 A. I understand what I am reading here and I—

4 Q. Right.

5 A. —understand what you're coming at, but, Mr. Dopson could
6 have stopped proceedings if he found that this was at any time
7 off protocol.

8 Q. That's not what I was coming with. What I was coming with is
9 this. In that list, in that list of 16—

10 A. Uh-huh.

11 Q. —there's no mention of any activity involving the removing of
12 the barriers, the mechanical plug or the deflatable plug.

13 A. So why Mr. Dopson didn't stop the job?

14 Q. Mr.—all I'm saying is that that's a report at—in fairness to you,
15 I'm just showing you.

16 A. Okay, I understand, I understand, but—

17 Q. There is a record of—

18 A. All right, so like I—

19 Q. —although from Mr. Dopson.

20 A. You know I wasn't—

21 Q. There's a report—

22 A. —privy to this document—

23 Q. I know. That's—

24 A. —so, in—

25 Q. That's what I told you.

26 A. —in reference to that I not at a managerial level again, so—

27 Q. I—

1 A. —whatever they tell us on the safety meeting in the toolbox
2 meeting is what we go with. I'm just a diver and they told me
3 this is what we have to do and that's we went and, and do.

4 Q. Yes.

5 A. You understand?

6 Q. That—Mr. Boodram, in fairness to you, all I'm doing is, is—I
7 accept that.

8 A. Uh-huh.

9 Q. All I'm saying is that there are two records, documentary
10 evidence—

11 A. Uh-huh.

12 Q. —as to what was discussed at that toolbox meeting, one that
13 you signed that doesn't speak to the removal of the barriers—

14 A. Yeah.

15 Q. —and there's another record which appears to be in more detail
16 by a person who was there, I'm not saying that you're supposed
17 to know of this, but a person who was there, also separately
18 recording what was discussed at that meeting, and all I'm
19 pointing out to you is this again does not cover an activity for
20 the removal of the plugs. Okay?

21 A. Could I, could I draw a reference to you in, in—

22 Q. Um, I don't know if Mr.—

23 **Mr. Boodram:** Could I draw a reference?

24 **Mr. Chairman:** A reference to what?

25 **Mr. Boodram:** This situation where I trying to show him that
26 what on document and what they—we—does be done on the
27 job site doh always be what they want us to do—

1 **Mr. Chairman:** Well—

2 **Mr. Boodram:**—but—

3 **Mr. Chairman:**—I, I think, I think what I can ask you to do,
4 please, is to, is to answer each question that he has asked of
5 you, all right? You'll appreciate that we have a lot more
6 material than, than—

7 **Mr. Boodram:** Yes.

8 **Mr. Chairman:**—everything that's been gone through with
9 you, all right? And we'll see where we get to today. I've got
10 some other questions perhaps, depending on what others ask.
11 All right?

12 **Mr. Boodram:** Yes, Sir.

13 **Mr. Chairman:** But if you, if you just answer the questions,
14 that way I think we'll at least get on, you know? Thank you.

15 **Continued Examination By Mr. Peterson SC:**

16 Q. And I have one more question for you. Do you know one Sham
17 Balkissoon from Paria, HSC, HSC technician? Well,
18 Paria/Kenson.

19 A. A lot of, um, the employees I may not know by—

20 Q. By name?

21 A. —their name but by face and maybe a nickname.

22 Q. In, in fairness to you. Mr. Maharaj had taken you to a
23 conversation that was alleged that you had from the San
24 Fernando hospital with Mr. Piper with a speakerphone.

25 A. Yes.

26 Q. There is also—so I wouldn't go to that conversation but I just
27 want to point out there's a second person, Mr. Paul Yearwood,

1 who is also alleging that there was a conversation with you on
2 the 25th from the San Fernando hospital through a call coming
3 from Sham Balkissoon of Paria/Kenson, to—back to Paria
4 where you had said certain things.

5 A. Okay, so, let me make mihsself clear.

6 **Mr. Chairman:** Are you suggesting that was a different time
7 or the same?

8 **Mr. Peterson SC:** No, the same time.

9 **Mr. Chairman:** Same call.

10 **Mr. Peterson SC:** Yes.

11 **Mr. Chairman:** Right. Because there's another thing.

12 **Mr. Peterson SC:** There's a second person—

13 **Mr. Boodram:** So, let me make myself clear on that situation.
14 I have no recollection of the call. I not denying the call. What I
15 am sure that I would not say is those divers are dead, because I
16 told everyone from the beginning, my friends are alive. So I
17 am not denying—if there was a call I'm not sure, because I—
18 there's a lot a things while I was in hospital after I reach, my
19 wife I, I give up on trying to control what was going around and
20 everything like that. I felt that comfort when I, when, when I
21 reach and I saw my wife. So, while going through with the
22 painkillers and all these kind a things I was maybe in and out, I
23 not denying. I don't have any recollection, but I sure I will not
24 tell him that those divers died.

25 **Mr. Peterson SC:** Thank you, Mr. Boodram, for your time and
26 answering the questions. Thank you, Mr. Chairman. That's all
27 we have.

1 **Mr. Chairman:** Yes.

2 **Cross-Examination By Mrs. Persaud Maraj:**

3 Q. Good afternoon, Mr. Boodram.

4 A. Good afternoon.

5 Q. I would just like to ask you a few questions to clarify some
6 things.

7 **Mr. Chairman:** Can you introduce yourself—

8 **Mrs. Persaud Maraj:** Oh.

9 **Mr. Chairman:**—too, Miss, so that he knows who's asking
10 questions?

11 **Mrs. Persaud Maraj:** Certainly. My name is Kamini
12 Persaud-Maraj so I am representing LMCS—

13 **Mr. Boodram:** Okay.

14 **Mrs. Persaud-Maraj:**—at this Commission.

15 **Mr. Boodram:** Okay.

16 **Continued Cross-Examination By Mrs. Persaud-Maraj:**

17 Q. Mr. Peterson showed you some documents, the permit to work
18 documents. You recall that?

19 A. Uh-huh.

20 Q. And he also showed you the document that you signed which
21 was the toolbox document?

22 A. Yeah.

23 Q. You recall that. Can you confirm that there were other
24 documents that would have been together with the toolbox
25 and—document and the permit to work document?

26 A. Yeah, there were the, um, JSA.

27 Q. JSA?

1 A. Um, job safety analysis.

2 Q. Or—

3 A. Or JSA—

4 Q. JHA?

5 A. JH, JHA, yeah.

6 Q. Right.

7 A. Um—

8 Q. Method statement?

9 A. Right, yeah.

10 Q. All right.

11 A. But again, remember, as a employee, they may or may not run
12 through it with us, you know, um, and at our level we can't
13 demand or maybe we could but we, we don't demand to see all
14 documents. What I know, um, I need to see, is to know that
15 there's a permit, there is a toolbox meeting that I need to sign
16 and there is a JSA I need to sign. From every other experience
17 on a job, these are the important things that a employee should
18 review and sign. And not all the time we do fully review it, you
19 know? Sometimes we just sign it just to get things going.

20 Q. Just, just, right, just to hone in a little bit, the JHA is a
21 document that would say what the risks are in relation to the job
22 that you're doing?

23 A. Correct.

24 Q. Right.

25 A. And the mediation in it, in the risk.

26 Q. Mitigation?

27 A. Mitigation.

1 Q. Right. And the method statement would be what it is that the
2 job entails in terms of a [*Inaudible*]*—detailed—*

3 A. The steps, er, the steps in how they are carrying about the job.

4 Q. All right. I thank you for your clarification.

5 **Mrs. Persaud-Maraj:** I really don't have any other question
6 that I would like to ask of Mr. Boodram, Mr. Commissioner.

7 **Mr. Chairman:** I'm going to take him through this bit first, if
8 I may. Is there—before we move on, are there any other
9 questions from any other party? Yes, Sir. I think it might help
10 him if you just stand for a—just because I don't see you back
11 there? Um, you are?

12 **Mr. Hosein-Shah:** My name is Asif Hosein-Shah. With me is
13 Ms. Nyree Alfonso.

14 **Mr. Chairman:** Right. You need to put your microphone on
15 and I am happy for you to sit once you've introduced
16 yourself—

17 **Mr. Hosein-Shah:** Yes.

18 **Mr. Chairman:**—so that we can all hear.

19 **Mr. Hosein-Shah:** Yes, Sir.

20 **Mr. Chairman:** You can speak into the microphone. All
21 right.

22 **Mr. Hosein-Shah:** Should it please, should it please you, I am
23 Asif Hosein-Shah.

24 **Mr. Chairman:** Right.

25 **Mr. Hosein-Shah:** With me is Ms. Nyree Alfonso and we
26 represent the SWWTU.

27 **Mr. Chairman:** All right. Please take a seat and make sure

1 you speak into that microphone.

2 **Mr. Hosein-Shah:** Yes.

3 **Cross-Examination By Mr. Hosein-Shah:**

4 Q. Good afternoon, Mr. Boodram.

5 A. Good afternoon.

6 Q. I have a few brief questions for you before passing you over to
7 Ms. Alfonso. At your statutory declaration, I'm not sure if you
8 have a copy of it in front of you—

9 A. Go ahead, I don't think I need one.

10 Q. Okay. Well at paragraph two of your statutory declaration, just
11 to be fair to you, you mentioned that you became qualified with
12 PADI, the Professional Association of Diving Instructors, since
13 2009 and that you have 12 years' experience in diving
14 commercially.

15 A. Correct.

16 Q. Do you recall that?

17 A. Yes.

18 Q. So prior to your PADI certification, how long were you diving
19 or conducting dives?

20 A. Maybe about a year, if so much, in commercial—that
21 commercial level?

22 Q. At any level.

23 A. Er, well, maybe about five years before that.

24 Q. And at a commercial level?

25 A. Maybe about a year to six months before obtaining the cert.

26 Q. Sure. And you go further in stating that you conducted
27 underwater welding as well?

1 A. Yes, Sir.

2 Q. Would that have been included in the time prior to your PADI
3 certification?

4 A. No.

5 Q. All right. Did you undergo any sort of training, prior to PADI,
6 with respect to diving?

7 A. No, Sir.

8 Q. So I want to talk to you a little bit about your PADI certification
9 now. At your statutory declaration, also at paragraph two, and
10 also at your witness statement at paragraphs five and six to the
11 Commission, you say that you were qualified with PADI or you
12 are qualified with PADI. What does that mean?

13 A. Exactly what it say.

14 Q. Is it that you were granted a certification or a licence?

15 A. Yes, Sir.

16 Q. Is it a certification?

17 A. Yes, Sir.

18 Q. Are you aware that PADI offers different levels of certification?

19 A. I do.

20 Q. And are you able to recall what your level of certification is?

21 A. Open-water diver.

22 Q. Open-water diver. Is it at a particular depth?

23 A. Um, yeah, you shouldn't cross more than 200 feet on scuba.

24 Q. And what is involved 200 feet in scuba, just for clarification?

25 A. Sorry?

26 Q. Two hundred feet with scuba equipment?

27 A. Yeah.

1 Q. And what is involved in the training for that certification?

2 A. Um, learning how to tread waters, learning the various—um,
3 learning how to check your dive time, um, learning how to use
4 a dive chart, um, learning how to, um, be comfortable in the
5 water, taking off your equipment, putting it back on, um,
6 learning to tread wa—well, you know, learning to tread water,
7 um, practice, um, in the water without causing harm to the
8 marine environment, and a number of other things too with it.

9 Q. Did it involve or did—your training with PADI, did it involve
10 any sort of commercial training?

11 A. Well, the, the term commercial is, is kind a wide here, you
12 know, because while I was doing PADI training and all these
13 kind a thing it didn't had a demand to be, it had—and, and there
14 is no law that I am aware of in Trinidad stating that I have to
15 be, um, IMCA qualified or any other courses. The, the standard
16 is once you're certified. Right? So, as far as, as far as I—once
17 I, I was a skilled person, right, and I acquire diving skills, one
18 and one is two and a lot a people before me, a lot a IMCA
19 qualified people before me also was, um, PADI qualified and
20 after certain years of—in the industry and being able to make
21 money to go abroad to do the—to do that course to open, you
22 know, more work to them internationally, then they went and
23 do it.

24 Dah is more or less how Trinidad was in operation
25 because to do a IMCA, um, diving course is like 150,000 TT,
26 maybe more, right? So for me to get 150,000 just so without
27 having a purse or having a rich daddy or mummy, which I

1 don't, how would I have been able to, you know, obtain that?

2 So—

3 Q. But you would have at least gotten some training from those
4 you would have conducted dives with?

5 A. Well yeah, I was—um, I start off as a dive trainee. In most jobs
6 you will start off as a tender and come in as a trainee and, you
7 know, you go, you go be like observing. It's like a understudy
8 of any profession.

9 Q. So you would have been an understudy of someone who would
10 have been experienced in conducting commercial dives?

11 A. Correct.

12 Q. And what time period would you say, in a matter of years,
13 months, would you say you served as an understudy to such—

14 A. I was advantaged in that system. I did that for merely maybe
15 five years.

16 Q. I'm sure under various persons as well?

17 A. Correct. For the lowest amount of money.

18 Q. Hmm. Yeah, I, I entirely understand that. I want to take you
19 to, and I'm not sure if it could be put on screen, it's the exhibit
20 to your statutory declaration. It's at page 1564 of the witness
21 statement bundle. Now, this card—I—well, I'm sorry, is this a
22 card or is it some sort of piece of paper or something else?

23 A. That's a card.

24 Q. Right.

25 A. At the, at the time of my certification they stopped doing, um,
26 paper certification and they upgrade it to a card.

27 Q. And this card was issued by PADI?

1 A. Correct.

2 Q. Now, my eyes are particularly terrible but from what I can
3 make out or what I think I can make out, at the foot of that card,
4 the following words appear. “This diver has satisfactorily met
5 the standards for this certification level as set forth”, and then I
6 believe there’s PADI or whichever branch of PADI it is.
7 When—the words, “this certification level”, to the best of your
8 knowledge, does that relate to the open-water diving
9 certification of 200 feet?

10 A. Correct.

11 Q. Sure. Have you ever done any further courses, formal courses
12 that is, with respect to diving?

13 A. Um, I did some, um, I did some dive rescue training that a
14 company called Soliton’s [*Phonetic*] Battery Sea Mask, that’s a
15 international company provided for us but, um, I did not, um, I
16 did not collect the certification, you know, in my hands
17 personally. They just needed it for, um, the job to know that
18 their divers were, um, rescue trained.

19 Q. Sure. Now I want to take you to two things before I pass you to
20 Ms. Alfonso. Earlier in your testimony you stated that you
21 conducted dives inside Paria’s pipelines before, and if I recall
22 correctly you said you actually went inside the pipeline at Berth
23 six?

24 A. On one occasion before, yeah.

25 Q. Was that a formal operation or a job?

26 A. Yes, Sir.

27 Q. And prior to that operation—well, before I go there, could you

1 give us some details as to what that operation entails, what job?

2 A. It was a reinstallation of a riser from the elbow. Um, we just
3 had to, er, unbolt the flange on the seabed but first we had to do
4 some air lifting. Air lifting is like, um, vacuuming the floor,
5 the, the materials on the floor, the seabed, right, to go down,
6 excavating with a vacuum more or less, right?

7 Q. Yes.

8 A. Um, to clear the flange. After doing that, we had to unbolt the
9 flange, change out the old riser with a new prefabricated riser,
10 bolt it up. The issue we had on that job is because we had, um,
11 something called ground swells, that's where the sea does be
12 rolling at the ground level. It were causing rough and
13 unsuitable weather for diving, more or less, but because of the
14 urgency of the job, Paria always put urgency in front of
15 anything else with my experience. Right?

16 Q. Yeah.

17 A. Because of the urgency of the job they insisted that we get the
18 riser installed. Right?

19 Q. Yes.

20 A. We—it was paper gasket at that time we was using, not Paria,
21 sorry, I apologize. Back then was Petrotrin. I apologize. But it
22 was—

23 Q. [*Inaudible*]

24 A. —more or less the same managers. Mr. Collin Piper was the
25 man in charge of the job at that time too.

26 Q. Yes. And just, just for confirmation, even though it's a pretty
27 obvious question, this job required you to go inside the

1 pipeline?

2 A. Because of the, the rough weather and using a soft paper gasket,
3 right, the surges were very dangerous to put your hands and get
4 it from outside.

5 Q. Yes.

6 A. So we came up with a solution, a diver going from inside and
7 inserting the, the gasket from inside, keeping his fingers and
8 everything inside the diameter of the pipe while somebody tries
9 sketching a bolt and bringing it in. This was—this went to
10 Petrotrin and whoever had to make the certain clearance to say,
11 okay, it safe to do and whatever they had to do, that was passed
12 for we to go ahead and do it. I was the diver who, um, I would
13 say, um, the word, I lost my mind on the word. I apologize.
14 Sorry. Um, I was the diver that, um—

15 **Mr. Chairman:** Volunteered?

16 **Mr. Boodram:** Yeah, yeah, that.

17 **Continued Cross-Examination By Mr. Hosein-Shah:**

18 A. To go in, um, so I volunteered and went in, put the gasket in
19 place while two other divers bolted it on and came back out
20 safely.

21 Q. Sure. And prior to this dive, were you required to attend a
22 toolbox meeting?

23 A. No, Sir.

24 Q. Was there a safety briefing?

25 A. In—to the beginning of the day, yes, we safety meeting but for
26 this adjustment—

27 Q. Yeah.

1 A. —um, it wasn't a official toolbox talk but the—we, we were—
2 we had a talk, you know, concerning the—how to go about
3 doing it and to try and be safe and dah is it. You know? It
4 wasn't official toolbox because the toolbox meeting was, er, to
5 the morning period—

6 Q. Yeah.

7 A. —of the day.

8 Q. Was, was the topic of ever becoming stuck inside the pipeline
9 ever addressed for that operation?

10 A. No. I couldn't get stuck in the pipeline.

11 Q. Well, becoming trapped or otherwise trapped?

12 A. No because we was using a cord, a rope that was attached, um,
13 to me—

14 Q. Yeah.

15 A. —um, and to my right hand, my, um, breathing apparatus was
16 of course off mih back into mih left hand and when I reached
17 down to the—which part the flange was inside the riser where
18 the crane was holding up, I put the tank between my leg and I
19 put it, but I always had a rope connected to mih hand knowing
20 which way is out and if in case a any emergency, somebody
21 could have, um, maybe retrieved me.

22 Q. Yeah, and—well this is a question of opinion and I hope, I hope
23 the Chair allows it. Arguably, you just said that a rope was
24 used when you went inside the pipeline. So, if it is—and I'm
25 talking about this—

26 A. Yes, yes.

27 Q. —specific incident now.

1 A. Yes, yes. Yes.

2 Q. If it is that a rescue operation was to be conducted—

3 A. Yes.

4 Q. —would it be the case, that—I appreciate that, but would it be
5 the case that any person entering the pipeline would also be
6 similarly connected via a rope—

7 A. Yes.

8 Q. —to enter the pipeline and to find anyone stuck or otherwise
9 trapped in the pipeline and to assist them in getting out?

10 A. Yes, Sir.

11 Q. I've got one more question of opinion and I hope I'm not
12 overstaying my welcome. You gave a passionate answer to a
13 question asked by Mr. Maharaj earlier today and the topic was
14 the use of commercial diving equipment as opposed to the
15 scuba equipment used for this particular operation on the 25th
16 of February.

17 A. Yes, Sir.

18 Q. Are you in a position to expand on why you are of the view that
19 the scuba equipment was more appropriate for this particular
20 operation?

21 A. Yeah because, because all you need the diving equipment for is
22 to enter the chamber. After entering the chamber you have to
23 dis mount of diving equipment to execute the job. I, I challenge
24 any diver or any supervisor to say that they could have on that
25 hat in a clear atmosphere without buoyancy and do any type a
26 pipe-fitting work. So, diving equipment was irrelevant, and if I
27 had on this diving equipment and that suction had happened, for

1 some reason I have a hulk neck and I get suck in that pipe, my
2 head woulda stay in the helmet and my body woulda be in the
3 pipe.

4 Q. And is it that—I remember you also mentioned a vortex. Is it
5 that in the event—now these commercial diving masks, sorry,
6 they are also connected to something called surface air via a
7 cord?

8 A. Yes.

9 Q. And if you were trapped in a vortex—

10 A. The umbilical cord, that's what I saying. If my umbilical cord,
11 right, and that vortex pull me down inside there with that
12 umbilical cord, my head would have—with the force that was
13 there, my head would have been ripped off or neck would have
14 been broken. There were no—if I at—and it is impossible,
15 remember what I telling you it is impossible to wear a hat
16 inside there and do that work, right, the weight a dah hat.
17 When I get pull in dey there would a be no chance of survival
18 for none of us.

19 Q. Fair enough. Thank you, Mr. Boodram.

20 A. The onlies' difference, I may not have suffered any skull
21 fractures.

22 Q. Yeah, and I, I saw the details of your injuries and it's truly
23 miraculous and we're all very blessed to have you here alive
24 with us.

25 A. I don't feel so.

26 Q. Well those are my questions, so I'll pass you on to Ms. Alfonso
27 now who also has a few questions for you. Thank you.

1 **Cross-Examination By Ms. Alfonso:**

2 Q. Good afternoon, Mr. Boodram.

3 A. Good afternoon.

4 Q. Good afternoon. I just—in case I'm short you and you can't
5 see me and the Chair can't see me?

6 **Mr. Chairman:** Hello. You're representing the same union,
7 right?

8 **Ms. Alfonso:** The same, yes, indeed. It's myself and Mr.
9 Hosein.

10 **Mr. Chairman:** Is there a reason why you can't—one person
11 can't ask the question or—

12 **Ms. Alfonso:** Or, um, different prep. I, I—Mr. Hosein-Shah
13 says it here, different prep. Different prep.

14 **Mr. Chairman:** All right, how long are you going to be?

15 **Ms. Alfonso:** Very few questions.

16 **Mr. Chairman:** All right, [*Inaudible*].

17 **Ms. Alfonso:** Only one small aspect.

18 **Mr. Chairman:** All right.

19 **Ms. Alfonso:** So I hope the Chair will indulge me.

20 **Continued Cross-Examination By Ms. Alfonso:**

21 Q. Good afternoon, Mr. Boodram.

22 A. Yeah.

23 Q. My name is Nyree Alfonso and I just have a few questions to
24 ask you with regard—and I'll tell you specifically where it is so
25 it's not wide-ranging. From my reading of your statutory
26 declaration that you gave on the 22nd of October, no, sorry, the
27 other way around, the 19th of October, 2022, I can count three

1 tanks, three air tanks that you came across while traversing or
2 trying to make your way out of the pipeline. Am I correct?

3 A. That I came across.

4 Q. That you came across. So you didn't have one on you and—but
5 yet you—traversing the pipe you came across one, you used
6 it—

7 A. [*Inaudible*]

8 Q. —then you came across two from my reading.

9 A. Right, in the pipe.

10 Q. Am I correct?

11 A. Yeah. Faizal Kurban had one also.

12 Q. Okay. So the first one that you found, I believe that you said—
13 well, you reached a point where all of the air had been utilized?

14 A. Yes, Ma'am.

15 Q. And you dropped that tank.

16 A. Yes, Ma'am.

17 Q. Okay. Or you stopped using that tank. Let me not say dropped.

18 A. No, no, no, it was out.

19 Q. It was completely clean?

20 A. Clean, clean out.

21 Q. Okay. Could you tell me, Mr. Boodram, when you stopped
22 using that tank and you discarded it in some way or the other,
23 was it floating? Did it drop to the bottom of the pipe? Did it
24 float to the top of the pipe?

25 A. So when the tank is empty it will be, um, buoyant.

26 Q. Okay.

27 A. Right? So it wouldn't float level.

1 Q. Okay.

2 A. It float in a angle like that [*Indicating with hand pointing*
3 *downwards*]

4 Q. Okay.

5 A. So the—it could float either or because remember there would
6 be some level a air, it's just not be able—not usable, so it
7 wouldn't be floating like that, [*Indicating with hand flat*] it will
8 have a small amount. So however, whichever direction was
9 pointed up first—

10 Q. Okay.

11 A. —right, buoyancy go tend to be like that, so it could be either
12 by the head—

13 Q. Okay.

14 A. —or the bottom but it will be floating like that.

15 Q. Okay. And could you tell me the average tank that was utilized
16 on this job, oxygen tank, what was its length?

17 A. The specifics on the length could be about three feet, 6 inches
18 in diameter and it holding 3,000 PSI.

19 Q. Okay. So the tank is actually bigger than the actual pipeline
20 then?

21 A. Yeah. It is.

22 Q. Longer. Let me be clear, longer.

23 A. It is.

24 Q. Okay. So because it was at an angle it could fit in the pipeline?

25 A. Yeah. Yeah.

26 Q. If it was bigger than the pipeline then it should be lodged in
27 some way, yes?

1 A. There were no tanks lodged—

2 Q. Okay.

3 A. —anywhere.

4 Q. Thank you very much. That's what I wanted to hear. So, how
5 you—you couldn't have this tank on your back and you said
6 that, so you were pushing it or you were pulling it?

7 A. I were pushing it. The tank was in front of me, I had the tank in
8 front ah me and I was swimming because the length of the, the,
9 the length of the second stage to, to, the mouthpiece that
10 coming into your mouth, right—

11 Q. Regulator.

12 A. —if I had it to the back of me I wouldn't be able to reach it to
13 mih mouth.

14 Q. I see. I got you. So—

15 A. You understand? So I had to have it close by here in mih
16 mouth and traversing.

17 Q. So when that tank finished, you were able to swim past that
18 empty tank or swim over or swim around?

19 A. Correct.

20 Q. Which—could you help us out if you recall which one you did?

21 A. I went over.

22 Q. Under, over?

23 A. I went over.

24 Q. You went over the tank?

25 A. Yes, correct.

26 Q. And you were able to—and you were able to swim past that
27 tank and eventually go on to find two other tanks?

1 A. Yes.

2 Q. Yes, thank you. So that I think by now I will just put to you
3 that, you know, that, you, you would have seen some, some
4 information coming out from the early part or the opening day
5 of the Commission's hearings or sittings that the—there was
6 some cameras, a borescope first and then a crawler camera put
7 down in the pipeline, yes?

8 A. Yes, Ma'am.

9 Q. Okay. And you would have heard perhaps that there was a
10 report that there was a blockage?

11 A. Yeah. I don't believe—I, I, I do not believe that that camera
12 footage was real and if that was real it wasn't a real attempt to
13 see what was inside the pipe. Or maybe because of the
14 environment the cam—the, the, the camera maybe went and
15 jam something and there are—

16 **Mr. Chairman:** I'm going to stop this—

17 **Ms. Alfonso:** Okay.

18 **Mr. Chairman:**—line of inquiry, please. This is all
19 speculation.

20 **Ms. Alfonso:** Okay. I'm sorry, Chair.

21 **Continued Cross-Examination By Ms. Alfonso:**

22 Q. So—but you were able—that is your final thing, you were able
23 to swim past that, that, that oxygen tank?

24 A. Yes, Ma'am.

25 **Ms. Alfonso:** Thank you, Mr. Boodram. Thank you for your
26 time.

27 **Mr. Boodram:** Thank you.

1 **Mr. Chairman:** I think that's it, is it, from counsel? Thank
2 you. I think Mr. Wilson has a few questions. Please, Mr.
3 Boodram?

4 **Examination By Commissioner Wilson:**

5 Q. Afternoon again, Mr. Boodram.

6 A. Good afternoon, Sir.

7 Q. Again, thank you for coming and participating in this exercise.
8 I just want to ask you in terms of a standard, not in contention
9 of scuba diver or commercial diver—

10 A. Uh-huh.

11 Q. —but to the best of your knowledge, does LMCS practice their
12 dive operations to any known standard whether it be IMCA
13 ADCI, Trinidad and Tobago Bureau of Standard?

14 A. Um, a fraction IMCA. Not really to the full extent that it
15 should be, but—

16 Q. Okay. So you implement some safety measures and stuff and
17 take some of the good parts of IMCA and implement it into the
18 management system and stuff, so that's fine so, but, the answer
19 would be not really? There's—you don't know of any standard
20 that you guys operate to or dive to?

21 A. Correct.

22 Q. Okay, no problem. Earlier in your statement I heard that you—
23 um, one of the guys remained on the barge as a standby diver?

24 A. Yeah.

25 Q. At the commencement of the job or any did—throughout the
26 project cycle did you guys or do you know of—because I
27 understand you were absent some days—

1 A. Uh-huh.

2 Q. —would a sort of employ any drills where this standby driver
3 would have drilled to get back any—

4 A. No, Sir.

5 Q. Okay. No problem. The other one I want to go to is with the
6 permit to work. Hearing that you've had permit to work
7 training and stuff, in terms of raising the permit, did you have
8 any roles and responsibilities like a performing authority or
9 anything—

10 A. Not—

11 Q. —at the point in time?

12 A. Not on that job, no, Sir.

13 Q. No problem. So you have the training and you're aware and
14 stuff—

15 A. Yeah.

16 Q. —all of that? With your training, just the permit to work
17 process, are you aware if the permit to work is a component of
18 any other processes, of a larger process or you're just familiar
19 with the permit to work?

20 A. I'm aware that it's to a larger process.

21 Q. Got you.

22 A. It's a legal binding document and, um, in order to issue a
23 permit, you need to get signatories from, er, managers in
24 different positions and the last signatory would be the
25 supervisor or the job manager on the document and all these
26 things is to implement and to make sure the job is to a
27 satisfactory, safe level.

1 Q. Yeah, fair enough. By chance if you push, can you recall the
2 name of the larger process that the permit to work is part of?

3 A. Um—

4 Q. No problem.

5 A. A court, a court system, er, er—

6 Q. Control of work?

7 A. Control, yeah.

8 Q. Yes, COW. I hear you pronouncing it there.

9 A. Yes, please.

10 Q. All right. The last question would be, under the control of work
11 system or the permit to work system that you, um—that the
12 toolbox might be part of, are you aware of any supplementary
13 certificates or documents that's supposed to be attached to that
14 permit?

15 A. Repeat the question for me please?

16 Q. So, um, any awareness when a permit to work is being raised—

17 A. Uh-huh.

18 Q. —and then it's issued, when it's issued, um, are you aware or
19 did it—was it practised, put into practice, any time throughout
20 the cycle of the project that supplementary documents—

21 A. Yes, Sir.

22 Q. —were attached?

23 A. Yes, Sir. The JSA and the toolbox form and the method
24 statement should be there too.

25 Q. Got ya. Got ya. Mr. Boodram, thank you.

26 A. Okay, Sir.

27 **Examination By Mr. Chairman:**

1 Q. Your ordeal is nearly over but I'm afraid I am going to ask you
2 a few questions that arise from that which Mr. Gilbertson asked
3 you, and, to a lesser extent, Ms. Persaud Maraj. Can I first of
4 all ask for the document and our page 1074 be put up on the
5 screen, please? That's not it. Yeah, well, no, I think this is a
6 different document to that which I want, which is 1074 in my
7 core bundle Volume III. It's the, um, work permit. Yes.
8 Thank you very much. Can you have a hard copy as well of
9 that please? It's page 1074.

10 A. On this?

11 Q. What volume do you have there?

12 A. Volume II. I have Volume II.

13 Q. No, you need III. [*Commission orderly hands document to Mr.*
14 *Boodram*] You were asked about this document.

15 A. Yes, Sir.

16 Q. And you'll remember it was read to you. This is the work
17 permit, isn't it?

18 A. Yes, Sir.

19 Q. This is what permits you to do the job?

20 A. Yes, Sir.

21 Q. We can see that at the top it has a few lines where it says
22 "Specific Tasks". Can you see that?

23 A. Yes, Sir. Yes, Sir.

24 Q. And it was pointed out to you that nothing about the removal of
25 any plugs was contained there, correct?

26 A. Correct.

27 Q. Thank you. And then you were taken to the third section which

1 is “Certificates/Checklists Required”. Do you see that? Right.

2 A. Yeah, yeah, yeah.

3 Q. And there you can see this, the first document that’s attached to
4 this, right, this is a—this work permit has attached to it these
5 documents that are identified in that box, do you see?

6 A. Yes, Sir.

7 Q. Right. The first one is 2634 which is a hot work certificate.

8 A. Yes, Sir.

9 Q. All right? Can we, just so that we’re clear about this, if you
10 would turn please on in the bundle to 1079 please?

11 A. One oh seven nine. Yes.

12 Q. Just coming up on the screen now. You see right at the top it
13 says “Paria Fuel Trading Company Limited Hot Work
14 Certificate”.

15 A. Yes, Sir.

16 Q. And it gives, doesn’t it, the certificate number 2634 which is
17 what we’d just seen on the previous page, isn’t it?

18 A. Uh-huh.

19 Q. Right, so that’s—this is the document that is attached to the
20 work permit?

21 A. Right.

22 Q. Now, you told us that you did no hot work on that day, the
23 25th?

24 A. Uh-huh.

25 Q. Nonetheless this document was attached to it, was that right?

26 A. Yes, yes, Sir.

27 Q. I don’t think anyone is suggesting that you were doing any hot

1 work on that day, certainly not least me?

2 A. But, again, I—we were not doing hot work in the habitat but
3 there may have been hot work on top of which I was not aware
4 of.

5 Q. You were not part of it?

6 A. Yeah.

7 Q. Right. So far as you were concerned, your work permit
8 permitted you to do what you've told us, all right?

9 A. Yeah.

10 Q. You did not expect to be doing any hot work or be party to any
11 hot work on that day, correct?

12 A. Yeah, correct.

13 Q. Right. So, um, that document that we're looking at now, we
14 can just scroll up, please, it gives a whole list of things that are
15 conditions or precautions for hot work. Do you see the first 10
16 there are printed on the document and they're sort of safety
17 issues, aren't they?

18 A. Uh-huh.

19 Q. And then somebody has added 11, 12, 13, 14, 15 and 16. Do
20 you see that?

21 A. Yes, Sir.

22 Q. We needn't go through them but they—somebody has added
23 those and they're all to do with safety?

24 A. Yeah.

25 Q. Yes, thank you. All right. In addition, so can we go back now
26 to 1074, please? So we're back to the work permit. The next
27 document that's identified in our box number three—

1 A. Checklist—

2 Q. —1074 please? To box number three, please?

3 A. Uh-huh.

4 Q. There we go. The next document that's identified is the safe
5 work method statement. Do you see that?

6 A. Yes, Sir.

7 Q. Right? Because the other two there's not—it's either not
8 available or not applicable, do you see above that?

9 A. Yes, yes, Sir.

10 Q. So that document, the safe work method statement it says, "See
11 attached", correct?

12 A. Yes, Sir.

13 Q. Right. And was there such a document attached as far as you
14 can remember? Let me take you to it and you'll see if you can
15 identify or something—

16 A. I don't have any recollection of it.

17 Q. All right. Let's have a look. If you turn, please, to our page
18 1062, please? No, sorry, it's, um, 116.

19 A. One one six.

20 Q. One oh four eight. Forgive me, 1048 right at the front of the
21 bundle, 1048. Yes, scroll down a little further, please? Do you
22 see that? It says, "Method Statement"—

23 A. Yeah.

24 Q. —1048 at the bottom.

25 A. Yeah.

26 Q. Right. You see it's described as a method statement. Do you
27 see that?

1 A. Correct, Sir.

2 Q. And it sets out the steps for this job, doesn't it?

3 A. Yes, Sir.

4 Q. This, I suggest, is the document that was attached to the work
5 permit. I say that because Mr. Wei says that and he was
6 apparently a senior officer at Paria, all right?

7 A. Okay.

8 Q. So I just want to understand from you whether you remember
9 seeing this document attached to the work permit?

10 A. No, Sir.

11 Q. I'm sorry?

12 A. No, Sir.

13 Q. No you can't remember or no it wasn't attached?

14 A. I can't remember.

15 Q. Can't remember, all right. Well, be that as it may, can I take
16 you nonetheless please to page 1051?

17 A. One oh five two, one oh five one, yeah.

18 Q. Just go back one page if you would, please? Do you see at the
19 top of 1050 it says: "To remove leaking section of the riser"?
20 That's what the job was essentially about, wasn't it—

21 A. Uh-huh.

22 Q. —replacing that leaking section?

23 A. Yes.

24 Q. And then it gives, from 37 to 55 on that page, a list and I
25 suggest order in which the job was to be performed?

26 A. Yes, Sir.

27 Q. Can you just cast your eye over it, please? Does that help you

1 at all? Did you see any such document?

2 A. Not to my recollection, Sir.

3 Q. Very well.

4 A. Remember, um, I wasn't there every day.

5 Q. I understand. I just want to understand from you whether or not
6 this—you have no recollection of seeing this document at all?

7 A. No.

8 Q. The only reason I'm asking you about it is because Mr. Wei
9 says it was attached, do you see?

10 A. Okay.

11 Q. I just want to turn then to paragraphs 56 and 57. Do you see at
12 paragraph 56 it says: "Manually remove the migration barrier
13 from the line"? Do you see where it says that?

14 A. Um—

15 Q. Right at the top?

16 A. Uh-huh, yeah, yeah manually.

17 Q. Now that's 56. "Manually remove the migration barrier from
18 the line." The migration barrier is what?

19 A. It's the plug.

20 Q. The plug?

21 A. Yeah.

22 Q. The metal one?

23 A. Yeah.

24 Q. With the bolts on it?

25 A. Yeah.

26 Q. That's the first one that you removed?

27 A. Correct.

1 Q. And did it say after that at 57, “Manually deflate the line plug
2 and remove from the line”?

3 A. Yes, Sir.

4 Q. Right. Do you see that the next entry, 58, “Manually install the
5 blind flange on the riser by positioning end flange on the newly
6 installed slip-on flange and securing with fasteners”?

7 A. Yes, Sir.

8 Q. Go back to the previous page, please? Right at the bottom of
9 55 does it say: “On acceptance remove the test hardware”, and
10 before that at 54: “On completion of the weld conduct pressure
11 test”? This is the CARBER test, isn't it?

12 A. Yes, Sir.

13 Q. Which was abandoned in the end, wasn't it?

14 A. Yes, Sir.

15 Q. So CARBER test, then over the page, next page please,
16 manually remove the migration barrier, then manually deflate
17 the line plug and remove the line, and then the next thing is
18 manually install the blind flange, yes?

19 A. Yes, Sir.

20 Q. Do you see the next thing it says is 59, “Chamber crew to
21 demobilize and return to the exterior”?

22 A. Exactly.

23 Q. That's what you understood to happen, is it?

24 A. Yes, Sir. This was our two—

25 Q. Then you see the next one which says 60: “Disengage air
26 supply and allow the chamber to flood”?

27 A. Yes.

1 Q. Do you see the next one it says, 61 it says: “Unbolt the 50-inch
2 flange at the top of the chamber, stovepipe”?

3 A. Yes, Sir. This is what the topic we had on that day excluding
4 the flooding. Well we had to flood the chamber when we
5 leaving, um, so including the flooding of the chamber but the
6 removal of the chamber and thing would have been done,
7 providing the 25th went smoothly, on the 26th.

8 Q. All right. So when was the plug to be removed, according to
9 this document and according to your recollection?

10 A. On the 25th as we did.

11 Q. Right. And when was the chamber that was over it, this habitat,
12 when was that to be removed?

13 A. To be removed?

14 Q. Yes, when? In other words when was that to come off?

15 A. Well, we—it would have been removed the next day.

16 Q. Right, after the removal of plugs?

17 A. Yes, Sir.

18 Q. Just returning, if we may please, to our page 1074 whatever
19 the—scroll to box three, please? Whatever the position is,
20 whoever was responsible ultimately, this document that we’ve
21 just been looking at in part, the method statement, was attached
22 to this document according to Mr. Wei, all right? Did anybody
23 say to you that under no circumstances must the plug be
24 removed from LMCS or from Paria?

25 A. No, Sir. On, on—

26 Q. At any stage?

27 A. No, Sir. On the contrary, that was the plan to remove the plug.

1 Q. You've told us earlier in answer I think to a question from me
2 that it took about an hour and a half to two hours for that
3 process to occur.

4 A. Yeah.

5 Q. During that two-hour period, did anybody from LMCS or from
6 Paria say, "Do not remove that plug"?

7 A. No, Sir.

8 Q. That document also attaches, does it not, a lift plan and
9 something called a job safety analysis document. All of them
10 were together in a—

11 A. In a binder, folder of whatever.

12 Q. Yes, they were all together, weren't they, in a series of
13 documents supplied by Mr. Wei, or at least Paria, which have—
14 which put them and set them out in that way. Do you
15 remember if the document, this document, this work permit at
16 all was shown to you on the day that you were going to carry
17 out this work?

18 A. It was not shown to me but was read. The safety officer went
19 through the work permit with the JSA.

20 Q. Is that Mr., um—

21 A. Um—

22 Q. Sorry?

23 A. Dhillpaul, Mr. Dhillpaul, our safety officer.

24 Q. All right, your safety officer?

25 A. Yeah.

26 Q. All right. Do you know, if you look back to the—section A
27 please at the top of that document—do you know the man there

1 who says, described as the applicant, Mr. Houston Marjadsingh,
2 do you know him?

3 A. Yes, Sir.

4 Q. Who is he?

5 A. I know him to be I think a Paria official but I know him—I
6 know the individual.

7 Q. Somebody from Paria?

8 A. Yeah.

9 Q. All right. An official?

10 A. Yeah.

11 Q. Does this appear to be the document from him? It says he's the
12 applicant for this work.

13 A. Yeah, he's the applicant.

14 Q. All right. So whether he is the person who actually authored it
15 or not, this bundle of documents formed the substance of the
16 work permit?

17 A. Yes, Sir.

18 **Mr. Chairman:** Thank you very much. I'll permit anybody
19 else to ask any questions arising from that if they wish to.

20 **Mr. Peterson SC:** I have one question, Sir.

21 **Further Cross-Examination By Mr. Peterson SC:**

22 Q. Mr. Boodram, sorry, at—Mr. Boodram, right, at paragraph 28
23 of your statement, you said that you saw the permits to work at
24 the toolbox meeting, you actually saw it?

25 A. Yeah, because we was at the toolbox meeting, yes.

26 Q. And you were taken to the method statement attached to the
27 permit to work that you were just taken to by the Chairman

1 where you were taken to number 55, 56 and—

2 A. Yeah, yeah.

3 Q. —that sets out an order?

4 A. Uh-huh.

5 Q. But at the beginning of that method statement, it says—

6 A. What's the number again, sorry?

7 Q. It's attached to—

8 **Mr. Chairman:** Ten forty-eight.

9 **Mr. Peterson SC:** Ten forty-eight. Thank you, Mr. Chairman.

10 **Continued Further Cross-Examination By Mr. Peterson SC:**

11 Q. Ten forty-eight.

12 A. Ten forty-eight. Right, yeah. Yeah.

13 Q. There is a—in bold print it says after—and we're not dealing
14 with the list of—it says: "All steps below shall only", in blocks
15 and bold, "be carried out in full compliance with Paria's PTW
16 system". You saw—you see that there?

17 A. Correct.

18 Q. Right. And this was the method statement that you said was
19 referred—well it was attached to the PTW on the 25th?

20 **Mr. Chairman:** Well, apparently he's not saying that.

21 **Mr. Boodram:** I believe so.

22 **Mr. Chairman:** He says he didn't see it.

23 **Mr. Boodram:** I think I—

24 **Mr. Chairman:** It's your Mr. Wei who says that.

25 **Mr. Boodram:** Uh-huh.

26 **Mr. Peterson SC:** Yes, all right. Well, he said he didn't see
27 it—

1 **Mr. Boodram:** Yeah.

2 **Continued Further Examination By Mr. Peterson SC:**

3 Q. But you're not doubting that it may have been attached?

4 A. I can't doubt it. It in the files here, so I—

5 Q. Thank you. Right. We'll get—do you know which—between
6 this and the PTW for the day, do you know which one actually
7 dictates what you're supposed to do on the day notwithstanding
8 this list?

9 A. The method statement is the, in my view/

10 Q. In your view?

11 A. In the method statement is the one you would work with and go
12 to—

13 Q. Even though—

14 A. —because the method statement is what you would use to
15 obtain the contract.

16 Q. Yes. But you would accept the sentence that says that this, the
17 steps in the method statement, which you just referred to, shall
18 only be carried out in compliance with the PTW system?

19 A. Uh-huh.

20 Q. Do you understand that this is subject to the PTW?

21 A. Which part in the PTW say that you could not in—um, take out
22 the, the, couldn't take at the plugs? There were nowhere stating
23 that you should not have done it. If there was a must not do
24 something it would a been bold as it is here bold in writing that
25 all steps below shall be carried out to full compliance with
26 Paria's PTW system.

27 Q. But you did accept that the PTW at least has the phrase

1 “barriers to”, “migration barrier to be used”? You accept that?
2 We’ve been over that.

3 A. Well, that’s, that’s what it saying here.

4 Q. All right, thank you. That’s what you [*Inaudible*] say.

5 A. But, again, when Paria at any point a time found that the job
6 was going out of their PTW, they would have stopped the job.
7 That’s what they had officials there for.

8 Q. We’ve heard that before, thanks.

9 **Mr. Peterson SC:** Thank you, Mr. Chairman. No further
10 questions.

11 **Mr. Chairman:** Anybody else? No? All right.

12 **Examination By Commissioner Wilson:**

13 Q. Mr. Boodram, again, just at that point of the permit to work
14 system, and I emphasize system, all right, on the permit to
15 work, as far as you—because I saw right there they said that
16 they’re supposed to have the JHA attached, right, as far as you
17 can recollect, was the JSA attached and also do you remember
18 what mitigations the JSA, JHA attached addressed?

19 A. It was attached because I recall our safety officer going through
20 it. I do not fully recall the mitigation and I don’t want to
21 assume.

22 **Commissioner Wilson:** I understand, thank you.

23 **Mr. Chairman:** Mr. Maharaj, but before I ask you if you have
24 anything further, so apparently I’ve been addressing Mr.
25 Peterson as Mr. Gilbertson and I apologize. I’m sorry if I’ve
26 been doing that and you’re too kind not to correct me so I’ve
27 been corrected by my own team and I’m happy to apologize.

1 **Mr. Peterson SC:** [*Inaudible*] was laughing every time you
2 say it. Well, you provided him with entertainment this week.

3 **Mr. Chairman:** Well, forgive me, Mr. Peterson.

4 **Mr. Peterson SC:** And he could have corrected you before but
5 he just love, he just loved you being in error.

6 **Mr. Chairman:** All right, well, I apologize for that. Mr.
7 Maharaj, is there anything else that needs to be added?

8 **Mr. Maharaj SC:** No, Chairman.

9 **Mr. Chairman:** I want to extend our thanks to you, Mr.
10 Boodram. It has, I'm sure, been difficult for you. We have
11 learned much from what you've had to say and I am grateful, as
12 is Mr. Wilson is, for your contribution today. It's taken rather
13 longer than we had hoped. It's probably my fault because I
14 keep interrupting everybody, but I am truly grateful. Thank
15 you very much for coming and you're free to go. And you can
16 stay and come and go as you please now. I know you made a
17 request to give your evidence so that you could do that and
18 you're more than welcome to stay at any point in the
19 proceedings.

20 **Mr. Boodram:** Thank you, Sir.

21 **Mr. Chairman:** Thank you. All right, you're free to go. Well
22 we didn't get as much done as I'd hoped we would today but
23 I'm not surprised. It's important evidence and we will not sit
24 tomorrow. Please feel free to [*Inaudible*]. We'll not sit
25 tomorrow because we are on a view of the locus in quo
26 arranged by Mr. Peterson and his clients. So I'm grateful for
27 that. We will resume on Thursday at ten o'clock promptly.

1 Thank you very much indeed. Feel free to pack up and go. I'm
2 going to grab my own papers so don't stand on ceremony.
3 Thank you.

4 **3.28 p.m.:** *Enquiry adjourned.*

1 **EVIDENTIARY HEARING DAY 3**

2 **10.05 a.m.: Enquiry Commenced.**

3 **Mr. Chairman:** Good morning, everybody. Can I start,
4 please, with, um, Mr. Peterson, a few things. First of all,
5 yesterday, as you know, the Commissioners—myself and Mr.
6 Wilson—and a limited number of counsel and the press were
7 able to view the facilities at Paria. We saw berths 6 and 5
8 together with other points of interests including the riser that
9 was actually removed by the personnel from LMCS onto their
10 barge.

11 I want to express our gratitude to Paria and its staff who
12 looked after us extremely well yesterday. We got to see all the
13 things we wanted to see, and I'm very grateful, and I can extend
14 that gratitude to LMCS, if I may, for allowing us on their barge
15 and to see the pipework that was actually removed. The whole
16 exercise was well worthwhile and allowed us to get a sense of
17 scale and some of the logistic issues facing everybody on the
18 25th February.

19 I want to say at this time that when one looks at the
20 actual piece of pipe that was removed, the hoop that I had
21 brought into this court does no justice to what must have been a
22 most horrifying ordeal for somebody in that pipe. It looks so
23 small when you look down the tube. Photographs were taken
24 of our enterprise, and they will be posted on the website once
25 they've been vetted by you and your team, which we've given
26 an undertaking to provide them to you first so that there's
27 nothing that might compromise the activities of Paria. So I'm

1 very grateful and I hope you'll take that back to your clients.

2 Secondly, I understand, again—I'm grateful for this—
3 that Mr. Rampersadsingh is going to make himself available at
4 SAPA's base and that Ms. Maharaj, with her best smiling face,
5 will interview him. And I understand one of your team is going
6 to come to assist him. With that in mind, what we're planning
7 to do is to have it recorded; that is to say that there'll be a
8 transcript of both questions and answers. I'm anxious that there
9 isn't a phalanx of lawyers in the room for someone who need
10 not be embarrassed or cause him any additional difficulties.

11 I wouldn't say any more than that, but the position is, as I
12 understand it, for the moment at any rate, you're withdrawing
13 your application to have the subpoena lifted. We don't need to
14 exercise it. He's going to voluntarily appear at SAPA, and I'm
15 grateful for the arrangements that have been made for that.

16 Next, the video and audio recording of the GoPro footage
17 that we received on the Friday before these hearings began, it
18 will not be made available on the website for obvious reasons.
19 And whilst we will make copies available for those who need to
20 have it—and I emphasize “need to have it”—it is really on the
21 basis that they can justify it, which in your case, certainly, you
22 can, LMCS, and in my view, the family representatives are
23 entitled to have a copy if they wish. It could be put on a
24 memory stick, and if you provide us with one we'll give it to
25 you. Anybody else who wants it will need to justify why they
26 should have it and, of course, I can rely on you all to exercise
27 sensitivity about disseminating it to anybody other than those

1 who need to know for the purposes of this Enquiry. So thank
2 you for that.

3 Lastly, this. Mr. Lawrence, Mr. Loorkhoor from OSHA,
4 are they here? No. Right. I just want to say that they're not
5 here but it can, perhaps, be passed on to them, that, um, I
6 understand the report from OSHA has been finalized and their
7 counsel are examining it as we speak. I want to emphasize that,
8 obviously, we want it and we want it as soon as possible, and it
9 should be made available to everybody as soon as possible from
10 all out points of view. I hope it is not going to be necessary to
11 do anything draconian in making sure that we get it, but it is of
12 no use handing it to me at Easter of next year. I want it. If I
13 may say so, we need it next week, and we'll do everything we
14 can to ensure that we get it, and once we've got it, you'll have
15 it.

16 All right. Those are the preliminary matters that I wanted
17 to deal with. Is there anything else that—

18 **Mr. Peterson SC:** Yes, Mr. Chairman. There's one matter I
19 wish to raise. Since you conducted the site visit yesterday
20 [*Microphone turned off*] if you can get permission to bring the
21 chamber, the habitat, to the surface for two reasons: so that
22 you'll be able to have access to inspect it, and also that it's
23 sitting on the line, so to speak, and I think Paria would prefer if
24 they can move it. But we did not want to do so until you had
25 the opportunity to visit the scene and then grant leave for us to
26 bring it up. But, of course, it would require LMCS' consent,
27 because it's their asset, so to speak. But in the event that they

1 may not be inclined to expend the resources to bring it up, Paria
2 is prepared to do it and make it available to the Commission for
3 viewing and after to be handed back to LMCS, as the case may
4 be. But it is not desirable to have it sit where it's at now.

5 **Mr. Chairman:** Can I say, for my part, that seems to me an
6 eminently sensible idea, and I would encourage it. It's not
7 within my authority, as you'll appreciate, but it does seem to
8 me wise and useful. I, for my part, would wish to see it. I
9 know you're determined to put me back into PPE, with hardhats
10 and boots, but I think it would make some sense. I see no
11 reason why LMCS would wish to keep it at the bottom of the
12 ocean, and I can see no reason why you'd want to keep it there
13 either. So if between you, you can agree its extraction, I would
14 have thought that that was the ideal thing to do, and I encourage
15 it. I dare say you might feel it wise to at least inform OSHA—

16 **Mr. Peterson SC:** Yes, Sir.

17 **Mr. Chairman:**—so they're aware that that's what you're
18 going to do.

19 **Mr. Peterson SC:** We planned to take all those steps. We just
20 wanted to ensure that there was no objection from the
21 Commission's perspective.

22 **Mr. Chairman:** Certainly not; not from me; on the contrary.
23 Thank you for that. Anything else from anyone else? No?
24 Good. Well, then, we will get on. Mr. Maharaj.

25 **Mr. Maharaj SC:** Mr. Chairman and Commissioners, the first
26 witness for this morning would be Hassan Mohammed. Ms.
27 Vijaya Maharaj will do the summary of the evidence, and then I

1 will question him.

2 **Mr. Chairman:** Okay. Where can we find the statement,
3 please?

4 **Mr. Maharaj SC:** The statement is at Volume II, page 1261.
5 It's the witness statement bundle.

6 **Mr. Chairman:** Sorry, bear with me a moment. I got the
7 wrong bundle. It would be here somewhere. Just give me a
8 moment. Page—I've got it. Thank you very much. Sorry to
9 keep you.

10 [*Mr. Hassan Mohammed sworn*]

11 **Mr. Chairman:** Yes, do sit down. Make yourself
12 comfortable. I think you got some water there if you need it. If
13 there's any point in time when you feel you need a break or
14 anything like that, just let us know. All right?

15 First of all, we're going to summarize your evidence and
16 Ms. Maharaj is going to summarize your evidence that you've
17 given either by statement or in interview, and once that's done
18 and you've confirmed that that is accurate, there'll be a few
19 other questions from Mr. Maharaj, all right, and then the other
20 counsel will have some questions, I suspect, for you.

21 **Mr. Mohammed:** Okay.

22 **Mr. Chairman:** And as I understand it, your name Hassan
23 Mohammed, and you were the Facilities Engineer at Paria. Is
24 that right?

25 **Mr. Mohammed:** Correct.

26 **Mr. Chairman:** Okay. Thank you very much. I'll leave you
27 to Ms. Maharaj.

1 **Ms. Maharaj:** Thank you.

2 **Examination By Ms. Maharaj:**

3 Q. Good morning, Mr. Mohammed.

4 A. Good morning.

5 Q. Do you recall signing a witness statement on the 16th August,
6 2022?

7 A. Yes, I do.

8 Q. Yes. And can you confirm that that witness statement, the
9 contents are true and correct?

10 A. Yes, they were.

11 Q. I'll just read a summary of your statement.

12 Mr. Mohammed was the Facilities Engineer at Paria and reported to
13 Catherine Balkissoon who is Paria's technical lead. He did
14 preliminary work into the development of Paria scope of works
15 for the repairs at berth No. 6 which were being carried out by
16 LMCS' divers on the 25th February, 2022 when the incident
17 occurred. He reviewed the draft scope of works which had
18 been prepared utilizing the scope of works for a similar project
19 done by LMCS in 2022 with some adjustments where
20 appropriate. After reviewing the scope of works for the project,
21 Mr. Mohammed passed it on to Mr. Manmohan Balkaran,
22 Maintenance Lead in charge of the project.

23 Mr. Mohammed says that one of the tasks permitted by Paria under
24 permit to work No. 9320 issued on the 25th February, 2022 was
25 to conduct a pressure test on flange weld in order to ensure that
26 the line does not leak under pressure and that the weld was of
27 sound quality.

1 On the 25th February, 2022 at about 12.30 p.m. that is before the
2 incident occurred, Mr. Mohammed who was at home at the
3 time was contacted by telephone by one Mr. Adesh Ramlogan
4 and told that LMCS was having challenges with pressure
5 testing the flange due to the out of roundness of the line which
6 prevented a seal from forming between the line and a CARBER
7 plug to perform the pressure test. Accordingly, the pressure test
8 could not be done on the flange.

9 Mr. Mohammed says that he discussed the testing with Mr. Ramlogan
10 who was on the site witnessing the CARBER plug testing
11 attempt being done by LMCS through their subcontractor,
12 Isotech. Mr. Ramlogan and Mr. Mohammed discussed all of
13 the testing which had been done prior to and during the welding
14 of the flange on a previous day. The testing included a 100 per
15 cent VT being a Visual Test, and a 100 per cent PT, being a
16 Penetrant Test both of which were witnessed by Mr. Ramlogan.

17 The penetrant test is a test in which a solvent is used to clean the weld
18 to be inspected then a dye penetrant is applied to the weld and
19 allowed to set for a while. The dye is then wiped off and a
20 developer is then sprayed onto the weld. If there are any
21 defects in the weld it would show up as a different colour. Mr.
22 Mohammed told Mr. Ramlogan that in lieu of the CARBER test
23 and in consultation with Paria Inspector, Mr. Sharaz Hosein, a
24 service test would be carried once the repairs were completed
25 together with a dive test.

26 On Friday, 25th February, 2022 after the incident occurred, Mr.
27 Mohammed was contacted by Mr. Michael Wei at

1 approximately 6.00 p.m. and instructed to arrange for a
2 borescope inspection of the line. He was later advised that the
3 inspection was unsuccessful as the light on top of the borescope
4 probe was insufficient.

5 On Saturday, 26th February, 2022 at about 5.40 p.m. Mr. Mohammed
6 arranged for two IOCL rental pumps to be loaded at berth 6 but
7 they were replaced on Sunday 27th February, at 8:00 a.m. with
8 two Laing pumps as a letter were better suited for the intended
9 purpose on that day. Mr. Mohammed said that the intended
10 operation of the pumps was for the recovery of the bodies of the
11 four missing divers. Mr. Mohammed was also present at the
12 berths during the discovery of the bodies of the four divers on
13 Monday the 28th February 2022 and Wednesday the 2nd
14 March, 2022.

15 Mr. Mohammed, Mr. Maharaj will now ask you a few
16 questions.

17 A. Okay.

18 **Mr. Chairman:** Can we at least confirm that you're content
19 with that summary of your evidence?

20 **Mr. Mohammed:** Yes, I am.

21 **Mr. Chairman:** There's nothing inaccurate that you detected?

22 **Mr. Mohammed:** No.

23 **Mr. Chairman:** Thank you very much.

24 **Examination By Mr. Maharaj SC:**

25 Q. Mr. Mohammed, I want you to help us with a few answers. At
26 paragraph six of your witness statement you stated that prior to
27 the incident on the 25th February, 2022, you did some

1 preliminary work in the development of Paria's scope of works
2 dated the 29th April, 2021, et cetera, et cetera. What I want to
3 ask you is that you reviewed the scope of works before it was
4 passed to Mr. Balkaran—Mr. Manmohan Balkaran. Am I
5 correct?

6 A. I did a partial review for the components of the scope in which I
7 would have had an involvement.

8 Q. I'm sorry. I didn't hear the—

9 A. I did a partial review for sections of the scope in which I was
10 involved.

11 Q. And what section of the scope was that?

12 A. Within the scope of works my function would have been to
13 engage in technical discussions related to understanding the
14 integrity of the pipeline and what repairs were required. So I
15 would have had discussions with the Paria's Inspector Zahir
16 Hosein and the Planner who was developing the scope to
17 ascertain what repairs should be done. So my involvement is to
18 determine what sections of the line should be changed, and also
19 the inspection requirements, the technical requirements as it
20 relates to welding, pressure testing, and coating. Those were
21 my involvement.

22 Q. Okay. Um, do you have any—or did you at the time have any
23 experience in subsea maintenance work?

24 A. Prior to this, I would have done a scope—had same
25 involvement in a scope similar, the scope referred to in 2020.
26 Yes, so I am familiar with repairs of—involving fabrication and
27 repairs.

1 Q. Okay, okay. I want to show you the scope of works. It's in
2 volume 2 of the core bundle at page 564. Have you seen it?
3 All right. I want you to look at—you see a heading "Isolation
4 List"?

5 A. Correct.

6 Q. Right. Now, if you could help us—you see something written
7 there, "Estimated Volume of Product Between Isolation Points
8 2,000 Barrels"?

9 A. Correct.

10 Q. Could you help us whether that was an estimate of the volume
11 in Sealine 36?

12 A. It was an estimate.

13 Q. Of the contents between berths 5 and 6?

14 A. Correct. It was just an estimate at the scope of works
15 development phase.

16 **Mr. Chairman:** I'm sorry. I'm struggling to hear you. I
17 wonder if you just keep your voice up a little bit.

18 **Mr. Mohammed:** Okay. Yes, it was an estimate based on the
19 length of the line at the scope of works development phase. At
20 that time, a verification wasn't done of the volume, but, yes, an
21 estimate.

22 **Continued Examination By Mr. Maharaj SC:**

23 Q. Right. And that would have included the topside piping and the
24 underwater piping?

25 A. No, the riser sections and the subsea.

26 Q. Okay. You said the riser section?

27 A. The both riser sections and the subsea section as well.

1 Q. Okay. As far as you know, was the scope of works for Sealine
2 36, did it require the line to be drained?

3 A. It required the line to be drained to a point where the repair can
4 be carried out, not fully drained necessarily.

5 Q. Okay. I want to show you the same Volume, page 564 at
6 paragraph 3.1.5; at page 564, 3.1.5. You see that?

7 A. Yes, I do.

8 Q. Right. I'll read it slowly for you.

9 "Properly coordinate works with Paria Operations
10 Maintenance and HSE Personnel to perform the
11 following activities including but not limited to isolation,
12 de-isolation, depressurization, pressurization, and
13 draining/filling product from line SL 36 at berth 6 and
14 berth 5."

15 Okay? So the works included draining of the line, but do you
16 know how much draining?

17 A. At the scope of works development phase, no. It was meant to
18 provide guidance that at whatever level the repair is to be
19 carried out, the production—remove to and below that level;
20 that level at least.

21 Q. But a quantity was not mentioned?

22 A. It was not defined, no.

23 Q. At page—I want you to also look at page 598. Addendum No.
24 1; you see Addendum No. 1?

25 A. Correct.

26 Q. And that is a document from Paria. Okay?

27 A. Yes.

1 Q. Correct. And you see a query:

2 “Who is responsible for pumping back from berths to
3 clear the lines with water?”

4 Response: The contractor is responsible for the safe
5 removal of hydrocarbon contents from the line and to
6 ensure that the line is clear and dry.”

7 Is that what you understood the works to be?

8 A. This addendum wasn't prepared by myself.

9 Q. Oh, I see.

10 A. Yes.

11 Q. But it's headed, “Paria Fuel Trading Company Limited”?

12 A. It does.

13 Q. It does?

14 A. Yes.

15 **Mr. Chairman:** Even if it wasn't your responsibility, is it—
16 could you answer the question—is it what you understood the
17 position to be?

18 **Mr. Mohammed:** What I would understand is that the
19 company is asking for the line to be clear and dry. I don't know
20 if they mean up to the point where the repair is to be carried out
21 safely. It depends on the methodology to be used to repair the
22 line. I am unsure.

23 **Continued Examination By Mr. Maharaj SC:**

24 Q. In the works you did on the scope of works in the services you
25 performed, did you, at any time, recognize that the scope of
26 works could have created a differential pressure situation or
27 Delta P hazard?

1 A. At the scope of works development plain and obvious risks
2 were considered.

3 Q. I'm sorry?

4 A. At the scope of works development phase for my involvement
5 plain and obvious risks associated with the job were considered,
6 hence the use of a migration barrier; that was included. Right?
7 That would have been looking at potential for occupants in the
8 chamber being exposed to toxic gases and also a fire. Risks
9 associated with this job being a specialist job were not
10 considered as this job was, for all intent and purposes, was to be
11 considered as a turnkey project.

12 Q. As a?

13 A. Turnkey project, where Paria Fuel Trading will define what is
14 to be done, identify any plain and obvious risks that we would
15 face on a day-to-day basis at our facility, which is, example,
16 fire, exposure to toxic gases similar to the refinery, and we
17 would have relied at the—our Paria safe system of work, which
18 is our permit to work at the execution phase to identify all risks
19 associated with the tasks to be done. Because at the scope of
20 works development phase, we would not know which method
21 the vendor will be using to carry out the repair. So all the risks
22 would not be known.

23 Q. Okay. So, Mr. Mohammed, as I understand it, you are familiar
24 with the contents of the scope of works. Not so?

25 A. Yes.

26 Q. Right. The contents of the scope of works included the
27 draining of the line?

1 A. Yes.

2 Q. Right. The contents of the scope of works also included
3 installation of a migration barrier—these plugs. Correct?

4 A. A migration barrier, correct.

5 Q. Yes. And the migration barrier was the mechanical plug and
6 the inflatable plug?

7 A. No. Migration barrier is a barrier alone. The migration barrier
8 in this context is referring to the mechanical plug.

9 Q. The mechanical plug?

10 A. No reference was made to use of inflatable plugs. And, again,
11 the migration barrier was put there for the plain and obvious
12 risk.

13 Q. So you are telling us today that the scope of works did not
14 envisage the insertion of an inflatable plug?

15 A. At that time, no.

16 Q. When you mean “at that time”, what you mean?

17 A. At the scope of works development phase, because we would
18 not know how the contractor is going to execute the works, we
19 were not—I was not aware of that.

20 Q. Okay. So it involved a mechanical plug?

21 A. Correct.

22 Q. It involved the Sealine 36?

23 A. Correct.

24 Q. And the plug was to cover Sealine 36—that mechanical plug?

25 A. The mechanical plug, correct—the migration barrier, correct.

26 Q. And it involved a habitat going over Sealine 36?

27 A. Correct.

1 Q. And you are—are you aware that that would have created a
2 differential pressure from the pipe and the habitat?

3 A. At that time, no.

4 Q. At that time you were not aware?

5 A. No.

6 Q. Are you aware now on reflection?

7 A. It will be dependent on how much product was drained from the
8 line if the condition exists. I am unsure how much was drained.

9 Q. If the line was clear and dry—assuming the line was clear and
10 dry, would you agree, on reflection, would have been a latent
11 hazardous differential pressure situation?

12 A. Yes.

13 **Commissioner Wilson:** Ramesh, I would just like to ask a
14 question here.

15 **Examination By Commissioner Wilson:**

16 Q. Good morning, Sir. In listening to you there, what I want to
17 ascertain is, coming up with the scope of work in the planning
18 phases of the scope of work, were you part of any risk
19 assessment team, hazard identification, and/or equivalent
20 exercise?

21 A. No. I was involved more towards the technical side, which is
22 understanding the line integrity, the repair to be done, and the
23 requirements for the repair as it relates to inspection and
24 quality. I did not have no involvement, any risk assessment at
25 that phase.

26 Q. At which phase? Planning?

27 A. The planning phase.

1 Q. Okay. Just clarify for me, because how I'm hearing it is that
2 you were quite integral in the planning or the development of
3 the scope of work. Isn't the development of the scope of work
4 in the planning phase?

5 A. There's different aspects of the development of the scope of
6 works. Like in my case, I was involved in what repair was to
7 be done and why it should be done. That is the role I played—a
8 technical role in that regard.

9 Q. Okay. So one last question and taking off from Mr. Maharaj is
10 you indicated that you were involved in the previous scope of
11 work with LMCS, but you indicated that there were just several
12 adjustments. The scope of work was similar but there were
13 adjustments. Was a lessons-learned exercise and/or equivalent
14 driving that sort of difference or adjustments that had to be
15 made from the previous scope of work that you were involved
16 in?

17 A. So I would just like to explain how it was similar. Right?
18 Sealine 36 goes from the onshore Paria to berth 5, then it goes
19 from berth 5 to berth 6. The section that goes from onshore to
20 berth 5, there's a riser there. That riser had a clamp just below
21 mean sea level. That is the repair that was done successfully by
22 LMCS in 2020.

23 Sealine 36 in 2021 had a clamp approximately 8 to 10
24 feet below mean sea level. Both repairs required the use of a
25 hyperbaric chamber and working below the sea level. The
26 adjustments that were made to the scope was where the repair
27 was to be conducted and improvements to the technical and

1 inspection requirements as it relates to quality.

2 Q. All right. Thank you for that. Just one last part. So at the end
3 of project—washups and stuff—do you guys implement a
4 lessons-learned or have a lessons-learned exercise so there are
5 learnings from the previous scope to take into the new scope,
6 regardless of the minute changes or anything? How is that
7 captured and how are those lessons-learned transferred on to
8 similar scopes?

9 A. There would be learnings within the group who formulates the
10 scope of works, and adjustments will be made where necessary.

11 Q. Okay, thank you. Where is that documented? So it's an
12 exercise or is it just by experience?

13 A. It's by experience within the deep at that phase of the project,
14 for that particular project being referred to.

15 Q. All right. Thank you.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. I want to ask you a few questions on the waiving of the
18 CARBER test. Okay? Would you agree that the waiving of the
19 CARBER test was a change in the method of works which had
20 been approved?

21 A. Okay. I would just like to correct that. Technically speaking,
22 Paria did not waive the CARBER test.

23 Q. What happened?

24 A. Paria was informed by the inspector that was there representing
25 Paria that the test could not be done because of the outer
26 roundness of the pipe. So Paria would have acknowledged that
27 the test could not be done.

1 Q. But Paria was monitoring the works for compliance—

2 A. Correct.

3 Q. —with what was agreed to be done?

4 A. Correct.

5 Q. And Paria had someone topside monitoring what had to be
6 done?

7 A. Correct.

8 Q. And Paria wanted to ensure that the works which were
9 approved to be done were done?

10 A. Correct.

11 Q. So Paria knew that the CARBER test was not going to be done?

12 A. Could not be done, yes.

13 Q. And Paria agreed for the CARBER test not to be done?

14 A. At that time, Paria acknowledged the test would not be done—

15 Q. But Paria did not object to the CARBER test not being done?

16 A. No, we did not.

17 Q. No. Paria did not stop the works at that stage?

18 A. No, we did not.

19 Q. No. Am I—could you help us? When a method of work is
20 approved and it has to be changed, is there a procedure that
21 Paria utilize for that method of work to be changed? What has
22 to happen?

23 A. Typically the contractor will send official correspondence to
24 Paria of the change via an RFI process. So in this case, the
25 contractor being that on that day, the only activity scheduled
26 was for the test to be done, Paria being informed that the test
27 could not be done, the contractor is supposed to follow up with

1 the Paria representative via official correspondence indicating
2 the test cannot be done.

3 **Commissioner Wilson:** Just excuse. Just for the knowledge of
4 people who are not familiar with the acronyms, can you clarify
5 what an RFI is?

6 **Mr. Mohammed:** Oh, my apologies. Like a Request For
7 Information; so that is like a clarification from the vendor
8 saying their concerns and Paria will respond.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. You are familiar with the permit to work procedure. Not so?
11 Are you familiar with Paria's permit to work procedure?

12 A. To an extent, yes.

13 **Mr. Maharaj SC:** And for the Commission's information,
14 there is a CB1 at page 28 and 29. It starts at page 26. It's core
15 bundle 1.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. I want to read the relevant parts to you and tell me if you're
18 familiar with it. Look at page 29 and look at bullet point four:

19 "Continually monitor the job to ensure that it is
20 performed in a safe manner and within the conditions
21 prescribed in the Work Permit, Certificates and JHA/Risk
22 Assessment."

23 You see that?

24 A. Yes, I do.

25 Q. "Stop the work if there are changes in site conditions that
26 increase the risk or if new hazards are identified; and
27 promptly notify the Site Authority of these changes."

1 So would you agree that Paria had a duty, if the job was not
2 being done in accordance with what was approved, to stop the
3 job?

4 A. The role that I would have played, the information from the test
5 would have been shared with me and I would have had to
6 communicate it with the Paria supervisor who would then
7 communicate with the contractor. I do not stop the work on
8 that project as I am not the supervisor. I provide technical
9 support.

10 Q. But would you agree with me that in a job like this, Paria
11 manages any change of policy to be done to the job?

12 A. Yes, it does.

13 Q. Yes. Tell me if you could answer this question. What risks
14 could have been exposed to the divers by the waiving of the
15 CARBER test?

16 A. From my understanding, none.

17 Q. None. So if the—if there was a plug on the pipeline and there
18 was a leak on the riser, could there have been any risk?

19 A. The weld that was to be inspected—

20 Q. I'm sorry?

21 A. The weld that was to be CARBER tested is above the inflatable
22 plug and mechanical plug.

23 Q. So on that basis you said there could have been no risk?

24 A. There's no risk.

25 Q. Okay, all right. On the morning of Saturday, 26th February,
26 you were given instructions to assist in the mobilization of two
27 rental pumps for berth 5 and berth 6. Correct? And that was at

1 about 5.40 p.m.?

2 A. Correct.

3 Q. Were you told—were you given instructions what those pumps
4 were to be used for?

5 A. At that time, no.

6 Q. No. You had no instructions whatsoever as to what those
7 pumps were to be used for?

8 A. I was just told to walk through the process to have the pumps
9 mobilized safely to the site.

10 **Mr. Maharaj SC:** No further questions.

11 **Mr. Chairman:** Before I pass you on to the other counsel, we
12 may want to ask you some—

13 **Examination By Mr. Chairman:**

14 Q. Can I just take you back briefly, please, to page 598, please?
15 It's in the core bundle, volume 2, page 598. It's the addendum
16 that you were asked about in the—addendum to the works,
17 “Miscellaneous Repairs and Refurbishment Works”.

18 Could you just scroll down so that we include in that,
19 lines 1 to 2, please? Yes, thank you. Can you just explain to
20 us, please, what the purpose of this document is? It's described
21 as a “Miscellaneous Repairs and Refurbishment Works at #5 &
22 #6” and Addendum 1”. What's the point of it?

23 A. Okay. So when a tender like in the case of—

24 Q. Try and keep your voice up.

25 A. Okay, my apologies.

26 Q. No, it's all right.

27 A. In the case of this job, for all intent and purposes, it was to be a

1 turnkey project where Paria will specify what repairs are to be
2 done.

3 Q. Yeah.

4 A. Not how the repairs are to be done. So vendors are to come up
5 with their own methodology and ask any questions related—

6 Q. Who's asking the questions?

7 A. Vendors. So when the tenders—

8 Q. Who?

9 A. The vendors—the contractors.

10 Q. Right.

11 A. So when this tendered document is prepared it is sent to the
12 contractors and they will have an opportunity to ask any
13 questions about the works to be done or anything related to how
14 they plan to do it, they can ask.

15 Q. I got it.

16 A. This is the response document to the questions that are
17 compiled.

18 Q. Right. So if I can answer my own question, I hope, in this way,
19 this is intended to sort out any queries?

20 A. Correct.

21 Q. And so, the contractor can ask the query and Paria, the
22 contractee, can answer them?

23 A. Correct.

24 Q. So the question in No. 1 is:

25 "1. Query - Who is responsible for pumping
26 back from the berths to 'clear' the lines with
27 water?"

1 That's the first question. Isn't it?

2 A. Yes.

3 Q. And the answer to that is from Paria:

4 "Response: The Contractor is responsible for the safe
5 removal of hydrocarbon contents from the line..."

6 A. Correct.

7 Q. "...and to ensure that the line is clear and dry."

8 A. Correct.

9 Q. That's what it says, isn't it?

10 A. Correct, that's what it says, yes.

11 Q. I appreciate that. Now, and you told us that this is not your
12 responsibility. But you can help us, perhaps, because it seems,
13 on the face of it at any rate, a line—when we're talking about a
14 line, we're talking about the pipe, aren't we?

15 A. But this particular line is like a "U". So it has two risers and a
16 horizontal, yes.

17 Q. Well, I don't really care which shape it is, right. It's a line; it's
18 the pipe, isn't it? When we talk about a line in your terms, it's
19 a piece of piping?

20 A. Correct.

21 Q. Right. And if the piping has to be clear and dry, what do you
22 understand that to mean?

23 A. Clear and dry.

24 Q. In other words, nothing in it.

25 A. Correct.

26 Q. Is that what it means?

27 A. Correct.

1 Q. To you; it means nothing in it, doesn't it?

2 A. Correct.

3 Q. I mean, tell me if I've got this wrong. I don't want to away
4 with the wrong—

5 A. No, it depends—

6 Q. Just a minute. I don't want to go away with the wrong
7 impression. All right? I need to understand precisely what it
8 means to you. What it means to me maybe I may have got it
9 wrong, so you need to help me. All right? If you are saying
10 that the line needs to be clear and dry—this is you, Paria, not
11 you personally, all right—needs to be clear and dry, what do I
12 take from that?

13 A. I would interpret it that wherever the repairs are to be carried
14 out, the line is to be product free. Working in the hydrocarbon
15 industry, I would understand that as the line needs to be
16 hydrocarbon-free at that point at its minimum—as a minimum.

17 Q. No, no, no. You're saying that it means just a little bit above
18 the plug? Is that what that's supposed to mean? Are you really
19 saying that that's what it's supposed to mean?

20 A. I understand what you mean by clear and dry, but I would
21 interpret it as, as a minimum at least that area needs to clear.

22 Q. This document is supposed to sort out queries, isn't it?

23 A. Correct, yes.

24 Q. It's supposed to clear up any ambiguities, isn't it?

25 A. Yeah.

26 Q. Is that at the very best ambiguous and at worst misleading?

27 A. Well, it says "clear and dry", so you're correct. You could

1 interpret it as clear and dry. It depends; yeah.

2 Q. It wasn't, was it?

3 A. Sorry?

4 Q. It wasn't clear and dry, was it?

5 A. I do not know.

6 Q. You don't know? You don't know what happened? Have you
7 not read the papers?

8 A. If the line was clear and dry?

9 Q. Yes.

10 A. I don't know how much product was remaining in the line to
11 answer that. I can't say if it was clear and dry.

12 Q. All right. Very well. Thank you very much.

13 **Mr. Peterson SC:** Mr. Chairman, I just want to indicate that
14 we did discharge your directive and advised the witnesses not
15 to read the papers and try not to follow anything on the media.

16 **Mr. Chairman:** I'm sure you did. But long before this
17 Commission was conceived of, there was very considerable
18 press tension, as you will no doubt recall. I've had the
19 opportunity of reading it in more recent times. I dare say the
20 public were reading it at the time. Be that as it may, I've heard
21 your answers, and I'm grateful for those. Thank you very
22 much. I pass you over now to counsel.

23 **Mrs. Persaud Maraj:** I am with LMCS, Kamini Persaud
24 Maharaj.

25 **Mr. Mohammed:** Okay.

26 **Mrs. Persaud Maraj:** Mr. Mohammed, I—

27 **Mr. Chairman:** There are questions.

1 **Mr. Peterson SC:** I thought the order, Mr. Chairman, was we
2 would re-examine last; he's our witness, so in case we have
3 anything to clarify at the end. I thought that was the order.

4 **Mr. Chairman:** Mr. Peterson, he's not your witness, he's our
5 witness, and we've asked him questions. I thought I'd made it
6 clear that I expected people to cross-examine any questions that
7 they had in the order as I set it out on Monday. If you are
8 saying to me you would like to go last, last means, in my book,
9 before any re-examination from Mr. Maharaj. If you would
10 prefer to hear what other questions there are since he is a
11 witness employed by your client, I would have no objection to
12 that.

13 **Mr. Peterson SC:** Well, that's what I—well, it's my
14 understanding, Sir. I thought the understanding was that a
15 witness that was called by my client, other lawyers would ask
16 questions then we will ask, and then Commission Counsel
17 would have the last say, so to speak. But that's my
18 misunderstanding, Sir.

19 **Mr. Chairman:** Then I thought I had made our position clear
20 as to how we were going to approach it. But I don't have a
21 particular objection to that course—

22 **Mr. Peterson SC:** Thank you, Sir.

23 **Mr. Chairman:**—if that helps you help us, which is why we're
24 all here. So if you're saying you would like to go after all other
25 Counsel of interest ask him any questions, then I have no
26 difficulty with that.

27 **Mr. Peterson SC:** Thank you, Sir. I thought that was the—

1 only with respect to witnesses that we were calling.

2 **Mr. Chairman:** Well, why don't we set that as the process
3 here on in after?

4 **Mr. Peterson SC:** Thank you, Sir.

5 **Mr. Chairman:** And those who have got witnesses who are
6 employed by their clients can do the same.

7 **Mr. Peterson SC:** Thank you, Sir.

8 **Mr. Chairman:** All right. Very well. I'll pass him over to
9 you.

10 **Mrs. Persaud Maraj:** I'm grateful, I'm grateful.

11 **Cross-Examination By Mrs. Persaud Maraj:**

12 Q. Mr. Mohammed, in your witness statement you have said at
13 your paragraph 5, No. 7, that as part of your duties you
14 maintain updated key engineering data including the process
15 and instrumentation diagrams, drawings, technical
16 specifications and area classification maps of terminal
17 operations. Correct?

18 A. Correct.

19 Q. In your answer to Counsel for the Commission you used the
20 terminology "Line Integrity" in relation to how the scope of
21 works was developed in terms of what your contribution was in
22 its development?

23 A. Correct.

24 Q. All right. So can you say in determining the line integrity—and
25 being that you are saying part of your duty is to maintain
26 updated key data and drawings—whether any particular
27 drawing was used by you?

1 A. Yes, there were drawings that were taken from Petrotrin that
2 were considered.

3 Q. Taken from Petrotrin?

4 A. Yes, as built drawings and the build-up materials for the
5 pipeline, yes, to understand the design.

6 Q. All right. And were those drawings disclosed to the vendors,
7 meaning the contractors that the invitation went out to?

8 A. At that time, it was not required. A sketch was provided.

9 Q. A sketch was provided?

10 A. Yes.

11 Q. And from those drawings, you would have been able to
12 determine exactly what in the line needed to be repaired?

13 A. I would have determined what needed to be repaired from the
14 inspection data, not from the drawings.

15 Q. So inspection data is something separate?

16 A. Inspection data. That is—yes—collecting thickness data on the
17 pipeline and understanding where the defects are.

18 Q. So you would have had—would you have had to read the
19 inspection data in collaboration with the drawings?

20 A. The inspection data guided the process.

21 Q. That alone?

22 A. Yes—where the repairs were to be carried out, correct; the
23 inspection data.

24 Q. All right. So you had no reference at that point in the
25 development of the scope to drawings?

26 A. The drawings were used to understand the materials of
27 construction of the pipeline for the section to be replaced.

1 Q. Just the materials?

2 A. Of construction, correct.

3 Q. Not layout?

4 A. No.

5 Q. Not configuration?

6 A. For the riser section, no.

7 **Mrs. Persaud Maraj:** Can I have page 2922 of the bundle of
8 submissions shown to Mr. Mohammed?

9 **Mr. Chairman:** Where are we going?

10 **Mrs. Persaud Maraj:** The bundle of submissions, page 2922.

11 **Mr. Chairman:** What is it you're asking to look at?

12 **Mrs. Persaud Maraj:** There is a drawing, please, Mr.
13 Chairman.

14 **Mr. Chairman:** It's a drawing?

15 **Mrs. Persaud Maraj:** It's a drawing. It's up on the screen
16 now.

17 **Mr. Chairman:** All right. There it is. I don't think it's being
18 copied into our individual printed bundles. It's just on the
19 entirety of the bundles, which is the—you'll appreciate we
20 didn't print 20,000 pages for each Counsel.

21 **Mrs. Persaud Maraj:** Same here, please.

22 **Continued Cross-Examination By Mrs. Persaud Maraj:**

23 Q. So you're seeing—are you seeing that drawing?

24 A. Yes, I am.

25 Q. All right. Can you give me the date of that drawing?

26 A. There are a few dates I see there.

27 Q. I am seeing the 10th January, 2022 to the bottom of the—in

1 blue. Below the words “Approved by J. Beckles” on the
2 7/1/2022?

3 A. Okay, yeah.

4 Q. So this would have been—can you tell me what we’re looking
5 at?

6 A. I did not prepare this drawing or was part of this.

7 Q. You did not prepare this drawing?

8 A. I did not.

9 Q. And you have no idea what this drawing is of?

10 A. No. At this time, no, I do not.

11 **Mrs. Persaud Maraj:** All right. I have no further questions
12 on it.

13 **Mr. Chairman:** Have you seen that before—that drawing?

14 **The Witness:** No.

15 **Mr. Chairman:** Thank you. You can take that down. Anyone
16 else? Yes, Sir. Introduce yourself again, please, so everyone
17 knows who you are and who you represent.

18 **Mr. Ramadhar:** Thank you very much, Chairman. Prakash
19 Ramadhar on behalf of the Kurban family and Yusuf Henry.

20 **Cross-Examination By Mr. Ramadhar:**

21 Q. Good day, Mr. Mohammed. Had there ever been, in the
22 process, a meeting with all of the stakeholders before the work
23 actually started, including yourself, all those who would have
24 helped design and implement, oversee, to ensure a successful
25 completion of the project?

26 A. There would have been a kick-off meeting.

27 Q. I didn’t ask you whether there would have been. Were you in

1 such a meeting?

2 A. No, I was not.

3 Q. Thank you. In relation to the addendum to which you have
4 spoken earlier about the need to clear the line, did you ever see
5 that addendum before today? Yes or no.

6 A. Yes.

7 Q. Yes. Did you sign off on that at all?

8 A. No.

9 Q. Could you tell us the date that that addendum was introduced?

10 A. Introduced to me?

11 Q. No, to the entire proceedings?

12 A. I am not sure.

13 **Mr. Chairman:** What do you mean by “entire proceedings”?

14 **Mr. Ramadhar:** I’m sorry. Chairman, to be fair to the
15 witness, let me put it like this.

16 **Continued Cross-Examination By Mr. Ramadhar:**

17 Q. When was the first time you actually saw this addendum?

18 A. On going through the submissions online, on the COE website.

19 Q. When?

20 A. Approximately a month ago.

21 Q. A month ago?

22 A. Yeah.

23 Q. You would consider the contents of that addendum to be
24 critically important, wouldn’t you?

25 A. Yes.

26 Q. Yes. Was that addendum ever discussed in a meeting with all
27 of the stakeholders? Yes or no.

1 A. I was not involved in a discussion.

2 Q. Thank you very much.

3 **Mr. Ramadhar:** If you could, with your kind leave, Mr.
4 Chairman, have the addendum brought up, please? And if you
5 could scroll to the lower part where there would be an area for
6 signature.

7 **Continued Cross-Examination By Mr. Ramadhar:**

8 Q. Is that addendum signed, Sir, by anyone from either Paria or a
9 contractor representative?

10 A. This one, no.

11 Q. Thank you very much.

12 **Mr. Ramadhar:** That would be all. Thank you very much.

13 **Mr. Chairman:** Thank you. Anyone else? Yes. Can we have
14 one of you ask questions rather than both, please? Can you
15 introduce yourselves so that the public know who you are and
16 who you're representing?

17 **Ms. Alfonso:** Good morning. My name is Nyree Alfonso and
18 I represent the interest of the Seamen and Waterfront Trade
19 Union, SWWTU.

20 **Mr. Chairman:** Is your microphone on?

21 **Ms. Alfonso:** Yes. I'll bring it closer, so I'll just repeat that.
22 My name is Nyree Alfonso, and I represent the interest of the
23 Seamen and Waterfront Trade Union.

24 **Cross-Examination By Ms. Alfonso:**

25 Q. Good morning, Mr. Mohammed. I just have one or two
26 questions for you, please. I notice you say that you are
27 Facilities Engineer, Mechanical, at Paria. Yes?

1 A. Correct.

2 Q. Could you help us out with what—if you have any
3 qualifications, any qualifications of any nature, degrees,
4 anything?

5 A. I'm a Mechanical Engineer from UWI; I have my Master's in
6 Engineering; API Pipeline Inspector Certification; Pressure
7 Vessel Certification; Certified Quality Engineer.

8 Q. Okay. Thank you. And how long have you worked with Paria?

9 A. Approximately seven years, and I would have worked in total
10 approximately 11 years as an engineer.

11 Q. Mr. Mohammed, would that mean that you worked with
12 Petrotrin before then?

13 A. Correct.

14 Q. Thank you. You mentioned when you were being questioned
15 this morning and in your paragraph 6 of your witness statement
16 as well that basically you piggybacked—not you, not you, the
17 corporate you—Paria would have used a similar scope of works
18 used in a previous job in 2020. Yes?

19 A. Paria used the previous scope of works as a starting point.

20 Q. As a starting point, okay. And you mentioned, I believe,
21 something about lessons, you know, you would have
22 reviewed—when you using it at a starting point you would have
23 reviewed any lessons learnt from the 2020 project. Did you say
24 that earlier this morning?

25 A. The group working on the scope would have, yes.

26 Q. The group, okay. Could you tell us anything about any lessons
27 learnt?

1 A. At this time I can't remember.

2 Q. You can't remember?

3 A. At this time, no.

4 Q. At this time?

5 A. No.

6 Q. Okay. In relation to the 2020 job which was on Sealine 36—
7 yes?

8 A. Correct.

9 Q. Was any aspect of that job involved draining of a pipeline?

10 A. I am not sure. I am not involved in the execution of the works;
11 more so the planning phase.

12 Q. But you—okay. So you reviewed the scope of works in
13 relation to the 2020 plan as well?

14 A. Correct.

15 Q. Okay. And you can't recall whether any line in relation to that
16 project required draining or removing the contents, or lessening
17 the contents, or completely clearing the contents?

18 A. I can't recall.

19 Q. You can't recall. Thank you very much, Mr. Mohammed. I
20 beg your pardon. I'll just ask again, because I have an insistent
21 junior. You don't recall any lessons learned in that—so this
22 was a team effort in 2020 to do the scope of works. Yes?

23 A. Okay, so let me explain. The scope of works goes through
24 different groups within the company. There's a technical group
25 that will create the scope of works based on the works to be
26 done. Like I would have said previously, for all intents and
27 purposes, this job was to be done as a turnkey project where the

1 company would understand the integrity of the asset and where
2 the repairs are to be done, solely that, where the repairs are to
3 done, and the material specification. This was included in the
4 scope of works along with contractors' requirements and
5 Paria's—sorry, contractors' responsibility and Paria's
6 responsibilities. When this is done, this would be tendered out
7 and there would be an execution team which is the Maintenance
8 Department which will execute the works. I am not part of the
9 maintenance team. I am part of the technical team.

10 Q. Was there—I got you, Mr. Mohammed. In relation to the
11 2020—so I've left 2020 alone; 2022, which is the subject
12 matter of this Enquiry, was there any debriefing, any post—and
13 I want to be careful, post-mortem type meeting after this
14 incident in which lessons learnt in terms of methodology of the
15 work, or scope of work, or what went wrong? Is there anything
16 like that? Anything like that happened that you were a
17 participant in?

18 A. There would have been internal discussions and opinions.

19 Q. There would have been or there were?

20 A. There were internal discussions and opinions about what could
21 have been the possible scenarios.

22 Q. Maybe what could have been done differently?

23 A. What could have been done—not necessarily differently but
24 what could have been the cause.

25 Q. Okay. What could have been the cause of what transpired in
26 February this year?

27 A. Correct.

1 Q. Okay. Were you a participant in that meeting—in those
2 meetings? As you said internal discussions; it could be more
3 than one meeting.

4 A. I can't recall.

5 Q. You can't recall from February or March that you were in a
6 meeting?

7 A. There would have been passing conversations with colleagues.
8 It wasn't specific, like, sit down meetings where minutes were
9 taken, and these things.

10 Q. Were there meetings, Mr. Mohammed?

11 A. Official meeting that I am aware of, no.

12 Q. There were no official meetings that you were aware of?

13 A. No.

14 Q. Thank you, Mr. Mohammed?

15 **Mr. Chairman:** It follows from that, that you didn't attend any
16 such meeting even if there were any?

17 **Mr. Mohammed:** Correct.

18 **Mr. Chairman:** Thank you. Yes, Mr. Peterson?

19 **Mr. Peterson SC:** Thank you very much, Mr. Chairman. Mr.
20 Mootoo will question this witness. He has to do some of the
21 lifting.

22 **Mr. Chairman:** Very well; sharing the burden.

23 **Mr. Peterson SC:** Yes.

24 **Mr. Mootoo:** Good morning, Chairman and other members.

25 **Examination By Mr. Mootoo:**

26 Q. Mr. Mohammed, you were asked a series of questions about the
27 addendum which followed the tender process. I want to put

1 that in context, and I would like you to help me. Is it correct to
2 say that this project was a project that invited a competitive
3 tendering process?

4 A. Yes, it did.

5 Q. Good. And you told us you were involved in the development
6 of the scope of works for that project. Is that correct? In some
7 aspects of it.

8 A. The technical requirements, yes.

9 Q. Yes. And is it correct to say that when you have a competitive
10 tender process the employer sets out the work that it wants done
11 and goes into the marketplace to invite contractors to bid for
12 those works?

13 A. Correct.

14 Q. Yes. Would it be also fair to say that the employer expects
15 contractors to submit bids saying the manner in which they
16 intend to execute those works?

17 A. Correct.

18 Q. Good. And would it also be correct to say that the bids for
19 contractors come in after questions are answered by way of the
20 addendum process?

21 A. Correct.

22 Q. Good. So when the addendum you were shown this morning
23 was issued—that's the addendum at page 598—would it also be
24 correct to say that no contractor had submitted a bid at that
25 point in time?

26 A. Correct.

27 Q. Good. And you will accept, will you not, that when the

1 contractor received the scope it is incumbent upon the
2 contractor to decide how it executes the works?

3 A. Correct.

4 Q. Yes. And is it not also true that even if an employer
5 contemplates the performance of the scope of works in a
6 particular manner, it is open to a contractor to bid, to carry out
7 the scope by virtue of a different method of performance than
8 that envisaged by the employer?

9 A. Correct.

10 Q. Yes. And is it not the fact that in this case that is precisely—if
11 we are to accept that the addendum is to be construed in a way
12 that the line is to be emptied in its entirety, if we are to accept
13 that, is it not correct that when the contractor submitted his bid
14 he suggested a different method of performance? I'd like to
15 take you to document 6 or page 659 which forms part of
16 LMCS' project execution plan.

17 **Mr. Mootoo:** Page 659. It's now on the screen, Chairman.

18 **Mr. Chairman:** 659; I just need to find it in my bundle first.
19 Thank you.

20 **Continued Examination By Mr. Mootoo:**

21 Q. I'd like to take you to the bottom half of that page, Mr.
22 Mohammed. You would see a heading "Procedure for
23 Removal of Line Content between berth 5 and berth 6". You
24 see that?

25 A. Correct.

26 Q. Good. So let's just find ourselves back in context again.
27 Would you accept this document came after the addendum at

1 page 598?

2 A. Correct.

3 Q. Good. So would you also accept that this is the contractor
4 saying to the employer this is how I intend to execute the
5 works?

6 A. Yes.

7 Q. Good. And let's go to the last bullet point on that page. And
8 let's read it together.

9 "Once level in the riser has dropped to 35 feet below sea level, a line
10 plug will be installed."

11 You see that?

12 A. Yes.

13 Q. Would you, therefore, agree with me that what the contractor is
14 saying to the employer is whatever you have invited in your
15 tender documents or you've said in your appendix or
16 addendum, the scope of works that you want done this is how I
17 propose to do it?

18 A. Yes.

19 Q. Yes. And this is a—would you also agree with me that this is a
20 different method than simply emptying the line?

21 A. Correct.

22 Q. Good. Would you also agree with me that Paria was open—it
23 was open to Paria to reject that or accept it?

24 A. Correct.

25 Q. Good. And in this case, you'll also agree that the contractor,
26 LMCS, was the one possessing all the specialist knowledge and
27 expertise to carry out the works?

1 A. Considering that it was to be executed as a turnkey project, yes,
2 it is expected.

3 Q. Yes. And is it not also correct to say that Paria would have
4 known of this document?

5 A. Yes.

6 Q. And is it also not correct to say that Paria accepted the
7 contractor's works, the contractor's bid, in the full knowledge
8 that the contractor was saying that it will execute the works in a
9 manner not by the full emptying of the line, but that only if the
10 line is empty to 35 feet below sea level?

11 A. Yes.

12 Q. And this is what the contractor was representing it could do as
13 the specialist contractor. Correct?

14 A. Correct.

15 Q. And there was no reason to believe that the contractor couldn't
16 do the works in this manner as far as you are aware?

17 A. It goes back to where I said depending on where the repairs are
18 to be carried out, once the line is suitably drained at or below
19 that level—

20 Q. Yes.

21 A. Yes, it can be done.

22 Q. And this was the same contractor who had successfully
23 executed works of this nature one year before for Paria?

24 A. Correct.

25 **Mr. Mootoo:** Mr. Chairman, I have no further questions for
26 this witness. Thank you.

27 **Mr. Chairman:** Thank you. Mr. Maharaj.

1 **Further Examination By Mr. Maharaj SC:**

2 Q. Yes. In the documents you were shown by Mr. Mootoo at page
3 659, and you were shown about—it was pointed out to the last
4 bullet on that point.

5 “Once level in the riser has dropped to 35 feet below sea
6 level, a line plug will be installed.”

7 Okay? And you answered that. Okay? If you look above that,
8 the one just above that:

9 “Using air driven pump, pump out approximately 300
10 barrels of line content.”

11 You see that?

12 A. Yes, correct.

13 Q. And what that means? What you understand that to mean?

14 A. An approximate volume of 300 barrels.

15 Q. To pump out?

16 A. Correct.

17 Q. Correct. Now, you were asked about the contractual process.
18 The contractual process in this case—and you are experienced
19 in this because you work at Paria—you had a scope of works
20 developed by Paria. Correct?

21 A. Correct.

22 Q. Then that was put out; then you would have had questions
23 asked about the scope of work by LMCS?

24 A. Correct.

25 Q. Then you would have method statements submitted to Paria in
26 relation to how to do the work. Am I correct?

27 A. Correct.

1 Q. Then you would have Paria approve the method statements in
2 this case?

3 A. From my understanding, the review that Paria does for method
4 statements, because we don't have the specialist knowledge of
5 how to do the works, is if the methods capture the works to be
6 done and the inspection and quality requirements—

7 Q. So are you saying that Paria approved the method statements
8 without having the expertise?

9 A. Specific to subsea repairs, correct.

10 Q. In respect of this contract, are you saying that Paria did not
11 approve the method statements?

12 A. Paria approved the method statement as it relates to the
13 inspection in quality requirements and the list of works to be
14 completed at the end of the project.

15 Q. I am asking you, the method of how the work was to be done,
16 didn't Paria approve the method statements in this case? Mr.
17 Mohammed—

18 A. For this job I was not involved in the review of the method
19 statement.

20 Q. Okay. I'm suggesting to you, Paria approved the method
21 statements that was submitted by LMCS.

22 A. Okay.

23 Q. I am also putting to you that Paria approved the risk
24 assessments done by LMCS.

25 A. Okay.

26 Q. Paria also approved the emergency response done by LMCS.

27 A. Okay.

1 Q. And that was how Paria awarded the contract to LMCS. What
2 you have to say about that?

3 A. I am unsure if this particular method statement used for
4 execution was the method statement which it was awarded on,
5 because the method statement is a live document that could
6 change. Right? So I just want to be clear about that.

7 Q. Okay. But Paria—apart from approving the contract, Mr.
8 Mohammed, Paria monitored the implementation of the
9 contract.

10 A. Correct.

11 Q. Paria held out itself as having the expertise through Kenson to
12 monitor this project. Isn't that so?

13 A. Paria would have had their roles and responsibilities outlined in
14 the contract clearly.

15 Q. Why would Paria have two persons or one person topside while
16 these works were being done in the hyperbaric chamber in the
17 habitat monitoring, taking a video? Wasn't Paria monitoring
18 compliance of this job?

19 A. At this exact—the moment when the incident occurred?

20 Q. Yes, yes.

21 A. I am unsure who was on site and monitoring. I do not know the
22 details.

23 Q. Oh, you're unsure. But you know about the procedure that
24 Paria used to monitor works?

25 A. Okay. So there's—

26 Q. You have answered a lot of questions to Mr. Mootoo.

27 A. Okay. So—

1 Q. You know of the procedure?

2 A. Right, so—

3 Q. Isn't one of the procedures that Paria—

4 **Mr. Peterson SC:** Could the witness be allowed to answer at
5 least one of the questions?

6 **Mr. Chairman:** I think that's a fair observation.

7 **Mr. Maharaj SC:** Much obliged, Mr. Chairman; much
8 obliged.

9 **Mr. Mohammed:** Okay, so let me explain—

10 **Mr. Mootoo:** And also, Mr. Chairman, if I may, the witness is
11 here. He's indicated what his role is. I asked him about the
12 tendering process. Mr. Maharaj is asking him to commit to a
13 whole range of activities well beyond his job description. We
14 have other witnesses who will be coming.

15 **Mr. Chairman:** I think that's a fair point as well, Mr.
16 Maharaj. We have coming after this witness, Mr. Wei, who,
17 perhaps, can deal with some of these questions for you.

18 **Mr. Maharaj SC:** Okay. Okay.

19 **Mr. Mohammed:** So just to add, just to maybe help you. In
20 the scope of works, because this is a turnkey project, Paria's
21 responsibility and the contractor's responsibilities were
22 outlined. I don't know if you all want to refer to that, maybe
23 we could answer what was Paria's responsibility related to this
24 project.

25 **Continued Examination By Mr. Maharaj SC:**

26 Q. Okay. Mr. Mohammed, I will accept what the Chairman said,
27 and I'll wait for the other witness.

1 A. Okay.

2 **Mr. Maharaj SC:** Thank you very much.

3 **Mr. Chairman:** I just have one question arising from what
4 we've been looking at.

5 **Examination By Mr. Chairman:**

6 Q. Could you have a look—put back up page 659, please. Thank
7 you. You were taken by Mr. Maharaj to the second bullet
8 point. Do you see that?

9 “Using air driven pump, pump out approximately 300
10 barrels of line content.”

11 Do you see that?

12 A. Correct.

13 Q. “Content to be pumped in Paria Fuel Trading Company
14 Limited slops barge and ferried over to Lube Oil Jetty
15 where it, line content, will be removed by Paria Fuel
16 Trading Company Limited supplied Vacuum Truck.”

17 I don't claim to understand all of that, but what I get from that
18 is that 300 barrels or whatever was in this pipe was to be
19 pumped out and put somewhere safe and taken away rather than
20 pumped into the ocean. Am I right about that?

21 A. Correct.

22 Q. Right. So they're saying, according to what you've told us and
23 what Mr. Mootoo was asking you, that 300 barrels, in effect,
24 were to be taken from this pipeline.

25 A. Approximately 300 barrels, correct; approximately.

26 Q. Do you know whose—first of all, whose responsibility was it to
27 do that? Was that LMCS' responsibility or was it Paria's?

1 A. I am unsure. I'll have to refer to the scope of works
2 requirements.

3 Q. Right.

4 A. But I know Paria would have access to a slops barge and a
5 vacuum truck.

6 Q. Well, it says so, doesn't it? It's there.

7 A. Yes, correct. Paria will provide a slops barge and a vacuum
8 truck to carry it to a storage tank.

9 Q. Do you know if there is some method by which you can
10 measure how much is coming out of the pipe?

11 A. I don't know, but I will speculate they do. I don't know.

12 Q. If you don't know then don't—don't speculate. We have other
13 witnesses. I'm just asking if you knew. You don't?

14 A. I don't know.

15 Q. All right. Well, I'll ask somebody else. Thank you very much.

16 A. Yes.

17 **Mr. Chairman:** Does anybody else have anything they want
18 to ask arising? I hope not.

19 **Mr. Peterson SC:** No, Mr. Chairman.

20 **Mr. Chairman:** Good. And that means we'll probably take
21 our break now, a little bit earlier than we would otherwise, but
22 it's probably a convenient point at which to do so. Thank you
23 very much, indeed, for coming; appreciate your efforts. Thank
24 you, and you're free to go. You can stay or leave as you
25 choose. Mr. Peterson, you looked exercised by something?

26 **Mr. Peterson SC:** No, Sir. I was just telling him we'll take
27 the break now and then we'll call Wei after. He's present.

1 **Mr. Chairman:** How do we pronounce his name? I'm not
2 quite sure. Is it "We" or "Why"?

3 **Mr. Peterson SC:** We have been struggling with that for a
4 while, Sir. We have versions. It is not Gilbertson, though.

5 **Mr. Chairman:** One thing is for sure, it's not, is it? I think
6 it's because you introduced me—you told me that your son is
7 here.

8 **Mr. Peterson SC:** Yes, he is. The amount of heckle I've
9 gotten over that. But I think it's "We", Michael Wei.

10 **Mr. Chairman:** All right, lovely, thanks. Thank you very
11 much, indeed. Thank you, Mr. Peterson.

12 **11.23 a.m.:** *Enquiry suspended.*

13 **11.34 a.m.:** *Enquiry resumed.*

14 **Mr. Chairman:** Yes, Mr. Maharaj

15 **Mr. Maharaj SC:** The next witness, Mr. Chairman and
16 Commissioner, is Mr. Michael Wei and the summary would be
17 given by Mr. Ronnie Bissessar and then I'll follow Mr.
18 Bissessar.

19 **Mr. Chairman:** Thank you very much.

20 *[Pause]*

21 *[Mr. Michael Wei sworn]*

22 **Mr. Wei:** I, Michael Wei, solemnly swear that the evidence I
23 shall give to the court in this case shall be the truth, the whole
24 truth and nothing but the truth.

25 **Mr. Chairman:** Yes. Thank you for coming. Do I pronounce
26 your name "we" or "why"?

27 **Mr. Wei:** "We".

1 **Mr. Chairman:** “We”. Well, thank you for coming. There’s
2 water there for you if you want it. If you need a break at any
3 point, just let me know and we’ll see what we can do, all right?

4 **Mr. Wei:** Sure, thanks.

5 **Mr. Chairman:** We’re going to start with a procedure where
6 your statement is going to be summarized rather than having to
7 go through the entirety of it. You follow? That summary is
8 going to be given by Mr. Bissessar who sits at the end of the
9 row there. Listen carefully to it. If you disagree with anything,
10 let us know once we get to the end. All right? And then you’ll
11 be asked some questions by Mr. Maharaj and other counsel who
12 have an interest. All right? Okay. Thank you. Mr. Bissessar.

13 **Mr. Bissessar:** Thank you, Chair.

14 **Examination By Mr. Bissessar:**

15 Q. Mr. Wei, do you recall signing a witness statement dated 16th
16 August, 2022?

17 A. Yes.

18 Q. And the contents of that witness statement, are they true and
19 correct?

20 A. Yes.

21 Q. I will now summarize your witness statement which is at WB
22 1271. While I’m doing so, on the screen a schematic
23 representation of Sealine 36 and the two risers at berths 5 and 6
24 will be displayed.

25 Sealine 36 was out of service as its risers at berths 5 and
26 6 had clamped leaks. To return Sealine 36 to service, the
27 approach undertaken was to first repair Sealine 36 between pile

1 bent 80 and berth 5 and that was done in November 2020 and to
2 then repair the section between berths 5 and 6. The scope of
3 works for the works at berths 5 and 6 were prepared by Paria
4 and then a tender package for the project was submitted to
5 registered vendors of Paria which included LMCS Limited.

6 A. I think this doesn't really represent what the first repair was,
7 eh? There was a second loop. The risers are fixed at 5 first as
8 mentioned in 2020 would be a separate loop not this loop,
9 okay?

10 Q. Thank you, Mr. Wei. This is just merely for illustration
11 purposes.

12 A. Yes.

13 Q. It's not related to specifically what we are summarizing. The
14 scope of works for the works at berths 5 and 6 were prepared by
15 Paria and then a tender package for the project was submitted to
16 registered vendors of Paria which included LMCS Limited,
17 LMCS for short. LMCS was the only bidder that was
18 technically compliant with all of the requirements for the
19 contract and Paria's manage management tenders committee
20 approved the award of the contract for the repairs and
21 refurbishment works at berths 5 and 6 to LMCS and that was on
22 27 May, 2021.

23 A purchase order was issued, and, apart from the terms
24 and conditions contained in the invitation to bid, the works are
25 also governed by Paria's general conditions of contract dated
26 10th May, 2021. LMCS had previously successfully completed
27 a similar subsea repair job at berth number 5. Its performance

1 on that job had been assessed by Paria as either very good or
2 excellent in various categories.

3 After this project commenced in June 2021, there was an
4 accident at the offshore services dock resulting in an injury to
5 an LMCS worker. OSHA issued a prohibition notice
6 suspending all works on the Sealine number 36. Works
7 resumed in January 2022 after OSHA lifted the prohibition
8 notice upon being satisfied that Paria satisfied the requirements
9 for a safe resumption of works.

10 There was a meeting on 24th February, 2022 between
11 Paria and LMCS representatives where the planned schedule of
12 works for Friday, 25th February, 2022 and the weekend were
13 outlined and discussed. Mr. Wei, yourself, lists the specific
14 tasks which were to be completed and the sequence of the said
15 tasks to be completed from Friday, 25th February, 2022 up until
16 the completion of the works. Notably, according to you, Mr.
17 Wei, at paragraph 56 of your witness statement, the plugs were
18 not to be removed from within the hyperbaric habitat, rather,
19 they were to be removed from the topside after the habitat had
20 been removed.

21 Permits to work were issued on 25th February, 2022.
22 The main permit to work was PTW 9320 for various
23 maintenance works. Attached to that PTW was a revised
24 method statement dated 4th January, 2022 and a job safety
25 analysis dated 10th December, 2021. LMCS' method
26 statements JHAs, risk assessments and dive plan documents
27 were all reviewed and accepted by Paria. The revised method

1 statement dated 4th January, 2022 was subject to Paria's permit
2 to work system.

3 LMCS did not identify drowning, suffocating in the
4 pipeline as credible scenarios in its documents. In its dive plan,
5 it stated that the likelihood of entrapment or entanglement in
6 the pipeline was no. Paria accepted this assessment because no
7 one could enter the pipeline while the mechanical and inflatable
8 plugs, collectively known as the migration barrier, were in
9 place. The configuration of the work area in the pipeline was
10 such that the top of the riser would pass the waist of the divers
11 standing in the chamber and it was not credible or reasonable to
12 expect that any of the divers would enter the pipeline
13 voluntarily.

14 There was no job or task described in PTW 9320 for the
15 removal of either the mechanical plug or the inflatable plug.
16 The removal of the plugs by LMCS without express approval
17 by way of permit to work would have constituted a serious
18 breach of Paria's PTW—PTW's procedure and constitute work
19 which was not authorized. The removal of the plugs would
20 have caused a dangerous disturbance of the atmospheric
21 conditions inside the chamber and the differential pressure
22 between inside the pipeline and inside the chamber. This would
23 have allowed the hydrocarbon fumes from the pipeline to enter
24 the chamber which would have contaminated the breathing air
25 in the chamber and would have created a combustible
26 environment and would have created as well a fire hazard.

27 In your witness statement, you say that the removal of the

1 plugs by LMCS opened the differential pressure between the
2 pipeline and the chamber which is likely to have caused a
3 powerful and immediate suction effect which pulled and
4 entrapped the divers inside the pipeline and ultimately caused
5 the deaths of four of them. You were a member of Paria's
6 incident command team and you gave in your witness statement
7 an account of the response of that team to the incident.

8 In your witness statement, you say that at 6.00 p.m., this
9 is on Friday, the 25th of February, 2022 the IMT, that's the
10 incident command team or the incident management team, got
11 information that Christopher Boodram was rescued. The IMT
12 then made a decision that the remaining divers were in the
13 pipeline and the IMT decided that it was critical to ascertain the
14 conditions in the pipeline for any rescue efforts to be safely
15 planned and executed.

16 In your witness statement, you say, that, based on that
17 decision, at 6.10 p.m., the IMT took steps to source cameras to
18 provide internal visuals of the pipeline. You say that it first
19 made efforts to obtain a borescope but this could not be used
20 because the borescope's light intensity was inadequate. In your
21 witness statement you say that the IMT made efforts to obtain a
22 push rod camera which was used at about midnight to conduct
23 an inspection of the pipeline but encountered an obstruction in
24 the horizontal section.

25 You say that at 10.00 p.m. the IMT had a telephone call
26 with Christopher Boodram. He is the survivor. At around
27 10.50 p.m., you say in your witness statement that you made

1 arrangements to obtain a pipeline crawler. That crawler also
2 encountered an obstruction in the horizontal section of the
3 pipeline. You then discussed the works of the IMT and the ICT
4 and you say that during the meetings and discussions of the
5 ICT, several search and rescue options were discussed and you
6 identified four of them.

7 Firstly, open water search. This was immediately after
8 the incident. Secondly, a dive rescue into the pipeline and dry
9 hyperbaric chamber, and you say that this, once the first diver
10 was recovered, and it was therefore known that the divers were
11 in the pipeline. Thirdly, a confined space rescue in the pipeline
12 in a dry environment and you say that seawater had to be
13 pumped out of the line prior to this rescue effort, and finally,
14 fourthly, cutting of the pipeline. You say that, however, neither
15 the coast guard or the expert diving companies or the rescue
16 company which Paria contacted could be persuaded to enter the
17 pipeline to conduct a rescue. You say that, further, the cutting
18 of the pipeline was deemed too inefficient and too risky due to
19 the estimated time it would take to plan and execute the works.

20 Mr. Wei, can you please stay where you are as Mr.
21 Maharaj has several questions for you following any statements
22 from the Commission?

23 **Examination By Mr. Maharaj SC:**

24 Q. Good morning, Mr. Wei. Good morning to you.

25 A. Good morning to you, too, Sir.

26 Q. I just want to ask you some questions. I'm sure you'll be able
27 to assist us, whatever—

1 **Mr. Chairman:** One second. Microphone.

2 **Mr. Maharaj SC:** Sorry.

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. Sorry, I just want to ask you a few questions because I'm sure
5 you'll be able to assist us in the task which the Commissioners
6 have to decide. You said in your witness statement that you
7 were a member of the incident command team of Paria. Could
8 you explain to us what is the duty? What is the duty and
9 functions of that team? Just a summary of it.

10 A. Okay. The incident command team is a team responsible for
11 the management of any major incidents on the site or
12 emergencies. Right? It's headed by the incident commander.
13 And another function—other functional people in the Group
14 would be a logistics coordinator which would have been me,
15 you would have someone for the site, right, and any other
16 supporting that would be required. So it's basically a
17 management team that comes together to manage the incident.

18 Q. Okay. And on the 25th of February, 2022 when this accident
19 occurred, you were a functioning member of that team, am I
20 correct?

21 A. Yes.

22 Q. And according to your witness statement, at about three 3.13
23 p.m. on that date, you first heard of the accident?

24 A. Yes.

25 Q. Yes. Now, I want to deal first with the rescue aspect of your, of
26 your statement, okay? It was mentioned a short while ago that
27 at, um—you got information that Christopher Boodram was

1 rescued, and, am I correct you got that information at around
2 6.00 p.m. on the 25th of February?

3 A. That is correct.

4 Q. Correct. Would I be correct to say that prior to the rescue of
5 Christopher Boodram, the efforts of Paria to rescue was—well,
6 constituted mainly searching in the open waters for the divers?

7 A. Based on the information provided by LMCS, Paria focused on
8 sea and search. Let me explain a little bit. Under the contract,
9 LMCS as our independent contractor, expert contractor, is
10 required to provide an emergency rescue plan and the
11 respective people to execute the emergency plan. This being a
12 job of diving, Paria doesn't have divers, neither the competency
13 with diving in this instance. So that would have relied on the
14 contractor to provide that. At the time of the incident, the
15 information reaching to the IMT was limited, only that it was
16 reported by Mr. Andrew Farah that an incident occurred about
17 2.45.

18 Subsequent to that, he put on his gear and entered the
19 water and about 15 minutes later thereafter he reported that in
20 the chamber there were no divers, though it was dry. That
21 information related back to the IM—there was, there was a
22 report back to the incident command team that an incident
23 occurred in the chamber and Paria, on its own accord, started
24 sea search because that is what we're capable of. We have
25 boats, we have tugs, and we were able to such the open water
26 while LMCS would have been responsible for the execution of
27 their rescue plan within the chamber.

1 Q. Okay. I'll come later to about responsibility. I'm just trying to
2 get the facts from you.

3 A. Yeah.

4 Q. It is therefore correct that prior to the rescue of Christopher
5 Boodram, Paria's rescue efforts were confined to searching the
6 open waters?

7 A. Correct.

8 Q. Correct. And, in fairness to you, contacting some of the
9 agencies like the coast guard and the fire service?

10 A. Yes.

11 Q. Correct? Before you—well, put it this way. I want to ask you,
12 so after, after Paria and the incident command team found out
13 that Christopher Boodram was rescued, according to your
14 statement, you all started to make efforts to get cameras,
15 crawlers, borescope and et cetera to get information of what
16 was in the pipeline, the condition in the pipeline?

17 A. Yes.

18 Q. And, according to your statement, you would have known that
19 Christopher Boodram was rescued, he was taken to the San
20 Fernando hospital, right?

21 A. Yes.

22 Q. And it was not until about 10.00 p.m. that the incident
23 command team had a virtual meeting with him?

24 A. That is correct.

25 Q. Correct. So during the period 6.00 p.m. to 10.00 p.m., um, the
26 efforts that Paria made to assist in rescuing was purely trying to
27 get diving teams to go into the pipeline and getting cameras to

1 see what was in the pipeline?

2 A. Okay. Trying with respect to assisting LMCS with the dive
3 rescue if they had a plan to do that. Right?

4 Q. Could you give us an explanation that you are in the incident
5 command team, divers were missing and you would have got
6 that information at about 3.00 p.m., before Christopher
7 Boodram was rescued, you all were doing rescuing in the open
8 waters, you knew that at six o'clock he was rescued, you
9 continued to try to find out what information you could get
10 from what is inside the pipeline, the condition of the pipeline
11 and not until ten o'clock you decided to talk to Boodram who
12 would have had first-hand information about what was in the
13 pipeline?

14 A. Okay. Let's put it in context. At six o'clock, Mr. Boodram was
15 pulled from the pipeline. Mr. Boodram came out from the
16 pipeline in a condition that the first thing you would try to do
17 was to ensure that his life is safe. Had we not done that,
18 Christopher Boodram may not have been here today. What we
19 did, we did a medical—quick medical check on the guy, on Mr.
20 Boodram. For example, he came up with bodily injuries, he
21 had, I don't know what oil or the throat, it was fully covered in
22 oil and the primary responsibility would have to be ensuring
23 that he is medi—he is properly taken care of before questioning
24 on every—in every, every condition inside the pipeline. Right?

25 Subsequent to that, he was moved to the hospital. At the
26 hospital, because of the, um, restrictions of COVID, we were
27 unable to get to him, to get information from him. I understand

1 from the IMT members a call needed to make within the
2 medical fraternity higher up to get information to at least get a
3 call to him and that was successful at ten o'clock. Additionally,
4 at the time to talk to him was limited. The doctor said, um,
5 you—they wasn't give much time to talk to him.

6 But also too, what you need to understand too is that the
7 information from Boodram is not only verbal. When Mr.
8 Boodram is pulled out from the chamber, there's also non-
9 verbal information that one can get. For example, he was
10 covered in oil. He had injuries, internal injuries, and both, um,
11 disoriented.

12 Q. Mr. Wei, according to the evidence we have so far from the
13 record, did you—did Paria make any effort to have a doctor to
14 meet Mr. Boodram when he was rescued? Was a doctor there?

15 A. I, I don't know.

16 Q. No. Was, was a decompression unit available for him to go in
17 when he was rescued at the sea, at the place of rescue?

18 A. The place of rescue the requirement for—the requirement for
19 any hyperbaric chamber would have been the supply of LMCS.
20 Right? Paria, again, is not in the diving business. Right? But
21 Paria did assist in trying to get a hyperbaric chamber in the
22 event that he required the use of a hyperbaric chamber.

23 Q. So I just want it clear from you, you were taking the position,
24 Paria was taking the position since, in your view, it was LMCS'
25 responsibility, you were not taking steps to have a DMO there?

26 A. Not at all. Paria—

27 Q. Did you make any, did you make any—did you take any steps

1 or any action to have a—

2 A. Specifically for me, I, I did not take any actions to call a DMO.

3 Q. Are you—well you were in the IMT?

4 A. Correct.

5 Q. Did the IMT take any steps?

6 A. I, I would not know.

7 Q. You would not know.

8 A. But we had called in all the other agencies, the fire services,
9 whoever, coast guard. I'm not too sure if we actually called a
10 DMO.

11 Q. Mr. Boodram told us that when he went to the hospital he was
12 conscious, he was talking, he talked to his wife, he talked to the
13 nurses. Would you doubt that?

14 A. No, I don't doubt that.

15 Q. You don't doubt that. Now, if he was in that condition, would
16 you agree with me that the IMT and you would have got
17 important information from him as to what was the condition in
18 the pipeline?

19 A. If he was—if we could have spoken to him, yes.

20 Q. Did you, did you make any effort to find out whether you could
21 have spoken to him?

22 A. Me personally or the IMT?

23 Q. You, you.

24 A. No, I didn't make—

25 Q. No.

26 A. —personal efforts to call him because I don't have his contact
27 numbers. I don't know the numbers for the hospital.

1 Q. But you were in the IMT.

2 A. [*Inaudible*]

3 Q. Correct? Did the I—what, what the IMT did that evening, did
4 you have records of it?

5 A. Yes, there should be records.

6 Q. So there are minutes of—that happened at that meeting?

7 A. There would be—the IMT would log—the IMT logs what, um,
8 not, or um, log, a live log of what's occurring.

9 Q. From what you know, have you seen any record of the IMT
10 making any effort to talk to Mr. Boodram before ten o'clock
11 that evening?

12 A. From what I know, we were attempting to talk to him but we
13 only got through at ten o'clock.

14 Q. So when, you, you—so what, you only got through, what, on
15 the telephone or what, what—

16 A. On the telephone.

17 Q. So when did you attempt to talk to him?

18 A. From as early as possible, I guess. From—

19 Q. Do you know or you assume?

20 A. I assume.

21 Q. You assume.

22 A. Because that would be the natural, that would be the natural
23 response.

24 Q. Well, from six o'clock to ten o'clock, four hours, did you
25 consider it was urgent to be able to get this information
26 because, according to your—

27 A. Yes.

1 Q. —according to your statement, that was important for you all—

2 A. Right.

3 Q. —to make a decision as what—

4 A. Right.

5 Q. —what to do to rescue?

6 A. Right. Personally, I did not go to the hospital but I understood
7 that we sent someone to the hospital in an event to—

8 Q. Who was that?

9 A. I don't recall his name.

10 Q. Do you have a record of the person's name?

11 A. We will have to talk to the HSC lead on the team.

12 Q. Mr. Wei, as a senior officer of Paria, would you not have
13 thought at the time, and a member of the incident command
14 team, would you not have thought at that time that you could
15 have had an official of Paria accompany Mr. Boodram in the
16 ambulance to get vital information that you were looking for
17 from cameras and borescope and et cetera?

18 A. Okay—

19 Q. At the time did you—

20 A. Okay—

21 Q. —did you think of that?

22 A. —the incident command team's structure has different
23 responsibilities for the individuals.

24 Q. I'm sorry?

25 A. The incident command team comprises different members who
26 have different responsibilities. At the time of the incident when
27 Christopher Boodram was retrieved, I would have then started

1 to focus on collect—on getting the, as you said, the cameras
2 and stuff to get the information on the line as part of the
3 logistics case. The part of the, the, um, stabilization and
4 transport of Mr. Boodram would have fallen on another
5 member of the team.

6 Q. Who is that member?

7 A. That would be Randy Archbald.

8 Q. Well, as a member of the incident command team, you're here
9 to help us.

10 A. Yeah.

11 Q. Would you agree that if someone from Paria or a member of the
12 incident command team had accompanied Mr. Boodram, they
13 could have got information from Mr. Boodram of the matters
14 you all were making attempts to get from the cameras and the
15 bore rose scope and et cetera?

16 A. That—no, no, no, no. Mr. Boodram—we would not know the
17 condition of Mr. Boodram or the information or the condition
18 of Mr. Boodram at that time. Right? As I said before, it was
19 trying to stabilize Mr. Boodram. Right? Also too, visual, the
20 visual information from Mr. Boodram, the pipeline is dark, full
21 of oil, Mr. Boodram would not give any visual information.
22 But Paria were making attempts to communicate with Mr.
23 Boodram to understand what information he could provide for
24 the internal of the pipe.

25 Q. Okay. Am I correct in saying that from six o'clock to ten
26 o'clock, and continuing, well let's say from 6,00 to 10.00—

27 A. Yeah.

1 Q. —the purpose, the IMT was trying to get the cameras and to get
2 information to see what was the condition inside the pipeline in
3 order to determine what rescue plan to devise?

4 A. To assist with the rescue plan to devise, yes.

5 Q. Yes. And would you agree with me that Mr. Boodram was
6 inside that pipeline, you would have known then that after he
7 was rescued he was rescued from the pipeline, from inside the
8 pipeline. Am I correct?

9 A. Yes.

10 Q. So the information which the IMT wanted to have was
11 information which Mr. Boodram could have given to you and
12 the IMT, am I correct?

13 A. Yes.

14 Q. Yes.

15 A. And we got that around ten o'clock.

16 Q. Yes. You gave evidence of a conversation the IMT had with
17 Mr. Boodram.

18 A. Yes.

19 Q. And the information you gave in your witness statement is
20 accurate?

21 A. To the best of my recollection, yes.

22 Q. Is accurate. I want to read what you said in your affidavit
23 about—no, no, no, about what—the information he had with
24 Mr. Boodram. The conversation. That conversation is at—I
25 wonder if the witness can be shown his witness statement? At
26 paragraph 106, page one two nine zero. Okay. You found it,
27 Mr. Wei?

1 A. Yes, Sir.

2 Q. You said:

3 “At around 10.00 p.m. the IMT”—and the names there—
4 “were on call with the rescue diver, Christopher
5 Boodram, who provided his recollection of the events
6 within the pipeline. He stated that on his way out of the
7 pipeline he crossed over Blacks, who was already gone,
8 he was assisting Kaz who had a broken leg. He
9 encountered an air pocket. They continued on the way
10 out but lost a diver along the way. He encountered
11 another air pocket and then lost Kaz. He recalled that he
12 felt and counted two pipe welds before he reached the
13 elbow. As he was coming up with Fyzie behind him,
14 Fyzie told him he could not make it and to leave him
15 behind.”

16 Do you, you said this was accurate of the conversation that you
17 had with him? Do you see—

18 A. My recollection of the conversation, yes.

19 Q. **Yes.** Do you see anything here of the—they asking him about
20 the condition in the pipeline, those conditions, what you wanted
21 to know?

22 A. He reported that there was a pocket. Remember I told you that
23 the time was limited and he wanted to recount with respect to
24 what conditions in the pipeline, the people in the pipeline and,
25 yes, he provided some information on the condition of the line.

26 Q. But you wanted to know about the air pocket or you wanted to
27 know whether there was any obstruction? In other words, you

1 wanted to know—the IMT wanted to know whether someone
2 could have gone into the pipeline to rescue the divers, so you
3 wanted to know what was preventing, if anything was
4 preventing persons to go into the pipeline?

5 A. This communication was to establish who would have been
6 alive in the pipeline and what else was in the pipeline.

7 Q. The question I'm asking you is that would you agree with me
8 that you could have got information from Mr. Boodram as to
9 whether, on his way out of the pipeline, there was any
10 obstruction to prevent any diver from going into the pipeline to
11 rescue the men?

12 A. Repeat the question, please?

13 Q. Would you agree with me that the information you could have
14 got from Mr. Boodram was to find out whether there was any
15 obstruction in the pipeline to prevent any divers from going into
16 the pipeline to rescue the men?

17 A. I, I would say no. Because I would—

18 Q. You would say no?

19 A. —I would not know what Boodram would have said or what he
20 would have encountered.

21 Q. But, but were you interested to find out as a member of the
22 incident command team?

23 A. Of course. That's why we got in touch with him.

24 Q. But if you were interested to find out, you had Mr. Boodram
25 who could have given you first-hand information, the best
26 evidence, and you spent hours trying to get cameras to go in to
27 find out what you could have got from Mr. Boodram.

1 A. Okay, remember I mentioned to you when we finally got
2 through to Mr. Boodram, Mr. Boodram started to recount the
3 events, the persons that's inside, and then we were informed by
4 the person on the other side that he cannot speak much longer.

5 Q. But would you agree with me that you did not take any steps,
6 you or the IMT, did not take any steps—

7 A. I disagree with you.

8 Q. —to interview Mr. Boodram before ten o'clock?

9 A. I disagree with you.

10 Q. What steps you took?

11 A. We said—I earlier said that we had someone from the HSC
12 team—

13 Q. But you cannot tell us who is that person. Did that person
14 report to the IMT?

15 A. That person reported to—into the HSC team who would, would
16 have provided that information.

17 Q. Mr. Wei, as a member of the IMT, were you interested in taking
18 steps to rescue Mr. Boodram?

19 A. Of course.

20 Q. According to your statement, it was important for the IMT to
21 make a decision to rescue, to find out what was the condition in
22 the pipeline in order to determine what action it will take
23 because, according to your statement, Mr. Wei, there were
24 several divers that you all contacted and contacted for the
25 purpose of going into the pipeline. Am I not correct?

26 A. Yes.

27 Q. Right. So, here it is you have a man who just came out of the

1 pipeline, he could give you all that information. Right? Why it
2 is, why it is that—I haven't seen any evidence that Paria or the
3 IMT got someone to go with him to the hospital to get
4 information whilst he was at the hospital to get information?
5 I'm saying all this thing to under—for you to understand my
6 question. Could you assist us—

7 **Mr. Mootoo:** Mr. Chairman, if I may object, I'm sorry, but
8 this is in order to assist. Mr. Ramesh Lawrence Maharaj just
9 said he hasn't seen any evidence that anyone from Paria was
10 there. At least that's what I understand him to be saying.
11 Perhaps he might want to consider, before pursuing the
12 question, considering the statement of Mr. Paul Yearwood and
13 paragraph 33 of that statement. I don't want to identify what
14 that evidence is at this stage because the witness is giving
15 evidence.

16 **Mr. Maharaj SC:** Paul Yearwood at paragraph 33 says.

17 **Mr. Mootoo:** And, of course, um, I understand that witness
18 statements from Kenson are yet to come.

19 **Mr. Maharaj SC:** Yes. Yes, at paragraph 33, at paragraph 33
20 it said of Mr. Paul Yearwood's statement, it says that at the
21 time he indicated he was in the San Fernan—at 9.53 p.m. he
22 indicated he was at the San—that Mr. Sham Balkissoon said
23 that he was in the San Fernando General Hospital with Mr.
24 Boodram. A person who identified himself as Boodram was
25 put on the line and spoke to Mr. Mushtaq Mohammed. What
26 I'm saying, I'm not disputing that someone spoke to him. What
27 I'm disputing, I have not seen any evidence so far that anyone

1 tried to find out from Mr. Boodram what was the condition of
2 the pipeline in—when he came out.

3 **Mr. Chairman:** Yes. I, I think, er, if the purpose of your
4 question is to try and establish what was said, as opposed to
5 when it was said, then I think you need to make that clear.

6 **Mr. Maharaj SC:** Yes.

7 **Mr. Chairman:** If you're suggesting that it was—that there
8 was no effort, as I understand you to be suggesting, there was
9 no effort made to contact Mr. Boodram at all for the better part
10 of four hours, then I think that's already been answered. He's
11 made it clear that he says there were efforts being made.
12 Whether that's borne out we'll see.

13 **Mr. Maharaj SC:** Yes.

14 **Mr. Chairman:** But, for the moment, that's what his evidence
15 is.

16 **Mr. Maharaj SC:** Yes.

17 **Mr. Chairman:** I think we don't need to pursue that any
18 further, but if you're looking to establish precisely what is said,
19 that is a different matter.

20 **Mr. Maharaj SC:** Yes.

21 **Mr. Chairman:** And I shall certainly, for my part, be
22 interested in what it was that he said.

23 **Continued Examination By Mr. Maharaj SC:**

24 Q. Mr. Wei—

25 **Mr. Chairman:** I think it might be particularly useful—
26 forgive me. I think what might be particularly useful is to know
27 whether anyone wrote any of this down.

1 **Mr. Maharaj SC:** Yes.

2 **Continued Examination By Mr. Maharaj SC:**

3 Q. In respect of what this—in respect of Mr. Sham Balkissoon's
4 conversation allegedly made with Mr. Christopher Boodram, do
5 you know whether that was written down,— that there was any
6 written record of that?

7 A. I, I wouldn't know because that would be Sham, Sham
8 Balkissoon, I would not have, um, interfaced with Sham
9 directly.

10 Q. But you would agree with me that Mr. Boodram could have
11 given you information as to whether there was any obstruction
12 in the pipeline to prevent any rescue being done?

13 A. Mr. Boodram provided that information physically that there
14 was oil in the line. He provided information there was as an air
15 pocket. He provided information that the men were in the line,
16 right? He provided in—and the rest would have been deduced
17 from that the divers would have had their tanks off of them and
18 everything. The chamber information from Farah reflected that
19 the chamber was empty, meaning that all the tools and the gear
20 was inside.

21 Q. Based on what you have told me, Mr. Boodram did not say that
22 there was any obstruction in the pipeline to prevent a diver from
23 going into the pipeline?

24 A. Based on from my statement here, it did not state that.

25 Q. No.

26 **Examination By Mr. Chairman:**

27 Q. May I ask, just so that I understand it, did you keep a

1 contemporaneous note of what he was telling you?

2 A. No.

3 Q. Did anyone, as far as you know, keep a contemporaneous note
4 of what he was saying at ten o'clock?

5 A. That would have been recorded by the IMT.

6 Q. Well, do you know that that was recorded by the IMT in a
7 separate note?

8 A. Yes.

9 Q. Well somebody had it. Thank you.

10 A. I don't, I don't know if it was submitted here.

11 Q. But let me be clear. I don't claim to have read every single
12 piece of paper in the 20,000 that's been provided and it may be
13 that someone can enlighten us in due course as to whether there
14 was such a separate note kept or whether it was recorded in the
15 IMT and I look forward to seeing it if it was, all right? But you,
16 at any rate, did not keep a note?

17 A. Yes, specific for me I did not—

18 Q. No.

19 A. —keep a note.

20 Q. And just to that end, did you, when you made your statement,
21 which I think you made on the 16th of August of this year, so
22 many months after the event, did you have the IMT notes with
23 you when you made that statement?

24 A. A time for getting a specific time, maybe yes.

25 Q. Say that again please?

26 A. The note basically would have taken when I needed a specific
27 time.

1 Q. Right.

2 A. So I put the time based upon what time would have been—

3 Q. So you would have used those notes, such as they might have
4 been, to assist you in recording the sequence of events and the
5 times? Is that—would that be fair?

6 A. In a way, yes.

7 Q. Than you. Thank you very much.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. And in your witness statement you would have, you would
10 have, you would have put in your witness statement all the
11 matters you considered important relating to the rescue of Mr.
12 Boodram?

13 A. Yes.

14 Q. Yes. Now at paragraph 102 of your witness statement, after
15 you—after it was found out that Mr. Boodram was rescued
16 within the pipeline, you stated at paragraph 102:

17 “Having heard that Mr. Boodram said that the remaining
18 divers were trapped in the pipeline, it was critical for the
19 IMT to ascertain the conditions within the pipeline for
20 any rescue effort to be properly planned and safely
21 executed.”

22 That is correct?

23 A. Yeah.

24 Q. And then what the IMT did was that at paragraph 107, at
25 around 10.50 p.m., a company was contacted to provide a
26 crawler with a camera, correct?

27 A. Yes.

1 Q. And what, what was that purpose? What that was to achieve?

2 A. To enter in the pipeline—

3 Q. Uh-huh.

4 A. —to establish—to identify the conditions inside the pipeline.

5 Q. Well, to identify whether there is any obstruction, because at
6 paragraph 107 you said, um:

7 “I contacted HHSL Systems Limited for the mobilization
8 of a pipeline crawler with camera. HHSL reported that
9 within the riser of berth number 6 they were able to
10 descend the riser unobstructed. On the horizontal scuba-
11 tank was obstructing the pipeline crawler from going
12 further.”

13 Correct?

14 A. Yes.

15 Q. So, would I be correct in saying that the IMT wanted to know,
16 through the crawler and the borescope, whether there was any
17 obstruction in the pipeline?

18 A. Yes.

19 Q. Yes. And the attempts were made by the IMT throughout that
20 night until, um, until, well, until 3.00 p.m. the next morning in
21 trying to get the crawler and getting the footage in order to
22 determine whether there was any obstruction in the pipeline?

23 A. Not only obstruction but the conditions inside the pipeline.

24 Q. What conditions, apart from obstruction?

25 A. Additional risk that is in the pipeline.

26 Q. Like what?

27 A. We were unaware of what caused the incident. Right? At this

1 time we know it was a Delta P incident. However, we did not
2 know if the incident created—would have created any
3 secondary, secondary condition which another Delta P incident
4 could have occurred—

5 Q. Another Delta P?

6 A. Yes—or another Delta P incident could have occurred or what
7 could disrupt the conditions in the line that would have, that
8 would have affected the air pockets.

9 Q. So, so, you formed an opinion or the IMT formed an opinion
10 there could be another Delta P?

11 A. There was—you would have—at this stage here we do not
12 know so we have to, we have to consider different scenarios.

13 Q. So the crawler photograph would have assisted you to find out
14 whether another Delta P would have occurred?

15 A. It would provide information that could have answered the
16 questions or provide clarity on where, where it was, where the
17 items were—

18 Q. Could you assist us? How would that have been able to assist,
19 assist to determine how, a—if a Del—another Delta P could
20 have occurred?

21 A. The camera would have been able to go into the line, if it was
22 able to go in freely to a hundred, to around I think it was about
23 600 plus feet the camera could have gone in. It would have
24 established the, the conditions inside the line because at that
25 stage we understood that the plug, the plug was removed, was
26 attempted to be removed and it could have been stuck
27 somewhere in the line, we don't know where, you don't know,

1 berth 5 was closed, the pressures are different. So the
2 conditions, we were unaware of the conditions, and the crawler
3 would allow you to see, allow you to pick up information.

4 Q. Well—

5 **Examination By Mr. Chairman:**

6 Q. Just a moment. I understand that. Of course, um, any camera
7 equipment into the pipe would give you information. But you
8 haven't really answered the question that Mr. Maharaj was
9 asking which was, how would that crawler help you identify if
10 there was a possibility of a second Delta P?

11 A. Okay. It could establish if the plug was deflated or infla—or
12 still inflated. Had it been inflated, you could have had a
13 different pressure on the berth 5 side and the berth 6 side. If it
14 was deflated, it would have said that then the pressures on both
15 sides would be equal and you can do a different strategy for
16 options. The plug itself would have created—if it blocked the
17 line one side would have a different pressure and the next side
18 would have a different pressure.

19 Q. Yes. I follow that. But, of all things that were in that pipeline,
20 the first thing that got sucked in, if it got sucked in, would have
21 been the plug?

22 A. Yes.

23 Q. So that would be the furthest thing away from all the other
24 things that were in the pipe, right?

25 A. Yes.

26 Q. So, by now you knew that the men were in the pipeline?

27 A. Correct.

1 Q. You presumably assumed, if not known, that the tanks were in
2 the pipeline?

3 A. Yes.

4 Q. And any other equipment that might have been in that
5 hyperbaric chamber, yes?

6 A. Yes.

7 Q. So how was your crawler going to go past all of those things to
8 a plug that would have been the furthest thing away, and how
9 would that have assisted you in knowing whether there was the
10 possibility of a second Delta P by identifying the plug was
11 inflated or not? How, how would, how would it be possible?

12 A. Because we don't know.

13 Q. Who is we don't know?

14 A. We, the team.

15 Q. Don't know what?

16 A. The conditions inside the pipeline.

17 Q. No, no, no, we've already—

18 A. The location.

19 Q. I don't want to go over that. Mr. Maharaj is doing that. I just
20 need to understand. Forgive me, Mr. Wei, I don't understand.
21 The question that was asked of you was whether or not this
22 particular piece of equipment, which I'm assuming has a
23 camera on the end of it—

24 A. Yeah.

25 Q. —is able to identify whether there was a possibility of a
26 secondary Delta P and your answer to that was, well, we would
27 want to look at the plug, whether it was inflated or deflated, and

1 I get that.

2 A. Right.

3 Q. I just don't understand how you could have got to the plug
4 without getting to the people first.

5 A. And that is why we would have gone from berth 5 late in the
6 night.

7 Q. Why you would have what, sorry?

8 A. That's why the camera would have come in from berth 5,
9 attempt to go in from berth 5, from the other side, inspect—

10 Q. Is that what happened?

11 A. The intention was to establish the condition inside the line.
12 You had access from berth 6 and you had access from berth 5.

13 Q. No, I follow that. So when you sent in the camera, this
14 crawler—

15 A. Right.

16 Q. —which end did it go in?

17 A. It went in on the berth 6 first.

18 Q. Right.

19 A. Because at that time—

20 Q. Did it go—

21 A. —that was the accessible area.

22 Q. Sorry.

23 A. At that time that was the accessible area.

24 Q. Yeah. Um, there came a time, didn't there, when you opened
25 the seal at the other end?

26 A. Yes.

27 Q. Yeah. Had there been a Delta P differential between the

1 pressure, one side of that seal and a different pressure on the
2 other side of the seal, if you opened that cap, would that have
3 caused a problem?

4 A. That could have caused a problem.

5 Q. Yes, so that was a risk as well?

6 A. Correct.

7 Q. Of course, the men were still in the pipe when you were
8 sending in this crawler?

9 A. Right. So, let me just step back a bit—

10 Q. Well no, no, no just before you go on—

11 A. —so I could answer that question—

12 Q. No—well, you have. You told me so they were still in the other
13 side, so I just want to—I need to be clear about this because I
14 think it's quite important. If you sent the camera at the other
15 end which you told me you did, when was that?

16 A. That would have, um—you have to refer to my statement.

17 Q. Please do? It's there for your use.

18 A. Yes.

19 Q. Perhaps someone can guide you as to which paragraph that
20 might be in.

21 A. [*Perusing document*] One oh eight.

22 “HHSL was subsequently instructed to relocate to berth 5
23 riser to conduct a pipeline internal inspection.”

24 Q. Right.

25 A. “HHSL reported that oil was encountered at the bottom
26 of the riser which covered the crawler and camera so they
27 could not continue.”

1 Q. What time was that, please?

2 A. That was—that would have been somewhere around five
3 o'clock in the morning.

4 Q. Five in the morning?

5 A. If I, if I recall. Um—

6 Q. Well, I don't want you to guess. If you can't recall now—

7 A. No, it would have been after, after the inspection at 6 and then
8 we went on to 5, so it would be somewhere around five o'clock.

9 Q. Five o'clock in the morning?

10 A. On the Saturday.

11 Q. On Saturday morning?

12 A. Yeah.

13 Q. All right. Yes. The, er—so that I understand as well, the—
14 when that was done, and the crawler sent in, what you came
15 across was oil?

16 A. Correct.

17 Q. And you couldn't see—

18 A. At the bottom of the pipe.

19 Q. Yes. And couldn't see anything?

20 A. Correct.

21 Q. And so that was abandoned presumably?

22 A. That was abandoned but it did provide information.

23 Q. Well, provided the information there was oil at the bottom of
24 the pipe?

25 A. And that the plug was—

26 Q. Uh-huh—

27 A. —was, um, sealing the line.

1 Q. Was what?

2 A. And the plug was sealing the line.

3 Q. Sealing the line?

4 A. Because one level on six was full of water.

5 Q. Right.

6 A. And on 5, was just oil at the bottom of the line.

7 Q. Right. Okay. Thank you very much.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. But Mr. Wei, are you aware that around 10.00 p.m. the topside
10 riser was above water?

11 A. The topside riser at 10.00 p.m. was above water.

12 Q. At berth 6?

13 A. Yes.

14 Q. That was above water?

15 A. Correct.

16 Q. So the camera went in above—from above water?

17 A. At six?

18 Q. Yes.

19 A. Yes.

20 Q. So both sides of the riser were above water?

21 A. Both sides of the riser?

22 Q. Were above water, at, at around 10.00 p.m.?

23 A. Both—explain that. I not seeing what you're talking about.

24 Q. Both risers were above water?

25 A. Above water, sea level?

26 Q. Yes.

27 A. Right, yes.

1 Q. Yes.

2 A. I am talking about the level inside the pipeline. Sorry, if I
3 didn't make myself clear, the level of water in berth 6 was
4 higher than the level of oil at berth 5.

5 Q. At ten o'clock in—at ten o'clock? How, how do you know
6 that?

7 A. At 1.00? Okay. Well I have to make an assumption here.

8 Q. You make an assumption?

9 A. That, that nothing occurred and that the plug did not move
10 between ten to five o'clock in the morning.

11 Q. Do you consider yourself an expert in Delta P?

12 A. No.

13 Q. Do you consider an ex—someone sufficient to give an opinion
14 on Delta P?

15 A. In this instance here with the, with the, um, with the U-tube?

16 Q. So you consider yourself sufficiently experienced and have the
17 expertise to give an opinion on Delta P?

18 A. On that issue with the, with the plug stuck in the line?

19 Q. Yeah. All right, Let's go on. So around—at some time during
20 the evening of the 25th of February—

21 A. Right.

22 Q. —you ascertained that there was an obstruction with a tank
23 inside the pipeline?

24 A. Yes.

25 Q. And were you—

26 A. No. At what time?

27 Q. I'm asking you, at some time?

1 A. At some time in the night we sent the camera down.

2 Q. Yes.

3 A. And the camera was obstructed from going further into the line
4 by a tank.

5 Q. By a scuba-tank?

6 A. Right.

7 Q. Obstructed by a tank?

8 A. The camera was obstructed by the tank.

9 Q. By a tank?

10 A. And it wasn't able to move the tank to go in further.

11 Q. Okay. Were you interested then to find out whether,
12 notwithstanding that obstruction, a diver could have gone into
13 the tank, um, sorry, could have gone into the pipeline to effect a
14 rescue?

15 A. Okay. To, to, to—for a diver to enter the rescue, a proper risk
16 assessment should be conducted before you send someone into
17 the line. Meaning that you need to know the conditions inside
18 the line, you need to know if there's obstructions, if there's
19 hazards, what hazards are in the line. Right? To send someone
20 inside that line without knowing that would be, would be
21 reckless.

22 Q. Okay. So, at some time in the night you all—you found out
23 that there was an obstruction with a tank?

24 A. We found out that there was a tank and around the elbow.

25 Q. Did you all do a risk assessment?

26 A. We did not have all the information to do a risk assessment.

27 Q. What information you want, more cameras to go inside?

1 A. We did not know the quantity of oil inside the line, we didn't
2 know the distance the divers are inside—

3 Q. So—

4 A. —if you wanted to send a diver down inside you needed to
5 know a lot more information. Right? Because then you put the
6 diver's life at risk.

7 Q. So this risk assessment would have taken a long time?

8 A. The risk assessment, it—

9 Q. The risk assessment took a long time, not so?

10 A. No, I don't—there was no risk assessment.

11 Q. Because, according to your evidence, several efforts were made
12 and crawlers went, borescope went?

13 A. Right, so—

14 Q. And at the—

15 A. So, so—

16 Q. And at the end of the risk assessment—

17 A. Let's step it back a bit because you're, you're going way ahead
18 and you're carrying the conversation away from what really
19 happened. At the time of the incident, LMCS were responsible
20 for executing the emergency rescue plan. They had lost their
21 standby divers and had no one to rescue anybody. Paria is
22 assisting because Paria is not equipped with rescue equipment
23 for diving, so with respect to the supply of boats and barges and
24 calling around for expert advice, stuff like that, Paria is
25 assisting that, so that LMCS—

26 Q. Mr., Mr. Wei—

27 A. —so LMCS can make a proper call with respect to not putting

1 people's lives at risk on retrieval of anybody.

2 Q. Okay.

3 Q. Putting someone inside that line without knowing the
4 conditions in the line is wanton recklessness.

5 Q. So, according to you—tell me, according to you then, that the
6 risk assessment would have necessitated getting full visual of
7 what was in the line?

8 A. Not for the full visual. You can get a risk assessment for a
9 certain section and that could provide information and you
10 could progress further. I'm not saying that can't be an option.

11 Q. So at the—

12 A. Unless you have information to make that first entry safely,
13 then it would be reckless.

14 Q. Okay. Could you assist us to tell us what time you finished,
15 well, Paria or IMT, complete their risk assessment to make a
16 decision whether they would go into the pipeline?

17 A. At that time LMCS were the ones responsible for coming up
18 with the risk assessment.

19 Q. We will deal with responsibility at some other time. What I'm
20 asking you, Paria was making efforts for diving teams to
21 establish—

22 A. For the option or diving into the line, yes.

23 Q. And according to your statement, they were making efforts to
24 have a rescue attempted, am I correct?

25 A. Correct.

26 Q. So all that I'm asking you, what time Paria made the risk
27 assessment that they could not go into the pipeline?

1 A. The risk assess—

2 Q. When?

3 A. The advice given from, from different divers, commercial
4 divers, were not advising that it was safe enough to enter the
5 line.

6 Q. Right.

7 A. At that stage, yeah—

8 **Examination By Mr. Chairman:**

9 Q. So, no, I'm sorry that's not an answer. I'm sorry, that's not an
10 answer to the question. It is important, yes. Did you ever make
11 an assessment of risk that it was too risky to enter into the
12 pipeline?

13 A. Okay. The advice given by the people that we spoke to, the
14 expert divers, advised that it was too risky to enter the line.

15 Q. Right, is that a yes, then?

16 A. So that first—so the first—

17 Q. Is that a yes?

18 A. So the first—yes, that's yes.

19 Q. Thank you.

20 A. The first part of the assessment was advice from experts.

21 **Continued Examination By Mr. Maharaj SC:**

22 Q. So you adopted what the diving team told—the various diving
23 teams told you?

24 A. We were guided by that.

25 Q. You were guided by that. And, around what day and what time
26 that was made, that decision was made?

27 A. Decision to?

1 Q. Decision not to send a diver into the pipeline to do the rescue.

2 A. Sometime in the af—after Christopher Boodram was rescued a
3 de—a decision was made not to enter the pipeline unless we
4 have more information to ascertain the condition in the line and
5 ascertain that the risks were acceptable to send someone into
6 the pipeline.

7 Q. I agree that is what you said but I'm asking you, at what day
8 and time you made the decision to send someone in the
9 pipeline?

10 **Mr. Chairman:** I'm not sure that's an entirely fair question
11 because I'm assuming, from what the witness has already said,
12 that they were constantly reviewing whether it was possible to
13 put anyone in the line.

14 **Mr. Maharaj SC:** Yes.

15 **Examination By Mr. Chairman:**

16 Q. And what as I understand what you're saying, Mr. Wei, is that
17 that review was an ongoing process which ultimately you
18 decided it was too risky to send anybody in the line.

19 A. Because we were advised by expert divers—

20 Q. Yeah, I understand that, but, I mean, I'm—we're not interested
21 for the moment in how you arrived at that decision, but you did
22 arrive at the decision that at no point in time were you given
23 sufficient information to allow you to say it was a risk worth
24 taking. That's what it comes to, isn't it?

25 A. Correct.

26 Q. Thank you. And it was an ongoing thing is what you're telling
27 us?

1 A. Right.

2 Q. The first minute Mr. Boodram comes out the line it obviously
3 was a very high risk to consider it. Hours later, days later, is a
4 different question because you'd had more information. That's
5 as I understand it?

6 A. Correct.

7 Q. And there never came a point in time when you, I don't mean
8 you personally, I mean the IMT, ever—were ever able to arrive
9 at a point where you thought the risk was worth taking. That's
10 what you're saying, as I understand it?

11 A. Yes.

12 **Mr. Chairman:** Right.

13 **Mr. Maharaj SC:** I'm much obliged, Mr. Chairman.

14 **Continued Examination By Mr. Maharaj SC:**

15 Q. Now, you would have, apart from Mr. Christopher Boodram
16 who had been in the pipeline, were you aware that Mr. Michael
17 Kurban had gone into the pipeline after Mr. Boodram was
18 rescued?

19 A. There were reports, alleged reports. We cannot confirm that he
20 entered the pipeline.

21 Q. Did you have reports that he entered the pipeline and he went
22 through on the vertical section and the horizontal section?

23 A. No confirmed reports. That's alleged. That's what he says.

24 Q. Well, if you were interested in getting information about the
25 condition in the pipeline, did you make efforts to contact Mr.
26 Boodram to see whether you could get information from—
27 sorry, Mr. Kurban, much obliged, Mr. Chairman—Mr. Kurban?

1 A. I did not personally make any communication with Mr. Kurban.

2 Q. Do you know whether the IMT made any decision to contact
3 him?

4 A. I don't know.

5 Q. Do you know whether the IMT made any efforts to contact him
6 to get information about the conditions in the pipeline from
7 him?

8 A. I don't know and I don't know if it would have been reliable.

9 **Examination By Mr. Chairman:**

10 Q. Sorry, I didn't catch your answer. I don't know if what?

11 A. We don't know if he entered the pipeline. We don't know
12 the—

13 Q. Well I think what Mr. Maharaj is asking is, did you ask him?

14 A. It was there in the—it was there in the, um, clips on what he
15 did. But all that is—

16 Q. Sorry, I'm not following.

17 A. We did not ask Mr.—I personally did not ask Mr. Boodram. If
18 I know the IMT asked Mr. Boodram, I do not know.

19 **Examination By Commissioner Wilson:**

20 Q. But Mr. Wei, I think earlier did you indicate that Paria had
21 officials at the site? Were those officials part of the IMT
22 construct in terms of an onsite commander or anybody relaying
23 information back to the IMT?

24 A. Yes, we would have someone on the berth itself who would
25 report back in to the IMT.

26 **Continued Examination By Mr. Maharaj SC:**

27 Q. Mr. Wei, it's correct, though, that you knew that divers from

1 LMCS were prevented from going into the pipeline to attempt a
2 rescue?

3 A. Were advised.

4 Q. Sorry?

5 A. Paria would have advised divers that it's unsafe to enter.

6 Q. Did Paria take steps to prevent divers from going into the
7 pipeline.

8 A. Elaborate on the word "prevent"?

9 **Mr. Chairman:** Do you really need advice on the word
10 "prevent"?

11 **Mr. Wei:** Yes.

12 **Mr. Chairman:** All right.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. Did—

15 A. Okay, let me explain. Prevent could either mean don't go,
16 prevent could mean, as is alluded in the newspaper, with coast
17 guard preventing. Paria did not prevent people from entering
18 the pipeline. Had they, had they done that, there would not
19 have been the continued divers diving without—past Paria's
20 request to not continue diving because it was unsafe.

21 Q. After Michael Kurban dived in the pipeline and came out—

22 A. Yes.

23 Q. —are you aware of any other diver who went into that pipeline?

24 A. We would be aware of divers entering the hyperbaric chamber.

25 Q. I'm not asking about the hyperbaric chamber. Entering the
26 pipeline.

27 A. You can't see.

1 Q. You can't see?

2 A. You can't see. The hyperbaric chamber—

3 Q. You are giving evidence on oath. I'm asking you a question.
4 Are you aware that Paria instructed the coast guard not to allow
5 persons to dive into the pipeline?

6 A. Paria advised coast guard to in—to take control of the site
7 because it was getting unru—when I say, what is the word to
8 use, I mean, it's uncontrollable.

9 Q. The question is—I want your answer. Are you aware that Paria
10 instructed the coast guard to prevent persons from diving into
11 the pipeline?

12 A. Paria requested a the coast guard to assist.

13 **Mr. Chairman:** Assist what?

14 **Mr. Wei:** To, to assist people from not entering the pipeline
15 but not prevent them.

16 **Mr. Chairman:** It's a little bit semantic, isn't it?

17 **Mr. Wei:** No.

18 **Continued Examination By Mr. Maharaj SC:**

19 Q. I want you to read to you paragraph 109. Mr. Collin Piper is
20 the incident commander, not so?

21 A. Yes.

22 Q. And I want to read a paragraph of his witness statement and I
23 want you to tell me whether you agree with it. It's paragraph
24 109 of Mr. Collin Piper's statement 1365.

25 "After discussions between myself and the general
26 manager about apparently volatile situation developing at
27 the scene, he and I agreed that the TTCG should take

1 control of the site, safeguard Paria/Kenson personnel and
2 take control of the ongoing rescue operations. This
3 would include preventing the LMCS divers from entering
4 the pipeline. Mushtaq therefore made this request of the
5 TTCG in my presence.”

6 Would you agree with that?

7 A. That—Collin Piper asked the coast guard, which is—after
8 discussion between myself and the General Manager about the
9 apparently volatile situation developing at the scene, he and I
10 agreed that the Trinidad and Tobago Coast Guard should take
11 control of the site, safeguard Paria’s/Kenson personnel and take
12 control of ongoing rescue operations. This would, this would
13 include preventing the LMCS divers from entering the pipeline.
14 Right. This is Paria making a request to the coast guard to take
15 control of the site.

16 Q. And?

17 A. And, and prevent divers from entering the pipeline. That was a
18 request.

19 Q. Yes. Do you agree with that statement?

20 A. That’s what—I agree that was a request to the coast guard.

21 Q. Do you agree with the statement Mr. Collin Piper made there
22 that you’re reading?

23 A. Well I, I’m not too sure exactly what Collin Piper would have
24 read but I, I would say I agree with the intent.

25 Q. Okay. Mr. Wei, were you aware that there were divers
26 prepared to go into that pipeline to rescue the men during the
27 time you and Paria officials were looking for video and

1 borescope and crawler?

2 A. I knew there were divers on the site who could have been
3 available to dive.

4 Q. Into the pipeline?

5 A. Whether it was into the pipeline once it was safe to do so.

6 Q. No, but you know that they were willing to dive even without
7 having a risk assessment done?

8 A. Yes.

9 Q. By Paria?

10 A. Correct.

11 Q. Correct. Did you have any discussions with them?

12 A. No. I did not have any discussions with the divers.

13 Q. In order to determine whether it was safe, whether they—well
14 whether what they told you would have been considered to
15 determine whether it was safe for them to go in?

16 A. Neither that they communicate to the IMT.

17 Q. Sorry?

18 A. Neither that they communicate to the IMT.

19 Q. Oh, they didn't communicate with the IMT.

20 **Mr. Maharaj SC:** I wanted now to go to the scope of works. I
21 do not know whether you consider this might be—

22 **Mr. Chairman:** I think I will.

23 **Examination By Mr. Chairman:**

24 Q. Can I just ask one more question?

25 A. Sure.

26 Q. Before Mr. Maharaj—well, before he have lunch, I think, but,
27 um, were you aware that those who were missing were related

1 to divers who were on the surface and who had worked or were
2 working with LMCS?

3 A. Yes, they were.

4 Q. The father, for example, of one—

5 A. Well the fa—yes—

6 Q. Um, a cousin—

7 A. —the senior.

8 Q. —or I think a brother of another, were you aware of that?

9 A. Yes.

10 Q. Yes. And perhaps relatives would be more likely to take risks
11 to retrieve their own relatives than a stranger?

12 A. Yeah.

13 Q. Did that factor in to the risk assessment that you said you were
14 making? Did it factor in?

15 A. Yes.

16 Q. It did? All right. Well, thank you very much.

17 **Mr. Chairman:** I think what we'll do is we'll take an early
18 lunch today, come back at shall we say 10 to 2.00 with a view
19 to dealing with the first part of this. Thank you very much
20 indeed. Can I say this? I would like to try in every which way
21 we can to ensure that Mr. Wei does not have to return at some
22 stage on the 5th of December. It would be unfair on him and I
23 think we should do whatever we need to do—if that means
24 sitting on, we will sit on until we've concluded your evidence,
25 Mr. Wei, so that you can go and not have to worry about not
26 discussing it with others and so on all right? Especially since
27 we've got such a long break between now and when we sit

1 again. All right?

2 So it may mean that you'll sit longer than you might have
3 been told that it was going to finish at 3.30. It might be a bit
4 longer but I think everyone would be happier if we got it all
5 done with today.

6 **Mr. Wei:** Not a problem at all.

7 **Mr. Chairman:** All right, thank you very much. We'll come
8 back then at five to 2.00 please? We'll call it five to 2.00.

9 **12.52 p.m.:** *Enquiry suspended.*

10 **1.55 p.m.:** *Enquiry resumed.*

11 **Mr. Chairman:** Good afternoon. Yes, Mr. Maharaj.

12 **Mr. Maharaj SC:** Much obliged, Mr. Chairman. Mr.
13 Chairman, before I continue with the second aspect of my
14 questioning, I forgot to put about four paragraphs to the
15 witness. If you'll permit me to do that—

16 **Mr. Chairman:** Of course.

17 **Mr. Maharaj SC:**—just to get his answers?

18 **Continued Examination By Mr. Maharaj SC:**

19 Q. Mr. Wei—

20 **Mr. Chairman:** “Way”.

21 Q. “Way”, sorry. I'm sorry, Mr. Wei.

22 A. No, it's okay, Mr. Wei.

23 Q. Can the witness have the witness statement? It's at page 1290
24 of the witness bundle.

25 A. Thank you. [*Document handed to Mr. Wei*]

26 Q. At paragraph 109 you said:

27 “From around 3.00 a.m. I started communication with

1 Ravie Seepersad of Inland and Offshore Contractors
2 Limited for delivery of two pumps with an estimated
3 time of arrival on site at 7.00 a.m.”

4 Now, what was the purpose for those pumps? Because it was
5 certainly not something that was urgent because it was a
6 conversation from round 3.00 a.m. for the pump to arrive at
7 7.00 a.m. What was the purpose for those pumps?

8 A. Okay. At that time, we were exploring other options which
9 could have been one of pumping down the line for dry rescue.
10 And your question about why wasn't it urgent, I don't
11 understand the question when you said—

12 Q. No I said that it obviously was not urgent because it was for
13 7.00 a.m. the next morning.

14 A. I don't understand how “Why”.

15 Q. If it was urgent, you would have asked for the pumps to come
16 earlier?

17 A. Okay. So—

18 Q. You were making the call from round 3.00 a.m.?

19 A. Yes but logistically, seven o'clock would have been a very
20 optimistic time for that pump to arrive.

21 Q. Okay.

22 A. These pumps are not like a water house pump that you could
23 put in the back of the car and drive.

24 Q. But did you make attempts to get the pump urgently?

25 A. Yes. And that is why at three o'clock in the morning I was
26 calling Ravie Seepersad.

27 Q. So you are saying that the pumps were for the rescue operation?

1 A. Correct.

2 Q. Okay. Look at the next—at paragraph 112.

3 “However the Eastern divers rescue team, who had
4 arrived earlier and were asked to develop a rescue plan,
5 advised that realistic this was no longer a rescue and they
6 would not attempt a confined space entry for the recovery
7 of the deceased persons.”

8 So Eastern was telling you that it was no longer a rescue as far
9 as they were concerned, it’s recovery of the deceased persons?

10 A. That was the opinion of the Eastern divers rescue team.

11 Q. All right. Were the pumps ordered the day before for a
12 recovery operation or a rescue operation?

13 A. A rescue operation.

14 Q. Let’s go. Then, at paragraph 113:

15 “Despite the IMT efforts the TTCG, Hull Support
16 Services Limited, Mitchells divers and OTSL could not
17 be persuaded to enter the pipeline to conduct any rescue
18 efforts. All four parties explained that there would be
19 significant risk to their own divers in attempting to rescue
20 the divers by entering the pipeline. However, IMT
21 continued to make efforts to get a diver to attempt a
22 rescue for the missing divers to collect and share
23 information, to make preparatory steps to facilitate
24 requests by LMCS.”

25 First question is that you would agree with me that these
26 companies would be reluctant to have gone into the pipeline to
27 rescue the divers if they believed that it was no longer a rescue

1 but a recovery of dead bodies?

2 A. Say that again?

3 Q. They were willing to enter the pipeline—

4 **Mr. Peterson SC:** Mr. Chairman, in fairness to the witness, I
5 don't know how the witness could answer what the other
6 companies would be thinking.

7 **Mr. Chairman:** Yes, well, I—my inclination is to think that
8 for them to calculate whether or not they were prepared to risk
9 their people, they would want to know whether there was any
10 realistic prospect of the people in the pipe being dead or alive.
11 Nobody wants to risk divers if they're ready dead. And I think
12 that's the purpose of the question that—

13 **Mr. Peterson SC:** Yes but I'm attracted to how you frame the
14 question, Mr. Chairman.

15 **Mr. Chairman:** Now you're trying to flatter me and that's
16 not—

17 **Mr. Peterson SC:** No you need to know, well, the way Mr.
18 Maharaj had framed it, it was calling on the—

19 **Mr. Chairman:** I think you need to put your mike on.

20 **Mr. Peterson SC:** Yeah, right. No, the way Mr. Maharaj had
21 framed it, it was asking the witness to explain the thinking of
22 the, of the diving companies but the way you framed it it's
23 based on the fact that it's a deduction to be drawn.

24 **Mr. Chairman:** All right. Well, perhaps you'll rephrase your
25 question, Mr. Maharaj. I think we understand where you're
26 going. I think Mr. Wei probably does now but you'll rephrase
27 the question.

1 **Continued Examination By Mr. Maharaj SC:**

2 Q. Mr. Wei, would you agree with me that divers, to go into that
3 pipeline, these companies to go into that pipeline, they would,
4 they would obviously want to consider whether it is realistic to
5 go into the pipeline and rescue a living person or a dead
6 person?

7 A. That would play into their consideration but, as I said, I
8 wouldn't know the exact, um, considerations at this time.

9 Q. Okay?

10 **Examination By Mr. Chairman:**

11 Q. Well, that's not entirely fair, is it, because you've just had read
12 to you paragraph 112. If you can scroll back the other way,
13 thank you. You've just had that paragraph read to you. Eastern
14 divers rescue team who presumably you called as experts to
15 advise you, am I right?

16 A. Someone else called them but—

17 Q. I don't mean you personally, forgive me, Mr. Wei. You, the
18 IMT—

19 A. Yes, the IMT, yes.

20 Q. —yes, called the Eastern divers rescue team—

21 A. Right.

22 Q. —for their expertise?

23 A. Yes.

24 Q. Presumably you placed some faith in their expertise?

25 A. Yes.

26 Q. And they were saying to you that they took the view at this
27 stage, by the look of what that paragraph says, they were saying

1 to you they believed there was no real prospect of these men
2 still being alive?

3 A. Yes, that was their—

4 Q. What time are we talking about?

5 A. This would have been somewhere around maybe 7.00, seven
6 o'clock, early hours of the morning.

7 Q. Seven o'clock or so in the morning?

8 A. Yes.

9 Q. All right, so, what are we—what's the time gap between Mr.
10 Boodram coming out of the pipe and seven o'clock in the
11 morning?

12 A. That would be about, that would be in the—

13 Q. Thirteen or 14 hours? Are we, we're talking about something
14 like that?

15 A. Yes.

16 Q. Something in that order, isn't it?

17 A. Yes.

18 Q. Did you regard it as being likely that these men were still going
19 to be alive 13 or 14 hours after Mr. Boodram, having been in
20 there for some hours himself, had come out?

21 A. Repeat that question?

22 Q. Yes. Did you regard it, you, the IMT, I don't mean you—

23 A. Yes.

24 Q. —personally, you, the IMT, did you regard it as being likely or
25 unlikely that these men had already died?

26 A. Let me answer this question. The IMT considered still rescue
27 options.

1 Q. Yes. Well—

2 A. It did not consider—

3 Q. I understand that's the question you want to answer, but I'd like
4 you to answer my question, and my question is whether or not
5 you, in the IMT, had considered, given that you'd just been
6 given the advice by people you placed faith in—

7 A. Right.

8 Q. —Eastern divers rescue team, that these men were already
9 dead?

10 A. No. We had considered that the guys may still be live.

11 Q. They might still be alive. All right. So notwithstanding what
12 you'd been told by Eastern divers team who said they were not
13 going to be prepared to risk their divers, the basis being that
14 they thought the other divers were already dead—

15 A. Yes.

16 Q. —you were still looking at options?

17 A. Correct.

18 Q. Thank you very much. And the paragraph that Mr. Maharaj
19 was asking about, at paragraph 113, you say this:

20 “Despite the IMT’s efforts, the coast guard, the Hull
21 Support Services Limited and Mitchells divers and
22 OTSL”—

23 What’s OTSL?

24 A. Offshore Technologies Services Limited.

25 Q. Did they have divers?

26 A. Yes.

27 Q. Add had you consulted with them?

1 A. The IMT consulted with them.

2 Q. Right. What about Mitchells divers?

3 A. The IMT—

4 Q. They obviously had divers?

5 A. I understand the IMT would have consulted with them.

6 Q. Right. Hull Support Services Limited, did they have divers?

7 A. Yes.

8 Q. And the coast guard, did they have divers?

9 A. Yes.

10 Q. Right. So all of those other organizations, other than the
11 Eastern divers, did they think that the men were still alive or
12 might be?

13 A. Well I don't know. What I know that they were considering
14 that the risk of diving into the line was high.

15 Q. Well, I dare say it would be. But you see the way you phrased
16 that, I just, I'm kind a anxious to understand you because your
17 paragraph says none of those people could be persuaded.

18 A. Correct.

19 Q. So, so that I understand it, are you saying that the IMT were
20 trying to persuade any one of these organizations, "Please go in
21 the pipe. Please rescue these men"? What am I to take take?—

22 A. Yes.

23 Q. —well, am I to understand that's the position?

24 A. Okay. So picture the scenario.

25 Q. I will.

26 A. At that stage a dive rescue was still being considered.

27 Q. Right.

1 A. So there are companies who responded that were readily
2 available.

3 Q. Yes.

4 A. So you're exploring all options. They are saying it was unsafe
5 and significant risk to put their divers to go in that pipeline
6 without knowing all the conditions that I explained before
7 and—well, we were trying to convince them in whatever way
8 we could have done and also continued looking for other
9 options—

10 Q. Right.

11 A. —of divers.

12 Q. Well then the last option might have been the LMCS?

13 A. That is true.

14 Q. Nowhere here do you say, do you, that you asked LMCS if they
15 had divers that were prepared to go in?

16 A. If we—the full—later on into the statement, LMCS on the
17 Sunday, on Sunday, came forward with a diver they said were
18 willing to enter the pipeline.

19 Q. All right. Let me see if I understand you. You are saying that
20 LMCS did not offer divers to dive into the pipeline until
21 Sunday is that—

22 A. Did not come forth with any rescue plan—

23 Q. No, my question please, forget the rescue plan. That comes
24 after. You're entitled of course to say, "We're not prepared to
25 let your divers go in without a rescue plan." I want to know
26 first of all, please, whether LMCS were offering divers to dive
27 into the pipe?

1 A. Yes.

2 Q. Right. Were they doing that at the same time as you say in
3 these two paragraphs here that all of the other companies that
4 you were considering using could not be persuaded to go into
5 the pipeline?

6 A. At that time I, I don't know because this would have—the
7 divers at that stage would be offshore and I would have been
8 onshore. But I would expect that there would still be divers
9 wanting to go into the pipeline.

10 Q. Right. You agree that—you knew that LMCS' divers or some
11 of them were prepared to go into the pipeline at this time? Do
12 you agree with that?

13 A. Wanted to.

14 Q. Yes.

15 A. Not—yeah.

16 Q. No, I understand that you may have good reasons why you
17 didn't want to let them.

18 A. Right.

19 Q. And that may be perfectly good.

20 A. No, no I'm taking the word prepared means—

21 Q. Yes.

22 A. —that had a rescue plan, everything prepared to enter the—

23 Q. No, well that's not what I mean.

24 A. Okay.

25 Q. I'm a diver, I work for LMCS, these are my buddies in that
26 pipeline or my relatives, I'm prepared to go in there. There—a
27 willingness to do so.

1 A. Yeah, I'm following it.

2 Q. Did you know that there was so many—there were a number of
3 divers who expressed a willingness to go into the pipeline?

4 A. Okay, I was not in direct communication, right but I only know
5 of LMCS suggesting that one diver was willing to go into the
6 line.

7 Q. Well, I had hoped you wouldn't be putting any more than one at
8 a time anyway. Can I just—I'm sorry if this is difficult, Mr.
9 Wei. I just want to understand whether you knew at the same
10 time as you're saying this was taking place on our paragraphs
11 112 and 113 there, were any divers from LMCS saying, "I am
12 willing to go in the pipeline"? It's a, it's a yes or no, isn't it?
13 Did you know about that?

14 A. I would not know about that. No, I did not know.

15 Q. Did not know? So are you saying then the IMT did not know?

16 A. No. Specific me.

17 Q. Well you're part of the IMT. Surely you would know that?

18 A. The IMT structure, there's the IMT leader who has more
19 information than me.

20 Q. All right.

21 A. Right?

22 Q. And who is the IMT leader, Mr. Piper, is it?

23 A. Collin Piper.

24 Q. Right.

25 A. Right?

26 Q. So I should ask him?

27 A. Yes. But I do know that LMCS came forward with one diver

1 who I met on the Sunday who was willing to go into the
2 pipeline.

3 Q. But you didn't know that until Sunday? Is that what I'm to
4 understand?

5 A. That's the only time it was confirmed to me that there was a
6 diver willing to go.

7 Q. That was when it was confirmed?

8 A. I, I heard comments and statements that divers wanted to enter
9 the water—

10 Q. Divers?

11 A. —by LMCS on the Friday. On the Saturday I think there was
12 not much talk of any diver going into the water and then in the
13 afternoon a diver would have been available from LMCS but he
14 was not able to come until Sunday. That's the information I
15 have.

16 Q. Right.

17 A. So I—

18 Q. So there were divers on the Friday who were prepared to enter
19 the water. You heard nothing much on the Saturday and then
20 on the Sunday you had it confirmed to you that there was a
21 diver who was prepared to come on the Sunday?

22 A. Correct.

23 Q. And whether that was on Saturday you heard it or the Sunday, it
24 doesn't really matter, he was not available until the Sunday?

25 A. Yes.

26 Q. That's really what you heard, is it? Who told you that?

27 A. I can't specifically recall.

1 Q. Was it someone from the IMT?

2 A. Someone from the IMT.

3 Q. All right. Would it have been Mr. Piper, do you think?

4 A. No, I don't think it was Mr. Piper.

5 Q. Oh, all right. Couldn't hazard a guess?

6 A. Maybe Catherine Balkissoon.

7 Q. Maybe Mr. Balkissoon.

8 A. Yeah.

9 Q. Er, Miss, it's miss, isn't it?

10 A. Miss.

11 Q. It's a miss. Yes, thank you. But on the Sunday they came with
12 the diver and that I know.

13 Q. Yes. All right. Thank you very much.

14 **Mr. Chairman:** I'm sorry, Mr. Maharaj.

15 **Mr. Wei:** Yes.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. Mr. Wei, I'm suggesting to you that you and the IMT knew of
18 the request of LMCS for divers to go into the pipeline and I
19 refer you to paragraph 114 of your witness statement. I'll read
20 it for you. You want to look at it?

21 A. Yeah.

22 "However the IMT continued to make efforts to get a
23 diver to attempt to rescue the missing divers, to collect
24 and share information, to make preparatory steps and to
25 facilitate requests by LMCS."

26 Q. So you knew of LMCS' request to get divers to enter the
27 pipeline and the IMT was trying to facilitate those requests?

1 A. Um, I don't know if it's being read in the right way. Right?

2 "However the IMT continued to make efforts to get
3 divers to attempt to rescue missing divers, to collect and
4 share information, and to make preparatory steps and to
5 facilitate requests by LMCS."

6 It's all separate—if I read it I take it as separate actions. IMT
7 continued to make efforts to, one, get a diver to attempt to
8 rescue the missing divers, two, to collect and share information,
9 three, to make preparatory steps and, four, to facilitate requests
10 by LMCS.

11 Q. But what you think the request was for when you, when you,
12 when you wrote this witness statement?

13 A. Specifically there was a request by LMCS to remove the
14 hyperbaric chamber and there was a specific request by LMCS
15 to cut the, the, um, the lifting bar that was obstructing the top of
16 the new riser from entry of any personnel and equipment into
17 the pipeline.

18 Q. So you were doing—getting information for all of that but not
19 in respect of LMCS wanting to send their divers into the
20 pipeline?

21 A. Um, the request to remove those items by LMCS might most
22 likely, if I was to interpret, would have been to the process of
23 allowing a diver to go into the pipeline, because, at the top of—
24 the hyperbaric chamber height, at that time on the Saturday the
25 hyperbaric chamber height was maybe 6 or 8 feet above the
26 internal riser. Meaning that if you needed to enter the line for
27 any diving operation, you first had to build a scaffolding and

1 get yourself down 6 to 8 feet to the riser level and the riser had
2 an—LMCS design for lifting that riser in place had a bar,
3 meaning that a physical obstruction through the centre of the
4 pipe to send a diver down through there with equipment needed
5 that bar to be removed so in—I will agree with you that LMCS
6 was making—would have facilitated—would have requested to
7 remove the hyperbaric chamber and cut out that bar so that they
8 can send a personnel down and it—I could—I would say so.

9 Q. You remember you told us here this morning in your evidence
10 that LMCS was to have—supposed to have an emergency
11 response plan?

12 A. Yes.

13 Q. And that emergency response plan would have been in such
14 case to send divers in into the pipeline?

15 A. No.

16 Q. So emergency—an emergency response from LMCS would not
17 have—would—you didn't envisage that any such emergency
18 response plan would have had a plan to send in divers into the
19 pipeline with this kind of situation?

20 A. It was LMCS' responsibility to envisage that. Leh we step
21 back. LMCS would have done an emergency response plan to
22 cater for credible scenarios and in their emergency response
23 plan divers into the pipeline was not considered. So there was
24 no plan at that time or an emergency rescue plan for divers to
25 enter the pipeline to extract divers.

26 Q. But Mr. Wei, what I'm asking you now, final question on this
27 issue, what I'm asking you now, did you, at any time, from the

1 time you got the information at 6.00 p.m. that Boodram had
2 come out of that pipeline, you consulted with other dive
3 companies to get someone to go into the pipeline, did you
4 consult or did the IMT consult with LMCS to get any divers to
5 go into that pipeline?

6 A. I would say yes.

7 Q. Yes? Who you consulted with?

8 A. I would say Collin Piper would have definitely communi—tried
9 to communicate with LMCS.

10 Q. You have records of that in the IMT?

11 A. I would leave that to Collin Piper.

12 Q. Okay. I'm going to go to the other aspect of the—I see
13 Commissioner Wilson wants to ask some questions now.

14 **Examination By Commissioner Wilson:**

15 Q. Good afternoon, Mr. Wei. I'm going to—just from off of your
16 statements I'm going to try and interrogate the IMT philosophy
17 from what I heard from you if you don't mind. The first
18 question I'd like to ask is, with your experience and as a
19 member of the IMT, how often do you guys drill for any type of
20 response whether it be small, large—

21 A. Um, I can't recall.

22 Q. So it's not the practice of Paria to drill for emergency
23 responses?

24 A. No, Paria would have emergency drills, right, but I can't recall
25 the last time I would have been specifically involved in a site-
26 wide emergency response plan.

27 Q. Or an IMT drill? All right. So, um, one of the things I found

1 interesting is, when an IMT convenes, do they set out the
2 priorities of addressing an incident as an integrated team or
3 separately? That means do you guys come together and sit as a
4 team in any specified area that is committed to addressing
5 emergencies within your real estate?

6 A. Yes.

7 Q. All right. So—because that would speak to if you are
8 convening collectively, that you might be most likely aware of
9 all the priorities and all the information coming into the IMT.
10 So I would ask just a little when I heard, you know, your
11 responsibility of other probably, um, chief, section chiefs or
12 something like that but, um, I just wanted to know how the
13 updates come in and then, er, thirdly, I heard that it went on for
14 a sort of protracted period with the, meaning it started Friday,
15 Saturday and listening there, right? At any point in time did
16 you guys leave the IMT or did you have a handover to other
17 IMT members to manage the situation?

18 A. Okay, on the—yes, if we needed—if we left the IMT we'd hand
19 over to someone.

20 Q. Okay. So there's a back-to-back logistics section chief like
21 yourself who—

22 A. Okay. So we did not—because of the nature of this incident,
23 right, we were working, how you say, um, extra-long hours,
24 right, and in my statement I had called out Prakash Beharry—

25 Q. Okay.

26 A. —to be my, um—

27 Q. Okay.

1 A. —my backfill.

2 Q. Okay. And as I said, I'm trying to interrogate the IMT
3 practices. Is it a Paria practice to have an onsite commander,
4 meaning there's a designated person on behalf of Paria at the
5 site to relay information back into the IMT?

6 A. Yes.

7 Q. And—okay. So that would address some of your earlier
8 comments that you wasn't aware of what was coming in from
9 the site. How was that—you know, if you had a onsite
10 commander?

11 A. Right. The onsite commander—

12 Q. Uh-huh.

13 A. —would have relayed directly to Collin Piper, the incident
14 commander.

15 Q. Right.

16 A. Right? I would have had other people outside there too, right,
17 and they might have called and relayed certain things to me,
18 but, with the incident command structure, the instructions I
19 would take would come from the IMT leader.

20 Q. So—

21 A. And if there's information I thought I would feed back to him
22 that from—that the—

23 Q. But you would agree that the onsite commander is feeding
24 information back into the IMT which has to be disclosed
25 amongst the IMT members?

26 A. Yes.

27 Q. Because you all are not making decisions in silos?

1 A. Yes.

2 Q. All right.

3 A. But decisions—most of the decisions basically would—and
4 direction comes from the IMT leader.

5 Q. Understood. Right, I just have one last question, um, when it
6 comes to the coast guard and some of the other members that
7 you had there. Under your IMT philosophy practice, do you
8 have a unified command, meaning, is there someone that
9 manages all the conversations, all the information you're
10 getting from different bodies, coast guard, other contractors and
11 stuff, to make a decision or is it, how were those conversations
12 managed?

13 A. Okay so most of the conversations would have gone through,
14 through the incident commander, and also too the conversation
15 would—from information coming in would be scribed.

16 Q. Get through the ICS forms and stuff?

17 A. Yes.

18 Q. Yes. Okay, thank you. Thank you for your feedback.

19 **Mr. Maharaj SC:** Much obliged.

20 **Continued Examination By Mr. Maharaj SC:**

21 Q. At paragraph 75 of your witness statement, you stated that
22 LMCS method statements, JHA risk assessment and dive plan
23 documents submitted with the ITB proposal were reviewed and
24 accepted by the technical and maintenance department. Is that
25 correct?

26 A. LMCS method statement submitted with the ITB proposal were
27 reviewed and accepted by the technical and—as part of the

1 evaluation of the tender.

2 Q. Yes. So would it be correct to say then that Paria accepted
3 these documents?

4 A. The documents provided in the ITB proposal? Yes.

5 Q. All the documents you mention there, Paria accepted them?

6 A. Yes.

7 Q. And agreed to them?

8 A. Yes.

9 Q. In order for the contract to have been awarded to LMCS, Paria
10 had to agree to these documents? Without Paria's agreement
11 there could not have been a contract?

12 A. Yes.

13 Q. Yes. Now, in this scope of works which was developed by
14 Paria, did it, um, did it provide, as far as you can recall, for the
15 line content to be cleared, of Sealine 36?

16 A. There would be some clearing of the fuel oil in the line, yes.

17 Q. All right.

18 A. The oil in the line.

19 Q. And the system of the monitoring of the works that Paria had
20 was a control of work system, am I correct?

21 A. Yes.

22 Q. Yes. And that meant that Paria would monitor compliance with
23 the method statements and with the risk assessment?

24 A. Monitor.

25 Q. Monitor.

26 A. Which is not dedicated monitoring.

27 Q. And as far as you're concerned, Paria had the competence to

1 monitor?

2 A. Yes.

3 Q. Yes. And Paria did monitor?

4 A. Yes.

5 Q. Yes. Now, I want to—you are familiar with the method
6 statement, the risk assessment statement and the emergency
7 response plan? I don't want to go into all the names but you are
8 familiar with them?

9 A. I was provided with the ITB.

10 Q. Yes.

11 A. I'm familiar with it to a certain extent. If I need to ask
12 clarifca—if I need to see it I'll ask.

13 Q. How—I want to show you—can I show, CB—I want to show
14 the witness CB 659 Volume II Tab 21.

15 **Mr. Chairman:** Six?

16 **Mr. Maharaj SC:** Six five nine.

17 **Continued Examination By Mr. Maharaj SC:**

18 Q. And you see Section A, procedure for removal of line content
19 between berth 5 and berth 6, and then removal of liquid content,
20 and then you would have seen that and then you see it at
21 number four, there's not four there but if you check one, two,
22 three, four, remove, then you see, using air driven pump, you
23 could read that one, approximately 300 barrels of line content,
24 content to be pumped in Paria Fuel Trading Company Limited,
25 et cetera, et cetera, and once level in the riser has dropped to 35,
26 what's that, feet, feet below sea level, a line plug will be
27 installed. Now, this was accepted by Paria, this method

1 statement?

2 A. Yes. Removal of—the removal of line content between 65, yes.

3 Q. Could you give us an idea what you understand this to mean?

4 A. That the section that they needed to remove was some of the
5 line content between berth 5 and 6 so that a line plug will be
6 installed, which they estimated that to be 35 feet below sea
7 level and possibly approximately 300 barrels. But the intent of
8 this procedure would have been to remove sufficient content so
9 that they can install the line plug to con—this is all part of
10 preparation works so that they could conduct the maintenance
11 activities of cutting the line.

12 Q. Yes. But you're not telling us about the 300 barrels.

13 A. The 300 barrels? That's an estimation because—okay. The
14 line—what you are seeing on that drawing is basically the U,
15 right, which I don't know, you may have done a calculation and
16 estimated the amount of barrels there but the additional parts
17 for the elbows, for the line straight, and maybe that 300 is an
18 approximate number what they estimated that figure to be, but,
19 the intent of it all, if I read it at face value, once the level in the
20 riser has dropped to 35 feet below sea level, a line plug will be
21 installed. So their intent was to get the line plug installed.

22 Q. But when Paria looked at this, did Paria ask for any
23 explanation? Do you know?

24 A. What, explanation?

25 Q. As to 300 barrels and then 35 feet below sea level? Because
26 what you are telling us, it could give the impression that 300
27 barrels had to be removed and also 35 levels had to be shown at

1 another part of the line.

2 A. No. This is saying that once the level in the riser has dropped
3 to 35 feet below sea level, which is an actual number, a line
4 plug will be installed. And they estimate the amount might be
5 about 300 barrels. The 300 barrels could be, for all intents,
6 maybe 200 and they just say well round it up to 300. But the
7 intent here, permit me if I read it wrong, but procedure for
8 removal of line content between berth 5 and 6, removal of
9 liquid content from Sealine 36 diameter 30-inch line sufficient
10 removal, sufficient removal to allow replacement of crowded
11 section and the last line is what they're trying to achieve, which
12 is, once level in riser has dropped to 35 feet below sea level, a
13 line plug will be installed.

14 Q. Okay.

15 A. You see, um, I understand what you're saying but certain things
16 inside this would change during the process. For example, the
17 remove [*Inaudible*] completely once drained but the intent at
18 the end of the day is a clear, clear objective.

19 Q. But the purpose of approval of the method statement by Paria is
20 to ensure—

21 A. Okay.

22 Q. —the work is done safely?

23 A. Right. So, let us step back a bit because these documents were
24 created at the time of tender. At the time of tender the
25 contractor is not—has all the information required to make a
26 detailed, detailed, um, method statement or procedure for the—
27 so they would put what they best see, right, so, but, they know

1 that they want to go 35 feet to install the line plug.

2 Q. Okay. But Paria—

3 A. So when, when they would have done—when—after the award
4 of tender and then they have the specific site visits and they are
5 able to measure and estimate properly, they might have come
6 back and say it's not 300 barrels. But they were clear in saying,
7 if I read this again, I mean, I mean, I—35 feet below sea level,
8 a line plug will be installed.

9 Q. But Paria accepted this method statement and awarded the
10 contract?

11 A. Yes.

12 Q. Would you agree with me that Paria had a duty in, in, in
13 assessing the risk to assess the risk to ensure that a Delta P
14 situation would not arise?

15 A. No.

16 Q. No.

17 A. I would not agree with you on that. Paria, if you step back in
18 this scope, let me see—spare me the time because I'm not very
19 familiar with this, eh, but basically Paria—

20 **Examination By Mr. Chairman:**

21 Q. What is it you're looking for? Let me see if we can help you.

22 A. Or, I mean, you'll get the time to look for it.

23 Q. No, no, turn to—

24 A. Paria was looking for an expert contractor, an experienced
25 expert contractor, to execute this work. So they sent out this
26 tender. These documents are to demonstrate that the contractor
27 has a good understanding of the job and the requirements of the

1 scope. It is understood after acceptance and award additional
2 information will be provided to the contractor at which time he
3 with his technical expertise will be bringing forward the
4 hazards associated with his specific specialized tasks.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. Yes, Mr. Wei.

7 A. Paria would look at the general risks, for example, those with
8 respect to operational but not, not expected to know the—all the
9 risks of what the specialist contractor is to do.

10 Q. Well, well, I—let's assume that I accept everything you say.

11 A. Well thank you.

12 Q. The point about it is that Paria, Paria undertook to assess the
13 risk also, and, based on that assessment awarded the contract.
14 So do you think that Paria had a duty of care in ensuring that
15 the risk assessment for the job and the method statement were
16 safe?

17 A. Right. So again, in the tender evaluation stage, it is done more
18 from a higher level in the sense that all the nitty-gritty details,
19 you would expect that to be ironed out later on the award of
20 contract when the contractor is now able to get good
21 information from the site. I mean, I don't know how I could
22 explain it better. I mean, before—for example, Chairman, you
23 would have read all of these documents and you had an idea of
24 what outside was. Yesterday I'm sure you would have gone
25 outside and have a totally better idea. The same is here. The
26 contractor is not, not au courant with all the details of the site.

27 **Examination By Commissioner Wilson:**

1 Q. Just a second. Mr. Wei, I'm going to try and follow you here
2 now. Are you saying that for a contractor to issue or put in his
3 tender, he did so without a site visit first?

4 A. No, no, no. If you go through my statement there is when there
5 was the site—virtual site visit—

6 Q. Uh-huh.

7 A. —and the option of a mandatory site visit I think.

8 Q. Uh-huh.

9 A. So yes, there is, there is the site visit stage.

10 Q. So he had the site visit stage prior to issuing his tendering?

11 A. Yes, that all forms part of the tendering process.

12 Q. Right, I just wanted to be clear because—

13 A. Yeah—

14 Q. —I heard from you you said site visit after the award of—

15 A. That would be, that would be reckless to, to allow somebody
16 just to submit a bid without sufficient details of which to put a
17 reasonable tender bid package in.

18 Q. And the second question is, under your control of work system
19 and in the planning stages, Paria wouldn't sit with any elected
20 contractor and in partnership identifying hazards, risk
21 assessments, however you want to term it, you just leave it to
22 your contractors to do or is it a partnered exercise under your
23 control of work process?

24 A. It's a partnered exercise not sitting on—not sitting directly with
25 each other in a room. It's a partner exercise in that the
26 contractor prepares his method statement and risk assessment
27 with the best knowledge of his ex—with his expertise in the

1 execution of the said task. He would know the specific risks.
2 Paria would take that and also look at it and complement that
3 with the risk that para has that is on the site [*Inaudible*]

4 Q. So I understand that. My question is, is there an exercise or
5 exercises—

6 A. Right, okay.

7 Q. —where Paria, the operator—

8 A. And those documents—

9 Q. —sits with the contractor and executes a hazard identification,
10 risk assessments, or you just say, “Contractor, give me your risk
11 assessment let me review”?

12 A. Right, review and we would add and we would com—if there’s
13 obvious risk for us, yes but the contractor still has the
14 responsibility to identify the specific hazards of the specialized
15 work that he’s doing. I don’t know if I answered your question
16 but—

17 **Continued Examination By Mr. Maharaj SC:**

18 Q. But in reviewing it you would assess the risks?

19 A. The contractor would have.

20 Q. But you—

21 A. —assessed it.

22 Q. —for reviewing, would you assess the risk?

23 A. There is—it—the contractor would assess his risk, we would
24 take that the risk is properly assessed. If there’s any obvious
25 in—any obvious, um, flaw or risk that was not considered yeah
26 we’re free to bring it up or question, or question what he has.

27 Q. So, Mr. Wei, in effect you’re telling me that Paria didn’t have

1 the competence to assess the risk?

2 A. No we're not saying that.

3 Q. You're not saying that?

4 A. I'm saying that—

5 Q. So, so—

6 A. —LMCS—

7 Q. One second.

8 A. —LMCS would have provided through their competence as the
9 expert contractor the risks that they saw with their job. Now, I
10 don't know if you're expecting that Paria now would have the
11 same expertise as the expert contractor to assess their risks.

12 Q. Okay.

13 A. So I—but Paria being the side with respect to the management
14 of the site and the management of a port would bring the risk of
15 their side. So for example, with respect to the ships coming and
16 the hazard that plays with—Paria will bring that in. So Paria
17 would not be expected to say, "Hear what, LMCS, you did not
18 identify the risk of Delta P. Correct that." No. But if they had
19 said, um, we—there's an obvious risk that they did not
20 consider, let's say, an explosive environment, Paria would raise
21 the, say, "Hey, there's a risk here" and I think that is why you
22 would have, as you read later, on why there's the insistence of a
23 migration barrier—

24 Q. Okay, the—

25 A. —not to jump forward but—

26 Q. —we'll come to that. But you'll agree with me that Paria
27 supervised the works?

1 A. No.

2 Q. No?

3 A. I will not agree with you on that.

4 Q. So—

5 A. So—

6 Q. —you do, you do not agree that Paria supervised the execution
7 of the works?

8 A. Okay, so—

9 Q. Do you agree that Paria supervised the execution of the works?

10 A. Paria did not supervise dedicated supervision of that job.

11 Q. What Paria did?

12 A. Paria would monitor.

13 Q. Monitor? Look at your witness statement at paragraph 23, 23 at
14 page one three seven six. It says:

15 “The role of the planner was to develop the scope of
16 works supporting the tendering process and to oversee
17 the execution of the project by the contractor.”

18 Is that accurate?

19 A. That’s accurate what I, what I have here, yes.

20 Q. Yes. So you—

21 A. Yes, go ahead.

22 Q. So Paria oversee the execution of the works?

23 A. Not to be interpreted as supervise the execution of the works.

24 Q. They monitor it?

25 A. Yes.

26 Q. To see that it complies with the requirement of the contract?

27 A. That too, yes.

1 Q. Yes.

2 A. Yes. Inasmuch as it's possible.

3 Q. And, according—well, Paria, in respect of these works, your
4 department monitored and reported on the ongoing works
5 which were being done by Rajiv Mangalee, your representative,
6 and Houston Marjadsingh?

7 A. Yes.

8 Q. And according to you at paragraph 67 of your witness
9 statement, at page one two eight three, the said maintenance
10 technicians received daily verbal reports from LMCS of the
11 progress of the works. They used these verbal reports together
12 with their own observations to produce daily work reports and
13 they then submitted these daily work reports to the planner
14 during the course of the project. So monitoring and
15 supervising, Mr. Wei—es.

16 A. I'm not seeing how you interpret that.

17 Q. Okay. Well—but you agree that what you said there is
18 accurate?

19 A. What I said there is accurate that the—

20 Q. Okay. Look at paragraph 67.

21 “On the ground level, my department monitored and
22 reported on ongoing works through Kenson technicians,
23 Rajiv Mangalee, Houston Marjadsingh who reported to
24 Paria planner Terrence Rampersadsingh. They were
25 situated mostly on site and rotated between berths 5 and
26 6 which are offshore and the offshore docks and called
27 Badger docks which is on land.”

1 A. Yes.

2 Q. That is accurate, correct?

3 A. Yeah.

4 Q. All right. And can I show the witness, Mr. Chairman, 565 core
5 bundle two? If you go to page 565, we have core bundle two,
6 Mr. Wei?

7 A. Five sixty five?

8 Q. Yes, five sixty five. And this is the scope of work prepared by
9 Paria and you,—our department would have been involved in
10 this.

11 A. Five sixty five.

12 Q. You see at paragraph three dot one—12—

13 A. Sorry, sorry, what number you said? Five sixty—

14 Q. Five sixty five.

15 A. Five six five, yeah.

16 Q. Right, you see at the top of 3.1.1, “The contractor shall execute
17 the following”, okay?

18 A. Three point one? Three point one—

19 Q. Three point one one, at the top of that it says, “The contractor
20 shall execute the following”, correct? You see that? Just at the
21 top.

22 **Mr. Chairman:** Well I don’t—

23 A. Five sixty five you said?

24 Q. No. If you look at five sixty four first, sorry.

25 A. Or, or sorry.

26 Q. Five sixty four, just under the heading, “Renewal of section SL
27 riser”, et cetera, then, just under that, “The contractor shall

1 execute the following”, and then there’s a—the description of
2 the works and then you’ll see at three dot—at page 565, 3.1.12
3 and then you see at the end of that sentence, “Note video stream
4 to be provided topside during work activity for Paria’s
5 representative”. You see that?

6 A. Yes.

7 Q. So, you still maintain that Paria does not, um, supervise the
8 works?

9 A. I kind a thinking that there’s a, there is a miscommunication
10 here between what is supervision and monitoring.

11 Q. Okay.

12 A. Supervision repair indicated—

13 Q. You indicated on—

14 A. —on the job.

15 Q. We’ll take your answer, right? Can I—

16 A. No, I need to say it because, you’re, you’re—

17 **Mr. Chairman:** *[Inaudible]*

18 **Continued Examination By Mr. Maharaj SC:**

19 A. Okay. You are, you are, you are trying to say that, you are
20 saying that the monitoring is dedicated monitoring.
21 Supervision is what we wa—is dedicated supervision on the
22 site. Paria monitors, meaning that Paria representative doesn’t
23 have to be on that site 100 per cent of the time. The contractor
24 official is to be on that site 100 of the time supervising the
25 execution of his works. This is the concept of the independent
26 contractor. Paria will not supervise the independent contractor.
27 It’s their responsibility.

1 Getting on to your point here now, note video stream to
2 be provided at topside during Paria—Para just ex—is asking for
3 mon—that Paria has a option here to monitor the live stream.
4 Right? Because they might have considered this step critical,
5 which was insert migration barrier, and they wanted
6 confirmation that it was installed because this is in the
7 hyperbaric chamber or wherever, and they needed to see it.

8 Q. Why would they need to see it?

9 A. Because for Paria that would have been a serious—this
10 migration barrier would have kept hydrocarbons—kept that seal
11 between hydrocarbons and any hot work to be conducted.

12 Q. Okay.

13 A. So from a Paria—right, so you ask about the risk. The
14 hydrocarbon risk is what Paria would be obvious to.

15 Q. Okay. Anything else you want to say on that?

16 A. No, um—

17 Q. Okay.

18 A. —if you understand what I'm saying I won't have need to say
19 anything.

20 Q. I want to go to show you—I'm still on the—

21 A. Yes.

22 Q. —I'm still on the evidence pointing out to you—

23 A. Yeah.

24 Q. —at page five seven zero. Look at page five seven zero.

25 A. Yes.

26 Q. You see it's paragraph four dot zero?

27 A. Yes.

1 Q. Right. Paria's responsibility.

2 "Supply personnel for organizing all work permits,
3 certificates, monitoring contractor's performance and
4 work standards, approving work done by the contractor
5 and carrying out quality assurance audits."

6 You agree that is Paria's role and responsibility?

7 A. Yes.

8 Q. And look at, um, 4.4, "Provide personnel for the acceptance of
9 work executed".

10 A. Yes.

11 Q. You agree that is Paria's responsibility?

12 A. Yes.

13 Q. In respect of these works?

14 A. Yes.

15 Q. And look at paragraph 4.5.

16 A. Right.

17 Q. "To provide personnel to oversee isolation, deisolation,
18 depressurization, pressurization, draining, filling product
19 from lines at berth 5 and berth 6."

20 You agree with that?

21 A. Yes.

22 Q. So, Paria had a responsibility to provide personnel to oversee
23 the draining of the lines?

24 A. Right, not supervise.

25 Q. Yes. Right. And the purpose of Paria doing that is to ensure
26 that the draining of the lines complied with what Paria agreed to
27 in the contract?

1 A. To oversee. As I mentioned oversee doesn't mean that you're
2 there all the time, right. But you're right, that line is to provide
3 over—to oversee the isolation depressurization and filling of
4 line.

5 Q. Well if, according to you, it is very important for the line to be
6 drained in accordance with the contract—

7 A. Right.

8 Q. —because you as an expert would know if the line is dry and
9 you're having a migration barrier, you could create a Delta P
10 situation?

11 A. No, I didn't say that.

12 Q. No, no, but you—

13 A. I didn't say a Delta P situation.

14 Q. Okay.

15 A. I said to create the barrier for hydrocarbons not to enter the
16 work space.

17 Q. Mr. Wei, at paragraph—well, before I ask you, would you
18 agree with me that if, in this matter, in these works, the line was
19 drained, the line was empty, okay, or, or, or mostly empty, and
20 a—and the migration barrier was installed, that is to say the
21 plugs were installed on that line and there was—and the habitat
22 came over the line in accordance with the works, that there
23 would have been a latent Delta P differential hazard situation?

24 A. If the hyperbaric chamber was installed over and the plugs was
25 installed and the line was empty, yes there would have been a
26 latent Delta P.

27 Q. Right. So—

1 A. So you had now.

2 Q. So therefore, if in relation to what I just read to you about
3 personnel overseeing the draining of the line and Paria
4 recognized that you could have had a Delta P hazard, if the line
5 was overdrained, if I use that expression—

6 A. Okay.

7 Q. —wouldn't you agree that Paria would have had a duty to
8 oversee what was being drained?

9 A. Step back there because you're talking about what is in the
10 tender document. Subsequent to that, there was a bid document
11 that we just read that LMCS had to—what we accepted
12 thereafter was to remove 35 feet for installation of the plugs.
13 So that would have now been the requirement of LMCS.

14 Q. Well LMCS had two figures, 300 barrels and 35 feet. But the
15 point I am getting at you, I want—the point I'm trying to ask
16 you, that if that was a dangerous situation, and you said it was,
17 it was a potentially dangerous situation if you had that with the
18 line dry and the migration plug installed and the hyperbaric
19 chamber installed and Paria, this is in the scope of duty which
20 Paria accepted as a responsibility—

21 A. Right.

22 Q. —to monitor the works—

23 A. Right. The migration—

24 Q. —to oversee the works—

25 A. —barriers were installed for the hazard that Paria would have
26 seen which is the explosive mixture. The contractor, specialist
27 contractor, should have seen that risk because that is—he is

1 working in—he is familiar with the use of hyperbaric chambers.
2 Para infrequently use a hyperbaric chamber.

3 **Examination By Mr. Chairman:**

4 Q. Did you say frequently or infrequently.

5 A. Paria—the last—Paria would have only used that hyperbaric
6 chamber previous in 2020. LMCS being the specialist
7 contractor would have more experience in that, so we would
8 rely on the expert.

9 Q. Can I just be clear, you don't profess to be an expert in diving
10 matters and so I don't know if you—

11 A. And hyperbaric chamber, no.

12 Q. But you have said that you understand what Delta P is?

13 A. After the incident, a better understanding.

14 Q. Well, that's what I want to ask you about. Did you have an
15 appreciation of what Delta P was, is, before this contract was
16 concluded, before it was even opened? Did you understand a
17 risk associated with Delta P, what that was?

18 A. No, because the contractor never contemplated that in its risk
19 assessment.

20 Q. Irrespective of this job, right, it's irrespective, did you yourself
21 have any kind of understanding of what Delta P is?

22 A. In the hyper—with respect to the hyperbaric chamber? No.

23 Q. Or, or, or irrespective of a hyper—even outside of that
24 particular er, er—

25 A. Yes, you would—

26 Q. You, you, you'd heard of it before, hadn't you?

27 A. Yes.

1 Q. And, having heard of it before, did you understand mechanics
2 of it?

3 A. Yes.

4 Q. You've got differential pressure?

5 A. Yes.

6 Q. And obviously if you've got pressure in one side that was
7 greater than the other—

8 A. Correct.

9 Q. —it's going to push, push it till it finds it's equilibrium isn't it?
10 Did you understand that as a—

11 A. Yes.

12 Q. —basic science if you like? Yeah?

13 A. Yes.

14 Q. All right. But as I understand what you're saying is, it never
15 entered your head to consider that as an issue at all because the
16 LMCS had never raised it as an issue?

17 A. Yes.

18 Q. Am I right about that?

19 A. Yes. As the specialist contractor—

20 Q. Yes.

21 A. —they would be familiar with those risks.

22 Q. And you regarded LMCS as being the specialist contractor?

23 A. Correct.

24 Q. Right. Can I, in that regard, then, please, ask you this? Did you
25 think there was ever any ambiguity at all about the extent to
26 which the line was to be cleared, whether it was to be
27 completely cleared, partially cleared or anything else? Did you

1 have any amb—did you understand there to be any ambiguity
2 about that?

3 A. Okay, so, from the tender document, I think it's clear that the
4 line should be emptied sufficiently to reinstall the plugs.

5 Q. Right.

6 A. Subsequent to that, the development of the method statement
7 would not have been under my purview.

8 Q. Right.

9 A. So I would not have been involved in development of the
10 method statements and the communication thereafter, but what
11 last I would have seen would have been on the tender document
12 with respect to—

13 Q. Thereafter you had no further interest in the detail of what
14 happened? Is that what you're saying?

15 A. To put it lightly, in—yes.

16 Q. I'm trying to use some of the jargon because I didn't follow
17 half of it so I do want to understand.

18 A. Yes.

19 Q. So that we all understand. Your position is, is that you saw the
20 tender documents, took them at face value, thereafter you had
21 no further involvement in the detail or amendments to that?

22 A. In development of the details, yes.

23 Q. All right. So can I ask you to have a look at document, just tell
24 me if you've ever seen it before? Five nine eight, please? Page
25 598. You see this is, this is described as an addendum, Paria
26 Fuel Trading Company Limited miscellaneous repairs and
27 refurbishment works at 5 and 6 berths and main viaduct

1 addendum one. You see that?

2 A. Yes.

3 Q. This is a document you've seen before?

4 A. Yes.

5 Q. At the time or subsequently?

6 A. I would have seen this for the addendum when the issuing of
7 the tendering.

8 Q. Right. So—

9 “The following are questions raised with clarifications.
10 This addendum has to be signed and submitted with the
11 technical tender submission.”

12 A. Right, so—

13 Q. Yeah, and the point of it, as I understand it, is that your, um,
14 where there was some ambiguity or some question arising from
15 the original works, that could be dealt with in this addendum,
16 question answer session?

17 A. Yes. This is clarifi—this is the response to clarifications from
18 invited ten—invited bidders.

19 Q. Yes.

20 A. Yes.

21 Q. So this is being sent out. “Who is responsible for pumping
22 back from the berths to clear the lines with water?” You see
23 that?

24 A. Right.

25 Q. Who's asking that question?

26 A. I—this would be one of the invited tenderers—invited bidders.

27 Q. The invited bidder. Right. And a response comes from you,

1 does it?

2 A. Yes, for Paria.

3 Q. So the response from Paria is, the contractor is responsible for
4 the safe removal of hydrocarbon content from the line and to
5 ensure that the line is clear and dry. What did you understand
6 that to mean?

7 A. Safe removal of hydrocarbons.

8 Q. Yes.

9 A. And ensure that the line is clear and dry.

10 Q. Yes. What's that mean?

11 A. It could mean with respect to—it's a little unclear because it
12 could mean—they didn't define the amount to remove.

13 Q. No, well—

14 A. So it could mean, it could mean from just below or the entire
15 line.

16 Q. Would you agree—

17 A. If I, if I was to read it.

18 Q. Mr. Wei, would you agree with me that at best it is ambiguous?

19 A. Yes.

20 Q. And this—I mean, I'm not saying it's you.

21 A. Yes.

22 Q. I appreciate you didn't write this.

23 A. It could be ambiguous.

24 Q. But whoever wrote it, whoever made that response to the not
25 unreasonable query that arises, your response, that is you, the
26 company, Paria's response—

27 A. Yes.

1 Q. —was, would you agree at best ambiguous?

2 A. Yes.

3 Q. Thank you.

4 A. But subsequent to this it was the tender documents.

5 Q. I'm sure there are many documents that came after this and
6 there's a scheme of work as well which I anticipate at some
7 point we'll get to—

8 A. Yes.

9 Q. —but I'm starting from the beginning because that's where we
10 are at at the moment. Where we end up is another matter. But
11 at this stage, at any rate, in seeking clarification, which I
12 assume this is all—what this is all about, the answer is, at that
13 stage at any rate, ambiguous. One would hope at that such
14 ambiguity would have been cleared up?

15 A. If it was ambiguous to another contractor they could have asked
16 for a clarification a bit further.

17 Q. Well it's ambiguous to you and it's ambiguous to me, all right,
18 so one would hope that somewhere, somewhere along the line,
19 someone would say exactly what we are saying?

20 A. Yes.

21 Q. Thank you. All right, we'll get to what happens later, later.

22 **Continued Examination By Mr. Maharaj SC:**

23 Q. In respect of supervision, I just want to point out to you, if you
24 can look at, um, CD 1 at page 29, 28 and 29 that has to do with
25 the permit to work procedure. And would you look at page 29
26 one, two, three, fourth from the beginning, for the fifth one:

27 “Stop the work if there are changes in site conditions that

1 increase the risk or if new hazards are identified,
2 promptly notify the site authority of these changes.”

3 Whose roles and responsibility is that one?

4 A. You'll have to scroll up for me to see.

5 Q. Isn't that Paria's responsibility?

6 A. Which one?

7 Q. To stop the work if there are changes in site conditions that
8 increase the risk of new hazards?

9 A. This is what page?

10 Q. Page 29.

11 A. Twenty-nine.

12 Q. The fourth dot, the fifth dot.

13 A. I want to see the header, if it's 5.1 or—okay, so it's 5.1—

14 Q. No, page—

15 **Mr. Chairman:** It's 5.1, applicant.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. Yes, it's 5.1?

18 A. Right.

19 Q. Just at the top. The applicant—

20 A. Yes.

21 Q. —right—

22 A. Yeah.

23 Q. —is the person completing, A, the work permit, the applicant
24 must have the necessary competence, et cetera. Stop the work
25 if there are changes in site conditions that increase the risk of
26 new hazards, et cetera. Would that apply to Paria?

27 A. That would apply to the applicant who can be a Paria, a Kenson

1 or even the contractor.

2 Q. Or even the contractor?

3 A. So it would be applicable to the applicant.

4 Q. And the applicant on the 25th was Kenson so it would have
5 been Kenson's responsibility?

6 A. That would have fall under his responsibility, yes.

7 Q. Yes. And then if you look at the one above, "Continually
8 monitor the job to ensure that it's performed in a safe manner
9 and within the conditions prescribed in the work permit,
10 certificates and JHA risk assessment. He may sign the renewal
11 section", et cetera, et cetera, that would be the applicant and if
12 it's Kenson would be the Kenson responsibility?

13 A. Yes.

14 Q. Yes.

15 A. To continually monitor.

16 Q. Yes. Now, you notice that it says there, "continually monitor",
17 not part-time, continually?

18 A. It doesn't say continuously.

19 Q. It doesn't say what?

20 A. Continuously.

21 Q. Continuous?

22 A. It says continually.

23 Q. Okay.

24 **Mr. Chairman:** Well he's right, isn't he? It does say that.

25 [*Laughter*]

26 **Mr. Maharaj SC:** Right, okay.

27 **Examination By Mr. Chairman:**

1 Q. Is there a difference?

2 A. In the understanding from the HSE training for permit to work,
3 there is a difference. Continually—

4 Q. Tell him. He knows about it.

5 A. Continually, continually—okay, so this is specific to this
6 permit, specific to the training, what I understand that
7 continually is more periodically as compared to continuously—

8 Q. Okay.

9 A. —in this instance here.

10 **Mr. Maharaj SC:** The next one I want to show you is CB
11 1033 Volume III and this is 1033, and this is, um, Paria's work
12 instructions, right?

13 **Mr. Chairman:** Where are we, please?

14 **Mr. Maharaj SC:** CB 1033. Doc—

15 **Mr. Chairman:** Got it.

16 **Mr. Maharaj SC:** Right.

17 **Continued Examination By Mr. Maharaj SC:**

18 Q. You see the document, um, is an instruction prepared by Paria
19 as to exactly—

20 A. Now, could I just come back to your question, because
21 something just crossed my mind, just to make it clearer for you,
22 with the applicant, right, because you're suggesting that the
23 applicant is on the job for dedicated monitoring—dedicated
24 supervising, right? The applicant, in the permit to work system,
25 can have more than one job in progress. He can apply for one
26 job in this, so it would be impossible for him to be on both sites
27 at the same time, but the contractor official is the one who is

1 supervising the work and needs to be dedicated to the job. So I
2 just want to clarify that because I think it's suggesting that the
3 applicant should be on the job continuously.

4 Q. But if for some reason a Paria person cannot be there, Paria can
5 put somebody else in order to deputize for the time being?

6 A. Para can do that to do their monitoring.

7 Q. Yes, okay, whatever you want to call it, okay?

8 A. Not whatever, to do the monitoring.

9 Q. Okay. You are calling it monitoring and I—for these purposes
10 I would accept that for the time being.

11 A. Thank you again.

12 Q. Okay. I want you to look at that document page 1033 and you
13 see that this is a document by Paria and it's an instruction as to
14 how the clearing of the line was supposed to be. So, you see
15 the title "Clearing of line between berth 5 and 6"?

16 A. Yes.

17 Q. Right? Then you go you see the scope of works, clearing of
18 section between berth 5 and 6?

19 A. Yes.

20 Q. And then you see "Responsibilities"?

21 A. Yes.

22 Q. And you see:

23 "The terminal operation manager has the overall
24 responsibility for ensuring that this procedure is
25 established by reviewing and approving this work
26 instruction and ensuring the offshore team lead
27 understand the requirements of this work instruction."

1 You agree with that?

2 A. Well yes, that's written there.

3 Q. And it says that:

4 "The offshore team lead has direct responsibility to
5 ensure compliance with the procedure by reviewing and
6 approving this work instruction and ensuring offshore
7 operations team supervisor understand the requirements
8 of this work instruction."

9 And can I refer you to paragraphs three and four of your
10 witness statement? At paragraph three you said:

11 "My role as team manager"—sorry, sorry—"My role as
12 technical and maintenance manager is to direct the
13 services of general engineering and central maintenance
14 to the terminal operations in compliance with safety,
15 engineering and regulatory standards consistent with the
16 business plan for Paria's terminal situated"—at so-and-
17 so.

18 And then, you itemize at paragraph four what your duties are,
19 and I won't go through all of them with you, but I go to
20 paragraph—to number seven:

21 "Ensure the effectiveness of the maintenance
22 management system, including adequate record and
23 knowledge management as well as performance
24 management and reporting to continually optimize the
25 maintenance planning and scheduling process. Oversee
26 project management and control for projects such as
27 major projects, example tank upgrades, berth turnaround

1 and Sealine and pipeline network repairs replacement.”

2 Then at 11:

3 “Implement SHE standards and ensure adherence to
4 same. Communicate information effectively upwards
5 and downwards.”

6 Those are accurate?

7 A. Yes.

8 Q. Okay. I want to ask you a few things about line clearing, okay?
9 Would you agree that the line clearing—if you don’t know, say
10 you don’t know, okay? Would you agree that the line clearing
11 was done in two phases?

12 A. The line clearing operations specifically didn’t—I was not
13 specifically involved with or the development in procedure.

14 Q. So you won’t, you won’t know?

15 A. I think, um, I would say let’s stay away from for the time.

16 Q. Okay. Would you be able to help us to tell us how many
17 barrels of oil it had in the lines before it was cleared?

18 A. I believe it may be somewhere in the documents. I, either, um,
19 pre or post—

20 Q. I, I have a document. I’ll show it to you and you’ll tell me if
21 you agree with that. I think it’s 2,000 or 3,000 barrels. It’s at,
22 um, core bundle two, page 564 and you would see just under
23 3.0 scope of work, estimate volume of product between
24 isolation points 2,000 barrels. Would you accept that?

25 A. I accept that that is written into the document, yes.

26 Q. Well, you know or you don’t know? You don’t know?

27 A. I don’t know the exact volume on the line—

1 Q. Oh you don't know?

2 A. —at certain points.

3 **Mr. Chairman:** We're not really expecting you to remember
4 that—

5 **Mr. Wei:** But, no, I mean—

6 **Mr. Chairman:**—but, I mean—

7 **Mr. Wei:** Well, I think the honourable here is expecting me to
8 remember that but inside of the document is an estimated
9 volume of 2,000 barrels. I can see that.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. But that figure is in the scope of works?

12 A. Yes.

13 Q. Because reports are prepared by Paria?

14 A. Correct.

15 Q. Right. You are familiar with the daily work reports of Paria?

16 A. I'm familiar that there are daily reports but, um, normally I
17 wouldn't really have line of sight on that specifically.

18 Q. But I want to show you something from the daily—about the
19 removal of the barrels of oil, right, and can I show the witness
20 Volume II of the core bundle 994 to 1019, and I'll just point out
21 something to the witness? Nine ninety-four. Where is my
22 bundle? Nine ninety-four, Mr. Wei. And when you—

23 **Mr. Maharaj SC:** You've got it, Mr. Chairman?

24 **Mr. Chairman:** Yep.

25 **Continued Cross-Examination By Mr. Maharaj SC:**

26 Q. Yes, you have it, Mr. Wei, page 994?

27 A. I'm seeing it on the screen.

1 Q. Or you're seeing it on the screen. If you look at number three
2 on page 994, you see in the last column, job status:

3 "Air Blowing started 12.22 p.m. due to operation setting
4 up to drain to tank and air blowed until 1800 hours. A
5 total of 798 barrels of oil was drained to tank."

6 Okay? You saw that?

7 A. Well I'm seeing it here, yes.

8 Q. Okay. Right. Then, you would agree that this—the daily report
9 of Paria is in this form in respect of this kind of activity?

10 A. Yes.

11 Q. Yes. Then, we go to page nine nine seven and number three,
12 mechanical, look at the job status:

13 "Air blowing started 11.00 a.m. due to installation of slip
14 blank and air blowed until 5.30 p.m. A total of 118
15 barrels of oil that was drained."

16 You saw that?

17 A. Yeah, I'm seeing it yes.

18 Q. At page 1002—

19 **Mr. Chairman:** Can we identify the dates of these—

20 **Mr. Maharaj SC:** Sorry, Mr. Chairman?

21 **Mr. Chairman:** Can we identify the dates?

22 **Mr. Maharaj SC:** Oh yes, sorry.

23 **Mr. Chairman:** The first one was on the 18th of January.
24 This one was on the 21st of January?

25 **Mr. Maharaj SC:** Yes. I'm much obliged. I'm much obliged
26 to you.

27 **Continued Cross-Examination By Mr. Maharaj SC:**

1 Q. At 1002, that was on the 1st of February, 2022 and it says at the
2 first column:

3 “Completed, installed two lengths of six, six feet 30-inch
4 hose together with one length of 6 feet 40-inch pipe and 6
5 inches check valve from SL36 riser to SL66 riser to assist
6 with Phase II air blowing.”

7 And then if you go to, at paragraph four, mechanical:

8 “Level was checked and pipe estimated to be three-
9 quarter full of oil contents.”

10 Then we go to page 1003 on the 2nd of February, 2020. At
11 number one:

12 “Air blowing was conducted between 11.00 a.m. to 3.00
13 p.m. Onshore noted that they received 276 barrels of oil.
14 Note: start air blowing 11.00 a.m. due to lining up of
15 tanks and waiting for pressure to build up.”

16 Then you see at number four:

17 “The level was checked after draining at PB80 and pipe
18 estimated to be one quarter full with oil contents to
19 continue draining tomorrow.”

20 Then at number five:

21 “Ongoing, two slops barge was filled approximately
22 hundred barrels of oil.”

23 Then at page 1004, the 3rd of February, 2022 at number one:

24 “Air blowing was conducted between 1300 hours and
25 1,500 hours. Onshore noted that they received 55 barrels
26 of oil. Note: started air blowing 1300 hours due to
27 waiting on onshore to give clearance to start.”

1 Then at number four:

2 “Completed level was checked after draining at PB80
3 and oil content was approximately 8 feet below tee
4 upriser.”

5 Then number five:

6 “Completed. Two slops barge was filled approximately
7 100 barrels of oil.”

8 That was the 3rd of February. Then we go to the fourth of
9 February, 1005. Number one:

10 “Completed air blowing was conducted between 10.30
11 a.m. and 1430 hours.”

12 Then we go to 1006, 5th of February and then number one:

13 “Remove hoses from inside riser and install 30-inch solid
14 blank at end. Remove temporary hose piping and check
15 valve going to 6 inches to SL66. Sealine 66 and solid
16 blank end.”

17 So, Mr. Wei, I think I have a duty to ask you, because I
18 just want to find out, you would not have an idea of how much
19 oil was drained from topside piping or from the underwater
20 piping?

21 A. No. I will not have.

22 Q. No. I want to show you a letter dated the 20th of July, 2022
23 from Paria to OSHA dated the 20th of July, 2022. It’s
24 electronic bundle 2906.

25 **Mr. Maharaj SC:** I have copies that I could pass up the letter
26 to the witness and to the Commissioners and to the other side.

27 **Mr. Chairman:** Copies for everybody else.

1 **Mr. Maharaj SC:** Yes. It's on the screen.

2 **Continued Cross-Examination By Mr. Maharaj SC:**

3 Q. And this was in response to enquiries from OSHA matters, and
4 I'll go straight to page, at 2906 the second page of the letter.
5 Number three:

6 "The rationale for utilizing the equipment in item two
7 above to remove content from Sealine 36 diameter
8 between berths five and berth 6."

9 Response, from Paria, and I read:

10 "An air compressor was logistically more practical given
11 the configuration of the pipeline. The volume of
12 hydrocarbon removed from Sealine 36 between berths 5
13 and 6 prior to the installation of the subsea slip-on flange
14 30-inch diameter as per method statement.

15 Response: Given the configuration of the system it is
16 impossible to segregate and measure the displaced
17 volume.

18 Five: The volume of hydrocarbon removed from Sealine
19 36 between berths 5 and 6 after the accident.

20 Response: The volume of hydrocarbon removed is
21 estimated at 125 barrels. The quantity is based on the
22 estimated spilled hydrocarbons, six barrels and the
23 recorded volumes of hydrocarbons recovered in the Sea
24 Manatee, 119.8 barrels."

25 So— well, this is from Paria records. At paragraphs 85 and 86
26 of your witness statement, you gave an opinion about Delta P,
27 page 1286 and 1287. And in that opinion—I'll ask you to read

1 it, 85 and 86.

2 A. Eighty-five and 86.

3 Q. Yes.

4 A. Eighty-five, more important. "Knowing I—

5 Q. You could read it to yourself.

6 A. Oh I thought you wanted me to read it for everyone. Sorry.

7 Q. If you read it to yourself, then I can read paragraph 86 for you.

8 A. [Reading] Yes, I've completed reading 85.

9 Q. Right. And at paragraph 86, you said that:

10 "The removal of the migration barriers by LMCS also
11 opened up the differential pressure between the pipeline
12 and the chamber which is likely to have caused a
13 powerful and immediate suction effect which pulled and
14 entrapped the divers inside the pipeline and ultimately
15 caused the death of the four men."

16 Now you told us earlier that at the time of the incident you did
17 not have any idea of Delta P but since the incident you have
18 read about it and you got some knowledge about it. Am I
19 correct?

20 A. Yes.

21 Q. Yes. And it's based on that knowledge that you acquired you
22 have put that—based on that knowledge your paragraphs 85
23 and 86?

24 A. Yes.

25 Q. Right. But since you have some knowledge of it, would you
26 agree with me that it did not need—in the circumstances that
27 day, it did not need the pulling of the plug to activate the Delta

1 P? I'll explain it to you. Would you agree with me that a latent
2 hazardous differential pressure condition was created by the
3 works which were involved in the removal of fuel oil from the
4 pipeline and the installation of the migration barrier with the
5 installation of the hyperbaric chamber? In other words, when
6 that occurred, that created a latent Delta P situation, and just for
7 your information, the habitat was installed on the 13th of
8 February and the migration barrier was installed on the 13th of
9 February. So would you agree with me that from the 13th of
10 February, 2022 there was in the habitat a latent hazardous
11 differential pressure condition?

12 A. Okay. You mentioned the 13th that the migra—the hyperbaric
13 chamber was installed and the plugs installed?

14 Q. Yes.

15 A. Not in that sequence. The plugs were installed and then the
16 hyperbaric chamber was installed.

17 Q. Yes.

18 A. Right? So, with the plugs installed and the hyperbaric chamber
19 installed, and the hyperbaric blown down—

20 Q. No, I'm not talking. The habitat installed—sorry, the
21 expression blown down. yes, go ahead.

22 A. No, no, no, just—I'm trying to make sure we have the right—
23 what we're saying here correctly.

24 Q. Yes.

25 A. Right? With the migration barrier installed, and then the
26 hyperbaric chamber installed over it, if there was the latent
27 Delta P with the plugs installed, yes, there would be that.

1 Q. There would be that. So therefore, during the period the 13th of
2 February, 2022 to the 25th of February, 2022 you had a latent
3 differential pressure situation and you had plugs. Would you
4 agree with me that if there was some leak on those plugs over
5 that period, it could have caused an active Delta P situation?

6 A. If there were leaks on the plugs, hypothetically you're
7 stretching your imagination because the plug is a tight seal.

8 Q. No.

9 A. Assuming the plug is a tight seal—

10 Q. Yes.

11 A. —and those when installed by the contractor would have done a
12 quality test to ensure that it was good, they would have done a
13 quality test to make sure that the plug was functional and
14 acceptable to you, so—

15 Q. Okay.

16 A. —this is like a situation like—

17 Q. All right so—

18 A. —I don't know, like—

19 Q. Okay, Mr. Wei, you do not want to assume that. You, you—

20 A. Okay.

21 Q. So would you agree with me that on the 25th of February, 2022
22 when the permit to work was issued for these works, there was
23 existing in the chamber a latent hazardous Delta P situation?

24 A. Yes.

25 Q. Yes. At paragraph 52 of your witness statement, you referred
26 to a meeting that you had with Mr. Terrence Rampersadsingh
27 on the 24th of February. Paragraph 52, yes, at page 1280, and

1 you told him that the works were to resume on the 25th. And
2 then you told him at paragraph 53 what was discussed. You
3 stated what was discussed. Do you have any—there were any
4 contemporaneous notes made by you at the time of what was
5 discussed?

6 A. No.

7 Q. No. So when you, when you recorded this, when you made this
8 statement, you spoke from memory?

9 A. Yes.

10 Q. Yes. And that was—you had signed this statement on the 10th
11 was it, 16th of August, 2022 and you were speaking from
12 memory of an incident, of a meeting you had on the 24th of
13 February, 2022. And you were able to remember all these
14 details?

15 A. Yes.

16 Q. And what about at paragraph 53? At paragraph 53—at
17 paragraph 53 you gave details of what the scheduled work for
18 Friday was?

19 A. Yeah.

20 Q. And you give the scheduled work for what the work on
21 Saturday was?

22 A. Yes.

23 Q. And that was a meeting between LMCS and Paria?

24 A. That meeting was between Terrence Rampersadsingh and
25 Paria—and LMCS.

26 Q. And LMCS?

27 A. Yes.

1 Q. So it was Paria representing—Mr. Rampersadsingh
2 representing Terrence—

3 A. right.

4 Q. —by Terrence Rampersadsingh?

5 A. Right.

6 Q. And LMCS. Were you at that meeting?

7 A. No, I was not at that meeting.

8 Q. So, you have minutes of that meeting?

9 A. I would not have minutes of that meeting.

10 Q. So you were not at the meeting?

11 A. Right.

12 Q. But you remembered this from memory?

13 A. Yes. Terrence Rampersadsingh would have discussed with me
14 after the meeting and said that work is going to start and these
15 are the works planned for the weekend.

16 Q. But all these works you remember it in that sequence from your
17 memory without looking at any document? Because you just
18 said you didn't have any notes.

19 A. Yeah.

20 Q. You were not at the meeting, Terrence Rampersadsingh tell you
21 something in February, right, and you, when you had to do this
22 statement in August, you remembered just what he told you?

23 A. At the time of this, yes.

24 Q. Yes. Well let's go to paragraph 56.

25 A. That was the day the minutes was—this, um, was signed.
26 Okay?

27 Q. At paragraph 56.

1 A. The date on the, um, document, the date signed.

2 Q. Yes.

3 A. It's not the date when it started. I don't have an exact date
4 when I started writing but when I started writing I would recall
5 what I wrote.

6 Q. Anyhow, you told us—

7 **Examination By Mr. Chairman:**

8 Q. I'd like to understand that, please? This is a very long
9 statement so I could imagine it would take more than a day. So
10 can I be clear, the document is ultimately signed on the 16th of
11 August of this year. Give us some estimate of how long it took
12 you to put this together.

13 A. I don't really—three months plus.

14 Q. So under a period of three months you were writing this
15 statement a bit at a time, obviously not doing that on its own, I
16 appreciate?

17 A. Right.

18 Q. So realizing that it was going to be necessary, you put this
19 document together. Did you do it yourself?

20 A. Yes.

21 Q. Did you do any, um—

22 A. I, I prepared the document.

23 Q. Yes.

24 A. Yeah.

25 Q. I mean, I don't know whether you typed yourself or you got
26 someone to do it for you. Did you type it yourself?

27 A. Yes.

1 Q. I mean, did you cut and paste bits from other statements or
2 other documents?

3 A. No.

4 Q. Can you just have a look at page 1281 for a minute please?
5 There, you see it right there. Stop. Now, go back again. Go
6 back, go back. Just, just stop there. Do you see paragraph 56
7 which you're about to be asked about?

8 A. Yeah.

9 Q. Do you see it starts with a list of numbers after that, just after
10 the introduction as it were, yeah?

11 A. Right, yes.

12 Q. Is it just me or is it that it looks as though the numbering that
13 comes afterwards with all those different lines setting out what
14 they are, are at a different angle from the previous two lines as
15 if that bit has been pasted on?

16 A. Which numbers?

17 Q. You see it says doesn't it:

18 "Paragraph 56 the specific tasks required to be done by
19 LMCS and the sequence of the said tasks from Friday,
20 February the 25th up until completion of the works were
21 as follows:—"

22 and then you list 23 different things that were done, yes?

23 A. Yes.

24 Q. Right. Now, if you look at where the one is on that list—

25 A. Look at?

26 Q. On your page, it looks exactly the same on the page that you've
27 got in front of you?

1 A. Yes.

2 Q. All right? The number one on that list underneath the word
3 “From”, you see what I’m thinking about?

4 A. Yes.

5 Q. And the distance between that and the distance between the
6 word “Workday”, and “Completion”, on the same lines, do you
7 see the distance between the two?

8 A. Yes.

9 Q. All right. Do you agree with me that they are both—that
10 they’re at different distances? One is wider than the other?

11 A. Yes.

12 Q. Well, does it look to you as if the number one through to
13 number 20 on that page has been cut and pasted on to the page?

14 A. I typed it in and I know it wasn’t cut and paste. If you look
15 higher up on the page it’s really—for me it seems to be on the
16 scanning of the document that would have twisted those lines
17 and writing a document over some period of time it’s really
18 formatting.

19 Q. So it’s really just the scanning of the document. Do you have
20 the original?

21 A. I would have the original somewhere, yes.

22 Q. Do you think you might make it available to us, not today, but
23 whenever you get a chance dry and dig out the original let us
24 have it? Do you think you could do that?

25 A. Yeah, I’ll see.

26 Q. Thank you very much. And just before I hand you back to Mr.
27 Maharaj, this particular paragraph that you’re about to deal

1 with, is this again without notes?

2 A. This—yes, this would have been without—

3 Q. Without notes? I'm only asking. I just need to understand what
4 you're saying, you see? You've told us the statement was
5 compiled by you over a period of three months or so leading up
6 to the 16th of August.

7 A. Right.

8 Q. And to the best of your recollection you didn't use notes, you
9 were doing it from your recollection. Is that right? Have I got
10 that right or if I've got it wrong tell me. Put me right.

11 A. I would have referred to some documents—

12 Q. Right.

13 A. —but I would not, um, specifically recall what documents.

14 Q. Because it's difficult, isn't it, for anybody to put a statement
15 together of—I mean, how many pages does it run to? It's, um,
16 15, 20, it's 162 paragraphs. It's an extensive statement and it
17 must have taken you a while as you've told us. I just want to
18 understand. If you used notes, that's fine. I would just like to
19 see them that's all, because otherwise what we have is what you
20 say in the statement. Do you follow?

21 A. Yes.

22 Q. And where you've been or where you refer to a list of particular
23 items, you say you didn't use notes and I'm asking you if you
24 used notes for this list of 23 items, and whether you, if you did
25 use notes, where are they?

26 A. Right and I'm saying that these were the sequence of events—

27 Q. Yes.

1 A. —that I would have expected to have been done.

2 Q. And so where did you get from it, that sequence?

3 A. From knowledge, from knowledge of how the work should be
4 done.

5 Q. Right. So you're relying on memory?

6 A. Yes, in effect, yes.

7 Q. Okay.

8 **Mr. Maharaj SC:** I'm sorry, Mr.—

9 **Mr. Chairman:** That's all right.

10 **Continued Cross-Examination By Mr. Maharaj SC:**

11 Q. Mr. Wei, does Paria have any record of the work-plan for the
12 25th of February of what happened at the meeting for the work
13 plan?

14 A. At the—there would be the, um, there would be the toolbox
15 meeting.

16 Q. The toolbox meeting?

17 A. Right? And there would be the permit. Whether there is a
18 specific document that says what was the work plan for that
19 day, I'm not aware.

20 Q. Uh-huh. But I—okay. Now, in this sequence of the works that
21 you gave at paragraph 56, you would notice that you set out for
22 the new riser section to be removed at tasks 10 and 11 and for
23 the plugs to be removed thereafter at task 20. Correct?

24 A. Yes.

25 Q. And you're telling us today that you remembered those
26 sequence purely from your memory?

27 A. Yes.

1 Q. Yes. Now, I want to show you the method statement number
2 116 dated the 4th of January 2022 CB 1051 Volume III.

3 **Mr. Chairman:** I wonder if before we go to that we might just
4 take a 5-minute break, a comfort break for some, and then we'll
5 press on? Hopefully we'll be able to conclude, all right? So 5
6 minutes, please?

7 **3.42 p.m.:** *Enquiry suspended.*

8 **3.47 p.m.:** *Enquiry resumed.*

9 **Mr. Chairman:** Apparently Mr. Wilson wasn't the only one.

10 **Continued Cross-Examination By Mr. Maharaj SC:**

11 Q. I was taking you, Mr. Wei, to CB 1051 Volume III which is the
12 method statement at paragraph 56 and I was taking you to that
13 in the context of the sequence of how you mentioned the plug
14 was to be removed in your sequence of events and showing you
15 the method statement and what it says. So, have you got
16 paragraphs 55 and 56 at page 1051? It's on the screen.

17 A. Yeah.

18 Q. And you would see what had to be done according to the
19 method statement before paragraph 56 on the next page.

20 "Manually remove migration barrier from line. Manually
21 deflate the line plug and remove from line."

22 So you would agree that the method statement has a different
23 sequence to your evidence of the sequence of the plugs, of the
24 removal of the plugs?

25 A. Yes.

26 Q. Yes. Now, at paragraph 73 of your witness statement, one two
27 eight four, you stated that the applicant for the—sorry, attached

1 to the P—attached to the permit to work, number nine three two
2 zero, were LMCS' revised method statement dated 4th January,
3 2022, job safety analysis dated 10 December, 2021 and other
4 documents LMCS submitted, um, two method statements to
5 Paria, one with ITB proposal and the letter in 2022, et cetera, et
6 cetera. So, the permit to work had this method statement
7 attached to it together with the job analysis report, correct?

8 A. Yes.

9 Q. Yes. And if you look at the permit—well would you agree that
10 the job safety analysis which was done by LMCS was based on
11 the method statement number 116?

12 A. It's based on the method statement 116, yes.

13 Q. And that method statement was reviewed and accepted by
14 Paria?

15 A. Going again what I said before—

16 Q. Yes, I take into account what you said before, but it was
17 approved and accepted by Paria?

18 A. Well I just want to say it again, that the specialist contractor
19 would have identified the risks specific to this—specific to his
20 specialty. Okay? And Paria would have looked at the
21 operational risks and included those into the risk assessments.
22 On that basis, yes.

23 Q. Yes. And that method statement was attached to the permit to
24 work?

25 A. Correct, yes.

26 Q. That was attached to the permit to work by Paria?

27 A. Yes.

1 Q. Together with the job hazard analysis?

2 A. Yes.

3 Q. Yes. And would you agree that the job safety analysis did not
4 identify a Delta P hazard?

5 A. Where's the job safety? So the job safety analysis, please?

6 Q. Yes.

7 A. Can I see it?

8 Q. It did not identify a Delta P hazard?

9 A. LMCS did not identify that, yes.

10 Q. All right. But you told us earlier today that from the 13th of
11 February, 2022 there was a latent Delta P situation in the
12 hyperbaric chamber?

13 A. And the date the document was developed?

14 Q. No, you cannot recall that earlier this afternoon—

15 A. Yes, I recall that, right.

16 Q. And you said that there was a latent Delta P situation from the
17 13th of February?

18 A. Yes.

19 Q. Yes? And Paria issued a work permit on the 25th of February,
20 2022 without identifying any Delta P situation?

21 A. It identifying that the migration barriers were to be used and did
22 not authorize the removal of the plugs.

23 Q. Okay, so—

24 A. So the, the situation would have remained latent.

25 Q. Did—on the permit to work you're familiar with the permit to
26 work—

27 A. Yes.

1 Q. —that was issued. There is nothing on the permit to work to
2 state do not deflate the plug.

3 A. But there is—

4 Q. Before—

5 A. It's not written in to remove the plugs.

6 Q. Okay, all right.

7 A. The permit to work would write what specific tasks are allowed
8 to be done. It does not say what tasks not to be done.

9 Q. Would you—I think I'd better show you the permit to work. It
10 won't be long again, Mr. Chairman.

11 A. Yes, show me the permit to work.

12 Q. Volume III, 1074. Right? Um, on the description of the job,
13 you would agree that the form does not say sequence of job to
14 be done?

15 A. Correct.

16 Q. You would agree that the method statement showed the
17 sequence of the works to be done?

18 A. No.

19 Q. The method statement—

20 A. The method statement shows what works are to be done. It
21 could be in that sequence or it may not be in that sequence,
22 based on specific conditions on the day. When the method
23 statement is developed, when the method statement is
24 developed by the contractor, the contractor is not aware of all
25 the operational risks or the operational situation that is going to
26 exist on that day.

27 For example, if the weather was raining heavily, he could

1 not have gotten entry into the chamber. If there was a barge or
2 a boat alongside, even though he says and it's sequenced that
3 way, it will not follow that. What the authorization is given for,
4 what the site authority is deemed safe to conduct, so these tasks
5 would have been allowed to be done.

6 Q. So you are saying that Paria recognized that the sequence of
7 work stated in the method statement can be changed from time
8 to time depending on the condition on the day?

9 A. Could be, yes. You see, I think you don't understand.

10 Q. No, I, I, I understand.

11 A. The permit to work is the site giving the contractor the
12 authorization to do those specific tasks. The method statement
13 is, is the expert contractor saying these are the steps to be done.
14 But based on conditions or on the site, for example in this if
15 you go lower down it says migration barriers to be used clearly
16 written in.

17 Q. Yes, Mr.—

18 A. So, how can you remove the migration barriers when it's
19 installed there "Migration barriers to be used"?

20 Q. So—

21 A. So that's what I'm saying it's, um, written inside there.

22 Q. Okay. On the permit to work it says, "Line drained". What
23 you understand that to mean?

24 A. I didn't fill out that so I wouldn't—I don't [*Inaudible*]
25 line drained.

26 Q. Would you accept it means the line was drained?

27 A. Yeah, I could—okay, you would—let's say—let's go ahead

1 with that.

2 Q. From your experience there, could the migration barrier to be
3 used, it was to be used in relation to preventing any things to go
4 into the pipe?

5 A. I can't speculate for what, um, for what—but, it would be—the
6 migration barriers there would have been used for a purpose.

7 Q. What is the purpose?

8 A. To separate the line from the hyperbaric chamber, and, in that
9 effect once the hyper—once the migration barriers are installed,
10 you've separa—you've, you've now kept the Delta P latent, but
11 I would—from my statement I would think it's more from if
12 you had it from a—the explosive environment and the fumes,
13 hydrocarbon fumes get into the chamber where you have men
14 working on, it serves the, it serves the both purpose.

15 Q. Do you think there were any residual hazards for that job that
16 day?

17 A. Residual hazards?

18 Q. Yes, in respect of those works, that day.

19 A. If followed in the method statement, no. If followed, sorry, the
20 work permit. Correction.

21 Q. So, as far as you are concerned, with these permit—with this
22 permit to work there was no risk of a Delta P situation
23 happening that day?

24 A. Correct.

25 Q. Even though you have told us that with the hyperbaric chamber
26 being there with the line cleared, no risk from the 13th of
27 February?

1 A. When the—once the migration barriers are installed, the risk
2 remains latent.

3 Q. Mr. Wei, do you find it surprising that in this permit to work
4 you would have a blank for residual hazards but you have
5 additional precautions, care to be taken when weather
6 conditions change? What you think is more important?

7 A. What you're saying there? I not clear.

8 Q. If you look residual hazards, blank.

9 A. Right.

10 Q. Additional precautions, care to be taken when weather
11 conditions changed.

12 A. Yes. And that's consistent with what I've just said. With
13 respect to divers in the water, if the weather changes seriously,
14 it affects the job. So additional precautions with care to be
15 taken when weather conditions change, I think that is quite
16 clear. Divers in the water, it's a storm, you take the divers out
17 the water.

18 Q. I want to ask you one more question.

19 A. Sure.

20 Q. What do you think was more important for this form, as Paria
21 was concerned, to put a Delta P possibility or to put "Care to be
22 taken when weather conditions change"?

23 A. The one with migration barriers to be used.

24 Q. Migration barriers to be used. Thank you.

25 **Mr. Maharaj SC:** Unless I can be of any assistance?

26 **Examination By Mr. Chairman:**

27 Q. Before I pass over, again, can I just be clear—

1 A. Sure.

2 Q. —I understand your position? Leaving aside whether it was
3 your responsibility or LMCS' responsibility to have considered
4 Delta P or anything like that, from the divers' point of view, the
5 individuals who were going to carry out the job themselves, do
6 you think that if they had cast their eye on the work permit that
7 we've just been looking at, 1074—just put it back up please?
8 The work permit, looking at that document—and scroll down to
9 which—where it shows what documents are accompanying it,
10 you see there this work permit authorizes as I understand the
11 position—

12 A. Yes.

13 Q. —authorizes the team to go and do that job.

14 A. Those specific tasks.

15 Q. Those specific tasks.

16 A. Yes.

17 Q. Right? The specific task as it says, “specific tasks”, doesn't it?
18 Just scroll back again please to A? That's it. It says: “Job:
19 various maintenance works”, and then it says, “Specific tasks”,
20 yes?

21 A. Yes.

22 Q. And they are listed there, aren't they?

23 A. Yes.

24 Q. By your colleague, Mr. Majardsingh.

25 A. Yes.

26 Q. Right. The specific tasks are what you want them to do?

27 A. Or what LMCS would have requested to be done on that day.

1 Q. Yes. Well what you, Paria, the firm, required them to do.
2 “These are the specific tasks we require you to do”?

3 A. There’s a slight difference.

4 Q. Is there?

5 A. This is an independent contractor performing a job.

6 Q. Yes. So you’re telling them what they can do?

7 A. On that day in question—

8 Q. Uh-huh.

9 A. —the—on the meeting that Terrence would have had on the
10 24th they would have explained to Terrence what their plan is
11 for the following day.

12 Q. All right.

13 A. So based on their work plan for that day, the applicant prepared
14 the specific tasks based on that.

15 Q. All right. I think we’re at the same place. We’re in the same
16 place.

17 A. I just want to make that clarification. It’s not that—because
18 there’s a, there’s a thought here that Paria is supervising the
19 contractor.

20 Q. No. I’m not, I’m not interested in supervising, all right?

21 A. So—so the—

22 Q. Mr. Wei, we’re going to get on much quicker if you just help
23 me. If you don’t agree with me, just say I don’t agree.

24 A. Okay, no problem.

25 Q. Right? So, my understanding of what this document is doing is
26 to provide the specific tasks for the teams that are going to
27 carry out the job.

1 A. Correct.

2 Q. Those specific tasks do not tell them, A, in which order to do
3 them, do they?

4 A. No.

5 Q. Or how to do them?

6 A. Correct.

7 Q. Do they? This document, scroll back please to three, has with
8 it, as a standard thing, because this is a preprinted document
9 isn't it?

10 A. Yes.

11 Q. Which you then fill in what you think is important, not you
12 personally but Mr. Majardsingh, and included in that is the hot
13 work certificate, there are numbers given, we've seen it, all
14 right, we get also a "not applicable" for confined space
15 certificate, excavation certificate not applicable, "safe work
16 method statement, see attached". Right?

17 A. Yes.

18 Q. What does safe work method statement mean to you?

19 A. The method statement.

20 Q. Right. Is it to do with how the job should be done as opposed
21 to the tasks to be done?

22 A. It's the work to be done.

23 Q. No, safe method statement please? I want to understand what it
24 means to you. The safe work method statement, does that mean
25 how the job is supposed to be done? If I'm wrong, tell me I'm
26 wrong.

27 A. Yes, how the work supposed to be done.

1 Q. It is. Right. Thank you. And that document is the one which
2 we have, that you've been referred to, called the, um, method
3 statement 116, correct?

4 A. Yes.

5 Q. Which is attached to this working document?

6 A. Right.

7 Q. From the divers' point of view, I'm not looking at LMCS, I'm
8 not looking at Paria, I'm just looking at the diver, the people
9 who are going to carry out this job, all right, if they get this
10 document attached to the worksheet, is that not telling them
11 how to do the job?

12 A. Yes. But not work that is authorized for that day.

13 Q. No well obviously. [*Inaudible*] for a lot more.

14 A. Correct, and the—

15 Q. And it's telling them in relation to those parts of the job that
16 we're concerned with on that day, you were referred to, were
17 you not, paragraph 56 and 57, can we have 1051 back up,
18 please? Go back just one page so that we put it into context for
19 you, Mr. Wei so that I understand.

20 A. Uh-huh.

21 Q. Go to 51. Fifty-one deals with perform die penetration test on
22 the welds to determine acceptability, right, so this is again to do
23 with the integrity of the welds, isn't it?

24 A. Yes.

25 Q. And then, "Thoroughly clean and dry the area to be tested.
26 Perform dye penetration test according to product
27 specifications", and then it gives you the steps. You see that?

1 A. Yes.

2 Q. And then next one 54, “On completion of the weld conduct a
3 pressure test on flange weld”, this is all in sequence, isn’t it.

4 A. Generally, yes.

5 Q. Yes. Well if I get—if the sequence is wrong, you tell me all
6 right? Fifty-five, “On acceptance remove the test hardware”,
7 right? That’s now you’ve done the testing, take it away,
8 correct? Then 56, “Manually remove the migration barrier
9 from the line.” You say that’s wrong, don’t you?

10 A. I’m saying based on what we know now, that that order is
11 wrong.

12 Q. Well based on what we know now we know it’s wrong because
13 four men died.

14 A. Yes, because—

15 Q. Can I just be clear, though?

16 A. If the line—

17 Q. At the time, and I want you to do your best to help me there
18 please because, you know, it’s your firm who’ve attached this
19 document to the worksheet, you see?

20 A. Yes.

21 Q. And I just want to look at it from the divers’ point of view.

22 A. Okay.

23 Q. And I get this and I look at this if I did, and we’ve already
24 heard some evidence he didn’t or we can’t remember doing so,
25 but, if you’re looking at this or you’re being told that this is the
26 order by some other diver, help me please to understand, he
27 would have thought this was the how to do the job, wouldn’t

1 he?

2 A. No.

3 Q. He wouldn't have?

4 A. No.

5 Q. And he shouldn't assume that?

6 A. He shouldn't have assumed that.

7 Q. He should not have assumed that. And the basis upon which
8 you say that is because in your statement you set up the
9 sequence that it should have been in, don't you? Let me just
10 find it again. Yes. You set out the sequence it should have
11 been in?

12 A. Yes.

13 Q. Right? In some detail. And we go to that at page 1281 of your
14 statement?

15 A. Yes.

16 Q. And that's at paragraph 56, the one I was asking about where
17 it's slightly askew?

18 A. Yes.

19 Q. And you list there the 23 steps that you say needed to occur on
20 that day?

21 A. No, not on that day.

22 Q. Or, sorry, not on that day, the day before and that day?

23 A. To completion.

24 Q. Or a longer period? Hmm?

25 A. From the 25th to completion.

26 Q. From 25th to completion, so that's the Friday, Saturday and
27 Sunday? I think it was those three days?

1 A. Yes.

2 Q. Doesn't matter if it's another day, but anyway, those are the
3 jobs that needed doing. But were they intended to be
4 sequential?

5 A. In my, in the—

6 Q. In your, in your statement? Go to—scroll up a little for Mr.
7 Wei, please? No, the other way, sorry. Down a bit. Yes. So
8 you can see there, at 13 it says, "Exit the hyperbaric chamber
9 and return to the crane barge." Fourteen, "Depressure the flood
10 barrier chamber". Fifteen, "Remove the hyperbaric chamber."
11 Sixteen, "Install scaffold Platform." Seventeen, "Measure and
12 cut the top of the riser." Eighteen, "Install flange top."
13 Nineteen, "Conduct the hydrotest of the flange weld." Twenty,
14 "Remove the mitigation barrier installation plug", and then over
15 the page, 21, "Reinstall refurbished topside piping", et cetera.
16 That's the order in which you expected it to be done?

17 A. Yes.

18 Q. Right. Can you tell me where you got that from?

19 A. In discussions with Terrence Rampersadsingh—

20 Q. Right.

21 A. —the experience that you would pull the plugs from outside—

22 Q. Right.

23 A. —and not inside the chamber.

24 Q. When I say where did you get that from, I mean, to put it in this
25 sequence in your statement. As I understood from what you
26 said before you weren't looking at any note—

27 A. Right.

1 Q. —you were just remembering how it went?

2 A. Because now I understand on the steps on how the job should
3 be done.

4 Q. Yes. It's through your own, how can I say, experience?

5 A. Yes.

6 Q. And you've got a very considerable experience, haven't you?

7 A. Yes.

8 Q. Thank you very much. That's all I needed to ask. I just needed
9 to understand.

10 **Examination By Commissioner Wilson:**

11 Q. Afternoon again, Mr. Wei. Again, I intend to more interrogate
12 the process and stuff off of what you said. What I need to know
13 in terms of the permit to work. The permit to work is part of
14 your control of work process, yes?

15 A. Correct.

16 Q. And the control of work process is owned by Paria and not
17 LMCS?

18 A. It's owned by Paria, yes.

19 Q. Great. So, I heard you mentioned that you identified the
20 contractor as a specialist contractor so you depended to be
21 advised by them. Well that—because Paria doesn't have any
22 competent diving personnel—

23 A. Yes.

24 Q. —to assist you with planning or executing the job. So without
25 that competent personnel, how were the control measures that
26 were defined in the risk assessment verified as reducing the
27 risks and can actually be delivered under your control of works

1 system?

2 A. The control of the works would have been on the responsibility
3 of the contractor. For this—on this job here, we selected a
4 contractor—

5 Q. Uh-huh.

6 A. —that was competent in HSC management systems. As a
7 matter of fact, the contractor was STOW certified to the Energy
8 Chamber STOW certified.

9 Q. Which contractor you're referring to?

10 A. LMCS.

11 Q. LMCS?

12 A. So they were STOW certified in the HSC management systems
13 by the Energy Chamber, its STOW implementation board.

14 Q. Well it's interesting here.

15 A. And they were high risk, I think it's high risk level.

16 Q. Uh-huh.

17 A. And their recertification scores were 100 per cent. So, for the
18 services that they were to provide for us, that was a very
19 compelling—that you're a contractor with a very strong HSE
20 systems and culture to execute this job. So we would have
21 depended on the contractor to execute the work in accordance
22 to their safety standards.

23 Q. Under your control of work system?

24 A. Under our control of work.

25 Q. Okay. Now you said something about their STOW
26 recertification. What was that about?

27 A. I know somewhere in the documentation there's a STOW

1 certificate.

2 Q. Right.

3 A. I could recall that. Right? STOW—their certificates, they had
4 a valid STOW certification for the period of the job.

5 Q. And five months prior, I heard it in the room here, they had
6 some prohibition by OSHA?

7 A. Yes.

8 Q. And they got that clearance. Now, under the STOW guidance,
9 if an organization who is—who has the membership of STOW,
10 if there's some prohibition which would bring me to my other
11 question around procurement but I'm just making the point, if
12 you have an incident under STOW and there's a prohibition
13 against you, you can have your membership taken. Was that
14 the case with LMCS? And did your procurement actually
15 interrogate that? Because the incident happened prior—

16 A. Yes.

17 Q. —on your assets. So are you aware that, er—

18 A. No I'm not aware.

19 Q. Okay. But under the STOW, that is something that can happen,
20 their membership could be re[*Inaudible*] but that would bring
21 them back to my question around procurement. As I said I'm
22 kind of testing the policies, practices and stuff. So again,
23 without having any competent personnel on the Paria side, how
24 is it that you, I don't want to use the word competent now but,
25 um, how, how or what was the weighting or the criteria used
26 from Paria and how did you validate that as selecting a suitable
27 contractor if you didn't have the competence on your side?

1 A. Okay, so the evaluation process was one where we looked at
2 the HSE management—the—well, first of all that the contractor
3 understood the scope. So he was required to sign off on the
4 scope and what that meant to ensure that he knew and
5 understood and accepted the scope.

6 Q. Just if I could interrupt? How did you validate that? How did
7 you verify that, then, if you don't have the specialist—

8 A. Right.

9 Q. —um, skills to determine that?

10 A. We would have evaluated from a high, from a higher level,
11 from a high level not going down into all the nitty-gritty details
12 of—because that, for us, we ex—we would have to rely on the
13 expert contractor to provide that. So, the contractor would have
14 provided a method statement for us to look at and in our
15 evaluation it seemed fair and reasonable.

16 The contractor would always have provided a schedule
17 that showed that he understood the sequence, he understood the
18 job. The contractor would have provided a list of previous
19 work conducted, that of similar, of similar complexity, also to
20 the equipment that he has and the competent people to execute
21 the job, respect to the relevant documentation for, let's say, the
22 cranes and stuff like that. So, it demonstrated that the
23 contractor for us was competent to execute the work.

24 Q. But if you don't have anyone to determine, that's why you said
25 you hired a specialist, what was the criteria you used to
26 determine competency or, again, scoring and selection?

27 A. That's why we built into the scope that the contractor has the

1 responsibility for developing—for provision of competent
2 personnel for the job.

3 **Mr. Chairman:** Thank you. Right. Let's see how far we can
4 go please? You're next.

5 **Cross-Examination By Mrs. Persaud Maraj:**

6 Q. Mr. Wei, good afternoon. Kamini Persaud for LMCS. So let
7 me take you right where Commissioner has left in relation to
8 the specialist contractor that you're talking about. You're
9 saying—

10 **Mr. Chairman:** Bring your microphone a little closer to you
11 somewhat?

12 **Continued Cross-Examination By Mrs. Persaud Maraj:**

13 Q. You're saying that LMCS was hired as a specialist contractor,
14 yes?

15 A. Give me a minute.

16 **Mr. Chairman:** I've been saying that for some time.

17 **Mr. Wei:** Yes, but I don't know where she's coming from so I
18 want to be accurate.

19 **Mr. Chairman:** Don't concern yourself to where she's coming
20 from.

21 **Mr. Wei:** I want to—

22 **Mr. Chairman:** If you could confine yourself to answering the
23 question then we will get finished before the end of today.

24 **Mr. Wei:** The term—

25 **Mr. Chairman:** Unless there's something specific you want to
26 refer to.

27 **Continued Cross-Examination By Mrs. Persaud Maraj:**

1 A. The term in the scope of work, I can't remember, but yes, a
2 competent, experienced specialist contractor, I don't know if
3 that's the exact wording in the ITB, but yes.

4 Q. All right. So let me take you to your scope of work, and this
5 would have been coordinated from your office and department,
6 correct?

7 A. Yes.

8 Q. You would have had input in it as well? Can I have the
9 introduction, one—it is page 4196 of the submissions, My
10 Lord. Did you communicate this, that you were looking for a
11 specialist contractor, to the vendors that the ITB went out to?

12 A. When you say communicate it—

13 Q. Yes.

14 A. —verbally or in the bid document?

15 Q. No, I—whilst they're finding it, so, yeah, okay, good. Did this
16 specialist contractor that you were looking for, was that
17 communicated when the invitation to bid went out?

18 A. I was not part of the, um, meetings so I—

19 Q. All right.

20 A. —specifically I can't answer that question.

21 Q. So, okay. So you're looking—Paria—you've been saying that
22 LMCS has been hired as a specialist contractor. So that means
23 you were looking for a specialist contractor to perform the
24 works for the contract which was eventually issued to LMCS?

25 A. Yes.

26 Q. Right. So look at the document in front of you, please? It's
27 your scope of work and at 1.0 it says:

1 “Paria Fuel Trading Company Limited (Paria) is seeking
2 to engage the services of an”—of—well it should be—
3 “an experienced and qualified construction and
4 fabrication contractors for the execution of miscellaneous
5 works detailed below.”

6 Is there—so I’m going to ask the question again, was there a
7 communication that you’re looking for a specialist contractor?

8 A. Right. That’s why I said I wanted to see this before, but the
9 Chairman—

10 Q. No, no, no, no.

11 A. So we were looking for experienced and qualified—

12 Q. Right.

13 A. —construction fabrication contractors.

14 Q. Right. But not a specialist? You would appreciate that
15 specialist would be something different from experienced and
16 qualified? You can accept that?

17 A. For me this is a specialist contractor in the construction and
18 fabrication.

19 Q. So for you this means specialist?

20 A. The specialist—this is specialist services, diving, subsea
21 welding.

22 Q. I’m asking you if from what your document, Paria’s document,
23 which went out to the contractors, if from what I have read,
24 right, you are comfortable by saying that you have
25 communicated to those contractors who would have been
26 bidding that you were looking for a specialist contractor?

27 A. The specific words that were said in the virtual—

1 Q. And the specific words, Sir—

2 A. —in the virtual meeting at the time of the tender, I am not
3 aware of what was said. I was not part of that meeting, so what
4 was communicated then. But on here, Paria is asking for
5 experienced and qualified construction and fabrication
6 contractor.

7 Q. All right. Are you familiar with project management
8 consultant?

9 A. Project management consultant?

10 Q. Yes.

11 A. Yes.

12 Q. Yeah. Can you explain to us what is a project management
13 consultant?

14 A. Someone you can hire to provide the technical expertise for
15 project management.

16 Q. All right. In circumstances where there are specialist oriented
17 work to be performed?

18 A. You can choose, you have the obligation to or you don't need
19 to.

20 Q. When you say you, who do you refer to? We're talking
21 about—I am asking you if in—

22 A. A contracting body. Any company has the option to either to
23 use the option of a project management consultant or not.

24 Q. Isn't it usual in the industry where you are hiring independent
25 contractors or contractors to perform works that you require
26 them to do to have a project management consultant when you
27 don't have on board, like you have said earlier today, on board

1 a specialist or a person duly qualified or a team qualified to—

2 A. It depends but it's not a, it's not a mandatory—it's not
3 mandatory.

4 Q. So it's optional?

5 A. It's optional if you, if you deem so.

6 Q. And Paria has saw it best not to utilize that option to have a
7 specialist consultant or a project management consultant, sorry?

8 A. Yes.

9 Q. Yes. And I would like to take you through the contract, the
10 document that you would have sent. Can I have clause 6.1?
11 Scroll down.

12 [*Crosstalk*]

13 **Mrs. Persaud Maraj:** Six point one one, yeah. [*Crosstalk*]
14 So if you could read that? [*Crosstalk*]

15 **Mr. Chairman:** Five seven three? Sorry, I'm looking at the
16 wrong one, am I?

17 **Mrs. Persaud Maraj:** Right, can you—it, it—the screen's
18 turned toward you so might I ask you to pay—okay.
19 [*Document handed to Mr. Wei*]

20 **Mr. Chairman:** I'm sorry, I'm confused, I'm afraid. I don't
21 know where we're going, what we're doing here. Which
22 document is it you want this gentleman to look at? Six point
23 one?

24 **Mrs. Persaud Maraj:** I have clause 6.1.1.

25 **Mr. Chairman:** Right.

26 **Mrs. Persaud Maraj:** And that would have been part of the
27 scope of—

1 **Mr. Chairman:** The one that's on the screen?

2 **Mrs. Persaud Maraj:** The scope, scope of works.

3 **Mr. Chairman:** Good. Proceed from there.

4 **Mrs. Persaud Maraj:** Right.

5 **Continued Cross-Examination By Mrs. Persaud Maraj:**

6 Q. So it says here:

7 "The contractor shall instruct his personnel on the safety
8 regulations, safe working practices and conditions that
9 are required for an industrial/marine environment and he
10 may seek advice on safety matters from Paria's
11 representative."

12 Do you see that?

13 A. Yes.

14 Q. All right. So you're saying this specialist contractor should
15 seek the advice of Paria who does not have the expertise?

16 A. Okay. Again, you see, the specialist contractor, experienced
17 contractor, is working on the specialized task. He is doing a job
18 in an environment, a facility that has other risk. So, yes, he
19 may seek advice on safety matters from Paria representative
20 with respect to the other risks of running the facility.

21 Q. But wouldn't he have been experienced in that environment? A
22 specialist who's experienced and competent, that is what you're
23 saying. I'm going with what you're saying.

24 A. Correct. He may—

25 Q. So why would he need to seek Paria's—

26 A. He may seek advice.

27 Q. Yes. And—

1 A. If there's something that he doesn't know—

2 Q. —it's written in your contract document.

3 A. —he want's clarity on, he can—he may seek advice.

4 Q. Okay. Can we go to 6.3.8? Right. It says there:

5 “The contractor is responsible for provision of the job
6 safety method statement, job hazard analysis and risk
7 assessment which will be reviewed by Paria's
8 representative.”

9 We've accepted that that is your process.

10 A. Yes.

11 Q. Right. I know this will be a repeat of what Mr. Commissioner
12 has asked you, but in the instance where Paria is not the expert,
13 in the reviewing of these documents, what is the standard by
14 which the presentation from the company is judged and dealt
15 with?

16 A. Run that question again?

17 Q. So, when LMCS would have presented to Paria its method
18 statements and job safety hazard analysis and risk assessments
19 for Paria to review, being that you're not the specialist or you
20 don't have the understanding and expertise to the extent of a
21 specialist, right, how would the submissions from the contractor
22 be properly adjudicated upon?

23 A. That would be on the onus of the specialist contractor to be
24 competent to develop the method statement and risk
25 assessment, identify the hazards.

26 Q. So then that process of submitting for approval to Paria it's just
27 a named process? There is no—

1 A. No, no.

2 Q. —purpose behind that, that mechanism?

3 A. The purpose here is to ensure that the contractor develops a
4 method statement and hazard analysis, would have gone
5 through a due process of developing a method statement and a
6 job hazard analysis and risk assessment.

7 Q. And I understand that, Sir.

8 A. Right.

9 Q. But in developing those documents and they're sending it to
10 you for review and approval—

11 A. Right.

12 Q. —right, what mea—by what measure—

13 A. As I mention again—

14 Q. —or standard—

15 A. —Paria—

16 Q. —are you going—

17 A. —Paria would not be respon—

18 Q. —verify—

19 A. —Paria will not be able—

20 Q. Sorry.

21 A. —Paria would not be able—

22 **Mr. Chairman:** One moment, please? I think, if I may say
23 so—

24 **Mrs. Persaud Maraj:** Yes.

25 **Mr. Chairman:**—what Mr. Wei is trying to say is there's no
26 point in buying a dog and then barking yourself.

27 **Mrs. Persaud Maraj:** Yes.

1 **Mr. Chairman:** And he is saying, in effect, that, you know,
2 has employed this specialist, rightly or wrongly, without any
3 verification or whatever we conclude, but he—what he’s
4 relying on is he’s saying, “I’m relying on LMCS as the
5 specialist.” Am I right?

6 **Mr. Wei:** Yes.

7 **Mr. Chairman:** And therefore there is no room for me to
8 review it. That is what he’s saying. Whether we accept that of
9 course is a matter for—in due course.

10 **Mrs. Persaud Maraj:** Um, and, I, and I can, I can move on
11 from this.

12 **Continued Cross-Examination By Mrs. Persaud Maraj:**

13 Q. I’d like to take you to the method statement prepared, 116—
14 116, method statement. On the core bundle, 1048. Right. So
15 you’d have familiarized yourself with this document by now?
16 You’ve had two persons question you on it. I would like to
17 take you to paragraph—to number 86 on page—

18 **Mr. Chairman:** 1052.

19 **Mrs. Persaud Maraj:** Thank you.

20 **Continued Cross-Examination By Mrs. Persaud Maraj:**

21 Q. Eighty-six reads:

22 “Repeat steps 15 to 28 to install migration barrier and
23 mechanical plug just below proposed location of new
24 topside flange.”

25 **Mr. Chairman:** Can you scroll up the page so that Mr. Wei
26 can see the heading under which this is?

27 **Continued Cross-Examination By Mrs. Persaud Maraj:**

1 Q. You see that?

2 A. Yes.

3 Q. All right. So, would you like to see what the steps are from 15?

4 A. No, okay, that's okay. I know that.

5 Q. You're familiar with it because you're familiar with the
6 methodology.

7 A. I'll ask a question and if I need to refer back, I'll—

8 **Mr. Chairman:** Well, I would like to see it, so can you put it
9 up on the screen, please? Fifteen?

10 **Continued Cross-Examination By Ms. Persaud Maraj:**

11 Q. So what do you understand by "Repeat steps 15 to 28"—

12 A. To repeat—

13 Q. —in the method of the work? Now you're saying that the plug,
14 the mechanical and the inflatable plug, the barrier in particular,
15 that's what you've said, the barrier was to remain and that—
16 those—that—the barrier consists of as we know two plugs?

17 A. Yes.

18 Q. Right? So you're saying that was supposed to remain in the
19 riser section to the, under the sea, and not to be taken out?

20 A. Correct.

21 Q. So now I'm asking you, in relation to this step here that is on
22 the method statement, as part of the methodology in the
23 performance of the work, what do you understand when it says,
24 "Repeat steps 15 to 18 to install migration barrier and
25 mechanical plug just below the proposed location of the new
26 topside flange"? What is this step saying to you?

27 A. To reinstall the plug.

1 Q. All right. And in order to reinstall the plug, wouldn't that
2 necessitate the taking out of the plug from below? Would you
3 accept that to be true?

4 A. In that method statement, yes.

5 Q. Okay. So in other words, you would accept that according to
6 the method statement the plugs were to be removed, the
7 mechanical barriers were to be removed?

8 A. I not saying that.

9 Q. You're not saying that?

10 A. I not saying that. That's conflicting what I said. The method
11 statement, the lines that you mentioned with the removal of the
12 plugs, right, that should not have been, I mean, contemplated
13 then, according to my statement, because you would a have the
14 ingress of the fumes.

15 Q. Okay. Can you tell us who Terrence Rampersadsingh is?

16 A. Terrence Rampersadsingh was the planner—

17 Q. Planner?

18 A. —Paria planner assigned for offshore works.

19 Q. All right. There is—can you go to page, of the supplemental
20 witness statement bundle, page two nine two four? So, this is
21 an email from LMCS to Terrence Rampersadsingh on the 4th of
22 January, 2022. And if you can, can you please read that out?
23 Can you see that sufficiently clear?

24 A. Yes.

25 Q. Yes. Would you, would you care to read that?

26 A. You want me read it out loud?

27 Q. Yes you can.

1 A. Oh, sorry.

2 Q. You can read it out loud.

3 A. No, I'll read it personally. [*Pause*] Yes.

4 Q. Have you read it?

5 A. Yes.

6 Q. To yourself? For the benefit of everyone—one second, please?

7 I would care to read that out loud for the benefit?

8 **Mr. Chairman:** All of it?

9 **Mrs. Persaud Maraj:** Not all of it, just—

10 **Continued Cross-Examination By Mrs. Persaud Maraj:**

11 Q. It says:

12 “See attached documents for a captioned job with revised
13 method statement. To answer the question asked,
14 question one, will the inflatable plug also be raised to the
15 top of the new riser section when cutting and welding of
16 the new flange above water?”

17 And the answer was:

18 “Yes. Both the inflatable plug and the solid barrier will
19 be reinstalled at the top before hot works begin. Step 86
20 has been updated. And will the new”—and then question
21 two and then it goes on. “Will the newly installed flange
22 above the water need to be—[*Inaudible*] within the
23 chambers?”

24 Okay so it's the first question that I would point you to,
25 right? So that would have been a question that were asked and
26 it's been answered and at the foot of that email, we see Ahmad.
27 You see that?

1 A. Yes.

2 Q. Okay. So I can tell you that Ahmad is a representative of
3 LMCS. He is the HSE officer. Yes?

4 A. Yes. So are you saying that—

5 Q. And he's saying to Rampersadsingh in a specific email dealing
6 with the methodology that has been submitted to Paria what
7 exactly is to be done.

8 A. Okay.

9 Q. Now you see that?

10 A. Yeah.

11 Q. And do you see that it's clear that the plugs were to be
12 reinstalled at the top?

13 A. What I see there is Ahmad, based on what he was—with
14 respect to the job, he did not see that there was a hazard to 56.

15 Q. I'm not asking you about a hazard.

16 A. Or no because a hazard question being asked, I don't know who
17 asked that question, right, and I don't know—

18 Q. I appreciate that. I appreciate that.

19 A. But the question here—

20 **Mr. Chairman:** Well, hang on, just a minute? Can you scroll
21 down so that Mr. Wei can see, no scroll the other way, sorry,
22 the other way, so you see the top, yes. It's using, on the face of
23 this, Mr. Kazim Ali's email address and being sent to Mr.
24 Terrence Rampersadsing's email address but it's signed off by
25 Ahmad, all right? So that's, that's what we have.

26 **Mr. Wei:** Yeah, but, I don't know who sent the question, but if
27 it's—what I know is Ahmad is answering some questions with

1 respect to the reinstallation of the plugs, so—

2 **Continued Cross-Examination By Mrs. Persaud Maraj:**

3 Q. No Ahmad is answering, to answer the question asked so he's
4 answering.

5 A. So, so it's Ahmad seems to have—

6 Q. With respect to who—

7 A. —picked up the first—

8 Q. Sir—

9 **Mr. Chairman:** One at a time, please? One at a time. Let Mr.
10 Wei speak.

11 **Continued Cross-Examination By Mrs. Persaud Maraj:**

12 Q. Yes. Go ahead, Mr. Wei.

13 A. Ahmad is saying to reinstall the plugs, so that should—Ahmad
14 should have—Ahmad could have seen that the plugs should not
15 have been moved. Is that what you're saying?

16 Q. No. I'm saying exactly what is being said that the plug has to
17 be reinstalled at the top.

18 A. I don't know who asked this question so I'm speculating here.

19 Q. I don't need you to speculate, Sir.

20 A. If, if—

21 Q. I'm simply asking you to—

22 **Mr. Chairman:** I'm not going to permit this, right? If you can
23 ask a question, he can answer it.

24 **Mrs. Persaud Maraj:** Certainly.

25 **Mr. Chairman:** When he's finished answering it, then you can
26 ask a question.

27 **Mrs. Persaud Maraj:** I'm guided, please.

1 **Mr. Wei:** Would this not show that Ahmad could have seen
2 that step—if step 56 and 57 was incorrect he should have
3 picked it up here. Because someone asked why you're reinstall
4 the plug? He knew that if you removed the plug then you
5 would have hydrocarbon vapour making explosives, so that's
6 one. So I think that's what you're trying to tell me?

7 **Continued Cross-Examination By Mrs. Persaud Maraj:**

8 Q. No. I'm just trying to confirm that indeed Ahmad is indicating
9 that the plugs will be reinstalled—

10 A. Yes that's what you're seeing there.

11 Q. —thereby the inference that the plugs would be removed.

12 A. So—

13 Q. Because you have said that the plugs ought not to have been
14 removed.

15 A. Right, and, this here says that Ahmad should have seen that he
16 should not have removed the plugs.

17 Q. Where, in that statement, is it saying that Ahmad should not
18 remove the plug?

19 A. Because if someone asked him to reinstall that plug and he was
20 thinking about it, he would say, if I remove the plugs inside the
21 Chamber that's a hazard, so she should have seen that this was
22 not feasible. And then, further, the reinstallation of the plugs
23 would not have been possible because there was this bar, as I
24 mentioned earlier, at the top. So, to me here this shoulda—
25 LMCS with this here, Ahmad should have specifically seen that
26 the 86 steps could not have been done because of the bar, the
27 lifting bar at the top and he should have seen that 56 and 57

1 steps, it should have alerted him to 56 and 57. Well that's what
2 I'm, that's what I'm reading here.

3 Q. So in other words what you're saying to us is that from the
4 information being given by Ahmad, to Mr. Rampersadsingh,
5 somebody should have said that this ought not to have been
6 done?

7 A. I would expect Ahmad to have said that, looking at that.

8 Q. Okay.

9 A. But I don't know the full context of the email, eh, so—

10 Q. And I appreciate that. I would like to ask you some questions
11 on the permit to work.

12 **Mr. Chairman:** Before you do that—

13 **Mrs. Persaud Maraj:** Yes.

14 **Mr. Chairman:** Before you do that, I think it's only fair that
15 you draw Mr. Wei's attention to the preceding email. This is an
16 email—

17 **Mrs. Persaud Maraj:** Below?

18 **Mr. Chairman:** Yes. This is an email that you've referred
19 him to of the 4th of January, Tuesday, the 4th of January, 2022
20 at 3.59. There's an mail preceding that which is at the bottom
21 of the page, which is the 4th of January, '22 at 1.22 and this is
22 from Kazim Ali again and it appears to be to Terrence
23 Rampersadsingh. So there are two emails.

24 **Mrs. Persaud Maraj:** Yes, yes.

25 **Mr. Chairman:** And there are, for the [*Inaudible*] if you go
26 over the page it says: "Good day. See attached documents for
27 the above captioned job." This is from Ahmad Ali to

1 Rampersadsingh.

2 **Mrs. Persaud Maraj:** Yes.

3 **Mr. Chairman:** And he includes in that the method statement,
4 the job safety analysis and the lift plans. Are they not the
5 documents that were attached to the work schedule?

6 **Mrs. Persaud Maraj:** That is certainly—those were the
7 documents attached.

8 **Examination By Mr. Chairman:**

9 Q. So you can see there, Mr. Wei, that the very documents that I
10 was referring to that have been attached to the work for that day
11 or the days that were to be done are the very documents that
12 apparently seem to be attached and being sent to your Mr.
13 Rampersadsingh.

14 A. Yes.

15 Q. Yes. So could we take it, since he was the person who was
16 carrying out the meeting and authorizing the work, he attached
17 these documents to that work permit which you referred to in
18 your statement which we've spoken about?

19 A. Yes. Those—well not he specifically would have attached it,
20 but, those were the documents that would have been with the
21 permit to work.

22 Q. Well, he says, doesn't he, and it's in this email, the job here is
23 to perform the work of replacing the leaking section of SL36
24 riser at berth 6. Work tasks include, and he sets them out, and
25 we needn't read them all now, but, we could see what he's
26 saying there, can't we? It supplements, does it not, what he set
27 out in his method statement? Yeah?

1 A. So the steps that he has here with, um—Ahmad writes here:
2 “Work tasks include installation of migration barrier and line
3 plug.”

4 Q. Yes.

5 A. “Installing the hyperbaric chamber on to the existing riser.”

6 Q. Yes.

7 A. Which at this point would have already had topside piping
8 removed. “Displacing all seawater from the chamber with
9 breathing air. Cut the leaking riser segment off. Evacuating
10 and flooding the chamber. Removing the cut section with barge
11 deck. Installing new riser piping.” Not remove plugs and
12 install, eh, “Installing new riser piping.”

13 Q. Yes.

14 A. “Displace water again, couple flange faces and coat
15 specifications, removing the chamber and cutting the new riser
16 pipe to length above water.”

17 Q. Yes.

18 A. And after that step would have been the removal of the plugs.

19 Q. Well it doesn't say that.

20 A. It says it here.

21 Q. Sorry? It doesn't say after that would be the removal of the
22 plugs.

23 A. Well, at this stage here for him to return the system to Paria, he
24 would have to then remove his isolation which is the migration
25 barrier.

26 Q. Yes.

27 A. So, on face value, after cutting the new pipe riser, pipe to length

1 above the water—

2 Q. Uh-huh.

3 A. —the next step would have been remove migration barriers.

4 Q. And, and—

5 A. This is what—

6 Q. —I showed it to you.

7 A. Thank you very much, Chairman.

8 Q. No, no of course but that on its own one can readily appreciate
9 that that must be how it was understood to be. What I'm not
10 clear about is what then comes with what you've been asked
11 about, about changing the steps 15 to 28 and then repeating
12 them at 86? Do you see, scroll back again please? Question,
13 question one, "Will the inflatable plug also be raised to the top
14 of the new riser section when cutting and welding for a new
15 flange above water?" Is that a question suggesting the plug is
16 going to be moved, the inflatable plug is going to be moved?

17 A. Yes, this is a suggestion that the inflatable plug will be removed
18 out of sequence as what they had in his email—

19 Q. Yes.

20 A. —preceding.

21 Q. Quite. Well, and then the answer is yes, both the inflatable plug
22 and the solid barrier will be reinstalled at the top before hot
23 works begin. Step 86 has been updated to reflect this. Now,
24 blah blah blah. So, without looking at the works, the statement,
25 the method statement, without looking at that, that would
26 suggest that you're taking the, the, the, the, um, chamber off
27 and then reinstalling the plugs at some point. Is that what you

1 understand it to be?

2 A. Removing the chamber and reinstalling the plug, the step here?

3 Q. Yeah, well—

4 A. Yes.

5 Q. —you see what I want to know is what do you understand this
6 to mean, right? Because on its face it suggests—it doesn't say
7 anything about the removal of the plugs in the first email, does
8 it?

9 A. No.

10 Q. No. It talks about putting them in.

11 A. Talks about putting them in.

12 Q. Right. And then this second email is talking about reinstalling
13 the plugs and I want to know whether you understood this to
14 mean after the hyperbaric chamber has been taken off, before
15 it's been taken off, and what did you understand this to mean?

16 A. This would be after the hyperbaric chamber has been removed.

17 Q. Right. So the plugs would have been removed at some point,
18 you say also, after the hyperbaric chamber has been taken off?

19 A. Yes. After the hyperbaric chamber has been removed then you
20 remove the plugs.

21 Q. And then put them back in again?

22 A. No. There would be no need to remove the plugs after the
23 hyperbaric chamber is removed.

24 Q. Well, that's what I want to understand.

25 A. Only when you finished the job.

26 Q. That's what I want to understand. Are you putting the plugs
27 back in again after you've taken them out and after you've

1 removed the hyperbaric chamber?

2 A. If the plugs were—the plugs were not to be removed. If the, if
3 the plugs are not to be removed—

4 Q. Well they've got to come out at some time.

5 A. Right, but at the end of the job.

6 Q. The job [*Inaudible*], right?

7 A. At the end of the job.

8 Q. So you tell us that your understanding is that these plugs have
9 to come out when the hyperbaric chamber has been removed.

10 A. Correct.

11 Q. Good. And then—but why would you be putting them back in
12 again?

13 A. You would take them out when the job is finished. There was
14 no need to put it back in.

15 Q. Right. So this is—

16 A. Had they not been—

17 Q. —to use a, to use a quaint English expression gobbledygook?
18 It means nothing, does it? What is the point of putting them
19 back in again?

20 A. Okay. This here went on the assumption that the plugs were
21 removed inside the chamber—

22 Q. Yeah.

23 A. —and then to reinstall them from outside the chamber.

24 Q. Right. So, it was clear, at least to Mr., um, Rampersadsingh,
25 that that's what they were going to do? If not to you.

26 A. I, I don't know because I don't know what he would have read
27 and what he would have thought of.

1 Q. No, well we'll ask him in due course, but, I mean just on its
2 face, Mr. Wei, so that I understand please—

3 A. Yes.

4 Q. —because I've always understood your evidence to be quite
5 clear about this—

6 A. Right.

7 Q. —that this hyperbaric chamber has to be removed first—

8 A. Right.

9 Q. —before you touch—have anything to do with touching these
10 barriers.

11 A. So—right. In my statement the step I said was remove
12 hyperbaric chamber—

13 Q. Yes.

14 A. —and then cut to the required length.

15 Q. Yeah.

16 A. And after that work is finished then you are able to remove the
17 hyperbaric—then you are able to remove the plugs.

18 Q. Right I'll let it—

19 A. If you remove it out of sequence before, you would have then
20 have fellas—before you put on the new riser, you would have
21 had hydrocarbon vapours entering the hyperbaric chamber.

22 Q. Yes, we're departing from the issue here.

23 A. Yeah.

24 Q. I just want to know what the point of putting them back in is.

25 A. In this one, in this statement here, it is considering that the
26 plugs were removed inside the chamber successfully.

27 Q. Yes.

1 A. And then there was additional hot work that was required to be
2 done again.

3 Q. Right.

4 A. So the plug needed to be installed again.

5 Q. So take them out, then remove the—this is what this is saying.
6 Take them out, remove the hyperbaric chamber, there's more
7 hot work to be done so put them back in again?

8 A. Yes.

9 Q. Right. That's what you understand it to mean, is it?

10 A. Yes.

11 Q. Okay. Thank you very much.

12 **Mr. Chairman:** I'm sorry to have interrupted. I'm conscious
13 of the time but we are going to proceed.

14 **Mrs. Persaud Maraj:** I'm grateful.

15 **Continued Cross-Examination By Mrs. Persaud Maraj:**

16 Q. So, you've touched on hydrocarbons so I'd like to move to the
17 hydrocarbon point. In your witness statement at paragraph 85
18 you say this, and, please allow me to read?

19 "More importantly, the removal of the migration barriers
20 would have caused a dangerous disturbance of the
21 atmospheric conditions inside the hyperbaric chamber
22 and the differential pressure between inside the pipeline
23 and inside the chamber. With regard to the former, it
24 would have allowed the hydrocarbon fumes from the
25 pipeline to enter the chamber which would then
26 contaminate the breathing air inside the chamber."

27 Right? And I think that's the point that you have been making

1 in relation to the removal of the barrier in relation to the aspect
2 of the safety mechanism that it provided—

3 A. Yes.

4 Q. —with respect to the hydrocarbon. Do you know the content,
5 the—of the, the kind of liquid that was in the 36 Sealine?

6 A. Fuel oil.

7 Q. Fuel oil. All right. And, what can you tell us about flash point?

8 A. I—with respect to the flash point of fuel oil?

9 Q. Yes.

10 A. I don't know it offhand.

11 Q. Okay. But can you explain to us what is a flash point?

12 A. The point at which the, the, the car—the hydrocarbon would
13 ignite.

14 Q. Would ignite or the vapours start rising?

15 A. I can't recall. Flash point, there's a—just help me with the
16 definition because, um—

17 Q. Sorry?

18 **Mr. Chairman:** I mean, do we need to develop this? I mean, I
19 think we can all appreciate that we don't want to be breathing
20 in fumes from hydrocarbons and if that's what he was trying to
21 safeguard then that seems to be highly reasonable.

22 **Mrs. Persaud Maraj:** Well, if I may—can you please find
23 page 76 of the, of the, um, core bundle?

24 **Mr. Chairman:** What are we looking for?

25 **Continued Cross-Examination By Mrs. Persaud Maraj:**

26 Q. So we have here, so this is a Paria Fuel Trading document, yes?

27 A. Yes.

1 Q. Right. And you will see fuel oil and then we have some
2 description below. Let me take you to line one, two, three,
3 four, five, six, seven, seven, vapour density. Do you see that?

4 A. Yes.

5 Q. All right. And it says that it's heavier than air.

6 A. Yes.

7 Q. Do you see that?

8 A. Yes.

9 Q. Can you explain that to us?

10 A. That the density of the vapour is heavier than air.

11 Q. Right. So in the hyperbaric chamber can you tell us what is
12 introduced in the hyperbaric chamber for it to have a dry
13 environment?

14 A. Normal air, air.

15 Q. Air. So in other words, what it's saying is that in simple lay
16 language, the density or the vapour density of the fuel oil is
17 heavier than the air that is introduced in the hyperbaric
18 chamber?

19 A. At standard operating—at standard temperature and pressure.

20 Q. At standard pressure. So in other words, there would have been
21 less likelihood of there being an issue with respect to
22 hydrocarbon inhalation that leads to some unsafe environment?

23 A. Okay. That is—you have to consider other factors.

24 Q. Certainly.

25 A. Right? One, temperature.

26 Q. Right.

27 A. The temperature would affect the density.

1 Q. Yes.

2 A. Meaning that if it's hotter it would be able to mix. Also, the air
3 has in the hyperbaric chamber and there's air coming in the
4 hyperbaric chamber for one to keep the pressure in. So there
5 are air currents inside. So with air currents inside and the line
6 open, air is going to enter the line and displace the air.

7 Q. Uh-huh.

8 A. Right? The air is coming to, so—so it's difficult to say that
9 there is no hydrocarbon coming in but there definitely will be
10 hydrocarbon coming in.

11 Q. All right.

12 A. So, as part of the risk assessment, you would isolate it so you
13 don't have that possibility. You install a physical barrier. And
14 that—so, yes, I understand you, you, you are alluding that if
15 it's, if it's fill of, um—if it's vapour that it's heavier than air it's
16 not going to enter the chamber.

17 Q. Right.

18 A. No, it's not water. Water will not rise but water will evaporate.
19 In this case here the vapour, the VOCs, even though it's dense,
20 heavier than air written here, with the air currents inside
21 because you have air blowing in the chamber—

22 Q. Right.

23 A. —it's going to stir it up.

24 Q. All right. So let me take you to the third line above that line
25 across the document that you're seeing. Right there. Sorry.

26 A. Third line.

27 Q. It's—okay, it's one, two, three, four, five, the sixth point, flash

1 point, 66 zero Celsius? No, we're still on fuel oil. Right. So
2 the flash point is 66 degrees Celsius. And that would mean that
3 at that point in time, 66 degrees, degrees Celsius would be
4 when the vapours would become a danger, from a safety point
5 of view?

6 A. Okay. Flash—define flash point again for me?

7 Q. Well you defined the flash point.

8 A. You were telling me that that's the temperature at which it
9 evaporates. Is that what you're saying?

10 Q. That is what you said?

11 A. Okay, eva—trying to remember my basic level physics but
12 evaporation can occur at any temperature.

13 Q. All right. So it's not necessarily at 66 degrees?

14 A. You can have evaporation occurring at 25 degrees.

15 Q. All right.

16 A. And you can—but the flash point, yeah, is 66.

17 Q. And you were explaining just now about the environment of the
18 water or the environment around the, around the, the liquid
19 within which the vapours would be emitted.

20 A. So, so—

21 Q. And that would have, that would have a bearing in relation to
22 the flash point—

23 **Mr. Chairman:** I'm, I'm calling—I'm sorry, I'm going to call
24 a halt to this. Sixty-six degrees Centigrade is about 150 in old
25 money, Fahrenheit. I don't see how this really is going to help
26 us come to any conclusion. What he is saying is, is that he is
27 mitigating, at least in part, the possibility of these gases coming

1 into the chamber. I don't see anything wrong with that at the
2 moment.

3 **Mrs. Persaud Maraj:** I understand, Mr. Chairman.

4 **Mr. Chairman:** Is there any remote possibility or not it seems
5 to be not an unreasonable precaution to make.

6 **Mr. Wei:** And in addition to the flash point evaporation, there
7 are dissolved gasses, dissolved hydrocarbon in the fuel oil.

8 **Mrs. Persaud Maraj:** Right.

9 **Mr. Wei:** That can evaporate also or can diffuse out or come
10 out of solution in the fuel oil.

11 **Mrs. Persaud Maraj:** But—

12 **Mr. Chairman:** Enough. Move on please? Next question.

13 **Mrs. Persaud Maraj:** I'm grateful.

14 **Continued Cross-Examination By Mrs. Persaud Maraj:**

15 Q. So let me take you to the permit to work which is on 1074 of
16 the core bundle, and I'd move quickly in relation to the specific
17 tasks.

18 A. [*Document handed to Mr. Wei*]

19 Q. So we have here, and I'll read it out very quickly:

20 "Specific task, to remove and install 50-inch flange.
21 Remove and install 30-inch riser pipe. Remove 30-inch
22 solid blank. Conduct pressure test on flange weld,
23 remove chamber and blank top of new riser."

24 Can you say within these steps, these specific tasks, can you
25 point us to where the new riser is bolted on on make up to the
26 flange of the old section?

27 A. The step, "Install 30-inch riser pipe".

1 Q. All rat. Can we go to paragraph—your witness statement
2 paragraph 56 where you would have listed the steps to be
3 taken? I would like to point you to number 11 that says, “Make
4 up mating flanges”. Do you see that?

5 A. Yeah.

6 Q. Right. And the making up of the mating flange is the actual,
7 the actual completion of the connection between the old riser
8 section and the new riser section, correct?

9 A. Yes.

10 Q. Right. And you would appreciate that in the specific task
11 mentioned in the permit to work, that has not been listed?
12 You’re saying that it is, it is the installation?

13 A. Okay. The tasks, install 30-inch riser pipe, to install it would
14 include the making of the flanges. In my, in my description, I
15 would just put a little bit more detail in what would have been
16 required.

17 Q. So you’re more detailed than the—your explanation is a lot
18 more detailed than what has been the specific tasks listed in the
19 permit to work?

20 A. Yes.

21 Q. Yes.

22 A. Because the purposes are different, eh. I wrote that here for the
23 Commission to get information to understand this as clearly as
24 possible, so I put a little bit more steps into it. So to, to say
25 that, that was the reasoning.

26 Q. So inherent, so then you will accept that inherent in the
27 explanation of the specific task that is listed in the permit to

1 work are steps that are not necessarily explicitly stated?

2 A. There can be, yes.

3 Q. All right. And would you accept that one of those steps is
4 indeed the removal of the barrier?

5 A. No.

6 Q. The plugs?

7 A. No.

8 Q. No?

9 A. No.

10 Q. But we're removing the chamber?

11 A. Remove chamber, yes.

12 Q. And leaving the plugs inside, that is what you're saying was
13 what had to have been done?

14 A. Yes.

15 Q. Irrespective of the fact that we would have seen the method
16 statement that said otherwise and an email correspondence that
17 implied otherwise?

18 A. That is in my statement.

19 Q. Thank you. All right. I'm trying to move as quickly as
20 possible. I would like to go back to some things you've said
21 this morning, Mr. Wei. In answer to Counsel for Commission,
22 you said that LMCS had lost its standby diver and had no one to
23 assist. You recall that?

24 A. Had lost their standby diver? I recall something of the nature,
25 yes.

26 Q. Right. Do you mean it's rescue diver?

27 A. Standby diver would also be in the term rescue diver.

1 Q. All right. And it has no one to assist. Was—were you aware
2 that Andrew Farah was present?

3 A. Andrew Farah was the dive supervisor.

4 Q. Right. And do you know one Dexter Guerra?

5 A. In the—Dexter Guerra, yes.

6 Q. And you're aware that he's also a diver, a PADI certified diver?

7 A. Yes.

8 Q. With LMCS?

9 A. Yes.

10 Q. So it wouldn't be true for you to make the statement that there
11 was no one to assist?

12 **Mr. Chairman:** Are you saying Dexter Guerra was there?

13 **Mrs. Persaud Maraj:** Yes.

14 **Mr. Wei:** If you—for this project, LMCS would have provided
15 an organization structure and manpower. On the list of divers,
16 Dexter Guerra name was not listed as a diver. He may have the
17 diving capability but he was not listed as a diver.

18 **Continued Cross-Examination By Mrs. Persaud Maraj:**

19 Q. We're dealing with an instance of emergency, would you
20 agree?

21 A. I do.

22 Q. You have a certified—

23 A. I, I have to review it—I, I have a idea that he used to dive. I
24 wasn't sure if it was—if he was able to dive.

25 Q. That's fair.

26 A. Because there would—I don't know his condition, so—

27 Q. You would have, you would have—

1 A. That would be for the dive supervisor to decide.

2 Q. Sorry?

3 A. No, go ahead.

4 Q. You would have also said that LMCS had no plan in place in
5 relation to what had happened after the emergency, yes?

6 A. They didn't come forward with any plan of rescue.

7 Q. They did not come forward to the IMT, to you, to anyone in
8 specific?

9 A. To the site coordinator or even to—

10 Q. Right. So the site coordinator would have been Catherine
11 Balkissoon?

12 A. Yes.

13 Q. All right. And she would have been informing the incident
14 command management team?

15 A. She would have been the communication to the incident
16 commander, yes.

17 Q. And she did not communicate any plan that was communicated
18 to her from LMCS?

19 A. Ask that question again?

20 Q. She did not communicate to the IMT any sort of plan or request
21 by LMCS in relation to the diving?

22 A. No.

23 Q. No.

24 A. No.

25 Q. Are you aware that there was communication between Andrew
26 Farah and Catherine Balkissoon?

27 A. I don't know.

1 Q. Have you, have you been famil—are you familiar with the
2 name Conan Beddoe?

3 A. Yes.

4 Q. Conan Beddoe, Conrad Beddoe?

5 A. Yes.

6 Q. All right. And these are divers?

7 A. Yes.

8 Q. And were you aware on the day in question, that's on the 25th,
9 that these—Paria had arranged for their quick entry on to
10 Paria's compound in response to the incident?

11 A. I know Paria would have aided in some, in some, um, divers to
12 come on the site, yes.

13 Q. Right. And would you agree that that was for the purpose of
14 executing an—a rescue, a rescue plan, a rescue effort?

15 A. Yes, they were there for a rescue effort.

16 Q. Right. And they would have supplied—they were supplying
17 manpower and equipment, additional equipment?

18 A. Yes.

19 Q. Yes. And these two men were not related to anyone who would
20 have been sucked into the pipe, to the best of your knowledge?

21 A. I'm not familiar with their family and their friends.

22 Q. Okay. [*Pause*]

23 **Mrs. Persaud Maraj:** I think I'm happy to say, Mr.
24 Commissioner, that those are all the questions that I have for
25 Mr. Wei.

26 **Mr. Chairman:** Well if nothing is coming readily to mind, I'll
27 take advantage of that. Thank you. I see somebody with his

1 hand up.

2 **Mr. Ramadhar:** Thank you very much, Sir. On behalf, of
3 course, the family of Kurbans and—

4 **Mr. Chairman:** You're going to have to be very brief, I'm
5 afraid.

6 **Mr. Ramadhar:** I shan't—I'm never very long in these
7 matters. Thank you so much.

8 **Cross-Examination By Mr. Ramadhar:**

9 Q. Sir, you were part of the incident management team, correct?

10 A. Yes.

11 Q. You're a technical man, a man with—you're a technical person,
12 technically minded, aren't you?

13 A. I would—yes.

14 Q. Yes. How do you rate the management of this incident on that
15 day? How would you rate the management of the incident on
16 the 25th that caused four men to perish? How would you rate
17 yourselves? You heard the Chairman. We do not have all
18 evening, please? Take your sip of water.

19 A. I would rate it as excellent.

20 Q. Thank you very much. Four men died on an incident that you
21 were to manage and you consider that excellent? Thank you
22 very much. You have a good memory because you were telling
23 us that you were able to put your statement together from
24 memory. Give me the names of the four dead.

25 A. Kazim Ali Jr.

26 Q. Yes.

27 A. Faizal Kurban.

1 Q. Yes.

2 A. Rishi Nagassar.

3 Q. Yes.

4 A. And Yusuf Henry.

5 Q. Excellent. That is excellent. Now tell us this. What is the
6 highest priority after an accident occurs?

7 A. Stabilizing the site and not putting other lives at risk.

8 Q. Stabilizing the site meaning property, correct?

9 A. Not—yes.

10 Q. Yes.

11 A. No.

12 Q. Yeah, no, make up your mind, Sir. We don't have all evening.

13 A. Yes.

14 Q. Stabilizing the site you said that's the first priority?

15 A. So that you don't con—so that you don't—

16 Q. Uh-huh.

17 A. —continue to have the hazards and danger to other people.

18 Q. To other people. So at that—

19 A. So suddenly—

20 Q. —moment—

21 A. You want me to finish? You asked me a question.

22 Q. Go ahead. My Lord, please don't take the time out from me.
23 Yes.

24 A. Right? And also to ensure that further life is not lost.

25 Q. Thank you. Is that the end of your answer? You appreciate
26 first responders on a daily basis, whether police or firemen, put
27 their lives at risk to help others? You agree with that?

1 A. Yes.

2 Q. Yes. When was the first moment you went down to that site
3 where these men died, you?

4 A. Personally?

5 Q. Yes, yes, you, you.

6 A. I would have gone on the site, on the site, and my statement
7 would have it.

8 Q. I'm not interested in your statement. Tell us now. Did you
9 even go? Sir, did you even go?

10 A. Yes. But you also have to understand—

11 **Mr. Chairman:** Allow him to look at—allow him to look at—

12 A. Yes, I went to the—I went to the site.

13 **Mr. Chairman:** Allow him to look.

14 Q. The anxiety of time. That's—

15 A. But you also have to understand my role—

16 Q. I don't have to understand. You'll answer the question.

17 A. You have to understand my role—

18 Q. I don't have to understand anything other than you answer the
19 question, when was it that you first went on site?

20 A. Chairman, Chairman—[*Perusing document*] Sir, in my
21 statement the first time I visited the site—

22 Q. Yes.

23 A. —the incident of itself, would have been on item page 11293 at
24 around mid-afternoon Collin Piper and myself visited the
25 [*Inaudible*] operations at berth 5 and 6.

26 Q. What date?

27 A. Sunday, February 27th.

1 Q. Oh God. Sunday. This thing happened, what, the Saturday or
2 when was it? When was the incident?

3 A. The incident occurred on Friday.

4 Q. Oh. Saturday you didn't go. Sunday you arrived?

5 A. But—

6 Q. Right, good.

7 A. But you have to understand—

8 Q. I don't need—

9 A. —you have to understand—

10 Q. I don't bound to—

11 A. —the roles and responsibilities of the relevant parties in the
12 emergency response team. My role was not the site
13 coordinator.

14 Q. Yes.

15 A. Right? So as we mentioned before, Catherine Balkissoon
16 would have been there on the site relaying information back. I
17 was—the requirement was not for the logistics to be on the site.

18 Q. Sir, we got that.

19 A. So—

20 Q. Going forward.

21 A. And I just want to be clear—

22 Q. You're, you're very clear. I think everybody understands your
23 position.

24 A. Right.

25 Q. So Catherine was the point person at the time of the accident or
26 shortly thereafter?

27 A. Shortly thereafter.

1 Q. Who was Paria's point person at the time of the accident in that
2 area of the site?

3 A. Paria point person with respect to the permit to work?

4 Q. Whatever it was, the point person who is there at the—

5 A. As I mentioned—

6 Q. Let me finish so you could get a proper answer to us, that had
7 responsibility for Paria's site while work was in progress?

8 A. With respect to the work, Paria did not have a representative on
9 the site specific to the work at that time.

10 Q. Excellent. You had a camera belonging to Paria looking on to
11 the work, yes or no?

12 A. Yes.

13 Q. Right. Who was manning that?

14 A. Andrew Farah.

15 Q. Thank you very much. Now, this is so obvious but I need to
16 put it for the record. Do you consider air to be extremely
17 important to you or any other human being, yeah, oxygen?

18 A. Yes.

19 Q. Right. This is a water environment. There's a grave danger of
20 drowning, you appreciate that, when one works in a water
21 environment, yes?

22 A. Yes.

23 Q. Yes. Did you have any concern about the quantity of air or
24 oxygen available to persons who may yet be alive who may be
25 in the water or in the pipe?

26 A. Yes.

27 Q. Good. What time frame did you consider the—well, did you

1 consider that to be a matter of urgency to get to men who may
2 be alive who may have limited access to oxygen or air, yes or
3 no?

4 A. Right, and that—at that time it did not—

5 Q. Yes or no? Did you consider it urgent?

6 A. At that time, yes—

7 Q. Thank you.

8 A. —with LMCS being the contractor—

9 Q. Yeah, yeah everything—

10 A. —responsible for the employees' safety.

11 Q. —is LMCS. We're talking about you are representing Paria.
12 I'm putting questions here to you.

13 A. But I would not have been the one with the divers.

14 Q. No, of course not.

15 A. Paria would not have been the one with the divers.

16 Q. Wash your hands.

17 A. So how—no, I'm not washing my hands. I'm being—

18 Q. You are incident—

19 **Mr. Chairman:** All right, all right, all right, all right, all right.

20 A. You're not listening.

21 **Mr. Chairman:** Just a minute. Just a moment.

22 **Mr. Ramadhar:** Mr. Now I'm getting bouff now.

23 **Mr. Chairman:** Just a minute. Um, we don't have a jury, it's
24 just us two, all right?

25 **Mr. Ramadhar:** Very good.

26 **Mr. Chairman:** Just us two; and, um, I understand your
27 enthusiasm on behalf of your—of the families, but, please, try

1 and, um—

2 **Mr. Ramadhar:** Yes.

3 **Mr. Chairman:**—contain yourself a little all right?

4 **Mr. Ramadhar:** And if the witness would contain himself and
5 answer the questions, Sir.

6 **Mr. Chairman:** Just a moment.

7 **Mr. Ramadhar:** I'm most grateful to you, Sir.

8 **Mr. Chairman:** I think I know how to handle this, thank you
9 very much.

10 **Mr. Ramadhar:** Thank you. Thank you very much. So—

11 **Mr. Chairman:** If you, if you address the question—

12 **Mr. Wei:** Yeah.

13 **Mr. Chairman:**—and then if you want to add something I will
14 permit you to, all right? So answer the question and if you say,
15 “But I would like to say something extra”, then you'll be
16 entitled to do that all right?

17 **Mr. Wei:** Thank you.

18 **Mr. Ramadhar:** Thank you.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 Q. Incident management team, it was part of your responsibility to
21 manage the incident, is that accurate?

22 A. Correct.

23 Q. Yes. Did you consider it urgent to find or locate those men,
24 whether alive or dead, and in particular if they were alive?

25 A. Yes.

26 Q. Yes. Let me take you to the best to what you may have said.
27 Around six o'clock you learned that there was a survivor and

1 that the men were in the pipe?

2 A. Yes.

3 Q. Right. At that point in time, did you or your team consider
4 sending in even—forgive my inexperience or lack of
5 professional knowledge on the matter—but something like an
6 air pipe or air hose into that, so that if men are in a, in a, um, an
7 air pocket, that you may have been able to su—you know,
8 supplant some of the oxygen or air for them? Did it even cross
9 your mind?

10 A. Yes and that would have been on LMCS to install because at
11 that stage the only access would have been in the hyperbaric air
12 chamber—

13 Q. Beautiful.

14 A. —with divers needing to access it.

15 Q. Yes.

16 A. So at that stage for those first three hours, to make it clear—

17 Q. Uh-huh.

18 A. —the access to it could have only been by LMCS divers—

19 Q. Wow.

20 A. —or any diver that responded.

21 Q. Thank you but—so that if assuming the worst that LMCS did
22 not do anything to help, you are saying, “Oh, it’s their
23 responsibility. I have no further responsibility to do that? Is
24 that what you’re telling us?

25 A. We have responsibility for it, but at that stage there’s only
26 LMCS with the divers responsible.

27 Q. Thank you very much. You’ve heard the name Michael

1 Kurban? You know that name?

2 A. I've heard the name Michael Kurban.

3 Q. Yes. Do you know what time he would have been there
4 together with others?

5 A. He would have been there just around the time when Kurban
6 was coming out.

7 Q. Kurban was coming out. I see. We could only pray and hope.

8 A. No, well, er, Christopher Boodram. Apologies there.

9 Q. Yeah. You knew he was part of the effort to retrieve
10 Christopher Boodram?

11 A. Yes.

12 Q. Yes. You knew that he was willing and able, ready, willing and
13 able to go into that pipe to save his own father? Do you know
14 this?

15 A. Yes.

16 Q. You have told this court—I'm sorry, M'Lud. You have told all
17 of us in the nation that there was a decision that it was too
18 dangerous for persons to go in. Is that accurate?

19 A. I don't know exactly when that decision was made, right, but it
20 would have been prudent for Paria to advise that it was—you
21 need to know the conditions in the line—

22 Q. Yeah.

23 A. —to conduct a rescue.

24 Q. Right. You're aware that the coast guard has indicated through
25 most learned Senior Counsel, Mr. Maharaj, have indicated that
26 they took instructions from Paria in relation to this matter?

27 A. No.

1 Q. You don't know this? That's all right. Do you know that
2 Michael Kurban was prevented from going in to save his own
3 father?

4 A. No. He was not prevented from going in.

5 Q. You were present?

6 A. No, I was not present but reports coming in—

7 Q. Yeah, reports from whom?

8 A. From the site coordinator.

9 Q. Give me the name?

10 A. Catherine Balkissoon.

11 Q. Beautiful. That he was never prevented? He made no effort
12 and was told, "You cannot go in"? Is that what you're telling
13 this court, this, this, er, country?

14 A. Well, [*Inaudible*] he continued to dive even with being advised
15 not to go in.

16 Q. Thank you so much. So he didn't went fishing. He went diving
17 for fish? What do you think he went in there for?

18 A. He went in—it is—I don't know if he physically went in the
19 line but I know that he may have went in the hyperbaric
20 chamber.

21 Q. Sir, Mr. Maharaj very brilliantly conducted and there's very
22 little for me but except to ask you this. You said that you all
23 spoke to Christopher Boodram around ten o'clock, 10.00 p.m.,
24 yes?

25 A. Yes.

26 Q. How many hours after the incident is this, around seven?

27 **Mr. Chairman:** The evidence is four, four hours.

1 **Mr. Ramadhar:** Four hours. No, no, this is not when
2 Boodram was retrieved, you know, My Lord.

3 **Continued Cross-Examination By Mr. Ramadhar:**

4 Q. But when the incident—the accident occurred to the time you
5 spoke to Boodram was how long?

6 A. Will be seven hours.

7 Q. Seven hours. To that time, you were unaware of any official
8 Paria controlled or LMCS controlled effort to go into the pipe
9 to retrieve anyone?

10 A. No, there was no controlled effort from LMCS.

11 Q. Thank you so much. You said—you listened to the
12 conversation with Mr. Boodram, is that accurate?

13 A. Yes, that is accurate.

14 Q. Yes. Anybody took an audio recording of that conversation?

15 A. No.

16 Q. No. So what we have is a record made by whom? You said
17 there was a written record of that conversation. Who made that
18 record?

19 A. There would be that of the scribe.

20 Q. Who made the record?

21 A. I don't know who would have been the scribe on that day.

22 Q. But it would be part of your team, wouldn't it?

23 A. Yes.

24 Q. You appreciate you have an interest to serve in taking away any
25 level of responsibility rather than admitting it? You agree with
26 that?

27 A. No.

1 Q. You don't. Thank you very much. Now, when Boodram was
2 brought out you had Paria persons on site?

3 A. Yes.

4 Q. Yes. You knew that he was speaking and shouting at that time?

5 A. I know he was speaking, yes.

6 Q. Right. Did you make any effort to ascertain what he said when
7 he came out?

8 A. That would have been with the team on the site.

9 Q. Yes. Did you make any effort to ascertain what that man said?
10 Because you were so eager to speak to him you waited until ten
11 o'clock to do so.

12 A. As I explained earlier—

13 Q. Listen to my question, Sir. Did you make any effort—

14 **Mr. Chairman:** No, no, no you can't frame the question in a
15 way which is not part of the evidence and making it sound as
16 though it is. The question, the question you can ask him is,
17 why it took so long. He has already answered that question and
18 said that they had tried over a period of some time to get ahold
19 of Mr.—

20 **Mr. Ramadhar:** Thank you.

21 **Mr. Chairman:**—Boodram and were unable to do so.

22 **Mr. Ramadhar:** I, I appreciate the hour of the day but my
23 question isn't that at all. My question is whether he make any
24 effort to ascertain what Boodram said when he came out of the
25 pipe.

26 **Continued Cross-Examination By Mr. Ramadhar:**

27 Q. Sir, would you answer that?

1 A. That would have been LMCS to report that into the incident
2 command.

3 Q. So, you had Paria persons on site yes? Did you ascertain from
4 Paria this, Ms. Catherine Balkissoon who was there, as to what
5 this man said when he came out of the pipe? That is your
6 official. Did you make any effort to ascertain from her what the
7 man who just came out, who is the best person to tell you the
8 conditions in the pipe, what he actually said?

9 A. I can't answer that.

10 Q. Of course not.

11 A. I believe that the one who was there specifically.

12 Q. Sir, would it shock you to learn that he said, "Go in", words to
13 the effect, "the men, your father, Michael, your father is right
14 behind me, the others are in. They have a air pocket", or words
15 to that effect? Would it shock you to learn that today?

16 A. Did you hear that from him?

17 Q. Actually, the country has heard it. The man gave sworn
18 testimony and we have evidence from Michael who was
19 present. We have evidence from Corey, we have evidence of
20 others. So let me hear you now.

21 A. And similar they all have interests in it.

22 Q. Eh-heh? To lie about this?

23 A. I didn't say that.

24 Q. Oh. But what are you suggesting then when you say they have
25 interest? Because you have not found out from Catherine what
26 the man said when he was brought out of the pipe. Is that
27 accurate? Up to today, did you find out what he said that

1 Catherine was present, what he said when he came out that
2 pipe?

3 A. I found out what he said from others subsequent to the event.

4 Q. When, subsequent when? When you're talking about?

5 A. Maybe the following weeks.

6 Q. But you were interested, with all due respect to you, Sir, to find
7 out the conditions within the pipe. Isn't that what you told us?

8 A. Yes.

9 Q. Right? And one of the reasons you wanted to find out that is to
10 ensure that it was safe enough to engage a rescue mission, you
11 agree with that?

12 A. Correct.

13 Q. Yes. And the best person, the best evidence that you would
14 have is what the man said when he just came out. You agree
15 with that?

16 A. Not necessarily.

17 Q. Wow. So, tell me something again. In your opinion, when was
18 the decision made or the view formed that the men were dead?

19 A. That would have been somewhere on Sunday afternoon.

20 Q. Sunday. Between Friday afternoon, when this incident
21 occurred, to Sunday, what efforts were made by any diver that
22 were authorized by Paria to go into the pipe to rescue these
23 men? Because you said now that you didn't believe them to be
24 dead until Sunday. So let me hear, let the country hear, what
25 efforts were made between Friday to Sunday to send anybody
26 in to retrieve these men?

27 A. From Friday to Saturday, the period was used to collect data

1 and inspection in the line, to develop a plan for the rescue of the
2 individuals.

3 Q. That never occurred. The rescue, because you got your
4 information—you think it's a bureaucratic exercise you were
5 in?

6 A. No.

7 Q. Or a lifesaving effort? Which is it?

8 A. It's a lifesaving effort.

9 Q. Right. Which lifesaving effort was made between Friday and
10 Sunday? Tell this country. We need to know. My client's
11 family needs to know.

12 A. Right.

13 Q. Yusuf Henry's 11-year old daughter needs to know. Tell us.

14 A. With respect to going into the pipeline, a plan needed to be
15 devised.

16 Q. Yeah, well, I'll hear about your plan. What efforts were made?

17 A. Right. The efforts were to establish the safety inside the line—

18 Q. My God.

19 A. —without putting other people lives at risk.

20 Q. Yeah; and there were persons who were willing to risk their
21 lives to do so. Isn't that correct?

22 A. Right, and part of the, and as I mentioned before—

23 Q. Listen. You will answer what I ask you.

24 A. —the, the—

25 Q. There were persons who were—

26 A. —part of our principles of rescue—

27 **Mr. Ramadhar:** My Lord, would you ask him? Would you

1 ask him?

2 A. —is not to put other people's lives at risk. It would have been a
3 whole—

4 Q. God I—

5 A. —different scenario had Michael—

6 **Mr. Chairman:** Mr. Wei has the right to answer your
7 questions. I understand you feel a little constrained in terms of
8 time—

9 **Mr. Ramadhar:** Yes.

10 **Mr. Chairman:**—but you must allow him to answer the
11 question.

12 **Mr. Ramadhar:** Okay.

13 **Mr. Chairman:** You can't just fire the second one straight at
14 him before he's finished the first answer, all right? I appreciate
15 that.

16 **Continued Cross-Examination By Mr. Ramadhar:**

17 Q. I will, I will do the human thing and allow you the time so
18 you—for you to collect your thoughts and take your breath,
19 okay? You were concerned more about the other person's lives
20 who may go in to rescue. Is that what you're telling us?

21 A. That is part of the factors in it.

22 Q. Part of the factors.

23 A. You cannot, you cannot send someone into the line with—
24 unsafe and then you end up with a different situation.

25 Q. Uh-huh. And the situation we ended up with was what, four
26 dead men? Is that it? No effort made to save them? Is that
27 accurate?

1 A. If you send—

2 Q. No effort made?

3 A. If you send someone inside with a unsafe condition in the
4 line—

5 Q. Uh-huh.

6 A. —and as you know the condition inside the line, you could
7 have end up with losing another person.

8 Q. And if a person—

9 A. And that—it's running into a—if you know someone is running
10 into a building that is burning and is falling—

11 Q. Uh-huh—

12 A. —to run into that building burning—

13 Q. Uh-huh.

14 A. —to save someone—

15 Q. Uh-huh.

16 A. —you are putting yourselves at risk that you yourself might die.

17 Q. Yeah.

18 **Mr. Chairman:** Just a moment.

19 Q. Isn't that what firemen do?

20 **Mr. Chairman:** Just a moment.

21 **Mr. Ramadhar:** Sorry.

22 **Mr. Chairman:** Of course that's right. If it was your father,
23 would you?

24 **Mr. Wei:** If it as my father?

25 **Mr. Chairman:** You can't answer that question.

26 **Mr. Wei:** Yeah, that is—

27 **Mr. Ramadhar:** I'm so sorry, My Lord, I missed what My

1 Lord said. [*Crosstalk*] Yeah, yeah, exactly the point.

2 **Continued Cross-Examination By Mr. Ramadhar:**

3 Q. Listen, forget about for a moment, do forgive me, forget about
4 father. Remember I asked you about first responders? Firemen
5 do this on a regular basis throughout the length and breadth of
6 this world. You agree with that?

7 A. Yes because they are—

8 Q. Yes.

9 A. —because they are trained and prepared.

10 Q. Thank you. And—

11 A. They are equipped with equipment to conduct those rescues.

12 Q. What other, what other—

13 A. You are saying—

14 Q. —equipment did they require to go into this tube? His
15 Lordship produced to us this hula hoop and showed us what it
16 is, the confines. What other equipment did you require for
17 somebody to go in there with?

18 A. What hula hoop?

19 Q. The size, to put a very, very clear indication as to the size of the
20 pipe, what other equipment do you need to go in there other
21 than a person who has an oxygen supply, a long enough line
22 and possibly a rope to go in—

23 A. Well—

24 Q. —listen, let me finish—to go in, right, with the oxygen line for
25 himself and possibly also to give those who were still surviving
26 oxygen? What other equipment did you require? What other
27 equipment could you have required?

1 A. Diving equipment, air equipment.

2 Q. Yeah. You had diving equipment, didn't you?

3 A. But you need to—

4 Q. Did you have diving equipment?

5 A. You need to know the conditions in the line—

6 Q. [*Inaudible*]

7 A. [*Inaudible*]

8 **Mr. Chairman:** Allow him to answer.

9 **Mr. Ramadhar:** I'm so sorry.

10 **Continued Cross-Examination By Mr. Ramadhar:**

11 A. Okay, let me just—I, I understand your compassion.

12 Q. [*Inaudible*]

13 A. We all have that compassion.

14 Q. It's rage for the country. The country has rage for what you all
15 did.

16 **Mr. Peterson SC:** Counsel not supposed to have that.

17 **Mr. Chairman:** Yeah, please? You have to—I understand,
18 but you have to contain yourself a bit.

19 **Mr. Ramadhar:** Yes, of course.

20 **Mr. Chairman:** All right? Please.

21 **Mr. Ramadhar:** Of course. Of course.

22 **Mr. Chairman:** I'm sure that—I'm sure lots of people have
23 rage—

24 **Mr. Ramadhar:** All right.

25 **Mr. Chairman:**—and we've heard it already, but, you know,
26 you're counsel—

27 **Mr. Ramadhar:** Yes.

1 **Mr. Chairman:**—and you try not to have the rage, all right?

2 **Mr. Ramadhar:** Thank you.

3 **Continued Cross-Examination By Mr. Ramadhar:**

4 Q. And you're making it so difficult.

5 A. No.

6 Q. Yeah. You had diving equipment?

7 A. But was it the right diving equipment?

8 Q. Did you find out?

9 A. We relied—

10 Q. Did you find out?

11 A. We relied on the experts to advise.

12 Q. Yeah. Did you find out that there was not the adequate
13 equipment to go in there?

14 A. We relied on the experts to advise.

15 Q. Forget about rely. Did you find out, you—

16 A. We relied—

17 Q. —Sir—

18 A. —on advice.

19 Q. —in, what is—incident management team member, did you
20 find out what was required and whether it—what was required
21 wasn't available?

22 A. What was required was a safe—

23 Q. We're talking equipment now. Right?

24 A. Right. A safe plan that would identify the equipment required
25 so without a safe—

26 Q. While you planning man dying?

27 A. —without a safe plan—

1 Q. Yes.

2 A. —you would not have the right equipment so you would be
3 sending someone down into a pipeline, I mean, you saw the
4 hula hoop and to be honest with you the hula hoop to try to
5 compare that hula hoop to a 30-inch line that is filled with
6 water and oil, 40, 50 feet down, horizontally for twelve hundred
7 feet across.

8 Q. Yes.

9 A. To rescue men that you don't know where they are—

10 Q. Right.

11 A. —you don't know the conditions of the line and to say now you
12 want to know what equipment you have, you don't even know
13 what conditions you're going to face, where the divers are how
14 could you know what condition they are—

15 Q. And [*Inaudible*] with what you're saying?

16 A. —to say something like that? You are putting other people's
17 lives at risk.

18 Q. How could you in good conscience say what you just said,
19 because Boodram came out of that pipe, you agree?

20 A. Boodram came out doesn't necessarily mean that the—that it's
21 safe to go back in.

22 Q. I agree. It may not be safe—

23 A. You agree?

24 Q. It may not be the safest—

25 A. You agree?

26 Q. I agree it may not be the safest thing, but Boodram came out.
27 He was rescued. He said certain things that the “father is right

1 behind me. Go get your father.”

2 A. And what I understand from the reports he went in—

3 Q. Uh-huh.

4 A. —and he did not—he went as far as safe as he thought so.

5 Q. Eh heh? As far as the line permitted. And you had access to
6 unlimited lines, didn't you?

7 A. Paria? LMCS had—

8 Q. Everybody who came there—

9 A. —and assets.

10 Q. —came with some kind a equipment. You know what a line is,
11 right? A hose. You agree with that?

12 A. Yes.

13 Q. And you could attach, you take as much as you could, you put
14 another length. You, you know that? You know that, right?
15 You deposit?

16 A. Um, I am not a diving expert and I don't know the—

17 Q. No, no, no, but common sense.

18 A. —details of this.

19 Q. You could add, you could add to the length. You could add to
20 the length. He came back up asking for more line. You know
21 this?

22 A. So then why did LMCS not provide?

23 Q. Listen, because they were prevented. The coast guard was
24 there. You cannot go back in.

25 A. That is not true.

26 Q. Oh really?

27 A. The coast guard never prevented anyone—

1 Q. You were there and spoke on behalf of the coast guard?

2 A. Reports coming back in.

3 Q. From whom, your own people?

4 A. From Catherine Balki—yes.

5 Q. Yes.

6 **Examination By Mr. Chairman:**

7 Q. May I ask, would—you said now several times that the coast
8 guard did not prevent anyone from going in.

9 A. What I under—

10 Q. Let me ask the question.

11 A. Sorry.

12 Q. You've said that several times. Would you have regarded it as
13 wrong for the coast guard to prevent someone from going in?

14 A. If it was deemed unsafe to do so, and if the coast guard would
15 have prevented them from entering, that would have been the
16 right thing to do.

17 Q. Okay.

18 **Continued Cross-Examination By Mr. Ramadhar:**

19 Q. The coast guard told you that it was too unsafe and nobody
20 should go in there?

21 A. Specifically reported that to the—someone else in the IMT.

22 Q. No, no. We're talking to you. You are here. Did the coast
23 guard tell you that it was too unsafe—

24 A. The coast—

25 A. —and they will not permit anybody to go into the pipe?

26 A. Within the reporting lines for the IMT I would not be liaising
27 with the coast guard.

1 Q. Right.

2 A. The coast guard—

3 Q. So you do not know what the coast guard said or did in relation
4 to they making a decision—

5 A. That's what they reported but that would—

6 A. Just let me finish my question. I'm trying to be disciplined and
7 hold back a lot a other things. Yeah? You are not in a position
8 to tell this country and His Ludships that the coast guard did not
9 prevent persons from going in to save other persons?

10 A. That's a question?

11 Q. Yeah.

12 A. The reports coming back to me through the—

13 Q. Uh-huh.

14 A. —IMT, that the coast guard did not prevent people from
15 entering the line. Paria did not prevent people from entering
16 the line.

17 Q. So, no one was prevented from, as far as you are concerned, is
18 that accurate?

19 A. That is true.

20 Q. So you're saying that Michael Kurban would be untrue if he
21 said that he wanted to go back in but that he was prevented by
22 the coast guard and other and then two of the Paria staff?

23 A. Well in that case that would have to be untrue.

24 Q. Wow. You know that Michael actually went into the pipe and
25 came back out?

26 A. Well I heard a report of that.

27 Q. Right. So, having gone in once, you're saying that he would be

1 lying about wanting to go back in a second time? Is that what
2 you're telling this—all of us here?

3 A. I understand he went in as far as he thought safe and he came
4 back out.

5 Q. Thought safe or as far as the line will take him?

6 A. As far as he thought was safe.

7 Q. Right. You talk to him?

8 A. Reports coming back—we're going around—

9 Q. From whom again? Give me a name now, eh. I don't want to
10 hear reports. Who told you he only wanted to go as far as he
11 considered safe? Who told you that?

12 A. I can't recall.

13 Q. Of course not. Because if it's not true what you are saying, he
14 wanted to. There were others who were willing to do these
15 things, not just Michael, to go into the pipe and save other lives,
16 their brothers, their fathers, their, their friends, their colleagues.
17 And because of Paria's position, and under the authority of
18 Paria, they were prevented from going into that line, into that
19 line.

20 A. No. The divers stopped on their own accord—

21 Q. Oh, thank you. You know what—

22 A. —after Paria continued advising that they do not enter the line.

23 Q. Who, who continued advising?

24 A. They stopped at the—Paria.

25 Q. Pariag, exactly, advising. Yes.

26 A. That the conditions in the line were unknown and it would have
27 been unsafe to continue diving.

1 Q. Yes. "I advise you not to go so. If you do so I will deal with
2 you." You, you know how that works, right? Yeah?

3 A. No.

4 Q. No you don't. You know what analysis paralysis is?

5 A. Let me take some time to think about that.

6 Q. You take some time.

7 **Mr. Chairman:** How much longer do you think we're going
8 to be?

9 **Mr. Ramadhar:** No, I'm finished. I am saying let him take
10 his time now. He could analyze as much as he wishes. God
11 bless.

12 **Mr. Chairman:** Thank you. Well you can understand perhaps
13 the somewhat hot-headed approach but, um—

14 **Mr. Peterson SC:** [*Inaudible*]

15 **Mr. Chairman:** Anyway—

16 **Mr. Ramadhar:** I do take serious umbrage to that national
17 statement you just made.

18 **Mr. Chairman:** You know, I've been where you are many
19 times.

20 **Mr. Ramadhar:** Of course.

21 **Mr. Chairman:** And I've been accused of exactly the same, so
22 I—

23 **Mr. Ramadhar:** Well, then I take that—

24 **Mr. Chairman:**—that's why I permitted you to—a, a certain
25 degree—

26 **Mr. Ramadhar:**—I'll take it as a compliment.

27 **Mr. Chairman:**—of latitude. All right?

1 **Mr. Ramadhar:** I take that as a compliment, thank you.

2 **Mr. Chairman:** Yes. Mr. Peterson.

3 **Mr. Peterson SC:** Yes, Mr. Mouttet just has a few questions.

4 **Mr. Chairman:** Mr. Mootoo, you're going to do this as well?

5 **Mr. Mootoo:** Yes. And hopefully—

6 **Mr. Chairman:** You've been burdened today, haven't you?

7 **Mr. Mootoo:** It doesn't feel that way. May I have one
8 moment, please?

9 **Mr. Chairman:** Yes, of course you can.

10 **Examination by Mr. Mootoo:**

11 Q. Mr. Wei, I have a few question for you. Let me apologize in
12 advance. I can't sustain the drama of Mr. Ramadhar so you're
13 going to have to bear with me.

14 **Mr. Ramadhar:** M'Lord, if my friends are going to continue
15 along this path—

16 **Mr. Mootoo:** So you were taken—

17 **Mr. Chairman:** All right.

18 **Mr. Ramadhar:**—to make personal, I [*Inaudible*]—

19 **Mr. Mootoo:** Mr. Ramadhar wants to speak again?

20 **Mr. Ramadhar:** Yeah, I'm saying if it is that you're going to
21 go down that line about making me the issue here, I'm doing
22 my job, Sir, with all due respect and I have clients whose pain
23 that is, you know, incomprehensible.

24 **Mr. Chairman:** Mr. Ramadhar, Mr. Ramadhar, he's accused
25 you of a little drama.

26 **Mr. Ramadhar:** Yes.

27 **Mr. Chairman:** I think we've all seen a little drama.

1 **Mr. Ramadhar:** Well, I am “Dramadhar” in some minds but I
2 am who I am and God bless.

3 **Mr. Chairman:** I allowed it, as you know. You need not get
4 so excited about it. We all understand, we all understand
5 exactly who you’re representing and why it’s important that
6 you should be allowed the latitude that I’ve granted.

7 **Mr. Peterson SC:** That’s what—

8 **Mr. Chairman:**—and so let’s keep any further comments
9 from—of Mr. Ramadhar, to ourselves, shall we?

10 **Mr. Mootoo:** Yes, of course.

11 **Continued Examination By Mr. Mootoo:**

12 Q. Mr. Wei, you were taken to the work permit on the day in
13 question. That’s at 1074 of the core bundle. It’s actually on the
14 screen, I believe, in front of you at the moment. So can I ask
15 that he be taken to the foot of that work permit, just at the
16 bottom of page 1074? And just—right, can you stop right there
17 for me please? Thanks. And you see there is a section C with a
18 heading in bold entitled “Acceptance”. Yes?

19 A. Yes.

20 Q. And there are—there’s space for the contractor official to sign,
21 yes?

22 A. Yes.

23 Q. And the contractor official there would be someone from
24 LMCS?

25 A. That is correct.

26 Q. Good. But the term, “contractor official”, that is a specialized
27 term under the work permit system, is that correct?

1 A. Yes.

2 Q. Yes.

3 A. Yes.

4 Q. And there was a line of enquiry made of you today as to how
5 about the—how the divers may or may not have understood the
6 permit. You remember that?

7 A. Yes.

8 Q. Good. I'd like you to—I'd like to take you very briefly to the
9 permit procedure. That can be found at page—the page I have
10 in question is at page 31 of the core bundle.

11 **Mr. Mootoo:** Can the witness be shown that please?

12 **Mr. Chairman:** Thirty-one, is it?

13 **Continued Examination By Mr. Mootoo:**

14 Q. And if you can be taken down to item 5.6? Right. And I'd like
15 us to just look at that very briefly. The heading is, "Contractor
16 Official" and am I right in saying that that's—the reference to
17 the contractor official there is the same reference for the
18 contractor official that he just saw on the foot of the work
19 permit?

20 A. Yes, that is correct.

21 Q. Good. Now, LMCS personnel were trained in that work permit
22 procedure? Wasn't that one of the—one of the contractor
23 requirements for the job?

24 A. The contractor official? Yes.

25 Q. Yes. And that procedure identifies, and we're going to come to
26 it, certain responsibilities for the contractor official. Isn't that
27 correct?

1 A. Yes.

2 Q. Good. So, let's look at it together. The contractor, this is the
3 second sentence:

4 "The contractor official is officially nominated by the
5 contractor as the signatory on the work permit and
6 certificates and must be at least the level of a supervisor."

7 So that the signatory to the work permit would have been
8 someone holding the position of at least an LMCS supervisor.

9 Is that correct?

10 A. Yes.

11 Q. And then the contractor official is required to have certain, um,
12 responsibilities and certain—and knowledge of certain matters.
13 And I'm keen with—there are six or seven bullet points here
14 and let's just go through them. He's required to have a clear
15 understanding of the job and the different steps involved. He's
16 to be knowledgeable of the hazards associated with the job and
17 the necessary controls. He is to be responsible for the work and
18 for the safety of all contractor employees associated with the
19 job. So in those circumstances it's the LMCS contractor
20 official who would have been responsible for the safety of all
21 the divers on the job. You agree with that?

22 A. Yes.

23 Q. And he's to maintain a log of persons of each worksite. He's to
24 ensure that all equipment is suitable for the job and in good
25 working condition, and he is to remain on site at all times, and I
26 think this, this, um, goes to what you were saying earlier, he's
27 to remain on site at all times or to be represented on site by a

1 suitably competent and authorized alternate. This is the
2 important bullet point. It also provides that the con—ensure
3 that contractor workers, and in this case it will be the divers,
4 comply with all precautions on the work permit and certificate.
5 Yes?

6 A. Yes.

7 Q. Would you therefore agree with me that it's the contractor
8 official who is responsible for ensuring that the LMCS divers
9 on that day complied with all precautions on the work permit?

10 A. Correct.

11 Q. And we know, from looking at the work permit, that it says a
12 migration barrier is to be used, correct?

13 A. Correct.

14 Q. And would it be correct to say that the use of the migration
15 barrier is a precautionary measure?

16 A. That is correct.

17 Q. So would you therefore agree with me that it was the
18 responsibility of the contractor official of LMCS to ensure that
19 the divers were specifically made aware of that precautionary
20 measure?

21 A. Yes.

22 Q. Thank you.

23 **Mr. Mootoo:** I have no further questions for Mr. Wei.

24 **Mr. Chairman:** Yes.

25 **Examination By Mr. Chairman:**

26 Q. Just from that, can I understand you please? There is no issue
27 between anyone, and I think that a barrier was and should have

1 been used, correct?

2 A. Yes.

3 Q. Um, I think we all accept that they were used and it was wise
4 that they should be used. The issue here is not that they were in
5 use but when they should be removed, isn't it? Because you're
6 saying that they should never have been removed until the
7 hyperbaric chamber had been taken off? That's your position,
8 isn't it?

9 A. Yes.

10 Q. Right. And that any suggestion that they were permitted to do
11 so in advance was wrong?

12 A. Correct.

13 **Mr. Chairman:** Yes, okay.

14 **Mr. Mootoo:** Sir, may I, may I have one follow-up question?

15 **Mr. Chairman:** Of course you may.

16 **Mr. Mootoo:** Thank you.

17 **Further Examination By Mr. Mootoo:**

18 Q. Is there anything on that work permit—[*Crosstalk*—is there
19 anything on the work permit that suggests to you that for the
20 tasks to be performed on that day the use of the barrier was
21 limited in duration?

22 A. Can you ask that again?

23 Q. Is there anything on that work permit that suggests to you, for
24 the tasks that are described, that the barrier was to be used for a
25 limited duration?

26 A. No. The barrier was to be used for all the steps identified,
27 [*Inaudible*] to the task.

1 Q. Thank you.

2 **Examination By Commissioner Wilson:**

3 Q. Mr. We, one thing I'd like to ask you on the permit to work
4 system, or, out of the overall control of work system, you just
5 said the roles and responsibilities of the contractor but I want to
6 take you to 5.4, Volume 1. Page number 31—

7 A. Yes.

8 Q. —5.4, the area authority and the senior area authority. You
9 want to read it or I could read it out for you or—

10 **Mr. Chairman:** Read it out loud.

11 **Continued Examination By Commissioner Wilson:**

12 Q. Okay I'd read it out.

13 “The area authority is the facility owner who audits the
14 precautions/conditions laid out in the safety certificates
15 by the competent person to ensure they are adequate for
16 the job taking into consideration simultaneous activities
17 on the facility. For the permit to work system, the area
18 authority shall be someone holding the position of lead or
19 any equivalent or higher designation and is appointed by
20 respective manager. The area authority shall audit and
21 specify additional conditions where necessary on the
22 safety certificates taking into consideration legal
23 requirements, company rules and business objectives,
24 approve the list of precautions on the safety certificates,
25 review the JHA for adequacy, coordinate all jobs under
26 his area of control.”

27 You understand it as I read it?

1 A. Yes.

2 Q. All right. So, if you've indicated that no one on Paria had the
3 competency to do this, how would you verify this or validate
4 this or how is the area authority in your present control of work
5 system able to do this?

6 A. Able—the area authority shall audit and specify additional
7 additions where necessary for the safety certificates, right?
8 Yeah?

9 Q. Yes. The safety certificates are off of like the supplemental
10 certificates attached to your work permit, right?

11 A. Yes, the hot work certificate—

12 Q. Yes.

13 A. —and the excavation.

14 Q. Yes.

15 A. So, yes, he should be able to do that.

16 Q. But again, so I think I've already made it in terms of a
17 competent person able to validate, like, let's just say any of the
18 supplement certificates, the risk assessment, the JHA, right, so
19 if you offer that Paria didn't have anyone competent to do it,
20 this is under your control of work system, so, I take what the
21 gentleman said about the responsibility of the contractor, but I
22 also offer Paria does have some responsibility in the control of
23 work in issuing a permit to work?

24 A. Right; and as I said before—

25 Q. Uh-huh.

26 A. —the risk that he would be very much familiar to bear on the
27 JHA, with those risks, were from the operational side of view,

1 or any plain risks, obvious risks, on that of the experienced and
2 competent contractor.

3 **Examination By Mr. Chairman:**

4 Q. Your position has been, as it has been right from the beginning,
5 if I may say so, is that you regarded LMCS as being the
6 specialist and therefore they were the ones to tell you what the
7 risks were?

8 A. Yes.

9 Q. If they didn't, then it's their fault? That's, as I understand it,
10 what you're saying, isn't it.

11 A. To say it like that, yes.

12 Q. Yeah, all right. I do.

13 **Mr. Chairman:** All right, Mr. Maharaj, is there any re-
14 examination?

15 **Mr. Maharaj SC:** I have no re-examination.

16 **Mr. Chairman:** Well I'm very relieved to hear that. Can I
17 thank everybody for sitting as late as we have. I hope that we
18 can do so if it becomes necessary again, and certainly from Mr.
19 Wei's point of view he's now released. I release you from your
20 obligation. Can I ask, though, please that you do seek do find
21 the original copy of your statement please, rather than the
22 scanned copies or whatever they may have been distorted
23 during the course of being transmitted to us? So I would be
24 grateful if we could have the original at some point. Thank
25 you.

26 **Mr. Wei:** Okay.

27 **Mr. Chairman:** All right, well, with that we shall rise, please.

1 Do not worry about my getting off the Bench. I've got to grab
2 my own papers, so, feel free. Thank you very much indeed and
3 I will see everybody again on the 5th of December.

4 **5.54 p.m.:** *Enquiry concluded.*

EVIDENTIARY HEARING DAY 4

10.05 a.m.: *Enquiry Commenced.*

Mr. Chairman: Good morning, everybody, welcome back. Few housekeeping matters, if I may, please. I hope everyone's had an opportunity to see the witness schedule for the next two weeks that we'll be sitting prior to Christmas. It is a tough schedule; it's quite a lot on there, but, if we are to keep to time, we're going to need to try and get through each of those witnesses on each of those days that they've been allocated for. You all know, as lawyers, once one slips into the next day then there's two into the day after that, and so on. So we're going to do our level best to try and make sure we keep it to the schedule that we currently have, and I will allow all of you, please, to help me to try and ensure that that's what happens.

Towards the end of this two-week period we will publish the final 10 days now that is going to be set for January. I know that I chose the timetable slightly to bring forward the dates from—remind me someone—we were going to be sitting on Monday 9th and we're now sitting on Wednesday 4th. So we acquired an extra three days, and I'm really grateful to everyone for agreeing to be here in a time which might have been otherwise holiday. So thank you for that.

Can I turn next—Mr. Peterson, can you help me a little about this? We've received a letter from your Gretel Baird, who I think is your instructing attorney, in which she discloses two new documents, one which is a series of emails between Mr. Kazim Ali and Mr. Randolph—Archibald, Randolph, from

1 Paria, which set out certain matters which I needn't refer to
2 specifically; and that was received at 7.40 this morning. And
3 then some charts showing the pipeline between 5 and 6; that
4 was received at 8.45 this morning. And, of course, I'm grateful
5 to receive all documents that might be relied upon; I appreciate
6 having an advance notice of it.

7 My slight concern, Mr. Peterson, as you would probably
8 appreciate, is that Paria have assured us that they've trawled
9 through all the documents and provided us with everything.
10 These seem to me, at first glance, to be relevant documents and
11 I'm slightly concerned, as I say, as to why they were not
12 disclosed before. And that's the first point.

13 The second thing is, is that whilst I appreciate them being
14 served there's no accompanying statement identifying what
15 they are; why on the face of it they're sought to be relied upon;
16 how they came to be found at this stage. And, really, for me to
17 be able to or asked to be able to make—he has it much better
18 than I do because he's read these sorts of charts before, but I
19 don't understand them so readily, and it would be helpful for
20 me to know if there is to be any documents to be served that we
21 get these with a statement setting out what it is. I don't know at
22 this point in time, Mr. Peterson, if this has been served on
23 anyone else. I see Ms.—forgive me, it's gone out of my head
24 for the moment. Forgive me.

25 **Ms. Persaud Maraj:** Ms. Persaud Maraj.

26 **Mr. Chairman:** Thank you, Ms. Maraj. The problem is, is
27 that, you know, if we are to be served this that, really, they

1 should be made available to us at an early enough stage so that
2 we can give it to everybody else, otherwise it's not really fair.
3 So I don't ask you to respond unless you particularly want to
4 say anything. I just flag up our concerns about it happening in
5 this way. All right?

6 **Mr. Peterson:** Yes, Sir. We'll try to avoid that. But the plan,
7 I only saw the plan over the weekend and I thought that it was
8 helpful, and I said to send it to the Commission as soon as
9 possible. But we will do the homework and clean it up, so to
10 speak.

11 **Mr. Chairman:** Yes, all right.

12 **Mr. Peterson:** But I recognize that the lay of the pipe—we are
13 all operating that it runs from 5 to 6 and 6 to—

14 **Mr. Chairman:** Yes, and it seems to be, looking at the chart as
15 best as I understand it with the help of Mr. Wilson as my Co-
16 Commissioner, it seems to me something which I've learned for
17 the first time in the months of preparation to this, that the pipe
18 that is in the seabed is not a straight line. It apparently has a
19 kink in it, as it no doubt searches to find the most level surface
20 under the water. That's what it appears to me. I may have got
21 that completely wrong, but it was kind of useful to know that at
22 an earlier stage; no doubt it's the reason why it prompted you to
23 seek to have it served. But we'll hear evidence about it, I'm
24 sure of. Thank you.

25 Next this: Mr. Rampersadsingh has been interviewed.
26 He's an important witness, as you know, and I appreciate the
27 efforts made by Paria to facilitate that. He was interviewed by

1 our counsel, Ms. Maharaj and Mrs. Baird—I hope I haven't
2 given her the wrong handle—Ms. Baird, I should say—the two
3 of them saw him on Thursday last. It was quite a lengthy
4 interview. And for reasons that are familiar to, at least a
5 number of you, it took a little time, to be sensitive. But it has
6 produced, I think, 600 pages—no, 111. Somebody told me 600
7 and I got very frightened. I haven't read it myself as yet. It
8 was only just finally produced as a transcript in the early hours
9 of last night. It is, as we speak, being made available. That
10 transcript is being made available to the website so that
11 everyone can see it. There's nothing, I'm assured, in it that
12 ought to be redacted, so it has not been. So it is in its full detail.

13 I should say that we are, or Ms. Maharaj is making
14 arrangements to do a summary of a hundred and whatever
15 pages and that summary will also be put on the website and
16 provided to everybody to make sure that we have an overview
17 of exactly what those hundred-and-odd pages say, rather than
18 straight question and answer. I can say at this time that as a
19 result of representations made to me by you and our own
20 observations through Ms. Maharaj, I will not be requiring him
21 to come to this courtroom to give evidence, and if that provides
22 him with some reassurance, then that can be provided. So there
23 will be no opportunity, I make clear, there'll no opportunity for
24 anybody else to cross-examine him. We will have to rely on
25 what he has said in the interviews. Now, of course, everyone
26 will have it, and anyone who wants to make representations

1 about it can. I think that there will be some evidence that may
2 be given as a result of what he has said from others.

3 Next this: the photographs that were taken when we had
4 the opportunity to go to Paria on our site visit are all available
5 now. I understand some had been redacted. I have not yet seen
6 those that had been redacted. Once I've seen those I'll—if
7 there's an issue arising we'll raise it with you. But at the
8 moment, all the others that had been taken are now being made
9 available and, again, will be available on the website today.

10 Fifthly, Mr. Wei's evidence, you will recall I asked him
11 about what looked like some sort of cut and pasting in his
12 witness statement and I asked to have a sight of his original.
13 That has been provided by your instructing attorney, Ms. Baird,
14 and I'm grateful for that, and I can say straight away that no
15 issue arises from it as a result. So that issue, if it were ever an
16 issue, is now laid to rest. So I'm grateful for that.

17 Next, Mr. Hargreaves. He is due to give evidence. He's
18 a senior man at the coast guard, and he is retired; lives in
19 Barbados. We have been able to track him down. He's going
20 to give his evidence on Monday 12th, so next Monday, a week
21 today, he's going to do so by VideoLink. I mention that now
22 because, obviously, giving evidence by video link, if anyone
23 wants him to have a document in his possession so that he
24 could be asked about it, you need to tell us and tell us soon so
25 that we can make sure he's got it. He has, obviously, got his
26 witness statement, and he'll have that with him. Someone will
27 no doubt make sure he's got a Bible in front of him so that he

1 can swear on it, if that's what he wishes to do. But that aside, if
2 there's any document that needs to be placed, we need to have
3 it, and pretty, pretty quickly, please, so that we can make sure
4 he's got it. And I think that's it. No, one more matter I should
5 mention as well.

6 The first witness today is Kazim Ali. I remind everybody
7 that he is the father of Kazim Ali Jr. who died. Please, treat
8 him as you have hitherto, with care, respect, and some
9 sensitivity. It's bound to be difficult for him. It's his own son
10 in his own company that died. So, please, some sensitivity, and
11 I know you will. All right. Well, with that said, unless there's
12 anything anyone wants to raise with us? No? Very well. Let's
13 crack on, shall we? Mr. Maharaj.

14 **Mr. Maharaj SC:** Much obliged, Mr. Chairman. Mr. Ronnie
15 Bissessar will do the summary of the evidence of—

16 **Mr. Chairman:** All right. Thank you very much. Mr.
17 Bissessar, I understand his evidence could be found at 475. Is
18 that right?

19 **Mr. Bissessar:** Correct. His amplified witness statement,
20 Chair, is at 475 and his supplemental witness statement is at
21 2855.

22 [*Mr. Kazim Ali Sr. affirmed*]

23 **Mr. Kazim Ali:** I, Kazim Ali, do solemnly, sincerely and truly
24 affirm that the evidence I shall give to this Commission, shall
25 be the truth, the whole truth, and nothing but the truth.

1 **Mr. Chairman:** Mr. Ali, you can sit or stand, whichever you
2 feel more comfortable with. Most people have been sitting
3 down. You need to bring that microphone down towards you.

4 *[Mr. Kazim Ali Sr. adjusted microphone]*

5 Exactly. And if you speak directly into it, then we won't have
6 to keep asking you, "What did you say?" or repeating yourself.
7 That will put this—your giving evidence in a much shorter
8 compass than it might otherwise be. All right?

9 Can I say straight away on behalf of, certainly the
10 Commission and the lawyers who are here, that everyone feels
11 keenly your loss. It must be hard for you to have to give
12 evidence about a matter such as this, and we are grateful that
13 you're here to do so. Nobody, no father wants to see their
14 children die before them. I have my own sons and it must be
15 very difficult for you. But we are anxious to hear your
16 evidence. It's going to be summarized because you were kind
17 enough to come and have an interview before this part of the
18 Enquiry took place, and that will shorten your evidence
19 considerably. All right?

20 Now, Mr. Bissessar, who sits on the end there, I think
21 you've met once before, he's going to summarize your
22 evidence. If you listen to it very carefully and if you agree with
23 it you will say so. If you don't, you can point out where you
24 think there's something wrong. All right?

25 **Mr. Ali Sr.:** Okay.

26 **Mr. Chairman:** And then we'll deal with it. Then you see all
27 these other lawyers that are sitting there, they will be given—

1 not all of them, but some of them will be given an opportunity
2 to ask you some questions. All right?

3 **Mr. Ali Sr.:** Okay.

4 **Mr. Chairman:** If at any point in time you want a break, you
5 need to take stock, just, please, just put up your hand, ask, and
6 I'll make sure that happens. All right? Take your time. All
7 right? Thank you very much indeed.

8 **Mr. Ali Sr.:** Okay. Thanks. Just one thing.

9 **Mr. Chairman:** Of course.

10 **Mr. Ali Sr.:** I'm a bit hard of hearing.

11 **Mr. Chairman:** You're a bit hard of hearing so we need to
12 shout. Well, nobody ever accused me of not being, um, heard.
13 So I'm sure that others will take into account that you need to
14 be spoken to louder than might otherwise be the case. But if
15 you can't hear anything you just put your hand up straight
16 away. All right?

17 **Mr. Ali Sr.:** Okay.

18 **Mr. Chairman:** Good. All right. Thank you very much, Mr.
19 Ali.

20 **Mr. Bissessar:** Thank you, Chairman.

21 On 28th August, 2022, Mr. Kazim Ali Sr. submitted a
22 signed statement to the Commission and on 5th October, 2022,
23 he submitted a signed amplified witness statement to the
24 Commission. This is at WB475. This combined his previous
25 statement submitted on 28th August, 2022.

26 Mr. Ali Sr. said that the information contained in his
27 amplified witness statement was known to him personally from

1 contemporaneous rep reports given to him as Managing
2 Director of LMCS Limited, which I'm referring to as "LMCS".

3 On the 22nd November, 2022, Mr. Ali Sr. submitted a
4 supplemental witness statement to the Commission—this is at
5 WB2855—following interviews with Counsel to the
6 Commission. Mr. Ali Sr. was represented by counsel at the
7 interviews which were convened on 13th and 18th October,
8 2022. In his amplified witness statement dated 5th October,
9 2022, Mr. Ali Sr. certified that the contents were true and
10 correct and in a supplemental witness statement dated 8th
11 November, 2022, he verified the contents of his amplified
12 witness statement and accepted that what he said in his
13 supplemental witness statement was also true and correct.

14 His evidence then, firstly, on LMCS' principal business
15 and his own qualifications: Mr. Ali Sr. is the Managing
16 Director of LMCS with its registered office situated at 10
17 Tarouba Road, Marabella. LMCS' principal business is project
18 management, engineering design, procurement, marine
19 construction, and construction services including diver-related
20 underwater services, and marine logistics support. In his
21 capacity as Managing Director, Mr. Ali Sr. says he has an
22 overarching responsibility to LMCS, its employees, and
23 contracting parties.

24 Since 2000 to the present LMCS has done about 90 per
25 cent of the marine works at Pointe-a-Pierre including the
26 rebuilding and maintenance of berths and the repair and
27 replacement of pipelines. Mr. Ali Sr. obtained a Marine

1 Engineering Certificate in 1973 qualifying him to serve in
2 different engineering positions on ships and in 1979 he received
3 a second engineering certificate for open vessels and a Chief
4 Engineering Certificate for smaller vessels issued by the then
5 Secretary of State in the Department of Trade in the United
6 Kingdom. This is at SWB2887 to 2896.

7 In 1979 Mr. Ali Sr. served as 2nd Engineer in England
8 for bulk-shipping containers and in 1981 returned to Trinidad
9 and started working for Texaco and was the senior supervisor in
10 charge of Marine Maintenance and maintenance of drilling
11 equipment. Mr. Ali Sr. left Texaco which later became Trintoc
12 in 1991 and worked as a Project Engineer with different marine
13 contractors, and in 2000 he established LMCS.

14 LMCS' previous works: in 2020 LMCS changed out part
15 of the pipeline riser on Sealine 36 between berths 5 and Bent
16 80. In the 2020 job, the riser was leaking at berth 5,
17 approximately 10 feet below sea level. Mr. Ali Sr. attached a
18 copy of the method statement for the 2020 job as KA13 to his
19 supplemental witness statement. He says that the method used
20 for the 2020 job was similar to the method used for the 2021-
21 2022 job. The difference was the configuration of the pipeline
22 because from the 2020 job the line along the seabed sloped
23 from 20 feet at Bent 80 on the main viaduct to 60 feet,
24 approximately, at berth 5.

25 Mr. Ali Sr. maintains that the objective was the same for
26 both the 2020 and the 2021-2022 jobs. In both jobs LMCS
27 used the plugs as a migration barrier to stop hydrocarbon

1 vapours entering the weld area. The mechanical barrier stopped
2 hot molten material from compromising the inflatable plug.
3 This is at SWB2857.

4 LMCS' tender for the 2021-2022 job: in 2021 LMCS
5 tendered for miscellaneous repairs and refurbishment works at
6 berths 5 and 6, the main viaduct, and the servicing of the
7 mooring buoys. The repairs were in relation to a leak on the
8 30-inch diameter riser on Sealine 36 at approximately 10 feet
9 below mean sea level at berth 6, and as part of the works LMCS
10 was required to provide hyperbaric chamber welding. Mr. Ali
11 Sr. understood Paria in the scope of works at 3.1.5 to be
12 requesting for Sealine 36 between berths 5 and 6 to be isolated,
13 depressurized, and drained, and when the job was completed
14 LMCS would reconnect, that is, open back the valves and refill
15 with content.

16 Mr. Ali Sr. says that the addendum dated 14th May,
17 2021, which is at page 46 to the exhibits of his amplified
18 witness statement, also clarified that this is what Paria wanted
19 as it expressly stated that the contractor was responsible for the
20 safe removal of the hydrocarbon content from the line and to
21 ensure that the line was clear and dry.

22 He says that LMCS did not think that complete removal of the
23 line content was the safest method of work execution. LMCS'
24 proposal, according to Mr. Ali Sr., comprised a method
25 statement as well as a risk assessment. LMCS prepared the
26 method statement and the risk assessment which he says was
27 accepted by Paria. The original method statement which was

1 submitted to Paria did not propose the removal of the entire
2 contents of Sealine 36.

3 Mr. Ali Sr. estimated that the contents to be removed
4 from the topside piping would have been approximately 300
5 barrels, and he says this method statement was accepted by
6 Paria which did not ask any questions about the method. Mr.
7 Ali Sr. says that he did not propose the removal of the entire
8 line content between berths 5 and 6 because LMCS wanted to
9 set the plug on a solid leg of liquid.

10 LMCS did not mention Delta P in the method statement
11 or risk assessment but that was to be taken care of by ensuring
12 that there would have been no pressure difference between the
13 plugs. He said that everything LMCS did was to avoid creating
14 a void in the pipeline which is why LMCS tried to ensure that it
15 had a column of liquid under the plug in the riser.

16 He further stated at page 2860 that LMCS only sought to
17 remove enough content in the riser at berth 6 to create a 30-foot
18 ullage which would also have created a 30-foot ullage at the
19 riser at berth 5. Mr. Ali Sr's evidence is that the method
20 statement proposed the use of an air pump at an open riser at
21 berth 6 to create a 30-foot ullage at berth 6 to install the plugs
22 which led to new method statements. This would have
23 involved introducing an air pump at an open riser at berth 6.

24 He said that at the kick-off meeting around 29th June,
25 2021, after LMCS was awarded the 2021-2022 contract, LMCS
26 and Paria looked at the job in some detail. He said that the
27 proposal with respect to the air pump was not practical because

1 LMCS would have had to remove the flange from the top of the
2 riser in order to get the pump in and this risked water entering
3 the riser. He also said that as early as the kick-off meeting
4 LMCS and Paria discussed the method proposed by LMCS of
5 using the air pump. This led to Paria developing and approving
6 an instruction dated 5th January, 2022—this is at CB1033—for
7 using air by way of an air pump to remove the liquid.

8 LMCS also developed new method statements for line
9 clearing, namely No. 108 dated the 1st December, 2021; this is
10 at CB1028, and No. 115 dated 5th February, 2022; this is at
11 CB1041, both of which specifically relate to line clearing.

12 Line clearing: Mr. Ali Sr. said that the method of line
13 clearing in LMCS' method statement and Paria's instructions
14 contemplated air blowing instead of an air pump and the first
15 phase was the removal of the contents of the topside piping by
16 air blowing from berth 5 into Sealine 36. Once the topside
17 piping was cleared of content the tying piping between the
18 topside piping and the riser would be removed at berth 6.

19 The second phase was the creation of a 30-foot ullage in
20 the riser at berth 6 which would also create a 30-foot ullage in
21 the riser at berth 5. Mr. Ali Sr. says that there were numerous
22 oral discussions with Paria's Terrence Rampersadsingh who
23 was told that LMCS was not clearing the pipeline between
24 berths 5 and 6 but only creating a 30-foot space to set the plug.

25 Mr. Ali Sr. says it was his impression that Paria
26 understood that this was the method. He says LMCS never
27 changed the original objective of getting that 30-foot ullage.

1 Mr. Ali Sr. also says that he did not think from the work
2 instructions that Paria wanted LMCS to clear the entire Sealine
3 36. He says that Paria did not do their own assessments for the
4 clearing of the lines, but had oversight and final approval of all
5 method statements and job hazard analyses (JHA).

6 Mr. Ali Sr. maintains that the removal of the contents
7 from the riser to achieve a 30-foot ullage was done in one day
8 in a few hours. He did not see the permit to work for that part
9 of the job and was not present for the toolbox meeting for that
10 job. He says that when LMCS opened the top of the riser at
11 berth 6, the ullage was about four feet. LMCS disconnected the
12 hose which was going to Sealine 66 and connected it to the slop
13 barge.

14 He says that the method of air blowing directly into
15 Sealine 66 to achieve the 30-foot ullage in the riser was not
16 effective, so LMCS decided to transfer the contents directly to
17 the slop barge. LMCS blew, meaning introduced air pressure,
18 then bled off the air pressure in the line and measured a few
19 times until the 30-foot ullage was achieved. The measuring
20 was at the berth 6 riser.

21 Mr. Ali Sr. says that LMCS did not measure the volume
22 removed but got an indication from the number of barges which
23 were filled. The slop barge was filled two and a half times.
24 One slop barge has a capacity of 25 barrels. So LMCS
25 removed approximately 60 barrels. Further, that the line
26 clearing was done in January 2022 over a two-week period and
27 that the change in technique from air pump to air blowing could

1 not have resulted in more of the contents of Sealine 36 being
2 removed because LMCS was measuring the ullage as they were
3 executing the line clearing.

4 Mr. Ali Sr. says that LMCS did not discuss the
5 possibility of a differential pressure in the method statement or
6 the risk assessment because the steps which it took should have
7 eliminated this. Mr. Ali Sr. also says that LMCS' proposal was
8 on the basis that the horizontal section of the line was flat. He
9 said that in working before on the pipe and on Sealine 36 and
10 66, LMCS did not encounter anything but a flat profile.
11 Moreover, that Terrence Rampersadsingh was the person who
12 oversaw the project on behalf of Paria and there were daily
13 meetings with LMCS through Kazim Ali Jr. and Mr.
14 Rampersadsingh. Mr. Ali Sr. says that all method statements
15 were done by him and Paria received and approved method
16 statements and risk assessments submitted.

17 Installation of Plugs and Hyperbaric Chamber: Mr. Ali
18 Sr. said that the plugs were installed on 13th February, 2022,
19 together with a hyperbaric chamber. He said that when the
20 chamber was installed LMCS did a function test. He also said
21 that the chamber which comprised a cube eight feet by eight
22 feet by eight feet had been constructed by LMCS and used
23 twice before. It was not constructed on any specific code or
24 standard and Paria did not require any specific information in
25 relation to the chamber although Paria had inspected the
26 modification works on it. Mr. Ali Sr. says that LMCS wanted

1 to complete the chamber works within a four-day window to
2 limit changes in the condition in the line behind the plug.

3 Meeting on 14th February, 2022: on 14th February, 2022,
4 Paria had requested a meeting. Terrence Rampersadsingh and
5 other Paria personnel were present and he, meaning Mr. Ali Sr.,
6 Mr. Ahamed Ali, and Mr. Kazim Ali Jr. were present, and
7 copies of the method statement were distributed. Mr. Ali Sr.
8 says that there were no formal notes or minutes of the meeting,
9 and no issues were raised by anyone, and at the time of the
10 meeting both the plug and the chamber had been installed and
11 he outlined the work plan which included the removal of the
12 plugs followed by the installation of a flange at the top of the
13 riser.

14 He said that the project did not proceed on 17th February,
15 2022, and prior to 25th February, 2022, LMCS through him,
16 Ahamed Ali, and Dexter Guerra raised concerns with Terrence
17 Rampersadsingh and Randy Archibald. LMCS' concern was
18 that something could have happened to the line due to the
19 passage of time. Mr. Ali Sr. said that he was concerned about
20 an oil spill from Sealine 36 and Randy Archibald's response
21 was that we could clean it up if we had an oil spill.

22 Friday 25th February, 2022: Mr. Ali Sr. says that on
23 Friday, 25th February, 2022, he was not present at the toolbox
24 meeting and around lunchtime he received a call saying that the
25 pressure test could not be done and that a decision had been
26 made by Paria to forgo the pressure test and for LMCS to
27 continue with the job. He said LMCS was not asked for a risk

1 assessment or any documents relating to this change. Later, he
2 received a call from Dexter Guerra saying that they could not
3 find anyone in the chamber.

4 Mr. Ali Sr. said he went on the barge and was told that
5 the men had already removed the mechanical plug and were in
6 the process of removing the inflatable plug when there was a
7 gush of water in the chamber. He says that after speaking to
8 Andrew Farah and Dexter Guerra he decided that there was
9 only one place where the divers could be, which was inside the
10 pipe. He says that Farah had already done some searching of
11 the surrounding area by the time he arrived.

12 Mr. Ali Sr. said that LMCS assumed that the divers had
13 five bottles of dive-air with them and while the worst case was
14 that they were all dead, the best case was that they were still
15 alive in which case LMCS had about an hour to rescue them as
16 this was the time they had left with the air from each dive tank.
17 He said that LMCS devised a simple rescue plan using scuba
18 gear, tanks, and rope. They also had umbilicals and underwater
19 torches.

20 He said that when Dexter Guerra and Andrew Farah were
21 going to implement the rescue plan and he left berth 6 to get
22 more resources, equipment, and gear, but was told by Guerra at
23 about 3.30 p.m. that LMCS was stopped from doing anything.
24 Between 3.00 p.m. and 4.00 p.m. he received a call from Collin
25 Piper for him to go to the shipping office but told Collin Piper
26 that he was busy sourcing resources, speaking to the families,
27 and doing a rescue.

1 At about 5.00 p.m. Christopher came out and they got a
2 message that the men were alive in the pipe. He said he
3 received reports of knocking at berth 5. After about 6.00 p.m.
4 Mr. Ali Sr. says he called Collin Piper and Mushtaq
5 Mohammed requesting that LMCS bolt the riser extension in
6 order to do two things. One, was to remove the chamber in
7 order to more easily access the pipeline and the other was to
8 open the riser at berth 5. He says that Mushtaq agreed but he
9 was told that Catherine Balkissoon at berth 6 said that nobody
10 told her about that.

11 Mr. Ali Sr. says that nobody at Paria asked LMCS for
12 documents for the riser extension to be bolted, then permission
13 was eventually given at about 9.00 p.m. and it was completed
14 by 10.00 p.m. He recalled speaking to Mushtaq Mohammed
15 three or four times mainly to get the riser connected and also
16 spoke to Collin Piper, but on that Friday he did not speak to
17 them about the rescue plan. He says he assumed they knew
18 about the rescue plan because he had said what the plan was on
19 the barge and also because Christopher had said that the men
20 were alive.

21 On the barge when they were discussing the plan, he was
22 aware that there were also Paria representatives listening. Mr.
23 Ali Sr. says that after the riser was extended he told Dexter
24 Guerra to go to berth 5 to take the top off but they were stopped
25 by Catherine Balkissoon. He said he spoke to Catherine on the
26 phone and she told him that they heard from Christopher that
27 the men were in an air pocket and Paria did not want to disturb

1 the air pocket. He said that he told her that this was ridiculous
2 because both ends of the pipe were out of the water. He said
3 that Catherine told him that Paria had sent for a camera to see
4 what was happening, and eventually when the camera arrived,
5 he was told that rain was falling and nobody was doing
6 anything.

7 Saturday 26th February, 2022: when the rain stopped a
8 camera was sent down—this was after midnight—and it was
9 reported that it met obstructions and Paria was getting a
10 crawler. And at about 3.00 a.m. after LMCS got the okay to
11 open the flange, the crawler went in but didn't see the divers.
12 Mr. Ali Sr. says that no one from Paria asked him to join the
13 incident command or to send someone from LMCS and he was
14 not aware that on Friday that there was a team of persons from
15 Paria making any plans.

16 Mr. Ali Sr. said at around 4.00 a.m. after he was told that
17 the flange at berth 5 had been opened and the liquid was low he
18 realized that the plug was still intact in the line so he had to
19 concentrate on berth 6. He suggested that the riser at berth 5 be
20 filled with the same amount of water as at berth 6 to prevent
21 movement of the plug and that Conan Beddoe would be the
22 rescue diver to enter the riser with surface-supplied air.

23 He said that at 7.00 a.m. he went to meet Paria to discuss
24 the rescue plan but was not let in and did not get in until 9.00
25 a.m. and went to Mr. Piper's office to discuss the rescue plan
26 with him. He recalls Catherine Balkissoon, Paul Yearwood,
27 Michael Wei, and Rajiv Mangalee being present walking in and

1 out of the meeting. Mr. Ali Sr. said that Catherine Balkissoon
2 told him that she did not think it was safe to send divers into the
3 pipeline and that Paria had a plan to pump out the line and send
4 in confined space experts to take the men out. He says he
5 assumed she was still talking rescue as no one was talking
6 recovery. He told her he saw the pumps but these could not
7 pump out the line, and in any event, Paria was not going to get
8 anyone to go 60 feet into a dry pipe.

9 Mr. Ali Sr. then told Catherine Balkissoon of his rescue
10 plan and she seemed amenable but she said would have to run it
11 by Mushtaq Mohammed who was in a meeting so that Mr. Ali
12 Sr. waited in the conference room. At about 4.00 p.m. Mushtaq
13 said he would like to speak to the rescue diver, Conan Beddoe,
14 who was in Sangre Grande.

15 Sunday 27th February, 2022: At 10.00 a.m. Mr. Ali Sr.
16 and Conan Beddoe met Collin Piper together with Mushtaq
17 Mohammed, Paul Yearwood, and a lady from Heritage. Conan
18 told Paria about his diving experience and showed him his CV.
19 Conan's dad who was also a diver, assured Paria that it was safe
20 and he would be the topside man. Paria then showed video
21 footage of the tank in the line and that it was jammed about 200
22 feet in the line. Conan said there would be no problem moving
23 it. Paria said, however, that they wanted something in writing
24 and LMCS asked for the footage to be sent to them. Mr. Ali Sr.
25 says that LMCS emailed the rescue plan to Paria at about 2.19
26 p.m. but never received the video footage.

1 There was another meeting after 2.30 p.m. with the same
2 Paria persons as before, but in addition there was a coast guard
3 officer, one Mr. Fuentes from OTSL as well as Heritage
4 persons. Mr. Fuentes had a problem with the diver's apparel
5 and radiation in the line and that the rescuer's diving suit would
6 not give him sufficient protection. Paul Yearwood said he did
7 not think that there would be much radiation there as the
8 pipeline did not have crude oil. The coast guard officer also
9 said that it was not safe but did not say why, and Mushtaq
10 Mohammed then said that they were looking at recovery.

11 Mr. Ali Sr. says that LMCS did not agree with this,
12 saying that if there was a slightest chance that anyone was alive
13 they deserved a chance to be saved. He said he was ignored
14 and he got the impression that Paria had made their minds up
15 long before. Mr. Ali Sr. also says that he did not think Paria
16 intended a rescue and conversely, he was confident about the
17 rescue. He says he was a diver trained since 1981 and that
18 diving in a pipeline means that you would not have the usual
19 dangers of ocean currents, boat propellers, predators, getting
20 snagged in fishing nets, or debris. He said that the pipe was big
21 enough and it would be safe enough to dive in the pipe.
22 Further, that Christopher had come out unaided because nothing
23 was in his way.

24 What caused the accident: Mr. Ali Sr. says in hindsight
25 there had to be differential pressure which caused the plug to
26 move. He said he does not know what caused the difference in
27 the pressure from the top to the bottom of the plug but believes

1 it could have been due to the undulating pipe and the air trapped
2 there. He says that when LMCS put the plug in, there was
3 liquid under the plug but during those 10 days after the plug
4 was put in to 25th February, 2022, the conditions could have
5 changed.

6 He says, again in hindsight, that if he was instructed that
7 or had known the pipeline was not flat but undulating, he would
8 have included in the method statement a step of measuring the
9 pressure at both risers, and if the pressure was not equal he
10 would have equalized the pressure before removing the plugs.
11 He says that on the level line the pressure would be equal and
12 that an inspection of the line by a diving team would not have
13 revealed if it was not level as it was in concrete covered in mud
14 under the seabed. Thank you, Chairman.

15 **Mr. Chairman:** Thank you very much.

16 **Examination By Mr. Chairman:**

17 Q. The first thing I want to ask you, please, before Mr. Maharaj
18 asks you some questions is you've heard that summary of the
19 interviews that you've given to our team together with the
20 original statement that you made. Does that summary
21 accurately reflect what you have told us?

22 A. It does.

23 Q. Thank you very much. I think Mr. Maharaj has a few questions
24 before I pass you on to anyone else. Before he does that, I just
25 want one thing you could help me with. In that summary and,
26 indeed, in your statement, you say that once you'd heard that
27 the divers had gone missing you took the view that there was

1 only one place they could be; that was inside the pipe. All
2 right?

3 A. Correct.

4 Q. First thing is this; we know that they all went missing sometime
5 during the course of that afternoon, but Mr. Boodram came out
6 about 2.45?

7 A. After five.

8 Q. They went missing at 2.45. So you were advised that Mr.
9 Boodram had come out at about five?

10 A. Correct, yeah.

11 Q. At that time, did you know when they went missing? How long
12 it had been?

13 A. Um, I'm not sure it's in the statement there, but I was informed
14 at about three o'clock that the guys went missing. I went out
15 onto the barge by about quarter past three. At that stage Farah
16 had done a seabed inspection as well as an inspection inside of
17 the chamber. When he told me there was nothing from in the
18 chamber on the seabed which would have been bolt spanners,
19 then we assumed everything was sucked into the pipeline.

20 Q. Right.

21 A. So fairly early in the game we realized that they weren't
22 floating around the water.

23 Q. Well, that's what I want to ask you. You said, "We realized".
24 You've said this in your statement, between the time when they
25 went missing and Mr. Boodram coming out, that there was a
26 point in time when you took the view that they must be in the
27 pipe. That's what you've said so far?

1 A. Yes, that's about quarter past 3.00.

2 Q. That was about quarter past 3.00?

3 A. Yeah.

4 Q. So maybe a half an hour, or so, after they've gone missing. All
5 right?

6 A. Yeah, correct.

7 Q. You also said that you thought that if there were no air pockets
8 in the pipe at all and they were relying entirely on the tanks,
9 that must have been sucked in.

10 A. Correct. Until Boodram came out, we didn't even think 'bout
11 air pockets in the line.

12 Q. I follow that, exactly.

13 A. Yeah.

14 Q. So you assumed that they had about an hour or so of air that
15 they could have extracted from the tanks that would have been
16 sucked in—

17 A. From the tanks.

18 Q. All right. So from 2.45 when they went missing, you'd have
19 about an hour, say to 3.45, to effect any kind of rescue if they
20 were going to be rescued alive, as far as you were concerned?

21 A. Yeah. Could I clarify just a little bit?

22 Q. Yes.

23 A. If all five survived that they would be using one bottle each so
24 they have [*Inaudible*]. But depending on how many survive,
25 the survivors could have a longer time. So, like, if one diver
26 had survived he would have five tanks for himself.

27 Q. He actually had them?

1 A. Yeah, because the others wouldn't be using it.

2 Q. Right.

3 A. At that time, one of the divers had his full gear on him when
4 they were sucked in, which happened to be my son. [*Mr. Ali*
5 *crying*] So if only he did survive, he would have the rest of the
6 tanks. So there were a time of an hour, at the least, to probably
7 about four hours if one diver had survived and had all the
8 bottles.

9 Q. So if the others were—in fact, had died already inside, you
10 were surmising in your own mind that your son would have had
11 his tank on?

12 A. Well, at that time I didn't even know was my son. I knew was
13 one diver with a tank.

14 Q. All right, all right. But all I want to try and understand is this,
15 is that you'd said that you thought they would have an hour,
16 minimum—a minimum of an hour?

17 A. That's if all five survived.

18 Q. I got you. And if not, the maximum might be five hours?

19 A. With one.

20 Q. All right. The net result of that would have been that you had
21 that window, a maximum window of five hours in order to
22 effect a rescue?

23 A. Correct, yeah.

24 Q. And a minimum of—hopefully a minimum of one hour?

25 A. Of one hour, yeah.

1 Q. So before Mr. Boodram came out that was the window that you
2 felt was available to you and others who's working at Paria, and
3 so on, to effect the rescue?

4 A. Correct.

5 Q. All right. We know already from some of the evidence we've
6 heard what happened in that window. We know already from
7 some of the evidence that we've heard what happened during
8 the course of that window. All right?

9 A. Yeah.

10 Q. If I'm right about this, can I understand that by the time—when
11 Mr. Boodram did come out and had explained that there were
12 air pockets, that would have given you hope, obviously?

13 A. Well, everybody on the barge.

14 Q. Of course. And did you have any idea at that stage what would
15 be the time scale, or did you have any idea of the size of
16 potentially this air pocket or any of that information?

17 A. No. At that stage we were just going on hope. I calculated
18 afterwards, it had about 1500 cubic feet of air. How long that
19 would last at that depth, [*Inaudible*] guess. What kept us going
20 is we heard this continuous knocking coming from the pipeline.

21 Q. All right. So the first thing that happened after your estimate of
22 the time period that they might have a one to five hours was
23 Mr. Boodram coming out at—[*Mr. Chairman and Mr. Ali*
24 *speaking over each other*] Exactly—at around five o'clock
25 when you were told that. And then whatever air pocket,
26 whatever size air pocket there might have been, did you put,

1 again, any sort of time scale on what you thought might be the
2 period of time that they might survive?

3 A. I didn't really—I was just as urgent as possible to get people in
4 there.

5 Q. All right, all right. Thank you. And lastly this: once you had
6 made the decision, the assumption that they must have been
7 sucked into the pipeline you said at about 3.15, or so, you'd
8 come to that conclusion?

9 A. Yeah.

10 Q. Did you tell anyone else?

11 A. As I said, they were all gathered around me on the barge.

12 Q. Who is "they"?

13 A. Paria and LMCS people.

14 Q. Who particularly at Paria?

15 A. There would have been—I remember Dobson. As I said in my
16 statements somewhere he brought a chair for me to sit down.
17 And there would have been the offshore supervisor, and I had
18 missed it in that statement, but later on I picked it up. I had
19 actually spoken to Mr. Piper while I was on the barge and I had
20 explained to him that the men were in the pipe.

21 Q. Before Mr. Boodram came out?

22 A. Yeah, that's at 3.20 or 3.25 I got a call from Mr. Piper, and he
23 confirms that in his statement as well, that the men were in
24 there. And if you look at the time, the white board that Paria
25 had in their incident command office, there's a statement there
26 from one, their HSE guy, that about 3.48, saying the men had a
27 very—survival was very slim. The only reason you would say

1 that is if you knew—if you considered they were in the
2 pipeline, because we know if people are out in the open sea
3 they could last a couple days before you call them off dead. So
4 I'm saying the only reason he would say that is because he
5 heard me saying that the men were in the pipeline.

6 Q. Just so that I understand it, whatever the position, whatever
7 they might have believed, whatever the conclusions that
8 officers from Paria might have come to, and we'll hear more
9 about that in due course, so that I'm clear, you told them that it
10 was your belief that they were in the pipeline?

11 A. I did.

12 Q. And you told them that inside the hour, or so, that was the
13 minimum period of time?

14 A. I did.

15 **Mr. Chairman:** Thank you very much. Thank you. Thank
16 you, Mr. Maharaj.

17 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

18 **Examination By Mr. Maharaj SC:**

19 Q. Mr. Ali, I know how difficult this is and I do sympathize with
20 you, but I'm sure you would appreciate the exercise we are in,
21 we have to try and get as much information as possible. So I
22 know that you have cooperated with the Commission; you have
23 been interviewed on two days, but there are a few questions on
24 an important aspect that I want to ask you some questions on.
25 Okay?

26 A. Okay.

1 Q. Before I—and it has to do with the line clearing because I think
2 the line clearing is very important in the light of the expert
3 evidence which you know about; the In-Corr Tech Report.
4 Okay?

5 A. Yeah.

6 Q. So before I ask you any question I just want to refresh your
7 memory from the In-Corr-Tech report.

8 **Mr. Maharaj SC:** And that, Mr. Chairman, is at the
9 supplemental core bundle at page 1394.

10 **Mr. Chairman:** Are you at the Executive Summary?

11 **Mr. Maharaj SC:** Executive Summary.

12 **Mr. Chairman:** Oh, I've got it.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. And at paragraph 2.3 it says:

15 “The removal of Fuel Oil from line and the installation of
16 a migration barrier as stipulated in Paria’s Scope of
17 Works” (et cetera, et cetera) “created a large, gaseous
18 void in Sea Line SL36.

19 This void served as a prerequisite for the Latent
20 Differential Pressure hazard that was created when the
21 habitat was installed and pressurized to facilitate work
22 within the said habitat. The hazards associated with this
23 void were overlooked by both Paria and LMCS.” And it
24 referred to a diagram.

25 Then if I could go to paragraph 2.5.

26 “This latent hazard existed at the onset of work within
27 the habitat and became active when the divers were

1 attempting to remove the primary seal (inflatable plug)
2 from within the riser. See drawing.”

3 2.6 Not being aware of this latent differential pressure
4 (ΔP) condition, incorporating a gaseous void, LMCS
5 divers proceeded to deflate the plug after safe removal of
6 the mechanical seal. On reaching a deflated Pressure of
7 approximately 11.4 psig, the resistive force of the plug
8 was then lower than the downward force (4031 lbf) on
9 the plug.”

10 And if I take you to paragraph 3 at page 1397 at paragraph
11 3.1.4.:

12 “Changing the method of oil removal from the line from
13 using an air driven pump as per LMCS method
14 statement, to forced-air blowing from berth #5 resulted in
15 a dramatic increase in the risk profile of the job.”

16 Okay. Now, in your statement that was referred to—your
17 supplemental witness statement that was referred to by Mr.
18 Bissessar under line clearing, and that is at page, in the
19 supplemental witness bundle, it starts at page 2855, but at page
20 2860 at paragraph 30 you stated that:

21 “The method of line clearing in the method statements
22 and Paria’s instruction for the use of air blowing instead
23 of an air pump was to be done in two (2) phases.”

24 So as I understand it, the removal of the fuel from the line
25 was—of the contents of the line, were done in two phases?

26 A. Correct, yeah.

27 Q. Phase one was topside?

1 A. Correct.

2 Q. And topside, according to the evidence you have given—you
3 will tell me if this is correct—you're saying that you removed
4 300 barrels from topside?

5 A. Well, we estimated 300 in the initial method statement. But
6 then when we started blowing, when we changed the method,
7 we weren't just dealing with 36 Sealine. We actually crossed
8 over to 66 Sealine. So the volume would have changed.

9 Q. Could you give us an idea?

10 A. I couldn't really tell you; 66 Sealine was a 50-inch slide so
11 there would have been product of that as well and some of that
12 was more.

13 Q. So it's more than 300 barrels or less than 300?

14 A. More than 300 barrels.

15 Q. So in the method you used to remove the contents from topside,
16 you didn't use an exact measurement then? You just—

17 A. No. The initial 300 barrels was an estimate to start with, but
18 that involves just draining 36 Sealine above sea level. But
19 when we went to this method here and we went via 66 Sealine,
20 it involved—more oil would have been removed than the initial
21 period. How much it was, I couldn't tell you.

22 Q. So was it—did you drain Sealine 66?

23 A. It was used in the clearing but we didn't drain it. The oil from
24 36 Sealine was pushed into 66 and then some of—all of the 36
25 and some of 66 would have been moved into the tank farm.

26 **Examination By Mr. Chairman:**

1 Q. Sorry, I'm not following this. I wonder if—would a diagram
2 help or would it be possible for you to draw a diagram, perhaps,
3 because I am not following this. Line 36 is the one that was
4 supposed to be drained?

5 A. Right. So what we did—

6 Q. Where does 66 come into it?

7 A. Sixty-six is another line on No. 6 berth.

8 Q. Right. Are they connected?

9 A. So we connected 36 to 66.

10 Q. Why?

11 A. To displace the oil from 36 into 66 and ashore.

12 Q. Right. So you were draining one—from one to the other?

13 A. Well, drain mightn't be the right word; pushed.

14 Q. Pushing the fluid?

15 A. Yeah.

16 Q. Well, I'm going to call it fluid because we don't know exactly
17 what it was; oil and water mixture, whatever it is, yeah. But
18 you're pushing that fluid from 36 into 66?

19 A. Into 66, and then eventually would end up in the tank ashore.

20 Q. When you say you're pushing it—

21 A. Well, the air pressure would displace it. It wasn't supposed to
22 be—air wasn't supposed to be blowing through. It would
23 displace—yeah.

24 Q. Right. We got 36 over here?

25 A. Yeah.

26 Q. Right? We got 66 over here?

27 A. Yeah.

1 Q. And you're pushing it from one into the other?

2 A. Into the other.

3 Q. Right. So you're putting some in between connection?

4 A. Yeah.

5 Q. And then what? A pump or—

6 A. No, the air was pushing.

7 Q. Forcing the air in at one point?

8 A. Forcing the air at No. 5. Was pushing it all along.

9 Q. Into this one?

10 A. Into that one.

11 Q. Into 66?

12 A. Yeah. And then—

13 Q. Was 66 empty, then?

14 A. No, it was full.

15 Q. So how were you able to push anything from 36 into 66?

16 A. So we were pushing from 36 into 66 and the same air pressure
17 would have been felt on 66 and pushing that ashore. But we
18 found out—sorry. Are we okay with that one?

19 Q. No. I mean, it may be me. I'm sure Mr. Wilson follows
20 everything you're saying, but I don't and I need to understand
21 it.

22 A. Yes. So we introduced the air at No. 5—the riser—36 riser at
23 No. 5 berth.

24 Q. Right.

25 A. Right. So that would pressurize the line now. We made a tie in
26 between 36 and 66 on No. 6 berth.

27 Q. You created this tie, did you?

1 A. Yeah. Well, it was between Paria and mihsself. We actually put
2 a physical connection between the two.

3 Q. And that was a temporary thing in order to drain one or to push
4 air in to drain the fluid or push some of the fluid into the other.
5 Is that right?

6 A. Right, that's what it is, yes.

7 Q. So it is a temporary connection between the two?

8 A. A temporary connection.

9 Q. Am I understanding that?

10 A. Yeah.

11 Q. So where did the fluid then that you were pushing from 36, it
12 goes into 66, where did the—if that was already full, where did
13 it go?

14 A. Well, the end of that was open into a tank ashore.

15 Q. Right.

16 A. So push it into the—

17 Q. So that I'm clear, you got 36 over here; 66 over here. You're
18 pushing the fluid from 36 into 66 in order to create something
19 of a void in 36. Correct?

20 A. Correct, yeah.

21 Q. And in the process of pushing this fluid into 66 it comes out
22 somewhere else in Paria's—

23 A. Yeah, in their tank farm.

24 Q. Establishment, yes?

25 A. Yeah.

26 Q. Into a tank?

27 A. Correct.

1 Q. Correct. So is there a way in which you can measure how
2 much you're pushing into this tank?

3 A. They were supposed to measure it at the tank farm.

4 Q. Who were "they"?

5 A. Paria's tank farm people.

6 Q. Right. So Paria have some tank people?

7 A. Yeah.

8 Q. And the tank people can measure how much fluid is being
9 pushed through 66 into the tank. Is that right?

10 A. Right. But at the same time while they were measuring there,
11 our objective was to get an ullage in the riser at No. 6.

12 Q. I follow that. I'm going to come back to that in a minute, if I
13 may, or Mr. Maharaj will probably. But what I want to
14 understand is having made this connection between 36 and 66,
15 and pushing the fluid from 36 into 66 and then from 66 into a
16 tank, there is a method by which you can measure how much is
17 going into the tank?

18 A. Correct.

19 Q. Did they tell you how much had gone into the tank?

20 A. Correct.

21 Q. Did they tell you?

22 A. No.

23 Q. Thank you. I now understand. Thank you very much.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. Did you ask them? Did you ask operations how much it was?

26 A. We asked operations and we were getting negligible, negligible
27 as the answer.

1 Q. I'm sorry?

2 A. Negligible was the answer.

3 Q. All right. That is the topside. I come to the phase two which
4 was the underwater between berth 5 and berth 6.

5 A. Correct, yes.

6 Q. So as far as you have told us—well, in your evidence, tell me if
7 I'm correct. You were only interested, as you said, in getting
8 an ullage of about—I think you said 30 feet?

9 A. Thirty feet. I think is 30 feet. I can't remember.

10 Q. About how much oil that would have been?

11 A. One foot of 30-inch pipe is approximately a barrel. So 30 feet
12 would be 30 barrels.

13 Q. So according to you, Mr. Ali—

14 A. Yeah.

15 Q. —as far as you are concerned, that in respect of the underwater
16 piping between berth 5 and berth 6, only 30 feet of oil was
17 removed?

18 A. All right. At No.—36 Sealine has two risers. Right? When we
19 finished with the first phase—

20 Q. No. If you could just keep it at berth—I'm talking about this
21 job. Right? So if you could help us.

22 A. Okay. After we remove 30 barrels of oil we still didn't reach
23 the 30-foot ullage.

24 Q. You still did not reach the 30-foot ullage?

25 A. Yeah.

26 Q. But the point is that, according to you, as far as you're
27 concerned, you removed 30 barrels or 60 barrels?

1 A. About 60 barrels; about two and a half—again, we didn't
2 measure it. We were measuring the ullage.

3 Q. All right.

4 A. Not the amount of oil.

5 Q. So as far as LMCS evidence is concerned, from you, from the
6 underwater piping between berth 5 and berth 6, only about 60
7 barrels of oil were removed?

8 A. Correct.

9 Q. And that evidence is true. Okay?

10 A. It is, yeah.

11 Q. Now, in your witness statement you said that the method of
12 clearing the lines were changed with the approval of Paria?

13 A. Correct.

14 Q. It was to be air pumping and then it now, it changed to air
15 blowing. Correct?

16 A. Correct.

17 Q. So you were blowing air into this line?

18 A. Correct.

19 Q. Now, I want to—before I refer you to the records of Paria as to
20 how much oil was taken out of that line, the underwater line, in
21 your witness statement at paragraph 42 you said: “The line
22 clearing was done in January, 2022...” Sorry, page 2862.
23 “...over a period of two (2) week period.”

24 Am I correct?

25 A. Correct, yeah.

26 Q. Correct. And you said it was not a continuous work but it was
27 done over a period of two weeks?

1 A. Yeah.

2 Q. And then at paragraph 43 you mentioned about the change in
3 technique from air pump to air blowing. And then you said at
4 paragraph 44:

5 "Everything being equal, I knew that once there was
6 liquid in the riser directly under the plug then the
7 horizontal section of the pipe should have been full and
8 the riser at berth 5 would have an ullage equivalent to
9 that of the riser at berth 6. Once this was achieved, there
10 was no chance of any differential pressure."

11 A. Correct.

12 Q. So am I correct in saying that your conclusion at paragraph 44
13 was based on your assumption that Sealine, the underwater
14 line—

15 A. Was full.

16 Q. —had—it was full?

17 A. It was full, yeah.

18 Q. But you did not take any measurement or any test to determine
19 whether the line was full?

20 A. No. The only test we did was we checked the ullage at the riser
21 at No. 6.

22 Q. But when you checked the ullage at riser No. 6, you didn't
23 know if there was air underneath there or more oil?

24 A. You couldn't tell; in the riser there was oil.

25 Q. And you checked that with your naked eye?

26 A. With naked eye and with a tape.

27 Q. And with a tape. And at paragraph 45 you said:

1 “We therefore did not discuss the possibility of a differential
2 pressure in the method statement or the risk assessments
3 because the steps we took should have eliminated this.”

4 A. Correct, yeah.

5 Q. Now, you based that opinion—you based that assessment on
6 the basis that you assumed that the pipe was full; the
7 underwater pipe was full?

8 A. Correct.

9 Q. Correct. Now, so you recognize, Mr. Ali, that there could have
10 been a risk of a differential pressure if the underwater pipe was
11 not full?

12 A. Correct.

13 Q. Correct. But from what I saw in the documents, nowhere in the
14 risk assessment which was done for this job, differential
15 pressure was mentioned. Am I correct?

16 A. Correct.

17 Q. Nowhere in the scope of works I saw that. Am I correct?

18 A. Correct.

19 Q. Nowhere in the job safety analysis I saw that. Am I correct?

20 A. Correct.

21 Q. Nowhere in the notice to permit the work I saw that. Am I
22 correct?

23 A. Correct.

24 Q. But you are telling us today quite in the—that you knew that
25 there was such a risk but you thought it was eliminated because
26 you assumed that there was liquid content in the underwater
27 piping?

1 A. Correct, yeah.

2 Q. Now, if I—I want to show you—I want to refer to you some of
3 the records from Paria daily work reports to show that for the
4 underwater piping there was over 500 barrels of oil taken out
5 from the underwater piping. Would that surprise you?

6 A. It would.

7 Q. It would surprise you. And you would agree with me that if
8 that was taken out, that was a potential differential pressure
9 situation. Not so?

10 A. Yeah.

11 **Mr. Maharaj SC:** So can we go, Mr. Chairman, to core
12 bundle two?

13 **Mr. Chairman:** Thank you.

14 **Examination By Mr. Chairman:**

15 Q. Just so—to remind us, the formula that you gave us before, 500
16 barrels of oil represents about 500 feet of cleared pipe?

17 A. Correct, yeah.

18 Q. That's what it would represent, isn't it?

19 A. That's if it was vertical.

20 Q. It represents linearly or vertically, if it were possible to do,
21 that's the length of pipe that we're talking about?

22 A. Yeah.

23 **Mr. Chairman:** All right. Thank you.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. I am going to start at page 994; core bundle two.

26 A. 994, correct.

27 Q. You saw it, Mr. Ali? You have it there before you?

1 A. Yeah.

2 Q. You're seeing 994?

3 A. Yeah, I am.

4 Q. Okay. Now, I'm going to go through the daily reports and
5 show you the quantity of oil. Right? Now, if you look at No. 3
6 under mechanical and you look across, you see "Description"
7 and then you see "Job Status"; and you see "Air blowing" and
8 then you see:

9 "Ongoing air blowing started at 12:22 p.m. due to
10 operation setting up to drain to tank and air blowed until
11 1800 hours, a total of 798 barrels of oil was drained."

12 That look as if it was phase one. Right? That is topside. Let's
13 go to page 997, at No. 3:

14 "Mechanical description: SL36 riser renewal air blowing
15 contents 36 from berth 5 to 6 ongoing air blowing started
16 11:00 a.m. (due to installation of slip blank) and air
17 blowed until 5:30 p.m. a total of 118 barrels of oil was
18 drained."

19 You see that?

20 A. Yup.

21 **Mr. Chairman:** This is topside or—

22 **Mr. Maharaj SC:** This is topside.

23 **Mr. Chairman:** Topside still.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. Now, I saw in your witness statement you said you personally
26 supervised the line operation—the line clearing operation?

27 A. Well, the final pieces, yeah.

1 Q. Okay. So let's continue, Mr. Ali. Let's go to page 1002.
2 Sorry, I should look at 1001.

3 "No. 1. Completed. Removed topside piping and solid
4 blank top end going towards berth."

5 So that is the topside was completed. Correct?

6 A. Correct.

7 Q. And they started phase two. Correct?

8 A. Correct, yeah.

9 Q. Right. Then we go to 1002. You see No. 1?

10 "Completed two lengths of 6.30 hose together with
11 length 6.45, et cetera. Riser to assist with phase two air
12 blowing."

13 So it shows air blowing had started. And then you go to No. 4.

14 A. Correct.

15 Q. Level was checked and 5 estimated to be 3/4 full with oil
16 content. You see that?

17 A. I saw that, yeah.

18 Q. Right. Then we go to 1003; 2nd February, Mechanical No. 1.
19 Phase II air blowing. Description: Air blowing was conducted
20 between 11.00 a.m. and 3.00 p.m. Onshore noted that they
21 received 276 barrels of oil. Started air blowing 11.00 a.m. due
22 to lining up of tanks and waiting for pressure to build up.

23 You see that?

24 A. Yep.

25 Q. Yes. Then you go to No. 5. Draining contents of SL36 into
26 slop barge. Connect hose, et cetera, et cetera. Two slop barge
27 was filled approximately 100 barrels of oil.

1 You see that?

2 A. I see that, yeah.

3 Q. Mr. Ali, that's much more than 60 barrels. Am I correct?

4 A. A lot more.

5 Q. Yes. Then we go to page 1004. On the 3rd February. No. 1—
6 Phase II, air blowing description. Air blowing was conducted
7 between 1300 hours to 1500 hours. Onshore noted that they
8 received 55 barrels of oil. Note stated air blowing 1300 hours
9 due to waiting onshore—et cetera, et cetera. And then we go to
10 No. 5—well, No. 4 and No. 5. Level was checked at No. 4
11 after draining and oil content was approximately 8 feet below
12 tee on riser. What that means?

13 A. Sir, this is not my report.

14 Q. No, no. But do you know what eight feet on tee riser means, in
15 your—the oil industry, in your business? What it mean?

16 A. Like I say, this is not my report. The figures here are all over
17 the place, but item 4 there will confirm what I was saying all
18 the time. When we measure the ullage he's saying eight feet
19 here below the tee. The tee was the top of the riser. So if you
20 measure down from the top of the riser, the oil was 8 feet below
21 the tee.

22 Q. Below the tee?

23 A. Below the tee. The tee was at the top of the riser.

24 Q. Okay.

25 A. And then I see he goes on to say two barge full, approximately
26 100 barrels. Well, a barge full was 25 barrels. So—

27 Q. Okay. But it says so; 100 barrels?

1 A. Yeah, but he's estimating from—or whoever it is—two barge
2 full, but—

3 Q. And I note, page 1005

4 **Mr. Chairman:** Hang on a second.

5 **Examination By Mr. Chairman:**

6 Q. Two slop barges, you say represents 25 for each barge. So that
7 would be—

8 A. About 50 barrels.

9 Q. Fifty, not 100?

10 A. Not 100.

11 Q. But whoever has put this down has got that wrong, you think?

12 A. Sorry?

13 Q. Whoever has written down 100 barrels has got it wrong—

14 A. Well, estimate, yes.

15 Q. Yes.

16 A. It can't be two slop barge full and 100 barrel.

17 Q. Well, they might have got the number of slop barges wrong
18 rather than the number of barrels?

19 A. Well, I think we say it the way we put a two and a half slop
20 barge full in my statement.

21 **Mr. Chairman:** I'm afraid we're going to need to take a short
22 break. I was hoping to finish this bit, but we can't, I'm afraid,
23 so such is life. We're going to have to break off just for 10
24 minutes. All right? Normally we have a longer break but—

25 **Mr. Ali Sr.:** We don't want to finish this little item here?

26 **Mr. Chairman:** Apparently not, so we will have to take the
27 break now. So as not to embarrass anyone, go. Oh, I'm sorry, I

1 have. Forgive me. Please, if you would go with them.
2 Everyone could take 10 minutes, please. Thank you very much.

3 **11.23 a.m.:** *Enquiry suspended.*

4 **11.35 a.m.:** *Enquiry resumed.*

5 **Mr. Chairman:** Can I just—in helping to see where we got to,
6 summarize what you've established so far, Mr. Maharaj?

7 **Examination By Mr. Chairman:**

8 Q. So, Mr. Ali, what Mr. Maharaj was asking you, and I leave
9 aside the topside for the moment, all right, because that's the
10 one where I was asking you going from 36 to 66 and then into
11 the tank.

12 A. Yeah.

13 Q. So leave that to one side, what I'm calling the subsea pipe level.
14 All right? What he had taken you to is page 1003 where there
15 was 276 barrels and another 100 barrels. And then page 1004
16 where there were 55 barrels and then another 100 barrels, if that
17 is correct. And you pointed out that at line 5 on page 1004 that
18 two slops barges doesn't equal 100 barrels of oil.

19 A. I'm wondering if that—No. 1 and 5 is not a duplicate.

20 Q. One and 5?

21 A. Yes. This report is given at the end of the day.

22 Q. Well, we can ask somebody from Paria to explain that in due
23 course. But at the moment what we've identified is that we've
24 got 55 barrels at one and 100 at five. All right. And we got to
25 put a question mark next to that 100 because that 100 might, in
26 fact, be wrong. Might be less than that; might be 50. Is that
27 right?

1 A. So at item 4 we had a level of eight feet below the tee.

2 Q. Yes.

3 A. And we'll assume that the tee is at the top of the riser.

4 Q. All right. So that was a lot less than you needed? You were
5 asking for 30 feet.

6 A. Yes, so we still had to get some more out.

7 **Mr. Chairman:** All right. Thank you very much. Mr.
8 Maharaj.

9 **Mr. Maharaj SC:** Much obliged.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. And at page 1005 you see it says—and this is Phase II. Air
12 blowing was you conducted between 10.30 a.m. to 1430 hours.
13 That's a lot of hours. Correct?

14 A. Right. Well, it would have been continuous. Following from
15 the previous page we hadn't got to the depth we wanted. And
16 at this case now, we would have been blowing a little bit,
17 offloading some until we got the right amount. So it wouldn't
18 have been three hours continuous.

19 Q. But this was an important part of the work. Am I correct?

20 A. Yes.

21 Q. Did you keep records of what was air blown? The quantity of
22 oil?

23 A. That would be the last half of slop barge. Remember I said two
24 and a half.

25 Q. No. Did you keep record?

26 A. No, I didn't keep record of it.

1 Q. So—but would you not agree with me even on hindsight that
2 knowing the quantity of oil, if any, in the underwater piping
3 was critical to determine whether a Delta P hazard could have
4 become active?

5 A. In hindsight, yes.

6 Q. In hindsight. So what you are telling us about this air blowing
7 from 10.00 a.m. to 1430 hours is purely from memory?

8 A. Okay. What I'm saying is the air blowing would have been
9 done to achieve the final ullage we wanted. It wouldn't have
10 been continuous. We would blow a bit; measure; blow a bit;
11 measure, until we got the 30-foot ullage that we wanted.

12 Q. But the final ullage, the figure that I've shown you, the quantity
13 is over 300 barrels?

14 A. Well, that's what I'm questioning—the quantity.

15 Q. Yes, it's about 600.

16 A. Yes.

17 Q. But I want to show you—you are very familiar with the In-
18 Corr-Tech report. Not so?

19 A. I am, yeah.

20 Q. And you would have seen the schematic diagram in that report
21 that the opinion was even based on if 300 barrels of oil were
22 removed.

23 A. Correct.

24 Q. I want to point out to you at page 1413 of the—it's at—

25 **Mr. Maharaj SC:** Mr. Chairman, it's at the Supplemental
26 Core Bundle and it's at page 1413.

27 **Mr. Chairman:** Under "Conclusions"?

1 **Mr. Maharaj SC:** No, it's a diagram; 1413. It's a schematic
2 representation of sea line between so and so.

3 **Mr. Chairman:** Got it. Thank you.

4 **Continued Examination By Mr. Maharaj SC:**

5 Q. And if you see, Mr. Ali, look at the side, on the left-hand side
6 where you have the darkened drawing at the bottom of the line.

7 You see:

8 "Approx. Level of product in 30" line after removal of
9 300 bbls"

10 So based on his opinion, he was showing the void even if you
11 had removed 300 barrels of oil?

12 A. Yeah. I looked at this opinion that he gave and he based the
13 whole opinion on the 300 barrels we said last May 2021 that we
14 would remove. Right? But I'm still holding that we measured
15 the ullage and not the amount removed. When we opened the
16 flange—

17 Q. So you are saying that you did not measure the amount of oil
18 removed?

19 A. No. Our measurement was what was left in the riser.

20 **Examination By Mr. Chairman:**

21 Q. Can I ask a question about that, please? You're measuring your
22 ullage at riser No. 6.

23 A. Six, yeah.

24 Q. What was the position whilst you were doing that at riser No.
25 5?

26 A. Sorry?

27 Q. Well, you see—

1 **Mr. Chairman:** Can we have a diagram back, please? I don't
2 know why we keep having problems with this. It seems to be
3 pretty straightforward stuff. Right.

4 **Examination By Mr. Chairman:**

5 Q. There's a riser 5 and a riser 6. Okay? The one as we look at it
6 on the left is 6?

7 A. Yes, the one with the plug in it.

8 **Mr. Chairman:** Why is it going off and on? Forgive me, Mr.
9 Ali.

10 *[Pause for technical issues]*

11 Right. It seems to have stayed on now for the moment at any
12 rate. Can whoever is controlling this just don't do anything for
13 the moment, please?

14 **Examination By Mr. Chairman:**

15 Q. Right. You see on the left-hand side that is the riser at the No.
16 6. Yes?

17 A. Correct.

18 Q. The one on the other side is riser No. 5. Yes?

19 A. It's the riser at No. 5 berth, sorry.

20 Q. All right.

21 A. Just to be accurate.

22 Q. Okay. So this is 5, this is 6. All right?

23 A. Yeah.

24 Q. When you are measuring the ullage at 6, what is the position at
25 5?

26 A. Unfortunately, we weren't measuring there because it was
27 closed. That's where we were injecting the air from. So you

1 had a one-inch bus.

2 Q. The time that you were doing the measuring over here, this one
3 has got a sealed cap on it?

4 A. Sorry?

5 Q. No. 6 is being measured by you over here. Right? No. 5 has
6 got a sealed cap on it?

7 A. No.

8 Q. It hasn't?

9 A. We bled out the air. It had a cap but there was also a bus in it
10 that—

11 Q. Is a what?

12 A. A connection, a one-inch connection where we were injecting
13 the air into it.

14 Q. So in this 30-inch over here at No. 5—

15 A. Yeah.

16 Q. —it's got a sealed cap on it. Correct?

17 A. Yeah.

18 Q. It has a hole in the side where you can access the pipe. Is that
19 right? And you're blowing air?

20 A. Yeah, but it was at the top on an elbow.

21 Q. I'm not with you.

22 A. Okay.

23 **Mr. Chairman:** If someone can keep the picture on the screen,
24 on the screen, we could actually try and understand what you're
25 trying to say.

26 **Mr. Maharaj SC:** I am told, Mr. Chairman, that if they get
27 two minutes they could sort out the problem.

1 **Mr. Chairman:** Well, they just had 10, but let's have two
2 more. I don't want to ask this—I do need to understand this.
3 All right.

4 **Mr. Ali Sr.:** Yeah.

5 **Mr. Chairman:** Would you forgive me, Mr. Ali. We're going
6 to have a couple of minutes while they sort out this problem so
7 it doesn't keep flashing up and down. And if necessary, we're
8 going to use that white board behind you and you can show me
9 what you mean. All right? So we're just going to rise for a few
10 minutes please. Thank you.

11 **11.44 a.m.:** *Enquiry suspended.*

12 **11.52 a.m.:** *Enquiry resumed.*

13 **Mr. Chairman:** I'm sorry if I sound impatient, it's because I
14 am impatient, but with technology like this. So I'm pleased to
15 see it's now working. I'm sorry, Mr. Ali, that that's been a
16 problem.

17 **Examination By Mr. Chairman:**

18 Q. Let's see if we can manage with the diagram first. If we can't,
19 then we'll move on. But now we can see that in that diagram
20 that is—

21 **Mr. Chairman:** Can we just make it a slightly smaller so we
22 see the bottom as well, please, and the tops of the pipes as well,
23 please. That's perfect. Thank you.

24 **Examination By Mr. Chairman:**

25 Q. So what I need to understand from you, please, if you could
26 help me is—

27 A. I think I need to draw that piece in for you to—

1 Q. Feel free to, yeah. Keep it at the top of the board rather than at
2 the bottom, if you would, please.

3 *[Diagram drawn on white board by Mr. Ali Sr.]*

4 Right, thank you.

5 A. Sir, that's how it would have been.

6 Q. Where you put those little tee junctions, if I can call them that?

7 A. So that would be the top of the riser in both cases.

8 Q. Right. That's the top of the riser.

9 A. Right. On this side we took off the top piece, so that's where
10 the chamber would have come out eventually. So on that side
11 we were—this pipe was there up to the last—a day or so. So
12 this tee piece—

13 Q. Speak right into that microphone, yes.

14 A. Yeah, this elbow piece. So we didn't have access down here.
15 The air was being injected here.

16 Q. Right.

17 A. Right. And then before we do any measurement, we would
18 bleed out the air, get zero pressure back at the top of—

19 Q. Right.

20 A. So even though it might appear it was sealed, the same spot we
21 were injecting in, we had a tee there and we could bleed off the
22 pressure there. That's why you would notice that we went on
23 the day after. It took about three hours to get the final
24 measurement because we kept blowing and releasing the
25 pressure to get the measurement.

26 Q. When you say, "releasing the pressure"?

27 A. Open it back to atmosphere.

1 Q. So you're pumping air in at 5?

2 A. At 5, yeah.

3 Q. Right.

4 A. I'll show the bottom. [*Diagram drawn*] So the air would be
5 going in here.

6 Q. Right. And you're using quite a lot of pressure presumably?

7 A. In this case it would have been under 40 psi.

8 Q. Under 40?

9 A. We had a limit of 40 psi to use in the pipeline. But here, you
10 would have got the air out. Probably about 30 psi you would
11 have got movement in the line.

12 Q. All right. So you're pumping air in; that forces the fluid out at
13 6?

14 A. Yes. And from there it was going into the slop barge.

15 Q. From there into the slop barge?

16 A. Correct.

17 Q. Right. And then when you got the ullage that you want at 6,
18 what do you do? You've been pumping in the air at one end?

19 A. Right.

20 Q. You turn that off?

21 A. Turn it off, release the pressure through this one here.

22 Q. Right, release the pressure.

23 A. So you get back to—you had equal pressure on the top, then
24 zero pressure.

25 Q. Right. So zero pressure at the top?

26 A. Yeah.

27 Q. Right. And—

1 A. And then you take your measurement when you had equal
2 measure at the top.

3 Q. How do you know what the pressure is at this end?

4 A. This is open. Once it's open no air is bleeding out, so you don't
5 have to measure it. Once it's open to atmosphere that's the
6 pressure you had.

7 **Mr. Chairman:** Right. Thank you very much. That does help
8 me. Thank you, Mr. Maharaj.

9 **Mr. Maharaj SC:** Much obliged.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. Mr. Ali, you have also read the report of Mr. Newsum of the
12 Association of Diving Contractors Inc. You read that report?

13 A. I did.

14 **Mr. Maharaj SC:** That is at 1286, Mr. Chairman, in core
15 bundle 3, and at page 1286 (c)—

16 **Mr. Chairman:** Yes, I've got it. Thank you.

17 **Continued Examination By Mr. Maharaj SC:**

18 Q. 1286(c); and the paragraph, about the fourth paragraph starting
19 with the words "Other assessments". You see that, Mr. Ali?

20 A. Yeah.

21 Q. If you look at the last two sentences:

22 "Mr. Kazim Ali stated that he was a Marine Engineer in
23 the preliminary report on the accident. If that is accurate
24 he should have performed some calculations to ascertain
25 the potential for any Delta P hazard."

26 Would you not agree with that?

27 A. Again, in hindsight, yes.

1 Q. In hindsight, yes. So I just want to put a few thing to you and—
2 just a few things. Would you agree with me that since the risk
3 assessment to identify a Delta P hazard was not made at the
4 beginning, or let's say whether the scope of works or in the
5 method of statement, but that failure would have had a ripple
6 effect throughout the process of the works?

7 A. I would say so, yeah.

8 Q. And would you not agree with me that LMCS had a duty of
9 care to its workers?

10 A. We do.

11 Q. And to do everything that was reasonable in the circumstances?

12 A. I would.

13 Q. Since you, from your witness statement, say that you knew
14 what Delta P was and differential pressure, would you not
15 consider it was your duty that if you felt that there could have
16 been the risk of a Delta P to have pointed it out to Paria?

17 A. Well, I didn't think there would be one. Remember, this job we
18 had done similar a year before and there wasn't a consideration
19 there.

20 Q. And, Mr. Ali, I'm just asking you again. You have agreed that
21 the contents of the line under water was a decisive factor to
22 determine whether there could be an active Delta P?

23 A. In hindsight, yes.

24 Q. In hindsight. So at that time you didn't—

25 A. I didn't think—I didn't think there would be a void in the line at
26 that time.

27 **Examination By Mr. Chairman:**

1 Q. If you did this job again—

2 A. Sorry?

3 Q. If you did this job again, whether for Paria or anyone else,
4 would you identify Delta P as a potential risk?

5 A. Chief, I not going anywhere near this job again.

6 Q. Yeah, well, I could understand why you wouldn't, but you
7 understand what I'm asking you? Because you said with the
8 benefit of hindsight you recognize that there was a latent risk as
9 described in the report—so if you were to be engaged in this
10 sort of work again, would you identify Delta P as a risk?

11 A. I would.

12 **Mr. Chairman:** Thank you.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. Mr. Ali, well, let me ask you then. In hindsight, don't you
15 think that you should have contacted Operations Department of
16 Paria to ascertain the volume of oil which was taken out of this
17 pipeline?

18 A. We did contact them. In fact, in my witness statement—

19 **Mr. Chairman:** Speak into the microphone, please.

20 **Mr. Ali Sr.:** Sorry. In my witness statement you will see that
21 we changed to pushing the oil into the slop barge because we
22 were told they weren't receiving anything into the tank farm.

23 **Continued Examination by Mr. Maharaj SC:**

24 Q. I will check that, but I can't recall seeing that.

25 A. Words to that effect; that because we weren't getting anything
26 at the tank farm, that's why we decided to put it into the slop
27 barge. We assumed that the pressure was too low to push it

1 into the tank farm.

2 **Examination By Mr. Chairman:**

3 Q. You assumed the pressure was too low where?

4 A. The 40 psi—you see, we had a limit. Paria asked us not to
5 cross 40 psi air pressure.

6 **Mr. Chairman:** I want to ask you a few questions about that
7 when Mr. Maharaj is—

8 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. Well, that brings me to the final question. Did you consider
11 taking the pressure before the job was done on the 25th
12 February, and since you had an idea of what Delta P was, did
13 you consider taking the pressure from the riser at berth 6 and
14 the pressure to compare the pressure in the habitat?

15 A. I didn't consider it, no.

16 Q. One more question, Sir. Did you use a method of air blowing
17 in the 2020 project?

18 A. Yes, we did.

19 Q. And did you use a hyperbaric chamber?

20 A. I did.

21 Q. And did you use an inflatable plug?

22 A. I did.

23 Q. And did you take out the plug inside the hyperbaric chamber?

24 A. I did.

25 Q. Without checking pressure?

26 A. Without checking—

27 Q. Without checking—

1 A. Yep.

2 Q. You're probably very fortunate.

3 **Mr. Maharaj SC:** I have no further questions.

4 **Mr. Chairman:** I do, and I think the only way I can
5 reasonably do that is by using your white board. So I'm going
6 to come across to where you are so that you can answer my
7 questions please.

8 Can I have that microphone? Is there a microphone?
9 Otherwise I'll just do my best to speak loud enough for
10 everyone to hear me. If anyone can't, just [*Inaudible*]—

11 **Examination By Mr. Chairman:**

12 Q. Can I ask, please—and you perhaps best use the microphone.
13 But can I ask if we're clear about this? [*Microphone handed to*
14 *Mr. Chairman*] Thank you. We were all assumed that this
15 pipeline here and in particular the horizontal is level?

16 A. That was the assumption.

17 Q. Yeah. Whose assumption is that?

18 A. Well, everyone.

19 Q. Right. Well, who would know?

20 A. Paria would know.

21 Q. You need to speak into that microphone.

22 A. Yeah, Paria would know.

23 Q. Right. Did anyone tell you that it might not be?

24 A. No. In fact, we got a drawing showing the reason why it could
25 be flat or it would be flat.

1 Q. Right. You see, if it's flat and you're pumping air in at this
2 end, and you're pushing the fluid—let's say to start with, the
3 fluid level is there.

4 A. Yeah.

5 Q. And you're just pushing the fluid around to get rid of some of
6 it. All right?

7 A. Yeah.

8 Q. As you pump air in here, you're pushing that level down.
9 Correct?

10 A. Correct.

11 Q. And this level goes up?

12 A. Should.

13 Q. And then it comes out. Correct?

14 A. Correct, yeah.

15 Q. All right. So that assumes this arrangement. And the amount
16 of air pressure you're pumping in at that end, rather depends on
17 this being level. Because if this end is lower, if this end does
18 this, [*Mr. Chairman draws*], instead of what you've drawn, if
19 that's the position, then what would happen is—

20 A. It would get blown.

21 Q. What you would have is the level would be the same through.
22 So if it's there—this level, let's say there, this end would be
23 here. Wouldn't it? Because—

24 A. It would be the equal height.

25 Q. The fluid, well, the fluid here, all of that fluid will go until it got
26 to about here, wouldn't it?

27 A. Yeah.

1 Q. So that line was level right the way through it. So you have
2 more air on this side than you'd have on that side. Correct?

3 A. Correct.

4 Q. And so, then you're pushing that, you're now pushing that fluid
5 into a void at this end. Correct? To pump it out?

6 A. Um-hmm.

7 Q. And that's one way. If it was this way, if this end was lower
8 than that end, the level would be—you've now got the fluid in
9 at this here, okay?

10 A. Yes.

11 Q. And it would go all the way to wherever is level at that end.
12 Okay? And as you start pushing from that end, you're now
13 going to create, are you not, a much more flat level that you're
14 pushing down on?

15 A. Yeah.

16 Q. Because there'd be lots of water at this end and almost none at
17 that end?

18 A. Correct, yeah.

19 Q. Yes?

20 A. Yeah, but when you bleed out the pressure then it—

21 Q. Then it should equalize. It should. I haven't finished yet. I'm
22 going to give you one more question. Right?

23 A. [*Inaudible*]

24 **12.00 noon.**

25 Q. But can you, and that also assumes, does it not, that the pipe
26 is—

27 A. Level—

1 Q. —straight—

2 A. Straight, as well as level.

3 Q. —as well as level. What if it's not? What if it's actually doing
4 that? I mean, that's an exaggeration, but—

5 A. Well, I think that's what it was because if Christopher could say
6 he had two air pockets it had to be like that.

7 Q. Who would know whether pipe that's been laid along the
8 bottom of the seabed was level and/or straight? Would you
9 know?

10 A. No, not without removing all the, um, silt and exposing that.

11 Q. Who would know?

12 A. The people who put it down, the owner of the line.

13 Q. Sorry, there's something else you wanted to say?

14 A. No, I was just going to show you this same drawing.

15 Q. All right. Thank you very much. So that I'm clear, all right,
16 can we just have the drawing back that we had, please, from the
17 report from In-Corr-Tech, please, the one we were looking at
18 earlier that kept disappearing? [*Crosstalk*] That's it. Thank
19 you very much. Do you see that, just looking at the diagram—
20 forget the wording because nobody can read it frankly. You
21 need some microscope to be able to read the writing, but, just
22 looking at the drawing, do you see that what has been assumed
23 there by the expert who's drafted this report, Mr. Khan—

24 A. Yes.

25 Q. —he has shown the level of fluid in a horizontal pipe.

26 A. Flat line.

27 Q. Yeah, A, that assuming that the pipe is flat, that is to say lying

1 level and secondly that it is straight, it has no undulations?

2 A. Correct.

3 Q. Um, and therefore it's showing the level of fluid as having a
4 gap between the level of fluid and the top of the pipe?

5 A. Correct, eh.

6 Q. Constant all the way along?

7 A. Correct.

8 Q. We know that that's wrong, don't we?

9 A. We, we do from Christopher description, yeah.

10 Q. From his description, the very fact that he survived?

11 A. Yeah.

12 Q. And indeed from the autopsy reports of others that survived for
13 some time. There must have been air pockets.

14 A. Yeah.

15 Q. So your scale of one to five hours using tanks are well exceeded
16 by their survival for a period of time anyway?

17 A. Yeah.

18 Q. Can I—and so, looking at that diagram, if that is wrong, that is
19 to say one end of the riser is deeper than the other end, it would
20 create a difference unless you drained off the air in the way you
21 described at one end?

22 A. But it doesn't explain everything.

23 Q. No.

24 A. Because if we have air trapped in the middle, the pressure of
25 that air would be with the column of liquid on it. So—

26 Q. And the depth.

27 A. —just that air pressure—

1 Q. And the depth—

2 A. —there should have resisted the movement of the plug. So
3 unless that air trapped in there was released somewhere during
4 the 10 days, are you, are you [*Inaudible*] that?

5 Q. I am. I mean, I—

6 A. So if that is trapped there, it would be like, um, like liquid in
7 that it's going to support this column here.

8 Q. Yeah.

9 A. At this point you're going to have—if it's air there you're going
10 to have on 20, 30 PSI depending on the—

11 Q. The depth of water?

12 A. —the length of the column.

13 Q. Yeah.

14 A. Right?

15 Q. But the air that's—

16 A. And that would resist the pressure from the plug coming down.
17 So somewhere along the line we had to release the pressure that
18 was trapped in between.

19 Q. Yes. What we know is that at the point in time when you were
20 carrying out this exercise—

21 A. Yeah.

22 Q. —and draining off an amount of fluid to create the ullage that
23 you wanted, you could not know whether there was any air in
24 this pipe at all?

25 A. [*Inaudible*]

26 Q. You could only know there was air at either end.

27 A. We did not know.

1 Q. If you had been aware of undulations in the pipe in the way in
2 which I've described there—

3 A. Yeah.

4 Q. —would that have made any difference to your assessment?

5 A. It depends on how serious the undulations would have been.
6 Checks for undulations would have made a difference, air—

7 Q. And the other thing I wanted to ask you is—all right, and the
8 last thing I wanted to ask you about that is this. Any air pocket
9 that does exist—

10 A. Yeah.

11 Q. —within this fluid pipe, all right, any air pocket, if it did and
12 we know that there must have done, the pressure of the air in
13 that pipe, would that be dependent on the depth of the pipe?

14 A. It would depend on the amount of liquid above the air.

15 Q. Only that?

16 A. Yeah. If it's in the seabed, and it doesn't matter how deep it is,
17 once the ends are outside the pipe, so at the top of the pipe you
18 would have atmospheric pressure.

19 Q. Yes.

20 A. And then any further pressure on this, on the bottom, will be
21 caused by the height of the liquid, again one of the things that
22 we have there is, um, one PSI 2 feet, so if you have 30 feet, 40
23 feet, you'll have initial 20 feet at, er, 20 PSI at the seabed level.

24 Q. As I understand it, every 10 metres or so you could—

25 A. Ten inches?

26 Q. —for every 30 feet is something like one atmosphere?

27 A. Rule of thumb is—

1 Q. Hmm?

2 A. Rule of thumb is 2 feet one PSI.

3 Q. One PSI. All right, that's what you use, all right. Okay. Thank
4 you very much.

5 A. [*Inaudible*]

6 **Mr. Chairman:** Thank you. All right, so, questions next from
7 Paria, counsel from Paria. You can go last, Mr. Maharaj.

8 **Mr. Peterson SC:** Thanks.

9 **Cross-Examination By Mr. Peterson SC:**

10 Q. Morning, Mr. Ali.

11 A. Morning.

12 Q. Your company has done a lot of work at Pointe-a-Pierre for
13 Paria and Petrotrin?

14 A. Correct.

15 Q. In fact, in paragraph 10 of your witness statement, you said that
16 you have done 90 per cent of the marine work at Pointe-a-Pierre
17 including building, rebuilding of berths at Pointe-a-Pierre?

18 A. Correct.

19 Q. And your company has developed a good reputation in the
20 marine environment?

21 A. Correct.

22 Q. And you held yourself out—when Paria put out its invitation
23 you held yourself out as a competent company and justifiably
24 so, to do the work.

25 A. I did.

26 Q. In fact, your company does not only do work in Trinidad, it do
27 work up the Caribbean region?

1 A. Correct.

2 Q. And you're also STOW certified?

3 A. Correct.

4 Q. For those of us who are not familiar, what is the status of a
5 STOW certification? What does it say, in your industry?

6 A. It's for certification from the, um, Energy Chamber stating that
7 you are proficient or able to do the works that they're listed on
8 it.

9 Q. You're proficient and competent?

10 A. Yep.

11 Q. So you would not hold Paria to blame for relying on the
12 reputation and competence of your company?

13 A. Um, why not?

14 Q. Okay. Are you saying that you—you can't have it both ways.
15 There were—you said you were competent, you held yourself
16 out to Paria as being competent when they invited bids so I'm
17 asking you, the fact that you're STOW certified and published
18 as STOW certified, the fact that you have done 90 per cent of
19 the work in Paria and its predecessor, the fact that you said you
20 do work up the Caribbean in the industry, is it reasonable for
21 someone like Paria to rely on the competence of your
22 company?

23 A. I did 90 per cent of the work there, but the pipeline, the subsea
24 pipeline would probably be about one per cent.

25 Q. All right, I—

26 A. So I had myself as a contractor who had the manpower and the
27 equipment to carry these jobs. The history of work at Pointe-a-

1 Pierre with Petrotrin and with Paria was we—it would be
2 collaborative. We did joint method statement, joint, um, JHAs,
3 everything.

4 Q. All right.

5 A. In Petrotrin—

6 Q. All right.

7 A. —they had a separate, um, project department.

8 Q. Okay well I'll take—all right, I have a limited time so let me
9 take you directly to 10 and see if you—if 10 is saying—

10 A. Uh-huh.

11 Q. —in your statement what you're just telling us. From 2000 to
12 present-day—

13 A. Yeah.

14 Q. —LMCS has done about 90 per cent of the marine works in
15 Pointe-a-Pierre?

16 A. Correct.

17 Q. This includes the rebuilding and maintenance of a number of
18 berths—

19 A. Correct.

20 Q. —at Pointe-a-Pierre. The rebuilding included replacement and
21 repairs of pipelines.

22 A. Correct.

23 Q. That's both above ground and underwater?

24 A. Correct.

25 Q. Right. You have done work in 2020—

26 A. Are you finished with that first question?

27 Q. Yes I—

1 A. Ninety per cent included the building of berths, repairing of
2 berths and everything, and if you look at the weighting of the
3 percentage, it'd be over 85 per cent in topside repair.

4 Q. Yeah but—

5 A. Right? And the pipelines would be split between above ground
6 and—

7 Q. Underground, okay?

8 A. I'm just telling you that the subsea pipeline would have been
9 less than 3 per cent.

10 Q. Okay, I accept that for the time being.

11 A. Yes, okay.

12 Q. I want to deal with the job you referred to in 2020 that you did.

13 A. Yeah.

14 Q. And that was a seabed—

15 A. Subsea, yeah.

16 Q. Subsea?

17 A. Yeah.

18 Q. And that falls into the 3 per cent you just described?

19 A. Correct, yeah.

20 Q. And you said you dealt with a 20-foot slope of that line?

21 A. Er—

22 Q. Or you want me to take you to the paragraph in your statement?

23 A. Er—

24 **Mr. Chairman:** I think you should.

25 **Mr. Peterson SC:** Yes, I would. I was just trying to—

26 **Continued Cross-Examination By Mr. Peterson SC:**

27 Q. Paragraph 16 of your supplemental statement, it's coming to

1 you. [*Document handed to Mr. Ali*] You see the method used
2 in 2020 was similar to the method that you used in 2021, '22?

3 A. Right.

4 Q. Right. So the method used in 2020 is similar to the method you
5 used now?

6 A. Correct, yes.

7 Q. The difference was the configuration of the pipeline—

8 A. Correct.

9 Q. —which you recognized is an important factor—

10 A. Yeah.

11 Q. —the configuration of the pipeline?

12 A. Correct.

13 Q. Whether it's as you drew it there or whether as the In-Corr-
14 Tech report is, the configuration which include undulation and
15 slope, isn't it?

16 A. Yeah, go ahead, I'm listening.

17 Q. No. I just—no, I just want—I don't want you to agree with me
18 just agree with me. Do you accept that in your statement when
19 you speak of configuration of the line—

20 A. Yeah.

21 Q. —you're also referring to the undulation of the pipeline and the
22 slope of the pipeline?

23 A. You know there's a big difference between undulation and
24 slope?

25 Q. Yes, I know. That's why I put them separately.

26 A. I know. So you had a slope difference here.

27 Q. Right.

1 A. You had an elevation difference.

2 Q. Right.

3 A. But there was no undulation.

4 Q. Right. What's the difference?

5 A. I thought you just said you know.

6 Q. No.

7 A. Undulation is it would be up and down.

8 Q. Right.

9 A. And then you will have a chance of air being trapped or gas
10 being trapped in the highs and lows.

11 Q. And the slope?

12 A. And the slope you have a slope, a smooth slope, you have a
13 gradient then.

14 Q. Right. I thank you for that. Because in the 2020 project the
15 line along the seabed sloped 20 feet at bent, bent 80. Bent 80 is
16 further along than berth 5, isn't it?

17 A. Yeah, but you—

18 Q. No, isn't it? I'm asking you. I don't know. Isn't bent 80 in
19 that figure to the right of berth 5?

20 A. Bent 80 is by berth 5? Bent 80 is on the main viaduct.

21 Q. Yeah, but it's on the right of berth 5, on that diagram?

22 A. Yeah.

23 Q. Right. So it was 20 feet at bent 80 on the main viaduct to 60
24 feet for approximate—approximately at berth 5?

25 A. Correct.

26 Q. So the slope was about 60 feet. Where did you get that
27 information to undertake that job?

1 A. You could back up a bit? The slope was 60 feet?

2 Q. Yeah. No, the slope was 20 feet?

3 A. The slope wasn't 20 feet. It wasn't 20 or 60. It was sloping
4 between 20 and 60.

5 Q. Right.

6 A. Right. So that's no slope of 20 feet. That doesn't mean
7 anything.

8 Q. Okay. All right. But you're saying that the line was sloping.
9 Where did you get that information?

10 A. By the measurement at the riser on both ends.

11 Q. Why did you measure it?

12 A. Sorry?

13 Q. Why did you measure it if the job then was similar to this one?

14 A. I don't understand.

15 Q. Why did you measure to ascertain the slope in 2020 if the job
16 was similar to this one in 2021/2022?

17 A. Why did I measure it?

18 Q. Uh-huh.

19 A. For the same reason I measured it on the, um, other job.

20 Q. Right. Did you—

21 A. To get as much information as you could.

22 Q. Right, so you could know what you're doing? Right.

23 A. All right.

24 Q. Did you take steps to ascertain the undulation slope
25 configuration with respect to the line between berth 5 and berth
26 6 on this 2021 job?

27 A. No. We went by the information given by Paria.

1 Q. Which was what?

2 A. Which was a drawing showing that the—under the risers were
3 supported so they shouldn't be sinking at that point.

4 Q. But that's at the point of the risers?

5 A. Yeah.

6 Q. What about the 1,200 feet between berth 5 and berth 6? What
7 information you relied on—

8 A. Well, I couldn't measure that.

9 Q. Beg your pardon?

10 A. We couldn't measure it. It was under the mud.

11 Q. Yes.

12 A. So we assumed or we took Paria's thing that it was a level
13 pipeline.

14 Q. You took Paria's what?

15 A. Word that it was a level pipeline.

16 Q. Where did you get the word that this was a level pipeline?

17 A. That's what they said. In fact, that's what they're still saying.

18 Q. Where is that?

19 A. You'll check any one of their statement you'll see that that's
20 what they are still saying that the pipe is level. They
21 maintained it before and after.

22 Q. No, no, no. When you were bidding for the job who maintained
23 to you—

24 A. Paria.

25 Q. —that the line—who at Paria?

26 A. They gave some drawings showing the line was level.

27 Q. Drawings? You had drawings showing that the line was level?

1 A. Yeah.

2 Q. What drawings are those?

3 A. Maybe in my statement.

4 **Mr. Peterson SC:** Mr. Chairman, he may be referring to page
5 two three zero, um, nine three two. Nine three two—00932.

6 **Mr. Chairman:** Of his statement?

7 **Mr. Peterson SC:** Of his statement.

8 **Mr. Chairman:** Zero?

9 **Mr. Peterson SC:** The page number, Sir. The page number,
10 Mr. Chairman. Right, it's up on the screen.

11 **Mr. Chairman:** Of the—that's the core? [*Crosstalk*] Sorry,
12 remind me of the page number?

13 **Mr. Peterson SC:** Nine three two. Right.

14 **Mr. Chairman:** Thank you.

15 **Continued Cross-Examination By Mr. Peterson SC:**

16 Q. So, on the assumption that the line is flat, I take it in hindsight
17 you are saying what could have caused the Delta P problem is
18 that the line was undulating?

19 A. It could be one of the factors.

20 Q. It could be one of the factors. And it would depend on the level
21 of undulation we take it, well, I mean—

22 A. It would.

23 Q. Right. You said you—I'll get straight to the point. You said
24 you were blowing out the line in order to facilitate the work.

25 A. Correct.

26 Q. We have had reference in this Commission to make the line
27 clear and dry.

1 A. Correct.

2 Q. What do you understand about that phrase in the context of this
3 job?

4 A. In my submission, my proposal that I submitted, we stated that
5 we are going to take out sufficient to get the plug in. Right?
6 We never intended to drain the line, empty the line, even
7 though it appears that that's what Paria wanted. We said he
8 were going to just take out sufficient to put the plug in.

9 Q. So you would—line—well, sufficient means to make the area
10 that you're working dry, that you could work?

11 A. It didn't have to be dry, just once I could get the plug in. If the
12 wall is lined, was wet or whatever it doesn't make a difference.

13 Q. Right. Well when I say dry I don't mean paper dry, I mean dry
14 from liquid.

15 A. So empty area?

16 Q. Empty, yes.

17 A. Well, yeah.

18 Q. Right. And you were prepared to take it down, yeah, you were
19 prepared to take down the liquid to about 30 feet?

20 A. Thirty feet from the top, yeah.

21 Q. And you embarked on that exercise using two methods, isn't
22 that so? Didn't you use a method where you were pumping
23 into the slop barge and then another where you were pumping
24 into 66?

25 A. Yeah. Initially it went into 66, and, when we couldn't get the
26 objective we wanted, we put it into the slop barge.

27 Q. I thought you said this morning—all right. Did you not use the

1 slop barge to clear the elbow at 6, at berth 6?

2 A. I don't think so.

3 Q. Berth 6 comes up and connects to the pipe, the piping along the
4 racks. You cleared the elbow before you broke it, did you not?

5 A. We cleared everything above the riser, not just the elbow.

6 Q. I know.

7 A. You had a mass of piping on number six.

8 Q. But then—

9 A. —so it had—

10 Q. —before you opened 6 to start your blowing at 5, did you not
11 have to clear that elbow, that line?

12 A. I, I not sure where you're getting that. Could you—

13 Q. No but you said this morning to the Commission that—

14 A. Yeah.

15 Q. —you had opened the top of six—

16 A. After—

17 Q. —when you were blowing?

18 A. After we blew out the topside piping—

19 Q. Right.

20 A. —then we removed the elbow and had access to the top of the
21 riser.

22 Q. That's it.

23 A. Good.

24 Q. And where did you blow that into before you removed the
25 elbow?

26 A. That's what we just said. We blew everything from on the
27 berth into 66 Sealine.

1 Q. Right. So that—

2 A. —at shore.

3 Q. You didn't say that. That's the point.

4 A. That's what I said.

5 Q. So you started—

6 A. That's what I said.

7 Q. Right. So you started the process—

8 A. Uh-huh.

9 Q. —by blowing into 66 Sealine to shore into the tank farm?

10 A. We started the process by blowing into 36 Sealine which
11 pushed the contents of 36 into 66.

12 Q. Into 66 and—

13 A. And then 66 went to the tank farm.

14 Q. Right.

15 A. Correct.

16 Q. That's the point. So the process started with blowing into 66
17 then you moved into the slop barge or the slop barge into 36,
18 which one?

19 A. Let me say it one more time, slow this time, right?

20 Q. Yeah.

21 A. We blue from number five berth into 36 Sealine.

22 Q. Right.

23 A. Thirty-six Sealine was directed into 66.

24 Q. Right.

25 A. Sixty-six emptied into a tank ashore.

26 Q. Right. How much did you blow at that stage?

27 A. I have no idea.

1 Q. The only amount that you could measure is what you had in the
2 barge?

3 A. What I had in the barge, correct.

4 Q. And you were always blowing from berth 5?

5 A. Berth five, correct.

6 Q. But berth 5 doesn't just exist, it connects somewhere else?

7 A. No, it terminated at berth 5. If you look at the drawing, berth 5
8 went across the berth—

9 Q. Yes.

10 A. —down on the next side to number eight.

11 **Mr. Chairman:** Use what you've got on the screen, because I
12 think that helps you, Mr. Peterson. If you use the one on the
13 screen, as I understand what you're saying, this is—[*Pointing to*
14 *drawing on screen*—this is five.

15 **Mr. Peterson SC:** Right.

16 **Examination By Mr. Chairman:**

17 Q. And the air is being blown in here, pushing the air round and
18 this is the connection from six to—from 36 through to 66.
19 That's where this dotted line here is the connection that was
20 made, is that right?

21 A. Correct, yeah.

22 Q. And that's the one that's being pushed—pushing the fluid into
23 tank 111, yes?

24 A. Yeah.

25 Q. But so this is connect—connected to the riser—

26 A. Yes.

27 Q. —at six?

1 A. Yeah.

2 Q. So when you're pumping air in at that end, it's pushing the fluid
3 down here, cross here, up that way—

4 A. Across.

5 Q. —into this temporary pipe that you've connected and down
6 there?

7 A. Yes.

8 **Mr. Chairman:** I that's where you're—where you—where—

9 **Mr. Peterson SC:** Not quite, Sir.

10 **Continued Cross-Examination By Mr. Peterson SC:**

11 Q. But on the—at berth 5, where you connect your line, where
12 does that—

13 A. There's a valve where.

14 Q. Where does the right side go to?

15 A. Just—

16 Q. That goes to?

17 A. It goes across—

18 Q. To PB 80?

19 A. Yeah.

20 Q. All right. I'm not trying to trap you, you know. I'm trying to
21 help you really.

22 A. No, no so there's a valve there—

23 Q. Right.

24 A. —that separated it from

25 Q. Right.

26 A. Yes.

27 Q. Notice in some of the numbers that were shown this morning I

1 see reference to PB 80 some barrels?

2 A. There was no connection between the two.

3 Q. Right. There was no connection from PB 80?

4 A. No.

5 Q. Why you say that? Tell us. Help us. We weren't there.

6 A. Because you had two valves locking off—

7 Q. All right.

8 A. —between—I think if you look on that drawing you'll see one,
9 there was a second valve closer.

10 Q. Right. And whatever was pumped all the way into 66—

11 A. Uh-huh.

12 Q. —was commingled with other product wasn't it, or was it
13 purely what came from the line?

14 A. Sixty-six Sealine was full with crude oil. Thirty-six had fuel
15 oil. The product from 36—

16 **Mr. Chairman:** Into the microphone, please?

17 **Continued Cross-Examination By Mr. Peterson SC:**

18 Q. Speak into the mike.

19 A. Yeah. The product from 36 was pushed into 66 so it would
20 have commingled there.

21 Q. Right. And you checked the level at berth 6—

22 A. Berth 6.

23 Q. —to see whether you had achieved your goal?

24 A. Correct.

25 Q. But I think you told the Commission this morning you never
26 checked the level at berth 5?

27 A. No, we didn't check that level.

1 Q. But best practice and hindsight would now assist us that you
2 should have checked five also?

3 A. Well, now that we know the line wasn't level and—

4 Q. Now that we know what?

5 A. That the line wasn't level.

6 Q. But we don't know the extent to which that impacted the
7 incident.

8 A. No we don't.

9 Q. Well, I prefer to say accident. I like how In-Corr-Tech says it,
10 so we don't know if that is really—that's what you surmised as
11 a possible explanation, isn't it?

12 A. I'm not making the explanation. I'm giving you a fact.

13 Q. Okay.

14 A. Right? We pumped down the line at six, we found minus 30
15 feet from the surface, and—

16 Q. No, the explanation I'm talking about is to the delta event
17 which we all accepted has now occurred. So one of the things
18 you anticipate that could have caused the delta, the Delta P
19 event, is you're saying undulation in the line?

20 A. I'm saying that one of the things.

21 Q. Right. But you cannot tell us the level of the undulation and
22 whether it could have had an impact on the Delta P or whether
23 it should be a factor to be ignored?

24 A. I think I clearly stated, I don't know what caused the Delta P.
25 I'm suggesting that—

26 Q. Okay.

27 A. —it's one of the things.

1 Q. Now I want—the plugs were installed on the 13th of February?

2 A. Correct.

3 Q. This job recommenced 12 or 13 days later, the 25th?

4 A. Twelve days.

5 Q. Twelve, yeah, 12. I want you to look at paragraph 61 of your
6 statement. Sorry, before I go there, I want to take you back to
7 something Mr. Maharaj had dealt with. At page 104 of the—oh
8 God, 1004 of the daily reports, of the core bundle, you see at
9 item four on that daily report—

10 A. I do, yeah.

11 Q. It says across on “Job Status”, level was checked after draining
12 at PB number 80 and oil content was approximately 8 feet
13 below the tee on riser. Mr. Maharaj took you there. Isn't it that
14 that's correct because they needed to drain 8 feet down on PBB
15 to get under the level of the valve?

16 A. Sorry, repeat that again?

17 Q. This daily report—

18 A. Uh-huh.

19 Q. —that says the level was checked after draining at PB 80 and
20 oil content was approximately 8 feet below tee on the riser—

21 A. The job that we were doing had nothing to do with PB 80.

22 Q. No, but did you—you were—PB 80 connects with berth 5?

23 A. I said to you there were two blind flange—two—

24 Q. Two valves?

25 A. —two valves that were closed off.

26 Q. Right. But did you not need to drain—that is what I understand
27 this report to be saying you need to drain 8 feet on that side

1 too—

2 A. We had nothing to do—that was a completely different system,
3 was shut off. The work was between number five and number
4 six.

5 Q. So what's your comment on this daily report?

6 A. I didn't write that daily report.

7 Q. I know.

8 A. Right?

9 Q. But it's a contemporaneous record?

10 A. I have no idea what it—

11 Q. It's a daily record?

12 A. It's not my daily record.

13 Q. I know, Mr. —

14 A. In Sir, so why you're asking me?

15 Q. I'm trying to find—okay. All right, so your position is it's not
16 your record?

17 A. It's not my record. I have no idea what is that. All I could see
18 in the description, it concerns with Sealine 36. Sealine 36 when
19 we were working, we had nothing to do with Pile Bent 80.

20 Q. Is that your position on that?

21 A. Yes.

22 Q. So I want to take you now to paragraph 61.

23 A. Okay.

24 Q. At paragraph 61, you said: "The fact that the works did not
25 proceed within four days would have been a risk as we were
26 worried that the conditions of the line may change." What do
27 you mean by that?

1 A. Exactly what I mean.

2 Q. No, that's not good enough, sorry. What changes you were
3 worried about, not concerned, worried about?

4 A. The plug was my main concern.

5 Q. Beg your pardon? Sorry.

6 A. The plug was my main concern.

7 Q. Yes.

8 A. Right? Over—we had done this job using the plug within four
9 days then we had no problem. Any extended period you're
10 going to start losing pressure on the plug. The plug was going
11 to be in a oily condition. Even though it's supposed to be
12 resistant to oil, you could have certain dissolving of the rubber,
13 that was the, um—my concern.

14 Q. That was your worry?

15 A. That was my concern.

16 Q. But then you went on in that same paragraph to say, "I was not
17 targetting any particular condition."

18 A. I wasn't targetting—

19 Q. Just conditions in general.

20 A. I'm just saying over that period of time things coulda happen.
21 Thing always happen over a period of time.

22 Q. Right. And the fact that you were concerned about the plug and
23 the holding of the plug, did you have Delta P in mind?

24 A. Actually, I was more concerned about pollution.

25 Q. You were more concerned about?

26 A. Pollution.

27 Q. Pollution?

1 A. If the plug failed because, as far as I was concerned, the method
2 that used prevented the plug going down because of the liquid
3 we were supposed to have there. Right? I was concerned that
4 if the plug failed and water got in you'll get pollution to
5 harbour. I think that is addressed further down in my statement.

6 Q. No, but—

7 A. I suggest—

8 Q. —that, that—

9 A. —a bit further down.

10 Q. You had already gotten 30 feet clearance.

11 A. Yep.

12 Q. And your concern was the pollution?

13 A. Yep.

14 Q. Is that the only—

15 A. If water got into the line because the plug failed, the oil would
16 float out into the—

17 Q. That inflatable plug?

18 A. Yeah.

19 Q. And the mechanical plug will not hold?

20 A. The mechanical plug, as I clearly stated, was to prevent molten
21 material getting down to the inflatable plug.

22 Q. Right.

23 A. And it was also meant as a block against a plug failure.

24 Q. And the inflatable plug was to prevent hydrocarbons coming
25 up?

26 A. Well, also to prevent the, um, molten material going into the
27 oil.

1 Q. All right. I thought that was the mechanical plug to do that?
2 The inflatable plug is to do that too?

3 A. You ever heard of a double block.

4 Q. No, I didn't—

5 A. Yeah, this is—

6 Q. —I just [*Inaudible*] just help us.

7 A. That's—

8 Q. You're the expert now, Mr. Ali.

9 A. Take a little bit extras here.

10 Q. All right. So the inflatable plug will serve both purposes?
11 That's what you're telling us?

12 A. Yeah, right.

13 Q. Having—the period of 12 or 12 days having run—

14 A. Uh-huh.

15 Q. —and you having a worry about the conditions—

16 A. Yeah.

17 Q. —did you do any pressure checks?

18 A. No. We put a chamber into operation and observe it for a
19 while.

20 Q. Did you check to see if the plug was—the integrity of the plug
21 had been compromised?

22 A. We put it under operated pressure and observed it.

23 Q. You did that on the 25th?

24 A. On the 25th.

25 Q. Right. Did you then, having had that plug in there for 12 days,
26 having not checked berth 5 on the 13th when you, in my
27 respectful view, ought to have done, did you go and check berth

1 5 at that stage to see what was happening across there?

2 A. No.

3 Q. So you don't know what the level of the liquid was on the 25th
4 in berth 5?

5 A. They opened the flange at berth 5 and they did a pressure test in
6 there.

7 Q. When?

8 A. On the 25th.

9 Q. All right.

10 **Examination By Mr. Chairman:**

11 Q. Was that pressure test on the weld?

12 A. On the weld.

13 Q. Right. It wasn't a pressure test to test what the pressure was in
14 the pipe?

15 A. No, no it was on the weld itself.

16 Q. It was to test the pressure on the weld that you previously
17 performed, is that right? Mr. Ali, on the weld that—

18 A. Yes on the weld.

19 Q. —you'd previously performed?

20 A. Yeah.

21 Q. Thank you.

22 **Continued Cross-Examination By Mr. Peterson SC:**

23 Q. Yeah, you said you did—sorry, you said you did the—I was
24 being distracted. You said you did the pressure check on five?

25 A. On the weld.

26 Q. On the weld?

27 A. Yeah.

1 Q. You supervised the installation of those plugs?

2 A. The plug at, um, number six berth, yes.

3 Q. Number six. You supervised?

4 A. I did.

5 Q. Why you personally supervised those plugs, the installation?

6 A. Whenever we have lifting, I supervise personally? Right? That
7 day we had lifting going on and I was on the barge supervising
8 the installation of the plug, the installation of the chamber.

9 **Mr. Chairman:** You have to use the microphone, Mr. Ali.
10 We can't hear you otherwise. Thank you.

11 **Continued Cross-Examination By Mr. Peterson SC:**

12 Q. Is there any reason why you also did not supervise the removal
13 of those plugs?

14 A. Lifting wasn't involved so I didn't go out there on that date.

15 **Examination By Mr. Chairman:**

16 Q. Is that right? Isn't lifting involved in removing the plug?

17 A. When I say lifting I mean with the crane barge so—

18 Q. Well, did you not use the crane to take the mechanical plug out?

19 A. No.

20 Q. So no cable attached to it to remove it?

21 A. No, no. It wasn't [*Inaudible*]

22 Q. How on earth—forgive me.

23 A. —with a chain hoist, chain hoist inside there.

24 Q. A what?

25 A. A chain hoist.

26 Q. A chain hoist, not the crane?

27 A. Yeah.

1 Q. All right.

2 **Continued Cross-Examination By Mr. Peterson SC:**

3 Q. But when was the habitat put in place?

4 A. On the 13th.

5 Q. And you said that—I'm curious. You said that Paria told you
6 that the line was flat?

7 A. Yeah.

8 Q. The horizontal?

9 A. Yeah.

10 **Mr. Peterson SC:** Mr. Chairman and Member Commission,
11 598 of the core bundle. I wish to take the witness to it.

12 **Mr. Chairman:** Five ninety-eight core bundle or 598 of his
13 statement?

14 **Mr. Peterson SC:** Five nine nine, it goes on to five nine nine,
15 Sir. Addendum one, Mr. Chairman.

16 **Mr. Chairman:** Yes.

17 **Continued Cross-Examination By Mr. Peterson SC:**

18 Q. At number seven there was a query at the bidding process, Mr.
19 Ali? Were you familiar with that question as to what is the
20 water depth at berth 5 and 6?

21 A. Yeah.

22 Q. And the storm moorings?

23 A. Yeah.

24 Q. What do you understand the response to be the water depth
25 varies between approximately 60 to 70 feet?

26 A. I see the storm moorings.

27 Q. Yeah.

1 A. The word storm mooring. This job was in three parts. Storm
2 moorings has nothing to do with berth 5 and 6.

3 Q. All right.

4 A. Okay?

5 Q. The water depth was there, not the storm mooring, the depth of
6 the water.

7 A. At the storm mooring, not at berth 5 and 6. The storm
8 moorings were placed throughout the harbour. There were
9 about ten moorings that were placed at different points in the
10 harbour.

11 Q. I know but it says—

12 A. At, at the storm mooring, the storm mooring was in the harbour,
13 not close to number five and six.

14 Q. No, you said at berths five and six?

15 A. There were no storm moorings at berth 5 and 6.

16 Q. No. That's correct. What it says is—Mr. Ali—

17 A. It says—

18 Q. Mr. Ali, just now.

19 A. That—

20 Q. What it says—

21 A. There was no storm mooring by the riser.

22 Q. Mr. , yes, just now, wait, please?

23 A. Yeah.

24 Q. The water depth, [*Inaudible*] what is the water depth at berth 5
25 and 6 and the storm moorings?

26 A. The storm mooring, right.

27 Q. So they're not saying the storm mooring is at five and six.

1 A. Right. So you had some storm moorings around the harbour
2 and you.

3 Q. Forget the storm moorings?

4 A. And at berths five and six. So, at the storm moorings it would
5 have been 70, you see so it ranged across from where number
6 one berth, number six berth and number seven berth so you had
7 the storm moorings displaced all around, right?

8 Q. Right. I'm not on the—I'm talking about the water depth. You
9 did not, signal to you?

10 A. So that was a water depth throughout the harbour.

11 Q. Does it not signal to you that the line there would be flat?

12 A. No.

13 Q. And that flat line is a half-inch thick steel line, isn't it?

14 A. Is the what?

15 Q. How thick is the line, 36?

16 A. About half-inch, yes.

17 Q. Right. Embedded in concrete?

18 A. No. Has a concrete coating on it.

19 Q. Right. And that is to do what, to keep it steady?

20 A. To keep it from floating.

21 Q. And from then—

22 A. [*Inaudible*] it's a weight coating. Concrete on the pipeline is a
23 weight coating. If it doesn't have that, and you remove the
24 liquid from the line it will float up.

25 Q. Right.

26 A. So that is meant to keep it on the seabed.

27 Q. Right. So having removed the liquid, you took no steps to

1 ascertain the condition of the line?

2 A. How could you assert? We removed the liquid in the riser. We
3 checked out that piece.

4 Q. Right. And you left how much in the line?

5 A. We took out 30 feet of liquid from the riser.

6 Q. On one side?

7 A. On one side.

8 Q. And from your calculation, how much was left in the line?

9 A. It should have been about twelve hundred, about eleven
10 hundred.

11 Q. But you agree that that wasn't left there since you had this—

12 A. I don't know. I don't know.

13 Q. You don't know?

14 A. I don't know.

15 Q. Even in hindsight after having this violent vortex that Mr.
16 Boodram described, you still don't know?

17 A. I don't know.

18 **Mr. Chairman:** Before you move on from that particular
19 point, can we, can I ask you please, can we have the addendum
20 document back please? Thank you. And can we go to the
21 question that Mr. Peterson was asking, which is at number
22 seven, please?

23 **Examination By Mr. Chairman:**

24 Q. So who's asking? You see it says "Query"? If you look at the
25 screen—

26 A. Yeah.

27 Q. —it says:

1 “Query: what is the water depth at berths 5 and 6 and the
2 storm moorings?”

3 And then, response:

4 “The water depth varies between approximately 60 and
5 70 feet.”

6 First of all, who’s asking the question? Who’s, who’s, who’s
7 the query?

8 A. That would be one of the, um, bidders on the job.

9 Q. One of the?

10 A. The bidders. That came out—after they send out the tender, the
11 peel who were bidding the job would have sent in questions.

12 Q. All right. But if you go back to the beginning of the document
13 please, just one page up? A bit further.

14 “Paria Fuel Trading Company Limited, miscellaneous
15 repairs and refurbishment works at five and six berths
16 and main viaduct, Addendum one. The following are
17 queries raised with clarifications. The addendum has to
18 be signed and submitted with the technical tender
19 submission.”

20 Right? And so, the query is raised by whom?

21 A. I’m sorry?

22 Q. Who raises the query, the potential bidder?

23 A. The bidders, yes.

24 Q. Right.

25 A. Yeah.

26 Q. Might not have been you but whoever it was—

27 A. Yeah.

1 Q. —these are the queries that have been raised. So the first one
2 there is:

3 “Who is responsible for pumping back from the berths to
4 clear the lines with water?”

5 Do you see that?

6 A. Yeah.

7 Q. Then the answer or the response to that is:

8 “The contractor is responsible for the safe removal of
9 hydrocarbon contents from the line and to ensure that the
10 line is clear and dry.”

11 What did you understand that to mean?

12 A. Well that’s what I said, we, in our submission we said we
13 weren’t going to clear the line.

14 Q. You were not?

15 A. We were just going to take off—yeah, and they accepted that
16 proposal.

17 Q. Whose response is this, if you read this document when you’re
18 given this document?

19 A. Right, that’s Paria’s response.

20 Q. That’s their response?

21 A. Yeah.

22 Q. So go to seven as well please? Question by one of the potential
23 bidders:

24 “What is the water depth at berths 5 and 6 and the storm
25 moorings?”

26 And you could have broken that down into two questions
27 couldn’t you? You could say: “What is the water depth at

1 berths 5 and 6?” And then another question: “What is the water
2 depth at the storm moorings?”

3 A. Correct.

4 Q. Right. First of all, berths 6 and 6, when that question’s being
5 asked, are we talking about what’s in the pipeline or are we
6 talking about the water depth from berth 5 to the seabed?

7 A. To the seabed.

8 Q. Right. So it’s out—forget the pipeline altogether.

9 A. Yeah.

10 Q. We’re just talking about the water depth, right?

11 A. Right, yeah.

12 Q. And it’s the same 5 and 6 and then the storm moorings are
13 some other asset?

14 A. Yeah, they’re scattered around the harbour.

15 Q. I follow that. And the answer by Paria is, as Mr. Peterson has
16 pointed out, there is between approximately 60 feet and 70 feet?

17 A. Correct, yeah.

18 Q. Right. Without identifying whether that’s 5, 6 or the storm
19 moorings?

20 A. Or the storm moorings, correct.

21 Q. Correct? And given that it varies between 60 feet and 70 feet,
22 that is a 10-foot difference, correct?

23 A. Correct.

24 Q. And a 10-foot difference at one end is considerable different
25 ullage depth at that end than it would be at the other end, 5 and
26 6, wouldn’t it?

27 A. Yeah, ullage was measured from the top.

1 Q. Yes.

2 A. So—

3 Q. So it would be the same distance down—

4 A. Yes.

5 Q. —but the fluid, I didn't mean ullage, I meant the fluid below
6 that to the—

7 A. Yeah, could be different, yeah.

8 Q. —might be, might be as much as 10 feet difference.

9 A. Correct, eh.

10 Q. If that's right, or they may have been referring to the storm
11 moorings at the berth.

12 A. I don't know.

13 Q. We don't know which; it's not clear?

14 A. That's what I read it to be.

15 Q. All right.

16 A. The difference at the different storm moorings.

17 Q. You read it to me mean what the difference between—

18 A. At the different storm moorings.

19 Q. Right, okay. Thank you. Thank you.

20 **Mr. Chairman:** I'm sorry to be—

21 **Mr. Peterson SC:** Thanks, Sir. I'd like to take it up from
22 there.

23 **Continued Cross-Examination By Mr. Peterson SC:**

24 Q. Why you read it and restricted it only to the storm moorings
25 and just don't factor in berth 5 and berth 6 which are the berths
26 you are concerned with?

27 A. Because I knew the water depth varied from the, um, storm

1 moorings from one to the other.

2 Q. And from berth 5 to 6 it must be—

3 A. They're close enough so we expected it to be the same.

4 Q. You ex—or. But Paria told you there's a 10—

5 A. No, Paria said it was difference between 60 and 70—

6 Q. You're reading what Paria said.

7 A. —at the storm moorings and 5 and 6.

8 Q. Mr. Ali—

9 A. All right.

10 Q. —you're reading what Paria said, so, I am not saying it, right?

11 Paria is also saying—

12 A. Uh-huh.

13 Q. —you're restricting your consideration to the storm moorings.

14 Paria is also saying a 10-foot differential in their answer—they

15 may be wrong, but that is the information they were giving you

16 at that point that there is a difference in the seabed—and I—Mr.

17 Chairman I thank you—there's a difference on the seabed

18 between 60 and 70 which is a 10-foot difference?

19 A. Er—

20 Q. Don't you understand that they're telling you there, it is not

21 flat?

22 A. I don't really, but if they understood it was not flat, you didn't

23 think I would a picked it up in my submissions?

24 Q. Picked up what in your submissions?

25 A. In my method statement and all those things. You said it—

26 Q. No, no, that's something else, Mr. Ali. We are telling you—

27 A. Uh-huh.

1 Q. —you see where we are—

2 A. Okay, I'll make it simple.

3 Q. No.

4 A. I didn't understand, appreciate that then.

5 Q. All right.

6 A. Maybe they were not clear enough to—

7 Q. I could accept that. I could understand that.

8 A. All right, so—

9 Q. So, reading this—

10 A. —they should have made it a little more clear.

11 Q. —reading this you could have read it to pertain to the storm
12 moorings, not to the—

13 A. Not on berth 5, right.

14 Q. Because, had you appreciated the 10-foot differential between
15 berth 5 and berth 6, you would have then been revisiting your
16 understanding as to whether the line was sloping, undulating or
17 flat?

18 A. Well, it will tell if it was sloping. It wouldn't tell you was
19 undulating.

20 Q. All right. Okay, well at least it would put you on inquiry?

21 A. Yep.

22 Q. All right.

23 **Examination By Mr. Chairman:**

24 Q. Following on from that, would it not have alerted you to
25 perhaps check the seabed levels?

26 A. Looking at the seabed you wouldn't know. The seabed itself
27 was level—

1 Q. I appreciate—

2 A. —but the pipe was submerged under the mud.

3 Q. You couldn't see the pipe or whether—

4 A. You couldn't see the pipe so you could see the mud—you could
5 see the depth of the seabed.

6 Q. Right.

7 A. So if you met 5 and 6 there it will tell you where the mud was
8 on the seabed not where the pipeline was.

9 Q. Are you saying that it's not immediately identifiable where the
10 pipeline is—

11 A. Nor how—

12 Q. —at the seabed?

13 A. No.

14 Q. So it could have been completely buried?

15 A. Yep, it's completely.

16 Q. Although it's covered in concrete it could have been completely
17 buried by some feet?

18 A. Yeah, by some considerable amount, yeah.

19 Q. Yeah, all right. But, you know, Mr. Peterson is saying did this
20 not alert you to the fact that there was a differential in the
21 heights?

22 A. No.

23 Q. It didn't. All right, very well.

24 **Mr. Chairman:** Thank you, Mr. —

25 **Mr. Peterson SC:** That just brings me to the next question.

26 **Continued Cross-Examination By Mr. Peterson SC:**

27 Q. The drawings that you put in your statement that I took you to

1 earlier at page nine three two, those are not engineering
2 drawings, those are just schematic drawings?

3 A. Yeah.

4 Q. So they're not an accurate representation of what is actually
5 under the water?

6 A. No. But that's not the drawing I was referring to.

7 Q. That's not the drawing you was referring to?

8 A. No.

9 Q. Well in fairness to you, could we get what you're referring to?
10 Well this one is in your statement, huh? This one is attached to
11 your statement, huh, as I just—

12 A. Yeah.

13 Q. Was there another one attached to your statement?

14 **Mr. Chairman:** Page 4, page 4 from memory, it's either the
15 page—if you just scroll down one or up one you'll see a
16 difference. Yes, there you go. There's a different one. Is that
17 the one you meant?

18 **Mr. Ali Sr.:** It's—sorry?

19 **Mr. Peterson SC:** That's also schematic?

20 **Mr. Ali Sr.:** No, it's a sandbank, concrete barge.

21 **Mr. Peterson SC:** Mr. Chairman if there's another one in
22 fairness to him I think we should—

23 **Mr. Chairman:** No I agree, I agree. Let's be clear about what
24 you're talking about, Mr. Ali.

25 **Mr. Ali Sr.:** Yeah.

26 **Mr. Chairman:** You had a different diagram to that? In the
27 tender document, please? [*Document handed to Mr. Ali*] I

1 think you might need to look at the tender document.

2 **Mr. Ali Sr.:** Could I confer with M'Lord?

3 **Mr. Chairman:** No, well, no, not really. You're in the midst
4 of your evidence. I don't know if Ms. Persaud Maraj can help
5 us. I don't think there's a different diagram attached to your
6 statement. A lot of material is attached to your statement but
7 there are only, as I recall it, those two schematics. There's a
8 picture of the chamber which, um, which you—which we've
9 got. I don't think there's any other—*[Perusing document]* Can
10 you help us as to what it looks like?

11 **Mr. Ali Sr.:** Could I go please?

12 **Mr. Chairman:** I'd rather you didn't. I think we're getting
13 there.

14 **Mr. Ali Sr.:** With the cement bags.

15 **Mrs. Persaud Maraj:** The one on the tender, the tender
16 document.

17 **Mr. Chairman:** Six two six?

18 **Mrs. Persaud Maraj:** Six two six.

19 **Mr. Chairman:** What, of his statement?

20 **Mrs. Persaud Maraj:** Volume II.

21 **Mr. Chairman:** Volume II?

22 **Mr. Ali Sr.:** Was after the In-Corr-Tech report I submitted it.

23 *[Pause]*

24 **Mr. Chairman:** Well I'm not going to delay this any longer.
25 We'll come back to it, please? Mr. Peterson, if you'll move on
26 please and we'll try and locate it for you, all right, Mr. Ali?

27 **Mr. Ali Sr.:** I appreciate that.

1 **Mr. Chairman:** We're going to try and locate it for you,
2 please, so we're going to carry on for the moment, all right?

3 **Mr. Ali Sr.:** Yeah.

4 **Mr. Chairman:** Make sure you keep speaking into that
5 microphone please? Speak into there. All right.

6 **Mr. Ali Sr.:** Yeah, just what you said there.

7 **Mr. Chairman:** Okay.

8 **Continued Cross-Examination By Mr. Peterson SC:**

9 Q. Mr. Ali, I just want to—I'm hesitant to do this because we only
10 sent it to the Commission yesterday but are you aware this
11 mor—well you were here this morning, I think boasting and
12 telling me this morning like it's an achievement, I said
13 yesterday. A bathymetric chart for that area berth 5 and 6, have
14 you ever seen it?

15 A. No.

16 Q. Are you familiar with such a chart? Do you have the technical
17 expertise to read such a chart? [*Document handed to Mr. Ali*]

18 **Mr. Chairman:** Do we have that to put on the screen, please,
19 the chart that was provided to us at about seven o'clock this
20 morning? I think we might want the third page of that
21 document. Yes, after that. No, it's the first one, sorry. I'm not
22 sure I'm—yes, that's better, thank you. Have you seen that
23 document before?

24 **Mr. Ali Sr.:** I haven't seen it before.

25 **Mr. Chairman:** All right. Well, Mr. Peterson, if you're
26 proposing to ask him question about it—

27 **Mr. Peterson SC:** No, just, no, that—

1 **Continued Cross-Examination By Mr. Peterson SC:**

2 Q. Yeah, that's why I was saying because I didn't want to hold you
3 to it or put anything—if you could read—that's what I asked, if
4 you had the ability to read it and assist us but if you can that's
5 fine. I just—

6 A. Well I could hardly see it.

7 Q. I don't want to lose the opportunity of your presence.

8 A. It, it measures the depth of water.

9 Q. Good. All right.

10 **Examination By Mr. Chairman:**

11 Q. It's a contour map of the land—

12 A. Of the seabed.

13 Q. —under the sea?

14 A. Of the seabed.

15 Q. Yes, of the seabed?

16 A. Yes.

17 Q. So in the same way as you have contours of hills and mountains
18 above land—

19 A. Yeah.

20 Q. —above sea level, this is one in reverse in effect?

21 A. Right, so you know it as the sea level.

22 Q. So we can see where the water is—

23 A. Yep.

24 Q. —and how deep it is—

25 A. Yep.

26 Q. —depending on the tide of course?

27 A. Well they normally fix it to mid tide.

1 Q. As a sort of medium?

2 A. Yes.

3 Q. Yes, all right.

4 **Continued Cross-Examination By Mr. Peterson SC:**

5 Q. And it's—this between berths 5 and 6 but if you have never
6 seen it before you'll have to probably call someone who could
7 assist us with reading it and explaining the levels, but I didn't
8 want to not give you an opportunity, if you could have or if you
9 did see it before, to assist.

10 A. I didn't see it before but I could see—

11 **Mr. Chairman:** You can see it now?

12 **Mr. Ali Sr.:** Yeah, I can see the, um—

13 **Continued Cross-Examination By Mr. Peterson SC:**

14 Q. And you—can you see the numbers there that they're a very
15 slight variation in the undulation?

16 A. I can, yeah.

17 Q. Yep?

18 A. Yeah.

19 Q. You can?

20 A. I can.

21 Q. Right.

22 **Mr. Chairman:** First of all can you help me please so that I
23 can understand it, since you served it on us this morning, the
24 numbers that go with each contour, now nobody else is going to
25 be able to see this because although I'm squinting at it I can just
26 about make it out, but what's on the screen you won't be able to
27 see the actual numbers, but each contour, that is, each line that

1 creates a sort of wiggle underneath which that signifies the
2 depth at that point of the seabed?

3 **Mr. Peterson SC:** And in metres.

4 **Mr. Chairman:** And it's in metres, is it? Right. So we can
5 see, for example, that at berth 6 in that what looks like a T box,
6 to the left of that top of that T box, which is berth 6, there is a
7 number on the contour which is 17.5? Correct? Have I got that
8 right?

9 **Mr. Peterson SC:** Yes, Sir.

10 **Mr. Chairman:** So that that's 17 and a half metres in depth
11 right beside berth number 6, is that right? Have I got that right?
12 I see you nodding.

13 **Mr. Peterson SC:** Yes.

14 **Examination By Mr. Chairman:**

15 Q. Right. And there is a line which has got little crosses on it
16 which stretch between berth 6 and berth 5. Do you see that?
17 Looks like a—yes, that's—someone's tracing it now with the
18 marker and if they can use a hand rather than that little marker,
19 but anyway, you can see a line moving in a straight line slightly
20 north and east and then down slightly south and east towards
21 berth 6—5, sorry, from 6 to 5. Do you see that? Is that the
22 pipeline?

23 A. The one with the crosses?

24 Q. Yes.

25 A. No, no. This is a map of after they dredged the harbour.

26 Q. After they dredged the harbour? Right.

27 A. So you'll notice that if you draw a straight line between 5 and

1 6—

2 Q. Yes.

3 A. —the water to the top of it is deeper. That's where there was a
4 dredge—

5 Q. Right.

6 A. —for the—

7 Q. There's a dotted line between 5 and 6.

8 **Mr. Chairman:** Is that the pipeline? I'm asking Mr. Peterson.

9 **Mr. Ali Sr.:** It does—it does—

10 **Mr. Chairman:** Pause, pause, Mr. Ali, please?

11 **Mr. Ali Sr.:** Yes.

12 **Mr. Chairman:** I'm asking Mr. Peterson what his—I mean,
13 he's served this. So that we understand what it is—

14 **Mr. Peterson SC:** We plan to call someone with the
15 knowledge to speak to it, Sir. I—

16 **Mr. Chairman:** It would have been even more helpful if you
17 provided a witness statement with these documents, so—

18 **Mr. Peterson SC:** We will be doing—we will be doing that,
19 Sir.

20 **Continued Cross-Examination By Mr. Peterson SC:**

21 Q. All right, just before we pass on, Mr. Ali, since you've been
22 handed this document, leaving aside where the pipeline is
23 because we can't identify it, but, do you see that squiggly line
24 that I've been talking about that goes across the page?

25 A. Yes.

26 Q. Starting on the far left—probably best if I come and point to it.

27 A. The one that—

1 Q. From this line here, do you see this line here that goes like this?
2 Do you see that all the way there, so that's literally between 5
3 and 6, this line. Do you see that?

4 A. Yes.

5 Q. That says 17.5 metres.

6 A. That's the dredged area where the—

7 Q. That's the dredged area?

8 A. That's the normal, the ambient depth.

9 Q. Right. And then the next contour which passes right through
10 berth 6 is this one?

11 A. Yes.

12 Q. And comes close to berth 5 as well. Do you see that?

13 A. Yeah.

14 Q. That's, that's marked at 15 metres?

15 A. Yes.

16 Q. So the difference between each of these contours appears to be
17 two and a half metres. Fifteen metres.

18 A. Yeah.

19 Q. The next 17 and a half metres.

20 A. Yeah.

21 Q. It's a little bit taller than me—

22 A. Yeah.

23 Q. —is the difference in height.

24 A. All right.

25 Q. All right? But for these two contours, and they're the ones that
26 seem to pass near to berth number 5 and berth number 6. Some
27 day we'll find out where the pipeline is.

1 A. The pipeline would be somewhere between berth 5 and berth 6.

2 Q. I think we've managed to work that out, the pipeline is
3 somewhere between those two, yes?

4 A. And then the not in front, it's in between the structures.

5 **Mr. Chairman:** All right.

6 **Continued Cross-Examination By Mr. Peterson SC:**

7 Q. Thank you, Mr. Ali. I know you didn't see these but just to
8 show you in case you were familiar with it or you had seen it
9 before.

10 A. Right.

11 **Mr. Peterson SC:** But, Mr. Chairman, we will call someone to
12 give a—well, to speak to it.

13 **Commissioner Wilson:** Is there a legend—

14 **Mr. Peterson SC:** Yes, there.

15 **Commissioner Wilson:** Yeah, but I'm just asking about a
16 legend and if we could enlarge it so we could get an idea of
17 what everything means?

18 **Mr. Peterson SC:** Go to the right. Down.

19 **Mr. Chairman:** Or, right at the bottom on the left—

20 **Mr. Peterson SC:** On the left.

21 **Mr. Chairman:** Right.

22 **Mr. Peterson SC:** Left.

23 **Mr. Chairman:**—side, you see a legend. Well we'll work it
24 out [*Inaudible*]

25 **Mr. Peterson SC:** Yeah, when the witness comes we'll have
26 the original too.

27 **Mr. Chairman:** So how long—how much longer do you think

1 you're going to be, Mr. Peterson?

2 **Mr. Peterson SC:** About 45 minutes, Sir.

3 **Mr. Chairman:** About 45 minutes. All right, we're going to
4 take lunch here. Would anyone be too upset if we resumed at
5 two o'clock? I hear no protests, so that's what it will be.
6 Thank you very much. Two o'clock. Mr. Ali, I'm afraid
7 you're going to have to come back after lunch. I was hoping to
8 finish you before lunch so we're not going to be able to finish
9 you now.

10 **Mr. Ali Sr.:** Sorry, um—

11 **Mr. Chairman:** I'm afraid we're going to have to break off for
12 lunch now, all right? So we'll come back at two o'clock. Will
13 that be all right for you?

14 **Mr. Ali Sr.:** That's okay for me. You have two more
15 witnesses. Are you going to take them or you—

16 **Mr. Chairman:** I know. Well, I'll work that out. Don't you
17 worry about them. I'll deal with that. For the moment, you're
18 not to discuss your evidence with either of them or anyone else
19 for the time being, all right?

20 **Mr. Ali Sr.:** Yeah.

21 **Mr. Chairman:** So keep your counsel to yourself, have a bit
22 of lunch, come back at two o'clock if you would please?

23 **Mr. Ali Sr.:** Yeah.

24 **Mr. Chairman:** Thank you very much. All right, we'll rise
25 now.

26 **1.07p.m.:** *Enquiry suspended.*

27 **1.59p.m.:** *Enquiry resumed.*

1 **Mr. Chairman:** Good afternoon. Can I please ask everyone to
2 give me a little bit of help? I heard from Mr. Peterson. He
3 thinks he'll be another 45 minutes. Ms. Maraj, first all, before
4 you, anyone else? Any questions? No. Good. Ms. Maraj?

5 **Mrs. Persaud Maraj:** Mr. Commissioner, unless there is—if
6 my friend clarifies the points that I have to clarify here, I see
7 that I should be no more than 30 minutes, 15 minutes to 30
8 minutes.

9 **Mr. Chairman:** The nearer to 15 the better, thank you very
10 much. We're going to try and get through the witnesses today.
11 I've had it suggested to me that we might sit earlier. I'm not
12 sure if that's to sit earlier and retain the time that we've
13 changed it to today or whether it is a suggestion that we should
14 sit earlier and finish earlier?

15 **Mr. Peterson SC:** The suggestion came from me, Sir, and I
16 was saying that if you're losing time today, then the following
17 day you could possibly crave the indulgence of everyone for an
18 extra hour, so what—if you were pushing us to like 4.30,
19 quarter to 5.00 today, five o'clock, instead of keeping us 6.00
20 you may want to start 9.00?

21 **Mr. Chairman:** Yes. I'm open to that suggestion.

22 **Mr. Peterson SC:** So we'll be more productive early in the
23 morning.

24 **Mr. Chairman:** Yes.

25 **Mr. Peterson SC:** The hour in the morning is more productive
26 than the hour in the evening.

27 **Mr. Chairman:** I'm open to that subject, subject to witness

1 availability and convenience. I appreciate that we've all got
2 other lives as well but this must take priority. We're all
3 lawyers, we know what that's like. So, I think that's not an
4 unhelpful suggestion and I'll certainly take that on board. Does
5 anybody have any difficulty with us starting at nine o'clock on
6 any particular day? No? Good. I understand that's the normal
7 starting time for courts in this jurisdiction in any event. Good.

8 Well, what we will do is to go on till about 4.30 today. If
9 we find that we haven't been able to conclude what needs to be
10 concluded today we will, subject as I say to the witnesses,
11 resume on tomorrow morning at 9.00. So, and I'll adopt that
12 policy wherever possible between now and the conclusion of
13 these two weeks to try and make sure that we stick to the
14 timetable we've applied.

15 I'll ask you all please to look again at what examination
16 you've got, try and concentrate it in such a way that we get to
17 the issues and I'll do my level best not to interfere too much.
18 All right. So, I hope you've been able to get some lunch, Mr.
19 Ali, and we'll proceed now. Thank you. Mr. Peterson.

20 **Mr. Peterson SC:** Thank you, Mr. Chairman.

21 **Continued Cross-Examination By Mr. Peterson SC:**

22 Q. Mr. Ali, good afternoon.

23 A. Afternoon.

24 Q. I want to get straight to the plugs which is one of the important
25 parts. Have you—the brand of plug that you used, Lansas, have
26 you ever used it before?

27 A. I did, yeah.

1 Q. Beg your pardon?

2 A. I did.

3 Q. Yes. They have helpfully published a video and material online
4 how to safely install their plugs. Have you watched that video?

5 A. Sorry?

6 Q. Have you ever viewed the video?

7 A. I did not.

8 Q. Have you ever read the literature online?

9 A. Yep.

10 Q. All right. And how many times you have used that plug
11 before?

12 A. I used that plug twice.

13 **Mr. Chairman:** Which plug are we talking about, the
14 inflatable?

15 **Mr. Peterson SC:** The Lansas, yes, inflatable, sorry. The
16 inflatable plug I'm referring to, the Lansas inflatable plug.

17 **Continued Cross-Examination By Mr. Peterson SC:**

18 Q. When did you use it before?

19 A. At number 5 in 2020 and number 6.

20 Q. Right. Have you ever reviewed the installation safety
21 instructions for the plug?

22 A. Um, not really, no.

23 **Mr. Peterson SC:** Mr. Chairman, I'm at page 9832 in the
24 bundle of submissions.

25 **Mr. Chairman:** The core bundle?

26 **Mr. Peterson SC:** Core bundle. It says bundle of submissions,
27 I think it's in the—the electronic bundle.

1 **Mr. Chairman:** I'll get it in a while but carry on.

2 **Mr. Peterson SC:** It's on the screen now, Sir.

3 **Mr. Chairman:** All right.

4 **Continued Cross-Examination By Mr. Peterson SC:**

5 Q. Could you scroll down to the, under the rubric "Safety should
6 always be of the most importance"? You see prior to doing any
7 installation, that you should review the pipe plug safety
8 instructions? You said you have never done it. Have you
9 circulated to your men to review?

10 A. Yes.

11 Q. Who have you circulated it to?

12 A. My son went to the States and brought the plug back himself.
13 He spoke to the people there.

14 Q. Right. But he wasn't the only one installing it?

15 A. No.

16 Q. What did you all do to educate everyone with respect to the safe
17 installation of the plug?

18 A. Well he would have spoken to his crew.

19 Q. When? You don't know that? You assume that he would
20 have?

21 A. Yes.

22 Q. Right. You know that there is a procedure to put a brace whilst
23 installing the plug? I know I taking you a bit quickly but could
24 we go to page 3 under the rubric "Installing the pipe plug"? It's
25 page—

26 **Mr. Chairman:** Nine eight three five.

27 **Mr. Peterson SC:** Nine eight three five.

1 **Continued Cross-Examination By Mr. Peterson SC:**

2 Q. The first one says to make sure it's the correct size plug for the
3 line. What line you did in 2022 was a 30-inch line?

4 A. Sorry?

5 Q. The line was—

6 A. Yes, about 30-inch, yes.

7 Q. And this plug was for which line?

8 A. Thirty-inch.

9 Q. Right. It's only a 30—

10 A. It also range from I think was 24 to 30, I'm not sure right now,
11 but it was for more than one size.

12 Q. Right. And ensure the pipe is rated to handle the back test
13 pressure for the application. Did you do that examination
14 before you insert the plug and pressure it up that you ascertain
15 that the pipe was fit to take the pressure?

16 A. Yep.

17 Q. You did that?

18 A. Yep.

19 Q. What was the pressure to install that plug?

20 A. I don't think that's what they're saying there, you know.

21 Q. What they're saying?

22 A. It should—

23 Q. That's the plug itself?

24 A. Yeah.

25 Q. Right, and ensure that the pipe is clean and free of debris or
26 damage which can damage the pipe plug, cause the pipe plug to
27 fail or dislodge from the pipe?

1 A. Right, we did that.

2 Q. Did you all clean inside the—

3 A. We did.

4 Q. Just before the 30—just above the 30, um, the 30-foot of liquid?

5 A. No. When we pumped out the line, the line was clean. Where
6 we pumped down the line, the line was clean.

7 Q. When you pumped down the oil, the line was clean?

8 A. The line was clean, yeah.

9 Q. Could you explain to us how that can be?

10 A. Well the liquid went down. There was no solids, nothing, no
11 rust or anything on the line. I think that's what they meant.

12 Q. You think that's what they meant?

13 A. Yeah.

14 Q. But again, is that what you think?

15 A. Yep.

16 Q. Go over to the next page towards the bottom. Eight three—
17 nine eight three five under the rubric,
18 "Blocking/bracing/restraining the pipe plug". Do you
19 understand the purpose for blocking/bracing/restraining the
20 pipe plug?

21 A. That's why we ensured it went down on a leg of liquid.

22 Q. No, just now. Yeah, that's probably the way you did it. But
23 you understand the reason for it?

24 A. Yeah, to stop the plug moving, to restrict the movement of the
25 plug. Once you put it on a solid thing or they lock it leg of
26 liquid it wasn't supposed to move.

27 Q. So you use the liquid to support the plug?

1 A. Come back?

2 Q. You used the liquid to support the plug?

3 A. Exactly.

4 Q. So if the liquid evaporates or disappears, the plug goes?

5 A. Well it shouldn't have inside the pipeline evaporate or go.

6 Q. Beg your pardon?

7 A. It should not have.

8 Q. Yes. But that is—

9 A. And now in hindsight we know something happened to it?

10 Q. We all know—right.

11 A. But, at the time—

12 Q. I like you—all right. We all know that, Mr. —

13 A. And the science of it is the liquid there would restrict
14 movement of the plug.

15 Q. Right. But they're not telling you here to use the liquid to rest
16 the plug on?

17 A. They said to restrain the plug.

18 Q. Right.

19 A. They didn't say how to restrain it. If there was no liquid, you
20 would block it.

21 Q. Right.

22 A. Right? Like to the top of the plug there was no liquid and we
23 used the mechanical plug as the restraint.

24 Q. Oh.

25 A. So you had the—the plug wasn't supposed to go down because
26 you had a solid leg of liquid below.

27 Q. Right.

1 A. And the mechanical plug which stop it coming up—

2 Q. Right.

3 A. —whilst using it.

4 Q. So once you remove the mechanical plug—

5 A. Right.

6 Q. —the top support is removed?

7 A. Right, so at that stage—

8 Q. Isn't there?

9 A. —we were removing the plug. While you're in operation,
10 while you're doing the welding and you're doing that sort a
11 stuff you restrain it, you make sure.

12 Q. Right. You could move faster if you just accept. You know the
13 plug had two hooks on top to attach cables?

14 A. Yes.

15 Q. What's the purpose of those hooks?

16 A. Those were also a restraint.

17 Q. To restrain it within the hyperbaric chamber?

18 A. Yeah.

19 Q. So it would not fall into the pipe?

20 A. Yep.

21 Q. That—

22 A. Well that—

23 Q. —was done?

24 A. Sorry?

25 Q. Was that done?

26 A. That was done, yeah.

27 Q. When was that done?

1 A. When they removed the mechanical plug, they attached—

2 Q. They're supposed to attach?

3 A. No, they did.

4 Q. Right. To—the plug should be in the hyperbaric chamber but it
5 wasn't?

6 A. No, I'm not saying that. I said they attached it.

7 Q. Right.

8 A. If you look at the plug, the pictures I got now you'll see where
9 the log was broken off.

10 Q. Right.

11 A. So when it moved it broke off the, um—

12 Q. So some of the key considerations when blocking, bracing or
13 restraining pipe plugs are as follows. Do not point load the pipe
14 plug when blocking and bracing. What does that mean?

15 A. That you shouldn't have anything sticking up that the plug
16 could puncture itself on, so that's why the liquid was the better,
17 um, option.

18 Q. Instead, use multiple points of contact on the plug in order to
19 spread the back pressure or—

20 A. Correct, yes.

21 Q. —test pressure forces—

22 A. That's why the liquid was the better option.

23 Q. I ain't finish yet, eh—over the largest possible area of the plug?

24 A. Correct.

25 Q. Right.

26 A. So you don't have point loading that would stick into it and
27 puncture the, um—

1 Q. Right. But I get back to you, once that liquid goes the support
2 that you are depending on goes?

3 A. At the time we didn't expect to go.

4 Q. Right. I accept that. But it happened that it went?

5 A. Right.

6 **Mr. Chairman:** Can I ask a question in relation to that please,
7 Mr. Ali?

8 **Examination By Mr. Chairman:**

9 Q. This plug that you're being asked about, there was no attempt
10 by you, as I understand it, to check the integrity of that plug in
11 the 12-day gap between it being installed?

12 A. Unfortunately we couldn't get at it. The only way to get at it
13 was to remove it.

14 Q. Well—

15 A. It was inside the pipe 30 feet down and we had the mechanical
16 one. So we could remove the mechanical plug—

17 Q. Yes.

18 A. —but we couldn't access—we would have had to go inside the
19 pipeline.

20 Q. Well forgive me, that's what I want to ask you. You would
21 have had to have removed the mechanical plug first of all,
22 correct?

23 A. Correct.

24 Q. Right. Assuming you'd removed the mechanical plug and left
25 the inflatable plug—

26 A. Yeah.

27 Q. —the way in which—one way in which to check the integrity

1 of that was to ensure that the pressure that had been pumped
2 into the PSI into that plug was the same as when you left it?

3 A. It would have been, yep.

4 Q. Yeah. I mean, I don't know what it was but whatever the
5 pressure was necessary to inflate it so that it created the seal
6 which you're talking about?

7 A. But remember it was in operation test mode for the four hours
8 and it didn't move at that stage.

9 Q. Right.

10 A. So that was a way of testing it as well.

11 Q. Well—

12 A. But we didn't—

13 Q. You said earlier, you see, that normally you'd want this work to
14 be done within four days of installing plugs?

15 A. Yeah.

16 Q. We know that it was three times that much.

17 A. Yeah.

18 Q. Did that not cause you some anxiety to check the integrity of
19 that plug?

20 A. That's what I'm saying, Sir. We put the chamber into
21 operation.

22 Q. Right.

23 A. And it had the air pressure on it and it held, so that was one way
24 of testing it.

25 Q. Well, by the time you did that, you had the mechanical plug in
26 place, didn't you?

27 A. Yeah but the mechanical plug wasn't sealed off.

1 Q. Was what, sorry?

2 A. It tightened against the wall of the pipe.

3 Q. Yes. Well they put—

4 A. But it wasn't a pressure seal. We had holds in the plug, the
5 same bolts to leave the pressure to pass in and out of that.

6 Q. Well I've not understood this then.

7 A. It's air-tight, then.

8 Q. Am I to understand it that you're saying that the mechanical
9 plug that is but over the top of the inflatable—

10 A. Yeah, it wasn't air-tight.

11 Q. Was not air tight?

12 A. No. It was tight against the side of the pipe—

13 Q. Right.

14 A. —that would stop it moving up and down in the pipe.

15 Q. Right.

16 A. Right? But it didn't stop the pressure from passing through in
17 and out the pipe.

18 Q. Oh really? So just—

19 A. So it was meant—

20 Q. Just a minute, Mr. Ali. I need to write that down. [*Pause*]
21 Thank you. So I can take it, can I, that the mechanical plug
22 didn't create a seal?

23 A. No, it was more or less a physical barrier—

24 Q. Right.

25 A. —to stop the plug coming out and to stop things falling on to
26 the plug.

27 Q. I got you. Right. So what Mr. Peterson was asking you about

1 this inflatable plug, once you put the hyperbaric chamber over
2 the top, that would have had that downward pressure?

3 A. It would have, yeah.

4 Q. And do you know if it moved, if the inflatable plug moved
5 when you did that?

6 A. It was still there when they opened the chamber. We wouldn't
7 know. All we would know is that the chamber was operating.

8 Q. Right.

9 A. Right? It was voiding the liquid in the chamber and we were
10 getting, um, some ullage in the pipe, about 4 feet under the, um,
11 where we did the flange.

12 Q. Right.

13 A. So it was never meant to be a seal.

14 Q. The mechanical plug was never a seal?

15 A. No.

16 Q. Well I have completely misunderstood that up until you just
17 told me that, all right?

18 A. Yeah. I think it's stated there that it was to stop the, um—

19 Q. Well, then it's passed me by.

20 A. Yeah.

21 Q. I'm grateful to know that that's what you're saying.

22 **Mr. Chairman:** All right, thank you very much. Sorry.

23 **Mr. Peterson SC:** Thanks, Mr. Chairman. One more question
24 on the plug before we move.

25 **Continued Cross-Examination By Mr. Peterson SC:**

26 Q. Could we just scroll back—well, scroll back up to the rubric
27 ahead of—stop, come back down please, "Monitoring the pig

1 plug.” Right. Pipe plug. Monitoring the pipe plug. Once the
2 installation, you see that?

3 A. Yeah.

4 Q. “Once the installation and inflation of the plug is
5 complete, and you are working the application, the plug
6 should be monitored regularly.”

7 A. Right.

8 Q. “The required inflation pressure should be checked every
9 four hours at a minimum but more often in critical
10 situations.”

11 But that plug was installed 12 days before?

12 A. It was.

13 Q. What do you say about this?

14 A. I say it was monitored. Before you went into the chamber we
15 would leave it running to make sure the plug was still holding.

16 Q. Not the hyperbaric chamber I talking about, you know, I’m
17 talking about—

18 A. I know, but what I’m saying—

19 Q. —the plug.

20 A. —the way we knew the plug was still holding was because we
21 could empty the hyperbaric chamber.

22 Q. Right.

23 A. Right. So the pressure from the chamber was going acting on
24 the plug.

25 Q. But you don’t know if it’s holding but you don’t know if it’s
26 leaking?

27 A. It—

1 Q. It was there for 12 days.

2 A. Right.

3 Q. And they're suggesting every four hours.

4 A. I'm not sure what you're saying.

5 Q. I will say it slowly.

6 A. What are you talk—no, no, you don't have to say it slow. What
7 are you talking about leaking.

8 Q. The inflatable plug.

9 A. Right.

10 Q. The inflatable plug—

11 A. Right.

12 Q. —was installed 12 days before the 25th.

13 A. Right.

14 Q. The manufacturer's specifications suggest, which you told me
15 that you hadn't read—

16 A. Uh-huh.

17 Q. —but we have to accept it's in the bundle, indicated that you
18 should check the pressure on the plug every four hours at a
19 minimum and more often depending on the situation. That
20 wasn't done.

21 A. The only way it could have been done by making sure the
22 chamber was functioning. If the chamber wasn't functioning it
23 meant you were losing the pressures on there.

24 Q. The chamber—

25 A. It's, it's—

26 Q. The chamber was able to push down the water and you're
27 interpreting that to mean that the plug—

1 A. That the plug was holding.

2 Q. Yes, but holding how?

3 A. Holding sufficient enough, right.

4 Q. But not sufficient enough to stop a delta, a latent delta pressure?

5 A. We said before the Delta P we could—was in hindsight. At the
6 time we installed the plug there was supposed—there was a leg
7 of liquid underneath that would have eliminated Delta P.

8 Q. Okay. And that—

9 A. There were other considerations that could have caused the
10 Delta P that they haven't uncovered.

11 Q. Another conclusion or explanation, if the plug—well, we're all
12 now into the realm of speculation?

13 A. Yeah.

14 Q. If the plug was at its best—

15 A. Uh-huh.

16 Q. —the Delta P force may not have been able to pull it in.

17 A. If it was at its best?

18 Q. At its best, like complete the pressures that—properly installed,
19 properly braced.

20 A. So, are we speculating that during the 12 days the pressure was
21 lost in the plug?

22 Q. That's the problem we have. That is what the chairman is
23 trying for us to understand. That's what we're investigating
24 here.

25 A. Yeah, but the plug didn't move until we went and deflated it so
26 it was okay.

27 Q. It's like a car tyre. Let's, let's—let me speak—

1 A. Yeah but what I'm saying we had to deflate it in any case.

2 Q. It's like a car tyre, Mr. Ali. Sometimes the tyre kind a soft
3 you're saying, um, gas station I ain't stopping there but I go
4 make it home?

5 A. Right.

6 Q. Or you have it—you stop and pressure it up efficiently.

7 A. So—

8 Q. That's what I'm—

9 A. And I'm telling you.

10 Q. —the parallel I'm drawing.

11 A. I'm telling you it's only when we deflated it that the plug
12 moved. So prior to us deflating it, the plug was good at its best.

13 Q. Prior to you deflating it, it had not moved?

14 A. It had not moved.

15 Q. But you don't know if it was at its best.

16 A. In any case we had to reduce the pressure, so whether it had
17 reduce and stayed there we still had to come and reduce it even
18 more.

19 Q. Right. Well, we have the manufacturer's specs—

20 A. All right.

21 Q. —specifications in the bundle. I now want to take you quickly
22 to the method statement, the final one that was used, which is
23 number 116.

24 A. Yeah.

25 Q. Your guys did not hold religiously to the steps in that method
26 statement?

27 A. Your guy is making up a story.

1 Q. No, I ask—

2 A. There was one that is certain and we used that method.

3 **Mr. Chairman:** Can we have the method statement up so that
4 we could see what you're saying? Thank you. Can we put—
5 what page is it at, please? It's in core bundle two, 1048? Yes,
6 thank you. Could you identify what you're speaking of please
7 Mr. —

8 **Mr. Peterson SC:** This is method statement 116?

9 **Mr. Chairman:** Yes.

10 **Continued Cross-Examination By Mr. Peterson SC:**

11 Q. This is the only method statement you submitted?

12 A. We submitted a method statement at the time we tendered the
13 job.

14 Q. Yes.

15 A. We submitted a method statement for removing the oil in the
16 pipeline. We submitted a method statement for installing the
17 plug and installing the chamber.

18 Q. Right. Those earlier ones as number 108 and I can't remember
19 the other number?

20 A. Right.

21 Q. The one I'm referring to is this one that—the last one on the
22 job.

23 A. Could you scroll down? Because I'm not sure if it's the final
24 version. Hold there. Scroll down a bit more, please? Yes, that
25 looks like the one we have.

26 **Mr. Chairman:** Where do you want him to look, Mr.
27 Peterson?

1 **Mr. Peterson SC:** Thank you, Sir.

2 **Continued Cross-Examination By Mr. Peterson SC:**

3 Q. Now, if we go to—the job was stopped on the 13th, wasn't it?

4 A. On the 15th.

5 Q. On the 15th, sorry, 15th of February, after completing number
6 53.

7 **Mr. Chairman:** Can we turn to 53 then, please?

8 **Mr. Ali Sr.:** Right.

9 **Continued Cross-Examination By Mr. Peterson SC:**

10 Q. All right?

11 A. Yeah.

12 Q. Let me ask, is this method statement supposed to follow in
13 order, 48 followed by 49, followed by 50, or can we jump
14 around depending on the execution?

15 A. It's supposed to follow unless we have an agreed change
16 between us and Paria.

17 Q. All right. Are you aware that when they stopped on the 15th,
18 they stopped after completing step 53 and they resumed with
19 step 58 and then they had 61 to 73, then reverted up to 54?
20 They were moving around. Are you aware of that?

21 A. You could you come back on, um—

22 Q. I didn't move it.

23 A. Who's controlling the—I can't see what you're—

24 **Mr. Chairman:** Right. Well, can we take it one bit at a time,
25 please, Mr. Peterson, so that he has a fair opportunity to answer
26 your questions? So you're saying that on the 15th the work was
27 called to a halt? That was at the conclusion of number 53 that

1 we've already read. That's performing a dye penetration test to
2 ensure the integrity of the weld, I imagine, all right?

3 **Mr. Peterson SC:** Yes.

4 **Mr. Chairman:** And then options if it passes or not, right, so
5 that's when work was called to a halt?

6 **Mr. Ali Sr.:** Right, so—

7 **Mr. Chairman:** That's what Mr. Peterson has put to you, all
8 right?

9 **Mr. Ali Sr.:** But he's flipping the screen so I can't see it.

10 **Mr. Chairman:** Right. So the next step he says is 58 so can
11 we turn to 58, please?

12 **Mr. Peterson SC:** No, 61, Sir. They restarted at 61, sorry.
13 That's my error.

14 **Mr. Chairman:** So you restarted at 61. Right.

15 **Examination By Mr. Chairman:**

16 Q. So what is, what is being suggested to you is that step 54, which
17 was, on completion of the weld conduct a pressure test on the
18 flange weld, 55 which is, on acceptance remove the test
19 hardware—

20 A. Could I have a couple minutes, Sir—

21 Q. You need to speak into the microphone.

22 A. —to explain? All right. So, on the 15th, they finished late and
23 we couldn't do the test.

24 Q. Right.

25 A. We were that late. So we said we'll resume. Because we didn't
26 have the technicians for testing the weld on the 16th we said
27 we'd test continue on the 17th.

1 Q. Right.

2 A. Right. But there were couple steps that could have been
3 interchanged. So—

4 Q. Right. Stop there for a minute. Did you complete the weld test
5 on the 17th?

6 A. No we did not.

7 Q. Right.

8 A. So we went out on the 16th and we changed around the step in
9 order to progress the work. So we went on to—

10 Q. So had works been stopped on the 15th?

11 A. Right. So we stopped at 54. We didn't do the weld.

12 Q. Rat.

13 A. And if somebody could please scroll up? Who's controlling,
14 you? Yeah. Could you go down to where we, um, opened the
15 chamber?

16 Q. You've got the document in front of you.

17 A. Okay.

18 Q. It's easier for you to scroll through it.

19 A. Okay, I'll go with on the screen. I'll just explain it as we—

20 Q. All right.

21 A. It might be easier. All right. So we couldn't do the pressure
22 test on the weld.

23 Q. Right.

24 A. We decided we'll come back on the 17th. We didn't come back
25 on the 17th, whatever reason so we came back on the 25th. All
26 right? While we were waiting for this—

27 Q. Is Mr. Peterson right when he said to you the work on your

1 schedule—scroll back please to 51—that it stopped at 51, 52,
2 53, that's where it stopped?

3 A. It stopped at 53.

4 Q. Right. And is he right when he says it resumed at a different
5 place to 54? Have a look at 54.

6 A. Yeah, it resumed at a different place.

7 Q. Right. Where do you say it resumed?

8 A. It resumed at, um—

9 Q. Scroll forward, please, so that we're on to the next page?
10 Right, have a look at that page. Just pause there. Where, in
11 that list between 56 and 65, do you say it resumed? Have a
12 look.

13 A. I have to do it here, that is a moving—[*Perusing document*]

14 Q. Have a look at 56, paragraphs 56 to 65.

15 A. Okay.

16 Q. And you tell us—

17 A. So we got to 61.

18 Q. Right, 61, unbolt 50-inch flange at the top of the chamber
19 stovepipe.

20 A. Right.

21 Q. Are you saying that's where you resumed?

22 A. Yeah.

23 Q. Right. Now, I think that's what Mr. Peterson put to you.

24 **Continued Cross-Examination By Mr. Peterson SC:**

25 Q. That's what I wanted to know that notwithstanding what is
26 chronicled in your method statement—

27 A. Yeah.

1 Q. —you moved, you moved around depending on the execution
2 of the job?

3 A. In conjunction with Paria.

4 Q. Yeah.

5 A. Good.

6 Q. That's fine but it's not—what I'm trying to get—

7 A. Yeah.

8 Q. —before the Commission is that this is not set in concrete, the
9 order.

10 A. It could be changed with mutual agreement, yeah.

11 Q. All right. And the reason it could be changed is that the top of
12 your statement, if you could go to the top of the same method
13 statement, it introduces itself with these opening words, “All
14 steps below shall only be carried out in full compliance with
15 Paria's PTW system.”

16 A. Correct.

17 Q. So, notwithstanding what is contained in the method statement,
18 what really governs is the PTW to execute?

19 A. With this in conjunction.

20 Q. Yes. Because those steps have to be completed, but not in that
21 order. Isn't that so?

22 A. Right.

23 Q. Right.

24 A. And I'm saying—

25 Q. Thank you very much. And your company is of the view that
26 Paria PTW system is paramount, no pun intended, because
27 you're familiar with an email sent from your address, but in

1 fairness to you it was authored by Mr. Ahmad Ali, concerning
2 an incident when there was an unauthorized movement of a
3 barge?

4 A. Yep.

5 **Mr. Chairman:** Is this the email that you sent us earlier this
6 morning?

7 **Mr. Peterson SC:** Yes, Sir.

8 **Mr. Chairman:** Yes. Is there any reason why he can't see it?

9 **Mr. Peterson SC:** No, Sir, no.

10 **Mr. Chairman:** Right. Can we have it up on the screen then,
11 please? Is there a particular passage you want to refer to?

12 **Mr. Peterson SC:** Yes, um, I'll just—

13 **Continued Cross-Examination By Mr. Peterson SC:**

14 Q. The whole email is good for the Commission for reading later
15 on with respect to context, but, because we're against time this
16 was an incident with the unauthorized moving of a barge
17 contrary to a PTW?

18 A. Yep.

19 Q. It was investigated by you and you took certain steps and you
20 recognized in answering one of Paria's questions, yes, one of
21 Paria's questions, question three, when Mr. Archbald was
22 asking whether you would introduce self-check or a checklist
23 system to be implemented, so that is to guard against that kind
24 of infraction, you see question three? It's supposed to be on the
25 front page. Question three, you see "Q 3" and you see "A 3", A
26 is the answer, Q 3 is the question. Well I could help you
27 quickly. What your Mr. Ali was confirming to Paria is that a

1 checklist can be created because Paria was suggesting if a
2 checklist as a method of guarding against infractions, whether
3 that system is going be implemented and your Mr. Ali said, not
4 you, your Mr. Ali, Paria's, umm, LMCS' Mr. Ali said; "A
5 checklist can be created but we feel that the permit itself
6 already serves as the most powerful control document in the
7 existing system and another form recapping the same
8 requirements as already documented there is of little value."

9 A. Yep and—

10 Q. You accept—you agree with Mr. Ali, your, your—I think he's
11 the—one of your senior persons—you agree with him that the
12 permit—

13 A. I agree with him.

14 Q. Yeah, you agree with him.

15 A. Could I, um—

16 Q. Your lawyer across there will ask them—you see, I'm against
17 time, not that I don't want to—

18 A. Right.

19 Q. I against some time. The rescue, I just want to get there. I
20 know that—the rescue, you said in answer to the Chairman this
21 morning I think at about 3.50—when did you first know the
22 men went missing, around 2.50p.m. on the 25th?

23 A. Around three o'clock.

24 Q. Around three o'clock?

25 A. Yeah.

26 Q. But, by 3.15 you formed the view that they were in the pipe?

27 A. Correct.

1 Q. Because all equipment gone and all of that?

2 A. Yeah.

3 Q. And you mustered up a quick rescue plan?

4 A. Correct.

5 Q. Having mustered up that plan, what did you do with it?

6 A. I left it for the divers to activate, to execute the plan.

7 Q. All right. Anybody in particular?

8 A. Andrew Farah, Dexter Guerra and—

9 Q. Right.

10 A. —a bunch of men on the barge.

11 **Examination By Mr. Chairman:**

12 Q. I didn't hear that. Mr. —

13 A. Andrew Farah and Dexter.

14 Q. Farah and Dexter?

15 A. Guerra.

16 Q. Guerra. And they're both qualified divers?

17 A. Sorry?

18 Q. They're both qualified divers?

19 A. Well, one is, um, commercial, one is PADI.

20 Q. Right. One's PADI and one's commercial?

21 A. Yeah.

22 Q. Thank you.

23 **Continued Cross-Examination By Mr. Peterson SC:**

24 Q. And you left the barge area?

25 A. I left I went back ashore.

26 Q. You said you got a call from Mr. Piper inviting you to come to
27 the building, the shipping building?

1 A. I had few calls from Mr. Piper.

2 Q. You had a few calls from Mr. Piper.

3 A. Right.

4 Q. Did you tell him—

5 A. I had a call from Mr. Piper while I was on the barge—

6 Q. Yes.

7 A. —at 3.23—

8 Q. Right.

9 A. —where I told him what the status was on the barge.

10 Q. Which is that you think the men are in the pipe?

11 A. Yep.

12 Q. Right. When next you spoke to him?

13 A. Probably about half an hour afterwards or—

14 Q. Right. When did you tell him about the details of your plan, the
15 rescue plan?

16 A. I told him we were going to dive and get the men out. Whether
17 I give him the details I'm not sure but I told him that we were
18 going to get the men, rescue the men.

19 **Mr. Chairman:** Please speak into the microphone.

20 **Mr. Ali Sr.:** Sorry.

21 **Continued Cross-Examination By Mr. Peterson SC:**

22 A. Yeah, I said we were going to dive and get the men out of the
23 pipe.

24 Q. Right. Do you recall when around you told him that?

25 A. That would be around 3.23.

26 Q. Right. And did you execute the plan?

27 A. We're going in circles. I left the barge just after that.

1 Q. Or so you left it, okay. So you told Mr. Piper that you left a
2 plan, you plan to dive?

3 A. Yeah, and the men were going to do it.

4 Q. Right. But you didn't tell him the details of that rescue plan?

5 A. I said we were going to go into the pipe and get the men. The
6 men were in the pipe. I told him the men were in the pipe so
7 the, the plan was to go in and get them out of there.

8 Q. Right. You said in your witness statement that you told Ms.
9 Catherine Balkissoon. Our instructions are that you never told
10 her about your plan.

11 A. I never told her about the plan? She was told about the plan
12 about four times by me, by Dexter Guerra. At that stage I
13 detailed the plan.

14 Q. At which stage?

15 A. When I spoke to Catherine. That would have been a about after
16 6.00 somewhere around there.

17 Q. Right.

18 A. That's the first time I spoke to her around 6.00 or after 6.00.

19 **Examination By Mr. Chairman:**

20 Q. Right. So that I understand this please, Mr. Ali, you told Mr.
21 Piper before—

22 A. Catherine.

23 Q. —before Catherine?

24 A. Yep.

25 Q. Right?

26 A. I can't remember exactly what details I gave to Mr. Piper, I just
27 told him that.

1 Q. Pause a minute. I, I've got that bit. But you told Mr. Piper
2 before Christopher Boodram—

3 A. Yeah.

4 Q. —came out of the pipe?

5 A. Yeah, long before.

6 Q. And you told Catherine after—

7 A. Right.

8 Q. —Mr. Boodram came out of the pipe?

9 A. Correct, yeah.

10 Q. Have I got that right?

11 A. That's correct.

12 **Mr. Chairman:** Okay, thank you. Sorry.

13 **Continued Cross-Examination By Mr. Peterson SC:**

14 Q. You say you cannot recall the details you told Mr. Piper. I
15 would suggest that you told him none. In your witness
16 statement you said you didn't tell him any details, he didn't ask
17 you. You recall—

18 A. I meant.

19 Q. —saying that in your statement?

20 **Mr. Chairman:** Find the paragraph please?

21 **Continued Cross-Examination By Mr. Peterson SC:**

22 Q. Paragraph 104 I will take you to immediately but that's not the
23 one I was first looking for. Paragraph 104 of your
24 supplemental statement, you said, "I did not speak to them
25 about the rescue plan on Friday and they did not ask for any
26 details."

27 A. Right.

1 Q. That was—

2 A. That didn't—

3 Q. You were referring to Mr. Mushtaq and Mr. Piper?

4 A. Yep. When I spoke to Piper I said we were going to rescue
5 them. I didn't give him a plan. I didn't explain to him how we
6 were going to do it. At that time most important in my mind
7 was to get the men ready and go down in there. I was talking to
8 Mr. Piper on the phone while I was talking to the men. I'm not
9 sure exactly but I know I told him we were going to get the men
10 out. So the details of a plan I didn't give him.

11 Q. All right.

12 A. But I told him we were going to get the men.

13 Q. When did you first give him the details of a plan if any?
14 Wasn't it Sunday?

15 A. Who, Mr. Piper? I put Saturday morning. Saturday when I
16 went to Paria I was locked out of the gate. Mr. Piper eventually
17 let me come in about nine o'clock.

18 Q. When you say—no just now, wait. I can't—

19 A. Saturday morning.

20 Q. When you say Mr. Piper eventually, that could create the
21 impression that Mr. Piper was the person who locked you out.

22 A. Paria locked me out.

23 Q. Right. So you arrived at the gate and you weren't given
24 admission?

25 A. I wasn't given admission.

26 Q. Right. But don't say Mr. Piper let you in.

27 A. Mr. Piper spoke to them and I was allowed to come in.

1 Q. Right. Because you called Mr. Piper?

2 A. I called Mr. Piper.

3 Q. Right. You didn't do that when you arrived and you didn't—
4 weren't getting him?

5 A. Sorry?

6 Q. You did, you did that when, shortly after you arrived—

7 A. I tried a few times but—

8 Q. —[Inaudible]

9 A. —nobody was available on the phone.

10 Q. Right. Okay. Once you don't get the impression that Mr. Piper
11 did anything to keep you out of the compound.

12 A. Well Paria did that.

13 Q. Well—

14 A. And the instruction was, keep LMCS out.

15 Q. Well I don't know, Mr. , um, Ali, that's not in your statement.

16 A. No, I'm telling you now.

17 Q. Don't make up things as we go along please?

18 A. You're saying I'm making it up.

19 Q. No.

20 A. I'm telling you what happened.

21 Q. Don't—well don't add in things as we go along, otherwise I'll
22 have to get instructions and call you back to confront you.

23 A. All right.

24 **Mr. Chairman:** There is something in his statement about him
25 being held outside the gate—

26 **Mr. Peterson SC:** Yes, but not—

27 **Mr. Chairman:**—by Paria.

1 **Mr. Peterson SC:** No, not that Paria gave instructions not to
2 let LMCS on the compound. That's a different—

3 **Mr. Chairman:** Well, I appreciate they're slightly different
4 but—

5 **Mr. Peterson SC:** There is on the statement that he was
6 outside the gate and he wasn't admitted until Mr. Piper gave the
7 order to let him back in.

8 **Mr. Chairman:** One assumes there must have been authority
9 for that to happen.

10 **Mr. Peterson SC:** Well, it's a—it's a—I don't want to give
11 evidence but it's an insulated—

12 **Mr. Chairman:** No, no, no, but it'd be wrong to assume it was
13 Mr. Piper which you've made clear.

14 **Mr. Peterson SC:** Right.

15 **Mr. Chairman:** But somebody, presumably at Paria, must
16 have given that instruction.

17 **Mr. Peterson SC:** I don't know if instructions were given.

18 **Mr. Chairman:** All right.

19 **Mr. Ali Sr.:** I'm telling you you're going to find it in the
20 statement. When you read all the statements you'll see it there.

21 **Mr. Chairman:** Well I've seen it, don't worry, but Mr.
22 Peterson is putting to you that it wasn't Mr. Piper who was, as it
23 were, instructing anyone to keep you out, do you follow?

24 **Mr. Ali Sr.:** Yes, I agree to that.

25 **Mr. Chairman:** And that may be so, right?

26 **Mr. Ali Sr.:** Right.

27 **Mr. Chairman:** So—

1 **Mr. Ali Sr.:** I was locked out.

2 **Mr. Chairman:** You were locked out.

3 **Mr. Ali Sr.:** Right?

4 **Mr. Chairman:** We're clear about that.

5 **Continued Cross-Examination By Mr. Peterson SC:**

6 Q. Your plan to dive on Friday, did it consider the occurrence of a
7 second Delta P factor?

8 A. No, because the line had stabilized at that stage. There was no
9 external pressure on the plug and we weren't going to interfere
10 with the plug.

11 Q. At which stage you discovered that the line had stabilized?

12 A. As soon as Andrew saw the bubbles stop coming out of the line.

13 Q. What time was that?

14 A. That would have been before I even got to the barge.

15 Q. Okay.

16 A. About ten past 3.00 somewhere around there.

17 Q. So you never considered that not knowing whether the plug was
18 fully holding, that there was not the possibility of an occurrence
19 of a second event?

20 A. I was concerned that there were five people in that pipeline and
21 we were the only people that could help them out.

22 Q. I understand that, Mr. Ali.

23 A. The line was stable. There was no imminent danger, no
24 apparent danger and the best option at the time was to go in and
25 get them.

26 Q. Right. So you knew, you knew the plug was holding because
27 bubbles weren't coming up at that time?

1 A. No, I didn't know the plug was holding. At that stage I didn't
2 even consider where the plug was. All I know by number
3 five—by number six everything had gone back to the way it
4 was before the plug move.

5 Q. Right.

6 A. And we established that because we have deflated the plug
7 that's why the thing moved. But in our rescue there was no talk
8 or even thought of interfering with any plug.

9 Q. But there were—

10 A. Right.

11 Q. —was there consideration that the plug may have been in
12 such—

13 A. To be—

14 Q. —a condition—

15 A. —honest with you—

16 Q. Yeah.

17 A. —I said I didn't even consider the plug in the line.

18 Q. Okay.

19 A. Right? As later in my statement you will see I only found out
20 or figured out the plug was in the line on Saturday.

21 Q. All right.

22 A. Yep? At that time, the consideration was there's nothing
23 looking dangerous here, let's go get the men.

24 Q. Having discovered on Saturday that the plug was in fact in the
25 pipe—

26 A. Yeah.

27 Q. —and having not considered the possibility of a second event,

1 you would agree with me that your plan on Friday had built-in
2 inherent risk?

3 A. Life has inherent risks.

4 Q. I know that. I agree with you.

5 A. The consideration was five people needed saving in the pipeline
6 and we could see no immediate risk and we're not going to
7 leave them there figuring and thinking up risks.

8 Q. Right.

9 A. Right?

10 Q. Something I cannot understand. There is a statement from one
11 of Kenson's witnesses on the—in the bundles where he came
12 ashore at, around 1900 hours—

13 A. Uh-huh.

14 Q. —which is seven o'clock, with five empty tanks that were
15 emptied or consumed by the rescue divers and he came ashore
16 to have them refilled. Are you aware of that?

17 A. I'm aware and I don't think Mr. Dopson said that.

18 Q. Okay.

19 A. Mr. Dopson saw some empty tanks, asked Andrew if he would
20 like those to be refilled and he took them to be refilled.

21 Q. Okay.

22 A. Right, so I don't know what point you're trying to get at there
23 now but, um—

24 Q. I'm not getting at anything except that the statement says—

25 A. Yeah.

26 Q. —that five tanks were brought from the barge back to shore that
27 were used by the rescue divers to be refilled. He waited for

1 about an hour I think—

2 A. And whose statement is that, Sir?

3 Q. Um, one of the Kenson persons.

4 A. So it wasn't Kazim Ali's statement?

5 Q. No.

6 A. Well I can't help what Mr. Dopson put there.

7 Q. Mr. Ali, I know it's not your statement, but you're in the box
8 and we have to give you an opportunity that if you don't know
9 about it—

10 A. I don't know about it.

11 Q. —you state it. Well, thank you.

12 A. I think Mr. Dopson is programmed here, he could answer this
13 himself.

14 Q. Mr. Ali, before we—I wrapping up shortly—but let me explain
15 something to you.

16 A. Uh-huh.

17 Q. All we are doing is that if you are there and you know
18 something, we're giving you an opportunity to either comment
19 on it, say you don't know about it or dispute it. That's all it's
20 about. So that's why I asked you if you are aware. Just give
21 me one minute to let me make sure I cover it. *[Pause]* Mr. Ali,
22 you did say that you had experience before of diving into a
23 pipe.

24 A. I did.

25 Q. Yes. I think that's paragraph 56 of your amplified statement
26 and 154, but that was a 50-inch pipe, wasn't it? It wasn't a 30
27 inch?

1 A. Fifty-inch pipe, yeah.

2 Q. Did it have oil or was it a clean pipe?

3 A. It didn't have oil, neither did the riser at 36.

4 Q. Yes. Neither did the riser at 36. Right.

5 A. When we were looking at doing the dive. Your film would
6 show that.

7 Q. Beg your pardon?

8 A. Your film, the borescope shows that it was clear.

9 A. Right.

10 A. Andrew found out—

11 Q. So you had—

12 A. —going into the chamber—

13 Q. So you all had access to the borescope?

14 A. No. But I'm telling you, you would find out that. When
15 Andrew went to the chamber there was no oil at the top of the
16 riser.

17 Q. Yeah, yeah. And that 50-inch pipe, it was big—it was large
18 enough for you to turn in it, wasn't it?

19 A. No.

20 Q. Okay. The Tribunal will decide.

21 A. But you know you don't need to turn in the pipe to get out, eh.

22 Q. Explain that to the Chairman.

23 A. Right.

24 Q. [Pause] Mr. Ali, I want to take you to the Sunday, the 27th—

25 A. Yep.

26 Q. —where you said that an email was to be sent to you and it
27 wasn't sent, after you had a discussion with respect to a rescue

1 plan the Sunday?

2 A. I said the film was supposed to be sent.

3 Q. Yeah, yeah, via a email?

4 A. Yeah.

5 Q. Right. That plan that you developed at—you send it to Paria at
6 around two, 2.19?

7 A. Yep.

8 Q. In fact, it's covered in paragraph 143 of your witness statement
9 where you said you emailed a written plan specifically dealing
10 with the removal of the bottles at around 2.19?

11 A. Correct.

12 Q. Right? Could you look—and the email has attached to it
13 documents. And the email could be found at page five eight
14 seven five?

15 A. I have different numbers here.

16 Q. The submission bundle.

17 A. This one?

18 Q. Right, that's it.

19 **Mr. Chairman:** Look at do you see it there or is that too far
20 away? Is that the document that's up now?

21 **Mr. Ali Sr.:** Yes, yes.

22 **Continued Cross-Examination By Mr. Peterson SC:**

23 Q. That email, could you scroll down and show us the subject?
24 No, the other way.

25 A. Scuba tank retrieval.

26 Q. Scuba tank—or, you have it. Scuba tank—right. It doesn't
27 speak anything about the men?

1 A. No.

2 Q. The documents that were attached to that email as part of the
3 plan, at I think the method statement, which could be found at
4 page 1110 of the core bundle, could we go to that, page 1110 of
5 the core bundle? That method statement at the second line was
6 prepared to deal with entry into the riser pipeline to retrieve
7 three scuba tanks.

8 A. Right.

9 Q. Again, the method statement does not mention any rescue of the
10 men. It mentioned tanks?

11 A. Just get to the point.

12 Q. No, Mr. Ali. I have been very, very, very—I understand your
13 predicament, I understand your position. I have something to
14 do and I've been very respectful—

15 A. All right, will I explained the email?

16 Q. Answer me and then you could explain to your—

17 A. Okay, yes, it said the bottle—

18 Q. It said about the scuba tanks.

19 A. Yes.

20 Q. At the meeting and the audio is in the bundle, I could play it—

21 A. Uh-huh.

22 Q. —at that meeting in Paria, you did indicate to Mr. Piper and
23 Mr. Mushtaq in that meeting, the audio is filed, that you don't
24 think those guys were alive at that stage. You remember saying
25 that?

26 A. I said that, yes.

27 Q. So I don't need to play it because I'm trying to avoid doing

1 that.

2 **Mr. Chairman:** This is on the Sunday?

3 **Mr. Peterson SC:** Sunday. Yes, I—

4 **Mr. Chairman:** In the meeting in the afternoon?

5 **Mr. Peterson SC:** In the afternoon.

6 **Mr. Chairman:** Yes.

7 **Mr. Ali Sr.:** I think that was in the morning.

8 **Mr. Peterson SC:** In the morning, in the morning. There was
9 a meeting first. The evening meeting was the plan that was
10 submitted but the meeting wash around 10.00 a.m. on the
11 Sunday.

12 **Continued Cross-Examination By Mr. Peterson SC:**

13 Q. And this is my last question, Mr. Ali. I sorry to take you back
14 there but I had missed it and my colleague here pointed it out to
15 me that I have it highlighted but I missed it. I want to take you
16 back to page nine eight three seven, the—

17 **Mr. Chairman:** Well, I think before you do that, you said you
18 were going to give him an opportunity to explain what he meant
19 by the email together with these documents.

20 **Mr. Peterson SC:** No I told him his lawyer will do that. I just
21 told him—I point out to him the fact that the documents speak
22 only about scuba tank and not persons.

23 **Mr. Chairman:** Yes, but he did say he wanted to and I thought
24 you said you were going to permit him to do so.

25 **Mr. Peterson SC:** Well, you could go ahead and do that.

26 **Examination By Mr. Chairman:**

27 Q. What did you want to say about the email to—

1 A. Right, so we were shown—we went and we had to do a dive
2 and we were told there were bottles blocking the pipeline,
3 right?

4 Q. Speak into the mike.

5 A. I'm sorry. So we were told that there were bottles blocking the
6 pipeline.

7 Q. Right.

8 A. So we got a look up, just a little piece of the film showing us
9 what looked like two bottles in the line.

10 Q. Right.

11 A. And we said we could get that, out no problem.

12 Q. You said you would take it out?

13 A. Yeah.

14 Q. The reason why we wanted to take it out, as we were saying the
15 whole meeting there, if we take the bottles out we can send a
16 camera in. Paria's position was the bottles were blocking there
17 and we couldn't get the camera in, so I said let's take the bottles
18 out, send the camera in, make sure the men are not alive before
19 we do anything further. So that was just to address that one
20 thing to get the camera inside and show that the men were—

21 Q. I understand. Thank you very much.

22 **Continued Cross-Examination By Mr. Peterson SC:**

23 Q. Did you not also explain, I think to Mr. Mushtaq Mohammed,
24 that in the event of the retrieval of the body you didn't want the
25 tanks to damage the bodies? I know it—I didn't want to go
26 there so I said—

27 A. Sorry, um, I missed that.

1 Q. Do you recall telling Mr. Mohammed one of the reasons you
2 also wanted to remove the tanks that if they were retrieving the
3 bodies that you don't want the tanks doing damage to the
4 bodies?

5 A. Yes.

6 Q. You did tell him that?

7 A. Yes.

8 Q. Okay. So I'm sorry I'd want—I didn't have—I didn't want to
9 go there but I—

10 A. No, no.

11 Q. In fairness to you?

12 A. You understand was to get the camera in.

13 Q. Yes. Also. Also?

14 A. Okay.

15 Q. Also. Yes, finally page nine eight three seven of the core
16 bundle—no, bundle of submissions. That's the manufacturer's
17 specifications, the warning at the last page. Mr. Ali and it says
18 this:

19 "Before, before attempting to remove any pipe plug,
20 always make sure all back pressures or test pressures
21 have been completely released and that there are no
22 forces working against the pipe plug before deflating. If
23 there is still back/test pressure against the plug, when it
24 deflates it can shoot out of the pipe like a projectile. Or
25 like project, but a projectile. Did you have your men
26 check the back pressure before deflating that plug?

27 A. No because—

1 Q. Because—

2 A. —at the time we still—

3 **Mr. Chairman:** Microphone.

4 A. I'm sorry. Because we had the liquid leg or because we were
5 supposed to have a liquid leg.

6 Q. That's it

7 A. There was no way to pressure it.

8 Q. If they had followed the manufacturers' specifications and
9 warning and checked for that back pressure, they would have
10 realized the live issue of a latent delta event.

11 A. The method of installing the plug.

12 Q. That must be a yes, Mr. Ali.

13 A. Okay.

14 Q. That must be a yes?

15 A. All right.

16 Q. I know it's an unfortunate situation but that would have
17 possibly alerted them to the danger that was waiting. Thank
18 you.

19 **Mr. Peterson SC:** Thank you, Mr. Chairman.

20 **Examination By Mr. Chairman:**

21 Q. It would have taken but minutes, presumably, to have opened
22 the valve at riser number five, where you've shown us where
23 you were allowing the air pressure to come out? If you'd
24 opened that valve, before removing the plug, what would have
25 happened with hindsight?

26 A. In hindsight?

27 Q. Yes.

1 A. You would have known that the pressure wasn't equal.

2 Q. You'd have known?

3 A. Yeah.

4 Q. So, to be blunt about it, had that valve been opened at riser
5 number five, this would not have happened?

6 A. I don't agree, Sir.

7 Q. You don't agree?

8 A. If it was opened, it would have been worse.

9 Q. Had it been opened at riser number five, where you check for
10 the pressure—

11 A. Yeah.

12 Q. —as you told us before, as you told us before when they were
13 pumping air in, at the conclusion of each of those episodes you
14 checked for the pressure differential by allowing any air to
15 escape, correct?

16 A. I'm not trying to convince you but you did say if we had
17 opened—if it was opened it wouldn't have happened?

18 Q. No, no. If you had done that before you removed the plug?

19 A. Okay yes, I agree with you.

20 Q. That's what I meant. If I—

21 A. Yeah.

22 Q. —sorry if I didn't make myself clear.

23 A. No, but, even then, if we had opened it we would realize the
24 pressure was not equal.

25 Q. Right. How would you have known?

26 A. Because there'll be zero pressure there and you would have had
27 13 per 7 pounds when we were actually in the chamber, so you

1 would have had differential of 7 pounds, but if it was opened
2 while we were removing the plug, it would have been a worse
3 case.

4 Q. No, no, no.

5 A. There would have been no—

6 Q. I'm not talking about that. I'm not talking about that. What
7 I'm asking you in pursuance to what Mr. Peterson has said—

8 A. Sorry, chief, I'm not—

9 Q. Yes. In pursuance to what Mr. Peterson said, and it's quite
10 important that I understand this, all right?

11 A. Yeah.

12 Q. If you or one of your staff had opened the valve at riser number
13 five, the other end of the pipe, where you told us you were
14 testing for differential earlier when you're blowing air in—

15 A. Yeah.

16 Q. —if you'd have opened that valve, can we assume it would a let
17 air out and potentially fluid out?

18 A. But that's what I'm saying, Sir. That would have made the
19 situation worse.

20 Q. How?

21 A. Opening that woulda just tested and told me the pressure was
22 different and once it was opened what would happen when it
23 was closed and sealed—

24 Q. Yeah.

25 A. —it would a create a back pressure as the plug was moving and
26 slowed down the plug. If it was freely opened the plug might
27 have gone all the way out.

1 Q. No, no, no I think you're misunderstanding what I'm asking
2 you.

3 A. Yeah.

4 Q. Before you moved any plug at all—

5 A. Yeah.

6 Q. —before you got your staff to do anything to the—to
7 mechanical plug or the inflatable plug, before they touched it,
8 all right—

9 A. Yeah.

10 Q. —had you opened the valve at riser number five—

11 A. Yes.

12 Q. —would that have told you—

13 A. Yes, I agree—

14 Q. —that there was a differential?

15 A. I agree to that. It would a told me that we had a pressure
16 difference.

17 Q. Right.

18 A. Right.

19 Q. And then what, you'd have been able to act on that, wouldn't
20 you?

21 A. Yeah, I would have yeah.

22 Q. Right, so is it as blunt as this? Had you done that., this would
23 not have happened?

24 A. Correct.

25 Q. Thank you.

26 A. Right.

27 **Mr. Chairman:** Anybody? Introduce yourself please so that

1 everybody knows who you are.

2 **Mr. Hosein-Shah:** Good afternoon. Mr. Hosein-Shah on
3 behalf of the Seamen and Waterfront Workers Trade Union.
4 Good afternoon, Mr. Ali. Right here. [*Mr. Hosein-Shah stood*]

5 **Mr. Ali Sr.:** Er, yeah, I could see.

6 **Mr. Chairman:** Would it be too inconvenient for you to stand
7 while you're asking questions? Because then everyone can see,
8 because I can barely see you as you're sitting down at the back
9 row.

10 **Mr. Hosein-Shah:** I can try but these documents are quite
11 heavy.

12 **Mr. Chairman:** All right, well, do your best and prop them
13 perhaps on the ones you're not using.

14 **Mr. Hosein-Shah:** Sure.

15 **Cross-Examination By Mr. Hosein-Shah:**

16 Q. Sir, you're a mechanical engineer by profession—sorry, marine
17 engineer by profession?

18 A. Correct, yeah.

19 Q. I want to take you to paragraph 28 of your witness statement.
20 That is located at page 484 of the witness statement bundle. So,
21 just to be fair to you, at paragraph 28 you speak to a pressure
22 test that was ultimately abandoned by Paria. You see that?

23 A. Twenty-eight.

24 Q. Yes, paragraph 28.

25 A. Could you help me out? I'm not hearing you.

26 Q. Is this better?

27 A. Yep.

1 Q. Sure. So, at paragraph 28 you speak to a pressure test that was
2 foregone or abandoned by Paria. Are you seeing that?

3 A. Yep.

4 Q. What is this pressure test you're speaking about at this
5 paragraph? What did it involve?

6 A. That was a test on the flange that was welded in the chamber.

7 Q. Sure. And I want to take you now to page five seven three of
8 the witness statement bundle. This deals with the scope of
9 works attached in tender documents. So if we can go down to
10 8.4, you see pressure testing.

11 A. Yeah.

12 Q. Can you explain what paragraph A means, 8.4 A?

13 A. Eight point four A?

14 Q. Yeah. So it's the paragraph that starts with "The piping shall be
15 tested in according with AP1RP1110." Are you familiar with
16 that?

17 A. Yeah.

18 Q. What was that about?

19 A. Well actually it's for testing, pressure testing the pipeline, all
20 right? In this case we were pressure testing the weld on the
21 flange.

22 **Mr. Chairman:** Two separate things.

23 **Mr. Hosein-Shah:** Sure.

24 **Mr. Chairman:** One is testing the weld, this is testing the
25 pipeline itself.

26 **Mr. Ali Sr.:** Yeah, that's right.

27 **Mr. Chairman:** Pressure in the pipeline. All right.

1 **Continued Cross-Examination By Mr. Hosein-Shah:**

2 Q. So why is it that the pressure testing set out at paragraph 8.4
3 was not conducted? You could go ahead and answer that?.

4 A. Sorry.

5 Q. Sorry, I'm asking why the pressure testing at paragraph 8.4 was
6 not conducted.

7 A. Not conducted. Um, the pipe was egg-shaped so the rig for
8 testing the weld couldn't be installed.

9 Q. But you just said that this pressure testing is different from the
10 pressure testing you spoke about with respect to the weld
11 related to paragraph 28 of your witness statement. Are they one
12 and the same?

13 A. No, the whole objective there was to test the weld, not the
14 pipeline.

15 Q. Sure, but—

16 A. So even though it says here the pipeline, it was understood to be
17 the weld on the—between the flange and the pipeline.

18 Q. Sure. So you're saying that the pressure testing set out here
19 relates solely to the weld even though it's—

20 A. Yeah.

21 Q. Okay. Fair enough. Now I want to take you to paragraph 206
22 of your witness statement. So that would be at page 482. So at
23 paragraph 26, you say that your son, Yusuf Henry and
24 Christopher Boodram were PADI certified divers with respect
25 to open water scuba.

26 A. Yeah.

27 Q. And that Rishi Nagassar and Faizal Kurban were commercial

1 divers?

2 A. Correct and Andrew Farah.

3 Q. Well yes. But with respect to these divers with the exception of
4 Andrew Farah, did they undergo any further training beyond
5 their certifications?

6 A. Are you, um, who are you addressing there, um?

7 Q. These divers, Yusuf Henry, your son, Christopher Boodram,
8 Rishi Nagassar and Faizal Kurban.

9 A. And the question, um—

10 Q. Oh sorry let me ask it a different way. Did LMCS provide any
11 further training to these divers beyond their ordinary
12 certification?

13 A. No, I sent them for the commercial and I sent the— I send them
14 for the PADI as well, but, beyond that—

15 Q. So what sort of training did these divers have with respect to
16 operating in an environment in the oil and gas industry dealing
17 with pipelines?

18 A. Experience in working in the, um, in the oilfield.

19 Q. Okay and where did they get this experience?

20 A. In the oilfield right there. In—

21 Q. With LMCS?

22 A. In Pointe-a-Pierre, yes.

23 Q. With LMCS?

24 A. With LMCS, yeah.

25 Q. Okay, what sort of training did LMCS provide to prepare them
26 for those operations?

27 A. Not for that operation specially.

1 Q. But, in general, did LMCS, you know, whether by—not
2 anything with a certificate or anything but by experience or—

3 A. Yeah, by experience and that's why we started training up some
4 of the men in the commercial to spread it out to the guys down
5 below.

6 Q. And who conducted that training?

7 A. It would have been Faizal and Andrew would have been, um—
8 so when they went and got their commercial—

9 Q. Yes.

10 A. —then they would, um, spread the training amongst the men.

11 Q. Sure. And did that training involve rescue operations?

12 A. Not specifically, no.

13 Q. Okay. And did that training involve a situation whereby or a
14 situation where divers would be trapped inside a pipeline?

15 A. No.

16 Q. Okay. Now I want to go to page five eight nine of your witness
17 statement.

18 **Mr. Chairman:** Can I have some indication of how long you
19 think you're going to be? I did ask this question at the
20 resumption—

21 **Mr. Hosein-Shah:** Sure.

22 **Mr. Chairman:**—after lunch and you didn't say anything,
23 so—

24 **Mr. Hosein-Shah:** Er, I think about not more than 20 minutes,
25 Chair.

26 **Mr. Chairman:** I'm going to limit it to 20 minutes.

27 **Mr. Hosein-Shah:** Sure.

1 **Continued Cross-Examination By Mr. Hosein-Shah:**

2 Q. So we're at page five eight nine and at the listing or the table
3 you see here relates to prior experience going back five years of
4 LMCS. Yeah?

5 A. For Paria and Petrotrin.

6 Q. Good. Did any of these operations involve diving into a
7 pipeline?

8 A. No.

9 Q. All right. Now I want to go to paragraph 28 of the witness
10 statement of Andrew Farah, and that would be at page—

11 **Mr. Chairman:** Well just a minute. We've heard evidence
12 that Mr. Boodram says he did dive into a pipeline.

13 **Mr. Hosein-Shah:** Yes.

14 **Mr. Chairman:** Are you aware of that?

15 **Mr. Ali Sr.:** Andrew?

16 **Mr. Chairman:** Yes.

17 **Mr. Ali Sr.:** Yeah.

18 **Continued Cross-Examination By Mr. Hosein-Shah:**

19 Q. No, no Christopher Boodram.

20 A. Yeah.

21 Q. So, in his oral testimony Christopher Boodram said while
22 employed by LMCS he was involved in a dive where he was
23 required to go into the pipeline because carrying out the works
24 there was safer.

25 A. Are you sure it's LMCS he said?

26 Q. Well—[Crosstalk]—He didn't say LMCS? Okay, okay, well,
27 fair enough. So paragraph 28 of Andrew Farah's witness

1 statement, that's at page 447 of the witness statement bundle, so
2 you see there Mr. Farah is saying that he has dived in a pipeline
3 before?

4 A. Correct.

5 Q. Has LMCS conducted any works whereby divers were required
6 to go into pipelines?

7 A. Not LMCS. This job was for a company called Daynco and we
8 were all working on that job.

9 Q. Sure.

10 A. Andrew, Christopher, mihsel.

11 Q. Sure. So you all had experience—

12 A. Yeah.

13 Q. —when it came to diving into pipelines, right?

14 A. We did, yeah.

15 Q. And in that experience, was there anything in particular that
16 prepared you for emergency scenarios which may arise?

17 A. Whether we did we took the precautions of tying off a rope so
18 we could be pulled back out to find our way out and we went in
19 feet first. Any time we dive into a situation where you don't
20 have total access you go in feet first so you could swim out or
21 be dragged out other way, and, it's just a precaution that that
22 was the—

23 Q. Sure. Anything else?

24 A. —anytime we diving that's what would be using.

25 Q. Is there anything else you want to add?

26 A. Sorry?

27 Q. Is there anything else you want to add to that?

1 A. No.

2 Q. Fair enough. So, you had experience diving into pipelines?

3 A. Correct.

4 Q. You had experience dealing with potential dangers which may
5 have arisen in—when it comes to diving into pipelines, yes?

6 A. Correct, yeah.

7 Q. Whether by through LMCS or through your own rights or
8 through your divers' own rights?

9 A. Yep.

10 Q. Yeah? So now I want to go back—

11 A. Could I say—

12 Q. Yes.

13 A. —I myself dived into the pipeline, so, so I had experience.

14 Q. Sure. And you're a diver of how many years' experience?

15 A. Nineteen eighty-one, I think or '82, somewhere round there.

16 Q. And you have been commercially diving for how long?

17 A. Not commercially, diving in the industry. I also am advanced
18 PADI.

19 Q. Sure. So I want to take you now to page seven nine one of the
20 witness statement bundle. This is the site safety plan. And I
21 want to go to page 809 of that plan. So this is a plan, Sir, you
22 would have submitted to Paria.

23 A. Correct.

24 Q. Yeah?

25 A. Correct, yeah.

26 Q. And Paria would have approved this plan in the consideration
27 of your bid? Everything—

1 A. Well everything to do with Paria, Paria had to approve.

2 Q. Excellent.

3 **Mr. Chairman:** Just a minute I need to find my place. Just a
4 minute.

5 **Mr. Hosein-Shah:** Sorry. Eight zero nine.

6 **Mr. Chairman:** [*Pause*] Thank you.

7 **Continued Cross-Examination By Mr. Hosein-Shah:**

8 Q. Yeah. So we were looking at paragraph 8.1.4 so just to recap
9 this is the site safety plan. And under the heading of “Diving
10 Operations”, the second to last bullet point, “Standby divers to
11 be present and suited up to render assistance throughout the
12 dive.”

13 A. Yep.

14 Q. Now on the 25th of February, 2022, standby divers were
15 available?

16 A. Correct.

17 Q. And those standby divers, one of which being Andrew Farah,
18 they were commercial divers?

19 A. Correct.

20 Q. And he was trained in pipeline operations?

21 A. Correct.

22 Q. He was able to enter into pipelines?

23 A. Correct.

24 Q. And beyond Andrew Farah, further on during the day,
25 additional divers arrived?

26 A. That’s correct, yeah.

27 Q. And those divers came equipped with equipment to allow them

1 to enter into the pipelines and get to I think at least 300 feet into
2 the pipeline?

3 A. Correct. Well, to be honest they came at different stages. The
4 first set that came—

5 Q. Yeah.

6 A. —came with more scuba gear and then—

7 Q. Yeah.

8 A. —just after 6.00 we had be people with, um, surface supplied,
9 so as the day went on we got more and more equipment and
10 more and more men.

11 Q. Yeah. But Paria would have been aware, through your plan,
12 that in the event an emergency occurred, the primary
13 responsibility or the primary body of persons who would effect
14 a rescue operation would be LMCS?

15 A. Correct.

16 Q. And that's in fact what you did?

17 A. Correct.

18 Q. And when you spoke to Collin Piper, Collin Piper ought to have
19 known, through your safety plan, that you would be pursuing a
20 rescue operation?

21 A. Correct.

22 Q. And you, in fact, told him you're going to get your boys, yeah?

23 A. Correct, yeah.

24 Q. Now I want to take you to page eight one eight. This is the
25 emergency, er—what's the name of it, sorry—the emergency
26 response plan. So, the emergency response plan stats at eight
27 one six and we're going to eight one eight. So we see—right,

1 stop, stop, go back up. In the event of an emergency—of any
2 emergency, any emergency, in the hyperbaric chamber, and
3 we're going to the last bullet point. You're with me?

4 A. Yeah.

5 Q. Sorry trying to be economical on time, emergency assistance
6 available from additional divers on site. You're seeing that?

7 A. Which one, sorry?

8 Q. So, look at the screen. You're seeing "in the event of any
9 emergency in the hyperbaric chamber" and you see they're
10 using bullet points?

11 A. Okay, good, yeah.

12 Q. So I'm looking at the last bullet point. Emergency assistance
13 available from additional divers on site.

14 A. Correct.

15 Q. Again, this is a document that was in Paria's possession?

16 A. Correct.

17 Q. And LMCS had the facilities at the time?

18 A. We did.

19 Q. With the additional divers to conduct emergency assistance or
20 to provide emergency assistance?

21 A. We did, yeah.

22 Q. But ultimately Paria prevented you from doing that?

23 A. They did.

24 Q. And the coast guard prevented you from doing that?

25 A. They did as well.

26 Q. Now did you have any reason to doubt the structural integrity of
27 the pipeline?

1 A. Intake—of the pipeline? No, I didn't.

2 Q. In fact, LMCS was contracted to fix or to remove and replace
3 the defective portion of the pipeline?

4 A. Correct, yeah.

5 Q. So if there were problems, if, if there were other areas of the
6 pipeline defective, logic dictates that a tender would have gone
7 out to repair those portions as well?

8 A. It would have, yeah.

9 Q. Thank you.

10 **Mr. Peterson SC:** Is speculation and logic the same thing?

11 **Mr. Chairman:** If you have an objection—

12 **Mr. Peterson SC:** Yes, Sir. I was—I—

13 **Mr. Chairman:**—then make it.

14 **Mr. Peterson SC:** I don't know how—well, which interest my
15 friend is seeking but suggesting that there are other defects in
16 the line or if there were that they would be—it's highly
17 speculative and it's casting inferentially some liability or some
18 responsibility on Paria with respect to some aspect in the
19 pipeline that does not arise. There's no issue of other issues in
20 the pipeline that didn't go to tender. So I don't know where my
21 friend is going with this.

22 **Mr. Chairman:** Mr. Hosein?

23 **Mr. Hosein-Shah:** Well the point of the question was
24 essentially to get from Mr. Ali that they were there to repair a
25 defective portion of the pipeline. Insofar as it relates to
26 everything else, I can accept the objection from there.

27 **Mr. Chairman:** Rephrase the question, then.

1 **Mr. Hosein-Shah:** Sure.

2 **Continued Cross-Examination By Mr. Hosein-Shah:**

3 Q. So, Mr. Ali, LMCS was contracted to repair, remove and
4 replace a defective portion of the pipeline.

5 A. Correct.

6 Q. And you had no reason to doubt the structural integrity of the
7 remainder of the pipeline?

8 A. Not whatsoever.

9 Q. Thank you.

10 **Mr. Hosein-Shah:** Chair, I believe Ms. Alfonso has just a few
11 questions and she will be confined within the same time frame.

12 **Ms. Alfonso:** Much less, much less. Thank you.

13 **Mr. Chairman:** Sorry, who's going to do what? I thought
14 we'd resolved this tag team event?

15 **Ms. Alfonso:** Sir—

16 **Mr. Chairman:** In fact, I think we got correspondence about it
17 somewhere or—

18 **Ms. Alfonso:** Yes indeed Sir. We did try to document what
19 the position would be, which was that Mr. Hosein-Shah and I
20 would address different aspects of the material, I won't say
21 evidence, of the material, and we promised to be economical
22 and I promise to have far less questions than Mr.—

23 **Mr. Chairman:** You have 5 minutes and I really do want you
24 to resolve this. It's not going to happen again. All right? You
25 have to, I'm afraid, work it out between you. One counsel can
26 do the prep work the other one can do the questions. You
27 know, I've been a King's Counsel for a long time and I've had

1 my juniors prepare it for me. We know how it works, how it
2 works, you know, but I'm not going to have a tag team working
3 on preparing and then using their skills and whatever it might
4 be to cross-examine each witness. So I'm going—this is the
5 last time I will permit it please. You decide between you which
6 one of you are going to ask questions of each witness rather
7 than both of you. All right? This is the last time I'll permit it.
8 You have 5 minutes.

9 **Ms. Alfonso:** I take that. Certainly, Mr. Chairman, we would
10 work it out from today. Even if it's somebody does the prep—

11 **Mr. Chairman:** You're using up your 5 minutes. I suggest
12 you ask the questions.

13 **Ms. Alfonso:** Okay, well I'll try not to jump too far.

14 **Cross-Examination By Ms. Alfonso:**

15 Q. Mr. Ali, are you hearing me?

16 A. I am.

17 Q. Thank you very much. My name is Nyree Alfonso, Mr. Ali.
18 You've said, you admit that you are or you've said that you are
19 a marine engineer by training, yes?

20 A. Correct, yeah.

21 Q. Okay. You would have read the In-Corr-Tech Limited report?

22 A. I would have, yeah.

23 Q. Yes, okay, so I won't take you through that. But you would
24 have read that the root cause identified for the Delta P, you
25 would have read that part of the report, yes?

26 A. Yeah.

27 Q. So, well, let me put it you to. When we were here on another

1 occasion Mr. Michael Wei would have given certain evidence,
2 seated where you are, to the effect that one of the reasons that
3 Paria, let me not say him, Paria did not want LMCS's divers, or
4 any other divers for that matter, to go down into the pipe was
5 his fear or Paria's fear, beg your pardon, Paria's fear that, you
6 know, it could be a repeat Delta P incident. Do you have any
7 position on that? You have anything to say with respect to that
8 position advanced by Mr. Wei?

9 A. A repeat Delta P?

10 Q. Is that—in your training and experience, is that possible?

11 A. It is possible if there's external forces on the system, but at this
12 stage the pipeline condition had stabilized, and, unless
13 somebody went and interfered with the plug or we all know the
14 line was isolated so you couldn't switch on a pump or anything
15 elsewhere to create the situation again, so once the first incident
16 happened, and the pressure is equalized, and—well, like I said,
17 we didn't know, we didn't consider where the plug was in the
18 first day, right, so that wasn't there, but this system was—there
19 was no flow in or out of the pipeline so we assumed that—the
20 next day again that came up and I dealt with that and I said we
21 will fill the riser at number five with an equal amount of liquid
22 as we had at number six thereby stabilizing the line. At that
23 stage I knew there was a plug in the line and the plug was
24 intact.

25 Q. So you think it unlikely that another Delta P could have
26 occurred because the pressures had already equalized?

27 A. It wouldn't have had. It wouldn't have done.

1 Q. Okay. Mr. Ali, you would have—

2 **Mr. Chairman:** Before you move on just one moment.

3 **Ms. Alfonso:** Sorry.

4 **Examination By Mr. Chairman:**

5 Q. If there was the prospect of a second Delta P before Mr.
6 Boodram came out of the pipe, was that alleviated at all by the
7 fact that Mr. Boodram came out of the pipe?

8 A. It would have because he would have had to pass through some
9 kind a pressurized bubble or something like that, um—

10 Q. And given the information that he gave you that they were all
11 together—

12 A. Yep.

13 Q. —at least four of them were, did you have any doubts at that
14 time as to a second Delta P after he'd come out of the pipe?

15 A. No.

16 Q. Thank you.

17 **Mr. Chairman:** Sorry. Carry on. I'll add a minute.

18 **Ms. Alfonso:** Thank you very much, Mr. Chairman.

19 **Continued Cross-Examination By Ms. Alfonso:**

20 Q. Before the lunch break, Mr. Ali, we were shown a particular
21 map—

22 A. Yeah.

23 Q. —by Paria's attorney. Do you recall that.

24 A. Yeah, the, um, show the depths of water.

25 Q. Okay. Is that a bathymetric survey?

26 A. It was, yeah.

27 Q. Than you. And that bathymetric survey would show you the

1 depth of the water?

2 A. Correct.

3 Q. The area where—which we saw on the screen, yes?

4 A. Yeah, yeah. It won't show you what's under the seabed, no.

5 Q. Thank you very much. It wouldn't show you the pipeline
6 necessarily or the configuration of the pipeline?

7 A. Not unless it was on top of the mud.

8 Q. Okay, so it's showing you depths of water?

9 A. Yeah, correct.

10 Q. And perhaps topography, if that's the right word, when it's
11 under the water?

12 A. Yep.

13 Q. Okay, thank you. You would have read, Mr. Ali, the
14 Association of Diving Contractors International Inc. report that
15 is Mr. Neusum who signed that?

16 A. Yes.

17 Q. And you would have noted that he made some comments about
18 having PADI certified only divers participate in this, well, let
19 me call it exercise or this job?

20 A. Yeah.

21 Q. And you would have seen he made a comment with regard to
22 divers being tethered and divers being supplied with surface
23 air?

24 A. Yeah.

25 Q. You have any position with that, Mr. Ali? Do you think that
26 the better way to do this is if your divers were commercially, all
27 of them, were commercially certified and they were wearing

1 commercial gear rather than what, well scuba, scuba
2 equipment?

3 A. Okay, that's about three questions in one.

4 Q. Sorry. I'm trying—I'm sorry, I'm doing you a disservice
5 because I'm trying to hurry.

6 **Mr. Chairman:** Yes. It's a fair, it's a point he's making. You
7 have to select which ones you want to use.

8 **Ms. Alfonso:** Okay.

9 **Examination By Mr. Chairman:**

10 Q. So the first question is whether or not you've seen Mr.
11 Neusum's report and you've already told us you had.

12 A. Correct.

13 Q. So he makes an observation about the people working in the
14 chamber being tethered in some way to the chamber.

15 A. Yeah correct.

16 Q. Did you see that?

17 A. I can see advantage and disadvantage.

18 Q. I'm sure there are disadvantages to being tethered. Nobody
19 wants to be tethered. We're not dogs. On the other hand, it
20 might make some sense, mightn't it, if they had been tethered?

21 A. It might have. Whether it would helped in this situation, as,
22 um, Christopher said, it could have strangled you being tethered
23 and been crossing over things.

24 Q. Could have been worse?

25 A. Yeah.

26 Q. Difficult to see it being worse given that four people died?

27 A. Sorry?

1 Q. I said it's difficult to see it being much worse, given that four
2 people died. Obviously Mr. Boodram didn't but—

3 A. Well, to be, um—the four people didn't die from the incident.

4 Q. Oh.

5 A. They died from the lack of action after.

6 Q. Well, we had to have the incident first. I take your point but we
7 had to.

8 A. Yeah.

9 Q. The question is whether or not you think, with the benefit of
10 hindsight now, it might have been better if they had been
11 tethered.

12 A. I say, weighing it, they probably would have had a better
13 chance of, um, drawing them out. I still say there's advantage
14 and disadvantage but it might have been better.

15 Q. I ask the question I asked you earlier, now that you know what
16 happened and you have much more information than you did
17 before, do you think today you would make those people be
18 tethered rather than untethered?

19 A. Today I'd make sure we don't have a Delta P, Sir.

20 Q. Yeah, well, that's true but even with the possibility of a Delta P,
21 would they not be better being tethered? That's the question.

22 A. Possibly, yeah.

23 Q. Yeah. Do you think that now you would do that?

24 A. Yes, I would do that.

25 Q. That was the second question. Third question I think was
26 whether or not you thought that they will be assisted by surface
27 air if they were commercial divers having some separate tube

1 that leads to their mouth so that they're breathing that air rather
2 than the air that was in the hyperbaric chamber? I think that
3 was the essence of it.

4 **Ms. Alfonso:** Yes indeed, Mr. Chairman.

5 **Examination By Mr. Chairman:**

6 Q. I personally don't see how it could help, but, anyway you
7 answer the question not me.

8 A. I don't think there was a problem with the air in hyperbaric
9 chamber. I think she meant that if they had the tether, the
10 surface air, they would still get air down in the pipeline.

11 Q. Yes, would they have been able to take the surface air with
12 them into the pipeline?

13 A. Yeah. Well, that's the surface supply there.

14 Q. No, no. Given that we had a Delta P and they were sucked into
15 the pipeline, if they were using a surface to chamber pipe in
16 order to breathe, would they have been assisted by having that,
17 having been sucked into the pipeline?

18 A. Again, it would have been beneficial if they survived the trip
19 down with the surface air system because then they would a
20 kept on breathing there for a much longer time.

21 Q. It would rather depend on the length of pipe, wouldn't it—

22 A. It would.

23 Q. —that they were breathing through, not the length of the pipe
24 they were in.

25 A. But—it would, but even in the swirling around, they could have
26 become tangled up with it.

27 Q. All right, thank you very much. So there are your answers.

1 A. It would help them if they survived the trip had they had it.

2 Q. Yes.

3 A. And then we coulda use that to draw them back out.

4 Q. All right.

5 A. So, like I say, there's advantage and disadvantage to that.

6 **Mr. Chairman:** You have your answers.

7 **Continued Cross-Examination By Ms. Alfonso:**

8 Q. I just want for my clarification Mr. Ali, is there a difference
9 between the surface air which will be with a tube—

10 A. Yes.

11 Q. —and the helmet, yes, or would it be some—how—okay, so
12 there's a tethering with like a rope so that if you were—you
13 went down into the pipeline there would be a way to pull you
14 out, yes?

15 A. Correct, yeah.

16 Q. And there's—and you could have also a tube giving you
17 oxygen, air, as well?

18 A. Well, that—that's what we talk about surface-supplied, am—

19 Q. Okay.

20 A. Right? So the—

21 Q. But is it two different things or one thing? I don't want to
22 confuse you or myself. Is it two different things that you could
23 be tethered like, say, with a rope?

24 A. Yes.

25 Q. And then you could also have two—

26 A. Well, you could have—

27 Q. —for argument's sake with air from the surface?

1 A. Right you could have the scuba setup and you tether with a
2 rope.

3 Q. Okay, so—

4 A. Or, with the surface supply then, the tubing acts as a rope with a
5 tether in some.

6 Q. So following from what the honourable Chairman said, if you
7 had an opportunity once again in hindsight, would the safer
8 thing to be to be tethered with a rope, let me say like tethered
9 with a rope so they could be retrieved?

10 **Mr. Chairman:** He's already said that. He's already said that.

11 **Ms. Alfonso:** Right.

12 **Mr. Chairman:** And he's already drawn the [*Inaudible*]
13 between the two.

14 **Mr. Ali Sr.:** It'd be safer to be tethered with a rope and even
15 safer to have—

16 **Mr. Chairman:** I think you can move on now, please?

17 **Ms. Alfonso:** Okay thank you very much. Thank you very
18 much.

19 **Continued Cross-Examination By Ms. Alfonso:**

20 Q. Mr. Ali, by Sunday afternoon the meeting—I'm just going to
21 ask you one more question. By the Sunday afternoon—

22 A. Uh-huh.

23 Q. —when this plan to remove the three tanks that you
24 mentioned—

25 A. Yes.

26 Q. —was being put forward, by that time was there another plan
27 that Paria had explained to you by which the line would have

1 been, I want to say, pumped, flushed, being flushed, flushed in
2 order to recover the bodies of the—

3 A. To recover, eh. They weren't talking rescue they were talking
4 about recover.

5 Q. Okay. So is it that you wanted the tanks to be removed because
6 the plan that was put forward at that time by Paria was to flush
7 the line?

8 A. No. We were still talking rescue.

9 Q. You or Paria?

10 A. LMCS were talking rescue.

11 Q. Okay, I'm sorry, LMCS were talking rescue?

12 A. Rescue.

13 Q. But was Paria on the Sunday afternoon when you had this
14 meeting that you referred us to, wasn't Paria talking about
15 recovery and flushing the line in order to recover the bodies?

16 A. Yes.

17 Q. Right?

18 A. They had gone to recovery even though they pretended they
19 were engaging us in rescue.

20 **Ms. Alfonso:** Okay thank you very much, Mr. Ali.

21 **Examination By Commissioner Wilson:**

22 Q. Mr. Ali, good afternoon.

23 A. Afternoon.

24 Q. Thank you for coming. First all, I want to say condolences for
25 the loss of your son and your entire dive team, you know. I
26 could imagine the effects it have on your work. Whilst we have
27 this up here, I think we already established that Delta P was not

1 identified in the risk assessment or hazard identification here?

2 A. Right.

3 Q. And I offer you that an emergency response plan, you—it really
4 comes out powerfully out of a quality risk assessment, yes?

5 A. Sorry, I didn't catch your last.

6 Q. An emergency response plan, that's why I'm addressing this
7 here, an emergency response plan is something that would
8 come out powerfully if a risk assessment, a quality risk
9 assessment, was done, it speaks to emergency response plan?

10 A. Correct.

11 Q. Right. So I want to address here and just clarify, the gentleman
12 indicated that this was a pipeline. The emergency response
13 plan here identified was for vessel, the hyperbaric chamber and
14 event of emergency whilst underwater. It was never intended
15 for rescue within a pipeline?

16 A. No.

17 Q. No, because the risk assessment didn't drive for it?

18 A. Didn't call that.

19 **Commissioner Wilson:** Thank you.

20 **Mr. Chairman:** Yes. Well you didn't say anything either.

21 **Mr. Ramadhar:** Unfortunately in the washroom when you
22 asked the question but I shan't be very long and I apologize.

23 **Mr. Chairman:** All right. Very well.

24 **Mr. Ramadhar:** So, shall we start the countdown now, then?
25 Thank you so much.

26 **Cross-Examination By Mr. Ramadhar:**

27 Q. Good afternoon, Sir. Of course, just like your—

1 **Mr. Chairman:** Introduce yourself, please?

2 **Mr. Ramadhar:** Yes, Prakash Ramadhar representing the
3 interest of the family and of course the daughter of Yusuf
4 Henry.

5 **Continued Cross-Examination By Mr. Ramadhar:**

6 Q. Like the Commissioner I too, we all sympathize with your loss.
7 You lost your only son, is that accurate?

8 A. Yes.

9 Q. Now, what I'm most interested in is to find out—of course the
10 accident occurred that is behind us. This is tombstone hearing.
11 I know, you're not hearing me well.

12 A. I'm not hearing.

13 Q. Yeah. We are interested in finding out exactly how the
14 accident occurred to prevent possible recurrence. Okay?
15 That's one aspect.

16 A. Yeah.

17 Q. We call it a tombstone hearing. The other aspect is, in terms of
18 the rescue which my clients, their families, are most interested
19 in. Around three o'clock everyone knew that a disaster had
20 occurred?

21 A. Correct.

22 Q. Yes. You had plans in place?

23 A. Correct, yeah.

24 Q. You had manpower in place?

25 A. We did.

26 Q. Yes. When was the first time that you saw or observed any
27 Paria personnel on the scene?

1 A. On the sea?

2 Q. On the scene, on the scene?

3 A. On the site? Er, um—

4 **Mr. Chairman:** Define scene?

5 **Mr. Ramadhar:** Yes, where the accident or incident occurred.

6 **Mr. Chairman:** Berth 6.

7 **Mr. Ramadhar:** Berth 6. Thank you so much, Chairman.

8 **Continued Cross-Examination By Mr. Ramadhar:**

9 A. When I hot out on the site there were about four Kenson/Paria
10 people.

11 Q. No, no hold on. He have to make a distinction between Kenson
12 and Paria and there's a reason for that. I shall come to it. Paria,
13 who did you know from Paria that would have been present and
14 you first saw them?

15 A. No one. No one.

16 Q. No one. When was it the first time that you saw anyone from
17 Paria itself on site?

18 A. I didn't.

19 Q. You never saw any Paria personnel?

20 A. Well, to be fair—

21 Q. At the time, up to the time you left the site?

22 A. Yeah, up to the time I left.

23 Q. And what time would that have been?

24 A. That would have been between half past 3.00 to quarter to 4.00
25 so.

26 Q. Right. What time did you return to the site?

27 A. I didn't.

1 Q. You did not?

2 A. No. I—

3 Q. Now, you were at a meeting, and forgive me, Chairman, you
4 went to a meeting with Paria personnel?

5 A. Right.

6 Q. Onshore?

7 A. On Saturday and Sunday.

8 Q. Hold on, we're talking Friday evening.

9 A. No. Phone contact on Friday.

10 Q. Phone contact?

11 A. Because Mr. Piper was in St. Augustine at the time and there
12 didn't appear to be anybody at what they call the ICT.

13 Q. I under—I see. So, as far as you are concerned, the person who
14 was point person in terms of in complete control, apart from
15 LMCS, but in relation to Paria or Kenson, the most senior
16 person would have been Mr. Piper, is that accurate?

17 A. Correct, yeah.

18 Q. Yes. When did you first see Mr. Piper at or around Petro—
19 sorry, Paria's premises?

20 A. On Saturday, the um—

21 Q. Saturday morning?

22 A. About ten o'clock.

23 Q. Now you told us something very interesting. You said that you
24 believe that you were locked out, is that accurate?

25 A. I was locked out.

26 Q. How long were you waiting at the gate, as the father of a victim
27 and as the man in charge of LMCS? How long did you have to

1 wait at the gate?

2 A. At about three hours. Shortly after 6.00 I arrived there.

3 Q. Around three hours?

4 A. Correct.

5 Q. And the person, as far as you're aware, who authorized your
6 presence or your admission was Mr. Piper?

7 A. Yeah, that's when I called and got admittance.

8 Q. Good. At that point in time, who was looking after LMCS'
9 business at berth 6—

10 A. I—

11 Q. —at the time you were locked out?

12 A. I had Dexter Guerra and Andrew Farah.

13 Q. Do you know why it is that no one entered the water shortly
14 after three o'clock with a view to going into the pipe?

15 A. Um—

16 Q. Do you know why it was that no one entered the pipe with a
17 view to rescuing shortly after three o'clock?

18 A. As far as LMCS is concerned, we were stopped.

19 Q. By whom?

20 A. By the technician working—they pulled the permit and said—

21 Q. Whoa, whoa, hold on. Don't—I want to hear this. They pulled
22 the permit?

23 A. Yeah.

24 Q. What does that mean so that all us could understand what that
25 means?

26 A. Well, normally you—well the same permit to work that you
27 have—

1 Q. Right.

2 A. —all right?

3 Q. So it was cancelled? In other words you couldn't do—I just
4 want to hustle up here.

5 A. Yeah.

6 Q. Who pulled that permit?

7 A. They took away the permit and said we had no permit to work
8 and that would have been—

9 Q. Who said this?

10 A. Houston Majardsingh.

11 Q. Working for whom?

12 A. Well he would have been a Kenson worker working for Paria.

13 Q. Oh my goodness. Now, you have been in the business for
14 many, many years, correct?

15 A. Correct, yeah.

16 Q. The progenitor of Paria was Petrotrin, is that accurate?

17 A. Correct, yeah.

18 Q. In fact, my understanding is that we had world-class personnel
19 working there with greatest expertise, is that accurate?

20 A. Correct, yeah.

21 Q. Yeah. In—when this incident occurred, some of the most
22 senior men, of course, were no longer working with Paria, is
23 that accurate?

24 A. Correct.

25 Q. Yes.

26 A. Apart from Piper who would have been there.

27 Q. Apart from Piper?

1 A. Correct.

2 Q. So persons who would have been experienced in the art or in
3 the practice of recovery and so, or rescue would not—were no
4 longer with Paria? Is that accurate?

5 A. Well, so it is now, yeah.

6 Q. Yes. Now, hindsight is 2020 vision and we all learn from it and
7 we are grateful for the opportunity to be able to learn from it.
8 Now, you having lost your son—well, when I say lost, he was a
9 victim of the accident at the time?

10 A. Correct.

11 Q. When did you personally give up hope that he was alive?

12 A. I'd say Sunday sometime.

13 Q. Sunday?

14 A. Yeah.

15 Q. Did you wish to have any rescue effort from Friday afternoon,
16 yes or no?

17 A. From Friday afternoon to long after I felt some of them were—
18 well, until I was sure there was no one alive there was a rescue
19 in my mind.

20 Q. Thank you. Now, you appreciate anything to do with water,
21 underwater or even above it—

22 A. Yeah.

23 Q. —there are inherent risks as we've all been hearing, yeah?

24 A. Correct, yeah.

25 Q. But there comes a moment when you have to weigh and
26 balance the likelihood of life being saved to the likelihood of
27 life being imperilled, you agree with that?

1 A. Correct, yeah.

2 Q. At six o'clock or thereabouts, we understand that Christopher
3 Boodram miraculously was retrieved from the pipeline.

4 A. Correct.

5 **Mr. Chairman:** Five; five o'clock.

6 **Mr. Ramadhar:** Five. I thank you so much.

7 **Continued Cross-Examination By Mr. Ramadhar:**

8 Q. Certainly, makes it even better. So, by five o'clock, still
9 daylight—

10 A. Uh-huh.

11 Q. —I am—do you know, were you—well you said you were not
12 present but you had personnel from LMCS there, ready,
13 equipped and prepared to go in.

14 A. Correct.

15 Q. You agree with that?

16 A. Yep.

17 Q. Michael Kurban, you know he's a certified commercial diver?

18 A. I paid for that.

19 Q. Sorry?

20 A. I paid for his certificate.

21 Q. Of course. Do you know he was also trained in what we call
22 close water diving?

23 A. Correct.

24 Q. Specifically, specifically for diving into pipelines?

25 A. Well, that's sort of diver.

26 Q. [*Inaudible*]

27 A. Yeah.

1 Q. Yeah. You knew, because you had been speaking with the
2 families, and I want to thank you for that at least, and tried to
3 give support there and then to get men, equipment and
4 opportunity available to save not just your son but your other
5 co-workers' lives, is that accurate?

6 A. Correct, yeah.

7 Q. In fact, tell us, because this I important, they were like brothers,
8 all of them?

9 A. Correct.

10 Q. Including your son?

11 A. [*Nodding*]

12 Q. Mr. Kurban, I shan't go through all the names. I know it's very
13 difficult. Sir, I do not mean to do this but I need to make it very
14 clear, because we need to know at some stage or the other who
15 is liable, first of all, for the accident, okay?

16 **Mr. Chairman:** That's not what we're here for and I am going
17 to constrain you from asking questions with [*Inaudible*] the
18 limit to how far I'm prepared to permit this and you've gone far
19 enough, thank you.

20 **Mr. Ramadhar:** Thank you so much.

21 **Mr. Chairman:** Right, so can you move on, please?

22 **Mr. Ramadhar:** Absolutely. Thank you very much.

23 **Continued Cross-Examination By Mr. Ramadhar:**

24 Q. Now Mr. Farah and Mr. Guerra, as you've indicated were
25 available since around shortly after three o'clock?

26 A. Yeah.

27 Q. Now, the pipeline, as the Chairman had so graciously allowed,

1 um, the horizontal part was under the seabed cover?

2 A. Correct.

3 Q. Is that accurate?

4 A. Yep.

5 Q. You could not and did not know at the time—

6 A. Right, it wasn't visible, no.

7 Q. Right. You could not and did not know at the time that it was
8 not completely horizontal?

9 A. Correct.

10 Q. Yes. Now we're hearing a lot about pressure differentials,
11 yeah, and the issue of the plug being removed, whether by
12 failure or by—

13 A. Design.

14 Q. —design. On one end there's the plug on one side at six, berth
15 6, is that accurate?

16 A. Correct, yeah.

17 Q. And you have described now pumping air into this, into this
18 pipeline to push its content meaning water oil or whatever, out
19 of it?

20 A. Yeah.

21 Q. Also accurate? But you also said something very interesting
22 that at five there was a valve somewhere?

23 A. Correct.

24 Q. Yes. That valve, anybody check to see whether there was a
25 failure of that valve to create any, any, um, differential in the
26 pressure?

27 A. I—*[Shaking head from left to right]*

1 Q. But it—not under your remit? That’s Paria’s valve? Is that
2 accurate?

3 **Mr. Chairman:** Just a moment. I’m not sure I can
4 understand—

5 **Mr. Ramadhar:** Yes.

6 **Mr. Chairman:**—what you’re as actually asking.

7 **Mr. Ramadhar:** I’m—sorry.

8 **Mr. Chairman:** If the valve isn’t working, just think of your
9 car tyre, if the valve fails in some way and lets the air out, it’s
10 going to do the exact reverse of what you’re suggesting as far
11 as I can see.

12 **Mr. Ramadhar:** No. With all due respect I don’t know
13 enough and that’s why I’m asking.

14 **Mr. Chairman:** Well, I think I—I think we all—the rest of us
15 might know by now—

16 **Mr. Ramadhar:** Yeah.

17 **Mr. Chairman:**—that if you open the valve it’s going to let air
18 out rather than in.

19 **Mr. Ramadhar:** I believe I’d ask him—

20 **Mr. Chairman:** Unless, unless there was a vacuum on the
21 inside.

22 **Mr. Ramadhar:** Thank you so much.

23 **Continued Cross-Examination By Mr. Ramadhar:**

24 Q. And that is why, er, Mr. Ali you said something earlier that it
25 would have been worse if there was an opening at five. Is that
26 what you said?

27 A. Correct.

1 Q. Tell us what you mean by that.

2 A. This is not for checking the pressure now it's—

3 **Mr. Chairman:** This is what?

4 **Mr. Ali Sr.:** The riser was open and the plug moved, there
5 would be no back pressure building up to stop the plug.

6 **Mr. Ramadhar:** There you go.

7 **Mr. Chairman:** Yeah.

8 **Continued Cross-Examination By Mr. Ramadhar:**

9 A. So that's what you're asking?

10 Q. Yes. So there was a greater likelihood of the plug moving away
11 from where it was originally placed is that accurate?

12 A. Correct, yeah.

13 Q. And that, that's it.

14 **Mr. Ramadhar:** Thank you very much, Mr. Chairman.

15 **Mr. Chairman:** Thank you, um, yes Ms. Maraj.

16 **Cross-Examination By Mrs. Persaud Maraj:**

17 Q. Mr. Ali, Kamini Persaud Maraj for LMCS. I'd like to follow
18 up from this morning's questioning where you indicated that
19 there were some dive ramps that you would have referred to.

20 A. Correct.

21 Q. Do you recall that when you—

22 A. Yeah.

23 Q. —said you would have seen it? Okay. So, I understand that
24 they—I have emailed those documents to the Commission. It
25 was previously disclosed to the Commission but I don't think it
26 has found its way in the bundles. So those have since been
27 supplied. Have a look at the documents being supplied.

1 [Documents handed to Commissioners and Mr. Ali]

2 **Mr. Chairman:** Is this in a, um, original supplied material on
3 line?

4 **Mrs. Persaud Maraj:** It's part of a list of documents that were
5 supplied by LMCS to the Commission but it's not part of the
6 bundle. It's not within the bundle of the documents.

7 **Mr. Chairman:** So it was on a list but not actually supplied?

8 **Mrs. Persaud Maraj:** Not actually supplied.

9 **Mr. Chairman:** Right.

10 **Mrs. Persaud Maraj:** Yes?

11 **Mr. Chairman:** And have you got copies for everybody else,
12 or can we put it up on the screen at least?

13 **Mrs. Persaud Maraj:** It's on the screen, please?

14 **Mr. Chairman:** Ah, right.

15 **Mrs. Persaud Maraj:** Right.

16 **Mr. Chairman:** Can we make it a little bigger, please? That's
17 better, yes. Thank you. Is this what you were referring to?

18 **Mr. Ali Sr.:** Right.

19 **Mr. Chairman:** Right, thank you.

20 **Continued Cross-Examination By Mrs. Persaud Maraj:**

21 Q. Right. And you were explaining the assumption that was made
22 in relation to the pipeline referring to this dive ramp. Can you
23 explain what we're looking at and—

24 A. Okay. At the foot of the riser there is concrete bags placed to
25 stop the riser sinking further than the rest of the pipeline.
26 Because the pipeline is concrete coated—

27 **Examination By Mr. Chairman:**

1 Q. Could you just show us where that could be? Just point.

2 A. So there we have the concrete bags at the foot of the riser.
3 When you have a concrete coated line, at the riser it's coated as
4 well, there's concentrated weight on the riser.

5 Q. Of course.

6 A. Right? So it sinks further than the rest of the pipeline. So
7 that's where you would have getting your undulations. What's
8 a bit perplexing in this case it's not just at the riser, because
9 Christopher refers to two air pockets. So if was just this one
10 then you would have one air pocket. So there must have been
11 some more undulation in the pipeline, but this is what was
12 meant to portray that the line was level and not undulation or
13 sinking down into this corner. And that—

14 Q. Right.

15 A. That's one of the explanations for the air pockets that came up
16 that we found out were there.

17 Q. So when you were—where did you get this document from?

18 A. This was given by, um—in one of our meetings at the—

19 Q. Paria gave you?

20 A. Paria. It's a Paria document.

21 Q. Right. But you assumed from that that the pipe—

22 A. Was level.

23 Q. —at the subsea level—

24 A. Yeah.

25 Q. —was, was level?

26 A. Yeah, with no—the major thing was that the riser hadn't sunk
27 down lower than the rest of the pipe.

1 Q. Right. So that there'd been no movement or you didn't believe
2 there to be any movement—

3 A. Yeah.

4 Q. —at the riser at number six?

5 A. And similar for number five.

6 Q. And is that, is that the same for the riser, I think the next
7 diagram is the one—

8 A. Yeah.

9 Q. —at number five?

10 A. Number five.

11 **Continued Cross-Examination By Mrs. Persaud Maraj:**

12 Q. So yes, so there are two diagrams one for berth 5 and one for
13 berth 6. And just by way of explanation, Mr. Ali, you'll
14 confirm that that's the same reasoning and the rationale—

15 A. Yeah.

16 Q. —which is applicable—

17 A. At both.

18 Q. —to both. All right. Can we please have page four two five
19 two of the bundles of submission, that is the permit to work?

20 **Mr. Chairman:** Yeah. Just before you move on—

21 **Mrs. Persaud Maraj:** Yes.

22 **Mr. Chairman:**—does it give the distance of the pipe from the
23 main sea level to the floor? I mean, it probably does, but it's in
24 such tiny writing I can't possibly read it. Well, I challenge
25 most people to be able to read it, actually. I just want to know
26 if it does, and if it does it give exactly the same distance for
27 both five and six?

1 **Mrs. Persaud Maraj:** I'm going to attempt to read it myself,
2 please Mr. Commissioner.

3 **Mr. Chairman:** Well I figure it's going to give you the depth.
4 I just want to know if it's the same. Well, should we check that
5 later on? We've got the diagrams now, we can check it later.
6 You can move on to your next question.

7 **Mrs. Persaud Maraj:** I'm grateful. There is on the right of
8 the document a number of measurements that I can see it where
9 perhaps—

10 **Mr. Chairman:** We've got the document. We can work it out.

11 **Mrs. Persaud Maraj:** Yes, so we can perhaps look at it.

12 **Continued Cross-Examination By Mrs. Persaud Maraj:**

13 Q. All right, so can I have page two eight seven one, witness
14 statement, supplemental witness statement, paragraph 92.
15 Right. So, I'm taking you to paragraph 92 of your statement
16 where you've said that your men were about to implement a
17 plan, a simple plan for the rescue.

18 A. Correct.

19 Q. Right? But something happened. Right? Let me take you to
20 now page nine three oh two of the bundles of submissions. Oh,
21 sorry, it's page four two five two. It's the permit to work 9302.
22 But unlike the core bundle this has a second page that is
23 missing from the core bundle.

24 **Mr. Chairman:** Just a minute. The permit to work you say?

25 **Mrs. Persaud Maraj:** Yes, it's the permit to work. Right.

26 **Mr. Chairman:** Right. One zero seven four. It's in the core
27 bundle.

1 **Mrs. Persaud Maraj:** So the core bundle, Mr. Commissioner,
2 has a page that has been omitted. So this is the first page of that
3 permit to work.

4 **Continued Cross-Examination By Mrs. Persaud Maraj:**

5 Q. And Mr. Ali, this is the permit to work that would have been
6 issued to LMCS for the purposes of the 25th of February, 2022.

7 A. Correct, yeah, nine three two nought.

8 Q. Right. I'd like to take you to the second page. So this is the
9 first page. Yes? And now, scroll. Keep scrolling. Right, stop
10 right there. Right. So we have an annotation here. You see
11 that? Are you seeing that? Are you seeing—

12 A. Yeah, sorry, yeah.

13 Q. Right. Would you be able to tell the Commission what that
14 annotation means?

15 A. All right, I—that's where the permit was pulled and all work
16 stopped. The men were instructed not to do anything on the
17 barge. As you can see—

18 Q. Can you see a time?

19 A. —the time there is 15:22 on the 25th, second—

20 **Mr. Chairman:** So all worked stopped at 15:22?

21 **Mr. Ali Sr.:** Yeah. That's where they took, they pulled the
22 permit then and actually signed it off.

23 **Continued Cross-Examination By Mrs. Persaud Maraj:**

24 Q. And by pulling the permit they also came with instructions to
25 the members of LMCS present at the barge?

26 A. That's right. When they pulled it, even though it said 15:22 it
27 was just after I left that they told the men they weren't to do

1 anything else and they had the permit for nothing.

2 Q. And anything else would have included carrying out the—

3 A. The diving, the rescue.

4 Q. The rescue plan.

5 **Examination By Mr. Chairman:**

6 Q. So that I understand, your position is that is it that indicate the
7 time at which LMCS were effectively prevented from doing
8 anything further—

9 A. Yes.

10 Q. —under the original work permit?

11 A. Yeah.

12 **Mr. Chairman:** You're saying have I got that right?

13 **Mrs. Persaud Maraj:** That's correct.

14 **Mr. Chairman:** Okay, thank you.

15 **Continued Cross-Examination By Mrs. Persaud Maraj:**

16 Q. Now, I'd like to take you back in relation to the contract.

17 A. Yeah.

18 Q. And—for all of the works that was planned. You said earlier
19 this morning that it was—the development of the method
20 statement and the JHAs were a collaborative effort. You recall
21 saying that?

22 A. Yeah, correct.

23 Q. I'd like to take you to page six five eight of the core bundle. So
24 the work plan would be carried out as follows. Please scroll
25 down. This is under work method and this is a document that
26 you would have provided during the—

27 A. My proposal.

1 Q. —in your proposal in relation to what Paria required, correct?

2 A. Yes.

3 Q. Good. I'd like to read for you what this says. It says:

4 "LMCS will work with Paria Fuel Trading Company
5 Limited to confirm all engineering requirements
6 including quality control/assurance activities for the
7 contract prior to the placement of the purchase orders for
8 equipment and materials."

9 You see that?

10 A. Correct, yes.

11 Q. That's correct. This is what you would have indicated to Paria
12 and Paria would have had this document in their possession?

13 A. Correct.

14 Q. Next thing.

15 "LMCS Limited would provide the required insurances
16 and bonds within time limits for the contract."

17 A. Correct.

18 Q. And:

19 "Paria Fuel Trading Company Limited and LMCS will
20 conduct job hazard analyses (JHAs) and risk assessments
21 as required for all activities associated with the project."

22 A. Correct.

23 Q. All right. So, when you say that the this was a collaborative
24 effort—well let me take you back to the virtual attendances.
25 Were you present at the virtual meetings that would have had
26 with the—that Paria would have had with the—

27 A. Contractors.

1 Q. —with all of the tenderers, the contractors?

2 A. I was.

3 Q. All right. And you would have received of course the package
4 in order to put in your tender?

5 A. Yeah.

6 Q. Right.

7 A. Well the package was sent via email prior to the virtual site.

8 Q. Right. At any point in time did you understand that it was only
9 LMCS' expertise that was required for the execution of these
10 works?

11 A. No. Actually there were 18 contractors invited. At least some
12 of them were just painting contractors so there was no thing of
13 expertise in the field.

14 Q. All right. And your understanding was that you would have
15 worked along with Paria in relation to the development of the
16 methodology and the execution of the works?

17 A. Correct. Ever since we started with Petrotrin, and later on with
18 Paria, that has always been the conduct of the work. It was
19 Paria's site. Number six was an active berth with ships coming
20 and going. There was no way we could have taken over that as
21 a greenfield.

22 Q. So that—

23 A. Everything had to be done within their, um, purview and their
24 control.

25 Q. Right. So, I like that word, control. So at any point in time did
26 LMCS have total control over the execution of these works?

27 A. No.

1 Q. There's one other question I'd like to ask you and it's in
2 relation to the purpose of the inflatable plug.

3 A. Yeah.

4 Q. In relation to the stoppage, as I understand, were stopping the
5 hydrocarbons from being emitted within the contents of the line
6 that's correct?

7 A. [*Nodding*]

8 Q. Can you explain to me, in the circumstances of that safety
9 mechanism, the thought process or the methodology that LMCS
10 employed by removing that plug on the day in question?
11 Because, as it is, the work was not totally completed. Is that
12 correct?

13 A. Correct, yes.

14 Q. The hot works were completed, meaning the welding?

15 A. Correct.

16 Q. But all of the works were not yet completed?

17 A. Correct.

18 Q. Right. Can you explain to us that methodology employed by
19 LMCS in the removal of the—in the safety aspect of the
20 removal of the plug on that day in relation to the hydrocarbons?

21 A. In relation to the?

22 Q. Hydrocarbons.

23 A. All right, like I said the plug, the inflatable was to stop, while
24 we're doing hot work, the vapours coming into contact with the
25 molten metal and catching on fire, right, and the mechanical,
26 well, was again was to help that to stop the molten metal from
27 going. Once we finish all the hot work there was no

1 requirement for the plugs. The chamber was vented at all time
2 with fresh air.

3 Q. Right.

4 A. This is how habitats work. You put in pure air.

5 Q. And that was supplied?

6 A. Yeah, you supplied pure air and that keeps out undesirables,
7 then, right? They do it in the refinery. You go over pipelines,
8 you put it, you put a positive pressure and it keeps out the
9 surrounding air.

10 **Examination By Mr. Chairman:**

11 Q. Was there a method for measuring that?

12 A. Sorry?

13 Q. Was there a method for measuring the quality of the air?

14 A. There is.

15 Q. Right. And was that being monitored?

16 A. There were two metres monitoring the air constantly.

17 Q. Thank you.

18 A. One belonging to Paria and one belonging to LMCS and that
19 was full-time. It wasn't stop and go.

20 Q. All right.

21 A. Continuously. And, like I said before, the hydrocarbons from
22 heavy fuel is five times heavier than air. It would come out the
23 pipeline and sink to the bottom of the chamber. On top of that,
24 the flash point was so high that was very little hydrocarbon that
25 would come out. So, the chamber was safe at all times once we
26 have it vented. If it had ever gone to the stage where it became
27 dangerous we'll pull the men out, vent it out properly again

1 before we send them in. If we still couldn't get in, then we'll
2 go in with the air, keep the mask on, close the pipeline and let it
3 come out. So the danger of hydrocarbon—er, well there was no
4 welding done. I know there was a permit but I got no permit,
5 but the work permit was meant to be over a seven-day period.
6 Within that seven days we would have been welding again. So
7 that's why the permit would have been there. It's interesting to
8 note that, um, work permit—um, can we have it again on the
9 screen?

10 Q. Yes you can.

11 A. Nine three two nought.

12 Q. Seventy-four. Core bundle three.

13 A. Yeah. Just scroll down a bit please whoever, er—again. All
14 right, good. In column—in section four, if you look there's
15 gloves on one side and you go across, gas monitoring
16 equipment required. Right down to the bottom of that, um—
17 Right? You see there's no connotation there for gas
18 monitoring, so it's obviously everybody knew there was no
19 welding going to take place.

20 Q. No?

21 A. No welding. That's where you will have the gas monitor.

22 Q. Well it's blank. It hasn't been ticked, has it?

23 A. Yes. That's what I'm saying. So if they envisaged welding
24 they would have definitely ticked it off.

25 Q. Right.

26 **Mrs. Persaud Maraj:** I believe this is all from LMCS, please.

27 **Mr. Chairman:** Thank you.

1 **Mr. Maharaj SC:** I have no question, Mr. Chairman.

2 **Mr. Chairman:** Thank you very much.

3 **Mr. Ali Sr.:** Could I say one more thing, Sir?

4 **Mr. Chairman:** Well depends what it is.

5 **Examination By Mr. Chairman:**

6 A. Okay. When we were shown the film, the video of the
7 pipeline—

8 Q. Yes.

9 A. —there's reference to a borescope.

10 Q. Yes.

11 A. And the borescope showed—the film of the borescope showed
12 that the bottle was right there at the elbow.

13 Q. Right.

14 A. Which would have been about 10 feet—

15 Q. Right.

16 A. —from the riser. Right? The other film that was shown here in
17 the last session showed a crawler film and that same bottle was
18 now shown to be 200feet into the bottom of the pipeline.

19 Q. Do we know that it's the same one?

20 A. You didn't so the borescope one but—the crawler one showed
21 it, but the borescope, which was in the package that—

22 Q. Well you do believe it's the same one. What's the point you
23 want to make?

24 A. It's the same bottle.

25 Q. Right, the same bottle?

26 A. Yeah. Because earlier you can see the marking on the bottle.
27 But when people were invited, well, asked if they would go into

1 the pipeline, they were shown a drawing showing you the bottle
2 at 150 feet. In fact, one of the experts said the reason he wasn't
3 going to the dive, apart from being told by Paria it was a
4 recovery, was because there was a blockage 150 feet into the
5 pipe. This was wrong information. This is what led people to
6 say, "No, we can't do it."

7 Q. Right. Because they thought that the pipe was blocked by that
8 tank?

9 A. But not only that, they're showing that the pipe is—and then
10 they're using that now to say there was no air pocket.

11 Q. I'm about to say, I'm unpersuaded by that particular
12 observation by a number of people at the moment because it
13 seems to me if Mr. Boodram managed to get past it to get out—

14 A. Exactly.

15 Q. —I can't see how it was a problem for anyone to get past it to
16 go in, but that's another matter, all right? But we'll deal with
17 that.

18 A. All right, so if I could just quickly finish, right?

19 Q. You're not the advocate, Mr. Ali. I have a whole phalanx of
20 advocates here, all right? But I understand what you say.

21 A. I thought we were going to get to the facts of this thing.

22 Q. Well, we're doing our best, I can assure you.

23 A. Okay.

24 **Mr. Chairman:** All right, look, we're going to rise for 5
25 minutes and then we're going to recall another witness. Thank
26 you very much indeed for coming.

27 **Mr. Ali Sr.:** Okay.

1 **Mr. Chairman:** It's much appreciated.

2 **Mr. Ali Sr.:** Okay.

3 **Mr. Chairman:** You are now free to stay or go as you please,
4 all right?

5 **Mr. Ali Sr.:** Okay.

6 **Mr. Chairman:** Thank you very much. We'll rise for 5
7 minutes please?

8 **4.10p.m.:** *Enquiry suspended.*

9 **4.15 p.m.:** *Enquiry resumed.*

10 **Mr. Chairman:** Ms. Persaud Maraj, can you help me, please?
11 This document that you've produced for us a copy of, even with
12 these glasses I can't—actually I can see there is a dimension on
13 there but I can't actually read it. Can I leave it with you to look
14 at originals, or whatever you might have, and tell us if they
15 show a depth on each riser from the sea level to the bottom of
16 the riser, for berths 5 and 6? All right, if you can let me know
17 at some point, I'll be grateful.

18 **Mrs. Persaud Maraj:** Certainly, Sir.

19 **Mr. Peterson SC:** Mr. Chairman, and during the break what
20 we also strained, well we strained to observe is the dates so if
21 my friend could focus on that too. It seems to be 2018 but I
22 was leaving it to when I get home—

23 **Mr. Chairman:** What, on the bottom of the document?

24 **Mr. Peterson SC:** Yes, when I get home to my magnifying
25 glass, but—

26 **Mrs. Persaud Maraj:** Yes, it—the—I can confirm that, that
27 the date of this document is the 2nd of February, 2018.

1 **Mr. Chairman:** Well I've got a date on the bottom in a box
2 when it says checked which says the 26th of April, 2018.

3 **Mrs. Persaud Maraj:** Yes, so—but we'll take some
4 instructions on this also in the interim too.

5 **Mrs. Persaud Maraj:** Proved, yes.

6 **Mr. Chairman:** Marvellous, thank you very much. All right,
7 we now clearly do not have time to deal with both remaining
8 witnesses so I'm going to take Mr. Peterson's suggestion that
9 we sit earlier tomorrow to make up the time. We'll do that, sit
10 at nine o'clock tomorrow because the witness, Mr. Dhillpaul
11 has to be working tonight and will therefore, working through
12 the night, will not be available tomorrow morning. It would be
13 unreasonable to expect him to be available tomorrow morning.
14 I'm going to have him called now and we'll deal with Ahmed
15 Ali in the morning.

16 I know that that caused some disquiet to somebody. I
17 wouldn't normally change the order unless some specific
18 reason arises, but clearly this is not an unreasonable reason and
19 I am going to do that. We'll call next please Mr. Victor
20 Dhillpaul, please? He is the health and safety executive officer
21 for LMCS.

22 *[Mr. Victor Dhillpaul sworn]*

23 **Mr. Dhillpaul:** I, Victor Dhillpaul, solemnly swear that the
24 evidence I shall give to the Commission in this case shall be the
25 truth, the whole truth and nothing but the truth.

26 **Examination By Mr. Chairman:**

27 Q. You are Mr. Victor Dhillpaul, correct?

1 A. Yes, Sir.

2 Q. And I was introducing you, I think, when you came in. You are
3 the, or were, the health and safety officer for LMCS, is that
4 right?

5 A. Correct.

6 Q. Are you still in that role?

7 A. Not for the said company.

8 Q. No, all right, for a different company. All right, thank you very
9 much. What's going to happen next is, um, I think it's a
10 summary or the entirety of his statement? A summary.

11 **Mr. Bissessar:** Summary.

12 **Mr. Chairman:** So, Mr. Bissessar here is going to read a
13 summary of your evidence. You were good enough, I think, to
14 provide us with some additional evidence but he's going to give
15 a summary and listen to that summary. If you agree that it's
16 accurate then we won't need to hear your evidence-in-chief and
17 you'll just be asked some questions in cross. I don't think we
18 have any, do we, for Mr. Dhillpaul? No. All right. So, some
19 of the lawyers sitting to your left will have some questions for
20 you, all right? Hopefully we'll be done—well, we will be done
21 today definitely so—because I'm—you've got to get to work
22 tonight, don't you?

23 A. Yes.

24 Q. You'd be able to go to work tonight. You might not be as
25 sprightly as you would otherwise be but you'll be able to work.
26 All right. All right, thank you very much.

27 **Mr. Bissessar:** Thank you, Chair.

1 Mr. Victor Dhillpaul was employed by LMCS from
2 August 2021 as a field health and safety officer, FHSO, but not
3 full-time. He's no longer working with LMCS. On 10th
4 November, 2022, Mr. Dhillpaul provided a signed witness
5 statement to the Commission. This is at WB 2932, following
6 an interview with Counsel to the Commission. He was
7 represented by counsel during the interview. He said that the
8 facts stated in his witness statement are true and correct.

9 Mr. Dhillpaul has about 13 years' experience in health
10 and safety and has qualifications including OSHA General
11 Industry Standard certification, OSHA Construction Industry
12 Standards certification, International Association of Safety
13 Professionals Confined Space Entry certification, Shadrack
14 Risk Assessment and Accident and Investigation certification
15 and NEBOSH HSE Certificate Level IV.

16 As LMCS' FHSO, Mr. Dhillpaul conducted safety
17 meetings, explained job safety analyses, JSAs, and risk
18 assessments as well as identifying hazards and making
19 recommendations. He says he was not involved in the
20 preparation of JSAs or risk assessments for the Paria project.
21 LMCS' HSE manager, Ahmad Ali, prepared those documents.
22 Mr. Dhillpaul says he was training on Paria's permit to work
23 system, PTW, but was not yet authorized to sign the PTW on
24 behalf of LMCS. He says he attended training sessions with
25 Paria after he started working with LMCS. Mr. Dhillpaul was
26 involved in LMCS' line clearing and he was there when the line
27 was pumped at berth 5 and he conducted some of the toolbox

1 meetings for the line clearing.

2 On 15th February, 2022 he conducted a toolbox meeting
3 with Ahmad Ali. He also conducted toolbox talks for the
4 installation of the hyperbaric chamber and the plug and was
5 present for the installation of the plug but cannot recall exactly
6 how it was done. On Friday, 25th February, 2022 Mr.
7 Dhillpaul was LMCS' safety officer at berth 6 and at around
8 9.00 a.m. he had a toolbox meeting to discuss the job hazards.
9 He said Paria's Andrew Dopson was present and the main
10 hazard discussed were compressor failure and chamber
11 flooding. He says he discussed general hazards.

12 He asked Mr. Dopson if he wished to address anything
13 but Mr. Dopson said no. Mr. Dhillpaul said that anyone who
14 was present on 25th February, 2022 during the toolbox talks
15 would have signed the toolbox forms. Mr. Dhillpaul said that
16 on 25th February, 2022 he called upon Kazim Ali Jr., who was
17 a job supervisor, to discuss the job method and hazards. Kazim
18 Ali Jr. then talked about compressor failure and chamber
19 flooding but what he said was not documented at the toolbox
20 meeting.

21 Mr. Dhillpaul explains that Kazim Ali Jr. was his
22 supervisor that day and was very busy and told Mr. Dhillpaul to
23 leave it and when he, meaning Mr. Ali Jr., got a chance, he
24 would document what he had spoken about at the meeting, but
25 of course he never got a chance to. Kazim Ali Jr. also spoke
26 how the job to be done but Mr. Dhillpaul cannot recall what he
27 said about the job in particular.

1 Mr. Dhillpaul recalls that Mr. Terrence Rampersadsingh
2 of Paria was not present at the toolbox meeting. Mr. Dhillpaul
3 also said that he did not observe any breaches of safety protocol
4 but he did review the permit to work and his job was to ensure
5 that what was on the PTW was done and nothing contrary to
6 that. He said that the PTW was a package comprising a method
7 statement, a risk assessment and a JHA.

8 Mr. Dhillpaul says that when the accident occurred, he,
9 meaning Mr. Dhillpaul, was on barge six making observations.
10 He says Paria's representative, Mr. Dopson, had already gone
11 ashore to collect his lunch, but Mr. Dopson was on site for the
12 entire day before the accident occurred. He said that Mr.
13 Dopson inspected all the documents including the PTW with
14 the method statement, and also checked the oxygen level and
15 did a gas free test in the habitat.

16 Mr. Dhillpaul describes the knocking he heard coming
17 from the direction of the habitat. This was around 4.25 p.m.
18 and he and the others began bounding the pipe and he heard a
19 faint voice and knocking. He says that Paria said that no divers
20 should enter the habitat and he describes the arrival of the coast
21 guard who he said were taking photographs of themselves.

22 He also describes Christopher Boodram's rescue and that
23 when he was being transferred to the Adventurer X he said that
24 the others were alive in the air pocket. Mr. Dhillpaul said that
25 he tried to discuss rescue plans with Paria's personnel but they
26 showed no interest nor did they include him in their
27 discussions. He remained on site all day Saturday and left at

1 8.00 p.m. Before leaving he said that LMCS was just there and
2 no one from Paria was saying anything and nothing was being
3 done.

4 Thank you, Chairman.

5 **Mr. Chairman:** There was just one thing I needed to ask you
6 if you would help me at this stage, please?

7 **Examination By Mr. Chairman:**

8 Q. A permit to work could be for longer than one day, is that right?

9 A. Well Paria's permit to work system works several ways.

10 Q. Can you speak a little louder and into that microphone, please?

11 A. Paria permit to work system is seven days.

12 Q. Several days?

13 A. Seven days.

14 Q. Seven.

15 A. What happens after the day's job, it's suspended and the
16 following day it would be renewed.

17 Q. After each day or—

18 A. Each working day.

19 Q. Right. So the permit would have a life of seven days?

20 A. Correct.

21 Q. But it's limited in the sense that at the end of each day it's
22 suspended and then restarted the following day, and that would
23 go on for seven days?

24 A. Correct.

25 Q. And then there'll be a new work permit, would there, for any
26 subsequent work?

27 A. With the same information, unless there are changes to the job.

1 Q. Right. So if a job, for example, was estimated to take seven
2 days, but lasted in fact nine days, would there have to be a
3 whole new permit for the extra two days?

4 A. Yes.

5 Q. And would the new permit simply reflect what was on the old
6 permit?

7 A. Yes, correct.

8 Q. Right. Next, this. A toolbox meeting, is that just to do with
9 safety or does it cover other things as well?

10 A. Toolbox cover the safety of the job and also the steps of the job.

11 Q. Right. The steps of what's supposed to happen in the order in
12 which it's supposed to happen?

13 A. Correct.

14 Q. So you'd be present at such a meeting?

15 A. Yes.

16 Q. And your contribution would be to deal with health and safety?

17 A. Yes.

18 Q. And was it at any time your responsibility to identify health and
19 safety issues?

20 A. Not on that given day.

21 Q. I beg your pardon?

22 A. Not on that given day.

23 Q. Not on that given day. You were simply covering the ones that
24 had been already identified, is that right?

25 A. Yes.

26 Q. Thank you very much.

27 **Mr. Chairman:** All right, um, so I will ask anybody else, Mr.

1 Peterson?

2 **Mr. Peterson SC:** Mr. Mootoo will take this witness, Sir.

3 **Cross-Examination By Mr. Mootoo:**

4 Q. Good afternoon, Mr. Dhillpaul.

5 A. Afternoon.

6 Q. My name is Jason Mootoo and I have a few questions to ask
7 you. I act on behalf of Paria. Now, in your statement to the
8 Commission, you submitted that on the 10th of November,
9 2022, is that correct?

10 A. Correct.

11 Q. Right. But you also submitted a statement to OSHA on the
12 17th of March, 2022? You recall that?

13 A. I can't remember the exact date but I did.

14 Q. Okay. We'll get it but do you recall submitting a statement to
15 OSHA?

16 A. Yes.

17 Q. Okay. And do you recall that statement was quite some time
18 before you submitted your statement to this Commission?

19 A. Yeah.

20 Q. Yes?

21 **Mr. Chairman:** Mr. Mootoo would you get a little closer to
22 your microphone?

23 **Mr. Mootoo:** I'm sorry.

24 **Mr. Chairman:** Not at all, just—

25 **Continued Cross-Examination By Mr. Mootoo:**

26 Q. Okay and you were, um—as I read your statement you were
27 involved in two toolbox meetings, is that correct, at least two,

1 on this job, the 15th of February, 2022 and the 25th of
2 February, 2022?

3 A. Right.

4 Q. Is that correct?

5 A. Yeah.

6 Q. Right. And as the Chairman asked you, your responsibility
7 there was really to deal with the safety aspects of the job?

8 A. Correct.

9 Q. Correct? Now, on the 25th in particular, Mr. Kazim Ali was
10 there at that toolbox meeting?

11 A. Junior.

12 Q. Junior, sorry, yes. Thank you for the correction. He was there
13 on that day, yes?

14 A. [*Nodding*]

15 Q. And your discussion in your statement about the toolbox
16 meeting is that there is a toolbox form to be filled out?

17 A. Yes.

18 Q. Yes? And the important aspects that are discussed at that
19 meeting are included on the form, isn't that correct?

20 A. Correct.

21 Q. And you would consider that to be a very critical aspect of
22 what's included on the form?

23 A. Yes.

24 Q. Is that correct?

25 A. Yes.

26 Q. Yes. But your evidence to the Commission is that although you
27 could recall what you spoke about in connection with safety on

1 the 25th of February, you actually have no recollection what
2 Kazim Ali Jr. spoke about in relation to the job to be done?
3 Perhaps I can help you. Might the witness be shown paragraph
4 24 of his witness statement of the 10th of November, 2022?
5 That is at page 2936 of the witness statement bundle.

6 [*Document handed to Mr. Dhillpaul*]

7 **Mr. Chairman:** It's being given to him.

8 **Mr. Mootoo:** Yes.

9 **Continued Cross-Examination By Mr. Mootoo:**

10 Q. You can see it on screen. Do you see that?

11 A. What exactly?

12 Q. Paragraph 24. It's at the top of the screen. Your evidence to
13 the Enquiry is you can't remember or recall what Kazim Ali Jr.
14 said about the job on that day. Is that correct?

15 A. Yeah, I couldn't recall all the specifics which he spoke about.

16 Q. Right. But you didn't identify any in your witness statement,
17 did you?

18 A. No I didn't.

19 Q. And in fact in your earlier statement to the—to OSHA, that is to
20 be found at page six nine four of the bundle of submissions. I
21 want to suggest to you—well first of all, yes, it's up on the
22 screen. It's a two-page document. I want to suggest to you that
23 in this statement you also made no mention about the method of
24 the job to be performed, you made no mention of it there in that
25 statement at all, correct?

26 A. Correct.

27 Q. Good. And this was a mere three weeks after the incident had

1 occurred. Yeah?

2 A. Right.

3 Q. Now you are aware of Mr. Andrew Dopson. You know that
4 name?

5 A. Yeah.

6 Q. And he was an HSE technician on site. You agree with me?

7 A. Agreed.

8 Q. And he was there on the 25th of February. And he was a
9 Kenson official?

10 **Mr. Chairman:** You mean at the toolbox meeting?

11 **Mr. Mootoo:** Sorry, yes, at the toolbox meeting.

12 **Continued Cross-Examination By Mr. Mootoo:**

13 Q. Yes, you accept that?

14 A. Yeah.

15 Q. I need you to say yes or no.

16 A. Yeah.

17 Q. Yes. And he was a Kenson official or you knew him to be a
18 Kenson official?

19 A. Yes.

20 Q. Yes. And you also knew Kenson to be representing the interest
21 of Paria?

22 A. Correct.

23 Q. Right. Now, I'd like to ask the witness to be shown a document
24 at page six five nine two of what I understand to be the bundle
25 of submissions, electronic bundle of submissions received by
26 the Commission.

27 **Mr. Chairman:** Has somebody else got their microphone on?

1 Ah yes, it's—thank you.

2 **Mr. Peterson SC:** I realize when you have on both, Sir, you
3 cannot get yours—

4 **Mr. Chairman:** Yeah, quite. Somebody tell me where that is
5 in our core bundles, please? [*Crosstalk*] Volume II? Thank
6 you. No, no, no. It's not in the core bundle at all? You sure?
7 Ten two two? Thank you. Proceed please?

8 **Mr. Mootoo:** Thank you.

9 **Continued Cross-Examination By Mr. Mootoo:**

10 Q. I'd like you to have a look at this document in front of you. It
11 runs into two pages and on the face of it it's prepared by Mr.
12 Andrew Dopson. It's dated the 25th of February, 2022. It's the
13 same day. You agree with me?

14 A. Indeed.

15 Q. And it's a daily activity report. It's quite a detailed document.
16 Would you agree with me?

17 A. Yes.

18 Q. Yes? And would you also agree with me that nowhere in that
19 document is the removal of the—of any migration barrier
20 discussed. You accept that?

21 A. No.

22 Q. You don't accept it? Have a look at it. And tell me where, in
23 that document, the removal of the migration barrier is
24 discussed.

25 A. [*Perusing document*] It isn't there.

26 Q. It isn't there. So, let me get the evidence correct. It's not there,
27 it's not in your statement given to OSHA, yes? You agree?

1 A. Agree.

2 Q. It's not in your statement given to OSHA three weeks after the
3 event. It's not in your statement to the Commission. I want to
4 suggest to you that in fact the removal of the migration barrier
5 was not discussed on the 25th of February.

6 A. No, it was discussed.

7 Q. It was discussed?

8 A. Yeah.

9 Q. Didn't you just tell us a few moments ago when we looked at
10 paragraph 24 of your witness statement that you agreed with
11 me, you couldn't remember anything Kazim Ali Jr. spoke about
12 the job?

13 A. It wasn't mentioned.

14 Q. Do you recall that?

15 A. Yes I recall.

16 Q. Yes. Do you recall—do you think that the removal of the
17 migration barrier was an important matter?

18 A. Yeah it was a important matter.

19 Q. By the time you came to prepare this statement don't you
20 consider it was perhaps one of the most important matters?

21 A. To answer that question, the guys that were in the pipe—

22 Q. No, I'm not cash in you about that.

23 A. Right.

24 Q. Don't you consider by the time you came to prepare this
25 statement it was one of the most important matters, if not the
26 most important matter?

27 A. Well I've—it was important, yeah.

1 Q. Yes. And it was—but nonetheless are you asking the
2 Commission to believe that despite it was one of the most
3 important matters you never mentioned it to OSHA, you never
4 mentioned it to the Commission and in fact the first time you're
5 mentioning it is today?

6 A. Well I was going to quote for you from the method statement.

7 Q. I'll get you—we'll get to the method statement.

8 **Mr. Chairman:** I can't hear. You have to speak directly into
9 that microphone, please.

10 **Continued Cross-Examination By Mr. Mootoo:**

11 A. I we'll get to that when we come to the method statement.

12 Q. We'll get to it.

13 A. Right.

14 Q. I'm not asking you about the method statement. I'm asking
15 about what you told the Commission and what you told OSHA.

16 A. At that point in time I couldn't have remember everything.

17 Q. Or so you can re—your memory is better now several months
18 after the fact?

19 A. Um, if you were a part of that, you would have understand what
20 I had dealt with.

21 Q. Yes. I understand that but you, you submitted this statement so
22 your memory got better between the 10th of November and the
23 5th of December, is that it?

24 A. No, that's not it.

25 Q. Well I'm suggesting to you that in fact on the toolbox meeting
26 document that you formed, that you asked us to look—well,
27 that you signed. You recall signing a toolbox meeting form?

1 A. Yes.

2 Q. Let's look at page ten seventy of the—of core bundle. You
3 have that in front of you?

4 A. Yeah.

5 Q. No mention of the removal of the migration barrier. Would you
6 accept that?

7 A. Yeah, because I stated [*Document handed to Mr. Dhillpaul*] in
8 my statement that Kazim Ali had spoken about that so he would
9 have written in that—

10 Q. Kazim Ali spoke—you're saying in your statement you say
11 Kazim Ali spoke about the removal of the migration barrier?
12 Didn't you just tell us in your statement that you couldn't
13 remember what he said at all at paragraph 24?

14 A. At the given moment when I'd given the statement.

15 Q. Okay, so yes, two weeks ago you couldn't remember but now
16 you remember? Didn't we just cover that ground, Mr.
17 Dhillpaul?

18 A. Well, if you say so.

19 Q. Would you like to change your evidence today for the first
20 time?

21 A. Well, it was spoken about.

22 Q. Okay. But it's not on the form. It's not on the toolbox form.
23 Do you accept that?

24 A. Yes I accept that because the form is incomplete.

25 Q. And it's also—but you would accept that this toolbox form was
26 a document that was prepared on the day?

27 A. Yes.

1 Q. And Mr. Dopson's statement that we just took you to was a
2 document prepared on the day.

3 A. Okay.

4 Q. You accept that?

5 A. Right.

6 Q. And on the day would you also accept that nobody knew about
7 Delta P at the time? Would you accept that?

8 A. Yeah.

9 Q. To the best of your knowledge nobody knew about it?

10 A. Correct.

11 Q. In fact, um, nobody knew what had caused the problem, isn't
12 that right?

13 A. Correct.

14 Q. So, it's very unusual, if the removal of the migration barrier
15 was spoken about, that it was omitted from all of the documents
16 produced on that day. Wouldn't you agree with that?

17 A. Well—

18 Q. Would you agree with that—

19 A. I agree—

20 Q. —it's unusual? In fact, what, you would agree with me, that
21 what one would have expected is that if it was discussed, it
22 would have been on the documents? Would you not agree with
23 that, if it was discussed, it would have been usual, listen to my
24 question, it would have been usual to expect it to be on the
25 documents?

26 A. Some, some, yeah.

27 Q. Yes. Now, you, um, you also spoke about your knowledge of

1 the permit to work system. Am I right about that?

2 A. Yeah.

3 Q. You were trained in it?

4 A. [*Nodding*]

5 Q. Yes?

6 A. Yes.

7 Q. Now, in your statement I see you talk about, I see you talk
8 about the permit to work and then you talk about permit to
9 work documents. You recall that?

10 A. Right.

11 Q. So is it that you look at them as two different things, the permit
12 to work is one document and then you have a group of other
13 documents?

14 A. No, well, the permit to work is more or less a package.

15 Q. Okay. So when you use the phrase in your statement permit to
16 work documents, what you mean is the permit and the
17 supporting documents?

18 A. Correct.

19 Q. Is that what you mean?

20 A. Yeah.

21 Q. Okay. You know Paria produced a method statement, an
22 amended method statement for this job. Are you familiar with
23 that? [*Crosstalk*] Sorry, forgive me. LMCS. It's a long day.
24 You're familiar with that?

25 A. Yeah.

26 Q. No? But as the health and safety officer—

27 A. I said yes.

1 Q. Oh, yes. Right. Now, if the witness can be shown 1048 of core
2 bundle two? Right, just on the first page there, this is a method
3 statement. You see it?

4 A. Uh-huh.

5 Q. And that's the LMCS logo at the top of the page. Yeah. You
6 accept that's an LMCS document?

7 A. Yeah.

8 Q. You see immediately under the main heading, italicized words
9 in bold, "All steps below shall only be carried out in full
10 compliance with Paria's permit to work system. You see that?

11 A. Yeah, I see that.

12 Q. And were you listening to the evidence earlier today when Mr.
13 Ali was—

14 **Mr. Chairman:** I hope he wasn't.

15 **Mr. Mootoo:** Well I was going to ask.

16 **Mr. Dhillpaul:** Well I know I was isolated.

17 **Mr. Mootoo:** Now it's a bit late. Well I'm going to have to
18 find another question for you, then.

19 **Mr. Chairman:** Have I somehow stolen your thunder, Mr.
20 Mootoo?

21 **Mr. Mootoo:** Mr. Peterson was stealing it anyway.

22 **Mr. Chairman:** All right.

23 **Continued Cross-Examination By Mr. Mootoo:**

24 Q. Are you aware, and I'll use my words, are you aware that from
25 the perspective of LMCS' upper management, they consider the
26 actual permit to work to be the most important document?

27 A. The permit to work, work—

1 Q. I'm asking you are you aware of that? If you're not that's fine.
2 Are you aware of it?

3 A. No.

4 Q. Okay, good. Will you accept from me that the permit to work
5 can set out—the actual permit, forget the bundle, the permit to
6 work can actually set out what is to be done and what is not to
7 be done, well, or what is to be done on a particular day?

8 A. I can explain?

9 Q. Are you—you'll get a chance to explain in a while.

10 A. Okay.

11 Q. But let's go through my questions first. Would you accept that,
12 that the permit to work can set out what is to be done on a
13 particular day?

14 A. It can outline some of the—

15 Q. Okay.

16 A. —specifics.

17 Q. Do you recall the permit to work on that day, of the 25th of
18 February? You've told us you saw it.

19 A. Oh, yeah I saw it but I can't recall.

20 Q. All right. That is at page 1074 of the same bundle. Can you
21 look at little bit further down the page? Right. Can I ask the
22 operator to stop right there? "Migration barrier to be used."
23 You see this under the heading, "Requirements for Equipment
24 Isolation and clearance"?

25 A. Yeah.

26 Q. Now you would agree with me you would understand what that
27 means if the migration barrier is to be used on that day?

1 A. As I mentioned—

2 Q. No, no. We'll get to that.

3 A. Okay.

4 Q. Answer my question.

5 A. Well yeah, that's what I'm seeing there.

6 Q. Yes, good.

7 A. Right.

8 Q. And, um, I want to suggest to you that in your statement when
9 you say the most important document in the permit to work
10 package is the method statement, that's what you say, I want to
11 suggest to you two things. One, that that's untrue. Do you
12 accept that, that the actual document that's the most important
13 is the permit itself?

14 A. Well okay.

15 Q. Not okay. Do you accept it?

16 A. No, I don't.

17 **Mr. Chairman:** Two things first, please? Can you move that
18 microphone slightly to your left? A bit more. No, more than
19 that. You see, when you're looking at me it's fine, right, where
20 it is, but you're not looking at me, you're looking at Mr.
21 Mootoo who's asking you questions. So that's better there.
22 Thank you.

23 **Continued Cross-Examination By Mr. Mootoo:**

24 Q. Yes, you don't accept that the permit to work?

25 A. No.

26 Q. Would you like to reconsider that answer after having just
27 looked at the method statement? Remember the words I

1 showed you at the top of the method statement?

2 A. Yeah.

3 Q. Would you like to reconsider your answer in light of that?

4 Would you like to see the method statement again?

5 A. I saw it.

6 Q. It's not too late.

7 A. Well I want to explain why the—

8 Q. We'll get to that. would you like to reconsider your answer?

9 **Mr. Chairman:** Well, he keeps saying he wants to explain.

10 Let him explain, Mr. Mootoo.

11 **Mr. Mootoo:** I'll give way, Mr. Chairman.

12 **Mr. Chairman:** If he can let him explain it.

13 **Mr. Mootoo:** I'm directed.

14 **Mr. Chairman:** Explain what you understand the position to
15 be.

16 **Mr. Dhillpaul:** A method statement is created—from the
17 method statement the JHA and the risk assessment is created so
18 that is the steps of the job.

19 **Mr. Mootoo:** Maybe I'm not being clear.

20 **Continued Cross-Examination By Mr. Mootoo:**

21 Q. But the permit to work is a separate document, yes?

22 A. Yes it is.

23 Q. The permit to work is a separate document, isn't it?

24 A. Right, it is.

25 Q. And it's actually the last document, isn't it?

26 A. It is.

27 Q. So it is the final say—in fact, wait, let me withdraw that

1 question. The other documents are prepared by LMCS, isn't
2 that right?

3 A. Correct.

4 Q. But the permit to work is signed off by Paria?

5 A. Correct.

6 Q. And the permit to work is Paria's final say as to what is to
7 happen on the day in question?

8 A. But if, if you had noticed that the, the space there—

9 Q. We'll get to that. I'm asking you whether the permit to work is
10 Paria's final say—

11 A. Yeah.

12 Q. —as to what is to happen on the day?

13 A. Yes.

14 Q. Good. I want to take you to just one small area again?

15 **Mr. Chairman:** Did you say yes to that?

16 **Mr. Dhillpaul:** Yeah.

17 **Continued Cross-Examination BY Mr. Mootoo:**

18 Q. I just want to take you to one small area. This is just to help me
19 clarify something. In your witness statement of the 10th of
20 November, you talk at paragraph 52—can the witness be shown
21 paragraph 52 please?

22 [*Document handed to Mr. Dhillpaul*]

23 Right. And to be fair to him, if paragraph 49 can fit on
24 the same page it will be helpful to him. Right. So what we're
25 seeing, I want to pick up the narrative at paragraph 49. You're
26 saying at around 1445 hours, all right, "I was on the barge when
27 Andrew Farah was asking Dexter Guerra if the compressor was

1 still operating”, and then you give us a narrative and at
2 paragraph 52 you say, “At this time I had believed the men
3 were in the water.” What time was that?

4 A. Um, it would have been shortly after.

5 Q. All right. And then, and then—well you give us a time frame a
6 little lower down. You say at paragraph 53:

7 “Sometime around 1625 hours or it could be later, Dexter
8 heard—Dexter and I heard a knocking and a voice
9 coming from the direction of the habitat.”

10 So that’s about 4.30 p.m., right, correct?

11 A. Correct.

12 Q. And the immediate paragraph before you say:

13 “At this time I had believed the men were in the water.”
14 That closer to 4.30? Because you’ve told us a lot had happened
15 between 1445. So when you say “at this time” in paragraph 52,
16 that would be closer to 4.30, wouldn’t it? Have a look at the
17 statement. I’m just trying to follow what you meant.

18 A. Could have been shortly after Andrew had entered the chamber
19 and realized the guys weren’t there.

20 Q. Okay. So that was at—so you’re saying closer to three
21 o’clock?

22 A. To—could be after 3.00.

23 Q. Okay. And would it be fair to say that it wasn’t until about
24 1625 that you actually thought that the men might be in the
25 pipe?

26 A. Me?

27 Q. Yes, you did.

1 A. Me, yeah.

2 Q. Right. But you were the health and safety officer there on that
3 day?

4 A. Yeah.

5 Q. All right. And if—would you agree with me that if somebody
6 had thought that the men were in the pipe prior to 4.30, as the
7 health and—as LMCS' health and safety officer, somebody
8 from LMCS would have told you that prior to 4.30?

9 A. No, well, as I, I—as stated there—

10 Q. I'm asking whether it would be reasonable that prior to that
11 time, if, if anybody thought that they were in the pipe?

12 **Mr. Chairman:** Well, I think you're going to ask him was he
13 told. It's not a question of whether he thinks it's reasonable or
14 not as to whether he was or not. I think it's—what, what you're
15 going to ask him, it seems to me and the question is, is simply
16 this, were you ever told by anybody at LMCS that the men
17 might be in the pipe?

18 **Examination By Mr. Chairman:**

19 A. Yeah, well Andrew Farah, Dexter Guerra and Mr. Kazim Sr.—

20 Q. Right.

21 A. —they had suggested they were in the pipe, but I had still
22 believe that they were in the water.

23 Q. So you thought they were still—

24 A. Yeah.

25 Q. —in the water but they had suggested to you that they might be
26 in the pipe?

27 A. Yeah.

1 Q. Nonetheless, you believed them—they were still in the water?

2 A. Yes.

3 Q. When did they tell you that?

4 A. I can't really, I can't recall.

5 **Mr. Chairman:** Right, all right, thank you. All right, Mr.
6 Mootoo.

7 **Mr. Mootoo:** I have no further questions for this witness.

8 **Examination BY Mr. Chairman:**

9 Q. Before I pass you on, can I just ask you a couple questions,
10 please? If you don't know the answer please just say, "I don't
11 know." Don't try and guess and don't try and help anybody, all
12 right? Just answer the question, all right? In the document
13 which is our 1070 which is the toolbox meeting, can I have you
14 put that back up please? You were asked about this document.

15 A. Right.

16 Q. Correct? And what you told us is that you can now recall that
17 there was discussion about the removal of the barrier, you agree
18 it's nowhere on this document at all. You answered my
19 questions right at the outset before I asked Mr. Mootoo to ask
20 you any questions, that you told us what you understand a
21 toolbox meeting to be, which is a number of different steps and
22 different things that were being said before the work
23 commences on that day. Your part in that was safety?

24 A. Correct.

25 Q. Yes? But that's not the only things that are being done in a
26 toolbox meeting, is it, as you told us earlier, is that right?

27 A. Right.

1 Q. So other people have other responsibilities at that toolbox
2 meeting?

3 A. Correct.

4 Q. Did they include things like the steps to be done?

5 A. Yes they did.

6 Q. Right. So irrespective of what the steps were, all right, and I'm
7 going to put that to one side for the moment, irrespective of
8 that, in this document is there anything at all which sets out
9 what the steps are?

10 A. No.

11 Q. Of any kind?

12 A. No.

13 Q. Is the only thing that is raised in this document health and
14 safety?

15 A. Yeah.

16 Q. Who put those health and safety things on this document?

17 A. It would have been me because that's what I—

18 Q. Is that your handwriting?

19 A. Yeah.

20 Q. Right, so at the top where it says, "Topics Discussed", you've
21 taken up one and a third of the two lines that are made
22 available, and you've but in various thing that we can see which
23 are all to do with health and safety, choppy waters, weather
24 conditions, slippages, awareness, COVID 19 protocols, all of
25 those sorts of things, communications, all right, all health and
26 safety matters, all your responsibility?

27 A. Right.

1 Q. It is somebody else's responsibility, is it not, to add to that,
2 whatever else they discussed?

3 A. Yes. They didn't did they not on this document.

4 A. No.

5 Q. Can we go to the next page, please? Page 1071. This is also
6 toolbox meeting, isn't it?

7 A. Yes it is.

8 Q. Right. This is apparently 15 minutes later, isn't it? Do you see
9 yours, the previous one, is at 9.15. This one is at 9.30. It's also
10 on the 25th of February. All right? The speaker in the previous
11 ones are said to be Mr. Dhillpaul and the speaker in this one is
12 said to be Mr. Dhillpaul. That's you, isn't it?

13 A. Yes.

14 Q. Here, on this occasion the description is: "Job project to remove
15 and install solid blank." Do you see that? On the previous one
16 there is nothing there at all, was there? If necessary we can flip
17 back to it. See? Nothing where it says job or project. Nothing
18 at all. Left blank. Who should have put something in there?

19 A. That was my responsibility.

20 Q. I'm sorry?

21 A. That was my responsibility.

22 Q. Your responsibility? You didn't put anything in that?

23 A. Yeah.

24 Q. When you come to the next page the one—scroll up again
25 please—you did, didn't you? You put in, "To remove and
26 install solid blank." Is that what you thought was going to be
27 done on that day? Is that what you thought was going to be

1 done on that day?

2 A. This would have been on, on, um, berth 5.

3 Q. Yes. Well, just a second, is that what you thought was going to
4 be done on that day?

5 A. Yeah.

6 Q. Right. Are the things that are mentioned there, COVID-19
7 protocols, strain, pinch points, caught between,
8 communications, weather conditions, copy waters, manual
9 handling, so broadly speaking the same things as on the
10 previous document, correct?

11 A. [*Nodding*]

12 Q. Different people attending on this one, correct?

13 A. Correct.

14 Q. Did you conduct these toolbox meetings at each separate
15 location, berth 5 and berth 6?

16 A. That meeting would have been on the boat coming—going out
17 to, um—

18 Q. So you're having this toolbox meeting on the boat as you're
19 bobbing along going to berth 6 and berth 5, are you?

20 A. Yeah, berth 5.

21 Q. So were all of the people that have signed this doc—both
22 documents, on that boat?

23 A. Yeah.

24 Q. An awful lot of people on that boat. How big is the boat?

25 A. It's a pirogue.

26 Q. Sorry?

27 A. It's a pirogue.

1 Q. A what?

2 A. A pirogue.

3 Q. I've no idea what that is.

4 A. All right.

5 Q. No doubt somebody will tell me later, but anyway, they were
6 all on the boat?

7 A. Yeah.

8 Q. So you conduct a toolbox meeting on the boat for berth 5 and a
9 separate one for berth 6?

10 A. Yeah.

11 Q. And that's what these two documents relate to, is it?

12 A. Yeah. Right.

13 Q. And nowhere on these documents does it say anything about
14 what was actually going to be done or the steps to be done
15 beyond identifying to remove and install a solid blank at berth
16 6—berth 5, is that right?

17 A. Right.

18 Q. If somebody were to be setting out the steps to be carried out,
19 of the work that needed to be done at berth 6 and berth 5, whose
20 responsibility was it to put that on there?

21 A. Supervisor.

22 Q. The super—but not yours?

23 A. No.

24 Q. So the first things to be discussed were safety, yes? That's why
25 you filled it in. And then the supervisor, whoever that was, for
26 each of those particular jobs, didn't fill in anything, did he?

27 A. No.

1 Q. Who had the form?

2 A. Well the form would have been with their packages.

3 Q. Sorry?

4 A. Well berth 5 would—had, had a package and—

5 Q. No, you're on the boat. You just told us you're on the boat—

6 A. Yeah.

7 Q. —bobbing up and down going to the berth, you've got your
8 form, you're filling it in because then you told us, it's
9 contemporaneously done, isn't it?

10 A. Right.

11 Q. Right. So it's contemporaneously done. Who's got the form?

12 A. Well they would have their package so I would have filled that
13 out and they would have gone with that package—

14 Q. Who's got his form, Mr. Dhillpaul? Who has this form?

15 A. Berth 5.

16 Q. No, no, no, no. Who physically has it in their hands? Whose
17 writing on it?

18 A. My writing.

19 Q. Right. So you've got the form?

20 A. Correct.

21 Q. Having completed it, you then pass it to each of the people who
22 are on the boat to sign it. Is that right?

23 A. Right.

24 Q. While they're on the boat?

25 A. Yes.

26 Q. Is that right? So is this the last—contrary to what Mr. Mootoo
27 was suggesting, is this actually the last point in time, the last

1 document where Paria or its representatives can say, “That’s
2 not what we intended should happen”?

3 A. I wouldn’t say so because in my possession, if anything else
4 were to be done or not to be done, I, I carried a radio belonging
5 to Paria.

6 Q. Uh-huh.

7 A. So that if there’s anything that they have second thoughts on,
8 they would inform me.

9 Q. No, you see Mr. Mootoo was saying that the final document is
10 the permit to work.

11 A. Right.

12 Q. All right? And that that was the final point of say that Paria had
13 as to what the work should be. I hope I’m not getting it wrong
14 but that’s what I understood him to suggest, and you said yes to
15 that. That was the last document, the last opportunity that Paria
16 had to say what the scope of work was, what was to be done
17 and so on. Now is that right or is it the toolbox document that
18 is actually signed by representatives, if not actual Paria
19 employees, but representatives of Paria from Kenson?

20 A. It was a simple yes or no answer to me. I wasn’t able to—

21 Q. I can’t hear you.

22 A. I say it was a simple yes or no answer to me. I wasn’t able to
23 explain myself.

24 Q. Right. And?

25 A. The permit works hand in hand with the method statement.
26 You follow the steps of the job. The permit would have
27 specifics of the job. May not have everything that is to be done.

1 Q. Right. Well let's have a look, please? Can you just put up the
2 permit please which is at our page one zero seven four? You
3 see the permit there?

4 A. Right.

5 Q. Right. At the top of the permit it says what works to be done,
6 specific tasks, do you see? The job it says various maintenance
7 work on 5, 6, 36 riser yes? And then it says: "To remove and
8 install 50-inch flange, remove and install 30-inch riser pipe,
9 remove 30-inch solid blank conductors, pressure test of flange
10 weld, remove chamber and blank top of new riser. See that?
11 It's been pointed out to you that nothing's been said there about
12 the barriers being removed. That's correct, isn't it?

13 A. Correct.

14 Q. Indeed, at paragraph one it says mitigation barrier to be used.
15 Yes? Not to be removed.

16 A. That's because, as I mentioned, the permit is a seven-day
17 process.

18 Q. Right.

19 A. And it would—these information would always be there
20 because the permit is being suspended and renewed.

21 Q. Well, attached to that document is the document you were
22 referred to, the method statement, which is at 1048. Now
23 you're the health and safety officer. When you see this
24 statement—can you scroll up a little please—you see it's got
25 what appears to be one—well, a numbered system?

26 A. Yeah.

27 Q. What do you understand the numbered system to represent?

1 A. I think it's a sequence, everything—

2 Q. A sequence of events?

3 A. Yeah.

4 Q. If someone were to depart from that sequence of events, would
5 there have to—would something have to happen?

6 A. The only time that would happen is if it had a, a, a discussion
7 with the contractor and the client.

8 Q. Right. So LMCS would have to talk to Paria to put it in a
9 nutshell?

10 A. Paria have to approve on everything that is—

11 Q. Right.

12 A. —to be done.

13 Q. Otherwise, you as the health and safety officer of LMCS, did
14 you understand the numbering system to be the steps and the
15 order in which those steps were to be carried at?

16 A. Yeah.

17 Q. You don't think you might be wrong about that?

18 A. No.

19 Q. All right. Thank you very much.

20 **Mr. Mootoo:** Mr. Chairman, I have one or two questions just
21 arising from—

22 **Mr. Chairman:** Certainly I was going to say, Mr. Mootoo, if
23 you want to ask any questions arising from that now, please do.

24 **Mr. Mootoo:** Sure. Thank you.

25 **Continued Cross-Examination By Mr. Mootoo:**

26 Q. The Chairman just took you to the toolbox meeting form. On
27 that form, apart from Mr. Dopson—

1 **Mr. Chairman:** Is this one oh seven oh?

2 **Mr. Mootoo:** Yes, yes it is.

3 **Mr. Peterson SC:** The core bundle.

4 **Continued Cross-Examination By Mr. Mootoo:**

5 Q. I think what you were being asked is whether anyone from
6 Paria, after the permit to work had been signed, well when in
7 fact this toolbox meeting document was the last opportunity?

8 **Mr. Chairman:** That's what I was asking, yes.

9 **Mr. Mootoo:** Yes.

10 **Continued Cross-Examination By Mr. Mootoo:**

11 Q. The person who was there representing Paria's interest was Mr.
12 Dopson, right? We covered that.

13 A. Correct.

14 Q. And Mr. Dopson was the HSE, he was simply a HSE
15 technician, is that right?

16 A. Yeah.

17 Q. Was there anyone else on that—at that meeting representing
18 Paria or Paria's interest?

19 A. None that I can recall.

20 Q. Well—

21 **Mr. Chairman:** Are you at one oh seven oh?

22 **Mr. Mootoo:** I am.

23 **Mr. Chairman:** Can we scroll up to see the reference on
24 there?

25 **Continued Cross-Examination By Mr. Mootoo:**

26 Q. All right? Just take your time. Was there anyone else there
27 representing Paria's interest?

1 A. Dopson.

2 Q. No, apart from him, anyone else?

3 A. No.

4 Q. And on the next page, 1071?

5 **Examination By Mr. Chairman:**

6 Q. Sorry, before you move on from that, do you know a Mr.
7 Majardsingh?

8 A. Yeah, I know him.

9 Q. Who does he work for?

10 A. Kenson.

11 Q. Who does Kenson work for?

12 A. Paria.

13 Q. Was he's there?

14 A. No he wasn't there.

15 Q. He wasn't there. Would you have a look at the document? Is
16 that a signature on the document or is that just some—

17 A. Yeah, these documents was taken away when the incident
18 occurred.

19 Q. So you're saying even though his name is on there he wasn't
20 there?

21 A. He wasn't there.

22 **Mr. Chairman:** Mr. Mootoo?

23 **Mr. Mootoo:** I'm going to have to take instructions on that.
24 It's not been mentioned in any statement prior—

25 **Mr. Chairman:** Right, to me either, so we're at one with that.

26 **Mr. Mootoo:** Right. It's certainly very curious evidence to me
27 but I'll take instructions on it.

1 **Continued Cross-Examination By Mr. Mootoo:**

2 Q. And on the next page, 1071—well I don't think we need to go
3 to that. The point I'm after is this.

4 **Mr. Chairman:** Well, no, can we, please? Because you've
5 raised it and I do want to see—scroll up, please? Keep going.
6 Keep going. Stop there. Thank you. Do you see on that
7 document, Mr. Majardsingh is also shown as being present?

8 A. Yes.

9 Q. So this is the one—we're all on the boat at this stage. I don't
10 suppose the hot has gone back again, unloaded some people and
11 put some new ones on, has it?

12 A. No, no. He was—

13 Q. You're bobbing up and down on the waves. Had Mr.
14 Majardsingh joined the boat on this occasion?

15 A. He would have been there on berth 5 meeting.

16 Q. So was he already on berth 5 or was he on the boat?

17 A. He came on to the boat and, and—while we were discussing the
18 toolbox.

19 Q. Well I need to be clear, I'm afraid, because you've lost me now.
20 I thought that when Mr. Mootoo was asking the questions a
21 moment ago—

22 A. Uh-huh.

23 Q. —asking you about who was present representing Paria, you
24 told him there was a representative from Kenson, go to the
25 previous document, please, there was a representative from
26 Kenson. That was Mr. Dopson. Yes? We can see Mr.
27 Dopson's name and his signature appears at 39 on that

1 document?

2 A. Correct.

3 Q. Yes? Below him is Mr. Houston Majardsingh?

4 A. Yeah but he wasn't on that—he wasn't a part of that toolbox.

5 Q. Well you—if you're all on the boat together—

6 A. No—

7 Q. —coupled up as you go along, I mean, unless there's some
8 huge ship, as I understand it's a small launch taking you from
9 one berth to the other.

10 A. The meeting on berth 6 was held on the barge.

11 Q. Berth six was held on the barge?

12 A. Yeah.

13 Q. And berth 5 was held?

14 A. On the boat, yeah.

15 Q. Sorry?

16 A. On the boat.

17 Q. What, travelling from 6 to 5?

18 A. Yeah.

19 Q. Right. So the first one that we're looking at there, that one,
20 that's at 9.15?

21 A. Yeah.

22 Q. Right. So that wasn't held on the boat bobbing up and down on
23 the sea, was it?

24 A. No.

25 Q. Right, so that's what I thought you'd said to us earlier or to me
26 at any rate. So you were all on the boat, you went to berth 5
27 and it's at berth 5 that you have the toolbox meeting?

1 A. Right.

2 Q. Which did not include Mr. Majardsingh?

3 A. At berth 5, yes, but not at berth 6.

4 Q. Forgive me, yes, so you went PO to berth 6 first?

5 A. Yes.

6 Q. Had the meeting there?

7 A. Yeah.

8 Q. You left there, went to berth 5 and then you had the meeting
9 another meeting?

10 A. Yeah.

11 Q. All right. So this meeting, is this the start time or the end time?
12 Nine-fifteen—

13 A. It would have been the start.

14 Q. Sorry?

15 A. The start.

16 Q. Start time. All right. So that I get this clear in my head, you've
17 all gone out from the jetty to berth 6?

18 A. Right.

19 Q. You went there first. I've just done it about 10 days ago, all
20 right?

21 A. Right.

22 Q. I know what's involved in doing so, probably less complicated
23 with us than it would have been for you because there were all
24 kinds of COVID protocols in place then. In any event, at 9.15
25 on the 25th of February, you, together with all the people listed
26 on that document—scroll up again please—1 2, 3, 4, 5, 6, 7, 8,
27 9, 10, 11, 12, 13, 14, 15 if we include Mr. Majardsingh, 15

1 people plus the pilot of the boat and various other seamen that
2 were no doubt with him were all on this boat going out to berth
3 6. You get to berth 6, you all get off the boat and then you
4 conduct this toolbox meeting?

5 A. I conducted the toolbox meeting at berth 6 on the barge.

6 Q. On, on the barge? So you hadn't got off the barge, you stayed
7 on the barge but you're at berth 6?

8 A. Houston had dropped off at berth 5.

9 Q. You dropped Houston?

10 A. Houston. He was at berth 5. He wasn't at 6.

11 Q. Right. So you took him there first?

12 A. He was—their, their boat had dropped him there.

13 Q. So you're all on a boat, you go to 5, drop him off and then
14 come to 6?

15 A. No, not our boat, their boat.

16 Q. Paria boat.

17 A. Yea.

18 Q. Right. So we can exclude Mr. Majardsingh from being
19 present—

20 A. Right.

21 Q. —at the toolbox meeting at berth 6?

22 A. Right.

23 Q. Because you say he wasn't there even though he's signed it?
24 Correct?

25 A. Yeah.

26 Q. Anyhow, you conduct this toolbox meeting at 9.15?

27 A. Yes.

1 Q. On the barge at berth 6. Have I got that right?

2 A. Yeah.

3 Q. The meeting lasts however long it lasts, but it can't be for very
4 long, can it?

5 A. No, it wasn't.

6 Q. Because having conduct this toolbox meeting you all get back
7 or you're on the barge, the barge now goes over to berth 5
8 where you're joined by Mr. Majardsingh, correct?

9 A. Correct.

10 Q. And a load of others who were not with you on berth 6, correct?

11 A. [*Nodding*]

12 Q. So you conduct a second one there?

13 A. Right.

14 Q. So that, and—that starts at 9.30, so your toolbox meeting
15 couldn't have been for very long bearing in mind you had to get
16 to the other berth, didn't you, afterwards, to start that one at
17 9.30?

18 A. [*Nodding*]

19 Q. So the entirety, would it be fair to say, the entirety of the
20 meeting, toolbox meeting, couldn't have been more than 10
21 minutes, if that?

22 A. It could be about a little more than 10 minutes, yeah, because it
23 would a take you about three minutes to go to the—

24 Q. Yes, it's not far but you've got to get all of these people
25 together. They weren't on your barge, you had to get off?

26 A. Yeah.

27 Q. Yes? All right. So have I got it right now? So you're not all

1 on the boat bobbing up and down while you're writing this?
2 This all takes place at the barge?

3 A. Correct.

4 Q. But moored at—

5 A. Berth 6 to berth 5.

6 Q. But all of these people were on the boat, were they?

7 A. No. Berth six people were on the barge. That meeting was
8 held on the barge.

9 Q. Right.

10 A. But I went with the boat to 5 to keep the meeting.

11 Q. Right. I think I've got it. I think I have enough here.

12 **Mr. Mootoo:** Well I was on a slightly different point but from
13 our perspective we have to wait for the Kenson witnesses to
14 come because there there's no one from—

15 **Mr. Chairman:** I think we can't take this any further, if I may
16 say so, Mr. Mootoo. You've made your points.

17 **Mr. Mootoo:** There's one point I want to take you.

18 **Mr. Chairman:** Of course.

19 **Continued Cross-Examination By Mr. Mootoo:**

20 Q. And that's, um, in relation to the toolbox meeting, the question
21 was put to you whether Paria had perhaps a final—the final say
22 was not at the permit to work, at the stage of the permit to work
23 was signed off by Paria but was at the toolbox meeting, so I
24 want to ask you this. You're familiar that the permit to—you
25 are familiar with the permit to work system, right? And you
26 would also be familiar with the permit to work procedure for
27 Paria?

1 A. Correct.

2 Q. Yes? And you are familiar with the term, “site authority”?

3 A. Yeah.

4 Q. Right. The site authority for this permit was Johnathan
5 Ramdhan, yes?

6 A. Yeah.

7 Q. Mr. Ramdhan, his position was senior to Mr. Dopson who was
8 a mere HSE technician, correct?

9 A. Correct.

10 Q. And would you agree with me, from what you knew about the
11 permit to work system, is that the site authority is the person
12 with authority to authorize the commencement of the job?

13 A. Right.

14 Q. And he is the one with the authority—he’s essentially the one
15 with the authority over that permit for the day, correct?

16 A. Correct.

17 Q. And therefore, would you also not accept that really Mr.
18 Dopson could not have had the last word on that day over Mr.
19 Johnathan Ramdhan as the site authority?

20 A. Correct.

21 Q. And everybody knew that, correct?

22 A. Correct. But Johnathan supposed—normally when a permit is
23 to be signed or the nature of that type of job, he would have did
24 a visual on site and then signed the permit and be a part of the
25 toolbox. That never happened.

26 Q. Okay, thank you.

27 A. He weren’t there.

1 Q. But that wasn't my question. Thank you.

2 **Commissioner Wilson:** If we could get the roles and
3 responsibilities of the site authority?

4 **Mr. Mootoo:** If I can assist I think that's at item 5.3 of the
5 permit to work procedure which is—somebody's going to have
6 to give me the page reference. Page 31 of Volume I.

7 **Examination By Commissioner Wilson:**

8 Q. Sorry, it's the senior area authority; 5.5 the senior area
9 authority. I just wanted to get a full understanding of the roles
10 and responsibilities of the gentleman you're referring to, so I'm
11 going to read it.

12 "The senior area authority is the overall asset owner
13 having responsibility for more than one facility in an area
14 as identified in the asset map. For the work permit
15 system the senior area authority shall be the terminal
16 operations manager or technical and maintenance
17 manager. The senior area authority shall ensure that the
18 risks created by simultaneous operations in different
19 facilities are adequately managed. Specify any additional
20 precautions to be taken during the work. Periodically
21 audit the conditions laid out in the certificates, taking into
22 consideration simultaneous activities throughout the
23 asset/area under his control. Ensure that all persons
24 under his control who are signatories to the permit to
25 work system undergo the training and certification
26 requirements established by the HSEQ lead."

27 Mr. Dhillpaul, I'd like to ask you, as you've gone under the

1 permit to work training, what are the components required for
2 the permit to work or the permit issued to go live if you're
3 aware as you've gone under the training?

4 A. I don't understand the question.

5 Q. In order for a permit to be issued—

6 A. Right.

7 Q. —for it to go live under the control of works system, what are
8 the steps required for that to happen?

9 A. They would have assessed the area, the job, the hazards, before
10 creating the permit.

11 Q. Are you aware of all the personnel, whether asset owner or
12 contractor, who should be involved in the generation of a
13 permit and then ultimately the issuance of the permit?

14 A. Yeah.

15 Q. Right. So I'm sort of testing your knowledge of the system
16 since you've undergone the training, all those sequential steps
17 that lead up to a permit being issued or it goes live, are you
18 aware of them?

19 A. Yeah. That I—I don't know if I could recall at the moment,
20 but, yeah, I'm aware.

21 Q. Aware of what, the steps or just the end result of the permit
22 being issued?

23 A. What I do—what I could remember is that all the applicant and
24 anyone signing on the permit should be trained, certified and
25 competent.

26 Q. Okay. Well I'd move on to another question where I heard that
27 when the sequential process or steps in the method statement,

1 because these are supplemental documents to the permit to
2 work, when they were changed you said that there was a
3 discussion. Is there a process and/or a document that captures
4 that sort of collaborative discussion? In your experience, one,
5 as an HSE professional, and/or the training with the permit to
6 work?

7 A. This discussions happens between the client and my
8 management.

9 Q. Uh-huh.

10 A. And they would then inform me of the necessary changes.

11 Q. So all these discussions are just verbal, they're not captured in
12 any documentation or any process that is part of the control of
13 work process which would lead to the issuance of a permit
14 and/or be a supplemental certificate on the permit to work, like
15 a management, a change form or something like that?

16 A. Sometimes, sometimes there are documents depending on the
17 severity of the changes, sometimes it's verbally.

18 **Commissioner Wilson:** Okay, thank you.

19 **Mr. Chairman:** Does anybody have any questions for this
20 witness?

21 **Mrs. Persaud Maraj:** I have, I—

22 **Mr. Chairman:** No.

23 **Mrs. Persaud Maraj:** I, I have—

24 **Mr. Chairman:** Do you?

25 **Mrs. Persaud Maraj:**—just two questions.

26 **Mr. Chairman:** Two?

27 **Mrs. Persaud Maraj:** Yes. May he be shown document at

1 1070 with the core bundle again?

2 **Mr. Chairman:** Ten?

3 **Mrs. Persaud Maraj:** Ten seventy. That's the HSE toolbox
4 document. Right. It's there.

5 **Examination By Mrs. Persaud Maraj:**

6 Q. The document in front of you, Mr. Commissioner asked you or
7 pointed out to you that the job of project line is bare. Right?
8 Just tie that in for us. You also told him that the supervisor was
9 supposed to tie that in. Who was that supervisor?

10 A. Kazim Ali Jr.

11 Q. So he was the one who was supposed to fill in that information.
12 And—

13 A. Either he or me would have filled it in.

14 **Mr. Chairman:** Can't hear you. You have to—

15 **Mr. Dhillpaul:** Either he or me could have filled that part in,
16 yeah, but what he discussed he would have filled that in.

17 **Continued Examination BY Mrs. Persaud Maraj:**

18 Q. So on that day in question he was the one who was going to fill
19 in what he discussed?

20 A. Yeah.

21 Q. All right. You mentioned you had a radio, a Paria radio, just
22 now?

23 A. Yeah.

24 Q. Right. And that was a radio to communicate with Paria
25 personnel?

26 A. Yeah, shipping office.

27 Q. Shipping office?

1 A. Yeah.

2 Q. And any person or personnel in particular?

3 A. Well, is a radio that you could switch to any channel HSE,
4 shipping, office, wherever.

5 Q. And is that radio used for the purpose of you communicating to
6 them what you—

7 A. Yeah.

8 Q. —what you—what work is—

9 A. Yeah, like—

10 Q. —is being carried out?

11 A. Like seconds before they had entered the water, I had informed
12 Paria that divers are entering the water and they would have
13 confirmed.

14 Q. Do you recall who you would have informed?

15 A. Nah.

16 Q. But you had done that?

17 A. Yes.

18 Q. All right. And the person would have accepted that
19 information?

20 A. Yes, yeah.

21 Q. And there is an acknowledgment of the information flowing
22 from you to them via that radio?

23 A. Yeah.

24 Q. All right. Do you recall if you would have informed them
25 whether the—when the barriers were being taken out?

26 A. No, I didn't inform them of that.

27 Q. All right. In the event that they were aware, was there—were

1 you the only person with a radio?

2 A. Yeah.

3 Q. You were the—

4 A. No, um, well Paria officials would have had radios as well.

5 Q. Paria's officials?

6 A. Yeah.

7 Q. And we would have had Paria officials at berth—you were at
8 berth 6?

9 A. Yeah.

10 Q. Right. And at the station that had the live video observing the
11 men in the chamber, they would have had a Paria official at that
12 station?

13 A. Yeah there were someone there—

14 Q. Right.

15 A. —from Paria as well.

16 Q. And communication would have been able to be transmitted via
17 the Paria official's radio?

18 A. Yeah.

19 Q. At the time. All right?

20 **Mrs. Persaud Maraj:** I think that is all that I have.

21 **Mr. Chairman:** Thank you very much.

22 **Mr. Maharaj SC:** I have none.

23 **Mr. Chairman:** Are we done for the day? Excellent. Thank
24 you all again for sitting a little longer. I'm grateful. We will
25 start tomorrow morning with a Ahmad Ali who is LMCS. And
26 we're going to start at—

27 **Mr. Peterson SC:** Ten o'clock is—ten o'clock. It's nine

1 o'clock Sir when we stop at 4.30 when we—

2 **Mr. Chairman:** Well it's 5.30 now.

3 **Mr. Peterson SC:** Sir, but that's something we could—

4 **Mr. Chairman:** Shall we start at 9.30?

5 **Mr. Peterson SC:** Yes.

6 **Mr. Chairman:** Would that be all right, 9.30 tomorrow?

7 Thank you all very much—9.30. And please feel free to go.

8 I'm going to collect my papers anyway, so—

9 **5.25p.m.:** *Enquiry adjourned.*

1 **EVIDENTIARY HEARING DAY 5**

2 **9.35 a.m.: Enquiry commenced.**

3 **Mr. Chairman:** Good morning, everyone. Ms. Maharaj, the
4 drawings that you gave us yesterday, could we have any
5 dimensions now?

6 **Ms. Maharaj:** I did not check the dimensions. I'm very sorry.
7 But they are—I'm happy to say that they were disclosed to the
8 Commission. It's actually—

9 **Mr. Chairman:** No, no, I know. It's just that they are in such
10 tiny little space that we can't actually see anything on it.

11 **Ms. Maharaj:** What I did do was to email it, and it can be
12 expanded. I'll undertake to try to get that for you.

13 **Mr. Chairman:** If you could help me out, please, I'd be
14 grateful. Thank you.

15 **Ms. Maharaj:** Yes, yes, I will certainly try to do that.

16 **Mr. Chairman:** Mr. Peterson, your survey maps that you
17 disclosed yesterday, we were trying to work out dimensions on
18 that—the legend in particular.

19 **Mr. Peterson SC:** Yes, Sir. We are hoping to get someone to
20 speak to the map and give life to it.

21 **Mr. Chairman:** You're going to actually provide a witness
22 statement—

23 **Mr. Peterson SC:** Yes, we're going to file a supplemental.

24 **Mr. Chairman:** That would be helpful, yes. Thank you very
25 much. All right. When do you think we might have that?

26 **Mr. Peterson SC:** We were aiming to say [*Inaudible*], but
27 guaranteed Friday.

1 **Mr. Chairman:** Marvellous. Thank you very much. All right.
2 I think our first witness this morning is Mr. Ahmad Ali. Is that
3 right?

4 **Mr. Maharaj SC:** Mr. Chairman, Ms. Vijaya Maharaj would
5 do the witness summary.

6 **Mr. Chairman:** Thank you, Mr. Maharaj. Page number,
7 please?

8 **Ms. Maharaj:** The witness statement bundle at 936, and
9 there's also a supplemental at 1229.

10 **Mr. Chairman:** I'm sorry, Ms. Maharaj. What page did you
11 say the supplemental is?

12 **Ms. Maharaj:** It's 936.

13 **Mr. Chairman:** No, the supplemental.

14 **Ms. Maharaj:** I'm just double-checking. The witness
15 statement bundle one.

16 **Mr. Chairman:** Good morning, Mr. Ali. You are Ahmad Ali?

17 **Mr. Ali:** Yes.

18 **Mr. Chairman:** Yes. And I think at the time you were the
19 HSE Manager at LMCS. Is that right?

20 **Mr. Ali:** Yes.

21 **Mr. Chairman:** Are you still the manager there?

22 **Mr. Ali:** Yes.

23 **Mr. Chairman:** All right. Thank you very much.

24 I appreciate he needs to be sworn in, yes. You can do that now.

25 *[Mr. Ahmad Ali affirmed]*

26 **Mr. Ali:** I, Ahmad Ali, do solemnly, sincerely, and truly affirm
27 that the evidence I shall give to the Commission in this case

1 shall be the truth, the whole truth, and nothing but the truth.

2 **Mr. Chairman:** Mr. Ali, good morning to you. The lady, Ms.
3 Maharaj, is going to summarize the evidence you have put in
4 writing. All right? Listen, please, carefully to her summary.
5 Once she's finished, if you agree with it, please tell us that you
6 do. If you don't, then point out where you disagree, all right,
7 and we'll take it from there. And, hopefully, that would make it
8 a much shorter exercise. Okay, all right. Thank you very
9 much.

10 **Ms. Maharaj:** Mr. Ali submitted an amplified written
11 statement to the Commission dated 5th October, 2022,
12 containing a statement previously submitted by him together
13 with his amplified evidence. And that statement is at the
14 witness statement bundle 936. He was interviewed by Counsel
15 to the Commission on the 6th October, 2022 in the presence of
16 LMCS' attorney-at-law. A supplemental witness statement was
17 prepared by the Commission and signed by Mr. Ali on 31st
18 October, 2022, and that is at the witness statement bundle page
19 1129.

20 Since January, 2020, Mr. Ali has been LMCS' Health
21 Safety and Environment Manager. He was previously
22 employed by Petrotrin in its HSE Department between 2010
23 and 2018 and intermittently with Paria between 2018 and 2019.
24 As part of LMCS's submission for the bid for the project, Mr.
25 Ali prepared the HSE plan which included the risk
26 assessments—and those are at the core bundle of documents,
27 Volume II, pages 841 to 847; the Site Specific Safety Plan,

1 which is at the core bundle, Volume II again at page 852, the
2 COVID-19 Work Practices at the core bundle 873, and the
3 Emergency Response Plan also in the core bundle at 877.

4 Since the scope of works were divided into three main
5 sections, Mr. Ali prepared a risk assessment for each section.
6 The risk assessment prepared by him in relation to the works
7 which were being done by the divers at berth 6 in the
8 hyperbaric habitat are the section "A" works of the scope of
9 works.

10 In order to prepare that risk assessment, Mr. Ali reviewed
11 the method statements, which was at the core bundle 653,
12 which was prepared by Mr. Kazim Ali Sr. to determine how the
13 work was planned to be executed and then he envisioned what
14 type of scenarios may be encountered which leads to harm. He
15 then used the risk assessment procedure to evaluate how likely
16 those scenarios were to occur and how severe the consequences
17 of those scenarios are.

18 He then put together a list of control measures for those
19 scenarios which would help reduce the risk. Mr. Ali says from
20 a safety perspective that the following were identified by him.
21 One, it was a personal hazard for the divers to perform work in
22 the habitat with diving gears intact, so they were required to
23 take off their diving gears in the habitat to carry out their works.

24 The habitat was last used by LMCS in 2020 and an
25 operations pre-work checklist was developed to target the safety
26 of the habitat, and that is at the core bundle page 850. The
27 requirement for safety for the use of the habitat was based on

1 the air pressure and quality of breathing air within the habitat.
2 From all indications and previous work done in the habitat,
3 there was never a likelihood of a risk other than flooding, fire,
4 or toxic air within the habitat.

5 Mr. Ali says that the plan which was devised for rescue
6 involving the divers were directly related to a risk of a chamber
7 being flooded which was foreseeable and addressed. According
8 to Mr. Ali, the scenario of the divers entering the pipeline was
9 not identified by him in the risk assessment because there was
10 no need for the divers to enter the pipeline to execute work at
11 any point in time, and also the pipeline would have been
12 disconnected from Paria's system.

13 He said that based on his qualifications, training, and
14 work experience from previous LMCS works that he would
15 have been able to determine whether an event could have
16 occurred and caused the men to be sucked into the pipeline.

17 Mr. Ali stated that he was satisfied based on the method
18 statements that the scenario of the men entering the pipeline
19 would not have occurred because the method statement required
20 that LMCS remove only enough pipeline contents from the riser
21 at berth 6, sufficient to give room to install the mechanical and
22 inflatable plugs in the riser and by leaving the contents of the
23 pipeline, LMCS minimized the void space. In addition, he says
24 that whilst the works in the habitat were ongoing, the other end
25 of the pipeline would have been blanked and tight. The method
26 statement which Mr. Ali is referring to is at the core bundle
27 659.

1 Mr. Ali's evidence is also that after the contract was
2 entered into, Paria requested method statements and job hazard
3 analysis known as JHAs for specific tasks within the job so they
4 could be integrated into the permit to work to be issued for the
5 task. He says that the JHA is similar to a risk assessment.

6 One of the first tasks to be done in relation to the project
7 was the clearing of Sealine 36 between Berths 5 and 6. Mr. Ali
8 says that this was done in two phases and the method statement
9 and JHA was prepared by LMCS and approved by Paria for
10 each phase, and also printed as part of the permit to work
11 system for the line clearing task. The method statement in JHA
12 for phase one is at the core bundle, pages 1028 to 1030 and the
13 method statements in JHA for phase 2 is in the core bundle at
14 pages 1041 to 1044.

15 Mr. Ali attended a meeting on the 14th February, 2022
16 with representatives from LMCS and Paria to discuss the works
17 to be done in the hyperbaric habitat. He can't recall everything
18 that was discussed and only to note as it pertains to his duties.
19 In relation to recordkeeping by LMCS, Mr. Ali says that daily
20 reports for the project would have been done by Kazim Ali Jr.
21 He doesn't know how frequently this was recorded in writing
22 by Kazim Ali Jr.

23 Mr. Ali also states that all of the works which were to be
24 conducted in the hyperbaric habitat for the change out at the
25 riser at berth 6 were to be conducted on the 15th and 16th
26 February. The works went smoothly on the 15th February, but
27 the second day of work was the 25th due to an issue which

1 occurred resulting in suspension of works by Paria. A specific
2 method statement and accompanying JHA was produced by
3 LMCS for the works to be done in the habitat. This is the
4 method statements dated 4th January, 2022, and the JHA dated
5 10th December, 2022, both of which were attached to the
6 permit to work on the 25th February.

7 On the 25th Mr. Ali arrived at berth 6 when the toolbox
8 meeting was in progress. The toolbox meeting is essentially a
9 safety meeting discussing both the works for the day and the
10 safety. The toolbox meeting was conducted by LMCS' Safety
11 Officer, Victor Dhillpaul. Mr. Ali stated that it would have
12 been Mr. Kazim Ali Jr's job to inform the divers of the job to
13 be done that day at the toolbox meeting. He assumed that Mr.
14 Kazim Ali Jr. had already done this by the time he arrived at the
15 meeting. He also says that he recalls Mr. Dobson from Paria's
16 HSE being present. Mr. Ali conducted the breathing air quality
17 test in relation to the habitat and Paria personnel carried out an
18 air test of the habitat's vent. Mr. Ali then left berth 6 and
19 returned to the office.

20 In relation to the permit to work, which is at the core
21 bundle page 1074, Mr. Ali stated that from his experience this
22 document does not identify every aspect of the task to be done
23 on that day, as there are only two to three lines of space for a
24 summary of what completion is expected to entail. He also
25 stated that LMCS' supervisor is responsible for ensuring that
26 the job is being done in accordance with the permit to work.
27 He further stated that the job is expected to be done in

1 accordance with the method statement, and as far as he was
2 aware, there was no agreement between LMCS or Paria to
3 change the steps in the approved method statements.

4 On the 25th February there was a camera in the habitat
5 with a live feed. LMCS' supervisor and dive supervisor were
6 to monitor the job from this live feed. He also stated that there
7 would have been an operations representative present from
8 Paria and Paria also usually assigns a safety person.

9 At about 3.10 p.m. Mr. Ali was informed about the
10 accident from LMCS' Victor Dhillpaul. At this stage it was
11 unclear if the men had been pushed out of the habitat or pulled
12 into the open pipe. At about 3.50 p.m. Mr. Kazim Ali Sr. told
13 him that it was assumed that the men were pulled into the
14 pipeline and there could potentially be some fatalities.

15 Mr. Ahmad Ali went to Paria at about 4.10 p.m. that day.
16 He first went to Paria shipping building to try and get
17 information, but he said he did not get any. Nobody there from
18 Paria asked him to join in any meetings. When we got to berth
19 6 he ascertained that Paria had taken the folder from LMCS'
20 barge containing the permits to work and other documents. He
21 was also informed by other LMCS personnel about a proposed
22 rescue plan, and there was a lot of back and forth about the plan
23 between LMCS and Paria. Mr. Ali stated that Catherine
24 Balkissoon of Paria was receptive to them and had a lot of
25 questions about the job and how a rescue could be done. She
26 relayed the information she received on the telephone and
27 advised on the instructions she received which was that there

1 was no permission to dive.

2 Mr. Ali was told by Catherine Balkissoon that LMCS'
3 operations were on hold until the coast guard arrived to take
4 over rescue operations. Until then, LMCS was to keep
5 monitoring the situation at both ends of the pipe section and
6 provide information to Paria through her. When the coast guard
7 vessel arrived, the officer spoke to Catherine Balkissoon. Mr.
8 Ali stated he inserted himself into the conversation and from
9 what he gathered, the coast guard did not know why they were
10 there. They drew the coast guard officers a diagram of the
11 chamber and the pipe. The Coast Guard said they didn't know
12 they were coming to rescue anyone. None of the coast guard
13 officers touched the water. They took no action to perform a
14 rescue effort and seemed to remain on their vessel for the rest of
15 the night.

16 Based on his conversations with Catherine Balkissoon,
17 Mr. Ali genuinely believed that she felt when the coast guard
18 arrived they would have taken over rescue operations.
19 However, this did not occur. There were a number of private
20 diving crews and persons arriving to assist. Mr. Ali observed
21 LMCS' Andrew Farah going to Catherine Balkissoon and asked
22 him whether they could be permitted to attempt an extraction.
23 His standard response was that nobody was to enter the
24 chamber.

25 Eventually, LMCS was given the go-ahead to attach the
26 new riser section of the pipeline to allow for the end of the
27 pipeline at berth 5 to be opened to allow for easier access to the

1 pipeline interior. Mr. Ali also observed the arrival of cameras
2 on Friday night and Saturday morning which had to be inserted
3 into the pipeline. He left Paria at about 7.00 a.m. on Saturday
4 morning. He, thereafter, assisted with the preparation of a risk
5 assessment for a rescue plan for Paria's consideration which is
6 at the core bundle page 1126. He states that there's logic
7 behind the explanation that it was a Delta P incident that caused
8 the men to be sucked into the pipeline, but he can't say what
9 caused it. He says that every conceivable risk to the job was
10 addressed and what occurred was not foreseen.

11 Do you agree with that summary of your evidence, Mr.
12 Ali?

13 **Mr. Ali:** Yes, I do.

14 **Ms. Maharaj:** Thank you.

15 **Mr. Chairman:** Thank you. Thank you very much.

16 **Mr. Ali:** Could I just say—

17 **Mr. Chairman:** Yes, of course, you can.

18 **Mr. Ali:** Not to change anything in the summary, I noticed two
19 things while we were going through the summary. The first
20 thing I want to address is that the method statement for the—the
21 second method statement for the second phase of the clearing of
22 the line, there is a typo on that. It says it's revision zero, but
23 that one dated January is actually revision one. So there's a
24 typo on my end. And the second thing is there is a period of
25 time between when I found out about the incident on the—

26 **Mr. Chairman:** Between when?

27 **Mr. Ali:** Between?

1 **Mr. Chairman:** Period of time between when?

2 **Mr. Ali:** Between when I found out about the incident on
3 Friday afternoon and I arrived at shipping, because I went first
4 to Badger Docks, our base of operations, and I stayed there for
5 about an hour and a half before going to shipping.

6 **Mr. Chairman:** Right, okay. Thank you.

7 **Examination By Mr. Chairman:**

8 Q. In that regard, I see from your original statement that you say
9 it's at about ten past three in the afternoon of Friday that you
10 got a call from a Mr. Dhillpaul reporting that the surface crew
11 had disappeared?

12 A. Yes.

13 Q. What was the thought as to where they were at that time, or
14 they might be?

15 A. I asked and he said they just didn't know, and Andrew was
16 checking the chamber.

17 Q. All right. Had the hyperbaric chamber been checked?

18 A. At that point in time I believe they were in the process of
19 checking the chamber.

20 Q. Right. And was the ocean around the berth at 6 being checked?

21 A. At that time, no. I found out afterwards that he did a sweep
22 around the—Andrew did a sweep around the berth after
23 checking the chamber.

24 Q. When did you first come to believe that it was possible the men
25 were inside the pipe?

26 A. Well, honestly, immediately. That was my first thought.

27 Q. Sorry?

1 A. Immediately. That was my first thought.

2 Q. That was your first thought?

3 A. Yeah.

4 Q. That they were in the pipe?

5 A. If they couldn't be found.

6 Q. Why did you think that?

7 A. If they couldn't be found outside and no one saw anyone
8 exiting the chamber—because there isn't much space between
9 the bottom of the chamber and the water. You don't have—

10 Q. You are a very softly spoken man. So please speak very clearly
11 into that microphone if you would, please.

12 A. I'm just saying that it should have been possible, or it could
13 have been possible for them to see anybody exiting the
14 chamber.

15 Q. Right.

16 A. So the fact that they didn't see anything and nothing was
17 floating out of the chamber, my thought logically the only other
18 place they could be is inside the pipe.

19 Q. And did you have any view about how they might have got into
20 that pipe?

21 A. No.

22 Q. No. All right. Did anyone say anything to you about whether
23 they were or were not inside the pipe?

24 A. No, no one said anything until I spoke to Kazim Sr.

25 Q. Kazim Ali Sr.?

26 A. Yeah.

27 Q. Are you related to him?

1 A. My uncle, yes.

2 Q. He's your uncle. All right. It follows from that, that his son
3 was your cousin?

4 A. Yes.

5 Q. I'm very sorry about that. So you say the first time you heard
6 anything about it was from him?

7 A. Yes.

8 Q. Kazim Ali Sr?

9 A. Uh-huh.

10 Q. What did he say?

11 A. He was honestly a bit distraught, and he said that since they
12 couldn't find anybody again, they assume that they had to be
13 inside of the pipe.

14 Q. Right. Well, I'm not surprised he was distraught. But that was
15 his belief?

16 A. Yes.

17 Q. At what time was this?

18 A. The call I had with him was—I can't remember the time that
19 Ms. Vijaya just [*Inaudible*].

20 Q. Well, you say in your statement—it's not a secret—you say in
21 your statement, "I called Kazim Ali at 15:50 hours."

22 A. Yes.

23 Q. So 10 to 4.00 that afternoon, something in the order of a half an
24 hour, or 40 minutes or so after you first heard?

25 A. Yes.

26 Q. And that was his belief, that they might be in the pipe?

27 A. Yes.

1 Q. Did you, between you and him, or anyone else at LMCS,
2 formulate any kind of plan as to what you might do about it?

3 A. No. At that time he was at the—on our barge at the site at berth
4 6, and he was speaking with Andrew Farah, and I would
5 assume other LMCS employees there.

6 Q. Thank you. Just a moment. Yes. Can I ask you next about the
7 toolbox meetings, please? How long does a toolbox meeting
8 normally last?

9 A. Normally about five minutes; ten minutes.

10 Q. Right. So it would only be a short résumé of the safety aspects
11 of the work being carried out on that day. Is that right?

12 A. Yes.

13 Q. Two things arise from that, it seems to me. First of all, what is
14 to be carried out on that day, and then, secondly, what the
15 implications are of the work that's to be carried out that day.
16 Do you follow?

17 A. Yes.

18 Q. So before a safety officer, of which you are one, can address the
19 safety issues, he would need to know what was being done,
20 wouldn't he?

21 A. Yes.

22 Q. How would he know that?

23 A. Our documents. Our method statement and JHA.

24 Q. Your document, method statement.

25 A. And JHA.

26 Q. Right. Would you look at, please, 1074 in our bundle please?

27 **Mr. Chairman:** Can it be put up on the screen?

1 **Examination By Mr. Chairman:**

2 Q. This is the work permit—I'm sure you are familiar with it—for
3 the work that was to be carried out on that day.

4 A. Yes.

5 Q. Do you see it says, various maintenance work on 56, 36 riser?
6 Now, they knew that this was a new work permit that had to be
7 issued because the original one, that was beyond the seven-day
8 limit of a work permit—there'd been this gap between the first
9 work permit being issued, there was a stop on the work, and
10 then there was this new permit being issued. All right? So this
11 work permit, in essence, reflects what was on the original work
12 permit. All right?

13 A. I can't say I remember what was on the original permit.

14 Q. Well, ignore that then and just have a look, please, the next box
15 which—stop just there. Thank you. So you can see there, it
16 describes a job and then specific tasks, and it sets out what
17 those specific tasks are, which we are all now very familiar with
18 and you may be yourself. It says nothing, does it, on there
19 about the removal of any of the barriers?

20 A. Yes.

21 Q. Should it?

22 A. I don't think it needs to be there, no.

23 Q. All right. Secondly, do you see in the second box it says—it
24 specifically addresses the question of barriers because under the
25 heading: "Cleared of process/hazardous materials". It says,
26 "Yes". And then "Comments" next to that is: "Migration
27 Barrier to be used."

1 A. Yes.

2 Q. Did you understand that the migration barrier had already been
3 installed?

4 A. Yes.

5 Q. In relation to some of the work that was part of this project?

6 A. Yes.

7 Q. Do you see above that it says: "Isolated by blind
8 flanges/blanks/spool removal/valve". I'm pausing there for a
9 minute. As I understand it, this is isolating the piece of "U"
10 pipe that existed between 5 and 6. All right? So that when I
11 say isolated, taken out of service from all the other pipe work
12 that exists above surface, all right, so that you literally just had
13 this "U" bend effectively, for want of a better expression.

14 A. Well, isolation doesn't necessarily mean disconnection. It
15 could just be that the valves are shut, blinds are installed, so
16 that it's not continuous with the rest of the piping.

17 Q. Well, we know, as a matter of fact, it was isolated, because they
18 put a blind flange over on 5 and they were now working on 6.

19 A. Yes.

20 Q. And the elbow bend above the surface had been cut away and
21 taken down.

22 A. So at this point, yes, we would have already removed the
23 topside [*Inaudible*]—

24 Q. So this work permit which was for the purposes of carrying out
25 the operations on that day, without it you can do nothing.
26 That's right, isn't it?

27 A. Yes.

1 Q. All right. Scroll, please, to the next box which is 3. And there
2 you can see a number of documents are attached to the
3 document. All right? I happen to have a copy of how it was all
4 at the time. So there's the work permit. On the back of the
5 work permit—is there a document on the next page, please?
6 Can you just put up the next page? No, it's not that page. Just
7 a moment. I just want to show you a document—9839. Can
8 we have 9839, please? Yes. No, it's not that. Scroll up a little
9 further please. Yes, that document. That's 9839. It's that on
10 the back of the work permit?

11 A. Yes; work permit is two-sided. So these two is just at the back.

12 Q. So it's two side?

13 A. Yeah.

14 Q. All right. So I've got that right. So the one piece of paper has
15 on the front of it the details of the work permit, and on the back
16 it's got this part. Can you just shrink it down a little for me,
17 please? Which includes a box which deals with daily work
18 suspension, doesn't it?

19 A. Yes.

20 Q. And we could see that we've been told already that that deals
21 with the suspension of work at 1522 hours after the incident had
22 happened?

23 A. Yes.

24 Q. So that is the document that is the work permit. No one look
25 like that. People fill them in, in the appropriate way for that
26 particular job?

27 A. Yes.

1 Q. Attached to that work—if we can get back to the original,
2 please; the work permit it's at 1074. Attached to that we can
3 see that at box 3 there are a number of documents which it
4 shows, yes, that are attached to it. Is that, again, a normal
5 process? Is that what normally happens?

6 A. Yes.

7 Q. You've been at LMCS not that long, have you?

8 A. No.

9 Q. I think from 2020, is that right?

10 A. 2020, yeah.

11 Q. Where were you before that?

12 A. I was in Petrotrin, and then I served a very brief stint in Paria.

13 Q. Right. So before you worked for LMCS you had actually
14 worked for Petrotrin who were the predecessors to Paria?

15 A. Yes.

16 Q. And you had a short stint with Paria as well?

17 A. Yes.

18 Q. And then you joined LMCS?

19 A. Yes.

20 Q. So can we take it that you know, as a Health and Safety Officer,
21 senior officer, you know how their systems work?

22 A. Yes.

23 Q. So it is perfectly common that the work permit would have
24 attached to it a number of other documents as necessary?

25 A. Yes.

26 Q. In this bundle of documents as necessary, included a hot work
27 certificate—we don't need to put it up—and then a method

1 statement. Is that right?

2 A. Yes.

3 Q. The method statement has been drafted by LMCS?

4 A. Yes.

5 Q. And then revised as and when necessary?

6 A. Yes.

7 Q. Is that how it works?

8 A. Yes.

9 Q. Can I ask you, please, to have a look next, then, please, at that
10 method statement. And do you see at page 1048 in our bundle,
11 you've seen these before I dare say?

12 A. Yes.

13 Q. But this particular one deals with the method of work for this
14 project, not just that day, for the whole project. All right?

15 A. Yes.

16 Q. Can I ask you, please, to turn to line 51 onwards? This deals
17 with the performing a dye penetration test. This is to check the
18 integrity of a weld, we've been told. All right?

19 A. Yes.

20 Q. I'm not particularly interested in that. I simply want to
21 understand how the process works, according to you. All right?

22 A. Yeah.

23 Q. Because you can't perform your job until you know what's
24 going to be done on that day.

25 A. Yes.

26 Q. That's what you told us. And the way in which you know
27 what's going to be done on that day is by looking at a method

1 statement. Correct?

2 A. Yes.

3 Q. Which you or your firm have drafted. Correct?

4 A. Yes.

5 Q. What do you understand the numbering on this system to
6 represent?

7 A. Well, the numbering is just the order we expect jobs to be done
8 in.

9 Q. Say that again, please?

10 A. It is the order that we expect these things to be taken in?

11 Q. The steps?

12 A. Yeah.

13 Q. What steps?

14 A. The steps to execute the job; the tasks that we have to do to
15 execute the job.

16 Q. Right. So if this document is wrong in any way, that's not your
17 fault. You are just following it as the steps to be taken?

18 A. Yes.

19 Q. So if it were wrong, those steps—somebody else's
20 responsibility?

21 A. Yes.

22 Q. Can I ask you please just to go to the next page? You see it
23 says there at 56 and 57:

24 "56. Manually remove migration barrier from line.

25 57. Manually deflate line plug and remove from line."

26 All right. These are the barriers, aren't they?

27 A. Yes.

1 Q. And they happen to be numbered 56 and 57?

2 A. Yes.

3 Q. And then after that we have:

4 "58. Manually install blind flange on riser by positioning
5 end flange on newly installed slip-on flange and securing
6 with fasteners."

7 I understand that to mean that where they cut off the piece of
8 pipe behind you on that diagram, where they cut the piece of
9 pipe at riser No. 6, they put a flange, which is like a plate that
10 goes around the pipe with holes in it, and then somebody else
11 puts another piece on top which has got similar plate with holes
12 in it, and then those holes are bolted together. Yes?

13 A. Yeah.

14 Q. Now, you've repaired the bit that was busted by having cut that
15 piece away?

16 A. We were just removing that. We weren't repairing.

17 Q. Sorry?

18 A. We were just getting rid of that. We weren't repairing it.

19 Q. You were getting rid of it, exactly, yes. But you've repaired the
20 pipe?

21 A. Yeah, the pipe itself, yes.

22 Q. All right. So that part of the job, was that to be done on the
23 day?

24 A. Yeah.

25 Q. So putting the flange, joining the two pieces together that had
26 been cut off, new flange put on, and then there was to be some
27 CARBER testing. You understand what a CARBER test is?

1 A. Yes.

2 Q. Right. Then we're going to do this CARBER testing. Couldn't
3 do that for a variety of reasons. And then after that, there was
4 going to be this other piece put on top. Is that what you
5 understood to happen that day?

6 A. Yes. By the end of the day, we would have made up the new
7 riser.

8 Q. Did you know whether or not the hyperbaric chamber was
9 supposed to stay in [*Inaudible*] or be taken off?

10 A. I don't know.

11 Q. You don't know?

12 A. No.

13 Q. But either way, did you understand from this, be it right or
14 wrong, that the migration barriers were to be removed from the
15 line before putting this thing on?

16 A. Yes.

17 Q. Would it be tricky to take them out after you put them on?

18 A. Yes.

19 Q. If somebody says no, they'll get an opportunity to ask him
20 questions about it in a moment. But it would have been tricky,
21 I suggest, to take them off afterwards?

22 A. Yes.

23 Q. No doubt you'll be told that that's not the case. But, anyway, I
24 just need to understand what that position is. So thank you very
25 much for that.

26 This document, was this attached to the work permit?

27 A. Yes.

1 Q. Lastly, this, please. In your statement, your supplemental
2 statement, in answer to questions posed to you by the legal
3 team, you say this at paragraph 64—can it be put up on the
4 screen, please? Supplemental statement, 1239. Go back one
5 page, please. Go to paragraph 60, first of all. Paragraph 60;
6 thank you; pause there. This is now Sunday 27th February, all
7 right. So we're now two days after what has happened. You
8 say this:

9 "I was told by Kazim Ali Sr that the meeting had been
10 scheduled between him, Andrew. Conan, and Paria
11 officials about a rescue plan."

12 Is that right?

13 A. Yes.

14 Q. And he says this—or you say.

15 "He told me that part of the request from Paria was to
16 come with documents as if it was a normal job."

17 So the method statement, risk assessment, and certificates for
18 divers would need to be submitted.

19 A. Yes.

20 Q. Can I ask you, in a normal job, how long would that take you to
21 put together?

22 A. Our end of the—

23 Q. Yes.

24 A. Couple hours, a day maybe, depends on the complexity of the
25 job.

26 Q. Depending on the complexity of your job. But you are to put
27 together a method statement, a risk assessment, and certificates

1 for divers as part of that normal job. And that will take you a
2 few hours—a couple, I think you said.

3 A. Yes.

4 Q. Do you mean by a couple two or more?

5 A. Two.

6 Q. And I assume this is something you do all the time?

7 A. Yeah, but I can't say for certain under normal conditions how
8 long it would have taken to do it.

9 Q. Right. Nonetheless, did you prepare those documents?

10 A. Yes.

11 Q. And how long did it take you?

12 A. I can't say I remember. It was submitted on that same
13 afternoon. So it couldn't have taken longer than three, four
14 hours.

15 Q. Three or four now. So a few hours either way. Did you—turn
16 to paragraph 64, please? Did you have any sense of any
17 urgency being expressed by anybody in this enterprise to try
18 and rescue these men?

19 A. No.

20 Q. You say at the second half of paragraph 64: They moved in a
21 way—"They" being who?

22 A. Paria.

23 Q. Paria moved in a way that was overcautious when concerned
24 with saving a life. They should not have been asking for
25 documents to conduct a rescue when you have competent
26 professionals saying it can be done.

27 Why did you say that?

1 A. I believe that Paria was taking advice from external experts—

2 Q. From?

3 A. External experts that they called in. And that's fine if they want
4 to take advice from persons who have experience. But on our
5 end I believe that since the day of the incident we, LMCS, had
6 qualified commercial divers on site, on the site looking at the
7 site, aware of the conditions, and they were saying that they are
8 prepared. It is possible to do an extraction. They are prepared
9 to attempt it with their resources that they had available.

10 Q. Well, they didn't, as a matter of fact, did they?

11 A. No, well, they couldn't. Well, they were not allowed to.

12 Q. I'm sorry?

13 A. They were not allowed to.

14 Q. Not allowed to. By?

15 A. By Paria.

16 Q. You used the word, "overcautious". What do you mean by
17 that?

18 A. Obviously, caution is necessary in something like this.

19 Q. You say that again, please?

20 A. Obviously, caution is necessary in something like this. You
21 need to be aware of the risks. You don't want to send some
22 person into a dangerous environment. But I believe the way
23 that they were handling the job and handling the preparation for
24 the job was erring too much on the side of caution when, again,
25 you have experienced personnel telling you that the risk is
26 acceptable and they are willing to do it.

27 Q. Did you liaise at all with officers from Paria, in particular the

1 HSE officers from Paria?

2 A. No. I didn't have much conversation—

3 Q. Did they liaise with you?

4 A. I don't recall if I ever spoke to any of them.

5 **Mr. Chairman:** Thank you very much. Yes. Cross
6 examination, first of all, Mr. Peterson.

7 **Mr. Peterson SC:** Thank you, Sir.

8 **Cross-Examination By Mr. Peterson SC:**

9 Q. Good morning, Mr. Ali.

10 A. Morning.

11 Q. Can you assist us with the level of your training that qualified
12 you for the position of an HSE Manager?

13 A. My training—my formal training is in Environmental and
14 Natural Resource Management. And then my only other
15 training—I don't have any formal HSE training—safety
16 training, I should say. It's all work experience with Petrotrin.

17 Q. It's all work experience. So you have not had any training in
18 the risks including Delta P specifically?

19 A. No.

20 Q. Before February, were you aware of the concept of Delta P?

21 A. Yes.

22 Q. What exposure you had to that apart from knowing of the—

23 A. Well, that's basically it; just general industry knowledge of
24 Delta P being a concern in diving.

25 Q. Right. And what you understood generally to be the risk of
26 Delta P?

27 A. The main risk with Delta P is when there's a difference in

1 pressure between two locations and a barrier separating them.
2 When the barrier is removed, the equalization of the pressure
3 causes a flow from high to low and becoming entrained in that
4 fluid is the main risk of a Delta P.

5 Q. Right. Just on that definition you just gave me there, you
6 recognize that that fits squarely on the scope of work to be
7 done, at least in the phase where this incident occurred?

8 A. Yes.

9 Q. Having recognized that it fits almost squarely in the scenario of
10 the incident that occurred, was Delta P factored into your
11 assessment as the Risk Manager?

12 A. Yes, but we believe that the risk was low because we were
13 supposed to have a pipe full of fluid. And because the pipe was
14 supposed to be full of fuel oil, there will be no space for the
15 atmosphere to flow into it.

16 Q. Right. So let's take that slowly. You did consider Delta P but
17 you consider it to be a low risk because of the clearing of the
18 line supposed to be at a certain level, leaving content?

19 A. Yes.

20 Q. Right. I'm sure the fault is mine, but I have searched all these
21 documents leading up to the 25th February and I cannot find the
22 word Delta neither Delta P.

23 A. No. There's no explicit statement of Delta P being considered
24 in the risk assessment. That is true.

25 Q. Thanks, because I thought I was missing something. But in a
26 risk assessment and a job risk—JHA you call it?

27 A. JHA or JSA.

1 Q. Right, or JSA. Once you recognize the existence of a risk or
2 the risk of a risk you're supposed to document it, and explain it,
3 and put mitigating factors in. Isn't that so?

4 A. Yes.

5 Q. Could you tell us where in your JHA or JSA you have
6 recognized, you have documented the risk that you just admit
7 that you considered and considered to be low? Where in those
8 you have embodied that and explained it away or put mitigating
9 factors in?

10 A. Again, I'll say, we thought that it was not necessary to include
11 it because it seemed unnecessary to us at the time. So there's
12 no explicit statement of Delta P being accounted for.

13 Q. All right, I accept that. But in hindsight, you recognize that you
14 were wrong?

15 A. I recognize that we could have put it, yes.

16 **Mr. Chairman:** Sorry, I missed that. You recognized what?

17 **Mr. Ali:** We recognized that we should have put it.

18 **Mr. Chairman:** You should have?

19 **Mr. Ali:** Yes.

20 **Mr. Chairman:** Does that mean that following this incident
21 you as an HSE Officer, senior officer, would ensure that the
22 question of Delta P was always in a risk assessment where
23 pipes are involved?

24 **Mr. Ali:** Yes. Well, we will put it in any diving risk
25 assessment.

26 **Mr. Chairman:** Say again?

27 **Mr. Ali:** We could include it in any diving risk assessment.

1 **Mr. Chairman:** All right. Thank you.

2 **Continued Cross-Examination By Mr. Peterson SC:**

3 Q. Right. So you said you should have put it looking back at
4 things now?

5 A. I said we could have put it, yes.

6 Q. You could have put it. Well, that's the difference. That's what
7 I'm struggling with. We know that you could have put it
8 because the paper is there and you could have put it. My
9 question is, not that you could have done it, but whether you
10 should have done it. You understand the distinction I'm
11 making, which is not a fine one?

12 A. Yes, I understand the distinction.

13 Q. Right. So do you accept that you should have put it?

14 A. Sure.

15 Q. Right. And do you accept—you did answer to the learned
16 Commission earlier that in your risk assessment if the—you
17 work off the method statements to develop your risk
18 assessment?

19 A. Yes.

20 Q. And you said if the method statement is wrong, you work with
21 that and develop your risk assessment off of that?

22 A. Yes.

23 Q. Isn't part of your responsibility to also scrutinize and peruse the
24 method statement to see that something there may be wrong
25 that could cause a risk because of the steps being in a particular
26 order?

27 A. I could question the method statement, yes.

1 Q. You could question the method statement. I could understand
2 that, because if the plugs are to be removed at the wrong time, it
3 could create a problem?

4 A. Yes.

5 Q. Because those barriers are put there for a purpose?

6 A. Yes.

7 Q. Right. Did you scrutinize 116 method statement? It has the
8 number 116. When I say 116, that's what I'm referring to.

9 A. The line clearing?

10 Q. Beg your pardon?

11 A. Which one is 116?

12 Q. The January one, the last one that you said supposed to have
13 revision one in the brackets as opposed to zero? We could pull
14 it up.

15 A. You can remind me about which one that was? I mean, I read
16 through all of them. The answer is yes. I just can't remember
17 which one you're speaking about.

18 Q. The last one. Let us call it the last one we are working with.
19 Did you scrutinize that to see if any of those steps were, in fact,
20 out of place?

21 A. I wouldn't say out of place. I could question why they were in
22 place, but I'm not making a call about whether something is
23 right or wrong.

24 Q. Oh. So you have no—you're not required to have any input
25 into the method statement?

26 A. Required, no.

27 Q. But you would agree with me that depending on how the steps

1 are set out in the method statement by the mere order of them,
2 that could create a risk; apart from the fact of the step, the order
3 in which the step is set out could create a risk?

4 A. Yes.

5 Q. Right. So I'll go back to my question. So as part of your duties
6 is to recognize whether the order in that method statement has
7 created a risk for which you have a responsibility to cater for.
8 Isn't that so?

9 A. Yes.

10 Q. Right. When you look at 116 even before the job or since then,
11 have you seen an order there that created a risk that you should
12 have considered?

13 A. I see something that we did consider. That's why I asked
14 about—well, I asked Kazim about whether or not—

15 Q. We are not hearing you.

16 A. I saw a risk and I could query the reason why the steps are in
17 the order that they are in and if we could shuffle them around.
18 But it's not my place to make the final decision about whether
19 or not it is moved or—

20 Q. So let's go to the method statement and you would tell us what
21 risk you recognize and what discussion you had with Kazim.
22 This is Kazim Ali Sr?

23 A. Senior.

24 Q. Okay. Could you assist by scrolling for me to the steps? You
25 could start around—you could start around 51, 52. You could
26 jump to 51, 52; if that is the area in which you had the
27 discussion with Kazim Ali Sr.

1 A. I can't say I remember every discussion I had about it.

2 Q. I know, I know. I expect that you wouldn't. But I'm focusing
3 on the discussion with respect to the risk with respect to why
4 we are here today. Did you have any discussion with respect to
5 anything in the method statement with Kazim Sr. that you
6 recognize to create a risk?

7 A. I can't recall.

8 Q. You can't recall. In particular, you never discussed the
9 installation of the plug and/or the removal of the plug?

10 A. I can't recall.

11 Q. But you would agree with me that the installation and/or
12 removal of those plugs must be, if nothing else, the most
13 significant part of that method statement?

14 A. No.

15 Q. Okay. What you consider to be the most significant part of that
16 method statement?

17 A. The breathing air and maintaining the habitat inside the
18 chamber.

19 Q. The breathing air and—all right, I'm glad you take me there.
20 The breathing air you consider to be the most important part of
21 that?

22 A. [*Inaudible*], yes.

23 Q. The inflatable plug was placed for what purpose as you
24 understood it?

25 A. It was a fire protection to stop the vapours from hydrocarbons
26 in the line from coming into the oxygen rich environment.

27 **Mr. Chairman:** I'm sorry. I'm not hearing you. It happens

1 when somebody on that side is asking the questions, you zone
2 away from the microphone. So move the microphone, if that's
3 easier. Just move it in the direction that's helpful or yourself,
4 whichever. But you need to speak into it.

5 **Mr. Ali:** Yes, sorry. What I'm saying, it was supposed to be a
6 fire protection measure to stop the hydrocarbon vapours that
7 would have been in the line from the hydrocarbon in the line
8 from coming up to where we were doing hot work during the
9 removal of the top section of the riser, the leaking section, and
10 during the welding.

11 **Continued Cross-Examination By Mr. Peterson SC:**

12 Q. Wasn't it also to preserve the pristine nature of the air in the
13 chamber?

14 A. No.

15 Q. So if you had no hot works, the hydrocarbon could just come up
16 in the chamber where the men are working and that doesn't
17 matter?

18 A. We had positive pressure being maintained and the air is
19 constantly being exchanged.

20 Q. But you have a hyperbaric chamber checklist, don't you?

21 A. Yes.

22 Q. Do you want to help us as to some of the factors on that list,
23 relevant to the question I just asked you about the pristine
24 nature of the air in the chamber?

25 A. If you could bring up the checklist.

26 **Mr. Chairman:** It's at 1225; 1225, I believe. Hyperbaric
27 Chamber Operations Checklist. Is that what you want? 1225 in

1 Witness Statement Bundle Volume II. It's appended to his
2 statement. There it is. Mr. Peterson, it's on the screen.

3 **Mr. Peterson SC:** Yes.

4 **Mr. Chairman:** The copy that we have in our bundle is a bit
5 blurry. So I think you're probably better off trying to look at it
6 on the screen.

7 **Mr. Ali:** Yes. Well, they're not numbered, but the breathing
8 air checklist, the breathing air check, oxygen content, backup
9 breathing air—

10 **Mr. Chairman:** I'm not hearing what you're saying. Sorry.
11 You have a naturally soft voice, which is, I'm sure, very
12 endearing to many people, but it's not now helping us at the
13 moment. All right?

14 **Mr. Peterson SC:** You could have some water too, if your
15 throat is dry.

16 **Mr. Ali:** I apologize.

17 **Mr. Chairman:** No, you don't have to apologize for your
18 voice. Just help us so that we do hear what you have to say.

19 **Mr. Ali:** Yes. So centred on the screen there in the hyperbaric
20 chamber checklist, what I'm talking about is the breathing air
21 quality for breathing air checks, and so on, and having backup
22 air, and that sort of thing.

23 **Continued Cross-Examination By Mr. Peterson SC:**

24 Q. Right. But having a vent open to allow hydrocarbons to get
25 into the chamber is not a factor to take into account when
26 addressing air quality?

27 A. It could have been, but that is not what we put the migration,

1 the inflatable plug. That's not what the inflatable plug was for.

2 Q. All right. But why the—if the inflatable plug is only for that
3 purpose, not to keep out anything from coming up, what the
4 mechanical plug is for?

5 A. The mechanical plug was protection for the inflatable plug for
6 the hot works being conducted above it.

7 Q. Right. So you are saying that the inflatable plug in this scenario
8 played no role with respect to keeping the hydrocarbons out of
9 the chamber?

10 A. Yes, that's what it did. But it did that for the purpose of fire
11 protection, not for breathable air.

12 Q. Only for fire protection?

13 A. Yes.

14 Q. All right. But it serves both purposes?

15 A. It serves both purpose in this—

16 Q. You put it there for one?

17 A. Yeah.

18 Q. So that takes me to the clearing of the line.

19 **Mr. Chairman:** I'm sorry, Mr. Peterson. Your checklist has
20 as one of the criteria gas monitoring equipment present and
21 capable of monitoring vented chamber air. Sorry, I'm doing
22 that from a rather small print of this document. If this gas
23 monitoring equipment in the chamber—

24 **Mr. Ali:** No, outside of the chamber. On the top of the
25 chamber on the cubic part of the chamber, there is an air vent
26 that can be opened from the inside and also controlled from the
27 outside to let atmosphere from inside the chamber out. And so

1 we monitor using a hand-held monitor—Paria actually does
2 this—a hand-held monitor to check VOC, volatile organic
3 content, from the air inside the chamber.

4 **Mr. Chairman:** So the air inside the chamber is not being
5 constantly checked for its oxygen content?

6 **Mr. Ali:** No, it can't be, because we also have a tripod, a fixed
7 monitor system that we can put there. But it's usually checked
8 with the hand-held and the monitor is usually a little bit—

9 **Mr. Chairman:** Because what Mr. Peterson was asking you
10 was whether or not the barrier is put in there to stop the
11 hydrocarbons coming into the chamber—the hydrocarbon air.

12 **Mr. Ali:** Yeah.

13 **Mr. Chairman:** Right. You say, well, it is, but it's only really
14 to check against fire rather than a lack of oxygen or a question
15 of whether the divers who might be working in that chamber
16 might be overcome by fumes.

17 **Mr. Ali:** Yeah.

18 **Mr. Chairman:** So it's nothing to do with that?

19 **Mr. Ali:** No.

20 **The Chairman:** All right. Thank you for that. I just wanted
21 to be clear about that.

22 **Mr. Ali:** The primary function is the fire protection.

23 **Continued Cross-Examination By Mr. Peterson SC:**

24 Q. So the inflatable plug is only inserted in the hyperbaric chamber
25 if there are hot works to be undertaken?

26 A. Yes.

27 Q. According to your theory?

1 A. Yes.

2 Q. Which I'm not accepting, but that's your theory.

3 A. Yes.

4 Q. What is this alternative pressure you told me about, positive
5 pressure, that you said you didn't have to be concerned about
6 hydrocarbons coming into the chamber for breathing purposes
7 because you had the positive pressure. What is that? Explain
8 that to us.

9 A. We constantly have air, breathing equality air being pumped
10 into the chamber from above. And so that maintains a—that's
11 how we keep it dry and clear of water, and the bottom of the
12 chamber is open. So it is not a sealed—it is not a sealed; it's
13 not a door.

14 Q. The bottom of the chamber is opening to the sea?

15 A. Opening to the sea.

16 Q. So that's a flooring. It's not open above sea level. It's in sea
17 level. So the bottom of the chamber is—the flooring of the
18 chamber is, basically, apart from the metal you're standing on,
19 is water?

20 A. Yeah.

21 Q. Right.

22 A. And so, because of that, so long as we continue to pump in air it
23 bubbles out from the bottom, that is constantly. So it is a
24 constant exchange of air. We always have fresh air coming in
25 and atmosphere coming out.

26 Q. Yeah. That's the way you ventilate all chambers in that
27 scenario?

1 A. Yeah.

2 Q. Right. But because you ventilate all chambers that way, you're
3 telling this Commission that you had no difficulty with a
4 system where hydrocarbon is coming in as it wants because
5 you're bringing in some air from on top? That's what you're
6 telling the Commission?

7 A. Yeah. There was not very much concern about the vapours
8 because of the material itself, the fuel oil. It's not prone to
9 giving out very much vapours at normal temperatures.

10 Q. And why do you need gas monitoring equipment in the
11 chamber?

12 A. We don't have gas monitoring in the chamber.

13 Q. But is that on your checklist?

14 A. No, that is outside.

15 Q. No, but I mean it's to access what's in the chamber; it's to test
16 what is in the chamber.

17 A. Yeah, it's a backup just in case.

18 Q. It's a backup just in case?

19 A. Yeah. Again, for fire protection in case flammable material
20 gets inside.

21 Q. So the plug is not one of your backup systems—the inflatable
22 plug?

23 A. It is the system to prevent flammable material from getting
24 inside, yes.

25 Q. It's what?

26 A. It is the system to prevent flammable material from getting
27 inside the chamber.

1 Q. Not flammable material; hydrocarbons—well, yes. But for the
2 breathing—you see, that's the difference. You are telling this
3 Commission that keeping out the hydrocarbons was purely
4 because of hot works.

5 A. Yes.

6 Q. And I ask you, so in the scenario of no hot works, let the
7 hydrocarbon flow. Isn't that so?

8 A. Hydrocarbon vapours were not a concern to us because of the
9 nature of the material in the line.

10 **Mr. Chairman:** I think we've got as far as we're going to get.

11 **Continued Cross-Examination By Mr. Peterson SC:**

12 Q. Neither was Delta P?

13 A. Sorry?

14 Q. Neither was Delta P a factor?

15 A. So long as we had a full [*Inaudible*]; yes.

16 Q. Right. What system was put in place to monitor the
17 displacement of the content in the line to eliminate Delta P?

18 A. What system?

19 Q. Was employed to monitor the displacement of the contents of
20 the line?

21 A. We had manual supervision the entire time.

22 Q. Beg your pardon?

23 A. Manual supervision. It was overseen by both Paria and LMCS.

24 Q. You were a part of that risk assessment?

25 A. Risk assessment, yes.

26 Q. Yes. How was the line to be cleared?

27 A. Air blowing from berth 5 into a different line originally.

1 Q. I beg your pardon?

2 A. Air blowing.

3 Q. Yes.

4 A. Inject air at berth 5, it displaces the head at the riser at berth 5
5 down which pushes oil at berth 6 up and into a different line.

6 Q. Right. And what system, if any, to eliminate the risk of air
7 remaining between the top of the berth 5 and the last body of
8 oil?

9 A. Manually checking; yeah.

10 Q. A manual check?

11 A. Yeah.

12 Q. Where was that recorded?

13 A. I can't say.

14 Q. Where was that in your assessment for manual checks to be
15 done at berth 5 after the blowing of the air?

16 A. I believe it's in the method statement that we checked for the
17 level. You can only blow so far down.

18 Q. I beg your pardon?

19 A. We could only blow so far down before you start losing
20 suction. So you would just check the level and then if we have
21 enough—

22 Q. I'm talking about berth 5, not 6. You're blowing from berth 5
23 pushing the product up to berth 6?

24 A. Yeah.

25 Q. What method or what in your risk assessment did you cater for
26 checking to eliminate a void between the top of 5 and the last
27 area of body of oil in the horizontal line?

1 A. Just settling of the line.

2 Q. Umm?

3 A. There is nothing in place for that. It was just the settling of the
4 oil in the line.

5 Q. Right. But you realize that that could create a void that could
6 lead to Delta P?

7 A. Potentially, yes.

8 Q. I beg your pardon?

9 A. Potentially.

10 Q. Potentially. Did you, in your risk assessment, consider that
11 potential?

12 A. I don't believe it's there, no.

13 Q. In hindsight, now that we're in these air-condition
14 surroundings, that is a possible explanation for the Delta P
15 event that occurred?

16 A. I don't want to speculate.

17 Q. You what?

18 A. I don't want to speculate and say that, no.

19 Q. No, no. Well, we have to speculate now, because we don't
20 know, right?

21 **Mr. Chairman:** We don't.

22 **Mr. Peterson SC:** Beg your pardon, Sir?

23 **Mr. Chairman:** We don't have to speculate.

24 **Continued Cross-Examination By Mr. Peterson SC:**

25 Q. Well, you call it speculation, but you recognize that it's a good
26 explanation, a good possibility for the event?

27 A. I wouldn't say that, no.

1 Q. What caused the event?

2 A. I can't say.

3 Q. Why did you discount that scenario I just put to you?

4 A. Why did I discount—

5 Q. The scenario I just suggested to you.

6 A. The volume of air required.

7 Q. How much air was required?

8 A. You would have had to displace the line volume of the
9 horizontal section. We didn't do that much pumping.

10 Q. Had to what? I beg your pardon? I didn't hear that.

11 A. The volume of air that would have been required for that—

12 Q. For a Delta P?

13 A. For the scenario that we're talking about specifically.

14 Q. Yeah. Would have been?

15 A. We didn't inject that much air.

16 Q. How many barrels you removed?

17 A. I can't say. I wasn't present.

18 Q. And how can you say that amount of air wasn't injected?

19 A. Because there were two slops barge worth of oil that was
20 removed.

21 Q. Okay. Well, all right. Because of two slop barges of oil,
22 according to you, that were removed, that's what informed your
23 conclusion that you all didn't blow so much air to explain the
24 scenario I put to you that you say is speculation?

25 A. Based on the information I have, yeah.

26 Q. Right. Do you know that the evidence before this Commission
27 is that before they had those two barges of oil, they had been

1 pumping into 66 back on shore into the tank farm?

2 A. Yes.

3 Q. You knew that? So you know it's not only the two barges you
4 referred to?

5 A. Yeah.

6 Q. Mr. Ali, I am trying not to suggest something to you.

7 **Mr. Chairman:** Mr. Peterson, I think you should, in fairness
8 to him, distinguish between the pumping of material above the
9 sea level and the material below. I know there's both, but you
10 ought to make that clear.

11 **Mr. Peterson SC:** I will be going to all of that, Sir.

12 **Continued Cross-Examination By Mr. Peterson SC:**

13 Q. You say you only know about the two slop barges?

14 A. Volume-wise, yes.

15 Q. Volume-wise. But they will remove oil from topside; they
16 remove oil from the elbow; and they remove oil from 6 into 5.
17 You know that?

18 A. Yes.

19 Q. Right. The two slop barges is only part of the product that was
20 removed. You know that?

21 A. From my understanding, yes.

22 Q. Right. But you did not know that they were also pumping via
23 66?

24 A. Yeah, that was the—from my understanding, the topside of the
25 line. We had to do clearing first before you could remove the
26 line, otherwise we would have released oil.

27 Q. Yeah, but that's what you are saying, but all of that was not

1 from topside only. You know that?

2 A. No, I don't know that.

3 Q. All right. Well, we have evidence in here. But what—

4 **Mr. Chairman:** What was his answer to that? He did or he
5 didn't know about the removal of oil from the subsea level?

6 **Mr. Peterson SC:** No, not subsea, Sir. I think he said—

7 **Mr. Chairman:** Well, it's above the line and below the line.
8 Above—

9 **Continued Cross-Examination By Mr. Peterson SC:**

10 Q. What did you say?

11 A. What is the distinction in asking [*Inaudible*].

12 **Examination By Mr. Chairman:**

13 Q. Right. I want to understand, please, because Mr. Peterson has
14 been asking, and it's quite important. All right? You knew—I
15 think you said you knew that there was material being pumped
16 from 5 by blowing through to 6 which ended up in line 66. So
17 it was being blown out and straight back into a tank back on the
18 shore.

19 A. Yeah.

20 Q. You knew that?

21 A. Yeah.

22 Q. I think that's what you told Mr. Peterson?

23 A. Yes.

24 Q. Was that oil that was being pumped on shore oil from above the
25 water line or below the water line?

26 A. Well, I believe it was above.

27 Q. Above, right. Did you know of any material being pumped

1 from below the water line through that method into the tanks on
2 shore? Were you aware of that?

3 A. No. I thought that we had switched over to the barges.

4 Q. Right. So you understood—contrary to what we've heard so
5 far—but you understood that the oil that was being pumped into
6 the tank was oil from above the surface?

7 A. Yeah.

8 Q. Any oil that was pumped into the tank from below the surface
9 you are unaware of?

10 A. Volume-wise, yeah.

11 **Mr. Chairman:** Right. Thank you. I think that's where you
12 wanted to be, isn't it, Mr. Peterson?

13 **Continued Cross-Examination By Mr. Peterson SC:**

14 Q. How you know this?

15 A. How I know what?

16 Q. What you just told the Chairman.

17 A. When I spoke to our people, our supervisor, I was informed
18 about the change in using the barges afterwards.

19 Q. After the event?

20 A. Yeah.

21 Q. After the event?

22 A. Yeah.

23 Q. But you don't know—you said how much volume was pumped
24 back onto shore?

25 A. No.

26 Q. So you don't know if it came from on top or some of it in the
27 line.

1 A. I can't say for sure, no.

2 Q. So since you cannot say that—that's why I'm trying to get you
3 to say and that's why I'm—you don't know how much air was
4 pumped into 5 and the horizontal? You don't know.

5 A. No.

6 Q. Because you don't know how much content was removed?

7 A. Well, based on the information I had, it was two barges worth
8 of oil.

9 Q. Well, we went through that a while ago.

10 A. Exactly.

11 Q. But you don't know where those two barges—do you accept
12 now that not only two barges of oil were removed?

13 A. No. I don't know the volume.

14 Q. Okay. Well, we have evidence to the contrary.

15 A. Good for you.

16 Q. Did anybody tell you only two barges of oil was removed?

17 A. No.

18 Q. You understood the oil was to be removed to create what
19 situation for the installation of the plugs?

20 A. We needed to clear enough space in the line so that we have
21 clearance of about five-ish feet. The exact volume wasn't
22 necessary. About five-ish feet of space between the top of the
23 oil at berth 5 and 6, really, but berth 6 more importantly.
24 However, we wanted to install the inflation plug.

25 Q. You don't know that they were trying to get an ullage of 30
26 feet?

27 A. I can't say I know the exact figure. We needed clearance to

1 install the plugs below where we wanted to do the cut and
2 above where the oil stopped in the line.

3 Q. You heard anything about removing 300 barrels of oil?

4 A. No.

5 Q. First time you're hearing that is here?

6 A. No, not the first time I'm hearing that is here.

7 Q. Where you heard it before?

8 A. I know it came from the ITB proposal.

9 Q. What?

10 A. Our proposal for the ITB.

11 Q. Right.

12 A. Paria's ITB.

13 Q. Sorry, I didn't hear you.

14 A. Our proposal from Paria's ITB is, I believe, where it came
15 from.

16 Q. Right. But your method was to take it down to 30 feet. Well,
17 you say you didn't know about the 30 feet—take it down to a
18 point to insert the plugs?

19 A. Yeah.

20 Q. Right. Were you a part of the risk assessment in installing and
21 removing the plug?

22 A. Yeah.

23 Q. What was the risk engaged in installing the plugs? Any?

24 A. Nothing significant. It was mostly heavy lifting because it had
25 to be installed via crane.

26 Q. Right. And you had to assess the installation process for the
27 plug to assist in the proper installation of the plug from a risk

1 perspective?

2 A. I had to assess the?

3 Q. You had to assess the procedure for installing the plug from a
4 risk perspective?

5 A. Yeah.

6 Q. And also correspondingly removing those plugs?

7 A. Yes.

8 Q. Right. And in order to access, in order to properly assess the
9 installation and removal you have to be familiar with the
10 structure of the plug.

11 A. Yes.

12 Q. So the best way to do that is to go to the manufacturer's
13 literature on the plug?

14 A. Yes.

15 Q. Did you do that?

16 A. Yeah. I had mostly Kazim, Kazim Junior, Kaz, information on
17 that for the plug.

18 Q. So you didn't go to the data?

19 A. No, I didn't acquire the data. The plug was purchased before I
20 joined the company, so we had the information already.

21 Q. Did you have the literature?

22 A. Yes.

23 Q. You never went online and researched the plug and the
24 manufacturer's specifications?

25 A. Not before.

26 Q. You went after?

27 A. Yeah. We already had it, is what I'm saying. We purchased

1 the plug and we got it with the plug.

2 Q. Oh, no. I thought when you say not before, I thought you
3 meant you went online after.

4 So you were involved in the process for installation of the plug
5 and removal? Not the actual execution, but the plan?

6 A. The risk assessment, yes.

7 Q. Yes. Did you know that the plug was installed initially on the
8 13th February?

9 A. Yes.

10 Q. And the work actually executed on the 15th?

11 A. Yes.

12 Q. Some twelve days later. Did you factor that—did you assess
13 that period as a risk? The installation; the time period between
14 the installation; and the men going into the chamber to execute
15 the work twelve days later?

16 A. No.

17 Q. In hindsight, not speculation, in hindsight, you realize that there
18 was a risk there that should have been assessed?

19 A. I can't say that for sure.

20 Q. You can't say that for sure. Since this incident you have not
21 researched or tried to assist us as to whether that was a risk that
22 you all missed?

23 A. As far as I know, the plug held in place; it was inflated; it was
24 doing its job. So I can't say that it was a risk.

25 Q. How you know that?

26 A. They were executing their work and we had a camera on them.
27 We know that the plug was in place.

1 Q. Beg your pardon?

2 A. The men who were executing the work, they removed the
3 mechanical plug and then they had to remove the inflatable
4 plug.

5 Q. Did the inflatable plug—you don't know if it remained at its
6 same inflatable level from twelve days before?

7 A. No. But what I'm saying is I know that from the actual
8 execution of work, we know that the men saw the plug. It was
9 holding; it was in place; and it had to be removed.

10 Q. Now, the manufacturers of the plug—you know the brand of
11 the plug?

12 A. Lansas.

13 Q. Right. You ever came across literature about deflating and
14 removing the plug with a very bold warning on the literature of
15 the manufacturers?

16 A. Yeah.

17 Q. You came across that?

18 A. I submitted it to the Commission, yes.

19 Q. You submitted it to the Commission. Right. You knew about
20 this between the 13th and the 25th?

21 A. Yes.

22 Q. You knew of this warning before the 25th. Who did you tell
23 about it?

24 A. Kazim. But Kazim was the one who procured the plug, so he
25 was already aware.

26 Q. I wasn't hearing you, sorry. Slowly.

27 A. Kazim Jr.; Kazim Jr.

1 Q. You told Kazim Jr. about this warning?

2 A. No, I didn't speak to him about it directly, no. We didn't have
3 a conversation about it.

4 Q. Yeah, well, that's what I'm trying to get. You are the
5 manager—the HSE Manager. You are aware of what I'm about
6 to read to you, which you said you submitted to the
7 Commission, and you did not bring it to the attention or ensured
8 that it was implemented between the period of the 13th to the
9 25th?

10 A. It was already addressed during the method statement
11 development.

12 Q. What was addressed during the method statement?

13 A. How the plug was going to be removed.

14 Q. What in the method statement dealt with this warning in the
15 manufacturer's specification?

16 A. I can't say.

17 Q. We will go.

18 A. No, I can't point to a specific point in the method statement.

19 Q. I beg your pardon?

20 A. I know we had talks about it.

21 Q. Come again? I'm not getting—

22 A. I cannot point out a line in the method statement. What I'm
23 saying is during the development when we had discussions
24 about the method statement, and so on, it would have come up.

25 Q. But you said that the implications of this warning I'm about to
26 take you to that you supplied is factored in the method
27 statement?

1 A. Yeah.

2 Q. Well, that's why I want to take you there, because I have lost—
3 I have missed it.

4 A. What I'm saying is I can't point out a line that answers your
5 questions—

6 Q. Well, the answer to that is there is nothing in the method
7 statement that takes into account that warning. Isn't that so?

8 A. [*Nodded*].

9 Q. Don't give them nod. We have to record it.

10 A. If that is your conclusion, yeah.

11 Q. I beg your pardon?

12 A. That is your conclusion, yes.

13 Q. No, not mine, I don't want to put words in your mouth. If there
14 is representation in the method statement that factors in this
15 warning, I want to be fair to you for us to show the
16 Commission.

17 A. No.

18 Q. There is none. Isn't that so?

19 A. No.

20 Q. Right. Because the warning is this: Before attempting to
21 remove any pipe plug, always make sure all back pressures or
22 test pressures have been completely released and that there are
23 no forces working against the pipe plug before deflating. If
24 there is still back/test pressure against the plug, when it deflates
25 it can shoot out of the pipe like a project. There is nothing in
26 the method statement that's picking up this warning?

27 A. No. There is the fact that it's—the pressure exists acting

1 downward on the plug so that it would move towards the fluid.

2 **Examination By Mr. Chairman:**

3 Q. The warning is one which is designed to forewarn you of the
4 prospect of the plug being fired out of the pipe—

5 A. That's what I understand, yes.

6 Q. —by having pressure underneath greater than the pressure on
7 top. Are you saying that because you were working inside the
8 hyperbaric chamber that the pressure that was pushing down by
9 virtue of the air pressure inside the hyperbaric chamber, there
10 was no prospect of it being—I think the wording there is
11 project, but they mean projectile? Yes.

12 A. Yeah, and that's what I'm trying to say. I understand that the
13 pressure is—if the pressure is on the left it would shoot to the
14 right. And the intention of this is to ensure that no personnel
15 are hurt by it becoming a bit moving. And so—

16 Q. What was the pressure inside the hyperbaric chamber?

17 A. About 8psi.

18 Q. In terms of atmospheres, how many is that?

19 A. I think it's 1.6.

20 Q. Per atmosphere?

21 A. Yeah.

22 Q. PSI?

23 A. Yeah.

24 Q. Right. So about five?

25 A. I don't know the conversion. I'm sorry.

26 Q. Well, divide eight by 1.6; about five?

27 A. I can't say.

1 Q. Well, you were at school a lot closer than I have been. And so,
2 I'm relying on you. But, I mean, we all understand the pressure
3 that we're at here. We all get a sense of difference in pressure.
4 When we go on an airplane your ears give you trouble, and so
5 on, you know that you're at different air pressures, okay, and
6 they pressurize the cabin of an airplane is obviously in reverse.
7 Isn't it, right? They pressurize it in order so that we can go and
8 not have our ears screaming at us. And anybody who dives
9 understands that at the surface we're one pressure and you go
10 down 10 feet and you're at two pressures. You go down
11 another 10 feet you're at three, and so on. So this was being
12 pressurized to about five times the normal pressure that we
13 experience at sea level?

14 A. I don't know what to say. I don't know what to say. I don't
15 know the conversion.

16 Q. All right. Thank you.

17 A. The five times is what is throwing me off. At sea level you're
18 supposed to be at one atmosphere, and I believe at—because
19 the bottom of the chamber was about 13ish feet below the
20 surface, from what I could find that's about 1.6 atmospheres
21 down there. So the increase is .6 atmospheres from my
22 understanding.

23 Q. All right.

24 A. So the pressure inside the chamber would have been 1.6.

25 Q. Repeat the last thing?

26 A. So the pressure in the chamber, we expect it to be at 1.6
27 atmospheres.

1 Q. One point six atmosphere?

2 A. Yeah.

3 Q. The pressure in the chamber is only just only one ordinary
4 atmosphere. Is that what you're saying?

5 A. Yeah, because it's a very—the base of it is open to sea water at
6 a relatively shallow level.

7 Q. Was the water level inside the chamber lower than the water
8 level outside—sorry. Was the water level inside the chamber
9 lower than the water level outside the chamber?

10 A. Well, there is no water level inside the chamber. It would have
11 been—

12 Q. It was a bit, because the chamber was sitting—the edge of the
13 chamber were sitting in the water?

14 A. Yeah, so it was flush with the bottom of the chamber.

15 Q. Yes.

16 A. And that was about 13 feet below surface level, mean surface
17 level.

18 Q. Thirteen feet below the surface on the outside of the chamber?

19 A. Yes, about.

20 Q. Right. So whatever pressure was inside was pushing down all
21 the water that would have been 13 feet higher but for the air
22 pressure on the inside?

23 A. Yes.

24 Q. I suggested probably a little bit more than 1.6 atmospheres.
25 But, never mind; we'll get that from somebody who might be
26 an expert.

27 A. Yeah. I am not the best person to speak to that.

1 Q. As I understand it, the pressure above is pressing down such
2 that you have managed to move the volume of water that would
3 have been inside that, by 13 feet. That's right, isn't it? Moved
4 it down by 13 feet? So that they can work in there dry?

5 A. Yeah.

6 **Mr. Chairman:** Right. Okay; got you. Sorry, Mr. Peterson.

7 **Mr. Peterson SC:** Thank you, Mr. Chair.

8 **Continued Cross-Examination By Mr. Peterson SC:**

9 Q. The warning with respect to the example of the plug becoming
10 a projectile, that is with respect to pressure coming up through
11 the pipe?

12 A. That is what I understood, yes.

13 Q. But the warning is that there must not be—you must make sure
14 that the back pressure or test pressure have been completely
15 released and that there are no forces working against the plug;
16 no forces working against the plug. What do you understand
17 that to mean? Not only back pressure through the pipe?

18 A. What I'm saying—yes, that's a valid interpretation. What I'm
19 saying is the main—my understanding of the warning is to
20 prevent damage to personnel should the plug move and become
21 a projectile as they say. And for that purposes, if the pressure
22 was coming from inside the pipe, we had the mechanical plug
23 on top of it blocking it until everything needed to be removed.
24 So it was less of a concern for us.

25 Q. The other way around?

26 A. The other way around.

27 Q. Which we know is the major concern now. But I also want to

1 take you to the literature with respect to monitoring the plug,
2 monitoring the plug. That's why I took you to the period
3 between the 13th February and the 25th. And hear what the
4 manufacturers said about this monitoring the plug.

5 Once the installation and inflation of the plug is complete and
6 you are working the application, the plug should be monitored
7 regularly. The required inflation pressure should be checked
8 every four hours at a minimum, but more often in critical
9 situations.

10 So, were you aware of this at the time when you all installed
11 that plug on the 13th?

12 A. I can't say I was aware of the four hours, but monitoring the
13 pressure, yes. There's a gauge on the plug.

14 Q. Right. When did—in your risk assessment, did you build in a
15 schedule for monitoring the pressure?

16 A. No. I don't usually go into that detail in a risk assessment. The
17 literature for use of equipment, it stands by itself.

18 Q. Sorry, sorry, I'm not—

19 A. The literature for use of equipment and material it kinda stands
20 by itself. I don't always include that—I don't ever include that
21 in the risk assessment itself.

22 Q. You don't ever include, in this case—not the data, you know.
23 You use this to develop your risk assessment.

24 A. Yeah, but what I'm saying is I don't have like a schedule in the
25 risk assessment, because that is—the literature and the
26 documentation already exist for it.

27 Q. Right. So what steps did you take as the manager of—the SNE

1 at LMCS, to get this literature warning to monitor that plug
2 every four hours to the workmen who supposed to be doing it?

3 A. No explicit instruction was written; no. It was verbal.

4 Q. It was verbal. Who you gave that verbal instruction to?

5 A. Kaz is the one who gave the verbal instruction.

6 Q. What verbal instruction he gave?

7 A. To monitor the plug.

8 Q. How often?

9 A. I can't say.

10 Q. But you appreciate that you can't, based on what you told me
11 earlier about the inflatable plug being protected by the
12 mechanical plug, you cannot monitor the inflatable plug?

13 A. Without removing the mechanical plug.

14 Q. Without removing the mechanical plug. So was it envisaged
15 that the mechanical plug would be removed every day or every
16 other day in those 13 days to check that?

17 A. No, it wasn't supposed to last 13 days, no.

18 Q. No, I know. That's the point. I'm glad you take me there. But
19 it lasted 13 days. Did you do any developed, amended, revised
20 risk assessment, the fact that the job now extended—there's a
21 break of 13 days?

22 A. No.

23 Q. But you realize that you should have?

24 A. Hindsight.

25 Q. And you realize that the inflatable plug could not be monitored
26 pursuant to the manufacturer's specifications because of the
27 mechanical plug on top?

1 A. Yes.

2 Q. And all of this that I just described there, informing the men
3 about the literature, the removing of the mechanical plug to
4 check every day or every two days, let's say, although they say
5 four hours, let's give you that—all of that was totally within the
6 domain of LMCS?

7 A. Yes, it was our plug.

8 Q. I want it clear. Not Paria?

9 A. Yes.

10 Q. There was an incident in breach of Paria's PTW, permit to work
11 system. You know about that? In February.

12 A. 17th?

13 Q. Yes.

14 A. Yes.

15 Q. What was it?

16 A. It was a mobilization of LMCS' barge before the permit to
17 work had been fully signed off.

18 Q. Before the permit to work had been fully signed off. Who was
19 the offender?

20 A. Mr. Dexter Guerra.

21 Q. Mr. Dexter Guerra. You didn't ban him from the job?

22 A. No.

23 Q. In fact, he was there head and shoulder on the 25th?

24 A. Serving in a different capacity, yes.

25 Q. Serving in?

26 A. A different capacity.

27 Q. But same man, but different capacity?

1 A. Same person.

2 Q. And you responded using Kazim Ali's email to Paria, Mr.
3 Randolph Archibald, talking about the incident. You remember
4 that?

5 A. Yeah.

6 Q. In fairness to you, do you want to see the email?

7 **Mr. Chairman:** Well, I think he should. Is this the email you
8 served us yesterday?

9 **Mr. Peterson SC:** Yes, Sir.

10 **Mr. Chairman:** Thank you.

11 *[Document shown on screen]*

12 **Continued Cross-Examination By Mr. Peterson SC:**

13 Q. You're familiar with it?

14 A. Yeah.

15 Q. And Mr. Archibald was taking you—well, this is in evidence,
16 so you don't need to go through everything. I'm really
17 interested in immediately taking you to question three where
18 Mr. Archibald was asking whether you would introduce a self-
19 check or checklist system to be implemented. And that was
20 aimed at trying to prevent this happening again. And in your
21 answer you recognize that you don't feel it's necessary because
22 the permit itself serves as the most powerful control document.
23 That's your view?

24 A. Yes.

25 Q. And you still hold that view?

26 A. Yes. It controls the execution of work.

27 Q. It controls the execution of work. And you understand that

1 notwithstanding what may be in the method statement, that
2 there could be reflection in the PTW which governs how the
3 work is to be executed?

4 A. Yes.

5 Q. Because in the method statement there may be steps that when
6 the work start to be executed you realize that one should have
7 come before the other, as the case may be.

8 A. Sure.

9 Q. That happens in the industry.

10 A. Yeah.

11 Q. So in this case, as you have recognized, the most powerful
12 control document is the PTW which will, let us say, correct that
13 error in the flow. Right? Do you agree with that—my phrasing
14 of it?

15 A. I'm not sure I could agree with that.

16 Q. Well, when we say correct the error, reverse an error or reverse
17 an order of a step?

18 A. I would say that the permit to work is Paria's way of controlling
19 what works we get to be executed. I'll just say that.

20 Q. And the order of the work?

21 A. No.

22 Q. Okay. The permit to work that you were shown earlier, permit
23 to work 9320, and we see in it barriers—we could bring it back
24 up if you need to see it; but permit 9—1074. Could we scroll
25 down a bit? You see, "Migration barriers to be used"?

26 A. Yes.

27 Q. What is that referring to?

1 A. So I honestly couldn't tell you. Considering that it's the line
2 talking about hazardous materials, they wanted it to be used
3 while we're in contact with hazardous materials.

4 Q. So you don't understand migration barriers there to be the
5 plugs?

6 A. Yeah. I know that the migration barriers they're talking about
7 are the plugs, yes.

8 Q. Okay.

9 A. Is the "to be used part" is unclear.

10 Q. Come again?

11 A. It's the "to be used" part that I'm saying I'm somewhat unclear
12 about.

13 Q. Okay. But you're not unclear about the barriers?

14 A. No.

15 **Mr. Peterson SC:** Could we scroll down? I want to go to
16 the—no; the heading.

17 **Continued Cross-Examination By Mr. Peterson SC:**

18 Q. Now, you were telling the Commission earlier that you did not
19 see in the narrative up there, the specific task. You did not see
20 the removal of the plugs in that heading. That's correct?

21 A. Yeah.

22 Q. But—if we can scroll to 1075. Stop, please. You see that
23 highlighted version there?

24 A. Yes.

25 Q. "Installation of Migration Barriers..."

26 A. Yeah.

27 Q. Do you agree with me that the installation of the barriers and

1 the removal of the barriers are significant events?

2 A. No.

3 Q. Okay. So it is an insignificant event that they included on the
4 top narrative there?

5 A. Yeah.

6 Q. Why you say the installation of the migration barriers is an
7 insignificant event?

8 A. I'm not saying it's insignificant in terms of the safety criticality.
9 I'm saying it is part of a larger task. The removal of the
10 barriers is a step towards the completion of the riser in the same
11 way that there is no talk about using a crane on the permit, but
12 we obviously have to use a crane, and we were granted
13 permission to use a crane. There's no talk about the
14 compressor but we had to use a compressor. So it's not that—
15 they physically cannot fit every single thing that needs to be
16 done in those lines.

17 Q. We know that. Everything cannot be there, that's why I'm
18 talking about significant things.

19 A. Well, your definition of significant is different from my own.

20 Q. Well, that's why I'm asking you. Do you consider the
21 installation of the barriers significant?

22 A. No. I just said no.

23 Q. And the removal same thing; not significant?

24 A. No, it's part of a larger job task, sir.

25 Q. But do you realize that the installation of the barriers was one
26 of the major things that you all were preparing to do by blowing
27 down the lines?

1 A. Yes, which was part of the task.

2 Q. And you realize that the removal of the barriers is the trigger
3 that caused this event why we're here today?

4 A. I'm not going to say that, no.

5 Q. You don't consider the removal of the barriers resulted in this?

6 A. I don't want to say that, no.

7 Q. Why you don't want to say that?

8 A. Speculative.

9 Q. That is speculation?

10 A. I don't—well, I think that is speculative. I don't want to say
11 what the cause of the incident was. I can't say that.

12 Q. But do you know that it occurred during the course of deflating
13 the inflatable plug?

14 A. Yes.

15 Q. Which is preparation towards removal?

16 A. Yes.

17 Q. So do you accept now that removal is significant?

18 A. I still would say no.

19 Q. Okay. I can't convince you against your will. But I'm putting
20 to you that it is significant. Let me leave it at that. You don't
21 accept that, right?

22 A. Significant is subjective.

23 Q. Does LMCS have an emergency rescue plan for events?

24 A. Not in this case, no. We had emergency response plan.

25 Q. You have an emergency response plan. You had one for this
26 job?

27 A. Yes.

1 Q. Which was what?

2 A. What was what?

3 Q. Which was what? What was that plan?

4 A. It's included here. I don't know.

5 Q. Right. But in that plan, of course, you did not cater for Delta P
6 as something to respond to?

7 A. No. The plan is based on the risk assessment.

8 Q. Based on the contractual relationship with Paria for this job, the
9 first and major responsibility for emergency response is that of
10 LMCS?

11 A. Yes.

12 Q. And Paria's role was merely to be a supportive role?

13 A. If we need to escalate, yeah, escalate the response.

14 Q. Right. When this event occurred, did you form an incident
15 command centre or team?

16 A. LMCS, no.

17 Q. You all don't have that system?

18 A. No.

19 Q. So there is no—I think you described in your statement that
20 things were just evolving. So there is no set structured
21 development of a plan?

22 A. No. The facility is not ours, so we can't take control of it.

23 Q. No, I'm not talking about control yet. I'm talking about a plan.
24 It could be done virtually, telephone. It could be done anyhow.
25 So that's—we're not dealing with the—

26 A. Oh, no. That plan was developed in person on the barge at the
27 time of the incident.

1 Q. Right.

2 A. Yeah.

3 Q. You got to berth 6 around what time?

4 A. I don't remember the time.

5 Q. Approximately?

6 A. I don't know. Sometime around seven clock, twilight; it was
7 getting dark.

8 Q. Oh, it was getting dark? So your communication as to the event
9 and what has been happening was purely over the phone? With
10 whom?

11 A. Phone; yeah.

12 Q. With whom?

13 A. With?

14 Q. With whom?

15 A. Initially it was Victor and then Kazim Jr., and then I tried
16 calling other people. I can't remember all who I called. I was
17 trying not to bother them too much, because they were—

18 Q. All right. And when you got to Paria you went to the shipping
19 building?

20 A. No, I went to Badger Docks first and then later I went to
21 shipping building.

22 Q. Then to the shipping building. When you got to the shipping
23 building there were any LMCS representatives there?

24 A. No.

25 Q. You're sure about that?

26 A. At the time I was there, yeah; none that I saw.

27 Q. Wasn't there a Gonzales?

1 A. No. We were told he might have been there, but when we went
2 to the shipping building, we found out that he was not there.

3 Q. Oh; okay. And when you went to the barge, what was
4 happening?

5 A. Went to the?

6 Q. When you went to No. 6—

7 A. Uh-huh.

8 Q. —what was happening when you got there around seven
9 o'clock?

10 A. Not much was happening at the time actually. I arrived and,
11 well, some LMCS, some barrier; a lot of people were there that
12 I can't identify. But in terms of activity, nothing was
13 happening.

14 Q. But you said in your statement you did not see anybody going
15 into the water, and you did not see anybody preventing them
16 from going into the water. That's true?

17 A. That is true.

18 Q. What were people doing? Just standing around?

19 A. Essentially. There was a lot of phone conversations that I was
20 not privy to.

21 Q. Yes. You said that you had inserted yourself into a
22 conversation with the coast guard.

23 A. Yes.

24 Q. And the coast guard was not attempting to do any rescue.

25 A. Yes.

26 Q. Did you, as the manager of HSE at LMCS, LMCS men
27 missing, did you make any request of the coast guard?

1 A. No. I was speaking to Catherine. They were in control at the
2 time.

3 Q. Beg your pardon?

4 A. I was speaking to Catherine Balkissoon. They were in control
5 at the time. I didn't—

6 Q. When you say they were in control? I'm not getting that last
7 part. They were—

8 A. They were in control of the incident at the time. Paria assumed
9 control of their facility, so I was dealing with Paria.

10 Q. But you said you inserted yourself. Not that you were dealing
11 with Catherine Balkissoon and then you going—she dealing
12 with the coast guard. You inserted yourself when the coast
13 guard arrived, and she was speaking to the coast guard. When
14 you inserted yourself, did you request of the coast guard—
15 according to you, they were doing nothing—whether they going
16 to rescue?

17 A. I can't remember conversation with the coast guard. No.

18 Q. So your insertion into the conversation was just to listen?

19 A. Yeah.

20 Q. What did you hear?

21 A. Basically, what I said. They arrived on site. They were
22 asking—they were seeking more information. I believe they
23 knew Catherine from beforehand, or they at least had her
24 contact to know to ask for her, so when they asked for her, I
25 was just around, and so I could have been present. So they had
26 a conversation.

27 Q. That is seven o'clock. Did you speak to Kazim Ali Sr.—

1 A. That is past seven o'clock. That was a while afterwards.

2 Q. After seven. Did you speak to Kazim Ali Sr. and get from him
3 whether he had a plan developed at this stage?

4 A. Yeah. We would do a lot of conversations back and forth over
5 the phone.

6 Q. All right. Did you communicate to the coast guard, since you
7 know that they are divers and rescue people that we have a
8 plan—Kazim Ali Sr. has a plan, we could tell you about it for
9 you to execute?

10 A. I don't think I said that. No.

11 Q. But you had the knowledge of the plan; you had the presence of
12 Coast Guard, and you did not do anything about that?

13 A. No, well, Andrew Farah was the one really in charge and
14 speaking.

15 Q. Andrew Farah?

16 A. And speaking; yeah, and just speaking to them.

17 Q. You heard Andrew speaking to the coast guard?

18 A. No, I wasn't really listening. Like I said, it was very chaotic. I
19 wasn't everywhere at all times.

20 Q. Okay. Tell me something, there is a process called pulling a
21 permit or suspending works. You know about that process?

22 A. I wouldn't call that a process, but, yes; I'm familiar with the
23 thing.

24 Q. A step; when is that implemented?

25 A. Whenever Paria wants.

26 Q. No, no. That may be so, because they are the ones entitled to
27 do it. But in HSE practice when works are being executed and

1 an event has occurred, isn't there a process of pulling the
2 permit; either suspending or terminating the works and then an
3 investigation is conducted?

4 A. Yeah.

5 Q. So it's not what Paria wants. Don't put it that way.

6 A. No, what I'm saying, you were asking about this specific
7 incident—

8 Q. No. I ask about the concept of pulling a permit.

9 A. Right. And so the concept of pulling a permit, Paria can decide
10 for any reason to pull a permit. It doesn't have to be a
11 particular reason.

12 Q. Right. But that is an accepted system?

13 A. Sure. Yes.

14 Q. In your industry.

15 A. Yeah.

16 Q. Because it is a system that is designed to prevent works from
17 being continued when an event has occurred?

18 A. Yes. To stop work from continuing regardless, is my point.
19 They can just do it whenever they want.

20 Q. Right. Because the—just like with the barge, they have stopped
21 work when you moved the barge wrongly?

22 A. Yeah.

23 Q. When I say you, your people.

24 A. Yeah.

25 Q. Right. And it was investigated.

26 A. Yeah.

27 Q. Reports were done. You did your adjustments by removing the

1 offender and work resumed. So the missing divers was one of
2 the kind of event or the type of event, sorry, that will trigger the
3 suspension of the works, pulling the permits, or pausing of the
4 works. Whatever we want to call it. Isn't that so?

5 A. Yes.

6 Q. Right. Because you see we heard about—and I don't want to
7 quote—they pull the permits to make it appear as if it was some
8 vindictive step. It is a normal step in works like this kind?

9 A. Yes.

10 Q. Because I think you, in your statement, said the permit was
11 pulled so that work will stop.

12 A. Yes.

13 Q. Right. And also, in that process, when a permit is pulled, all the
14 material at that barge concerning the works, went to the Paria's
15 office—taken by Paria? I think you said in your statement.

16 A. Materials as in the permit documents, yes.

17 Q. Documents. But that is also a standard procedure?

18 A. Yes.

19 Q. So there is nothing wrong—I didn't say you say it was wrong,
20 but in your statement you narrate it. But there was nothing
21 wrong in Paria pulling the permit and taking the material away
22 from the barge?

23 A. No.

24 Q. Right.

25 **Mr. Peterson SC:** Give me one minute, please, Sir. I'm just
26 checking to make sure I don't need to spend time that I don't
27 need to spend.

1 **Continued Cross-Examination By Mr. Peterson SC:**

2 Q. You said Terrence—who was responsible for overseeing this
3 job from Paria's side?

4 A. I believe, um, I don't know how to describe it. The permit—the
5 contract rests with Terrence, like to execute, and below him
6 there was Houston Marjadsingh and Rajiv Mangalee.

7 Q. And you are familiar with Paria's—you are training on Paria's
8 permit to work system?

9 A. Yes.

10 Q. So you're familiar with the term of site authority and—area
11 authority, sorry; site area authority—site authority and area
12 authority.

13 A. Yes.

14 Q. You're familiar with those two concepts?

15 A. Yes.

16 Q. And those are the persons with the most senior authority with
17 respect to the permit?

18 A. With respect to the permit, yes.

19 Q. You attended the toolbox meeting on the 25th?

20 A. I reached late, but yes.

21 Q. You wasn't there for the—you were there for the one at berth
22 6?

23 A. Yeah.

24 Q. And also at berth 5?

25 A. No, I didn't go to berth 5.

26 Q. You didn't go to berth 5. And you don't know if it was at the
27 toolbox meeting that the removal of the plugs were to take

1 place? I see that you signed it, but, of course—

2 A. I don't know at the toolbox meeting that—

3 Q. That the plugs were to be removed that day?

4 A. Yeah, the plugs were scheduled to be removed that day, yes.

5 Q. That is not reflected in the toolbox notes?

6 A. I can't speak to that, no.

7 Q. You haven't seen them?

8 A. No, I have seen them, but again, just like the permit we don't
9 itemize every single item that we speak of. It's a summary. It's
10 not an exhaustive list.

11 Q. Well, I'm just reminded, you said you came after Kazim Ali
12 had spoken.

13 A. Yeah. Well, I assume.

14 Q. Right. So well, in fairness to you, you may not have heard that.
15 In your statement you said that you spoke about—well you
16 attributed certain things to Ms. Catherine Balkissoon—

17 A. Uh-huh.

18 Q. —at paragraph 55 of your supplemental statement. You said
19 based on my conversation with Catherine you understood that
20 Coast Guard would take over the rescue operations?

21 A. Yes.

22 Q. Well, our instructions are that she didn't have that conversation
23 with you.

24 A. No, it wasn't a conversation. I'm just saying that I felt that she
25 thought—the message that she kept relaying to us was that the
26 coast guard is on their way, and when they come they will take
27 over. I'm saying that I feel that she actually thought that was

1 going to happen; that when the coast guard came Paria would
2 surrender to them to let them take over.

3 Q. That's the impression you formed?

4 A. That was the impression I got, yes.

5 Q. Okay. And I'm also instructed, contrary to what you said in
6 your statement that a standard response was nobody was to
7 enter the chamber; I'm instructed that that's not true.

8 A. I don't know how to interpret that.

9 Q. Well, it is either your version is true or hers.

10 A. I'm not saying she was robot repeating that all the time. I'm
11 just saying—

12 Q. I didn't say that either.

13 A. Well, this is what I'm saying. I don't know how to interpret
14 what you are saying. I'm saying that the response that we got
15 from Paria consistently was that nobody was to enter the
16 chamber and that they had instructions that nobody is to enter
17 the chamber; nobody is to dive.

18 Q. But you are saying she told you that, or she was saying that?

19 A. She was, yes.

20 Q. Well, our instructions are that she didn't. So do you accept that
21 she didn't tell you that?

22 A. No, I'm not accepting that.

23 Q. She's the one that you say told you that?

24 A. As well as other people, yes.

25 Q. Now, in paragraph 60 of your statement—your supplemental
26 statement, you spoke of a plan, and I think you told the
27 tribunal—the Commission—that it would take you about two

1 hours to put a dive plan together because—give or take—that
2 Paria wanted a plan for the diving on that Sunday.

3 **Mr. Chairman:** More than just for the diving; in the plan he
4 said that there was a method statement, a risk assessment, and
5 certificates for divers.

6 **Mr. Peterson SC:** Yes. I'll come to that. I was dealing with
7 the plan.

8 **Continued Cross-Examination By Mr. Peterson SC:**

9 Q. And you said that this was for the same rescue plan. Did you
10 see the correspondence between Paria and Kazim Ali Sr. that
11 morning concerning the preparation of those documents you
12 were asked to prepare?

13 A. No, I can't remember seeing correspondence.

14 **Mr. Peterson SC:** Mr. Chairman, could 5875 of the core
15 bundle—bundle of submissions, sorry; the bundle of
16 submissions, 5875. Yes. That's it.

17 **Mr. Chairman:** Just a moment. Yes.

18 **Continued Cross-Examination By Mr. Peterson SC:**

19 Q. You see the heading of that email from Kazim Ali dealing with
20 dive for scuba tank retrieval?

21 A. Yes.

22 Q. That wasn't the plan on Friday. The plan on Friday was to
23 retrieve divers, not just scuba.

24 A. No. From my understanding of this, this was like phase one,
25 because they had had a meeting prior to this that I was not privy
26 to. I wasn't privy to the one afterwards, either, but they had
27 had a meeting prior to this where someone, I'm not sure who,

1 raised a concern about the scuba tank that was in the elbow—in
2 the first elbow as soon as you come down the riser, and so this
3 was like phase one, just to remove that before they allow them
4 to continue anything further.

5 Q. Right. But that's the meeting that you weren't at. But the
6 preparation that you were doing was with respect to retrieving,
7 as you say, leh we go with that, phase one, to retrieve the tanks?

8 A. Yes.

9 Q. Right. So that is not the same plan—when you say in your
10 statement—you may have misspoken or misspoke—this was
11 the same rescue plan which was being suggested by LMCS
12 since Friday.

13 A. Yeah. It was working towards that same thing.

14 Q. Oh. That's what you meant?

15 A. Yeah.

16 Q. But the preparation—the preparation that you were putting all
17 those things together, the risk assessment, the method
18 statement, if we go to them you will see it has nothing to do
19 with life; it has to do with the tanks.

20 A. Right. So what I'm saying—

21 Q. You accept that?

22 A. Yes, I accept that. Because this was just to remove the tank
23 first before they allow them to continue to do anything else.

24 Q. And you were also aware—well, you may not be aware,
25 because you weren't at the earlier Sunday morning meeting
26 when Kazim Ali Sr. said that he doesn't think the men are alive
27 at that stage.

1 A. No.

2 Q. But you heard about that?

3 A. Well, I heard about it during the Commission, actually.

4 Q. You weren't supposed to be saying—you're not supposed to
5 say that.

6 A. I'm not supposed to say that, but—

7 Q. But the removal of the tanks; if you saying that in your witness
8 statement at paragraph 60 is the same plan from Friday, so you
9 are saying on Friday there was a plan to remove tanks first?

10 A. No. This is what I'm saying. On the morning of the 27th—

11 Q. Sunday.

12 A. From my understanding, is when they raised the issue about the
13 tank. And so that's why they wanted something documented to
14 remove the tank first before they allowed anything else.

15 Q. And you know that the presence of the tank was revealed from
16 camera footage that went down into the pipe?

17 A. Yes. Yes.

18 Q. You know that?

19 A. Yes.

20 **11.25 a.m.**

21 Q. As an HSE expert, I see you tried to say Paria—you tried to
22 convey that they were concerned about their image with OSH
23 and that's what they were concerned about, but as a trained risk
24 analyst, what was wrong with developing that plan to go
25 down—to send people down there to remove the tanks first?
26 Anything wrong with what they asked you to develop?

27 A. About this?

1 Q. Yes.

2 A. No.

3 Q. I just have about less than 5 more minutes, Sir, if so much. You
4 had any encounter with—the last area I want to deal with you is
5 with respect to—I don't know if you have any training and
6 experience with the—I'm sorry. I don't know if you have any
7 experience in this area, rescue and evacuation from enclosed
8 confined areas. You have any training or expertise in that?

9 A. No training, no.

10 Q. How you go about developing a team of rescuers to go into
11 confined space?

12 A. Umm.

13 Q. Their experiences and all of that?

14 A. No.

15 Q. And whether they should be drilled before and have
16 experience? You don't, don't know anything of that?

17 A. No.

18 Q. Anybody in LMCS has that expertise?

19 A. I can't say off the top of my head, no. I, I do want to mention,
20 though, as you're talking about the plan, I wasn't developing
21 the plan.

22 Q. Yeah I know that.

23 A. Right, just—

24 Q. Yeah, Mr. Mr. Ali Sr. was developing the plan, but they just ask
25 you to do that assess—that—

26 A. Yeah. Yeah.

27 Q. You understand that? We're not holding you for things you're

1 not responsible for, you know.

2 **Mr. Peterson SC:** That's all I have for this witness, please Sir.

3 **Mr. Chairman:** Good. We will have a break.

4 **Mr. Peterson SC:** Yes.

5 **Mr. Chairman:** Fifteen minutes, please?

6 **11.28 a.m.:** *Enquiry suspended.*

7 **11.44 a.m.:** *Enquiry resumed.*

8 **Mr. Chairman:** Mr. Ali, I've been given some instructions to
9 ask you to make sure that you do speak into the microphone,
10 not so close that it starts to distort. You know what I mean?
11 You know you've noticed I think a couple of times yourself, so,
12 aim like I am, at the microphone, all right, speak slower if you
13 can because otherwise—what we're trying to do is to record all
14 of this so it can be transcribed later on, you see, so that when
15 I'm writing my report I've got everything that you say and
16 we're missing bits and that's not going to be good. So, um,
17 please try and speak directly into the microphone but not too
18 close, all right? Thank you very much.

19 Is there anyone else that wished to ask any questions of Mr.
20 Ali? Yes? Who do we have?

21 **Ms. Alfonso:** Sir, Nyree Alfonso.

22 **Mr. Chairman:** You're Nyree Alfonso?

23 **Ms. Alfonso:** Nyree Alfonso—

24 **Mr. Chairman:** Yes.

25 **Ms. Alfonso:**—for the SWWTU.

26 **Mr. Chairman:** Representing the union?

27 **Ms. Alfonso:** Yes indeed.

1 **Mr. Chairman:** Right.

2 **Cross-Examination By Ms. Alfonso:**

3 Q. Good morning, Mr. Ali.

4 A. Good morning.

5 Q. Mr. Ali, I noticed that you said you had experience working in
6 what would be Petrotrin between 2010 and 2018 and then a
7 short stint, always on contract with Paria?

8 A. Yes.

9 Q. Yes. Could you give me an idea—in the HSE, to be fair to you,
10 in the HSE department, yes?

11 A. Yes.

12 Q. Could you tell us, you know, at what level you would have
13 served in that department or those departments for that matter?

14 A. Well I started in the Petrotrin HSE refining and marketing
15 division as a trainee initially, and then I was offered a contract
16 position as a safety specialist or as a HSE specialist and then as
17 an ESA, an environmental safety assistant, which were
18 basically all the positions available in HSE at that time that
19 required I be an onsite person auditing jobs, auditing the permit
20 to work system, making sure all documentation was in place
21 and so on. I was a team member on risk assessments and JHAs
22 that were done for all tasks in the planning and marketing
23 division depending on where I was stationed and just general
24 HSE safety man work.

25 Q. Okay. If you could help me out, would that level be at a—well,
26 it isn't a managerial level?

27 A. No.

1 Q. It was like a supervisory level?

2 A. We were technically technical support supporting operations in
3 just managing the HSE part of the work—

4 Q. I see.

5 A. —in safety-related matters too.

6 Q. Okay. Thank you, Mr. Ali. Mr. Ali, I would have heard
7 something in response to my learned friend, Mr. Peterson. I
8 was trying to understand, you know, the barriers, the role of the
9 barrier, barriers actually, with regard to vapour that could come
10 up from the pipeline. I'm sorry, I'm an attorney, didn't do
11 much physics or chemistry or anything like that, but, is the
12 vapour coming up or the vapour that can come up from that—
13 well that from atmosphere, that site, would that be heavier or
14 lighter than air?

15 A. It would be denser than air.

16 Q. It would be denser than air. Okay, so if it's denser than air it
17 would do what, it would float at the top of the chamber, it
18 would sink to the bottom of the chamber? Which one would it
19 be?

20 A. No, it would have vented to [*Inaudible*] air.

21 Q. Okay. So if it sank in the chamber, what would happen to it?

22 A. Well, with the way the chamber is designed it would be pushed
23 out with the circulation of air.

24 Q. I see. I see. And there was some mechanism to monitor the
25 quality of the air?

26 A. Yes.

27 Q. To make sure that it wasn't more vapour than oxygen or any

1 other gas?

2 A. Yes. The quality of the air going into the chamber was
3 monitored as well as the quality coming out of the chamber was
4 monitored.

5 Q. Okay thank you, Mr. Ali. Mr. Ali, I noticed there were two
6 manuals which we have several copies of in different places in
7 the papers.

8 A. Yes.

9 Q. The safe system of work manual and an HSE manual.

10 A. Yes.

11 Q. Okay. And it is your evidence that in the time that you worked
12 with LMCS, you would have updated that manual from time to
13 time?

14 A. Yes.

15 Q. So that's between January 2020 and one assumes the current
16 time?

17 A. Yes.

18 Q. To your knowledge, because you are the HHSE person in
19 charge of HSE in LMCS, has any change in any of—either of
20 those manuals taken place consequent upon the incident that
21 happened on the 25th of February?

22 A. No, actually. We haven't updated the manuals until we get a
23 full investigation with recommendations that we could
24 consider.

25 Q. Okay. So LMCS, in your area, I can't saddle you with the
26 entire position of the company, would not have gleaned any
27 lessons from the incident that happened on the 25th of February

1 and onwards?

2 A. Of course we would have, but we haven't updated the
3 document until we get a fuller picture of this [*Inaudible*].

4 Q. Okay. I can see even from your narrative, Mr. Ali, that there
5 was—you described, I think at one point in time, a flurry of
6 activity—

7 A. [*Nodding*]

8 Q. —and some chaos—

9 A. [*Nodding*]

10 Q. —on the barge and Badger docks and various places. If that is
11 the case, did you, you know—in these manuals is there any—
12 no enhancement or change of the emergency response plan?
13 Because that's part of your manuals?

14 A. Yes, but what I'm saying is I know obviously we'll need to
15 make changes that we learn, as we make learnings about the
16 incident but we haven't updated the manual as yet until we get
17 a better investigation because I haven't been able to investigate
18 and we weren't allowed onto the compound to do an
19 investigation prior, after the incident because the gates were
20 locked. So we haven't been able to complete an investigation
21 and so I don't have like recommendations to be included in the
22 updates.

23 Q. Now I know—I, I understand what you're saying, Mr. Ali, that,
24 you know, you haven't gone on to the compound and so on, but
25 in terms of the management, let us say something that going
26 forward the company is still working and still doing jobs, I
27 imagine?

1 A. No, actually right now we are not.

2 Q. Okay, I see. So if the company were to undertake another job
3 involving diving, there are no take aways that you have from
4 this incident in terms of how you would respond if there was an
5 emergency?

6 A. Yes there are. They're just not put in writing as yet.

7 Q. They're not put in writing yet?

8 A. We don't have any plans right now to pursue work and we're
9 under a prohibition notice from OSHA for the [*Inaudible*]—

10 Q. I'm having the same problem as the Commissioners expressed.

11 A. I'm very sorry.

12 Q. You do speak softly but you also speak, like most Trinidadians,
13 quickly. So just repeat what you said there again so I could
14 hear what you said?

15 A. If I could remember what I said now. I believe what I was
16 trying to communicate is that we don't have intentions right
17 now to pursue work that would, um, like increase the priority of
18 making those changes. So right now it's really super priority to
19 update our documents. We're really looking at just making
20 sure a full investigation and a clear picture of what happened
21 took place through the Commission.

22 Q. Okay. That's unusual but anyway, on the 25th of—from my
23 understanding we received several times, I wouldn't carry you
24 to the document, you know, number 51, 52, 53 coming down
25 the method statement, from your understanding, Mr. Ali, on the
26 25th were there any hot works to be done on the, well, on the
27 riser, at berth 6?

1 A. No. To my knowledge there was no hot works—

2 Q. Okay.

3 A. —to be done for the 25th.

4 Q. And you maintain your position that the purpose of the two
5 barriers, both the mechanical and inflatable one, was a
6 protective barrier between hot works and the contents of the
7 line?

8 A. Yes.

9 Q. Okay, thank you. Just to help me understand something, Mr.
10 Ali, because you're a unique person in that you've worked for
11 Paria or worked in the health and safety department of Paria
12 and Petrotrin, as well as LMCS, so—and you're familiar with
13 permit to work system from both sides I must say, I would have
14 to say.

15 A. Yes.

16 Q. When—okay, so when a permit—I hear all kinds of
17 terminology so I'll use the easiest one. When the permit to
18 work was pulled, I think the time was 3.22, if I recall on the
19 endorsement, does that mean—okay, so I understand the works
20 must come to a stop. Whatever you were contracted to do—to
21 Paria to do in terms of the repairs to the pipe and so on, that had
22 come to an end?

23 A. Yes.

24 Q. Okay. Would that pulling of the permit also mean, I mean, like
25 an equal sign literally, that you could no longer conduct any
26 work at all, meaning putting divers in the water, calling divers,
27 bringing divers, bringing equipment to do the rescue, that

1 would also be included in the stoppage of work or removal of
2 the permit?

3 A. Strictly speaking, no. Actually strictly speaking, yes, because
4 we can't do anything without a permit, according to the
5 procedure itself but realistically emergency response is not
6 something that you would get a permit for. No one writes a
7 permit for emergency response.

8 Q. Well actually that was my impression from reading the
9 documentation, so I don't want to use the word exemption but
10 I'll use it anyway. So I would have thought that if there was an
11 emergency situation then a specific permit would not have to be
12 issued to allow you to rescue somebody? If somebody is
13 drowning in the water you don't have to get a permit to go and
14 get a diver or throw a life ring or, you know, whatever is the
15 right thing to save that person, would you?

16 A. No. So our emergency response started immediately when
17 Andrew got into the water and checked around and did his
18 sweep around the berth. We had no permits for that.

19 Q. Okay.

20 A. So, so, emergency response we started, we initiated without a
21 permit as one would not have been given for that.

22 Q. Okay. Since I say you're a unique person so far in terms of
23 who have given evidence, that you know this permit to work
24 from both sides, if it is that—okay, at some point in time, a
25 conclusion is made that the divers are in the pipeline. A permit
26 would have been required to go down into the pipeline, as far as
27 you know?

1 A. As far as I know, no.

2 Q. So—and I know you came rather late on the barge, on LMCS’
3 barge?

4 **Mr. Chairman:** I’m sorry to interrupt you.

5 **Ms. Alfonso:** Sorry.

6 **Examination By Mr. Chairman:**

7 Q. May I just ask in relation to that question that’s just been asked,
8 no permit is required for a diver to go into the pipe, is that what
9 you’re saying?

10 A. I would expect no.

11 Q. No?

12 A. No.

13 Q. But permission?

14 A. Permi—yes, because at the point in time that we were looking
15 at sending divers into the pipe, Paria had seized control through
16 their emergency response, their emergency command system.

17 Q. The emergency command system had kicked in, for want of a
18 better expression?

19 A. Yes.

20 Q. And therefore it was in the hands of Paria?

21 A. Yes.

22 Q. So you would have needed permission from them to do
23 anything in respect of effecting a rescue? Is that what you
24 understand?

25 A. Yes, yes, because they had a presence on site controlling work.
26 We needed permission in that specific instance.

27 **Mr. Chairman:** I’m sorry to have interrupted you.

1 **Ms. Alfonso:** Not at all, Sir.

2 **Continued Cross-Examination By Ms. Alfonso:**

3 Q. So, and the honourable Chairman has actually brought me to
4 the point. So, okay, so needed—you didn't need a permit or
5 needed permission, I accept that. So who—from that flurry of
6 activity that you witnessed, who did you think you could get
7 that permission from?

8 A. Well, it would have been the incident commander who I
9 understood to be on land. I didn't know who it was at the time.
10 And from our understanding, Catherine Balkissoon was the,
11 like I say, the senior person representing the incident command
12 team on the barge.

13 Q. Okay.

14 A. So that's why we went to her.

15 Q. Would Mr. Piper be the incident commander? Now that—you
16 say you didn't know at the time?

17 A. Yes.

18 Q. Do you know that—him to be the incident commander now?

19 A. Yes. After the fact we learned that Mr. Piper was the
20 commander, that he came in to work and he was—he took up
21 that position.

22 Q. And, for want of a better term, the point person on site was
23 Catherine Balkissoon?

24 A. Yes. Catherine and I believe Visham, but he wasn't always
25 there.

26 Q. I'm sorry, I lost you on the tail end there.

27 A. Gathering and Visham, but Visham wasn't always—

1 Q. Or hor, yes, I see, Visham. Yes, yes. And did, to your
2 knowledge you were—because you came, I say, late in the, late
3 in the fray, did you see—were you, I don't want to ask you
4 any—well, did you ask permission of either of those Paria
5 persons, either Catherine or Visham, did you ask them for
6 permission to do anything?

7 A. Yes.

8 Q. And what was that?

9 A. I asked them why we are not allowed to go into the water. I
10 asked them why we weren't allowed to do the dive because we
11 had divers on site who had indicated to me that they were
12 willing and that they wanted to go but they were being held
13 back and so I went to her to ask, well why are they being held
14 back? Why aren't we being allowed? Can we send them? And
15 the response, as I said, was that—the response that I always got
16 was that we just—instructions was handed down that no one is
17 to be allowed to enter the water and to perform a dive.

18 Q. Was any reason proffered up by Ms. Balkissoon or Mr.—I've
19 forgotten Visham's last name?

20 A. Harrichan.

21 Q. Harrichan, Mr. Harrichan?

22 A. Um, no, not that I recall being given.

23 Q. Just nobody is allowed to go down?

24 A. Yeah. It was an instruction. I didn't really get a full reasoning
25 behind it.

26 Q. Okay. Was the coast guard in anywhere in your—in the time
27 that you were there, I'm not asking what anybody else told

1 you—did the coast guard have any role to play while you were
2 there?

3 A. Not that I could see.

4 Q. Did they say anything or give any instruction?

5 A. They were speaking with Catherine.

6 Q. I see. But they never spoke to you?

7 A. Not—no, not in a direct way.

8 Q. I see. You would—well no you would not have heard. Mr. Ali
9 would have, sorry, Mr. Kazim Ali Sr. would have said, when he
10 gave evidence, that immediately as he came on site a simple
11 plan was devised. I know you weren't there. A simple plan
12 was devised in order to get the divers out or at least to make an
13 attempt to go down into the pipe, put somebody down feet first,
14 give them air, tether them with rope so that they could be pulled
15 out and so on. You're aware of that plan?

16 A. Yes I am.

17 Q. Okay. To your knowledge, is there anybody you know that
18 stopped that plan from being implemented?

19 A. No, I can't point you further.

20 Q. Okay. Thank you. In going through your health and safety
21 manual, I saw some references to some familiar—some familiar
22 references. One of them was IMCA code. Which is a code—

23 **Mr. Chairman:** What is that?

24 **Ms. Alfonso:** It's actually a code of practice for offshore
25 diving.

26 **Mr. Chairman:** What does it stand for, the acronym?

27 **Ms. Alfonso:** I think it's Offshore Diving International—

1 International Code of Practice for Offshore Diving. I hope I
2 have it right. I know the other Commissioner might correct me
3 if I'm wrong.

4 **Commissioner Wilson:** Well yeah let me correct you.
5 International Marine Contractors Association (IMCA).

6 **Ms. Alfonso:** Okay. IMCA, okay. So I—thank you very
7 much for that, Commissioner Wilson. Thank you very much.

8 **Continued Cross-Examination By Ms. Alfonso:**

9 Q. I saw that reference and in your manual and it's specific to what
10 you identified as critical services which is diving, yes?

11 A. Yes.

12 Q. Okay. Now, Mr. Ali, is it that, and I did look, you know, like
13 everybody else, took a little Google and so on, I didn't see—I
14 saw that reference in your manual. I didn't see any. what shall I
15 say, any reflection in the manual of the code, of the contents of
16 the code. Could you tell—

17 A. Yeah.

18 Q. —could you help me with—is there anything that you—that
19 LMCS has put in their, in their health and safety manual or their
20 safe work manual which is reflective of the code? Because the
21 code is like a guideline?

22 A. Yeah well the code—

23 Q. A best standard, best industry standard guidelines.

24 A. Yes, well best practice is what I'm about to say. So the
25 documentation that we have for diving at LMCS was developed
26 by Mr. Andrew Farah because he's our diving supervisor. I
27 myself don't have much—I myself don't have any experience

1 in diving and so I defer all matters of diving to Mr. Andrew
2 Farah and so those documents are included just by reference, as
3 you say, and we pull best practice from them as needed to be
4 applied to diving jobs.

5 Q. Could you—I know you—you're like myself. I have no
6 experience in diving. Is there anything in particular you could
7 point out in your manual that was culled or taken out or
8 extracted from that code?

9 A. No, I can't say specifically.

10 **Mr. Chairman:** Can I ask where this is going? If there's
11 something in particular that you say should be in it and isn't,
12 then by all means put it. I mean, it's a sort of vague question to
13 say look a code of conduct by some other agency and then
14 asking him what bits have you extracted from it or not extracted
15 from it. If there's something particular you want—

16 **Ms. Alfonso:** So—

17 **Mr. Chairman:**—then put it to him.

18 **Ms. Alfonso:** Okay. Thank you very much, Sir.

19 **Continued Cross-Examination By Ms. Alfonso:**

20 Q. Mr. Ali, I didn't see—I, I—okay, you said you don't know
21 what particular parts would have been removed from that code
22 or absorbed or copied into the manual?

23 A. Yeah.

24 Q. Okay. If I told you that I didn't see anything, any area reflected
25 in the manual that came from there, what would you say?

26 A. It's the same set of—same scope of work manual, the 31st item,
27 item number 31 is supposed to be our diving best practice

1 guide.

2 Q. Uh-huh. Okay. So, what I was seeing in this code was a lot of
3 stuff—oh, I don't say stuff—a lot of items about harnessing and
4 these conditions you would put somebody with, you know,
5 with, you know, you know, with using harness, using ropes,
6 using, you know, these kinds of things. Do you have anything
7 like that reflected in your manual?

8 A. No, nothing to that extent. They're just general best practices
9 and then as they apply our expert Mr. Farah will apply as
10 necessary.

11 Q. But you are the person principally who would have formulated
12 or reformulated, let me be fair to you, formulated or
13 reformulated the aspects of the safety manual, either one of
14 them, yes?

15 A. Yeah.

16 Q. Okay. I'll leave it there. I notice in your emergency response
17 plan, Mr. Ali, at 1179 of your, I think that is your original
18 witness statement, 78, I beg your pardon, 1178 towards the end,
19 so the last six or seven bullet points. You see those, Mr. Ali?

20 A. Yeah.

21 Q. Okay. So, I take it these were the risks—these were some
22 measures if certain things happened in the hyperbaric chamber?

23 A. Yeah.

24 Q. I still like habitat, but anyway, assistance to be rendered by
25 standby divers in accordance with diving certification,
26 additional external assistance to be requested by onsite
27 supervisor as needed. You see those two items?

1 A. Yes.

2 Q. And that's like the second to last, the third to last and second to
3 last items.

4 A. Yes.

5 Q. Okay. Did you have—LMCS to your knowledge have a
6 standby diver on the 25th of the second—well, the 25th of
7 February this year?

8 A. Yeah. There are supposed to be two standby divers on the
9 crew. Right, I don't know who was that. They rotate position.
10 Sometimes people are part of the active work in the chamber
11 and sometimes they're out to kinda rotate people, so I don't
12 know exactly who they were at the time of the incident, but we
13 had two standby divers, and in addition to that Mr. Farah
14 himself is of course a certified diver and he is not on the dive
15 team, he's supervising, and, um, Mr. Guerra who we spoke
16 about from the incident is also a certified diver.

17 Q. Okay. So, I probably got it wrong. I thought the two standby
18 divers were Mr. Farah and Mr. Guerra.

19 A. No they were, they were just extra people to see how a, like
20 extra divers who are going to be onsite, they were there to
21 function in a, well Farah as a supervisory role and Dexter just to
22 be knowledgeable about the job, and then we had standby
23 divers who were part of the crew who would have been suited
24 up and ready to assist at a moment's notice.

25 Q. And you couldn't help us what are the names of those two
26 divers would be?

27 A. No, they were—

1 Q. Or were?

2 A. Yeah, they were rotating, so I not sure.

3 **Examination By Mr. Chairman:**

4 Q. Well one of them was Kazim Ali, wasn't it?

5 A. Well so we heard afterwards, yeah.

6 Q. At the time of the incident he was the fifth man in the water?

7 A. Yeah.

8 Q. He was supposed to be the standby diver. I think we've seen
9 footage of him with a spanner in his hand going down into the,
10 um—

11 A. Yeah.

12 Q. —into the chamber.

13 A. At the time—

14 Q. —to pass the spanner to one of the people who was working.

15 A. Yeah. At the time of the actual incident he would have been
16 there. What I'm saying is that they kinda rotate positions.

17 Q. Yes, but we know that he was one of the standby divers at the
18 time?

19 A. Yes.

20 **Mr. Chairman:** Yes. Thank you.

21 **Ms. Alfonso:** Okay, thank you very much Mr. Commissioner,
22 Mr. Ali.

23 **Continued Cross-Examination By Ms. Alfonso:**

24 Q. Could you tell me in that second to last bullet point, onsite
25 supervision, somebody—external assistance to be requested by
26 onsite supervision, who is that onsite supervision, that's LMCS
27 or Paria?

1 A. LMCS, yeah.

2 Q. I see. So LMCS in their response strategies have outlined that
3 they would reach out to additional divers who may either be off
4 duty, LMCS people or additional divers who are not employed
5 by LMCS?

6 A. Yes.

7 Q. Okay. To your knowledge, Mr. Ali, were there such divers who
8 were on the scene on Friday night or Friday evening?

9 A. Yes.

10 Q. The 22nd—

11 A. Yes.

12 Q. —who somebody would have called out?

13 A. Yes. The prominent names like Corey and Michael and so on
14 are the ones that we call.

15 Q. Michael Kurban?

16 A. Yeah.

17 Q. Yeah, okay.

18 **Ms. Alfonso:** Thank you very much, Mr. Ali. Thank you for
19 indulging me and thank you to the Commission.

20 **Mr. Ali:** You're welcome.

21 **Mr. Chairman:** Yes, Mr. Ramadhar.

22 **Mr. Ramadhar:** Thank you very much, Chairman, for your
23 kind indulgence. I seem to—there we go. Prakash Ramadhar
24 on behalf of the family of Kurban and Yusof Henry, yes?

25 **Cross-Examination By Mr. Ramadhar:**

26 Q. You have said something quite interesting and you are a bit—
27 you are knowledgeable in some level of sciences. Is that

1 accurate?

2 A. Yes.

3 Q. Yes. And you appreciate science requires us, if we have to find
4 the cause of something, to take nothing for granted? You
5 appreciate that?

6 A. Right. Yeah.

7 Q. We've been hearing about the failure of this plug. What was
8 the outer limit of the pressure that that plug could endure before
9 it fails?

10 A. I can't say offhand.

11 Q. But you appreciate all mechanisms will have a breaking limit?

12 A. Yes.

13 Q. Good. Now, you appreciate equally that water is at least 800
14 times more dense than air?

15 A. Yes.

16 Q. Science tells us that fluids cannot be compressed but air or a
17 gas could be, yes?

18 A. Yes.

19 Q. Within the plug area, that is on the underside of that plug, was
20 there a positive or a negative pressure acting upon that plug?

21 A. Within the line at berth 6?

22 Q. Thin the line, I beg your pardon, yes.

23 A. It would have been—well, relative to the chamber it would
24 have been less. I don't want to say positive or negative.

25 Q. Right. So, within it, there'd be pressure from the chamber
26 pressing down—

27 A. Uh-huh.

1 Q. —on to the plug?

2 A. Yes.

3 Q. Correct? Now, are we to be guaranteed that that circuit, if I
4 may call it that, between 6 and 5 berths would have been
5 cauterized, um, closed?

6 A. The content of the—

7 Q. Within, within that U, as the Chairman so lucidly put on the
8 board.

9 A. Yeah.

10 Q. Was that a closed circuit?

11 A. Yes. The line at, um—

12 Q. [*Inaudible*]

13 A. —five is blanked.

14 Q. What would be the effect, for instance, if there was an
15 immediate and sudden breach of that circuit, not at the plug end
16 but at another end?

17 A. The, um—well, assuming that the plug holds—

18 Q. Yes.

19 A. —right, there would have been just seepage.

20 Q. Seepage?

21 A. Yeah.

22 Q. That all depends now on the break point of the plug, isn't it?

23 A. Yes.

24 Q. Right. So that, the plug didn't shoot out as a projectile,
25 meaning that there was a positive force pushing it out, is that
26 accurate?

27 A. Yes.

1 Q. So therefore it was pushed in, either by the pressure within the
2 Chamber and/or a negative pressure created within the pipe. Is
3 that accurate?

4 A. Yes.

5 Q. Inelegantly yesterday I said, we did the final [*Inaudible*] but I
6 really did mean, and I apologize, Commissioners, to say what
7 or who was responsible, which is why we're here. Is that
8 circuit connected to some valving—

9 A. No.

10 Q. —so that it could open or close?

11 A. No.

12 Q. Okay. Another witness has told us that there's a valve on one
13 of the lines, on that line.

14 A. On the U, after it has been disconnected?

15 Q. Further up, wherever it was that there's a valve. Are you in a
16 position to help us with that?

17 A. No. To my knowledge, the line was broken at 5 and at 6.

18 Q. Sorry?

19 A. The line was broken at 5 and at 6.

20 Q. Five and 6?

21 A. The pipe was disconnected, yeah.

22 Q. Thank you very, very much.

23 **Mr. Ramadhar:** Mr. Chairman, I'm most grateful to you.

24 **Mr. Chairman:** Anyone else? Ms. Persaud? Yes, thank you.

25 **Mrs. Persaud Maraj:** Thank you.

26 **Examination By Mrs. Persaud Maraj:**

27 Q. Mr. Ali, I just have a few questions. Earlier in your statements,

1 in your questioning, in your answer to Mr. Peterson, you said
2 that the permit to work controlled the works to be executed.
3 That's correct?

4 A. Yes.

5 Q. Right. My question to you is, in relation to the work that is
6 being done, what controls that?

7 A. Our—

8 Q. Your meth—sorry?

9 A. Our method statement is supposed to control the work that
10 LMCS is executing.

11 Q. And that's basically—

12 **Mr. Chairman:** I didn't catch any of that at all. You have to
13 do that all over again, I'm afraid, so if you concentrate on what
14 I've asked that you speak clearly into that microphone without
15 being too close, please?

16 **Mr. Ali:** I'm trying, I'm trying.

17 **Continued Examination By Mrs. Persaud Maraj:**

18 A. What I'm saying is that our method statement is the instructions
19 that we give for our work to be executed.

20 Q. Right. And that will tell you the methodology?

21 A. Yes.

22 Q. And is it fair to say that the methodology is developed during
23 the course of the work, before the work is carried out?

24 A. Before the work is carried out.

25 Q. All right. So, are you part and parcel of any process involved in
26 the development of the method—methodology in that
27 statement?

1 A. The development, no.

2 Q. All right. Do you have any role in the communication with
3 respect to the development of that method statement,
4 communication between Paria and LMCS?

5 A. Oh yes. I usually submit it, the documents are submitted to
6 Paria's, the person in, in—who holds the contract eventually,
7 Terrence Rampersadsingh, and then he does the distribution of
8 the documents for approval by Paria internally, and they just let
9 us know when everything has been approved.

10 Q. All right. And you were actually involved in that process in
11 this contract?

12 A. Yes.

13 Q. All right. Can he be shown the document at page two nine two
14 four to five of the updated supplemental witness bundle?
15 Updated witness bundle, two nine two four, right. This is an
16 email. If you can go to the bottom I think the chain of emails
17 starts at the end of the document. Are you familiar with this
18 email?

19 A. Yes.

20 Q. Was it you—I'm seeing a name there at the end the page,
21 Ahmad. That would have been you who sent this email to, the
22 sender is Terrence Rampersadsingh?

23 A. Yes.

24 Q. And he was the planner in relation to this project?

25 A. Yes.

26 Q. All right. Can we scroll up now? To the questions. All right.
27 So, in this portion of the email, this was the first one that was

1 sent, you were sending the method statement, the job safety
2 analysis and—I'm sorry, I can't read that from here.

3 **Mr. Chairman:** Lift plans.

4 **Mrs. Persaud Maraj:** And lift plans thank you. Right.

5 **Continued Examination By Mrs. Persaud Maraj:**

6 Q. So that was submitted to you via email, that's correct?

7 A. By email.

8 Q. By email. And thereafter we have a response coming from,
9 well, we have another email from you to Mr. Rampersadsingh.

10 That would have been on the 4th of January, 2022 at 3.59 p.m.,
11 3.59 p.m.?

12 A. Yes.

13 Q. Right. And in that email, you're answering questions in
14 relation to the method statement.

15 A. Yes.

16 Q. Right. And if I can quickly read this out to you, it says to
17 answer the questions asked. Can you say who was—who were
18 these questions asked to?

19 A. They were asked to—these questions were asked by Paria to
20 LMCS over, I believe it was, a zoom call, a zoom meeting.

21 Q. So it was not in writing? These questions were not given in
22 writing?

23 A. No.

24 Q. But you're responding to the questions that were put verbally
25 and they concerned the methodology that was contained in the
26 method statement, if we're to get this correct?

27 A. Yes.

1 Q. All right. And you said, in answer question one, to question
2 one, will the inflatable plug also be raised to the top of the new
3 riser section when cutting and welding for the new flange above
4 water? The answer is yes. Both the inflatable plug and the
5 solid barrier would be reinstalled at the top before hot works
6 begin. Step 86 has been updated to reflect this. (Now
7 indicates—and in brackets you said “(Now indicates that steps
8 15 to 28 will be repeated, which includes both plug and a
9 barrier installation)”. I don’t want to put words into your
10 mouth. Can you explain to us what it is that, that you were
11 communicating to Mr. Rampersadsingh in relation to the
12 methodology?

13 A. Um, well, it’s basically exactly as the question stated. I can’t
14 remember who exactly from Paria’s end made this—asked this
15 question but the original version zero of my document didn’t
16 explicitly state that we would reinstall the plugs at the top,
17 because after the top section of the riser was attached and the
18 works that was taking place on the 25th, we had to execute a
19 second cut much higher up.

20 Q. Right.

21 A. So we had that we would install the barriers for the bottom cut,
22 remove them but I didn’t put a line saying that we were going
23 to reinstall them when we do the second set of hot work, and so
24 this was just to clarify that, yes, that yes, our intention is to
25 reinstall the plugs before we do the second set of hot works.

26 Q. So in other words, the plugs had to—the barriers had to have
27 been removed from the subsea area?

1 A. Yes.

2 Q. As you understand it now?

3 A. Yes.

4 Q. And then reinstalled to the top?

5 A. Yes.

6 Q. All right. If we go further up in the email chain, we see that
7 there's an email that was forwarded to, on this very chain, from,
8 that would be Mr., Terrence Rampersadsingh again at 4.20
9 p.m.—

10 A. Yes.

11 Q. —on the 4th of January, 2022 and it says:

12 “Please review respective attachments, MS meaning method statement
13 was reviewed updated and acceptable. So that methodology
14 that you described with the removal of the plug and then the
15 reinstallation was accepted by Paria?

16 A. Yes it was.

17 Q. All right. And that was in fact the work in question that was
18 carried out on the twen—well, that was the work that was being
19 carried out on the 25th of February?

20 A. Yes.

21 Q. All right. I know in your answer to Mr. Peterson earlier you
22 said you can't speak to if anybody from LMCS from the top of
23 your head is qualified as confined space or has confined space
24 certification. I notice from your statement you did mention that
25 Conan Beddoe was present. Would you be able to say to the
26 Commission if you're aware that he has confined space
27 certification?

1 A. No. I'm not very familiar with Conan.

2 Q. That's fine. All right. In the course of these proceedings,
3 you're aware that OSH has been investigating this incident that
4 occurred on the 25th?

5 A. Yes.

6 Q. And as a result of that investigation, you're aware that they
7 had—they have an investigation report that was commissioned
8 and produced by In-Corr-Tech Limited?

9 A. Yes.

10 Q. Right. Have you ever—have you seen that report?

11 A. I skimmed through the short version of the report.

12 Q. All right. I would like to take him to the In-Corr-Tech report
13 please at—it's at page one three nine eight of the supplemental
14 core at page one three nine eight. So just look at this document.
15 This is the—is this the document that you're familiar with as in
16 the In-Corr-Tech report from the incident?

17 A. [*Document handed to Mr. Ali*] Er, yes. I haven't seen the full
18 report but this looks like the report.

19 Q. All right. I would just like to quickly take you to page 1398.
20 We're there? Under the rubric—3.3 under the rubric “Inflatable
21 Plugs” and at the point—but before I read this, you're aware
22 that the plug was retrieved after the bodies were taken out and
23 so forth from the pipeline at 36 Sealine?

24 A. Yes, I was told.

25 Q. And that was supplied to In-Corr-Tech?

26 A. Yes.

27 Q. For the purposes of investigation?

1 A. Yes.

2 Q. All right. So I know Mr. Peterson has put a number of
3 questions about the plug this morning to you, right? And I'd
4 like you to read 3.3 for the Commission, please?

5 **Mr. Chairman:** All of it?

6 **Mrs. Persaud Maraj:** Well, we can go to—

7 **Mr. Chairman:** Can we just identify the bits that matter?

8 **Commissioner Wilson:** The first sentence of 3.3.3, 3.3.3.

9 **Continued Examination By Mrs. Persaud Maraj:**

10 A. "Both tests, in the open and the test within the 30-inch
11 pipe, showed no evidence of leaks or defects which could
12 have been contributory to the accident."

13 Q. Continue please?

14 A. "It has to be noted that this plug held its seal from the
15 date it was installed in the riser to the date of the
16 accident."

17 Q. All right. So in other words there was no defect to the plug?
18 That's what the report is saying there?

19 A. Yes.

20 Q. And can he be taken to 3.3.5 which is on page one three nine
21 nine? And I'd like you to read the second sentence in that
22 report please for the Commission's benefit?

23 A. Three point three point five?

24 Q. Three point three point five, yes. The second—

25 A. "The important point here is that the plug held its seal
26 under the operating habitat pressure up to and until
27 attempts were made to deflate it, to facilitate removal

1 from within the riser.”

2 Q. Right. So in other words, to the benefit of our understanding
3 and your understanding of what it's saying, I know this is not
4 your report, but your understanding of what is being said here
5 in relation to the integrity of the plug, the investigator is saying
6 that the plug retained its integrity?

7 A. Yes.

8 Q. Yes? All right. In relation to a question asked by my learned
9 friend in respect of the updates to the manuals, the safety
10 manuals from LMCS, you said it's not a priority to have the
11 manual updated at present. Would you be able to say why it's
12 not a priority?

13 A. As I said before, LMCS is not currently actively seeking work
14 for which the manuals would be the guidelines for and so we're
15 spending all of our effort and time on the Commission right
16 now, and so, when we get more information, updates like this
17 following an incident especially, are particularly dependent on
18 accident investigation and the recommendations made in those
19 investigations and their reports, so until we have a proper idea
20 of exactly what happened and we have, I mean in this case
21 probably would be multiple reports stating what
22 recommendations should be put into place, those would guide
23 how we update our manuals and our work in future.

24 Q. All right. And my final point of clarification, in relation to a
25 question that my learned friend asked you, Mr. Peterson, in
26 relation to the amount of content taken out from the riser, the
27 two barges, just for clarification, because it wasn't clear, the

1 two barges of oil that you have mentioned that was taken out,
2 that was from, your understanding, the riser or the top side
3 only?

4 A. My understanding is that the barges were from the riser as they
5 were clearing space.

6 Q. Right.

7 **Mrs. Persaud Maraj:** I think that's all for the clarifications.

8 **Mr. Chairman:** Thank you, Ms. Right, anything else, Mr.
9 Maharaj?

10 **Mr. Maharaj SC:** I have no questions.

11 **Mr. Chairman:** Thank you very much. There are some
12 questions from my do-Commissioner here. I wonder if you can
13 help him, please?

14 **Examination By Commissioner Wilson:**

15 Q. Good morning, Mr. Ali.

16 A. Morning.

17 Q. I'm happy to hear that you actually had a stint at Paria which
18 could probably help clear up some stuff with me. In your HSE
19 experience working both with an operator and a contractor, is it
20 the norm where an operator depends solely on the contractor to
21 provide a risk assessment or is this usually a collaborative
22 agreement in your experience?

23 A. It's usually a collaborative experience.

24 Q. Right. And this is in, again in your experience working with
25 Paria and contractors?

26 A. Yes.

27 Q. So usually you bring all the stakeholders to the table to generate

1 and participate in a risk assessment?

2 A. Well no, not usually.

3 Q. Okay.

4 A. It may not be like a fully collaborative desktop update.

5 Q. Uh-huh.

6 A. But they would be worked on by multiple people before a final
7 version is issued.

8 Q. By all stakeholders—

9 A. By all stake—

10 Q. —of the project?

11 A. Yes, yes.

12 Q. But in this case they indicated that LMCS was the one that
13 generated the risk assessment for approval—

14 A. Uh-huh.

15 Q. —by the operators. Is that a usual practice?

16 A. That is the practice they put into place recently, yeah.

17 Q. Put into place recently?

18 A. Yeah, well, Paria.

19 Q. Paria put. In your experience as an HSE professional, is that
20 industry best practice?

21 A. I can't say. I can't say. I don't want to speak outside of my—

22 Q. Okay. No problem. When—so I'll deal with LMCS now and
23 your role at LMCS. When you are generating a risk
24 assessment, do you do that in a silo or do you collaborate with a
25 team?

26 A. It's collaborative with a team, but again, it's not usually a
27 desktop, so I would usually do a first draft and send it for

1 review around for the different people to put in their input or,
2 you know, recommendations.

3 Q. So just to be clear, your risk assessments are not done like in a
4 room with all the stakeholders of the project giving input into
5 your risk assessment? You generate it and you send it around
6 distribution by email or hard copies or—

7 A. Well it depends on who I'm trying to reach and how it's best to
8 reach them.

9 Q. Okay, so, it's not really in one room just—

10 A. Yeah.

11 Q. —distribution—

12 A. Yeah.

13 Q. —and approval?

14 A. Yeah.

15 Q. All right. Do you think that is best practice to do that and/or
16 you can achieve optimal identification of hazards and
17 mitigation through that sort of methodology?

18 A. Yeah, I believe it's possible to achieve that, that's why—it's
19 probably better to have everybody sitting in a room, but,
20 especially after COVID that is not really [*Inaudible*]—

21 Q. Understood.

22 A. —how we could get it done.

23 Q. Understood. All right, so, that's that question. The other
24 question, um, again, in your experience as an HSE professional,
25 when we went to the sequential steps and those sequential steps
26 changed, I heard conversations and that conversations were
27 had, and then they referenced the email, but in your experience

1 as an HSE professional, how do you usually capture a
2 sequential step changes to advise your team of documenting
3 and controlling those changes? Because the changes are really
4 to represent once a change is not like for like, how is that
5 captured and managed?

6 A. Well if the change is not like for like we have to revise the
7 document.

8 Q. Uh-huh.

9 A. Usually by—

10 Q. Which document?

11 A. The method statement.

12 Q. Right.

13 A. The method statements that we would generate, so that's why
14 we have multiple versions. If there are any queries or if there
15 are any changes to the methodology, we revise the document.
16 If there are like for like changes, we—it's been practiced, I
17 don't think it's the best practice but we—

18 Q. Sorry, you don't think it's best practice?

19 A. I don't know—I don't think you count it as best practice but if
20 it's a like for like change—

21 Q. Uh-huh.

22 A. —and it's agreed on in the morning of, for instance, we will
23 basically revise the documents live and just countersign the
24 document. So a person from Paria would sign, a person from
25 LMCS would countersign to agree on the changes that are
26 being made.

27 Q. And how are those changes distributed or communicated to

1 your workforce on the site—

2 A. Well, a—

3 Q. —capturing, let's just say those changes, there are some risks
4 that could arise in that, is there a process that captures
5 everything that you now can effectively communicate those
6 changes to your—to the worksite?

7 A. Toolbox talks.

8 Q. Okay. Well thank you for that. I want to revisit the incident
9 report. As an HSSE manager, I think I'm hearing, and I'd like
10 you to clarify it for me, you are depending on the findings of
11 this Commission to assist LMCS with their incident report
12 and/or the learnings, anything that comes out of an incident
13 report with that?

14 A. Yeah, well, you all and whoever else does reports because we
15 aren't able to first-hand investigate or report the incident
16 ourselves. I can't really generate—I could generate one-sided
17 based on what we did and how it would change our end, but in
18 terms of like getting a bigger overall picture of what happened
19 and recommendations, that we need to put into place like
20 systemwide, I would be advised by recommendations coming
21 out from people who investigate it further.

22 Q. All right, I'd take that ,but I'd like to offer further any
23 considerations for initial incident reports or anything that
24 coming out whilst this process is going on, what did LMCS do,
25 or you or your appropriate delegates, do to initially collect all
26 the information pertaining to the incident so that LMCS can
27 carry out an incident report or even a root cause? And I'm tell

1 you why I'm going with this. It's that you are a STOW
2 member and I think in getting that STOW accreditation you
3 would have been integral in contributing to getting that STOW
4 membership. To be effective as a STOW member, you would
5 have to be versed in incident investigation report, you know, so
6 that's why I was a bit taken aback when you told me you're
7 depending on the Commission to provide you with your
8 incident report, your root cause analysis.

9 A. Well I don't want it to come across as we are depending on the
10 Commission.

11 Q. And that's what I'm trying to clear up, yeah?

12 A. What I'm saying is that we are not right now in a position
13 where making these changes are a huge priority for us because
14 these changes would affect work. As—

15 Q. Yeah, so just to clarify, sorry to cut you, I'm not talking about
16 the safety management system in terms of improvements there,
17 lessons learned, I am talking about an incident happened, we
18 had fatalities, we had injuries, did LMCS do an incident report?

19 A. Yeah, we did a preliminary incident.

20 Q. Preliminary incident report. Okay, great. Thank you. The final
21 thing I want to take you to is on the emergency response, 1179.
22 Right. I want to look at the last bullet point and I think in your
23 role at LMCS, I'm particularly interested in medical
24 intervention to be requested on site supervision in all cases of
25 breathing airway difficulties and/or cases of suffocating under
26 water for any length of time. So, in this emergency response,
27 did you have a hyperbaric practitioner, a doctor on call, so that

1 this emergency response could be activated?

2 A. No. My understanding is that a—well we don't have a formal
3 relationship but OSTL would have been the on-call person that
4 we contacted for use of the hyperbaric chamber.

5 Q. No hyperbaric practitioner, doctor, because medical
6 intervention to be requested by on-site supervision, so, let's just
7 say, bam, an incident happened. It doesn't even have to be the
8 Delta P. Incident happened. Who does your supervisor call?

9 A. I don't want to be too presumptuous, but I believe it's Dr.
10 Coombs. You could, um, refer to Andrew Farah for
11 clarification on that, but I believe it's Dr. Victor Coombs.

12 Q. Okay. So in your capacity as the HSE manager, is there a
13 communications plan, an emergency response plan, that shows
14 incident and the doctor is Dr. Coombs with his emergency
15 response number readily available?

16 A. No.

17 Q. No. So, that's what I was kinda wondering. I mean, the
18 emergency response plan seems quite light.

19 A. Yes.

20 Q. Yeah? All right, thank you for your time, Mr. Ali.

21 **Mr. Chairman:** All right, look, does anyone have anything
22 arising from any of that? No? Thank you. Well, thank you
23 very much for coming, Mr. Ali. I think it took a little bit longer
24 than we anticipated but thank you for coming anyway, and
25 you're now free to go or you can stay as you please, but thanks
26 for your contribution.

27 **Mr. Ali:** Thank you.

1 **Mr. Chairman:** Right. The gentleman will take you. I think
2 next we have Mr. Ramdhan is that right? I think given the time
3 what we're going to do is we'll have the summary, is he to be
4 summarized, let's have his summary then we'll break for what I
5 hope we will all agree is going to be a 45-minute lunch,
6 [*Crosstalk*] so let's have his summary and then we can break
7 off and have our lunch. Do you anticipate that he might be a
8 little while?

9 **Mr. Peterson SC:** Not from us, Sir. We think he's quite
10 fulsome in his statement so—

11 **Mr. Chairman:** Mr. Maharaj, I think you have some questions
12 for him, do you?

13 **Mr. Maharaj SC:** Yes I have questions for him. I would
14 probably be about 45 minutes with him.

15 **Mr. Chairman:** Right, um, so, and everybody else five or 10
16 minutes something in that order, maybe a bit longer? I see a
17 head being shaken by Ms. Persaud.

18 **Commissioner Wilson:** I may be a little longer.

19 **Mr. Chairman:** All right, all right, okay, I get the picture.
20 Well we'll take stock once Mr. Maharaj sits down, all right, as
21 to what we're able to do for the rest of the day. All right,
22 then—

23 **Mr. Maharaj SC:** Ms. Vijaya Maharaj will do the summary.

24 **Mr. Chairman:** All right, thank you very much. Has
25 somebody gone to get Mr. Ramdhan?

26 [*Mr. Johnathan Ramdhan enters enquiry room and is sworn*]

27 **Mr. Ramdhan:** I, Johnathan Ramdhan, solemnly swear that

1 the evidence I shall give to the Commission in this case shall be
2 the truth, the whole truth and nothing but the truth.

3 **Mr. Chairman:** Thank you, Mr. Ramdhan. Did I pronounce
4 your name right, Ramhan?

5 **Mr. Ramdhan:** Ramdhan.

6 **Mr. Chairman:** Ramdhan.

7 **Mr. Ramdhan:** Yeah.

8 **Mr. Chairman:** Mr. Ramdhan, you're going to hear shortly a
9 summary of the evidence that you have provided to us already,
10 all right?

11 **Mr. Ramdhan:** Okay.

12 **Mr. Chairman:** That summary is going to be read by Ms.
13 Maharaj. Listen to it carefully, please? If you agree with it
14 then she'll ask at the end if you do and if you do, great, if not,
15 please point out any flaws or anything you think we need to
16 know about, all right? After that, Mr. Maharaj, unrelated, I
17 hasten to add, is going to be asking you some questions on
18 behalf of the Commission. When that's finished, we'll have
19 some questions from others who are interested in these
20 proceedings. All right?

21 **Mr. Ramdhan:** Okay.

22 **Mr. Chairman:** That's the lay of the land. We're going to
23 take our lunch break after this summary has been read to you
24 because we're right up against lunch now, all right? But it'll
25 only be about 45 minutes.

26 **Mr. Ramdhan:** Okay, good.

27 **Mr. Chairman:** All right, thank you very much. Mrs.

1 Maharaj.

2 **Ms. Maharaj:** Mr. Johnathan Ramdhan submitted a witness
3 statement to the Commission dated 30th September, 2022 and
4 it's in the witness statement bundle at page one four six eight
5 Volume IV. Mr. Ramdhan is Paria's operations team
6 supervisor in the terminal operations department. They
7 reported to Visham Harrichan who is Paria's offshore team
8 lead. Mr. Ramdhan says that following his training in the
9 permit to work procedure on 10th November, 2021, he was
10 authorized to sign and issue permits to work.

11 Mr. Ramdhan explained that part of the pre-work done
12 by LMCS involved the draining of product from the pipeline at
13 berths number 5 and 6 in accordance with Paria's work
14 instruction dated 5th January, 2022 which was developed by the
15 offshore section of the terminal operations department and that
16 document is at core bundle number one three thee—1033. Mr.
17 Ramdhan states that the draining of the pipeline at berths 5 and
18 6 by LMCS was done in two phases between the 18th of
19 January to the 3rd of February, 2022 by air-blowing the
20 contents into a slop barge.

21 He said that LMCS then removed the elbows connecting
22 36 Sealine to berths 5 and 6 so as to isolate the pipeline to be
23 repaired, which meant that the pipeline would be totally
24 isolated from the berths leaving a U-shaped pipeline in the
25 water. Isolation check lists dated 12th November, 2021, 31st
26 January, 2022 and 10th February, 2022 were prepared and
27 approved by Paria after each phase of the process and those can

1 be found in the core bundle at pages 1023 to 1025.

2 On the 25th of February, at 8.00 a.m., Mr. Ramdhan
3 posted his subordinate, Mr. Kirt Scott, an offshore operator
4 employed by Kenson at berth 6 to monitor and safeguard the
5 operational establishment during the course of the works being
6 done by LMCS. At 8.00 a.m. Mr. Houston Majardsingh
7 brought the relevant permits to work for Mr. Ramdhan's
8 signature as site authority. This included the main permit to
9 work, number nine three two zero, for the various maintenance
10 works at berth 6.

11 Mr. Ramdhan explains that the permit to work is valid for
12 a maximum of seven days and that permit to work number nine
13 three two zero was a duplicate of a nth permit issued during the
14 course of the maintenance works that expired prior to the
15 February the 25th. Mr. Majardsingh gave Mr. Ramdhan a
16 briefing on the status of the job and tasks as described in that
17 permit and also indicated that LMCS would not be doing any
18 hot works that day.

19 Mr. Ramdhan confirmed that the elbows were still
20 disconnected from the pipeline and that the berths were in a
21 safe and inactive state with all the valves closed. He also
22 confirmed with Mr. Majardsingh that the migration barrier was
23 still installed and would be used for the course of the day's
24 work.

25 Mr. Ramdhan says it was critical for the barrier to be
26 used during the works to be conducted pursuant to permit to
27 work nine three two zero, since, even after the draining of the

1 line there was still product in the line. He says the removal of
2 the migration barrier could pose a danger to divers by allowing
3 hydrocarbon vapours to escape into the divers' working area in
4 the habitat. He says that this in turn could cause a toxic
5 working environment and/or a flammable working environment
6 during hot works.

7 He also stated that he checked to ensure that all of the
8 valid documents were attached to the permit to work. This
9 included the job safety analysis at core bundle page 1062, hot
10 works certificate and LMCS method statement which is at core
11 bundle 1048 which sets out the step by step approach to execute
12 a task process or procedure. After receiving the briefing from
13 Mr. Majardsingh, Mr. Ramdhan performed his duties as site
14 authority which is set out in Paria's permit to work procedure
15 which is at the core bundle page 30. In his witness statement,
16 Mr. Ramdhan lists some of these duties and described how he
17 carried out those duties in relation to permit to work nine three
18 two zero.

19 With respect to his duty as site authority to ensure that a
20 suitable and sufficient job safety analysis was prepared, he
21 stated that he was not trained nor did he possess the expertise to
22 assess the suitability or sufficiency of the job hazard analysis
23 attached to that permit. He says that this was the responsibility
24 of Paria's HSEQ and technical and maintenance departments
25 and that his role was to ensure that a job hazard analysis had
26 been so approved which he did.

27 Mr. Ramdhan filled out section (b)(1) of the permit to

1 work and wrote the status as line drained and the instruction—
2 sorry, wrote the status of the line as line drained and the
3 instruction migration barrier to he used. In section (b)(2) of the
4 permit to work, he wrote, “Care to be taken when weather
5 conditions change.”

6 In relation to his duty as site authority to ensure through
7 face to face discussions and/or site visit that the person in
8 charge of the activities at the job site knows about the exact
9 location of the works, the hazards present and the precautions to
10 be taken, Mr. Ramdhan says that Mr. Majardsingh was in
11 charge of the activities on the job site and he had his discussion
12 with him face to face.

13 Mr. Ramdhan further explains that the main hazard
14 present was the escape of fumes into the habitat which could
15 cause a toxic environment or during hot works become
16 combustible. He says he discussed the hazards which could
17 affect the job with Mr. Majardsingh and made a point of writing
18 on the permit that the migration barrier was to be used.

19 In relation to his duty as site authority to periodically
20 monitor the ongoing work, Mr. Ramdhan states that he
21 monitored the work through Kirt Scott who reported to him
22 periodically and sent information about the maintenance of the
23 site conditions and precautions.

24 In respect of his duty as site authority to suspend the job
25 if unsafe conditions developed, or were likely to develop, Mr.
26 Ramdhan says that Kirt Scott did not report to him any unsafe
27 conditions prior to the incident and he had no reason to suspend

1 the job prior to the occurrence of the incident on February the
2 25th. Mr. Majardsingh [*sic*] stated that he signed and handed
3 the permits to work to Mr. Majardsingh for supervision of the
4 execution of the works described therein and performance of
5 his other functions under Paria's permit to work procedure. He
6 told him to ensure that safety talks were held prior to starting
7 works, so as to ensure that everyone knew the plan for the day,
8 the hazards of the job and the precautions that needed to be
9 taken.

10 Following the accident that day, Mr. Ramdhan went to
11 berth 6 to investigate what happened. He arrived at 3.12 p.m.
12 and spoke to Kirt Scott who indicated he observed a splash on
13 the screen and that LMCS was not giving him information. Mr.
14 Ramdhan said that LMCS' personnel appeared to be in shock
15 and displaced and he tried unsuccessfully to get information
16 from LMCS.

17 Mr. Ramdhan further stated that when he arrived he did
18 not observe any diving going on and no one appeared to be in
19 charge or actually responding or attempting to respond to the
20 incident. He further states that no one came to him as the Paria
21 representative on the barge and said what happened, what
22 information they had so far and what plan they had for the
23 search and rescue of the missing divers.

24 Mr. Kazim Ali Sr. told him that five divers were missing
25 in the water and he had—and he only had one more diver
26 available who was Andrew Farah. Mr. Ali also indicated to
27 him that Mr. Farah had checked inside the habitat and did not

1 see any of the missing divers. Mr. Ramdhan says that Mr. Ali
2 did not make any requests of Paria for information, assistance
3 or for LMCS to be part of the incident command team. He also
4 stated that there was no response from LMCS to his request to
5 be able to see the camera footage of inside the habitat before the
6 splash was seen and LMCS did not respond to his several
7 requests for more information, including his request that they
8 seek additional divers to assist.

9 Mr. Ramdhan stated therefore that the only information
10 he managed to gather was the missing divers were in the water
11 and he therefore activated Paria's emergency response plan by
12 instructing Leeandra Singh to have launches and tugs
13 dispatched to perform searches within the harbour for the
14 missing divers. At about 4.15 p.m. Paria's Visham Harrichan
15 arrived on site and he, Mr. Ramdhan, passed on the information
16 he had to him.

17 At 4.48 p.m., Lieutenant Hargreaves of the Trinidad and
18 Tobago Coast Guard called Mr. Ramdhan and requested
19 information. Mr. Ramdhan stated that Mr. Hargreaves
20 indicated that there was a dive crew on the way to berth 6 but
21 they would not be able to enter the water without the approval
22 of Hargreaves' supervisor.

23 At approximately 5.22 p.m., Mr. Ramdhan heard
24 shouting and banging from the habitat. The only diver LMCS
25 had at this time was Andrew Farah and he had been requested
26 to go onshore to meet with the incident command team. Mr.
27 Ramdhan therefore immediately instructed Mr. Farah to return.

1 At approximately 5.26 p.m., a pirogue arrived with Michael
2 Kurban and another diver. They were apprised of the situation
3 by LMCS and immediately entered the water to attempt a
4 rescue. Later at about 5.36 p.m., Mr. Ramdhan saw Michael
5 Kurban emerging from the habitat with Christopher Boodram
6 who was covered in oil and who shouted, “Where Blacks?
7 Where Blacks”, and “Them fellas right behind.”

8 Mr. Ramdhan overheard Visham Harrichan telling
9 Michael Kurban and the other divers that the incident
10 commander instructed him to inform them that they were not
11 permitted to enter the pipeline due to the high risks involved
12 and Michael Kurban aggressively responded by saying his
13 father was inside the pipeline and that Paria could not tell him
14 to not go in the pipeline.

15 Mr. Ramdhan did not observe any reaction of the coast
16 guard to the instruction passed by Mr. Harrichan. He said that
17 no one attempted to intimidate, threaten or physically interfere
18 with the divers to get them to stop entering the pipeline. He
19 also stated that the diving continued without interference for
20 about 45 minutes after Mr. Harrichan passed on the
21 instructions.

22 At about 6.30 p.m., Mr. Kurban came out of the water
23 and he didn't resume diving after that. Mr. Ramdhan overheard
24 Mr. Kurban saying that he went in and saw no one and they
25 encountered some air tanks lodged in the pipeline which made
26 it hard to pass and check further. Mr. Ramdhan also made two
27 trips to berth 5 but he did not hear any noises coming from the

1 riser. He left the site at about, sometime at about 9.30 to 9.30
2 p.m. on Friday.

3 Mr. Ramdhan, is that an accurate summary of your
4 evidence?

5 **Mr. Ramdhan:** Yes it is.

6 **Mrs. Maharaj:** Thank you.

7 **Mr. Chairman:** Beautifully timed if I may say so. We'll take
8 our short break now. Can we resume, then, at quarter to 2.00
9 please? Quarter to 2.00. Thank you, Mr. Ramdhan, and we'll
10 see you at a quarter to 2.00.

11 **Mr. Ramdhan:** Thank you very much.

12 **12.56 p.m.:** *Enquiry suspended.*

13 **1.42 p.m.:** *Enquiry resumed.*

14 **Mr. Chairman:** Is Mr. Maharaj going to join us?

15 **Mr. Bissessar:** In a second, sorry, um—

16 *[Pause]*

17 **Mr. Maharaj SC:** Mr. Chairman and Commissioner, I do
18 apologize.

19 **Mr. Chairman:** All right, good.

20 **Examination By Mr. Maharaj SC:**

21 Q. Mr. Ramdhan, I just want to ask you a few questions.
22 According to your—first, what are your qualifi—do you have
23 any qualification in subsea maintenance works.

24 A. No, I have no qualifications in subsea maintenance work. I'm
25 in operations.

26 Q. And do you have any experience?

27 A. In?

1 Q. Subsea maintenance work?

2 A. No, I have no experience in subsea maintenance. I am in the
3 operations department.

4 Q. In your witness statement at paragraphs nine to 13, you told us
5 that you gave some evidence—well you gave some evidence of
6 the process of the draining of the line between berths 5 and 6
7 based on the information which you obtained from maintenance
8 personnel.

9 A. And through handovers from my peers.

10 Q. And through?

11 A. Handovers, the shift handovers—

12 Q. Right.

13 A. —from my peers.

14 Q. Can you tell us who at Paria personnel supervised or monitored
15 the draining of the line?

16 A. I can't say. It would have been done prior and I had limited
17 involvement in that.

18 Q. Can you help us as to how many barrels of oil were removed
19 from the line when it was drained?

20 A. I can't say because I wasn't present during the draining process.

21 Q. And you did not have any access to any records to that effect?

22 A. Records? No.

23 Q. No. Can you help us as to whether the line was mostly cleared
24 or there was, there was one—you mentioned there was some
25 amount of liquid content in the line. Can you give us an idea
26 of, if you know, how much?

27 A. I can't quantify it.

1 Q. You cannot quantify it?

2 A. However, from the handovers they expressed that they drained
3 it in accordance with the procedure and it was handed over
4 from operations to the contractor in the maintenance of—

5 Q. Sorry. Now, in your witness statement, at paragraph eight, you
6 said, as part of the pre-work, LMCS undertook to drain product
7 from the pipeline at berths number 5 and 6 in accordance with
8 Paria work instruction effective the 5th of January, 2022. Is
9 that an accurate statement?

10 A. Yeah.

11 Q. And you went on to say, which was developed by the offshore
12 section of the terminal operations department. Is that an
13 accurate statement?

14 A. Yes.

15 Q. So Paria developed the instructions for the draining of the line?

16 A. Yes, yes, according to it.

17 Q. Right. Now those instructions, I—we have it—those
18 instructions are at CB 1033.

19 A. [*Document handed to Mr. Ramdhan*]

20 Q. That is the—those are the instructions?

21 A. Yes, these are the instructions.

22 Q. I want you to look and you would see that they even have
23 diagrams attached to it. Am I correct?

24 A. Yes.

25 Q. Yes. And I want you to—you see “Purpose: Paria intends to
26 change out”, and what’s mentioned there, so it refers to these
27 works that we are talking about in this case, correct?

1 A. Yeah, the draining, yes.

2 Q. Yes and then you see “Responsibilities”?

3 A. Yeah.

4 Q. The terminal operations manager—that would be of Paria, not
5 so?

6 A. Yes.

7 Q. —has the overall responsibility for ensuring that this procedure
8 is established by reviewing and approving this work instruction.

9 A. Yeah, it says that, yeah.

10 Q. And then you see: “...ensuring the offshore team lead
11 understands the requirement of this work instruction.” Okay?

12 A. Yeah.

13 Q. And then it goes on:

14 “The offshore team lead has direct responsibility to
15 ensure compliance with the procedure by reviewing and
16 approving this work instruction, ensuring the offshore
17 operation team supervisor understands the requirements
18 of this work instruction.

19 A. Yes.

20 Q. And then under—it gives a procedure and it has a heading,
21 “Procedure”.

22 “The following are the steps that should be followed for
23 the clearing of line 36 between berths 5 and 6.”

24 And then, you would see that the—for the next few pages, you
25 have a very detailed procedure up to page 1038 and then you
26 have the diagrams, correct?

27 A. Yeah.

1 Q. But I have not been able to see in this procedure, or these
2 documents or the instructions which were given, any amount to
3 be drained, any quantity of the oil to be drained. Could you
4 help us? Because you are the one who was given this document
5 and you, you would be familiar with the contents of it, not so?

6 A. Well, this document was prepared by someone else.

7 Q. I know. I'm not saying you prepared it—

8 A. Right.

9 Q. —but it was handed to you?

10 A. Yes, so, basically this document was to oversee the draining
11 process.

12 Q. Yes, to oversee it.

13 A. Right.

14 Q. So you'd be familiar with its contents?

15 A. Right, but—

16 Q. Did it—sorry.

17 A. Yeah, but it didn't have a—it didn't have a specific amount to
18 be drained.

19 Q. So you—

20 A. And I've said before I wouldn't be able to say specifically how
21 much was drained because I wasn't present. I had a limited
22 involvement in the draining process.

23 Q. But you had to oversee the process?

24 A. I don't recall because, as I said, we had four—we work shift so
25 we have four days on four days off, so, sometimes the work that
26 is conducted here might happen during the four days off.

27 **Examination By Mr. Chairman:**

1 Q. Yes, that might be so, but obviously nobody's expected to work
2 seven days a week but if you are four days on and then you are
3 handing it over to somebody else, presumably you tell that
4 other person how far you've got?

5 A. Right.

6 Q. Right. And then when they hand back over to you four days
7 later they tell you how far they've got?

8 A. Yeah, but sometimes the—

9 Q. Yes or no?

10 A. —work is not completed.

11 Q. Yes or no?

12 A. Yes.

13 Q. Right. Of course, sometimes the job is completed and there's
14 no handover to you. I can get that.

15 A. Yes.

16 Q. But do your best to help us here. It's not very helpful for you to
17 say, "Well I don't know because it might have been doing the
18 time somebody else was doing. I mean you had, you had
19 partial control over this, didn't you?"

20 A. The draining possess?

21 Q. Yes. On the site.

22 A. Not to my—no, not to my knowledge. I wasn't involved in the
23 draining as I said before.

24 Q. No, I'm not saying you did the draining.

25 A. Yeah.

26 Q. Didn't you have oversight?

27 A. No, as I said, like I wasn't present during the draining process

1 or I had limited presence of which I can't recall.

2 Q. Right. Who had oversight?

3 A. The personnel who had been working as the site—

4 Q. No, no, no. There's a difference between the man who's
5 actually turning the tap—

6 A. No, no, no.

7 Q. —and the person who has control over the process.

8 A. Yes.

9 Q. So did you have control over the process?

10 A. Operations department had control over the process.

11 Q. Right. Are you operations department?

12 A. Yes.

13 Q. What did you rank in the operations department?

14 A. Operations team supervisor.

15 Q. Right, well you answer his question.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. Didn't you just tell us under oath that you had to oversee this?

18 A. The?

19 Q. The draining of the, the line and the carrying out of these
20 instructions?

21 A. Yes, the operations department, yes.

22 Q. And that was your department?

23 A. Yes.

24 Q. So—and you cannot help us to tell us how much oil was
25 drained up—during the period of time you were overseeing it?

26 A. I, as I said, I wasn't involved in overseeing of the drain,
27 however, from handovers, I can't say the quantity of oil that

1 was removed.

2 Q. And how was the oil removed?

3 A. Basis handover again and talking to maintenance personnel, it
4 was air-blown from berth number 5 to berth number 6 and
5 then ashore, and then afterwards they were part of the process
6 where it was drained to a slop barge as well.

7 Q. So Paria officials were involved in the draining process?

8 A. Yes.

9 Q. And Paria officials were witnessing the draining process?

10 A. Er, I wouldn't say witnessing.

11 Q. They were present?

12 A. They were—well yeah, they were present, yeah, overseeing.

13 Q. Right. Do you know whether there—and where was the oil—
14 where the oil—where did the liquid content of the draining
15 process ended up, in slop barges or where did it end up?

16 A. Some ended up in the tank farm in a tank and some ended up in
17 a slop barge.

18 Q. Would Paria have records of what quantities of this oil ended
19 up in slop barges?

20 A. Not to my knowledge.

21 Q. Not to your knowledge?

22 A. Not to my knowledge.

23 Q. Would they have record of how much oil that was drained went
24 to the tank farm?

25 A. To the tank farms, they're supposed to. Onshore supposed to
26 have that since they normally do a open gauge and a close
27 gauge on the tank.

1 Q. At paragraph 13 of your witness statement you said upon
2 completion of the draining procedure there was still product in
3 the line. On what basis you say so?

4 A. This is again from handovers and talking to maintenance
5 personnel.

6 Q. So you remember what happened at handover?

7 A. Yeah, some handovers, yeah.

8 Q. Some handovers. So could you assist us with any quantity that
9 you could remember, from your handovers, of how much oil
10 was drained?

11 A. No. I, I can't say the quantity but, um, you see operations was
12 overseeing the draining process by the contractor, the same
13 LMCS, and they would have been doing their, their ullaging
14 order to determine if the right amount of oil was removed.

15 Q. You are familiar with the work permit—

16 A. Yes.

17 Q. —that was issued, not so?

18 A. Yes.

19 Q. That's at page nine eight three eight.

20 **Mr. Maharaj SC:** I'm referring to this because it has all the
21 attachments in it. [*Crosstalk*] Nine eight three eight. It's the
22 full bundle.

23 **Mr. Chairman:** It's the bundle of documents? Well I've got
24 them in that order.

25 **Mr. Maharaj SC:** I have the same thing.

26 [*Document handed to Mr. Ramdhan*]

27 **Mr. Chairman:** Page 1074 of our core bundle. It's 1074.

1 **Continued Examination By Mr. Maharaj SC:**

2 Q. You recognize your handwriting on that document?

3 A. Yes.

4 Q. And do you see in section A(a) “Line drained comments”?

5 A. Yes.

6 Q. How did you know that the line was drained to put on this
7 document?

8 A. From hand—as I mentioned before from handovers and talking
9 to maintenance personnel.

10 Q. Did you consider at the time that you were dealing with this
11 that the quantity or the amount of oil that was drained from the
12 line was an important factor, an important matter?

13 A. It was important that it was cleared so that their area to work
14 would have been clear to work at that time.

15 Q. It was important for the line to be cleared?

16 A. For the maintenance work to, to, to commence.

17 Q. For the maintenance work to commence. So the clearing of the
18 line was critical for the maintenance works to commence?

19 A. Well in order for them to change the section of the riser it
20 needed to be—the portion of that line needed to be clear.

21 Q. The portion of the line had to be cleared?

22 A. Yeah.

23 Q. The line was being drained both—you know when I talk about
24 top side and—there were two areas of the line being drained,
25 one was top side and one was under water between berths 5 and
26 6, am I correct?

27 A. Well, the—yes, yeah, you’re correct, yeah.

1 Q. That's correct?

2 A. Yeah.

3 Q. Look behind you and you'll see a sort of drawing of it. You see
4 you have—it's top side and then you have the underwater
5 shaped like the U?

6 A. Yes.

7 Q. Right. So the line which was being drained was both the
8 underwater portion of the line between berths 5 and 6 and the
9 line top side above the water?

10 A. Well the information I have is that the top side, they had to
11 clear the top side to remove the elbows.

12 Q. Okay.

13 A. Once the elbows were removed then they would drain partially
14 to the point under they had—where they had to perform their
15 maintenance work.

16 Q. Where they had to perform their maintenance work?

17 A. Yes.

18 Q. Okay. Let's go to—would it—how many days were you
19 involved in—how many days, as far as you were concerned, the
20 line was being drained?

21 A. I can't, I can't recall.

22 Q. So you can't recall how many days, would you, would you be
23 able to help us whether there were—

24 A. Okay, so, um, so just, I just trying to go back to my statement,
25 um—

26 **Mr. Chairman:** You can use your statement.

27 **Mr. Ramdhan:** Okay.

1 **Mr. Chairman:** It's not a memory test. At all.

2 **Mr. Ramdhan:** Okay.

3 **Mr. Chairman:** If you go to paragraph nine, that might help
4 you answer the question.

5 **Continued Examination By Mr. Maharaj SC:**

6 A. Right, yes, so, again, according to handovers and talking to the
7 maintenance personnel, yeah, so it was drained from the 18th to
8 the—between the 18th and to the 3rd of February.

9 **Examination BY Mr. Chairman:**

10 Q. So 18th of January of this year to the 3rd of February this year?

11 A. To the third of February.

12 Q. So that represents a period of what two, two and a bit weeks?

13 A. Yeah.

14 Q. Two and a half weeks?

15 A. Yes.

16 Q. So quite a lot of four-day handovers.

17 A. As I said, Sir, in—non-consecutively which would mean that it
18 was drained, sometimes they stopped.

19 Q. Still quite a lot of four-day handovers?

20 A. Again I'll have to check back my schedule to see.

21 Q. Well there's nothing to check, is there? If this was being
22 drained, as you've been asked, between the 18th of January and
23 the 3rd of February—

24 A. Uh-huh.

25 Q. —that represents, does it not, two weeks?

26 A. Yeah.

27 Q. Right? So in that two-week period, last time I looked, that's 14

1 days, divide that by four and there were at least four periods
2 when there've been handovers?

3 A. Actually, divide it by eight, four days on four days off.

4 Q. Yes, four days on, four days off, but in between you'd still have
5 to make a handover, either to you or from you?

6 A. Well in between would be the personnel who was on duty that
7 day.

8 Q. Yes I appreciate that, but if you've got a 14-day period, after
9 the four day, if you were working the first four, you'd be
10 handing over to somebody else, wouldn't you?

11 A. Well—okay, so on the 25th was my first day back to work after
12 my four days off.

13 Q. Right.

14 A. So if you date back then that was the period of time when the
15 work had stalled—stopped, non-consecutively.

16 Q. You'd not been working—so had you worked on the 18th of
17 January?

18 A. The 18th? I believe so. Yeah, maybe the 18th, yeah.

19 Q. Right. Did you work on the 19th of January?

20 A. Nineteenth? I have to—yeah, I believe so.

21 Q. You did. But did you work on the 20th of January?

22 A. Yes, yes.

23 Q. Did you work on the 21st of January? I don't want to go
24 through every day, but, come on, help us as best you can. You
25 must have made a number of handovers in that two-week
26 period, either to you or from you?

27 A. Yeah, however, I don't recall because—

1 Q. Well that's a different matter. If you can't remember then
2 please say so, but, what I'm struggling with is, is what appears
3 to be a little bit of obfuscation that is you're deliberately trying
4 to hide from something or other.

5 A. No, I didn't have information.

6 Q. Good. Well I hope not. So let's start again, all right? Is the
7 position that these lines were being drained between the 18th of
8 January and the 3rd of February? That's what's in your
9 statement.

10 A. Well, again, according to the information I gathered, yes.

11 Q. Right. Thank you.

12 A. Non-consecutively.

13 Q. Well I'm assuming that what you put into your statement is
14 what you believed to be true.

15 A. Yeah, non-consecutively.

16 Q. Well I'm not suggesting it was done every day but it was done
17 between those days, was it not?

18 A. Yes.

19 Q. Thank you. So, in that two-week period, do you agree you
20 were working off and on each four days?

21 A. Off and on, yeah.

22 Q. Right. So it must follow, doesn't it, that whenever it was that
23 you were working, you either handed over to somebody to carry
24 on for the next four days or they handed it back to you?

25 A. According to, um, to again, according to handovers and the
26 information that I have, the work was, I believe, suspended on
27 the 15th.

1 Q. Work was suspended, yes.

2 A. Yes the draining of the line was suspended on the 15th.

3 Q. So it wasn't being drained between the 18th and the 3rd?

4 A. I not sure. I can't say.

5 Q. Well it's what you put in your statement.

6 A. Yeah, again, this was just, as I said before in the statement I
7 provided a summary with regards to, with regards to the works
8 that were happening between there.

9 Q. Mr. Ramdhan, Mr. Ramdhan, you wrote this statement on the
10 30th of September of this year, correct?

11 A. No. This statement was prepared prior.

12 Q. Prior to that?

13 A. Yeah, yeah.

14 Q. So prepared even earlier than that?

15 A. Yeah.

16 Q. But you signed it on that day, did you?

17 A. On the 30th?

18 Q. Thirtieth of September. I think that's the day I got on mine
19 anyway, unless somebody's got a different date. Thirtieth of
20 September. Yes. That's the day you signed it?

21 A. Uh-huh.

22 Q. Prepared, was it? Who by?

23 A. By me.

24 Q. Right.

25 A. Johnathan Ramdhan.

26 Q. So you took a little while to prepare it, which would have been
27 more than those, on that day? Is that what we're to understand?

1 A. Yeah.

2 Q. Right. So you prepared the statement and then signed it as
3 being accurate. I assume you read through it first, did you?

4 A. Yeah.

5 Q. And you thought to yourself, "Well I—what I've put in here
6 must be right", because if you didn't think it was right you
7 wouldn't have put it in, would you?

8 A. Right.

9 Q. Thank you. So, did you rely on any documents when you were
10 making this statement or did you just make it up as you went
11 along from memory?

12 A. Well I would have relied on, um, on, again, handovers and
13 documentation.

14 Q. Documentation. Would it have been—

15 A. Pointing out the days since I wasn't there and I needed to give a
16 summary of like the nature of the that was—

17 Q. Yes. What were you being asked to do in this statement? What
18 was the purpose of you writing this statement?

19 A. To state what happened.

20 Q. Yes. As best you knew it?

21 A. Yeah.

22 Q. Given that your position in operations. It doesn't necessarily
23 mean everything you yourself did but what you understood to
24 happen, is that right?

25 A. Yeah.

26 Q. That's what you put in there. So can we take it that what's in
27 here is accurate as far as you're aware?

1 A. Yeah.

2 Q. Right. Now is there anything about paragraph nine you want to
3 change?

4 A. No.

5 Q. Good. Then we'll work on the premise that you believe the line
6 was drained between the 18th of January and the 3rd of
7 February. Yes?

8 A. Okay.

9 Q. Great. And that means that during that time if you were
10 working off and on every four days, you would have either had
11 it handed over to you or you to them, correct?

12 A. Correct.

13 Q. Marvellous.

14 **Mr. Chairman:** It's taken a little while but would you like to
15 carry on, Mr. Maharaj?

16 **Mr. Maharaj SC:** I'm much obliged.

17 **Continued Examination By Mr. Maharaj SC:**

18 Q. Well, could you help us for the days that you work, if you could
19 help us as to how much oil you are of the view or liquid content
20 from the line was drained?

21 A. I can't recall.

22 Q. You can't recall?

23 A. No.

24 Q. No, no amount?

25 A. No, I can't re—I can't recall the quantity.

26 Q. Okay. Could you help us? You were overseeing this operation
27 you said. Could you help us with how much liquid content was

1 in the line at the time when you started this overseeing in line
2 36 between berth 5 and 6?

3 A. You're referring to some—you're referring to a point in the
4 statement?

5 Q. No, I'm asking you.

6 A. Okay, huh, what's the question?

7 Q. The question is, could you help us with the amount of liquid
8 content that was in the line between berth 5 and berth 6 when
9 the process of draining the line began?

10 A. No.

11 Q. So what did you do in—what was your job in respect of?

12 A. Well, as I said, I had limited, limited involvement in the
13 draining process, so, when it started it didn't start with, with
14 um, with my, with my team or my shift working.

15 Q. Okay, let's go to something else. All right?

16 A. Yeah.

17 Q. On the work permit that I showed you—

18 A. Right.

19 Q. —and you said there's your handwriting, you see?—

20 **Mr. Chairman:** Could we identify what is his handwriting if
21 it's all or some of it?

22 **Mr. Maharaj SC:** Yes, yes.

23 **Mr. Chairman:** What is your handwriting—

24 **Mr. Maharaj SC:** Okay.

25 **Mr. Chairman:**—that's on there?

26 **Continued Examination By Mr. Maharaj SC:**

27 Q. A pat from the description of the works, the rest of, on A1, A1

1 is your handwriting?

2 A. No, A? A, no. A would be prepared by the applicant.

3 Q. I'm sorry, A—sorry, B1 is your handwriting, B1, B2, B3?

4 A. In B3, the hot work certificate number is wrote in by the
5 applicant. A little different handwriting.

6 Q. All right, let me get this specifically.

7 A. Yeah.

8 Q. On B1, "Line drained" is your handwriting?

9 A. Yes.

10 **Mr. Chairman:** That's not B1, one that's A1.

11 **Mr. Maharaj SC:** No, Mr. Chairman, that's B1.

12 **Mr. Chairman:** Is it?

13 **Mr. Maharaj SC:** Ah, I've misread it. You're right, you're
14 right. Thank you very much. Yes sorry. So B1, yes.

15 **Mr. Maharaj SC:** Line drained.

16 **Mr. Chairman:** Section A and then B is divided into different
17 sections. Forgive me.

18 **Continued Examination By Mr. Maharaj SC:**

19 Q. "Line drained" is your handwriting?

20 A. Yeah.

21 Q. "No" is your handwriting?

22 A. Yes.

23 Q. The next line, "Yes", is your handwriting?

24 A. Yes.

25 Q. "Migration barrier to be used" is your handwriting?

26 A. Yes.

27 Q. Right. On the form again if you go to B3, you see it has there,

1 um, the, all of the handwriting in, where it has the column
2 “Certificate number NA”, are those your handwriting?

3 A. Yes, except the hot works certificate handwriting, two six three
4 four.

5 Q. All right. And then if you go to the next column just at the side,
6 would that be your handwriting?

7 A. Yes.

8 Q. Right. Then if we go to B4, “Additional Precautions, care to be
9 taken when weather conditions change”, is that your
10 handwriting?

11 A. Yes.

12 Q. And your signature is at five. Am I correct?

13 A. Yes.

14 Q. Right. The ticks at B4, would that be your ticks?

15 A. Yes.

16 Q. Right. Okay. So let us—now the description in section A of
17 the works, that’s not your handwriting?

18 A. No.

19 Q. Whose handwriting is that, you know?

20 A. That would be the applicant, Houston.

21 Q. Now who is the applicant?

22 A. Houston.

23 Q. Houston Majardsingh?

24 A. Yeah.

25 Q. Right. Now, if you go to—let’s take the questions at B number,
26 B1, the third column, “Cleared of process, hazardous materials,
27 yes, migration barrier to be used”, am I correct that what you

1 are, in effect, dealing with there was whether any hazardous
2 materials would go into the pipe or would be a hazard in the
3 chamber?

4 A. Could you repeat the question?

5 Q. Where you, where you answered “Yes, migration barrier to be
6 used”, am I correct in relation to the context of that question,
7 you were using the answer in reference to whether any
8 hazardous materials would be either—would be going into the
9 pipeline or would be in the chamber?

10 A. “Cleared of possess/hazardous materials” means that the lines
11 to be worked on, they needed to be clear of the process hazards.
12 Like the section of line they were working on, they needed to
13 be clear of process hazards, which is essentially the fuel that
14 was in the line.

15 Q. Oh, I see.

16 A. Yeah.

17 Q. Okay, I see.

18 A. They needed to be clear to work on.

19 Q. It need to be cleared to?

20 A. It needed to be clear in order to do your maintenance work.

21 **Mr. Chairman:** Sorry, can I—cleared where? Because you
22 say migration barrier cleared above the migration barrier or
23 below it.

24 **Mr. Ramdhan:** Well the section line they needed to work on
25 which would be everything above the line, the part that they
26 needed to cut to perform their works, so everything there
27 supposed to be clear and because, um—well because, again,

1 from the procedure and handover there was still product in the
2 line, the migration barrier should be used as a precaution.

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. As a precaution for what?

5 A. For—

6 Q. For things—hot works going into the line?

7 A. Well my, the two—two precautions was the toxic fumes from
8 the fuel entering the workspace as well as the toxic fumes could
9 create a flammable environment in the event that you have any
10 hot works going on.

11 Q. Oh, so those are the hazards you were thinking of?

12 A. Yes, yeah, that's one of the hazards of that.

13 Q. Those were the hazards. And “Line to be”—where you had
14 “Line to be drained”, you understood that was one of the
15 instructions which were given to you as an employee of Paria to
16 oversee the line being drained?

17 A. Well, the line being drained, right, um, so if—when a applicant
18 comes to me with the instruct—well, with the specific task to
19 be done, we looked at what was required and the requirement in
20 this case was the line to be drained which was completed prior
21 and, um, seeing that the project was already ongoing, they
22 already drained the line, they already had the plugs in place,
23 sorry, the migration barrier in place and they already had a
24 hyperbaric chamber there and they were already doing welding
25 inside, so that's a indication that, yes, the line had to be drained
26 as prepared by the procedure.

27 Q. And the applicant in this case of this, um, was Mr.

1 Majardsingh?

2 A. Yes, yes.

3 Q. And he's an employee of?

4 A. That's Kenson working for Paria.

5 Q. Kenson working for Paria?

6 **Examination By Mr. Chairman:**

7 Q. So that I understand that, when it says, "Line drained", you
8 mean by that when you put that in there—

9 A. Yeah.

10 Q. —that the line had already been drained?

11 A. Line drained, yeah—

12 Q. Yes.

13 A. —and according to the procedure. That's like the conversation
14 we had. Because when someone comes to do a permit we have
15 that conversation of what is the job to be done and the
16 requirements, eh?

17 Q. I understand. Yeah. So, you—but why you're putting that
18 there is because you had understood it had already been done?

19 A. It's already been done, yes.

20 Q. Right. I see. And having said that, you don't actually mean, do
21 you, that the line had been completely drained?

22 A. No.

23 Q. Only partially drained?

24 A. Partly drained. It still had product in the line

25 Q. Yes, thank you.

26 **Mr. Maharaj SC:** Much obliged.

27 **Continued Examination By Mr. Maharaj SC:**

1 Q. Now, if you go down to B3, and you see you have “Safe work
2 method statement”. See that?

3 A. Yes.

4 Q. So you—but that was asking for any safe work method
5 statement? The question was whether there was any safe work
6 method statement, correct?

7 A. If it was attached to the documents.

8 Q. Yes. And you say, “See attached”?

9 A. Yeah.

10 Q. And attached to the document was a hot work certificate?

11 A. Yeah.

12 Q. Method statement 116—you could look at it if you don’t
13 remember.

14 **Mr. Chairman:** Sorry, I was distracted for a moment.

15 **Mr. Maharaj SC:** I’m sorry. I was showing the witness 116.
16 I was showing the witness the permit to work, the hot works
17 certificate and then I—and I was now showing him 116, the
18 method statement, attached to it. And it’s up on the screen.
19 Okay.

20 **Continued Examination By Mr. Maharaj SC:**

21 Q. And you had a job safety analysis, correct?

22 A. Yes.

23 Q. So as you understand it, you were representing, by signing this,
24 that there was a safe work method statement attached to the
25 work permit?

26 A. There was a method statement attached to the work permit
27 according to the documents that are attached to it.

1 Q. And as far as you were concerned it was asking for a safe work
2 method statement? You were representing Paria and you were
3 representing that it was attached?

4 A. I need to explain. Go ahead? Yeah. So, again, I'll make
5 reference to the permit to work system and our permit to work
6 training. With regards to method statement and GHAs, those
7 are reviewed prior, prior to the beginning of a project by the
8 technical and maintenance team who's the expert in the field,
9 and once they deem it fit, they would approve it and then it
10 would come to us as an approved document via an approved
11 applicant who is the—approved applicant meaning he's trained
12 in the permit to work system, so, according to our training, once
13 it comes via an approved applicant, we verify verbally that
14 these are the approved documents, we don't need to go through
15 the documents. Those are attached.

16 Q. I could understand.

17 A. Yes.

18 Q. So you assume it was approved without being seen?

19 A. I did not—no I didn't assume. It came to me via an approved
20 applicant so via his confirmation that these were approved
21 documents, I mentioned it was attached.

22 Q. Okay; and the approved applicant was Mr. Majardsingh?

23 A. Yes, in this case.

24 Q. Okay. Now, if you look at A2, "Residual Hazards", did you
25 have to fill this out or did you have to consider whether there
26 were any other hazards or anything like that?

27 A. B2, B2, right?

1 Q. Sorry, B2. B2.

2 A. Okay, yes, so—

3 Q. Yes, it's B2.

4 A. All right so, so as long as, um—my main concern was the toxic
5 fumes and combustible environment and as—once the
6 migration barrier to be used, this was adhered to, I didn't see
7 any residual hazards again.

8 Q. Okay. So just to—

9 A. Operationally.

10 Q. So just to get it clear, on that date, you had no idea of
11 differential pressure or Delta P?

12 A. No.

13 Q. No. And you are not, you are not qualified or you had no
14 experience in that?

15 A. No.

16 Q. So you could not really detect or assess whether there was any
17 Delta P hazard?

18 A. I know nothing about Delta P—

19 Q. Okay.

20 A. —at that point in time.

21 Q. Okay. Now, I notice here that one of the things that was
22 required was an isolation—process isolation checklist. If you
23 look at B3.

24 A. Right.

25 Q. Could you help us if you know anything about the importance
26 of such a certificate?

27 A. No, a process isolation certificate indicates when a valve is

1 closed, if a slip blank is in place. However, in this case the
2 elbows were removed so that superseded any process isolation
3 that was involved during the preparation process. When I say
4 elbows, sorry I mean the elbows at 436 Sealine at berth number
5 5 and berth number 6. So it basically cuts off any process from
6 interfering the with the line to be worked on.

7 Q. So as far as you were concerned, an isolation certificate one
8 way or the other, a certificate, isolation certificate, did not have
9 to be attached to the permit to work?

10 A. No, and, um, um, no, no, because it was done superseded by the
11 elbows being removed.

12 Q. Who is—if there was to be an isolation certificate, who would
13 sign that? Who would normally sign that?

14 A. A process isolation normally done by the operations
15 department.

16 Q. The operations department?

17 **Mr. Chairman:** That's you?

18 **Mr. Ramdhan:** Yes. It wasn't attached to the document but
19 there, as I said before, existed a process—well there existed a
20 process isolation or it would have to be superseded by the
21 removal of the elbows.

22 **Continued Examination By Mr. Maharaj SC:**

23 Q. Okay. I want to go to another area of your evidence. At
24 paragraph 16 of your statement—[*Crosstalk*]
25 you said at about 800 hours Mr. Majardsingh brought to you the
26 following permits to work and issued as the site authority. So
27 you were the site authority on that date?

1 A. Correct.

2 Q. So on the date of the works, that's the 25th of February, you
3 were the site authority?

4 A. Correct.

5 Q. In respect of the work permit?

6 A. Yeah.

7 Q. Right. Now, as the site authority, you are aware of the—you
8 are aware of the functions and duties of the site authority?

9 A. Yes.

10 Q. And we can find that in core bundle one, page 30, and you see
11 at paragraph five dot three on page 30, "The site authority
12 shall", and I'll just go through a few of it, right?

13 A. Yeah.

14 Q. "Ensure that a suitable and sufficient JHA has been prepared
15 for the job." Do you have any expertise to assess a job safety
16 analysis?

17 A. Could I explain? Okay. Right. So we—all right, as the site
18 authority we have no training or experience in the preparation
19 of a JHA, however, this was raised again in our HSE permit to
20 work system and the HSE department indicated that once the
21 documents were approved by the relevant parties and comes to
22 us via an approved applicant, and it's checked to see if it's
23 approved, it is rendered sufficient and, well, suitable and
24 sufficient.

25 Q. So could you tell me whether you complied, as the site
26 authority, with any of these duties mentioned in five three?

27 A. Five three. I complied with all.

1 Q. You complied with all?

2 A. Yeah.

3 Q. So the site authority—so, by ensuring that there is a sufficient
4 JHA you are saying you complied with that because you
5 accepted?

6 A. No. It's from—it's our instruction and from our permit to work
7 system that it indicates that because we are not the expert in
8 those areas, meaning the—in terms of assessing the risk, once
9 it's assessed and reviewed by the HSE department and it is
10 approved by them, and again it comes to us via an approved
11 applicant, it is deemed suitable and sufficient.

12 Q. So, as far as you are concerned, you have no discretion in the
13 matter? As long as it comes you're a rubber stamp and you
14 approved it?

15 A. It is not a rubber stamp, but—

16 Q. What you had—

17 A. —it is—it's basically, it was already approved by the relevant
18 departments, so essentially I basically just ensure that it's there
19 with the package.

20 Q. Okay, let's go down—I don't want to go through all.

21 A. Yes.

22 Q. Because, yeah—

23 **Examination By Mr. Chairman:**

24 Q. Just help me hat that though. You said it goes—it has to come
25 from an approved supplier?

26 A. Yes.

27 Q. But, er—and goes through which department?

1 A. It goes through technical and maintenance and HSEQ.

2 Q. Technical and maintenance?

3 A. Yeah. And HSE.

4 Q. And H?

5 A. HSE. HSE department.

6 Q. Health and safety executive.

7 A. Yeah.

8 Q. Of Paria?

9 A. Yeah.

10 Q. Thank you.

11 **Mr. Maharaj SC:** No problem.

12 **Continued Examination By Mr. Maharaj SC:**

13 Q. Well, help us with this one.

14 A. Yeah.

15 Q. “Ensure by face to face”, if you look—go down about two,
16 three, four, five, six, seven, about eight bullet points—

17 A. Uh-huh.

18 Q. —“Ensure by face to face discussion and onsite visit that
19 the person in charge of the activities at the job site knows
20 the exact location of the work, all the hazards that may be
21 present and all the precautions to be taken during the
22 work. This includes the discussion of the job hazard
23 analysis with the person receiving the permit.”

24 Now, you already told us you dint have any expertise in this
25 matter.

26 A. No I—

27 Q. So how do you perform that function?

1 A. Okay. I indicated that I have no expertise in establishing the
2 suitable and sufficiency of it. Now, the JHA comes to me, we
3 would run through the obvious risks with regard to if there's
4 any hot work going on, you have a fire hose there—I hope I
5 answering your question.

6 Q. Go ahead.

7 A. Yeah. Ensure that there's a fire hose there, you have your HSE
8 personnel doing your, doing your gas test and the—all other
9 precautions to assess the risk that is on the JHA.

10 Q. I see. I see. Then look at two more bullet points:

11 "Periodically monitor ongoing work, either in person or
12 through its team, to determine whether site conditions
13 and precautions have been maintained."

14 A. Right. Yes. So site conditions, as the name states site
15 authority, we are responsible for the operational site. Now, I'm
16 just going and expand a lil bit. Now, Paria business is not
17 maintenance work, it's a terminal. So basically I being the site
18 authority I'm in charge of the terminal operations meaning that
19 they are berthing of vessels, unberthing of vessels, so the site
20 conditions could change if there are any operational activities,
21 however, at the morning of this, um, when this permit came to
22 me, our due diligence was checked with regard to any
23 turnaround movements we're having, which we had none on
24 that particular day, and, um, so that's one of the reasons again
25 why the permit was issued as was because our conditions, our
26 site operations was not affecting the maintenance activity. Now
27 with regard to periodically monitoring the site, and again I refer

1 to the site conditions and precautions maintained, was the—I
2 had an operator Kirt Scott on site, and he would just check to
3 see if there are any vessels coming in the area to raise an alarm
4 to shipping building.

5 Q. Okay. So you were concerned with any vessels, but what about
6 any hazard in respect of the job which had to be done?

7 A. No, well, vessels woulda been a hazard. When a vessel passing
8 it would disturb the water.

9 Q. Not that—that's a hazard. So, in respect of what I just read,
10 precautions have been maintained, conditions and precautions
11 have been maintained. Were you in a position to personally see
12 whether precautions and conditions have been maintained?

13 A. Well I had my operator on site and he will—

14 Q. Oh, I see.

15 A. —be reporting to me.

16 Q. You had your operator. But you are the site authority?

17 A. Yes I'm the site—as it states here, periodically monitor ongoing
18 work, either in person or through his team—

19 Q. Okay.

20 A. —to determine whether the site conditions and precautions
21 have been maintained.

22 Q. And the, and, and the person who you're talking about is a
23 Kenson/Paria employee?

24 A. Kenson working for Paria.

25 Q. Kenson working for Paria. And, um, as far as you know, Mr.—

26 A. Kirt Scott.

27 Q. —Mr. Scott, he—working for Paria, he takes instructions from

1 Paria?

2 A. He's a competent operator taking instructions from Paria.

3 Q. Right. And taking instructions as to how to do the work and
4 what work to do?

5 A. Taking instructions to monitor the site.

6 Q. To monitor the site?

7 A. The operational facility and safeguard the operational facility.

8 Q. Yeah. Was the migration barrier a precaution?

9 A. It was a precaution to be—yes, it was a precaution to be
10 instated by the maintenance team.

11 Q. You monitored the migration barrier in the doing of the—in
12 implementing the works?

13 A. There were no way to monitor the migration barrier. It was—in
14 order to access the migration barrier you have to dive and go
15 into the chamber.

16 Q. But doesn't Paria have someone to monitor the work with a
17 video camera, a video on?

18 A. No. Paria never had any personnel monitoring the camera
19 there.

20 Q. So when these works were being done in the chamber, Paria
21 didn't have anybody monitoring?

22 A. I only speak for operations. Operations was not monitoring the
23 maintenance activity.

24 Q. So as the site authority that day—

25 A. Uh-huh.

26 Q. —you were not aware whether Paria was going to be
27 monitoring the work while it was being done?

1 A. I'm aware that the applicant is responsible for a period—well,
2 continually monitoring his site and that's why we have different
3 roles and functions. So he would have been monitoring that
4 with—well, continually monitoring it with the contractor who is
5 in charge to supervise the operation.

6 Q. Were you aware that Kirt Scott was monitoring this work?

7 A. Kirt Scott was not monitor—his duty was not to monitor the
8 maintenance work. Kirt Scott is operations.

9 Q. If you look at the functions of the site authority again—

10 A. Yes.

11 Q. —about five bullet points from the end:

12 "Periodically monitor ongoing work either in person or
13 through his team to determine whether the site conditions
14 and precautions have been maintained."

15 And you just said precaution, the migration barrier was a
16 precaution. Well, did you have to monitor that?

17 A. Well, it's one of the precautions, however, it's supposed to be
18 maintained on the maintenance site.

19 Q. So as—

20 A. So our site—

21 Q. Okay. So as far as you were concerned, as far as you are
22 concerned from your duties—

23 A. Uh-huh.

24 Q. —you did not have to be involved in monitoring the
25 precautions in respect of the migration barrier?

26 A. Could you repeat the question?

27 Q. As far as you are concerned, as the site authority, you did not

1 have any duties to monitor the precaution in respect—any
2 precaution—in respect of the migration barrier?

3 A. Okay, so I need to explain. So, a site authority, as the site—as
4 it says, is to monitor the site and ensure it's operationally safe.
5 I'll make reference back to the ter—terminal has operations
6 which needs to be clear in order for your maintenance activity
7 to take place.

8 Q. And the—

9 A. Once it is clear, meaning that the site we have no vessel
10 turnaround movements and also vessel movement within the
11 area, because that will be a hazard as well because if a vessel
12 moves in the area you have the disturbance of water and it
13 might affect the diving activity—

14 Q. I could understand what you're saying.

15 A. Yeah? So—

16 Q. So as far as you were concerned the site was not the work site
17 itself?

18 A. The site was the facility to ensure that it's operationally safe.

19 Q. I see.

20 A. However, as placed in the permit to work, the migration barrier
21 to be used in order to—that to be enforced is the applicant
22 would have to enforce it with his contractor who would be
23 supervising the job and ensuring that the stipulation on the
24 permit was abided by.

25 Q. Okay, Mr. Ramdhan. We have your evidence and you have
26 been very helpful. Can I go to something else?

27 A. Yeah.

1 Q. Right. At—

2 **Mr. Chairman:** Have you finished with the work permit?

3 **Mr. Maharaj SC:** Yes, yes.

4 **Mr. Chairman:** Because there's something I'd like to clear
5 up.

6 **Mr. Maharaj SC:** Sure, sure.

7 **Examination BY Mr. Chairman:**

8 Q. Mr. Ramdhan, what is the point of attaching to the work permit
9 the safe work method statement?

10 A. Well, that's to show that the job was an approved job, it had
11 approval—it had approved documents coming with the permit
12 so it was approved by maintenance.

13 Q. So the on—I want to be clear please? The—can we put up the
14 work permit again, please? You've signed the work permit?

15 A. Yeah, yeah.

16 Q. All right? And so you are saying you are allowed to do this
17 work, all right? That's effectively what it means, isn't it?

18 A. Providing our site is safe, yeah.

19 Q. Yes. And safety is your by-line, your—

20 A. Yes.

21 Q. —watchword. So, included in this list of documents that are
22 attached to the work permit is the method statement?

23 A. Correct.

24 Q. What this is describing it as, though, is a safe work method
25 statement, yes?

26 A. Yeah.

27 Q. That's not something different from the method statement, is it?

1 A. I don't think so, no.

2 Q. No. I mean the method statement please if we can bring it up,
3 page 1048—we're all getting familiar with this now, so that's
4 the method statement LMCS provided, isn't it?

5 A. Yeah.

6 Q. Yeah. And when you, as it were, say "See attached" on the
7 work permit, you mean this document, don't you, the one that
8 was on the screen now?

9 A. Yes.

10 Q. And so, although that's called method statement, what it means
11 for your purposes as the safety officer of the site here—

12 A. Well the site official or site authority, yeah.

13 Q. —the site authority, forgive me, yes, is that this method
14 statement represents a safe work method statement?

15 A. Uh-huh.

16 Q. Yes?

17 A. Yeah.

18 Q. And as with the other documents, do you take it that that
19 method statement represents the way in which or what work is
20 to be done and the way in which it's to be done?

21 A. A method statement is a list of proposed jobs to happen to get a
22 particular job done.

23 Q. Right.

24 A. However, only the permit allows or permits a job to happen.

25 Q. Say that again?

26 A. Only the permit, the permit to work document, the permit
27 itself—

1 Q. Right.

2 A. —allows particular activities to happen. So, when the applicant
3 comes requesting permission to do a job—

4 Q. Yes.

5 A. —he explains verbally what they are going to do today.

6 Q. Uh-huh.

7 A. And that would be the specific tasks they are going to be
8 doing—that is going to be done today.

9 Q. Right. And that's, that's—

10 A. And that will be translated into these permits.

11 Q. All right. Well, there's a dispute, clearly a dispute about what
12 was or was not going to be done on that day.

13 A. Yeah.

14 Q. And I don't—I'm not asking about that.

15 A. Okay.

16 Q. What I want to ask you about is that this document, the method
17 statement that we're looking at on the screen now is what you
18 understand to be the safe work method statement?

19 A. It would be the method statement but—

20 Q. N no, no, no, no, please?

21 A. —it would—

22 Q. Please listen to my question.

23 A. Yes.

24 Q. But what you have put on this document in your own
25 handwriting is, "See attached".

26 A. Yeah.

27 Q. The document that we're looking at that's on the screen is the

1 document that you mean by when you say, “See attached”?

2 A. Uh-huh.

3 Q. Is this something different to a safe work method statement?

4 A. No, it will be the same.

5 Q. Right. It is exactly the same. So when you say, “See attached”,
6 you mean that this document represents a safe work method
7 statement?

8 A. Yes, essentially.

9 Q. Right. Do you understand, scroll through a little, please, it
10 doesn't matter where, we just—that there are a sequence of
11 events seemingly that appear be on this list? Do you
12 understand it to be that?

13 A. Well, I understand it to be a series of jobs to be done to perform
14 the activity.

15 Q. Do you understand it to be sequential?

16 A. No.

17 Q. You don't?

18 A. No.

19 Q. So any of those jobs could be done in a different order and it
20 wouldn't make any difference to you at all?

21 A. Well it's not that the method statement wouldn't make a
22 difference to me. Is the task that they are coming to do on that
23 particular day would be the essential information.

24 Q. Yes, I understand that. But, in terms of this document—

25 A. Yeah.

26 Q. —it doesn't—to you, does not represent a sequence of events?

27 A. No.

1 Q. As to the order in which they should occur?

2 A. No, that's not my understanding of it.

3 Q. Right. So, we can put that out of our minds from your point of
4 view that you never regarded this in that way? Anybody who
5 was keeping an eye, a watchful eye, for whatever reason, over
6 the works that were taking place, should not regard, according
7 to you, should not regard this as a sequence of works to be
8 done?

9 A. I can't say what the maintenance personnel does with it.

10 Q. Well you're the site manager, you see, or the site authority.

11 A. I'm the site authority for the maintenance person.

12 Q. And the site—one of the by-lines, the watchword as you agreed
13 with me, is safety?

14 A. Right.

15 Q. Right. So obviously if something that was being done that was
16 not authorized for that day or was not on this document, you
17 would want to know, wouldn't you?

18 A. Could you repeat the question?

19 Q. Yes. It's not a difficult one. If something was being done that
20 was not on this method statement or was being done not
21 according to what had been determined for that day, you would
22 want to know?

23 A. No.

24 Q. You wouldn't want to know?

25 A. The method statement—

26 Q. No, no answer my question first. You can add whatever rider
27 you like afterwards.

1 A. Umm.

2 Q. Answer my question, please, and then you can say whatever
3 you want to say. All right? I'm not going to stop you or shut
4 you out. I just need to understand this, all right, so that I
5 understand why this might be attached to the work permit. Is it
6 that you're saying that you're not interested in whether they do
7 a job of work that has not been authorized that day?

8 A. The method—

9 Q. That might appear on the method statement?

10 A. The method statement doesn't authorize any job.

11 Q. No, but it's attached to the work permit.

12 A. Right but it doesn't authorize.

13 Q. No, I appreciate that, but without it being attached to the work
14 permit there wouldn't be a work permit?

15 A. Correct.

16 Q. Right. So it's attached for a purpose?

17 A. Uh-huh.

18 Q. And the purpose is, in order for you to be able to say there is a
19 safe work method?

20 A. It's a maintenance document, it's a guide for a maintenance
21 work.

22 Q. A guide? A guide to whom?

23 A. For maintenance department.

24 Q. For the maintenance department?

25 A. Yeah for the works to be done.

26 Q. Are you saying that's nothing to do with you?

27 A. The method statement? No the method statement doesn't

1 have—

2 Q. No I'm not saying the method statement. I'm saying the
3 maintenance that's, being carried out. Is that—are you
4 interested in the work that's being carried out?

5 A. Yes, and it's stipulated on the permit itself.

6 Q. Right. And so if something that was to happen that was not on
7 that permit, not approved by that permit, would you want to
8 know?

9 A. If?

10 Q. If something was being done that is not authorized by this
11 permit, the one that we have been looking at, it's not on there,
12 right? Removal, it's no secret, removal of the barriers was not
13 apparently approved for that day.

14 A. Right.

15 Q. So we've been told.

16 A. Right.

17 Q. So, if it was happening that they were taking these barriers off
18 on that day, would you want to know that?

19 A. Yes.

20 Q. Because if—

21 A. I would.

22 Q. —you knew that what would you do?

23 A. Right, so, and that brings us to the duties of—the different
24 duties of the persons—

25 Q. What would you do if you knew that they were doing
26 something they were not permitted to do?

27 A. Yeah, I'll stop the work.

1 Q. Right, you'd stop the work?

2 A. Correct.

3 Q. We've heard about stops. This is in your, your right, your
4 authority you can say stop now, right now?

5 A. Uh-huh.

6 Q. Yes? So if it had come to your attention that there was work
7 being done that should not have been done, you would have put
8 a stop on it?

9 A. Exactly, yeah.

10 Q. Right. So you are interested, aren't you, in what work is being
11 done?

12 A. In the work being done, yes.

13 Q. Yes. How do you know what work is being done?

14 A. Well the work that was being done was stipulated on the
15 permit.

16 Q. Right. But do you monitor it, keep any eye on it at all or you
17 just let them get on with it, "Do what you like and, well, if it
18 goes wrong too bad", but, I mean—or are you keeping any
19 watchful eye or any oversight on the work at all?

20 A. Okay, so that would be the duty of the applicant and the
21 contractor official.

22 Q. Right. So it all falls back onto the people who are actually
23 contracting it. And so this man, Mr. Majardsingh, who's from
24 Kenson and who puts all of this on here, would he be interested
25 in what was going on?

26 A. Interested in the?

27 Q. In what was work—what work was being done or not being

1 done.

2 A. Well, yeah he would be overseeing the maintenance activity.

3 Q. He would be overseeing it not you?

4 A. Not me.

5 Q. Right. So you would rely on him to tell you, to give you a call
6 and say, "Hey, by the way Mr. site authority, they're doing
7 something that they're not allowed to do"?

8 A. Or something was done that wasn't permitted.

9 Q. Or they're in the middle of doing it, and if you got that call
10 what would you do?

11 A. I would stop the work.

12 Q. Right. So, either you or somebody from Kenson, Mr.
13 Marjadsingh or his, er, one of his deputies or someone
14 presumably is keeping an eye on what's going on?

15 A. Or the contractor official as well.

16 Q. Sorry?

17 A. Or the contractor official as fell.

18 Q. Well, obviously the contractor who's doing the job, right? It's
19 the contractor who's doing, carrying out the work, isn't it?

20 A. Yes, but—

21 Q. Right. And if he's doing something wrong, if he's going
22 further than he's permitted to go, who stops him?

23 A. Okay, so—

24 Q. Or does he stop himself?

25 A. So—can I explain?

26 Q. Yes you can.

27 A. Good. So, the site authority issues the permit with stipulated

1 guidelines, all right, which would be the migration barrier to be
2 used. Now—

3 Q. Well it was being used?

4 A. Correct. So now, um, after that the applicant would be talking
5 to the contractor officials because it's a trained applicant and
6 it's a trained contractor in the permit to work system, so each of
7 them has their responsibility during the maintenance work so
8 once—if the contractor official did the thorough briefing he
9 would—the workers would have a understanding that this is the
10 work stipulated on the permit and this is the only work is to be
11 done on the permit.

12 Q. Hmm.

13 A. And once that was done correctly, then it would not have
14 resulted in, say, they doing something that wasn't authorized on
15 the permit.

16 Q. Yes. But, I mean, every step of the job that's being done on
17 any day for any permitted is not stipulated on the permit isn't
18 it? It doesn't say turn the bolt to the right or to the left, doesn't
19 it?

20 A. Well, significant tasks are mentioned—

21 Q. Significant tasks are mentioned. All right. In any event, to just
22 get back to the point I'm trying to understand, is that you're
23 saying that if the contractor goes wrong, there is no mechanism,
24 as far as you, you can tell me, to stop the contractor going
25 wrong?

26 A. Or. no. What I'm saying is the contractor official has a duty
27 and a responsibility.

1 Q. No, I understand that. You've said that now. I've got that
2 point.

3 A. Yeah, yeah.

4 Q. Right? But what you're saying is that you want to put a fox in
5 charge of the henhouse. If the reality is that it's the contractor
6 is the one doing the job and you've got the contractor
7 overseeing his own work, his own people, if he thinks he's
8 doing the right thing there's nobody going to stop him, is there?

9 A. No, but being an approved—a contractor via the permit to work
10 system you're supposed to know your responsibility.

11 Q. Yes, I dare say he will tell us that he does—what his
12 responsibilities are, but what I want to know is whether there is
13 any way in which you, I don't mean you personally but your
14 team or anyone from Paria, is keeping an eye on what's being
15 done, whether there is a violation of the work permit so that you
16 can exercise your right and duty to stop the works where it goes
17 beyond what has been permitted?

18 A. Could I just refer to the permit to work system?

19 Q. Yes you can.

20 A. Okay. So I'll start with just the contractor official.

21 Q. Where are we?

22 A. That's 5.6.

23 Q. Five point six. Contractor official page 31 of the core bundle,
24 yes. Yes, I see that.

25 A. Right. So if you take it one, two, three, four, four from the
26 bottom is a 8 of 14, on the next page. Yeah, there. There's
27 something here stating to promptly notify the applicant and site

1 authority of any hazards that may arise or of any changing
2 conditions that increase risk. So being a trained contractor
3 official and knowing that it's only what is stated on the permit
4 is allowed—

5 Q. All right.

6 A. —if anything changed there, he's supposed to notify the
7 applicant and essentially me in order to stop the work.

8 Q. All right. That's what you relied on, is it?

9 A. Yes.

10 Q. Do you think that's enough?

11 A. Well, this is the system we had at the time.

12 Q. No, no I appreciate that that was the system at the time. Do you
13 think it's enough?

14 A. Based on our system, yes.

15 Q. So you, now knowing what has happened, as you presumably
16 do, do you think that that merits any change?

17 A. Yes, I guess it merits some change. Everything isn't perfect
18 and—

19 Q. No, life isn't perfect. I get that.

20 A. Yeah and everything does improve with time.

21 Q. Yes, but do you think it merits change to the way in which you
22 organize yourselves when you've got a contractor and you're
23 getting him to police himself and if he goes off-piste with his
24 work permit and you don't know about it, you can't exercise
25 your authority?

26 A. Yeah, well it's supposed to be—the messages supposed to
27 translate back down to me.

1 Q. Yeah. Right. So, one obvious thing might be that if there were
2 more close oversight over the work that's actually being done
3 on a particular day related to the work permit, you might be
4 able to better exercise your authority?

5 A. Yes. The site authority would have to maintain the site—well,
6 once the message comes to the site authority, yes, he would
7 be—

8 Q. Well, it's a relatively small step, isn't it, because Mr. Kirt,
9 what's his name, Scott, he was there, wasn't he?

10 A. Yes, but he—

11 Q. And I appreciate your saying that he didn't have that
12 responsibility.

13 A. Yeah.

14 Q. I'm trying to understand, you see, our job, Mr. Wilson's job and
15 mine at the end of this, is to make recommendations as well as
16 to find out what happened. All right? I want to know from you
17 in your senior position as site authority whether or not
18 recommendations to change the way in which this operates is
19 something we should consider. Do you follow?

20 A. I follow.

21 Q. And what I'm asking you is this, is that since you had Mr. Kirt
22 Scott there anyway looking at a screen and monitoring the air
23 content in and out of the chamber, it would have been but a
24 small step to have provided him with the work permit for that
25 day, wouldn't it?

26 A. Um, I think you have some, some, some wrong in that line
27 because he wasn't there to look at any screen. He was there

1 just to maintain the site conditions.

2 Q. Yes, but we know he did have a screen in front of him.

3 A. He did not have a screen in front of him.

4 Q. Well, apparently he did, according to his statement.

5 A. Nope. No, he didn't.

6 Q. You've his statement.

7 A. Yeah. He didn't have a screen in front him. His job on that day
8 was never to monitor the maintenance—

9 Q. No, no, I know what his job—I know what his job was on that
10 day.

11 A. Uh-huh.

12 Q. What I'm asking you is whether or not it would be but a small
13 step for him to be given an additional task, like having the work
14 permit with him so that he could keep some sort of oversight on
15 what's being done, and he could alert you if something was
16 being done that was not permitted.

17 A. I need to say again, there's different roles for different
18 personnel.

19 Q. All right.

20 A. Our operations department is operations. We can't oversee a
21 maintenance job.

22 Q. I got you. It's not a particularly helpful answer, but thank you
23 anyway.

24 A. Okay.

25 **Continued Examination By Mr. Maharaj SC:**

26 Q. I just want to ask you two questions on this issue and pass on to
27 another issue.

1 A. Okay.

2 Q. Okay? As the site authority, could you have permitted the
3 work, if you were just presented with the first sheet, just the
4 work permit?

5 A. No.

6 Q. No. You had to have the method statement and the job safety
7 analysis and the other documents, am I correct?

8 A. Yeah.

9 Q. Right. Would you agree with me that at section A it does not
10 state method of works?

11 A. It says specific tasks.

12 Q. It describes the works, it describes some works, works, not so?

13 A. No, that's the specific tasks that—

14 Q. I'm asking you a specific question. Would you agree with me
15 that it does not state method of works?

16 A. It does not state method of works.

17 Q. And from looking at this you did not know the sequence of the
18 works?

19 A. No, but there were specific tasks to be done.

20 Q. Yes. Okay. All right. Let's go to something else, Mr.
21 Ramdhan. After the incident, were you aware that the permit to
22 work was pulled or withdrawn?

23 A. No.

24 Q. You don't—no or you don't know?

25 A. I don't know.

26 Q. Well can I show you the permit to work at page 1072 of core
27 bundle three? [*Document handed to Mr. Ramdhan*] And I'll

1 read the job on that work permit at the top, right?

2 A. Uh-huh.

3 Q. Tell me if I'm correct:

4 "To carry out diving activities

5 Specific tasks, to carry out diving activities to assist with

6 the maintenance of the work."

7 Right? You signed that too, not so?

8 A. Yes.

9 Q. Huh?

10 A. Yes.

11 Q. Could you not help us, was this not withdrawn or pulled?

12 A. It was—I only see—to the bottom? Could you scroll to the
13 bottom? I see nothing here, no sign.

14 Q. We are trying to get it on the screen. In the meantime while
15 they look for that I can ask, this work permit though authorized
16 works by LMCS or activities which would permit it to carry out
17 diving activities to assist with the project, not so?

18 A. Yes.

19 Q. Yes. The question is, look at it. Do you know whether it was
20 withdrawn or pulled on the 25th of February?

21 A. You going and scroll down? Sure. Let me see.

22 **Mr. Chairman:** It's page what?

23 **Mr. Maharaj SC:** Sorry, page 1072 of core bundle three.

24 **Mr. Chairman:** And is not 1073 the reverse of that and it's
25 unsigned, unmarked?

26 **Mr. Maharaj SC:** The other side is 1073.

27 **Mr. Chairman:** Yes and that's untouched?

1 **Mr. Maharaj SC:** Untouched.

2 **Continued Examination By Mr. Maharaj SC:**

3 Q. You cannot tell because nothing is endorsed at the back, is that
4 correct?

5 A. Yeah, nothing written, yeah, nothing written.

6 Q. So you're not in a position to answer that question?

7 A. No.

8 Q. No. But you would agree that this was a work permit to permit
9 authorizing diving by LMCS?

10 A. To carry out diving activities to assist with the 36 Sealine
11 maintenance works.

12 Q. Right. Thank you very much, Mr. Ramdhan.

13 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

14 **Mr. Chairman:** Thank you. There will be some other
15 questions for you, Mr. Ramdhan. You want to go first?
16 Introduce yourself, please?

17 **Cross-Examination By Mrs. Persaud Maraj:**

18 Q. Good afternoon Kamini Persaud marriage and I'm for LMCS.
19 Mr. Ramdhan, I'll take you to the very permit that we have on
20 screen, which is the dive permit. This was issued on the
21 morning of the 25th of February, 2022. Is that correct.

22 A. Yes.

23 Q. All right. So you signed at column section B5 and endorsed the
24 date the 25th of February?

25 A. What date you're on?

26 Q. The date is missing from the top.

27 A. Yeah. Yes.

1 Q. Yes, all right. So on the column the section B4r which speaks
2 of additional precautions, you have there:

3 "Call sipping via radio and inform when divers are
4 entering the water. Dive flag to be erected."

5 That's your handwriting?

6 A. Yes.

7 Q. And those were the precautions that you had in relation to the
8 diving?

9 A. Yes.

10 Q. So I'll take you to the next work permit which is 9302, also
11 issued on the 25th of February, the very next document. I
12 would like to take you to the section B4 of that work permit.
13 Now this is the work permit in question in relation to the work
14 to be done by the contractor within the chamber, that's correct?

15 A. Yes.

16 Q. Right. Additional precaution, can you say what you have
17 written there?

18 A. "Care to be taken when weather conditions change."

19 Q. And that's in relation to what, what aspect.

20 A. When weather changes, um, the water could get choppy and it
21 could interfere with any activities in subsea or any diving
22 activities as well.

23 Q. But in your precaution that you placed on the permit to work
24 for the diving that we just went through—

25 A. Uh-huh.

26 Q. —you did not put that as a condition of precaution. Do you see
27 that?

1 A. Okay, yeah.

2 Q. Should that not have been placed on that permit?

3 A. Yeah, it could be there, yeah.

4 Q. As I understand it, there's a separate permit in relation to the
5 diving and this—that what I—that which I just—you just read,
6 is in relation to the diving?

7 A. However you needed to dive in order to go in the chamber to do
8 the work.

9 Q. Right. As I'm on the method statement, let me take you to the
10 endorsement at five with the authorization, that's section B5.
11 Do you see after your signature and the date and time, you have
12 an endorsement there in relation to time? Can you read that for
13 us?

14 A. The 25th to the second 2022, 0720.

15 Q. Zero seven two zero?

16 A. Uh-huh.

17 Q. So that, we take that as 7.20?

18 A. Yeah.

19 Q. A.m., yeah?

20 A. Yeah, there, yeah.

21 Q. All right. I'd like to take you to your witness statement at
22 paragraph 16. That would be—

23 **Mr. Chairman:** Paragraph what?

24 **Mrs. Persaud Maraj:** Page 1471.

25 **Mr. Chairman:** Which paragraph did you say 16?

26 **Mrs. Persaud Maraj:** Paragraph 16, please.

27 **Continued Cross-Examination By Mrs. Persaud Maraj:**

1 Q. In your statement to the Commission, do you have the
2 statement in front of you?

3 A. I'm seeing it on the screen.

4 Q. All right. Do you see what time you have there in relation to
5 the applicant being presented to you?

6 A. At about zero eight hundred? Yeah, approximate time.

7 Q. Right. And that's different from 7.20?

8 A. Yeah but it's approximate, at about 0800 hours, approximate.

9 Q. Well it's a substantially different time, 7.20 and 8.00 a.m.

10 A. Again, some of these were taken from memory so it would be
11 an approximate time.

12 Q. Let me take you to paragraph 20 of your statement. Now I
13 understand you to say that you're not very well aware of the
14 work to be carried out. Would that be fair—

15 A. Repeat the question?

16 Q. I understand you to be saying to the Commission you're not
17 very well aware of the works to be carried out. Would that be
18 fair?

19 A. No, I didn't say that.

20 Q. Okay. So, are you very well aware of the works that were to be
21 carried out?

22 A. I knew—on that particular day?

23 Q. On that particular day on the 25th.

24 A. Yeah it has the specific tasks listed on the permit to work.

25 Q. All right. So look at your paragraph 20.

26 A. All right.

27 Q. You have a number of tasks there to be done and I take you

1 to—well, let me just indulge. In relation to the job at berth
2 60—er, at berth number 6 as described in the PTW number
3 9320:

4 “Houston told me that LMCS would be removing the 30-
5 inch solid blank, also called the blind flange or solid
6 blind, from the top of the riser inside from the hyperbaric
7 chamber, conducting a pressure test on the riser flange,
8 weld and installing the 30-inch riser pipe. He also said
9 that if they had time to do so LMCS would remove 50-
10 inch flange from the top of the hyperbaric chamber. He
11 said that LMCS would not be doing any hot work that
12 day but if hot work were to be done, he, Houston, would
13 inform me.”

14 Good? I take you to the—to your statement that LMCS would
15 remove the 50-inch flange from the top of the hyperbaric
16 chamber. And my question to you is, that in relation to the
17 explanation that you gave as to the work to be done, isn't that
18 the first thing that has to be done in order for the risers to be
19 switched, the blank? Well, first of all, did you mean 50-inch
20 flange or blank?

21 A. The blank.

22 Q. Blank. Right. So we could correct that, right? And wouldn't
23 that have been the first thing to be removed before there can be
24 the switching of the risers?

25 A. Yeah, if they had to switch the—yeah if they had to switch the
26 risers.

27 Q. Right so you would like to correct that?

1 A. No. And on completion they would remove it as well. They
2 would remove it totally.

3 Q. Well we have to remove it in order to switch around?

4 A. No, on completion of the day's work when they switched the
5 riser, when they put on the riser they would have removed the
6 50-inch blank as well.

7 Q. Right. That is what you understood to be—

8 A. That's what he told me.

9 Q. That's what he told you, Mr.—

10 A. Houston.

11 Q. —Mr. Majardsingh?

12 A. Yeah.

13 Q. When you spoke to Mr. Majardsingh that morning, you said—
14 because you said part of the process that you were engaged in is
15 him having a conversation with you as to the work to be done.
16 Did he mention to you that there was a switch in relation to the
17 method statement and the order? I know you said that you're
18 not really concerned with the orders that has been placed in that
19 document but did he explain anything to that effect to you?

20 A. No. He indicated the specific tasks that they were going to do
21 that particular day.

22 Q. And that, that is what you've detailed at paragraph 20?

23 A. Yeah.

24 Q. Right. So for all intents and purposes you were not aware of
25 the—of any particular order in which the work was to be
26 carried out?

27 A. No. Again, could I expand?

1 Q. Go ahead.

2 A. Right. So, so, when an applicant brings a document to a site
3 authority, well me in this case, we hear what job they are going
4 to be doing, right, and based on that we make our operational
5 checks to make sure the job could go on because terminal
6 operations is, again, berthing and unberthing of vessels, so once
7 they bring the proposed specific tasks to be done via
8 conversation and on the permit itself, we check to see if they
9 have any operations in the area. Once they have no operations
10 in the area, again we would check the site, make sure the site is
11 operationally safe and make sure that the line is clear, which
12 was done prior, well prepared prior. So—

13 Q. So—

14 A. —with regard to that, whenever the specific tasks come to us
15 and our site preparations are okay, meaning it is safe and it
16 doesn't have an operational, any operational task inhibiting the
17 job to be done, we give okay.

18 Q. All right. So, there are two—I'm hearing from you there are
19 two aspects of this permit in terms of its operation.

20 A. Uh-huh.

21 Q. First, that the site in which the works are to be carried out is
22 safe, which is operational?

23 A. Operational—these—operational.

24 Q. That's essentially what you're saying to us?

25 A. Operationally safe, yes.

26 Q. Sorry?

27 A. Operationally safe meaning we have no operations going on in

1 that—

2 Q. Right. And that the second aspect would be that the work that
3 is to be carried out is done in the manner that it has to be carried
4 out and that is what the—Mr. Chairman would have gone
5 through with you in relation to the barriers?

6 A. Well, maintenance would have their method of doing their job.

7 Q. Right. But I think you've already accepted that in relation to
8 the work to actually be carried out, which is specified in the
9 method statement, it has to—there is that correlation and you
10 must be able to ensure that it is done in the manner that it ought
11 to be done?

12 A. No. I think we clarified that they jump from step to step in the
13 method statement.

14 Q. Okay. Specifically in relation to the barrier, you've placed on
15 this document, right, "Barrier to be used". Your understanding
16 is the barrier to be used, the precaution in relation to the work,
17 not in relation to operations of the area, correct?

18 A. Repeat the question, please?

19 Q. The barriers to be used that you had endorsed on the permit to
20 work system document—

21 A. Right, the migration barrier to be used.

22 Q. Migration barrier, that is the—specific in relation to the work
23 that is being carried out by LMCS?

24 A. Well—

25 Q. And not in relation to the operation of the job site?

26 A. Well, the thing is, if you have a obvious risk involved, you
27 would point it out, and the obvious risk there was if they're

1 doing work in the chamber, they needed to have the migration
2 barrier in place in order to continue doing work or even do
3 work at all.

4 Q. So this was an—these are your words—this was an obvious risk
5 to—

6 A. This is a obvious risk from—

7 Q. —to Paria?

8 A. To me, to me.

9 Q. To you?

10 A. To me, yeah. I worked site authority on that day.

11 Q. And you're Paria?

12 A. I'm Paria, yes.

13 Q. Right. So for all intents and purposes if LMCS, and I think Mr.
14 Chairman has dealt with this with you, if LMCS was to be
15 doing something that they ought not to be doing on that day,
16 vis-à-vis the removal of the barrier, then you should have been
17 able to step in at that point and stop it, correct?

18 A. Well, following the permit to work process, it would have to be
19 raised by the contractor official, then to the applicant, then to
20 me, to say stop.

21 **Mr. Chairman:** I think we have covered this.

22 **Mrs. Persaud Maraj:** Yeah, well we have. I accept that.

23 **Examination By Mr. Chairman:**

24 Q. Can I ask you though, please—

25 A. Yeah.

26 Q. —so that I have this again clear in my own head, looking at the
27 work permit and the process by which it's obtained, the

1 applicant to get the work permit isn't the contractee at all, it's
2 this man, Majardsingh, who works for Kenson, correct?

3 A. Works for Kenson that works for Paria, yes, so he comes for
4 permission to do the job.

5 Q. No, no I understand. I just want to understand the process.

6 A. Okay.

7 Q. Right?

8 A. Okay, yes.

9 Q. So the process is that the applicant for the work permit, and it's
10 described as an applicant on the work permit, you can put it
11 back up please, 1074, the applicant for the work permit is not
12 the contractee, that's not LMCS, it is Mr. Majardsingh who
13 works for Kenson?

14 A. Right.

15 Q. And Kenson works for you, Paria?

16 A. Yeah, but that's—well, yes.

17 Q. Am I right about that?

18 A. Kenson, he—well that's in the maintenance department, Paria
19 maintenance department.

20 Q. Yes but it's all the firm, the same company, isn't it?

21 A. Different, yeah, different departments.

22 Q. Of course there are different departments. I understand that
23 much. I might be a bit slow but I am getting it. Majardsingh
24 works for Kenson, Kenson is employed by Paria?

25 A. Yeah.

26 Q. The contractee ultimately signs, I think at the bottom of this
27 document? Can you just scroll down? I think there's

1 somebody there. I can't remember his signature, but right at the
2 very foot it says, "Contractor Official". Is that the contractee,
3 that's somebody from LMCS, is it?

4 A. Yeah that's the contractor official trained in the permit to work
5 system.

6 Q. Right. Okay. But the top part of this document, scroll back the
7 other way please, is filled out by this Kenson employee, isn't it?

8 A. Right.

9 Q. So, so that I have it, Kenson employed by Paria are making the
10 application for the work permit and the monitoring of the work
11 that's being done by the contractee, not the applicant, is being
12 covered by the contractee? Are you with me? So we've got
13 LMCS looking after themselves and we've got Kenson
14 employed by Paria making the application?

15 A. Well I wouldn't say they're looking after themselves.

16 Q. Well, that's what you did tell me earlier on, that they're
17 monitoring the work that they're doing.

18 A. No.

19 Q. It's their responsibility. You pointed out to me that made—

20 A. Well—

21 Q. —me look at some other document.

22 A. According to the permit to work system they would have to
23 indicate any change to the applicant—

24 Q. Yeah, yeah, yeah.

25 A. Yeah.

26 Q. Absolutely. But they're the ones who are monitoring that,
27 they're monitoring themselves over here doing the job and the

1 application is being made by Kenson of Paria and Paria employ
2 Kenson. That's how the system works. I'm not blaming you
3 for this, you understand?

4 A. Yeah, yeah, yeah. That's how the system works.

5 Q. I understand that that is the system and I want to consider the
6 system.

7 A. Yeah.

8 Q. You understand, part of our remit—

9 A. Yes.

10 Q. —is to consider the system, how it works or doesn't work, all
11 right? But that is what's happened here, isn't it?

12 A. Yeah.

13 Q. Thank you very much. Sorry to interrupt you.

14 A. Could I just add one more point?

15 Q. Yes of course you can.

16 A. Right, so, just a over you—the Kenson person from the
17 maintenance department brings the permit and then, well, after
18 we vet it operationally, deem it safe to do the job—

19 Q. Yes.

20 A. —we would sign, well, taking out in consideration our
21 operational precautions and then the process after is for the
22 applicant to explain to the contractor the essentials on the
23 permit, which is the specific tasks, the precautions that is
24 rendered on the permit—

25 Q. Uh-huh.

26 A. —that gives permission for the permit to be done under those
27 specific—on those specific precautions—

1 Q. Hmm.

2 A. —and the contractor as well, being a trained contractor official
3 in the permit to work system, accepts the permit.

4 Q. Yes. I'm not excusing anybody here—

5 A. Okay.

6 Q. —or blaming anybody here.

7 A. Right.

8 Q. I simply want to understand the process—

9 A. No problem.

10 Q. —and how it works—

11 A. Okay.

12 Q. —or doesn't, as I say.

13 A. Okay.

14 Q. But that's the position, and, as I say I don't blame you. You're
15 just applying the process.

16 A. Yes.

17 Q. Yes, thank you.

18 **Continued Cross-Examination By Mrs. Persaud Maraj:**

19 Q. At your paragraphs 54, 55, 56 and 57 of your witness statement
20 you've detailed what it is that you experienced after the
21 incident which occurred on the 25th and in that—in, in your
22 details what you basically say is that Kazim Ali Sr., Dexter
23 Guerra, Andrew Farah refused to engage or communicate with
24 you.

25 A. Well, they—there were refusals, and then I get an answer from
26 Kazim Ali stating that the divers went missing in the water and
27 he had only one diver available, which was the, um, which was

1 Farah, Andrew Farah, and he already checked in the chamber
2 and didn't see no one there.

3 Q. All right.

4 A. And then afterwards I started to gather information from other
5 people because I wasn't getting—

6 Q. Okay, no, stop right there.

7 A. Okay.

8 Q. So that information that you just said there, at this point,
9 looking back to the day in question, was there any more
10 information that could have been supplied to you by Mr. Ali or
11 any other person present there?

12 A. No. They refused to give me information.

13 Q. No, that's not my question. My question to you, looking back
14 to the information that was—you just said Mr. Ali gave to
15 you—

16 A. Uh-huh.

17 Q. —was there any other information available to him that he
18 could have given to you that he kept back at that point in time?

19 **Mr. Chairman:** With the greatest respect, I think in—how on
20 earth can he possibly know that?

21 **Mrs. Persaud Maraj:** Well—

22 **Mr. Chairman:** How can he know what Mr. Ali has in his
23 mind?

24 **Mrs. Persaud Maraj:** My question is in relation to what
25 information he would have had—

26 **Mr. Chairman:** You have to rephrase, you have to rephrase it.
27 He can't answer that.

1 **Mrs. Persaud Maraj:** I'll rephrase that.

2 **Continued Cross-Examination By Mrs. Persaud Maraj:**

3 Q. Can you recall the time in which you would have gone on to the
4 area, the site?

5 A. Okay, well my statement said 1512.

6 Q. So that's just after 3.00?

7 A. Yeah.

8 Q. And when you attended the site you saw Mr. Kazim Ali, Dexter
9 Guerra and Andrew Farah?

10 A. After I spoke with Kirt Scott and tried to find out information
11 on the berth then I saw them on the berth—on the barge, yeah.

12 Q. And you're saying that Kazim Ali told you that the divers were
13 missing, is that correct?

14 A. Well after, after progressively trying to get information from
15 them, yes, he told me the divers were missing in the water.

16 Q. All right. Could you confirm that at the time you were trying to
17 get information from them they were in conversation with each
18 other?

19 A. I can't—everybody was talking, I guess, in distance. I can't
20 confirm.

21 Q. When you were observing, we're not there.

22 A. Right.

23 Q. You were there, right, so you go into the barge, you go into the
24 site in which—in—that the incident took place?

25 A. Umm.

26 Q. And you're seeing LMCS' personnel gathering?

27 A. Right.

1 Q. You can identify these three persons that I just called?

2 A. Yeah.

3 Q. Andrew, Kazim, Dexter, correct?

4 A. Yeah.

5 Q. Right. I'm asking you, when you go in there and you're trying
6 to get information from them, if you were observing them
7 communicating, speaking with each other?

8 A. Well some of them was talking. I can't specify.

9 Q. I'm asking you about those three.

10 A. I can't specify, no.

11 Q. All right. So I'm going to put it to you that they were in a
12 conversation and they were communicating with each other and
13 I'm going to—you can answer that.

14 A. I can't—I, I don't know if they were engaged in any
15 conversation together.

16 Q. All right. And I'm also going to put to you that they were and
17 that they were actually speaking to each other about—but they
18 were in communication with each other for the purposes of
19 dealing with the issue of the missing divers.

20 A. Okay.

21 Q. All right.

22 **Examination By Mr. Chairman:**

23 Q. You were the site authority?

24 A. Yeah.

25 Q. You tell us in your statement that you were asking people, some
26 of the LMCS people—

27 A. Yeah.

1 Q. —what was going on and they were not answering you.

2 Correct?

3 A. Yeah.

4 Q. Right. Did you tell them that you were the site authority?

5 A. They—yes I, I told them I was the site authority and they knew
6 I am the site authority from—

7 Q. They knew that anyway?

8 A. Yeah, from, from issuing permits.

9 Q. So you were saying to them, “Look, I need to know what’s
10 going on”?

11 A. Yeah.

12 Q. “Tell me what’s going on.”

13 A. Yes.

14 Q. And they didn’t tell you?

15 A. They didn’t respond.

16 Q. They didn’t respond or—

17 A. They didn’t respond. They were walking away from me and
18 after several attempts then the only information I got was that
19 the guys were missing in the water and they only had one diver
20 available. They had checked inside the chamber and they
21 didn’t see anyone present.

22 Q. Right. That’s the extent of the information you got?

23 A. Yeah, that’s the extent.

24 Q. That they were not being operative? Is that what we’re to take
25 from there?

26 A. Well, they weren’t—yeah they weren’t being cooperative.

27 Q. Not with you anyway?

1 A. To give me information, no.

2 **Mr. Chairman:** All right, thank you. Is there anything else
3 about that that we need to know?

4 **Continued Cross-Examination By Mrs. Persaud Maraj:**

5 Q. You said in your statement that you attended to berth number 5
6 at least on two occasions on that day?

7 A. Yes, in the statement, yes.

8 Q. And that was because you had received reports that there were
9 noise or knocking coming from being observed at that riser?

10 A. I overheard personnel, LMCS personnel, indicating that they
11 were hearing knocking from berth number 5 riser, yes.

12 Q. All right. And you also said that you attempted to hear that
13 noise, to try to decipher that noise?

14 A. Yeah, with information and personnel missing, I tried to, as best
15 as I could to for—to go check.

16 Q. How did you check—

17 A. Okay.

18 Q. —to ascertain?

19 A. I went across to berth number 5 via launch.

20 Q. Which launch?

21 A. That—I can't recall at the time, but one of our Paria launches.

22 Q. All right.

23 A. Yeah? Um, right by the riser area there's a scaffolding.

24 Q. Uh-huh.

25 A. So I climbed on there and I was trying to knock with some,
26 some, some bolts in order to make a noise so I could try to
27 attempt to get some noise back to me and I didn't hear no, no,

1 um, no other knocking besides mine.

2 Q. And you did anything in particular to hear that noise?

3 A. Yeah. I placed my ear down on the flange itself and listened to
4 hear any noise that was coming back.

5 Q. On the flange at the riser at berth number 5?

6 A. Correct, yes.

7 Q. And you said that it was concrete coated?

8 A. The, the line itself is concrete coated.

9 Q. Not the riser?

10 A. Not the—well, it had—well, it had—

11 **Mr. Chairman:** It would seem that part of the riser is coated.
12 near to the top. The flange isn't coated.

13 **Mr. Ramdhan:** Yeah, the flange isn't coated, yeah.

14 **Continued Cross-Examination By Mrs. Persaud Maraj:**

15 Q. But not the riser?

16 A. The riser is coated up to a point and then it goes to a flange with
17 a blank on it.

18 Q. And you heard nothing?

19 A. I heard nothing.

20 Q. Was there any other person present—with you at the time that?

21 A. At that time it would have been me and the launch crew, the
22 launch crew and I.

23 Q. And there was no LMCS personnel?

24 A. At that time, no.

25 Q. What time was that?

26 A. I can't say. I was check back—um, right, so that would have to
27 have been after the coast guard same on site, so I just trying to

1 get a ballpark time with regard to it so that would be after—and
2 that would be after—

3 **Mr. Chairman:** Before or after Mr. Boodram came out of the
4 pipe?

5 **Mr. Ramdhan:** That was after.

6 **Mr. Chairman:** It was after?

7 **Mr. Ramdhan:** After, yes.

8 **Mr. Chairman:** It's probably enough, isn't it?

9 **Mrs. Persaud Maraj:** I have no further questions.

10 **Mr. Chairman:** Anybody else? Yes, Sir. Introduce yourself
11 please?

12 **Mr. Pegus:** Good afternoon Mr. Chairman. Chase Pegus on
13 behalf of Kenson.

14 **Cross-Examination By Mr. Pegus:**

15 Q. In answer to learned Senior, you referred to Mr. Majardsingh as
16 an approved applicant, yes?

17 A. Yes.

18 Q. He was in fact approved by Paria?

19 A. Correct.

20 Q. Right. Now, in your oral evidence in referring to Mr.
21 Majardsingh, you were not suggesting that Mr. Majardsingh
22 approved the documents attached to the permit to work?

23 A. No.

24 Q. Right.

25 **Mr. Pegus:** Mr. Chairman, just one last area. Can the witness
26 be shown the permit to work procedure which could be found at
27 page 20?

1 **Mr. Chairman:** On the screen.

2 **Mr. Pegus:** Yes. And I am looking specifically at section 5.1.

3 **Mr. Chairman:** It was on the screen. Right, here they are.

4 **Continued Cross-Examination By Mr. Pegus:**

5 Q. I'm looking at bullet point number six from the bottom, which
6 reads:

7 "Stop the work if there are changes in site conditions that
8 increase the risk or if new hazards are identified and
9 promptly notify the site authority of these changes."

10 A. Correct.

11 Q. You see that provision there, yes?

12 A. Yes.

13 Q. And you accept that that is the only condition under which Mr.,
14 Majardsingh could have stopped the work on the day in
15 question?

16 A. Could you repeat?

17 Q. I'm suggesting to you that under provision 5.1, bullet number
18 six from the bottom, which reads—this refers to the applicant:

19 "Stop the work if there are changes in site conditions that
20 increase the risk or if new hazards are identified and
21 promptly notify the site authority of these changes."

22 A. Yeah, yes, so he would only stop the work if he knew that the
23 conditions changed.

24 **Mr. Pegus:** Much obliged. That would be all, Mr. Chairman.

25 **Mr. Chairman:** Thank you. Yes. Mr. Ramoutar.

26 **Mr. Ramadhar:** Thank you so much.

27 **Cross-Examination By Mr. Ramadhar:**

1 Q. Good afternoon, Sir. Prakash Ramadhar on behalf of the family
2 Kurban—

3 A. Good afternoon.

4 Q. —and for Yusuf Henry. Mr. Pegus just pointed out one area of
5 authority given to Kenson to stop work which he read to us.

6 A. Uh-huh.

7 Q. Right? What was the authority given to Kenson to observe the
8 work actually being done?

9 A. Could you repeat?

10 Q. Of course. What was the authority or par given to Kenson to
11 observe the work actually being done to see there was a change
12 in circumstances?

13 A. Well, from the permit to work system the applicant is
14 responsible for doing this, these duties listed here and, as such,
15 if anything changes from the permit to work system.

16 Q. Yes. Let me make it quite clear. You appreciate safety is one
17 of the highest importance on the job site?

18 A. Yes.

19 Q. Kenson is there basically as an agent for Paria to ensure that
20 things go well?

21 A. Applicant, yes, he's the applicant.

22 Q. Well, forget applicant. Kenson, yes? Well what authority was
23 given to them? Because you've told us, and Chairman I'm so
24 grateful to you and of course my guru, Mr. Ramesh Maharaj in
25 his cross-examination, that you did not have anybody with eyes
26 on the work but allowed the contractor to continue whatever
27 they are to do, and only when this disaster occurred then you

1 came in?

2 A. Well, it's a maintenance activity—

3 Q. Yes, Sir—

4 A. —and being the applicant—

5 Q. —you are site authority. Don't tell me about maintenance here.

6 **Mr. Peterson SC:** Let us—

7 **Mr. Ramadhar:** With all due respect, Mr. Peterson, allow me
8 this.

9 **Mr. Peterson SC:** The witness is [*Inaudible*] to answer the
10 question.

11 **Mr. Ramadhar:** All right, of course, let's hear it.

12 **Mr. Peterson SC:** Mr. Ramadhar may not like the answer
13 but—

14 **Mr. Chairman:** I think that's a fair point, Mr. Ramadhar.

15 **Mr. Ramadhar:** Yes, of course.

16 **Continued Cross-Examination By Mr. Ramadhar:**

17 Q. It's a maintenance issue. You are site authority, correct?

18 A. I didn't say it's a maintenance issue, it's a maintenance activity,
19 and as site authority, we are in—we—site authority is
20 operations. We had no expertise to—

21 Q. There you go.

22 A. —to monitor a maintenance activity.

23 Q. Beautiful. So it was not your "wuk", to quote in Trinidad
24 terms?

25 A. I wouldn't say that—

26 Q. Whose job was it, then?

27 A. There are different departments.

1 Q. Yeah whose job? You are the site authority. Whose job was it
2 to look on to ensure that nothing went wrong in the procedure
3 that is so stipulated, whether sequential or otherwise? Whose
4 job was it, the contractor?

5 A. Could you, um, just specify the question again, Sir?

6 Q. Of course. Whose job was it to ensure the procedure was
7 properly carried out, whether sequential or not, on the work
8 permit?

9 A. It's—well it is the job of the applicant to ensure that—

10 Q. Right.

11 A. —the maintenance activity went according to—

12 Q. Good.

13 A. —their plan which was in reference to the specific tasks
14 identified on the permit.

15 Q. Thank you. Was Kenson given any authority to have eyes on
16 the job?

17 A. I can't, I can't say.

18 Q. Whose, who is it—

19 A. It's a maintenance task.

20 Q. —that would be able to tell us this?

21 **Mr. Chairman:** Well, just a minute.

22 **Mr. Ramadhar:** Sorry, My Lord.

23 **Examination By Mr. Chairman:**

24 Q. We're looking at a document that's on the screen which is the
25 permit to work procedure which you've referred to and a
26 number of people have referred to?

27 A. Yes.

1 Q. On at paragraph 5.1, that deals with the applicant. We know
2 the applicant to be Mr. Majardsingh?

3 A. Uh-huh.

4 Q. And he works for Kenson. At bullet point—sorry about 12, 10,
5 you could scroll to the next page please, about four down from
6 the top of the page, do you see it says there:

7 “Continually monitor the job to ensure that it is
8 performed in a safe manner and within the conditions
9 prescribed in the work permit certificates and JHA Risk
10 Management. He may sign the renewal section
11 indicating that he has audited the job.”

12 So he has an overall responsibility to oversee, is that right?

13 A. Yes because he would be in charge of the maintenance activity.

14 Q. Continually monitor?

15 A. All right.

16 Q. Right? So that I understand what’s being asked of you—

17 A. All right.

18 Q. —is, is, did he have authority to stop the job?

19 A. Yeah, everyone has authority to stop the job.

20 Q. Everybody?

21 A. If we deem something—

22 Q. Even the most junior person, if they see something wrong,
23 about to go wrong—

24 A. Yes.

25 Q. —it is, they have the authority—

26 A. A right to say stop.

27 Q. —to say stop?

1 A. Yes.

2 Q. It would ultimately come to you or to somebody more senior
3 eventually to determine when it should start again, if it does?

4 A. Right—

5 Q. But even the most junior person on the job has the authority to
6 say stop?

7 A. Yes.

8 Q. But, the applicant has, under Paria's own permit to work
9 procedure, been given specific authority, and obligation? It is
10 an obligation, isn't it?

11 A. Yes.

12 Q. On them to continually monitor the job and so if Mr.
13 Majardsingh was the person who understood that the barriers
14 should not be removed, he was the one to have told you or to
15 stop the job when they were being removed, wasn't he?

16 A. Yes, he would have to.

17 Q. And he would have had to have some responsibility, if not a
18 duty as I say, to monitor the work, wouldn't he?

19 A. Yes. Well, according to the permit to work system, yes.

20 Q. Yes.

21 A. He would have.

22 Q. Well, you're—you're—I mean not you personally—

23 A. Yes.

24 Q. —but, you know, your firm's permit to work system and you
25 being the site authority would have wanted to know?

26 A. Yeah.

27 Q. That's where they are, isn't it?

1 A. Yes.

2 Q. Yes thank you. I'm sorry, I—

3 A. In addition, there's also the duties of the contractor official as
4 well.

5 Q. Look, I'm not seeking to excuse anybody here.

6 A. Yeah, yeah.

7 Q. All right? And neither am I seeking to blame anybody here.
8 I'm trying to understand how the system works or doesn't.

9 A. Okay.

10 Q. All right. So Mr. Ramoutar was asking—

11 **Mr. Ramadhar:** Ramadhar Sir.

12 **Mr. Chairman:** Yes, thank you.

13 **Mr. Ramadhar:** Ramadhar.

14 **Mr. Chairman:** Ramadhar.

15 **Mr. Ramadhar:** Yes, thank you.

16 **Mr. Chairman:** So, I've been getting it wrong all this time?

17 **Mr. Ramadhar:** I know one—

18 **Mr. Chairman:** You're too kind not to have corrected me
19 thank you. Ramadhar.

20 **Continued Cross-Examination By Mr. Ramadhar:**

21 Q. Yes. So, as we have it, let me get this clear. You're the site
22 authority but you had no oversight. Is that accurate?

23 A. I'm responsible for the site.

24 Q. Listen to my question. You had no oversight. As the ultimate
25 authority, it's a big name, site authority, you had no oversight?

26 A. Oversight on?

27 Q. On everything.

1 A. I have oversight on the site.

2 Q. Okay let me make it quite clear. To ensure no one dies on your
3 site. The thing is, you had no oversight to ensure that no one
4 dies on your site?

5 A. We—the thing is—could I, could I explain?

6 Q. Please do?

7 A. There are various responsibilities in a permit to work system.
8 My responsibility as the site official was because the nature of
9 Paria's business is not maintenance, we have to ensure the site
10 is operationally safe in order to start the maintenance activity.
11 As site authority, that's our responsibility, to ensure the site is
12 safe for the maintenance work to happen. Now the
13 maintenance work, we have no experience in maintenance work
14 as the site official or the site. Operations has no, um, no—
15 sorry, operations has no experience in a maintenance activity.

16 Q. Right so—

17 A. We would not be able to supervise a maintenance job.

18 Q. I hear you. I hear you. So we're back to the position site
19 authority, that's not his "wuk" to quote what we say in
20 Trinidad.

21 A. I didn't say that.

22 Q. Whose job is it then?

23 A. The?

24 Q. Whose job is it to have oversight to ensure these things don't
25 recur?

26 A. In the maintenance job. It would be—

27 Q. Forget about maintenance. I don't—I'm not interested in the

1 titles. I'm interested in responsibilities.

2 A. Ummm.

3 Q. Who has the responsibility to ensure that these things do not
4 recur?

5 A. It's a system. It's a control of work. Everybody has—

6 Q. And the system failed, you agree? Or the system succeeded
7 excellently, to quote Mr. Wei?

8 A. I can't say. I don't have all the facts.

9 Q. You do not—well, let's see what facts you have. Four men are
10 now dead. You agree that's a fact? Do you agree that is a fact?

11 A. It is a fact.

12 Q. You're the site authority. You must have done some
13 introspection, if not more, to ascertain where the systems failed
14 to have allowed that, you agree?

15 A. Repeat the question?

16 Q. Certainly. You must have done some study, some introspection
17 to ascertain how come a system that you rely upon allowed four
18 men to have died, isn't that correct? Yes or no?

19 A. Could you rephrase?

20 Q. Mr. Chairman? Yeah, of course, I have life, I have time so I
21 would do so. Has there been any analysis—you know the word
22 analysis?

23 A. Yes.

24 Q. —as to how come the system, which you clearly rely upon,
25 failed to have allowed four men to have died? Have you done
26 any such analysis yes or no?

27 A. Myself, no. There would have been other, there would have

1 been other departments—

2 Q. You cared that men died under, in your site?

3 **Mr. Peterson SC:** Could the witness be allowed—if my friend
4 doesn't—is not interested in the answer, a simple process is to
5 withdraw the question or don't put it at all.

6 **Mr. Chairman:** Yes, I, I—again—

7 **Mr. Ramadhar:** Yes, yes of course of course. My friend and I
8 we're best friends for long and—

9 **Mr. Chairman:** Yeah, I know, you might be best friends
10 outside of court but inside, you know—

11 **Mr. Ramadhar:** And that is why I would not respond in the
12 way I would normally.

13 **Mr. Chairman:** Try to restrain your enthusiasm—

14 **Mr. Ramadhar:** Of course.

15 **Mr. Chairman:**—a little, please?

16 **Mr. Ramadhar:** Thank you. I'm of that age now. You're
17 right, right.

18 **Continued Cross-Examination By Mr. Ramadhar:**

19 Q. So, um, Sir, you did not, as site authority, consider where the
20 systems failed? Forget about others having to do it, you
21 personally, Sir?

22 A. It's not my responsibility to—

23 Q. Oh, it's not your “wuk”?

24 A. —the site—

25 Q. Not your “wuk”?

26 A. —if it be the system has failed, the system is a bigger part of
27 things.

1 Q. And you appreciate a clock—

2 A. And it's a collective agreement.

3 **Mr. Chairman:** You have to let him answer the question. If
4 you're going to ask it, you got to let him answer it.

5 **Continued Cross-Examination By Mr. Ramadhar:**

6 A. Right, so the system itself is a bigger part, everyone has their
7 responsibility to develop the system.

8 Q. Yeah.

9 A. So I can't singularly analyze to determine the faults in the
10 system.

11 Q. Have you made any effort?

12 A. Effort?

13 Q. Yeah. To analyze?

14 A. To analyze it?

15 Q. Yeah.

16 A. Um, well the system—as in my position the system is to be
17 followed as it is.

18 Q. Right. So you know, as we've agreed, the system has failed
19 four men and their families and the country, you agree with
20 that?

21 A. If I agree that the system has failed?

22 Q. Failed yes?

23 A. I, I can't, I can't say to be honest.

24 Q. It has succeeded?

25 A. I, I have, I have not—I don't have all the facts on the system to
26 say or draw a conclusion to something like that.

27 Q. Four men died, a foundational fact.

1 A. With regard to the system—

2 Q. Right? I don't want to be repetitive because others may be
3 irritated by it, but I have to get to you, the fact that four men
4 died following your system—

5 A. Not my system, Paria's system.

6 Q. Well I call you by—you are Paria sitting in that seat today with
7 all due respect. Following Paria's system, four men died. You
8 are site authority. You went through that process in your mind
9 in your quiet moments to ascertain where things went wrong,
10 what could be done better to ensure no recurrence?

11 A. I couldn't do that because it wasn't my experience to do so. I
12 am involved in operations and—

13 **Mr. Chairman:** No, no it's not an entirely fair question, is it?
14 I mean, he is one individual in a very large organization.

15 **Mr. Ramadhar:** Of course.

16 **Mr. Chairman:** It is their responsibility to review the position,
17 all right? I dare say every single person who has been
18 concerned in this case have a personal introspection as to
19 whether they did their job properly or not, and if that's what
20 you're asking him, by all means ask him personally.

21 **Mr. Ramadhar:** Thank you.

22 **Mr. Chairman:** It's probably not going to advance the case
23 very much, though, is it?

24 **Mr. Ramadhar:** It may not but it's important to this extent.

25 **Continued Cross-Examination By Mr. Ramadhar:**

26 Q. Because you appreciate whatever organization there is, as
27 you've indicated, is made up of many parts and the parts have

1 to work together to ensure that the totality works as whole?

2 You agree with that?

3 A. Yes.

4 Q. Yes. Good. Like a clock, you remove one little piece, it
5 doesn't work well? You agree with that?

6 A. Okay, yes.

7 Q. Yeah. Now you are the site authority. You arrived shortly
8 thereafter this accident and you are saying that LMCS didn't
9 wish to speak with you?

10 A. I, I didn't say that. I said I attempted to talk to them—

11 Q. Uh-huh.

12 A. —and they didn't provide information until further when they
13 only indicated to me that the divers who was working in the
14 chamber went missing.

15 Q. But were they being cooperative? I think that was already
16 asked but for my refreshment?

17 A. At the time, no. I was constantly asking. I wasn't getting no
18 feedback.

19 Q. Who specifically were you asking?

20 A. I listed it in the statement.

21 Q. Yeah, give me the names?

22 A. That was Kazim Ali, Farah, Dexter.

23 Q. Right. Who represented Paria, apart from LMCS personnel
24 there, who represented Paria there? Kenson you've told us,
25 correct?

26 A. In maintenance or operations? Well Kenson in maintenance,
27 yeah.

1 Q. Who is on site as you arrived? Who did you first speak with?

2 A. That would be Kirt Scott.

3 Q. Representing whom?

4 A. Kenson/Paria operations.

5 Q. And you ascertained at best, as best as you could have, what the
6 status was at that time, men were missing, correct?

7 A. Yes.

8 Q. You, as site authority, you're the, you're the most senior man
9 on site at that point, isn't it?

10 A. At that time, yes.

11 Q. Yes. Was it, in your mind, the most important thing to rescue
12 possibly alive men, yes or no?

13 A. The thing is, when you reach on site with uncertainties, you
14 gather intimation—

15 Q. Correct, yes.

16 A. —to make your next—

17 Q. Yeah.

18 A. —your next move.

19 Q. Why are—you're getting information for what purpose?

20 A. For, for rescue.

21 Q. Right, good. So that was the foremost issue you had in your
22 mind, and you will get information to support the purpose of
23 rescue, is that accurate?

24 A. Correct.

25 Q. Yes. You of course know President Obama, you know who he
26 was. President Obama?

27 A. Yes.

1 Q. Right. You've heard the statement, "Trust but verify"? You've
2 heard that statement have you?

3 A. Yes, that's even before.

4 Q. Right, good. Did you trust the information you had at the time
5 when you got there?

6 A. Could you specify the, the information?

7 Q. Well you tell me what information you got when you got there
8 and whether you trusted it, speaking to Kenson, your agent?

9 A. Uh-huh. That's the question?

10 Q. Yes.

11 A. Yeah, well, the information that he gave me—

12 Q. Yes.

13 A. —was, um, he saw a splash on the screen and then he was
14 asking or enquiring about what happened to the personnel.

15 Q. Right.

16 A. He didn't get any feedback.

17 Q. As an experienced person, men in a chamber, splash on a
18 screen, you don't see anybody floating outside of the chamber,
19 you assumed they were either in the chamber or in the pipe. Is
20 that accurate?

21 A. I can't assume that.

22 Q. What could you—what did you assume?

23 A. From, from the information—

24 Q. From the information you had.

25 A. —that Kirt Scott gave me—

26 Q. Uh-huh.

27 A. —I had to gather more information and it maybe seem as

1 though it was time-consuming, however, it happened in a
2 matter of, say, on reaching on site gathering information before
3 I made my response was about 15, 15, 20 minutes—

4 Q. Congratulations. And what was your response?

5 A. Huh?

6 Q. What was your response in the 15 minutes?

7 A. Yeah, well, on gathering information, I—

8 Q. What was the response? We heard you and we congratulate
9 your 15-minute arrival.

10 **Mr. Peterson SC:** Could he be allowed to answer the question,
11 Sir?

12 **Mr. Ramadhar:** And I'm asking him specifically and he's on
13 a, on a—

14 **Mr. Chairman:** The problem is we're not getting any
15 information from him. We're getting it all from you at the
16 moment.

17 **Mr. Ramadhar:** Well—

18 **Mr. Chairman:** You've got—if you're going to ask him a
19 question he's got to be able to answer it.

20 **Mr. Ramadhar:** Thank you. Well—

21 **Mr. Chairman:** I know we're all trying to move along quickly
22 but—

23 **Mr. Ramadhar:** Yes.

24 **Mr. Chairman:**—er, you know, choose your questions a little
25 more carefully and allow him to answer them, please? All
26 right?

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. All right you've heard the Chairman's admonition, okay, so
2 let's refocus ourselves. I shall and you do, please? You arrive
3 within 15 minutes. You've told us this.

4 A. Yeah.

5 Q. Yes. What decision did you take to help rescue those men?

6 A. I tried to gather information from the contractor.

7 Q. Yeah. What decision did you take, seeing that you had failed to
8 obtain the necessary information you sought to require, what
9 decision did you take—

10 A. No, the—

11 Q. —to further the, further—to further the effort in your mind to
12 rescue?

13 A. No I'd mentioned it in my statement I'm—

14 Q. I'm not interes—with your leave—we're dealing with you here
15 live and direct.

16 A. I as I said, as mentioned in my statement, the only information
17 that I obtained was from Kazim Ali that men were missing in
18 the water.

19 Q. Uh-huh.

20 A. Thereon I dispatched our, um, launches, our emergency
21 response plan, which is dispatch all launches and tugs within
22 the area to see if we have bodies anywhere or if we could
23 recover personnel or re—or, sorry rescue personnel—

24 Q. Yeah.

25 A. —within the area because at the time the only information we
26 had is men were missing in the water.

27 Q. Right. Okay. So there you are, the most senior Paria man on

1 site. When did you next see anybody more senior than you on
2 site?

3 A. At 16, it's here in the statement, 16, Visham Harrichan arrived
4 on site—16:15.

5 Q. That is 4.15 p.m., correct?

6 **Mr. Chairman:** You're talking about Leeandra Singh?

7 **Mr. Ramadhar:** No, no, no. We're looking at the time, My
8 Lord, he was—er, 16:15 being 4.15.

9 **Continued Cross-Examination By Mr. Ramadhar:**

10 A. Yeah, approximately 16:15 that's the offshore lead at time.

11 Q. Offshore lead?

12 A. At the time, yes.

13 Q. You had a conversation with him?

14 A. Yeah. I transferred all the information I gathered to him.

15 Q. So you hand over to him?

16 A. I transferred all the information I gathered to him.

17 Q. Right. In other words it was no longer your responsibility, you
18 have a bigger boss there, is that it?

19 A. I didn't say that.

20 Q. I'm asking you.

21 A. I was still on site assisting in any way that I could.

22 Q. Right. But who then would have had authority to make
23 decisions? Was it you or in combination with this new bigger
24 boss?

25 A. Well at that time Visham Harrichan would have been in charge
26 and I assisting.

27 Q. Right. At that time, when he arrived, had it come to anyone's

1 attention that they were hearing knocking in the pipe by that
2 time?

3 A. No.

4 Q. No. You said you left there around what time?

5 A. Twenty-one thirty, around that time.

6 Q. Could you have Trini time, please, instead of military?

7 A. That would be 9.30.

8 Q. Nine thirty. So you were there when first of all knocking was
9 heard from the pipe, you agree?

10 A. I was there when someone mentioned that knocking was being
11 heard from berth number 5.

12 Q. You doubted that information?

13 A. No, I didn't doubt. I went across there and verified.

14 Q. And you verified?

15 A. Uh-huh.

16 Q. Was any step taken there and then to effect a rescue that men
17 were still alive and therefore precious life was available?

18 A. Well that was after Christopher Boodram was recovered.

19 Q. Yeah.

20 A. And that information that the divers told us that he was pulled
21 out from inside the pipeline was already passed on—

22 Q. Good.

23 A. —to the command.

24 Q. So I'm not—I shan't be longer with you except this. But when
25 Christopher Boodram came out, what time was this?

26 A. At around—I'll have to check back Sir. [*Perusing document*]
27 Seventeen thirty-six, I believe—17:36.

1 Q. Right. And you were present when he was rescued out the
2 chamber and brought out, is that accurate?

3 A. I was on the berth at the time, yeah.

4 Q. Yeah, you were there, right? So the proof of life of other men
5 was available at that time because he said men were behind
6 him, isn't it?

7 A. Well, that's what he said, yes.

8 Q. Yeah. You had reason to doubt him?

9 A. If?

10 Q. You had any reason to doubt him?

11 A. No.

12 Q. Thank you very much.

13 **Mr. Chairman:** Yes, thank you. Just pause for a moment.
14 Mr. Peterson, how long do you think you might be?

15 **Mr. Peterson SC:** I don't have anything Sir.

16 **Mr. Chairman:** You don't have anything.

17 **Mr. Peterson SC:** We don't have anything. I think the
18 witness has been—

19 **Mr. Chairman:** Right. Well, we're going to take a five-
20 minute recess and then we'll hear a little, probably not all, from
21 Mr. Scott.

22 **Mr. Pegus:** Mr. Chairman, if I may, please?

23 **Mr. Chairman:** Yes.

24 **Mr. Pegus:** Arising from Mr. Ramadhar's cross, I just want to
25 clarify one thing from this witness before he departs.

26 **Mr. Chairman:** What is it? Ask me first.

27 **Mr. Pegus:** What I want to get from this witness is that there

1 was no way for Mr. Majardsingh to supervise the removal of
2 this migration barrier and stop the works. What he said in
3 answer to Mr. Ramadhar is that anybody could have stopped
4 the work if it is they see something going not according to plan
5 with respect to the work permit.

6 **Mr. Chairman:** Ask him.

7 **Mr. Pegus:** Yes. Thank you very much.

8 **Further Cross-Examination By Mr. Pegus:**

9 Q. Now, in answer to my friend, Mr. Ramadhar, you made
10 reference to you who was a—who were a person in operations,
11 you couldn't supervise a maintenance job.

12 A. Correct.

13 Q. Right. Now, in further answer to him you indicated that there
14 were specific tasks on a work permit, yes?

15 A. Yes.

16 Q. And if it was found that the contractor, LMCS, was doing
17 something which was not according to plan, anybody coulda
18 stop them?

19 A. Correct.

20 Q. Right. Now, under the permit to work procedure, I believe the
21 learned Chairman pointed out to you, and I would read the
22 provision in the interest of time, that the applicant was to
23 continually monitor the job.

24 **Mr. Chairman:** It's on the screen.

25 **Continued Further Cross-Examination By Mr. Pegus:**

26 Q. Right, it's on the screen. You indicated that the applicant was
27 to continually monitor the job to ensure that it is performed in a

1 safe manner and within the conditions prescribed in the work
2 permit certificates and JHA risk assessment. You identified
3 that as being one of the duties of the applicant.

4 A. Yes, according to the permit to work system, yes.

5 Q. Right. And there you went on to say that the applicant could
6 have stopped the work if he noticed that there was a removal of
7 this migration barrier, yes?

8 A. Correct, if he noticed.

9 Q. Right. Now under the system that you all utilized, a lot would
10 have been—a lot would have depended, sorry, on the contractor
11 supervision in order for the applicant to stop the removal of the
12 migration barrier?

13 A. Correct, because the contractor was trained in the permit to
14 work system.

15 Q. Right. As you understand it, the contractor official provided
16 full-time supervision, yes?

17 A. That's how I understand it.

18 Q. And the only way Mr. Majardsingh could know that there was
19 going to be a removal of the migration barrier is if the
20 contractor official notified him?

21 A. Correct.

22 **Mr. Pegus:** Much obliged.

23 **Examination By Mr. Chairman:**

24 Q. Who's Scott—who is Kirt Scott?

25 A. Kirt Scott is an operator on my team.

26 Q. On your team?

27 A. Yes.

1 Q. Does he work for Paria?

2 A. He's a Kenson person—

3 Q. Kenson?

4 A. —working for Paria.

5 Q. Is he junior to Mr. Majardsingh?

6 A. Different departments.

7 Q. Completely different department?

8 A. Different department, yes.

9 **Mr. Chairman:** Thank you. Mr. Maharaj are there any
10 questions?

11 **Mr. Chairman:** No. We'll take our five-minute break and
12 then we'll have a little, but not all, I suspect, from Kirt Scott.
13 Thank you very much. Thank you for coming.

14 **Mr. Ramdhan:** Okay.

15 **Mr. Chairman:** Appreciate your attendance. You're free to
16 go. You can come and go as you please if you're interested, all
17 right?

18 **Mr. Ramdhan:** Yeah.

19 **Mr. Chairman:** So thank you very much for coming.

20 **Mr. Ramdhan:** Okay, I would just like to just say condolences
21 to the families, extend my condolences to the families of the
22 deceased.

23 **Mr. Chairman:** Very well, thank you.

24 **3.54 p.m.:** *Enquiry suspended.*

25 **4.02 p.m.:** *Enquiry resumed.*

26 **Mr. Chairman:** Hello. Would you take a seat for a moment,
27 Sir? Mr. Peterson, can I address a matter to you, please? We

1 made a request of Paria by letter on the 8th of November for the
2 IMT records. Without going through the litany of
3 correspondence that has passed between us and your instructing
4 attorney, the net result is that after all these applications and
5 being promised on no less than three separate occasions that we
6 would have at least some of the material we still do not have
7 any of it. And we're told that it is extensive and will have to be
8 provided by some sort of memory stick.

9 Now, I'm concerned because we're hearing from a number of
10 witnesses who work for Paria and it may be that this material
11 will reveal things that we would wish to ask them. I'm
12 releasing all of these witnesses at the moment but I'm really
13 very reluctant to do so and I really want these IMT records
14 provided to us this week, tomorrow if possible, and if you
15 haven't got it all, just give us what you've got.

16 **Mr. Peterson SC:** Sir, when I answered this morning about
17 Friday, I was at cross-purposes because I was—my team
18 thought that you had asked about that when they told me
19 Friday.

20 **Mr. Chairman:** Right.

21 **Mr. Peterson SC:** So I gave a commitment for the
22 supplemental statement with the survey which I think could still
23 be done, but the indication, when they told me Friday they were
24 speaking about that material.

25 **Mr. Chairman:** All right. So we can get it by Friday, can we?

26 **Mr. Peterson SC:** Yes. That's—

27 **Mr. Chairman:** That's more than reasonable.

1 **Mr. Peterson SC:**—when they said the Friday that what’s they
2 were speaking about.

3 **Mr. Chairman:** Right. Well, can I say this? I’ve no idea what
4 this material contains, and you probably don’t either. I don’t
5 know whether you’ve seen it.

6 **Mr. Peterson SC:** No I tell them, no, I tell them to assemble it.

7 **Mr. Chairman:** Right, well, I’m concerned that we’re being
8 given this material halfway through this Enquiry when we have
9 been asking for it for some time, but, be that as it I may, if I
10 don’t have it on Friday, if it’s not provided to us so that we can
11 at least start looking at it over the weekend, if we don’t have if
12 we don’t have it by Friday it will incur my displeasure, which is
13 not a happy sight.

14 **Mr. Peterson SC:** Yes, Sir I’ve, I’ve seen it. I’ve seen it, Sir.

15 **Mr. Chairman:** All right? You’ve seen it? I’m not sure you
16 have, actually. That’s me being jovial. All right? But I am
17 serious about this.

18 **Mr. Peterson SC:** Yes, Sir.

19 **Mr. Chairman:** I mean, we really must have it, all right?

20 **Mr. Peterson SC:** Sir, I, I will—

21 **Mr. Chairman:** So please—

22 **Mr. Peterson SC:** I will have my team—

23 **Mr. Chairman:**—impress upon them.

24 **Mr. Peterson SC:** You will have it.

25 **Mr. Chairman:** Thank you very much. All right, Sir, you are
26 Mr. Scott?

27 **Mr. Scott:** Yes, Sir.

1 **Mr. Chairman:** Please, would you stand for a moment while
2 you take the oath?

3 *[Mr. Kirt Scott sworn]*

4 **Mr. Scott:** I, Kirt Scott, solemnly swear that the evidence I
5 shall give to the Commission in this case shall be the truth, the
6 whole truth and nothing but the truth.

7 **Mr. Chairman:** Mr. Scott, make yourself comfortable. I'm
8 afraid I have an apology that you've been waiting I think all
9 day, have you not?

10 **Mr. Scott:** Yes, Sir.

11 **Mr. Chairman:** So I'm sorry that you've been waiting all day.
12 It's partly my fault and partly everybody else's but these things
13 take a little longer than we perhaps planned. My apology has to
14 extend a little further because I think it's unlikely that we will
15 be able to deal with your evidence completely today, which will
16 mean that you may have to come back tomorrow, all right? But
17 let's see how we get on. What we're going to do, is, Mr.
18 Bissessar there is going to summarize the evidence that you've
19 given us so far. Listen to it carefully. If you agree with it at the
20 end of his summary, tell him you agree with it and then we'll
21 see if there are any other questions from whoever needs to ask
22 you—are we asking any questions?

23 **Mr. Maharaj SC:** Yes.

24 **Mr. Chairman:** Yes, there will be some questions from Mr.
25 Maharaj, all right, and there—the other lawyers, some of them
26 may want to ask some questions as well. All right?

27 **Mr. Scott:** Yes, Sir.

1 **Mr. Chairman:** All right, thank you very much.

2 **Mr. Bissessar:** Thank you, Chairman.

3 Chairman, Mr. Kirt Scott declined the invitation to be
4 interviewed by the Commission and, in fact, a witness
5 summons was issued by the Commission to compel his
6 attendance and on the 2nd of December, 2022 Mr. Scott
7 provided a witness statement. It's an 11-paragraph witness
8 statement so rather than summarize I will simply read it. It's
9 fairly short.

10 **Mr. Chairman:** Sorry, where did you say it was again?

11 **Mr. Bissessar:** The 2nd of December. Um, it's at—forgive
12 me, it's 3029 of the supplemental witness bundle and it's on the
13 screen.

14 **Mr. Chairman:** Got it.

15 **Mr. Bissessar:** “My name is Kirt Scott. I have been an
16 offshore operator at Paria Fuel Trading Company Limited since
17 December 2018. I have been an offshore operator for the past
18 18 years. On the 25th of February, 2022 I reported for duty at
19 Paria at 600 hours. I recall arriving on berth 6 at about 8.20
20 hours. My role on the berth was to monitor the work area for
21 any signs of pollution, mainly all pollution, to be on the lookout
22 for any incoming vessels and ensure no work, other than the
23 operation within the defined area of number 36 Sealine riser,
24 was performed.

25 While performing my duties at about 14:45 hours I
26 noticed a splash on the monitor which was showing the ongoing
27 work activity inside the hyperbaric chamber. After this splash

1 that appeared on the screen, the screen went blank and I could
2 no longer see anything on the screen. Upon making this
3 observation I immediately alert LMCS' dive supervisor,
4 Andrew Farah. I also alerted LMCS' safety personnel who was
5 located on the nearby barge Adventurer One informing him of
6 my observation. I recall saying to him that something appears
7 to be wrong inside the chamber.

8 Upon alerting them, I noticed that they did not make any
9 immediate checks. I recall raising my voice demanding of them
10 that checks within the area and inside the Chamber be made. I
11 also demanded that they initiate their emergency backup plan as
12 I figured something was wrong. I recall telling them to try and
13 communicate with the personnel in the chamber via radio or by
14 knocking on the chamber. I also contacted the offshore
15 terminal supervisor Johnathan Ramdhan at approximately 14:50
16 hours and informed him that his immediate presence is required
17 at berth 6 as I was not getting any feedback from the contractor
18 with further information from the checks demanded.

19 At approximately 15:05 hours I observed the dive
20 supervisor was suited up with diving equipment and was told
21 by personnel on the barge that he was going to check inside the
22 Chamber. Shortly after, about 5 minutes, the dive supervisor
23 returned to the barge. I immediately demanded feedback from
24 the LMCS personnel on the barge, however, no feedback was
25 given. I continued to question the LMCS personnel on the
26 barge and I finally received feedback. One of the LMCS'
27 workers told me that the chamber was empty and that LMCS

1 divers who were in the chamber were all missing.

2 I recall asking what is the next step because the divers
3 could not be accounted for. I did not get an answer to this
4 question. I also recall speaking to LMCS' HSE personnel
5 requesting to view the recording from inside the Chamber in an
6 attempt to ascertain what happened, however, the HSE
7 personnel told me that only the dive supervisor can access that
8 recording.

9 At or around 15:12 hours, the OTS, Mr. Ramdhan,
10 arrived on site at berth 6. I recall informing him of my
11 observations. Upon his arrival I remained on berth 6 to provide
12 any assistance that may be required. I was not directly involved
13 in any rescue effort but assisted by locating and providing any
14 basic thing that was asked for, like rope or transmitting
15 messages from the berth to the shipping office. I recall leaving
16 the berth at around 19:30 hours.

17 I returned to Paria on the 26th of February, 2022 and Mr.
18 Ramdhan recorded a statement from me and he has exhibited a
19 true copy of that as A. Finally, I also answered questions asked
20 of me in an interview with the Occupational Safety and Health
21 Agency. A copy of those notes which was provided by the
22 Commission is attached and marked B.

23 Thank you, Chairman.

24 **Mr. Chairman:** Yes, thank you. Mr. Maharaj.

25 **Examination By Mr. Maharaj SC:**

26 Q. Mr. Scott, I just want to ask you a few questions. Okay?

27 A. Yes.

1 Q. You report for duties at Paria?

2 A. Yes.

3 Q. And you perform your duties at Paria?

4 A. Yes.

5 Q. And you are instructed by Paria officials what work to do?

6 A. Yes.

7 Q. And they also instruct you how to do the work?

8 A. Yes.

9 Q. And you have office facilities at Paria in order to perform your
10 duties? You have an office or you are there at the facilities?
11 What time you work? From what time to what time you work
12 at Paria?

13 A. Shift as a—

14 Q. Shift?

15 A. Yes.

16 Q. Now how many hours you—

17 A. Twelve hours.

18 Q. Twelve-hour shift. And during those 12 hours you're at Paria's
19 premises?

20 A. Yes.

21 Q. So on this—but they say you're a Kenson employee. Who you
22 are paid by?

23 A. By Kenson.

24 Q. So you are paid by Kenson but working at Paria?

25 A. Yes, Sir.

26 Q. Kenson is a contracting company?

27 A. Yes.

1 Q. What is your experience? You have any experience as an—
2 how long you're doing this job?

3 A. Well, at Paria, I branched over from Petrotrin into Paria.

4 Q. From Petrotrin.

5 A. Into Paria. On the port I start in 1998 as a pier man, then to
6 operator and in 2014—2012 then I start to act as dock
7 supervisor and on the closure of Petrotrin I had four years I'm
8 in the position of a dock supervisor.

9 Q. Okay. On the 25th of February, 2022 you were performing the
10 duties as what at Paria?

11 A. As a jetty—as a offshore operator.

12 Q. Offshore operator?

13 A. Yes.

14 Q. What those duties involved?

15 A. Those, those, um, those duties as a offshore operator consists of
16 taking mooring lines, standing by vessels to whether they're
17 loading or discharging cargoes and manning the berth facilities.

18 Q. Okay. But on that date, you were looking at, is it a video screen
19 when you saw this splash?

20 A. Yes, Sir.

21 Q. And you had a view of the chamber where the work was being
22 done?

23 A. Yes, Sir.

24 Q. And for how long have you—were you looking at the video
25 screen at the chamber on that date?

26 A. In between while I making, whilst making my checks I will
27 take a look because it was first time, first time I was

1 experiencing seeing the operation in the chamber, first time.

2 Q. Or it's the first time you were—

3 A. First time in the 24 years' service in the port, the first time I
4 was seeing that operation.

5 Q. So, you are not—were you monitoring the works that were
6 being done in the chamber that day?

7 A. No, Sir.

8 Q. No. Was anybody with you monitoring the works?

9 A. No, Sir.

10 Q. Do you know whether anybody was monitoring the works on
11 behalf of Paria that day?

12 A. I cannot say.

13 Q. You can't say. But from where you were—

14 A. Yes.

15 Q. —in relation to the chamber, you were topside obviously?

16 A. Yes.

17 Q. And where you were, in an office?

18 A. No, I was roaming, making my checks on the berth, but during
19 the course of the day, different people passed—partly
20 everybody who was on the berth who passed on the berth take a
21 look at the monitor screen.

22 Q. But could you explain to us how you could have seen this
23 splash? Where were you when you saw this splash?

24 A. The splash, I went, um, to check on a tarpaulin over the
25 monitoring area because the rain was falling and stopping so
26 whilst—so after checking the tarpaulin, after I would take a lil
27 look at the screen, at the screen before I make mih rounds again

1 and my eyes glanced on the screen and I saw the splash.

2 Q. And from what you are telling us, you are telling us accurate
3 information, this is the first time you were looking at the
4 chamber?

5 A. When? No.

6 Q. On the 25th of—

7 A. Um, on the 25th of February was the first time in my life I was
8 seeing inside of the chamber.

9 Q. Okay.

10 A. First time, from on the monitor on the screen.

11 Q. So that's first time you were—

12 A. First time in my life.

13 Q. And the only time—well, when you looked, before you saw the
14 splash—

15 A. Yes.

16 Q. —what did you see in the chamber?

17 A. I saw the personnels in the chamber at various time doing
18 various things.

19 Q. Did you see them, um, on screen—well you saw the pipe they
20 were working on?

21 A. I saw the top of the, um, the pipe where the flange was.

22 Q. Right. And you could have seen that they were doing some
23 work at the top of the pipe?

24 A. Yes.

25 Q. Taking out something from the pipe?

26 A. Yes.

27 Q. What you saw they were taking out?

1 A. First I saw they was working, moving some bolts from on the
2 blank. Right, and, um, during another time, um, another period
3 because every time I pass I would take a look. I saw personnel
4 operating a chain block and turning something.

5 Q. And turning something. If you see—I wonder if we could show
6 the—I wonder if the witness can see that mechanical plug on
7 the screen? I want to show you on the screen something and
8 you will tell me if you recognize it, okay?

9 A. Yes.

10 Q. Was it something like that you saw them working on?

11 A. Something like that I saw after take out of the pipe.

12 Q. I'm sorry?

13 A. Something resembling that I saw.

14 Q. Saw. And for how long you saw them working on that,
15 whenever you saw it, for how long you saw them?

16 A. I can't—

17 Q. Five minutes, 10 minutes, 20 minutes, how long?

18 A. I can't remember recall the exact amount of—

19 Q. No, I know you—

20 A. Could be about a—about an area for about a 5 minutes.

21 Q. For about 5 minutes?

22 A. Yes.

23 Q. And you saw it one time for 5 minutes or you saw it before?

24 A. No, the onlies time I saw it was when it was out of the pipe and
25 resting on the flange.

26 Q. On the flange?

27 A. Yes.

1 Q. So you saw it out of the pipe but did you see them working on it
2 too, moving it out?

3 A. I didn't know what they was working on.

4 Q. Okay. But could you see what was in the pipe when they were
5 working?

6 A. No, Sir.

7 Q. No. But how long—but from the time you saw them working
8 on the pipe to the time you saw them just, out of the pipe, in the
9 chamber, how much time, about how much time passed? I
10 know it's not exact. Tell me about how much time.

11 A. Well, whilst it was—whilst they was operating the chain block
12 and turning the thing, I would a left the area and returned. I
13 would have—because I didn't know what it is they was doing.

14 Q. Right. And then when you come back you saw it out or—

15 A. Yes, Sir.

16 Q. Yes. And how long was that from the time you saw it first and
17 you come back, about how long?

18 A. Roughly about could be about a 5 minutes or, or—

19 Q. For about 5 minutes?

20 A. Five to 10 minutes.

21 Q. Okay. I want to ask you something.

22 A. Yes.

23 Q. Do you know whether anybody from Paria, apart—well,
24 anybody who was working with Paria was monitoring that job
25 what was being done in the chamber?

26 A. Um, um, in between the, um, um, in the—during the course of,
27 um, of the, um, the operation, I saw various, various people

1 come by the screen there but I cannot, um, identify who is who
2 because I was not focused, um, on that area.

3 Q. Okay. But where is this screen? Where is this screen that
4 you're talking about? Where was the screen?

5 A. The screen was on a table on a—

6 Q. Topside?

7 A. Yes, Sir.

8 Q. But in an office, in—

9 A. No, no, no, on the walkway not too far from the riser.

10 Q. Or, on the walkway—

11 A. Yeah.

12 Q. —not too far?

13 A. From the riser. The area where you tour?

14 Q. So it's on the berth, then?

15 A. Yes.

16 Q. On berth number 6?

17 A. Yes, Sir.

18 Q. On the walkway?

19 A. Yes.

20 Q. And so people could walk and they could pass and they could
21 see what's happening?

22 A. Yeah, it was inside of the, um, the walkway, so once you, um,
23 you come on the berth you could take a look.

24 Q. Okay. Right. I want to ask you one more question.

25 A. Yes, Sir.

26 Q. You were not given any instruction by Paria that day to monitor
27 the work which was going on in that chamber?

1 A. No, Sir.

2 Q. No. Much obliged.

3 **Mr. Maharaj SC:** No further questions. Or I should ask—I'm
4 sorry, Mr. Chairman.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. Do you know whether anybody from LMCS—do you know the
7 company LMCS?

8 A. Yes, Sir.

9 Q. Do you know whether anyone from LMCS was monitoring that
10 work that day?

11 A. The majority of the time it had the guys' supervisor monitoring.

12 Q. By the camera or?

13 A. Yes, by the screen, by the, um, by the screen.

14 Q. You know the name of that person?

15 A. Um, Andrew.

16 Q. Andrew?

17 A. Yeah, yeah.

18 Q. Andrew. You know anybody—anybody else you know from
19 LMCS?

20 A. By name?

21 Q. Yeah?

22 A. Who was there?

23 Q. Yes

24 A. No, Sir.

25 Q. Um do you know anybody name from Paria who was there
26 looking at the screen? Do you know anybody? If you don't
27 know you don't know.

1 A. No, only about, um, in between I believe I saw the
2 maintenance, um, um, a maintenance technician, Houston, and
3 it had some other individuals but I not too familiar with the
4 maintenance personnel.

5 Q. Houston Majardsingh?

6 A. Yes.

7 Q. Okay.

8 **Mr. Maharaj SC:** I'm much obliged. Thank you very much.
9 Thanks, Mr. Chairman.

10 **Cross-Examination By Mr. Peterson SC:**

11 Q. Mr. Scott, good afternoon.

12 A. Afternoon, Sir.

13 Q. You said after you saw the splash on the screen you had to raise
14 your voice when you were trying to get persons to respond to
15 what you had seen on the screen. Do you remember saying
16 that?

17 A. Yes, Sir.

18 Q. Because you realized something went wrong in the chamber?

19 A. Yes, Sir.

20 Q. Who did you have to raise your voice and tell them to initiate
21 emergency backup plan? Who were you referring to?

22 A. First I notify the diver supervisor and the—

23 Q. That would be Andrew you spoke about?

24 A. Yes, Sir.

25 Q. Yes.

26 A. And the question with the emergency backup plan would a been
27 their HSE personnel, their safety personnel who was located on

1 the barge.

2 Q. All right. That was an LMCS person?

3 A. Yes, Sir.

4 Q. How many times you had to raise your voice to get their
5 attention and for them to respond?

6 A. Well, I can't recall exactly how many times.

7 Q. But it's more than once?

8 A. Basically, roughly.

9 Q. Right.

10 **Mr. Peterson SC:** Thank you, Mr. Chairman. That's all.

11 **Mr. Chairman:** Anyone else?

12 **Cross-Examination By Mrs. Persaud Maraj:**

13 Q. Mr. Scott, good afternoon.

14 A. Afternoon, Ma'am.

15 Q. Kamini Persaud from LMCS, representing LMCS. You said
16 you had to raise your voice but then at paragraph seven
17 paragraph seven you said shortly after, about 5 minutes, the
18 dive supervisor returned to the barge. "I immediately
19 demanded the feedback", but then you later said—well, you
20 don't later say it. Did you observe him taking a walk around
21 the area and looking back from where he was sit—first of all,
22 was Mr. Andrew Farah sanding or sitting?

23 A. He was walking towards the monitor.

24 Q. All right. And then you observed him walking around the area
25 looking into the water around the monitor, where the monitor
26 was situated?

27 A. Um, I did not observe that.

1 Q. Did you observe him speaking or shouting to anyone across the
2 barge, to the barge?

3 A. I can't recall right now.

4 Q. Did you observe or heard anyone from the barge speak to Mr.
5 Farah?

6 A. Not from where I was.

7 Q. Did you observe Mr. Farah go into the water, put on his gear
8 and go into the water?

9 A. Yes.

10 Q. And how long would that have been after the splash was
11 observed?

12 A. That could have been approximately, approximately about a 15
13 to 20 minutes after.

14 Q. Fifteen to 20 minutes after.

15 A. Approximately, approximately.

16 Q. All right. Thank you. That's all.

17 **Mr. Chairman:** Well you had a long day just for a relatively
18 short contribution but I'm grateful nonetheless. Thank you
19 very much for coming.

20 **Mr. Scott:** You're welcome.

21 **Mr. Chairman:** All right, you are free to go.

22 **Mr. Scott:** Thank God.

23 [*Laughter*]

24 **Mr. Chairman:** I think you're not the only one who's going to
25 say that tonight. Thank you. Please go. Yes. You can go out
26 this way, come on. That's it. All right. Well, happily we've
27 managed to at least conclude at a reasonable hour. So we will

1 stop today and we will start—I think we'll stick with 9.30
2 tomorrow morning. I see you shake your head Mr.—

3 **Mr. Peterson SC:** No my colleagues blaming me for this but
4 that's not the only burden—

5 **Mr. Chairman:** I think your shoulders are broad enough.

6 **Mr. Peterson SC:** That's not the only burden I have been
7 asked to carry, Sir.

8 **Mr. Chairman:** Well, it's at your suggestion we're at 9.30
9 otherwise it might be 9.00. All right 9.30 please tomorrow
10 morning. Thank you very much indeed. Please feel free to go.
11 I'm going to collect my papers myself.

12 **4.28 p.m.:** *Enquiry adjourned.*

1 **EVIDENTIARY HEARING DAY 6**

2 **9.28 a.m.:** *Enquiry commenced.*

3 **Mr. Chairman:** Good morning, everyone. Can I tell you all
4 that, on the 30th of November, the Commission wrote to Mr.
5 Zayed Khan who wrote a report which we've referred to as the
6 In-Corr-Tech report, and we asked him a number of additional
7 questions which are in a letter, as I say, dated the 30th of
8 November. Today we received a reply to those queries. Both
9 of these documents will be put up on the website today so that
10 you can see what we asked and what the answers were.
11 They're not without interest so you might want to avail yourself
12 of the opportunity to do that. If anybody needs a hard copy, I
13 dare say we could arrange it for you. All right, thank you very
14 much.

15 This morning our first witness, I believe, Mr. Maharaj, is
16 Andrew Dopson. Is that right?

17 **Mr. Maharaj SC:** Yes, Mr. Chairman.

18 **Mr. Chairman:** Okay, well, then let's get to it, shall we?

19 **Mr. Maharaj SC:** Ms. Vijaya Maharaj will read the summary.

20 **Mr. Chairman:** Yes.

21 [*Mr. Andrew Dopson enters Enquiry room and affirms*]

22 **Mr. Dopson:** I, Andrew Dopson, do solemnly, sincerely and
23 truly affirm that the evidence that I shall give to the
24 Commission in this case shall be the truth, the whole truth and
25 nothing but the truth.

26 **Examination By Mr. Chairman:**

27 Q. Good morning, Mr., is it Dobson or Dopson.

1 A. It doesn't matter. It sounds the same.

2 Q. It matters to everybody else here, not least because I get
3 everybody's name wrong all of the time, so I am the worst
4 person for that, for which I'm eternally embarrassed but would
5 you—it's Dopson is it.

6 A. Dopson, yes.

7 Q. I say Dopson as in—

8 A. Yes.

9 Q. Marvellous. Well, thank you for coming, Mr. Dopson. What's
10 going to happen next is this. Is Mrs. Maharaj going to read?
11 Right. Mrs. Maharaj is going to read a summary of your
12 evidence to the Commission so far in your statement and
13 elsewhere, and listen to it carefully, please? If you agree its
14 contents she will ask at the end do you agree and if you do then
15 fine, and then we'll go to any additional questions that will
16 need to be asked by any other counsel who are here. All right?

17 A. Yes, Sir.

18 Q. So that's the procedure. If there's any problems or issues arise
19 just let me know and we can stop, all right?

20 A. Definitely.

21 Q. Thank you very much.

22 **Mr. Chairman:** Thank you, Ms. Maharaj.

23 **Ms. Maharaj:** Thank you. On the 4th of September, 2022 Mr.
24 Andrew Dopson submitted a statement to the Commission
25 dated 2nd December, 2022. That witness statement is in the
26 supplemental witness statement bundle at page 2020—3020.
27 Mr. Dopson had declined to be interviewed by the Commission.

1 Mr. Dopson is a health safety and environmental
2 technician employed at Paria since 2019. He's employed by
3 Kenson Operation Limited but assigned to Paria. In the
4 execution of his duties Mr. Dopson was under the direction,
5 sorry, the direct supervision of Paria's HSE coordinator, Mr.
6 Paul Yearwood. He took all of his instructions from Mr.
7 Yearwood who would normally tell him what his duties are on
8 a daily basis.

9 On the 25th February, 2022 based on the instructions
10 which he received from Mr. Yearwood, Mr. Dopson had the
11 limited function to periodically check the hyperbaric chamber
12 to ensure that the air quality in the chamber was safe and to
13 make checks to ensure that the hot work conditions were
14 satisfied and maintained by LMCS. Mr. Dopson was present
15 when toolbox meeting commenced at about 8.00 a.m. on
16 LMCS' barge on the 25th of February. The meeting was led by
17 LMCS' HSE officer, Mr. Paul Dhillpaul, and LMCS' Managing
18 Director Mr. Kazim Ali Jr.

19 At this meeting the activities for the day was discussed
20 followed by a prayer. Following that meeting, Mr. Dopson
21 accessed the area of the hot works which included the air
22 compressor area on LMCS' barge and the operation of the
23 crane to ensure that all hot work conditions were met by the
24 contractor prior to the commencement of work by the
25 contractor. Mr. Dopson was satisfied that all safety conditions
26 were met and he revalidated the hot work certificate for work to
27 commence by LMCS.

1 At 9.30 a.m., Mr. Dopson performed an atmospheric
2 test of the interior of the hyperbaric chamber via valve located
3 on the top cover of the said chamber. He deemed the
4 atmosphere inside the hyperbaric chamber safe for work and
5 updated Paria's offshore terminal supervisor, Mr. Johnathan
6 Ramadan of same.

7 Work commenced in the hyperbaric chamber from 10.00
8 a.m. until about 1.45 p.m. During this time, Mr. Dopson did
9 periodic atmospheric checking/testing to ensure that the
10 atmosphere inside the said chamber did not change and/or was
11 safe for work to continue therein. He also produced in his
12 witness statements at page 3027 a daily activity report for 25th
13 of February, 2022 containing a log of the checks and the times
14 they were made by him. Mr. Dopson says he also ensured that
15 all hot work conditions/precautions remained unchanged.

16 At around 1.45 p.m. the works in the chamber stopped
17 and Mr. Dopson observed the divers Kurban, Henry and
18 Nagassar exit the chamber. He then left berth 6 and returned to
19 shore for lunch. He stated that he didn't have to be on the site
20 at all times as his role on that day was to make periodic checks.
21 At about 2.50 p.m., Mr. Dhillpaul informed Mr. Dopson on his
22 cell phone that LMCS' diving supervisor, Mr. Andrew Farah,
23 reported that he observed a splash on the remote monitor which
24 showed the activities inside the chamber and thereafter they lost
25 communication with the divers.

26 Mr. Dopson immediately informed Mr. Ramadan as well
27 as Mr. Yearwood of the information received and he then

1 returned to berth 6 at 3.12 p.m. to meet Mr. Dhillpaul to gather
2 more information as to what occurred. At 4.55 p.m., Mr.
3 Dopson observed three divers, Cody, Ramoutar and Michael
4 Kurban arrive on the scene to assist in a search and rescue. At
5 around 5.10 p.m., Mr. Dopson heard a knock sound and a voice
6 which appeared to be in distress coming from the hyperbaric
7 chamber. Upon hearing this, he climbed onto the scaffolding
8 leading from the berth to the top of the chamber and made
9 contact. He shouted, "Help coming", to which a voice replied,
10 "Okay". Mr. Dopson then observed that Christopher Boodram
11 was pulled out of the chamber by Cody and Ramoutar.

12 Mr. Dopson assisted Mr. Boodram upon a launch vessel.
13 He performed a body scan assessment to determine if Mr.
14 Boodram sustained any trauma. He used a knife to expose his
15 body suit and observed trauma to the left side of his face, the
16 left arm, left torso and right ankle. There was no exposed
17 bones or bleeding. Mr. Dopson used a rag to clean Mr.
18 Boodram's mouth, eyes and ears due to the presence of
19 hydrocarbon on his entire suit and body. Mr. Boodram
20 appeared to be in pain.

21 Mr. Boodram was transported back to shore and handed
22 over to Paria's ambulance staff by Mr. Dopson. Mr. Dopson
23 then returned to berth 6. At approximately 7.00 p.m., Mr.
24 Dopson took five empty scuba cylinders from LMCS' barge
25 back to shore for refilling. He says these cylinders were used
26 by the rescue divers on site. At 8.15 p.m., Mr. Dopson boarded
27 a vessel to return to berth 6 where he remained until around

1 10.15 p.m. He had no further involvement in the matter and he
2 returned to work at Paria on the 7th of March.

3 Mr. Dopson, is this an accurate summary of your
4 evidence?

5 **Mr. Dopson:** Yes, definitely.

6 **Ms. Maharaj:** Yes thank you.

7 **Mr. Chairman:** Mr. Maharaj, are there any questions?

8 **Mr. Maharaj SC:** Yes, Mr. Chairman. Thank you.

9 **Examination By Mr. Maharaj SC:**

10 Q. Mr. Dopson, is it correct that even though you were employed
11 by Kenson, you worked full-time at Paria in the HSE
12 department as an HSE technician?

13 A. Not full-time, as and when required, but yes, in the HSE
14 department at Paria.

15 Q. And you took instructions, when you worked there, from Mr.
16 Paul Yearwood?

17 A. That's correct.

18 Q. He gave you instructions for what to do and how to do it?

19 A. Yes.

20 Q. Yes. And, you say you didn't work full-time. You worked
21 every day of the week?

22 A. Most times every day of the week but our contract with Kenson
23 states as and when required. So we may work two weeks for
24 the month or three weeks. It depends on the workload.

25 Q. Okay. But on this day in question, you were working at Paria at
26 the offices of Paria and you were taking full instructions from
27 Paria?

1 A. Yes.

2 Q. As to what to do and how to do it?

3 A. Yes.

4 Q. Correct. I want to—you were present at the toolbox meeting on
5 that day?

6 A. That's correct.

7 Q. At the toolbox meeting, what was your function? What was
8 your duty?

9 **Mr. Chairman:** Which one? Five or 6 or both?

10 **Examination By Mr. Maharaj SC:**

11 Q. At berth 6, sorry, at the toolbox meeting at berth 6.

12 A. Yes. So my presence there, in my normal duties I don't have to
13 be there but why I went is because I would like to know what
14 the contractor is actually about to do, so I can have a idea or if I
15 have to discuss any further hazards with regard to our facilities
16 there. Right? So I made myself present there to be involved in
17 that toolbox meeting.

18 Q. But you got instructions from Mr. Yearwood to go there?

19 A. Yes, definitely. Definitely.

20 Q. So your instructions from Mr. Yearwood, who was the superior
21 officer at—a senior officer at Paria—

22 A. Yes.

23 Q. —to go to the toolbox meeting and to report to him what was
24 happening?

25 A. Yeah. That's normal.

26 Q. So, what was your function then at the toolbox meeting, to see
27 what work was to be done or what was your function?

1 A. Yes, um, basically to document, like what work needs to be
2 done, and ensure that the permit and the hot works certificate
3 was in alignment to what work was to be done by the contractor
4 on that day.

5 Q. Yes.

6 **Mr. Chairman:** The work permit and?

7 **Mr. Dopson:** The hot work certificate.

8 **Examination By Mr. Maharaj SC:**

9 Q. So, you regarded your duty was to ensure that the matters
10 referred to in the work permit were complied with?

11 A. Yes.

12 Q. And therefore you spent some time monitoring the works which
13 were being done?

14 A. Well I wouldn't want to say monitoring because there was a
15 waiting period. This is not a regular job where you just go on a
16 construction site and you start to function. They were to do
17 certain things before they actually entered the chamber. Right?
18 So, in between, I would have been doing periodic checks.

19 Q. You know Mr. Manmohan Balkaran?

20 A. Yes I do.

21 Q. And he—what he is at Paria?

22 A. I believe he is the maintenance lead.

23 Q. Yes. Did you perform day-to-day monitoring of the works?

24 A. No.

25 Q. At Paria?

26 A. Of this, of this particular task?

27 Q. Yes.

1 A. No, I did not.

2 Q. So on that date, what I want to get from you, and I want to—if
3 you could answer me—

4 A. Yes.

5 Q. —on that day you went to the toolbox meeting, you knew what
6 were the works to be done because that was discussed at the
7 meeting?

8 A. Yes.

9 Q. And did you have a duty to monitor the works after the toolbox
10 meeting?

11 A. No. My duty was to do periodic checks as per the permit to
12 work.

13 Q. Periodic checks on what?

14 A. On the work area, so the hot work tasks which were the
15 operation of the crane barge and the operation of the
16 compressor.

17 Q. So your monitoring—are you telling us, your monitoring and
18 your instructions from Paria—

19 A. Yeah.

20 Q. —was just to monitor what?

21 A. The hot work activities which were the operations on the crane
22 barge and the operation of the air compressor as well as the
23 atmospheric testing which is the air that exits the chamber.

24 Q. So your work did not—

25 **Mr. Chairman:** Just a moment let me just understand that,
26 thank you.

27 **Examination By Mr. Chairman:**

1 Q. So just reiterate please for me what you say you were
2 monitoring?

3 A. Right? So, there were certain conditions that the contractor had
4 to meet and upkeep, for example, we had hot work.

5 Q. I don't want examples. I just want you to tell me please what
6 were you monitoring?

7 A. Monitoring to ensure that the contractor upkept the conditions
8 that were required on the hot work certificate.

9 Q. Right.

10 A. And also to ensure that the quality of air inside the chamber
11 remains the same at all times or remains unchanged.

12 Q. Thank you.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. Did you have to monitor whether the migration barrier—you
15 know what was the migration barrier?

16 A. Yes, yes I do.

17 Q. Did you have to monitor whether the migration barrier was
18 being used?

19 A. No.

20 Q. So you did not get any instructions to monitor the migration
21 barrier?

22 A. No.

23 Q. No.

24 **Mr. Chairman:** Well before you move on from that please,
25 can I just understand that?

26 **Examination By Mr. Chairman:**

27 Q. See, we've been told that the migration—one of the purposes of

1 the migration barrier was to ensure that there were no fumes—

2 A. Yeah.

3 Q. —emanating from the pipe into the chamber. Yes?

4 A. Yes.

5 Q. You would agree with that presumably?

6 A. Agreed.

7 Q. Right. So obviously—were you aware that the migration
8 barrier was already in place?

9 A. Yes, I was already aware.

10 Q. It would of course concern you, I imagine, if that migration
11 barrier were removed?

12 A. Yes it would have caused concern definitely.

13 Q. Because that would mean that there was at least the possibility,
14 if not probability, of fumes emanating from the pipe into the
15 chamber?

16 A. Definitely.

17 Q. So any removal of the barrier would be something that you
18 would wish to know about?

19 A. Yes.

20 Q. And if you did know about it, what would you have done?

21 A. Well, first I would have asked the contractor supervisor to halt
22 the operation.

23 Q. Right, stop?

24 A. Yes.

25 Q. So the minute you were—had you been made aware that
26 someone in that chamber was removing the barriers, you would
27 have said stop?

1 A. Definitely.

2 Q. Because, as far as you were concerned, that might impact on the
3 air quality, if nothing else, in the chamber?

4 A. Definitely.

5 Q. Right. Were you told that the barrier was being removed?

6 A. No.

7 Q. Were you ever told that the barrier would be removed that day?

8 A. No.

9 Q. No. So do we take it then that your understanding of the
10 position is that there should have been no removal of that
11 barrier?

12 A. Correct.

13 Q. Right. Um, we've also heard evidence that the removal of that
14 barrier took some time to do—

15 A. Yes.

16 Q. —because they're two for a start. How often—you said you
17 were carrying out periodic checks. How often were your
18 periodic checks?

19 A. So based on the report that is on the screen there, I believe I did
20 it every hour but I remained on the berth because normally
21 there's a transportation issue. If we go to shore and come back,
22 I may not be able to get in the specific time frame that I looking
23 at.

24 Q. Yes. Were you aware, then, that before lunch on the 25th the—
25 one of the barriers had been removed?

26 A. No, I wasn't aware of that.

27 Q. You say you checked for what was going on, periodically about

1 every hour you say. Is that right?

2 A. Yes, correct.

3 Q. So am I to understand you were actually stationed on berth 6?

4 A. No. I was back and forth, on the barge and on berth 6 because
5 the operation of the crane barge and the operation of the
6 compressor was on the barge.

7 Q. Right. So between the two, but I mean they're next to each
8 other, aren't they?

9 A. Yes.

10 Q. Literally stemming off the barge stepping onto the berth then
11 back again, right?

12 A. Correct.

13 Q. All right, so in the period of time that you were there, and I
14 think it was up until lunchtime, is that right?

15 A. Yeah, about lunchtime.

16 Q. So had the men stopped work for their own lunch before you
17 left? You're nodding. You have to say yes or no.

18 A. Can you repeat the question?

19 Q. Yes. The men who were working in the hyperbaric chamber,
20 they stopped for lunch, we know they stopped for lunch at a
21 particular time, had you—did you—were you there when they
22 stopped for lunch?

23 A. I left when they stopped or lunch, so I—

24 Q. When they stopped for lunch you stopped for lunch?

25 A. Yeah.

26 **Mr. Chairman:** Thank you. I'm sorry, Mr. Maharaj.

27 **Mr. Maharaj SC:** Much obliged.

1 **Continued Examination By Mr. Maharaj SC:**

2 Q. But after lunch you went back in the hyperbaric chamber?

3 A. Technically, no, not inside.

4 Q. Not inside?

5 A. No, Sir. I'm not a diver.

6 Q. Okay.

7 **Mr. Chairman:** You went back to the berth.

8 **Mr. Dopson:** [*Nodding*]

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. You went back to the berth?

11 A. Before, before I returned to the berth I got a phone call that
12 there was, that there was an emergency and the divers were
13 missing.

14 Q. Okay.

15 **Examination By Mr. Chairman:**

16 Q. You could put time on that, can't you? I think you stopped
17 work when they stopped work which is about at about, um—at
18 about, um—

19 A. One forty-five?

20 Q. —1.45, yes.

21 A. Yeah, around that.

22 Q. That's the sort of time. They remained on the barge, didn't
23 they?

24 A. Yes.

25 Q. And then you got one of the Paria boats back to the—

26 A. No, I actually left on the LMCS pirogue.

27 Q. All right, well, whichever.

1 A. Yeah.

2 Q. You left on a boat and went back to shore?

3 A. Yes.

4 Q. To have your own lunch?

5 A. Yes.

6 Q. But before you could get back you heard that there had been
7 problems?

8 A. Yes.

9 **Mr. Chairman:** All right, thank you very much.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. As an HSE technician, you knew that Paria had a screen to
12 monitor the works that were going on in the chamber?

13 A. I believe that screen belonged to LMCS so—

14 Q. But do you know what was the purpose of that screen?

15 A. I am of the belief that it was to monitor the activity inside and
16 to maintain line of sight between the dive supervisor and the
17 workers in the chamber.

18 Q. And who used that screen to monitor the works?

19 A. That would have been the dive supervisor from LMCS. I
20 believe his name was Andrew as well.

21 Q. So Paria did not use that screen to monitor the works?

22 A. No, I hardly so even see anybody.

23 Q. So as far as you are telling us, was there any system that you
24 knew that Paria monitored the works continually during its
25 operations that day?

26 A. No, not that I know of.

27 Q. Not that you know of.

1 A. No.

2 Q. Now, Mr. Balkaran swore to an affidavit—I'm sorry, he signed
3 a witness statement in these proceedings and I want you to tell
4 me if what he said is true. At page 1436 paragraph 43, he says
5 that you were assisted by Rajiv Mangalee and Houston
6 Marjadsingh in performing the day-to-day monitoring of the
7 works. You want to put it up? One four three six paragraph 43.

8 **Mr. Chairman:** And whose statement is this?

9 **Mr. Maharaj SC:** Manmohan Balkaran.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. Look at three.

12 A. Yes, um—

13 Q. Paragraph 43:

14 "Performed day-to-day monitoring of the works along
15 with the terminal operations personnel such as Kirt Scott,
16 Kenson, and HSE personnel such as Andrew Dopson."

17 A. Yes. So the part where my name is there, Andrew Dopson, yes,
18 I will do day-to-day monitoring. So the first day of the job
19 activity would have been on the 15th and the second day would
20 have been on the 25th.

21 Q. So—

22 A. So those are the days.

23 Q. —your understanding of your duties on that day was not to
24 monitor the works continuously?

25 A. No. That is not in my job description nor the, in the competent
26 person duties which I performed. Er, the competent person
27 duties is part of the permit to work procedure. So to actually

1 monitor, I am not aware of that.

2 Q. Okay. If you had the duty that day to monitor the works that
3 was being done in accordance with the work permit and if you
4 had seen on the screen that the plugs were being removed, what
5 would you have done?

6 A. I would immediately contact the contractor official and have the
7 job stopped.

8 Q. Good. I want to refer you to an activity report which you did at
9 10, CB 2, 1021. CB 2, 1021. And that was a report you did in
10 respect of berth 6 on the 15th of February, 2022.

11 A. Yes.

12 Q. And you would see there that you did a very detailed report, not
13 so?

14 A. Yeah.

15 Q. In effect you stated what you saw, the activities, and everything
16 that you saw. So won't you agree with me that your job really
17 was to monitor the works to ensure that the works were done in
18 compliance with the work permit?

19 A. From the permit to work system, no. That is the duty of the
20 applicant and the contractor official.

21 Q. That's the duty of?

22 A. The applicant and the contractor official.

23 Q. That's how you understood it to be?

24 A. Yes. My function is basically to carry out the duties of the
25 competent person.

26 Q. To carry out the duty of the competent person. And who is the
27 competent person?

1 A. According to the permit to work system, the competent person
2 is the one who develops precaution and conditions prior to hot
3 work taking place in class one division one areas.

4 Q. I want to refer you—are you familiar with the permit to work
5 rules?

6 A. Yes.

7 Q. Volume I at page 29 and you see at 5.2:

8 “A competent person in Paria’s to work system is an
9 individual who has the required training, knowledge,
10 experience and qualifications to identify the hazards and
11 to develop effective precautions for high standard
12 activities such as hot work, confined space entry and
13 electrical works.”

14 Correct?

15 A. Yes.

16 Q. But wouldn’t that be a Paria official?

17 A. Well, basically, er, I functioned under Paria so I will be one of
18 the persons who were trained in this system and was authorized
19 to be a competent person in the permit to work system and to
20 carry out the functions of same.

21 Q. Did you consider you had the expertise to be a competent
22 person?

23 A. Yes. So, after the training, we would a have an assessment, this
24 assessment would have been submitted to Paria and then they
25 give authorization to perform same duties.

26 Q. So you are agreeing with me then that you had the expertise to
27 monitor the work?

1 A. To a point, yes.

2 Q. And you are, you are of the, well, you believe you were a
3 competent person in accordance with the permit to work rules?

4 A. Yes, yes.

5 **Mr. Chairman:** Can I just come back to the role that you
6 understood yourself to have, all right?

7 **Mr. Dopson:** Yes.

8 **Examination By Mr. Chairman:**

9 Q. Mr. Dopson, in this document here competent person—

10 A. Yeah.

11 Q. —that's you for these purposes, isn't it?

12 A. Yes.

13 Q. Right? Now, if we scroll to the bottom of that particular
14 passage, the one on the bottom there says periodically check the
15 site and equipment to ensure the conditions for certification
16 have not changed?

17 A. Yes.

18 Q. And that's what you were telling us earlier?

19 A. Yes.

20 Q. That you're performing this function periodically?

21 A. Yes.

22 Q. What I want to understand is that you said your periodic checks
23 were about every hour. What were you checking every hour?

24 A. Checking to make sure that the atmospheric condition inside the
25 chamber had not changed. So basically I will climb on the
26 scaffolding and there's a valve on top that you could just crack
27 and I'll take an atmospheric testing there, so that will give me

1 an idea of the type of air inside the chamber. Right? The other
2 one is to ensure that the conditions for hot work on the barge
3 have remained unchanged as well. So, should I give an
4 example?

5 Q. Well, let's take—you can give me an example in a minute. Can
6 we just take one thing at a time? So you climb onto the
7 scaffolding to test the air quality inside the chamber?

8 A. Yeah.

9 Q. And in order to do that there's some sort of little tube or
10 something—

11 A. Yes.

12 Q. —that you put on and there's a meter?

13 A. Yes.

14 Q. And you read the meter and it says it's okay.

15 A. Yes.

16 Q. And indeed you kept a record of that, didn't you?

17 A. Yes.

18 Q. And that record shows that you checked it at eleven o'clock,
19 11.55 and at 1255, all right?

20 A. Yes.

21 Q. So we needn't go to it but it supports what you're saying that
22 you did this every hour or so.

23 A. Yes.

24 Q. All right? And did you regard checking the air quality inside
25 that hyperbaric chamber hourly as sufficient?

26 A. Yes.

27 Q. Because of what? Why wouldn't it be every half an hour, for

1 example?

2 A. Okay, so, the first thing is that there wasn't any actual hot work
3 inside the chamber.

4 Q. Right.

5 A. That would have been done on the 15th. So on the 15th we
6 would a check it—

7 Q. Oh, that was all over?

8 A. Yes. So the welding, the cutting, the grinding was all over.
9 And then earlier that morning LMCS conducted an air quality
10 test on the air that is coming from the compressor and that was
11 deemed fit, so I make a decision and I say every hour.

12 Q. So that was you?

13 A. Yeah.

14 Q. Nobody's telling you do it hourly or half-hourly or whatever?
15 You make that decision?

16 A. Yeah, yeah.

17 Q. Right. I'm not criticizing, I just want to understand. So you do
18 that every hour?

19 A. Yeah.

20 Q. Right, that takes I don't know, about 10 minutes or so I
21 suppose?

22 A. About 5.

23 Q. Five, right. And then in between that you're saying you then go
24 on to do your other checks?

25 A. Yes.

26 Q. Which are?

27 A. So I'll check on the barge to make sure that the compressor is

1 functioning as it should, meaning no leaks or no additional—

2 Q. It's not working?

3 A. Yeah. I will also check the crane barge for the same thing,
4 make sure the extinguishers are where they're supposed to be.
5 There was a standalone gas monitor on the barge as well, make
6 sure that is on and functioning as it's supposed to be.

7 Q. Right.

8 A. Right? And make sure no one moves the fuel where it's not
9 supposed to be, so the fuel is supposed to be a safe distance
10 away from the ignition source.

11 Q. Constantly looking round, making sure everything's all right?

12 A. Yeah.

13 Q. So you were aware, weren't you, there was a screen that was
14 being monitored?

15 A. Yes I was aware.

16 Q. And there was also this man, um, Kirt—

17 A. Scott.

18 Q. —Scott?

19 A. Yeah.

20 Q. Who was there as well, wasn't he?

21 A. Yes he was on the berth.

22 Q. What was he doing?

23 A. I wasn't sure but I understand it to be that normally when we
24 have work on a berth or near a facility where there's offshore
25 operations, they will have a offshore operator present to do like
26 maybe pollution checks and so on.

27 Q. Right?

1 A. Yeah?

2 Q. So you just assumed that that was the case?

3 A. Yes.

4 Q. So did you see the screen that was on the—it was on the barge I
5 think, wasn't it?

6 A. No, the screen was on the berth.

7 Q. On the berth itself?

8 A. Yes, yes.

9 Q. All right. So, and did you see that screen?

10 A. Yes once or twice I would have seen what was taking place.

11 Q. So when you looked at the screen what could you see?

12 A. The last thing I saw while looking at the screen was the
13 removal of the solid blank. Right? So you could actually see
14 the guys around the top of the riser working.

15 Q. Right. And then removing a solid blank?

16 A. Yeah.

17 Q. That's the cap, as it were, on top?

18 A. Yes.

19 Q. Right. And that was the last you saw when you were looking at
20 that screen?

21 A. Yes.

22 Q. Right. Of course, having the screen available gave you an
23 opportunity to see what was actually being done if you wanted
24 to?

25 A. Yes, I agree.

26 Q. But Mr. Yearwood didn't instruct you to make regular checks,
27 even if they were only periodic?

1 A. No.

2 Q. Did you yourself think it might have been prudent to do so?

3 A. Yes.

4 Q. And did you?

5 A. No.

6 Q. Right. Thank you.

7 **Mr. Chairman:** Thank you, Mr. Maharaj.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. But when you saw the blank being removed, you would have
10 known that, according to the work permit the barrier must not
11 be removed, must be used?

12 A. Yeah, the barrier, the barrier have to be used. The blank is
13 something totally different.

14 Q. You agree with that?

15 A. Yes.

16 Q. Did that, did it not occur to you as the technician on the scene
17 representing Paria and you are in—supposed to be ensuring
18 compliance with the work permit that you would wait and see
19 what was happening to see whether they were going to remove
20 the barrier?

21 A. Well I, I know it to be that once the solid blank is removed, the
22 top of the riser that they have suspended in the chamber will be
23 the next step.

24 Q. So you assumed?

25 A. No, er, based on the information given on the toolbox talk, as
26 soon as the toolbox talk was finished I document that
27 immediately, I have One Drive on my phone so I document that

1 immediately because I am not the subject matter expert to say
2 which are the steps they take, so they tell me. So that's—I have
3 it documented on my report as consecutive steps. So based on
4 that information, I know, based on the toolbox meeting, that the
5 next step was to place the new section of the riser onto the
6 flange and make the coupling or install the bolts.

7 Q. Yes.

8 A. And gaskets.

9 Q. So therefore you wanted to ensure that that was complied with,
10 that, in effect, the next step was complied with? Wasn't that
11 your job?

12 A. [*Shaking head from left to right*]

13 Q. If you had to monitor for compliance with the job you think that
14 Paria wanted to be done, you had to remain there and see
15 whether they were, in effect, removing the migration barrier?

16 A. But removal of the migration barrier was not part of the plan.

17 Q. I know. That is what you are saying. That is not the point. The
18 question I'm asking you, you have told us on evidence that you
19 saw the—this, um, this covering of the pipe being removed?

20 A. Yes.

21 Q. And under that covering were the migration barriers?

22 A. Yes.

23 Q. Right. So you saw that being removed. Won't you have
24 known then that if they had removed the barriers that could
25 have caused a problem?

26 A. Yes, the removal of the barriers yes it would have caused a
27 problem.

1 Q. Yes. So you saw them removing that, you know that the job
2 which has to be complied with is to bring the other part of the
3 pipe to connect it and you didn't stay to see what was
4 happening?

5 A. That is not my duty. I was there to do periodic checks. The
6 contractor official supposed to be the one ensuring that they
7 conformed to their steps.

8 **Mr. Chairman:** Can I—I'm sorry to keep interrupting.

9 **Examination By Mr. Chairman:**

10 Q. When you saw the blank plate, I'm going to call it that because
11 that's what I understand, right, being removed from the flange
12 that was left from previously—

13 A. Yes.

14 Q. —because there's a flat plate, so they've got to take it off
15 before they can do anything?

16 A. Yes.

17 Q. All right? So they take that plate off, all right? That exposes at
18 least one of the barriers that are in the pipe?

19 A. Yeah.

20 Q. You thought that the next job that was going to happen was the
21 lowering of the new section, which had been prefabricated, on
22 to the flange that existed?

23 A. Yeah.

24 Q. How big is that new section?

25 A. Well it would have been the same diameter as the old section.

26 Q. Right.

27 A. And maybe 12 or 15 feet tall or 20 feet, 20 feet tall.

1 Q. Twenty feet tall?

2 A. Yeah.

3 Q. Did you understand that before they could do that the
4 hyperbaric chamber needed to be removed or were they going
5 to do it inside the chamber?

6 A. No, they will bolt it together inside the chamber.

7 Q. Right.

8 A. Then the hyperbaric chamber will be removed.

9 Q. And is it a straight section that was being fitted on?

10 A. Yes, Sir, straight.

11 Q. So about 15 feet tall, inside the hyperbaric chamber this piece
12 will be—

13 A. Yes.

14 Q. —lowered down on to it and bolted?

15 A. Yes.

16 Q. So, how did it get into the hyperbaric chamber?

17 A. Okay, so, prior to all this conversation, the first thing that
18 would have been done in the morning, they would have
19 removed the old section so the old section was pre-rigged
20 inside. So the first task for the day was the removal of the top
21 cover of the hyperbaric chamber—

22 Q. Right.

23 A. —and remove the old section, to place that onto the barge and
24 they rigged the new section, then they placed it back and then
25 closed the cover.

26 Q. I'm not quite following you. It's probably me. I'm sure it is
27 me.

1 A. Yeah.

2 Q. So when you went there on the day one, 25th of February,—

3 A. Yes.

4 Q. —day one, 25th of February, was the old section still in place?

5 A. Yes. It was in the hyperbaric chamber.

6 Q. Right. But had been removed?

7 A. No. They had—that was the first thing to be done, remove the
8 old section.

9 Q. Right. And that old section was fitted where?

10 A. It was rigged inside the hyperbaric chamber.

11 Q. Hanging there?

12 A. Yeah. Because the newly welded flange had a back.

13 Q. Right. So they took the old section away?

14 A. Yeah.

15 Q. How did they do that?

16 A. Via the use of the crane. Right? So normally they would
17 unbolt the section, er, unbolt the top cover of the hyperbaric
18 chamber and remove the entire thing. So the top cover will
19 come out together with the old section, the top cover of the
20 hyperbaric chamber.

21 Q. Is the hyperbaric chamber opened, then?

22 A. It could be opened via a series of huge bolts, I don't know, it
23 could be—

24 Q. But it wasn't?

25 A. No it wasn't opened.

26 Q. Right. But this piece of pipe had been the old section that was
27 being removed—

1 A. Yeah.

2 Q. —how did they get it out of the hyperbaric chamber?

3 A. Right so they unbolted the top cover of the hyperbaric
4 chamber—

5 Q. Yeah.

6 A. —and lift everything in one. So the top of the hyperbaric
7 chamber is circular, it's connected to the hyperbaric chamber
8 via a series of bolts, and there are two maybe three-quarter inch
9 holes in the top cover where the wire ropes are attached to the
10 pipe and the crane.

11 Q. So they pull it right out?

12 A. Yeah. So the cover of the hyperbaric chamber came off as
13 well.

14 Q. Right.

15 A. And then they rest that entire assembly onto the crane barge.
16 They removed the old section of the piping and put the new
17 section.

18 Q. And you saw all of this happening?

19 A. Yes.

20 Q. Right. So that's what I want to get to, you see? So that after
21 you'd seen the blank, this piece come out, the new piece has to
22 go in?

23 A. Yes.

24 Q. Did you understand there to be a CARBER test that had to take
25 place?

26 A. Yeah there had to be a CARBER test so the CARBER test
27 would have been before they attached the two pieces together.

1 Q. Right.

2 A. The new section and the welded flange.

3 Q. So, well, somebody had to perform that CARBER test?

4 A. Yes.

5 Q. Did you know who was going to do that?

6 A. No. I did not know but I saw when the technicians came on site
7 but they were not divers.

8 Q. No?

9 A. So—

10 Q. They're not LMCS people?

11 A. No.

12 Q. So there were different people coming on board?

13 A. Yes.

14 Q. To do the CARBER test?

15 A. Yes.

16 Q. Did you know whether there were any—whether any part of the
17 barriers had been removed before that CARBER test?

18 A. No.

19 Q. Okay. Anyway, um, thank you very much.

20 **Mr. Maharaj SC:** Much obliged.

21 **Continued Examination By Mr. Maharaj SC:**

22 Q. I want to show you the permit to work rules again under
23 “Competent Person”.

24 A. Yes.

25 Q. And what the competent person shall do. If you look at bullet
26 point two:

27 “Identify any deficiencies in equipment or method

1 statement for the job and the potential adverse
2 consequences.”

3 Okay?

4 A. Yes.

5 Q. So what I want to ask you, I want to get back to the point, but
6 what I want to ask you, you know from what happened
7 afterwards—

8 A. Yeah.

9 Q. —that the migration barrier was removed?

10 A. Yes.

11 Q. And it caused the persons to be sucked into the pipe?

12 A. Yeah.

13 Q. Would you agree with me that if, as you said, you had seen on
14 the video screen that they had removed the top of the riser—

15 A. The solid blank?

16 Q. Yes, the solid blank.

17 A. Yeah.

18 Q. —and you had remained there to see what was happening, you
19 could have stopped the work?

20 A. I agree.

21 Q. You agree. And if you had stopped the work, this accident
22 would not have occurred?

23 A. I agree.

24 Q. So are you telling us today that as far as you know—how long
25 you're working in Paria?

26 A. Since November 2019, so approximately three years.

27 Q. So as far as you are aware of, Paria did not have anybody

1 assigned to monitor the compliance of this job in accordance
2 with the work permit that day?

3 A. I can only answer from the HSE department.

4 Q. Yes. So what is your answer?

5 A. So I was to do periodically checks, so if you are saying monitor
6 means constant, you mean constant monitoring?

7 Q. Continuously.

8 A. No.

9 Q. Continually?

10 A. No.

11 Q. No. Well let's go to after the accident. All right?

12 A. Yes.

13 Q. You could probably help us with this. You're aware that work
14 permits were suspended after this accident occurred?

15 A. Yes.

16 Q. And the suspension of those work permits would have meant
17 that LMCS could not have continued any more works?

18 A. They could not have continued any more works with regard to
19 the operation of the hyperbaric chamber as well as the exact
20 specific task on the work permit. So they could not have
21 continued that.

22 Q. And that would include diving activities?

23 A. I am not sure. Um, I only know of one permit that was
24 suspended upon being informed by the applicant on that day
25 and that was the work in the hyperbaric chamber. I am not sure
26 about the diving permit.

27 Q. Were you aware of any of LMCS' plan after the accident for

1 rescue?

2 A. No.

3 Q. No. Were you aware of any of Paria's plans after the accidents
4 for rescue?

5 A. No.

6 Q. No.

7 **Mr. Maharaj SC:** No more questions for this witness.

8 **Mr. Chairman:** Just one minute. [*Perusing documents*]

9 **Examination By Mr. Chairman:**

10 Q. Yes. You were present when Mr. Boodram came out of the
11 pipe?

12 A. Definitely.

13 Q. And I think you helped in making an initial scan of him to see if
14 he was injured and so on?

15 A. Yes.

16 Q. Did you have some first aid treatment—first aid experience
17 yourself?

18 A. Not just first aid, emergency medical technician.

19 Q. Right. So you have some knowledge in that field, right?

20 A. Yeah.

21 Q. Well that was good I'm sure. Can you just help me about this?
22 Your role at this point in time was really finished, wasn't it?

23 A. Yes.

24 Q. Your specific task that you were there for—

25 A. Yes.

26 Q. —had already concluded?

27 A. Yes.

1 Q. There was nothing left to monitor, was there?

2 A. Right.

3 Q. But did it seem or did anyone suggest to you that someone
4 should accompany Mr. Boodram to the hospital or wherever he
5 was being taken, not least someone like yourself who had some
6 medical experience? Did you go on the barge with him, for
7 example?

8 A. Yes, so I went on one of Paria launches, that would have been
9 the Wahoo, so I went and handed him over to the medical staff
10 at the landing area.

11 Q. Right.

12 A. Yeah? And I give them all the pertinent information like, um,
13 he sustained an injury to one of his ankles and there was a lot of
14 trauma to his body, right?

15 Q. Yeah, he was obviously covered in oil and so on?

16 A. Yes.

17 Q. You helped to clean him up as best you could in his face and so
18 on?

19 A. Yes.

20 Q. But he was talking, though, wasn't he?

21 A. Yeah, definitely.

22 Q. Yeah. And I dare say he was distraught but he was talking?

23 A. He was.

24 Q. Conscious?

25 A. Yes.

26 Q. Lucid?

27 A. Yes.

1 Q. Did you, or anyone to your knowledge, seek to obtain from him
2 such information as he might have been able to give about the
3 conditions in the pipeline and his colleagues?

4 A. I would not know what happened when I handed him over to
5 the staff but on our journey to the, um, to the launch landing
6 from berth 6—

7 Q. Yes.

8 A. —he would have informed me that everybody in the pipe is still
9 alive. Right?

10 Q. Just pause please? Just as so I have a sense of time scale—

11 A. Yes.

12 Q. —from the moment he came out and you were able to attend to
13 him—

14 A. Yes.

15 Q. —as a medic—

16 A. Yes.

17 Q. —to the point in time when you handed him over to the
18 ambulance, what sort of period of time are we talking about?

19 A. It coulda be between eight and 10 minutes. That's the normal
20 time to reach from berth 6 to—

21 Q. Right.

22 A. Yeah.

23 Q. And he went on one of the launches, did you say?

24 A. Yes.

25 Q. Yes. Not—were the coast guard there at that time?

26 A. I believe the coast guard was there at that time.

27 Q. Anyway he went on one of the launches?

1 A. Yes.

2 Q. So it would have been, let's say, 10 minutes at the outside—

3 A. Yes.

4 Q. —between your getting hold of him yourself and handing him
5 over to the ambulance people?

6 A. Yes.

7 Q. And in that 10-minute period he would have informed you, you
8 were telling me, that the others were alive?

9 A. Yes, and, er, they could not account for Rishi, well he said
10 Blacks, right, Blacks was Rishi's nickname.

11 Q. Rishi? You knew Rishi.

12 A. Yeah.

13 Q. Rishi.

14 A. They—he could not account for him.

15 Q. Couldn't account for Rishi?

16 A. No.

17 Q. But he used the word Blacks?

18 A. Yeah.

19 Q. That's his nickname, isn't it?

20 A. Yes.

21 Q. Yeah. What else did he tell you?

22 A. That Mr. Kurban was right behind him in the pipe.

23 Q. Kurban was right behind him?

24 A. Yeah.

25 Q. Did he say anything about where in the pipe, whether it was in
26 the vertical section or the horizontal section?

27 A. No, he didn't specify. Um, I believe he was more concerned

1 about getting the point that we should go back in there.

2 Q. Yeah.

3 A. You know?

4 Q. Not to put too fine a point on it, was he shouting, “Go get—go
5 back and get them. Go and get them”, words to that effect?

6 A. Yes.

7 Q. Well he was obviously distressed.

8 A. Yes.

9 Q. But he was able to answer anything you might have asked him?

10 A. I, I believe the only thing he didn't really know was the actual
11 time of day.

12 Q. How long he was down there?

13 A. Yeah.

14 Q. Right.

15 A. And when he came out he didn't know like what time of day it
16 is, right, but he was able to give his phone number of his next
17 of kin.

18 Q. He gave you his phone number of next of kin?

19 A. Yeah, which would have been his wife.

20 Q. So he gave you his wife's phone number?

21 A. Yeah.

22 Q. How many digits would that be?

23 A. Seven.

24 Q. Right. Seven-number?

25 A. Yeah.

26 Q. Anyone else?

27 A. Um, well, the first thing he asked is where we taking him so I

1 advised that most likely San Fernando General might be the
2 best place, right, because they would treat with emergency then,
3 and it's then only he gave me his wife number. He also told me
4 that she's a nurse there.

5 Q. She's?

6 A. She's a nurse at the San Fernando General Hospital.

7 Q. She's nurse—

8 A. Yeah.

9 Q. —at that hospital?

10 A. Yeah.

11 Q. So he told you she was a nurse at the hospital. Did he say
12 anything about concern about his air pressure having been
13 down for any length of time?

14 A. No. He didn't, he didn't, um, explain anything about that.

15 Q. Did you tell him how long he'd been missing?

16 A. Yes.

17 Q. Did he express any concern when you told him that?

18 A. The only expression I was seeing from him is a lot a pain, right,
19 so there was a lot a bawling.

20 Q. He was obviously in pain, wasn't he, yeah?

21 A. Pain. Pain, distress, frustration.

22 Q. When you say frustration, frustration with what? Did he
23 express that?

24 A. Well, I, I believe if somebody is telling you the same thing over
25 and over and you're not really giving them any reaction—

26 Q. Right.

27 A. —they tend to get frustrated so he keep on saying—

1 Q. All right, I mean, that hadn't resolved, wasn't it?

2 A. Yeah. He was keep on saying, "Go for them. Go for them.
3 Send back somebody in there." He kept saying that on and on.

4 Q. At the time when you were—when he first came out, how many
5 people were on the barge and the berth?

6 A. There were probably five of us on the berth. There were two of
7 us on the scaffolding. One other guy was with me. I can't
8 remember his name. There were a few people in LMCS
9 pirogue, maybe around four or five.

10 Q. Right. Were any divers, obvious divers, there?

11 A. In the water?

12 Q. No, on the berth or on the barge.

13 A. Um, no, the divers were in the water.

14 Q. They were already in the—

15 A. Yes, so—

16 Q. Once you got him out?

17 A. Yeah. I believe it was, um, Ramoutar and Cody. I hope that's
18 his correct name.

19 Q. All right. It matters not.

20 A. Yeah.

21 Q. But, anyway, there were divers there?

22 A. Yes.

23 Q. But his preoccupation, if I can put it like that, was go and get
24 them?

25 A. Yeah.

26 Q. Yeah. No one instructed you to travel with him?

27 A. No.

1 Q. Or to seek to obtain from him such other information as might
2 be obtained as to the condition of the pipeline that he had
3 managed to escape from?

4 A. No.

5 Q. Did he say anything to you about air pockets?

6 A. No, he didn't say.

7 Q. Did he say anything to you about air supply in bottles?

8 A. No, he didn't say.

9 Q. Or how he had dragged himself along that pipe, anything like
10 that?

11 A. No, he didn't say.

12 Q. All right. But was he talking with you in the 10 minutes or so
13 that it took you to get him to the ambulance?

14 A. Yes.

15 Q. Continuously, and you talking to him?

16 A. Yes.

17 Q. No doubt trying to reassure him as well?

18 A. Yes, definitely.

19 **Mr. Chairman:** Thank you for that. All right, thank you.
20 Right, so, um, I think what we'll do is we'll have, um, first of
21 all counsel for LMCS, Ms. Persaud Maraj is going to ask you
22 some questions first, all right?

23 **Mr. Dopson:** Yes.

24 **Mr. Chairman:** That's the lady sitting over there.

25 **Mrs. Persaud Maraj:** Thank you, Mr. Chair.

26 **Cross-Examination BY Mrs. Persaud Maraj:**

27 Q. I just have one question for you and that's pertaining to the

1 meeting, the toolbox meeting on the morning in question.

2 A. Yes.

3 Q. You were present?

4 A. Yes.

5 Q. All right. Was there any other personnel from Paria present?

6 A. To my knowledge, no.

7 Q. Okay. That's all.

8 **Examination By Mr. Chairman:**

9 Q. I think you said earlier that you would ordinarily attend such a
10 meeting, is that right?

11 A. Yeah.

12 Q. But both Mr. Yearwood and yourself thought it prudent to do
13 so?

14 A. Yes. Er, just basically to confirm the activities that the
15 contractor was doing, to make sure it is or it was in alignment
16 with the permits, the specific tasks listed on the permits.

17 **Mr. Chairman:** Yes, anyone else? Yes, don't forget to
18 introduce yourself. I think Mr. Ramadhar, I think you wished
19 to speak for—because I see your hand up.

20 **Mr. Ramadhar:** Yes I do—

21 **Mr. Chairman:** Right.

22 **Mr. Ramadhar:**—like my learned friend.

23 **Mr. Chairman:** Right, that's Mr. Chase Pegus isn't it? Yes.

24 **Mr. Ramadhar:** I'll go after the chase.

25 **Mr. Chairman:** After the chase, yes. I don't suppose that's
26 the first time, isn't it?

27 **Mr. Pegus:** Mr. Chairman, I believe I should go after Mr.

1 Ramadhar as it's my witness.

2 **Mr. Chairman:** Well, I don't know that it's anybody's witness
3 other than ours, but, um, are you asking to go after Mr.
4 Ramadhar?

5 **Mr. Pegus:** Yes please.

6 **Mr. Chairman:** I don't have any difficulty with that. Mr.
7 Ramadhar?

8 **Mr. Ramadhar:** Neither do I, please.

9 **Mr. Chairman:** Very well.

10 **Mr. Ramadhar:** And my learned friend has indicated she
11 too—

12 **Mr. Chairman:** Right, well, I'm not sure how much more we
13 can extract from this witness, thank you very much but all of
14 you need to keep it short, thank you, please.

15 **Mr. Ramadhar:** Thank you very much.

16 **Cross-Examination By Mr. Ramadhar:**

17 Q. Good morning, um—

18 A. Good morning.

19 Q. —Mr. Dopson?

20 A. Sir.

21 Q. I am Prakash Ramadhar looking after the interest of Kurban's
22 family.

23 A. Yes.

24 Q. And of course Yusuf Henry.

25 A. Yes.

26 Q. First of all, let me thank you for giving comfort, as you've
27 indicated, to Christopher. And I'm going to be very, very brief.

1 **Mr. Chairman:** A little louder please?

2 **Mr. Ramadhar:** Of course.

3 **Continued Cross-Examination By Mr. Ramadhar:**

4 Q. Christopher Boodram, as you've indicated, was coherent, clear
5 in his communications. You have to say yes or no.

6 A. Yes, Sir.

7 Q. Yes. And insisted repeatedly for persons to go back to get his
8 colleagues, correct?

9 A. Yes, Sir.

10 Q. When he came out of that pipe area, who else from Paria or
11 Kenson were in that area of the accident?

12 A. Sir, I cannot confirm. My main focus was to go down to that
13 vessel, get on board to get him to shore. I didn't pay attention
14 to the barge. I was actually on the berth on top of the
15 hyperbaric chamber when I saw him in the water.

16 Q. Yes. And, of course, this would have been traumatic for you
17 also?

18 A. Definitely, yeah.

19 Q. Did anyone attempt—because there were several other persons
20 there, correct?

21 A. [*Nodding*]

22 Q. —to ask of him, that is Christopher Boodram, the conditions in
23 the pipe from which he had just come?

24 A. Er, on the vessel that I was on, there was the captain, the
25 deckhand and the engineer. They were all assisting me. There
26 were other people on the pirogue that received Christopher first
27 from the water.

1 Q. Yes.

2 A. I am not sure if they would have asked him questions with
3 regards that.

4 Q. All right. Let me take you back to the habitat area when he was
5 pulled out, yes?

6 A. Yes.

7 Q. You say there were several persons there. One would imagine
8 by this time there would have been several persons from Paria
9 or Kenson, together with you, if not necessarily in conversation
10 with you? You agree with that?

11 A. Yes, Sir.

12 Q. Did anyone attempt to speak to him to elicit information from
13 him as to the condition of the pipe from which he had just been
14 rescued?

15 A. I cannot confirm.

16 Q. Thank you very much. And at no stage, from the moment you
17 first saw him exiting the water to the time he got to the
18 ambulance, did he lose consciousness?

19 A. No, Sir.

20 Q. No. Did you accompany him on the journey to the hospital
21 with the ambulance?

22 A. No.

23 Q. Did anybody do so?

24 A. Er—

25 Q. —connected to Kenson or Paria?

26 A. Er, I would not have been sure of who went with him. I would
27 have just handed him over to the ambulance staff at the launch

1 landing facility.

2 Q. Was there anyone from Paria or Kenson at that area where there
3 was the handover to the ambulance?

4 A. I believe Mr. Yearwood was there and one of my co-worker, I
5 believe, is Sandiford. They received him.

6 Q. They received him?

7 A. Yeah.

8 Q. You appreciate learning the conditions of the pipe would have
9 been quite important for a rescue effort?

10 A. Yes, I agree.

11 Q. Yes. And as far as you are concerned, no one of the numerous
12 persons who were there, from the moment he was rescued to
13 the time he was handed over to the ambulance, made any such
14 enquiry?

15 A. Well I could only speak from my, um—

16 Q. From your awareness. I ask you—

17 A. —my awareness. I can only, um—my first, my primary
18 concern was to ensure that he was stable.

19 Q. Absolutely. And he clearly, from what you told my learned,
20 um, Chairman, he was?

21 A. Yes.

22 Q. He was coherent throughout?

23 A. Yes.

24 Q. And he had not lost consciousness so therefore he was?

25 A. Yes.

26 Q. And just to be clear, no one to your awareness from the moment
27 he was rescued to the time he was handed over to the

1 ambulance sought to enquire of the conditions within the pipe?

2 A. As stated before, Sir, from the moment he was pulled from the
3 water to the LMCS pirogue, I wasn't aware of what transpired
4 there because I was on the Wahoo so—

5 Q. To be fair to you?

6 A. To be fair.

7 Q. I appreciate all of that. But the time from when the incident is
8 supposed to have occurred, the accident may I put it like this, to
9 the moment that Christopher was retrieved was how long?

10 A. Could have been about two hours.

11 Q. Was there anyone there within your hearing discussing, well,
12 what might be the condition within the pipe to endeavour a
13 rescue?

14 A. There were multiple people on site. Um, I know, um, Mr.
15 Kazim Ali senior was there.

16 Q. Sir, I'm not asking you now for a list.

17 A. Okay.

18 Q. I'm asking you whether there was discussions about the
19 ascertaining of the conditions within the pipe to endeavour a
20 rescue.

21 A. On my end, no one.

22 Q. No.

23 **Mr. Ramadhar:** Mr. Chairman, I'm most grateful to you.
24 Thank you.

25 **Mr. Chairman:** Ms. Alfonso, did you have something to ask,
26 Ms. Alfonso?

27 **Ms. Alfonso:** Yes, my friend, Mr. Ramadhar, has actually

1 taken all but two of my questions.

2 **Mr. Chairman:** Does that leave zero or?

3 **Ms. Alfonso:** I have two remaining, Mr. Chairman.

4 **Mr. Chairman:** Two remaining?

5 **Ms. Alfonso:** Yes, Mr. Chairman.

6 **Mr. Chairman:** Right, very well.

7 **Cross-Examination By Ms. Alfonso:**

8 Q. Good morning, Mr. Dopson.

9 A. Good morning.

10 Q. My name is Nyree Alfonso and I represent the interest of the
11 SWWTU. Two very brief questions: in your witness statement,
12 you would have referred to a conversation with Mr. Dhillpaul
13 of LMCS?

14 A. Yes.

15 Q. Were you—did Mr. Dhillpaul relay certain things to you about
16 what was going on on the, on the—well, in the habitat and with
17 the divers when you spoke to him?

18 A. The exact information given by Mr. Dhillpaul to myself was
19 that a splash was observed on the camera and the screen went
20 blank.

21 Q. Okay. So you got some information from him?

22 A. Yes.

23 Q. Before you returned yourself?

24 A. Yes. He also indicated that the divers in the chamber were
25 missing.

26 Q. Thank you very much, Mr. Dopson. And lastly, I've heard
27 what—I'm not going to go over what information you said.

1 You said you received certain information in the eight to 10-
2 minute trip on the launch, on Paria's launch. That information
3 that you relayed to us, did you relay that in turn to anybody
4 else?

5 A. Yes. I would have passed on that information to the person
6 who I get my instruction from, which is Mr. Paul Yearwood.

7 Q. I see. And you would have relayed that orally or in writing or
8 both?

9 A. Via the radio.

10 Q. Via the radio. Okay.

11 A. Yeah.

12 Q. Verbally.

13 **Ms. Alfonso:** Thank you very much, Mr. Dopson, thank you.

14 **Mr. Chairman:** Mr. Peterson.

15 **Mr. Peterson SC:** Thank you very much, Mr. Chairman.

16 **Cross-Examination By Mr. Peterson SC:**

17 Q. Morning, Mr. Dopson.

18 A. Morning, Sir.

19 Q. We'll be short. The—tell me something, you said when Mr.
20 Boodram was retrieved from the water he first went on to the
21 LMCS pirogue?

22 A. Yes.

23 Q. Why you referred to it as the LMCS pirogue?

24 A. Because that pirogue belongs to them, to LMCS.

25 Q. And the personnel on it did you recognize that they were LMCS
26 people?

27 A. Yes, Sir.

1 Q. Right. And at that time you also observed people diving in the
2 water?

3 A. Yeah.

4 Q. Right. LMCS people?

5 A. Yes.

6 Q. Did you see coast guard officers pulling them from the water,
7 preventing them from continuing to swim?

8 A. No I didn't.

9 Q. Right. You spoke of taking five tanks from that area later in the
10 evening to be refilled and those were used, you said, by the, by
11 some rescue divers. The rescue divers you're referring to in
12 that statement are the persons you saw diving from LMCS in
13 the water?

14 A. Yes, Sir.

15 Q. All right. We also said that you—that note is a
16 contemporaneous note which is a word I tend to like, it means it
17 was done very shortly after the event?

18 **Mr. Chairman:** Contemporaneous means at the same time.

19 **Mr. Peterson SC:** Well, relatively contemporaneously. We
20 have evolved to—

21 **Mr. Chairman:** Relative contemporaneously

22 **Mr. Peterson SC:** Yes.

23 **Continued Cross-Examination By Mr. Peterson SC:**

24 Q. That note you said was made when?

25 A. Which note? This is—

26 Q. The note, yeah, your note—you could scroll up.

27 A. Or is it my report?

1 Q. Your report.

2 A. Yeah.

3 Q. It was made on the 25th?

4 A. Yes, er, it was made on the 25th and submitted somewhere
5 around the 7th or 8th—

6 Q. Right. And you made that note—

7 A. —when I came back out.

8 Q. —you said, using a programme on your phone?

9 A. Right, so, um, there's something called One Drive—

10 Q. Yeah.

11 A. —where when you have all the documents stored in one place
12 you could access it on any device, right? So I would have done
13 a report for the 15th.

14 Q. Right.

15 A. So I just edited the main parts which is the items that were
16 discussed in the toolbox talk—

17 Q. Right.

18 A. —because I will forget that.

19 Q. Right.

20 A. Right? The other things were documented after, for example,
21 the table with the atmospheric check readings and so on.

22 Q. Right.

23 A. Yeah?

24 Q. But, absent from that, that is very important for us for what it
25 doesn't say. It does not have the removal of the barriers on that
26 day as an activity to be done?

27 A. Yes.

1 Q. And if that was discussed at the toolbox meeting, that is
2 something that would have likely find its way into your daily
3 report?

4 A. Yeah.

5 Q. Well not likely, certainly would have found its way in there?

6 A. Yes. So I am not a expert in this field—

7 Q. Yes.

8 A. —of subsea.

9 Q. Yes.

10 A. So it was important for me to gather the steps as discussed in
11 the toolbox meeting.

12 Q. Right.

13 A. And there is a order where it has to go.

14 Q. And—

15 A. And it is of my opinion that if we skip a step here we in trouble.

16 Q. Right, so you were focused to record what was said?

17 A. Yes.

18 Q. And also, the last two questions.

19 **Mr. Chairman:** Just let me—well, I mean, I just want to make
20 a note of that.

21 **Examination By Mr. Chairman:**

22 Q. You said in your opinion if you skipped a step that would be
23 trouble.

24 A. Trouble.

25 Q. How would you know?

26 A. Er, from the discussion in the toolbox talk there was a
27 explanation of—

1 Q. No, no, how would you know they skipped a step?

2 A. I would not know.

3 Q. Yet you regarded it as important?

4 A. Yeah.

5 **Continued Cross-Examination By Mr. Peterson SC:**

6 Q. You also had the responsibility of checking the quality of the
7 air in the chamber?

8 A. Definitely.

9 Q. Right. So, maintaining the pristine condition of the air is
10 something that you would be focused on also?

11 A. Yes.

12 Q. Removal of the barriers are likely to compromise the quality of
13 the air in the chamber?

14 A. Definitely.

15 Q. So anything or any talks in that toolbox meeting with respect to
16 the removal of those barriers would be something that will he
17 standing out to you like a sore thumb?

18 A. Yes.

19 Q. Or a red flag?

20 A. Yes.

21 **Mr. Peterson SC:** Thank you, Mr. Chairman.

22 **Mr. Chairman:** Thank you very much for coming. Or, I'm
23 sorry. My colleague has a question. Oh, forgive me, I'm so
24 used to not calling upon you. Mr. Regus yes, there is another
25 question from Mr. Regus.

26 **Mr. Pegus:** Mr. Pegus.

27 [*Laughter*]

1 **Mr. Chairman:** Mr. Pegus. It's bound to have been wrong.
2 I'm sorry. I was hoping to get through a whole day without
3 getting a name wrong.

4 **Mr. Pegus:** Yeah.

5 **Mr. Chairman:** But I've already failed and we haven't even
6 had the morning break yet. So, forgive me please, it's Pegus?

7 **Mr. Pegus:** Pegus, yes.

8 **Mr. Chairman:** You're sure? [*Laughter*]

9 **Mr. Pegus:** Very much, yes.

10 **Mr. Chairman:** All right. I apologize.

11 **Examination By Mr. Pegus:**

12 Q. Mr. Dopson, good morning.

13 A. Good morning.

14 Q. You indicated in your statement that on the day in question you
15 took your instructions from Mr. Yearwood?

16 A. Yes, that's correct.

17 Q. Did Mr. Yearwood instruct you at any time to constantly
18 monitor the screen on the berth?

19 A. No, Sir.

20 Q. As you understood your function on the day in question, it did
21 not include constantly monitoring that screen on the berth?

22 A. No, Sir.

23 **Mr. Pegus:** Thank you very much.

24 **Mr. Chairman:** Is there anything else? I think that my
25 colleague here, Mr. Wilson, has some questions for you.

26 **Examination BY Commissioner Wilson:**

27 Q. Hi, good morning, Mr. Dopson. I just want—

1 A. Morning.

2 Q. —to test quickly the emergency response plan or what looked
3 like it. In getting Mr. Boodram to shoreside where he was
4 taken to the San Fernando General Hospital, that ambulance or
5 that emergency response on that side, that was enacted by Paria
6 or LMCS to your knowledge?

7 A. To my knowledge it was Paria.

8 Q. Paria?

9 A. Yeah.

10 Q. Did you hear any discussions or any awareness, because he's a
11 diver, that, um, they contacted a hyperbaric doctor or an
12 industrial medical professional or anything in the event or in
13 service of treating with any potential decompression illnesses of
14 a diver?

15 A. No, I wasn't aware if those arrangements were made or being
16 made.

17 Q. Okay. I know that you have no, um—you heard no discussions
18 of the sort?

19 A. No.

20 Q. Okay, thank you. Right.

21 **Mr. Chairman:** I think that is the conclusion of your evidence.
22 I want to thank you for being frank and forthright.

23 **Mr. Dopson:** You're welcome.

24 **Mr. Chairman:** Thank you very much for coming. You're
25 free to go or stay as you please, all right? Thank you very
26 much indeed.

27 *[Mr. Andrew Dopson leaves enquiry room]*

1 **Mr. Chairman:** All right, Mr. Maharaj, I think our next
2 witness is Harrichan?

3 **Mr. Maharaj SC:** Next witness is Mr. Harrichan.

4 **Mr. Chairman:** Harry?

5 **Mr. Maharaj SC:** Harrichan.

6 **Mr. Chairman:** Yes.

7 **Mr. Maharaj:** Abd Mr. Ronnie Bissessar would do the
8 summary.

9 **Mr. Chairman:** We'll take his evidence and we'll have a
10 break at around 11.30-ish. Have you got questions for him as
11 well?

12 **Mr. Maharaj SC:** Yes, yes.

13 **Mr. Chairman:** All right, so let's, um, let's have him and his
14 summary and then we'll have your questions, thank you. Mr.
15 Harrichan, please? Yes.

16 *[Mr. Visham Harrichan enters enquiry room and is sworn]*

17 **Mr. Harrichan:** I, Visham Harrichan, solemnly swear that the
18 evidence I shall give to the Commission in this case shall be the
19 truth, the whole truth and nothing but the truth.

20 **Mr. Chairman:** Thank you. *[To Enquiry orderly]* Would you
21 take those papers away please? Thank you.

22 **Examination By Mr. Chairman:**

23 Q. Good morning, Mr. Harrichan.

24 A. Yes, good morning.

25 Q. Good morning. What's going to happen next is this, is that Mr.
26 Bissessar is going to read a summary of the evidence that you
27 provided so far, all right?

1 A. Yes.

2 Q. So please listen to that carefully. If you agree with it, hopefully
3 you will, at its conclusion say so. And if you don't, let me
4 know, all right?

5 A. Yes, Sir.

6 Q. Hopefully that will take just a few minutes and then there'll be
7 some questions from Mr. Maharaj who sits next to Mr.
8 Bissessar, all right?

9 A. Yes.

10 Q. And then others that might want to ask you questions. I hope
11 that we'll be able to dispose of your evidence this morning but
12 that may not be possible but we'll do our best, all right?

13 A. Sure.

14 Q. All right, well thank you very much.

15 **Mr. Bissessar:** Thank you, Chair.

16 Mr. Visham Harrichan was Paria's acting offshore team
17 lead on 25th February, 2022 reporting to Mr. Collin Piper. Mr.
18 Harrichan PO MFAI D-D a witness statement dated 28th
19 October, 2022 to the Commission but declined to be
20 interviewed by Counsel to the Commission. That witness
21 statement is at WB 1618.

22 **Mr. Chairman:** Which volume is it? Four.

23 **Mr. Bissessar:** Volume IV.

24 **Mr. Chairman:** Thank you.

25 **Mr. Bissessar:** On 9th May, 2022 after the accident on 25th
26 February, 2022 Mr. Harrichan left Paria and took up operations
27 elsewhere. Mr. Harrichan says that his duties as acting offshore

1 team lead included authorizing permits and certificates,
2 monitoring and controlling all aspects of quality management
3 systems, evaluating areas of non-conformance and initiating
4 appropriate corrective action, implementing and ensuring
5 adherence to HSSEQ standards and maintaining marine
6 emergency response capability.

7 Pre-accident involvement: Mr. Harrichan was involved
8 in prework activities for the clearing of number 36 Sealine riser
9 between berths 5 and 6 as well as the isolation of the pipeline
10 from the berths. He says that in January 2022 he was an
11 operations team supervisor and part of his duties was to prepare
12 the draft procedure for the clearing of the pipeline between
13 berths 5 and 6 by LMCS. This draft procedure, after revision,
14 was finalized as a work instruction number QOFW:001 which
15 he signed on 7th January, 2022. This is at core bundle 1033.

16 The draft procedure was reviewed and revised by Mr.
17 Harrichan and then submitted to Mr. Jason Beckles who was
18 acting as the offshore team lead at the time and then to Collin
19 Piper for approval. He says that the line was cleared by LMCS
20 and he does not recall having any specific involvement in the
21 execution of that process. Mr. Harrichan recalls that the line
22 clearing by LMCS in accordance with work instruction number
23 QOFOW:001 was consistent with Paria's permit to work
24 procedure which required the mitigation of the credible risks
25 associated with performing hot works in a sufficiently
26 flammable or combustible environment.

27 Therefore, the clearing of the line was one of several

1 precautions intended and designed to safeguard LMCS'
2 employees, other workers and personnel in the vicinity of the
3 works and to safeguard the facility from the credible risks of
4 fire and/or explosion. Mr. Harrichan says he reviewed and
5 approved the precautions and conditions listed on each hot
6 work certificate HWC. He also reviewed the job hazard
7 analysis JHA. He said he signed each of the HWCs as area
8 authority.

9 Mr. Harrichan explains that he was also involved in
10 prework activities for the isolation of the line done by LMCS.
11 He signed three isolation checklists dated 11th November,
12 2021, 31st January, 2022 and 10th February, 2022 respectively
13 which shows the steps taken to isolate the line.

14 Post incident involvement: Mr. Harrichan first heard of
15 the accident at about 3.10 p.m. on Friday, 25th February, 2022
16 and immediately called Mr. Collin Piper who was the incident
17 commander leading the incident command team, the ICT, and
18 he, Mr. Harrichan, arrived at berth 6 at about 4.15 p.m. He said
19 that he, Mr. Harrichan, played a supportive role in relation to
20 the ICT.

21 Mr. Harrichan says that he attempted unsuccessfully to
22 get information on the accident from LMCS' employees
23 including Andrew Farah. He said that none of them made any
24 requests of him or asked him for assistance. Mr. Harrichan
25 explained that he informed the incident commander that two
26 rescue divers were making preparations to enter the water. He
27 also notified the incident commander of Christopher Boodram's

1 rescue at approximately 5.36 p.m.

2 Mr. Harrichan says he relayed to Dexter Guerra that the
3 incident commander did not want anyone diving into the
4 pipeline because it was too dangerous. Mr. Harrichan describes
5 the borescope operations at about 11.00 p.m. on the Friday,
6 25th February, 2022. He said that when he arrived at berth 6 he
7 saw that the topside cover of the habitat was being removed by
8 LMCS' employees and when it was removed LMCS'
9 employees assisted Atlantic LNG personnel with deploying the
10 borescope into 36 Sealine riser.

11 He says that the borescope went vertically all the way
12 down the riser and then horizontally along the line. He said the
13 line appeared to be filled with water with no evidence of air
14 pockets. He set he saw what appeared to be an oxygen tank
15 about 20 feet along the horizontal section and unsuccessful
16 attempts were made to manoeuvre the borescope past the
17 object.

18 Good, thank you. Mr. Harrichan, can you confirm
19 whether that summary is a fair and accurate representation of
20 your witness statement?

21 **Mr. Harrichan:** It is.

22 **Mr. Bissessar:** Thank you, Mr. Harrichan.

23 **Mr. Chairman:** Mr. Maharaj.

24 **Mr. Maharaj SC:** Much obliged, My Lord.

25 **Examination BY Mr. Maharaj SC:**

26 Q. The hot works certificates were issued by Paria?

27 A. Yes.

1 Q. And according to you at paragraph 24 of your witness
2 statement, prior to the issuance of the hot works certificates, the
3 line was cleared of hydrocarbons in accordance with the work
4 instructions as described above and those work instructions
5 were issued by Paria?

6 A. Yes.

7 Q. And then you said the clearing of the line of hydrocarbons was
8 therefore consistent with Paria's PTW procedure which
9 required the mitigation of the credible risks associated with
10 performing hot works, correct?

11 A. Correct.

12 Q. And then I asked you to note your paragraph 25 and then you
13 said:

14 "Therefore, the clearing of the line was one of the several
15 precautions intended and designed to safeguard the
16 employees of LMCS, other workers and personnel in the
17 vicinity of the works and to safeguard the facility from
18 the credible risks of fire and/or explosion that could
19 result from hot work that was required and authorized to
20 be done by LMCS under the permits to work issued on
21 that day in question."

22 So am I correct, based on your statement, to say that Paria made
23 a decision that the line, the Sealine, had to be cleared?

24 A. Yes, in collaboration with LMCS.

25 Q. Yes. And the Sealine which had to be cleared was Sealine 36
26 both topside and underwater between berth 5 and berth 6?

27 A. Yes.

1 Q. And therefore there were steps taken by Paria in collaboration
2 with LMCS to have the line drained?

3 A. Yes.

4 Q. And the instructions for the line being drained, which you are
5 referring to, and I'll show it to you, it's at CB 3, page 1033.

6 **Mr. Chairman:** It's not in that bundle I don't think. It will be
7 brought to you in a moment.

8 **Mr. Harrichan:** Okay.

9 **Mr. Chairman:** And it will come up on the screen. It's on the
10 screen now. Which passage did you want to refer him to?

11 **Mr. Maharaj SC:** Ten thirty-three. It's a—

12 **Mr. Chairman:** We've got that page on the screen at the
13 moment.

14 **Mr. Maharaj SC:** Oh sorry.

15 **Continued Examination BY Mr. Maharaj SC:**

16 Q. Could you look at, um, the scope was to clear line 36 between
17 berth 5 and berth 6. Those were the instructions, not so?

18 A. Yes.

19 Q. Right. And the responsibilities for clearing the line were that
20 the terminal operations manager had the overall responsibility
21 for ensuring that this procedure is established and they stated
22 the procedure?

23 A. Yes.

24 Q. Which Paria agreed to?

25 A. Yes.

26 Q. And which Paria instructed to be done?

27 A. No. This was in collaboration with LMCS.

1 Q. Yes, in collaboration with LMCS.

2 A. Yes.

3 Q. But Paria instructed it to be done?

4 A. Yes, the line.

5 Q. Yes. And then the offshore team lead had—that's the offshore
6 team lead of Paria, am I correct?

7 A. Yes.

8 Q. —had the direct responsibility to ensure compliance with the
9 procedure by review and et cetera, as stated there, correct?

10 A. Yes, correct, yes.

11 Q. And then you see the procedure—

12 **Mr. Chairman:** Sorry, Mr. Maharaj, before we move on—

13 **Examination By Mr. Chairman:**

14 Q. Who was the terminal operations manager?

15 A. Mr. Collin Piper.

16 Q. Mr. Piper?

17 A. Yes, Collin Piper.

18 Q. Right. So—because the two people that are mentioned there
19 are the terminal operations manager, that's Mr. Piper, and the
20 review—the offshore team lead and that's you?

21 A. No, that would be Jason Beckles.

22 Q. Mr. Beckles?

23 A. Yes.

24 Q. You were sharing it with him?

25 A. Yes. So when this procedure was drafted, Mr. Beckles was the
26 acting offshore team lead at that time.

27 Q. When this document was being drafted?

1 A. Yes.

2 Q. Did you share that role, though, with Mr. Beckles?

3 A. At that time when this was drafted?

4 Q. Yeah. No, not when it was drafted, I mean generally did you
5 share?

6 A. Yes, I, um—after Mr. Beckles acted, I would have taken up the
7 offshore role in February the 1st.

8 Q. February the 1st?

9 A. Yeah.

10 Q. Right. So that I'm clear, please, there was no full-time offshore
11 team lead at the time?

12 A. No. It was a vacant position that the team lead at that time left
13 Paria.

14 Q. Right.

15 A. So it was vacant and the offshore operations supervisors were
16 rotating in that position.

17 Q. Right. How many of you were there?

18 A. What five.

19 Q. Five of you?

20 A. Yes.

21 Q. So you were each taking on the role for what, a month at a
22 time?

23 A. There wasn't a decided period so sometimes it'd be two
24 months. My stint was two months.

25 Q. Right. So—and you started your stint on the 1st of February?

26 A. Yes.

27 Q. So you were the offshore team lead from the 1st of February—

1 A. Yeah.

2 Q. —to the 1st of April?

3 A. Till the end of March, yes.

4 Q. End of March, 1st of April, right.

5 A. Yes.

6 Q. Okay. Thank you very much. But Mr. Beckles was your
7 predecessor in that role?

8 A. Yes.

9 Q. And you would have been described as the acting offshore team
10 lead?

11 A. Subsequent to that, yes.

12 Q. Yeah, all right thank you very much. Was this a job that you
13 coveted?

14 A. Sorry?

15 Q. Did you want the job?

16 A. Yes, I wanted the job.

17 Q. Right.

18 A. Yes.

19 Q. Well, only because if you're in an acting role—

20 A. Uh-huh.

21 Q. —if you want the job, you want to try and impress, I'm
22 assuming.

23 A. Yes, I tried to do the job to the best of my ability.

24 Q. Yes, good. Thank you very much.

25 **Mr. Chairman:** All right, thank you. I'm sorry, I just needed
26 to—

27 **Mr. Maharaj SC:** Much obliged.

1 **Continued Examination BY Mr. Maharaj SC:**

2 Q. And you see there was a procedure—

3 A. Uh-huh.

4 Q. —stated in the instructions and it—there was a step by step
5 procedure to be followed. You see under “Procedure”?

6 A. Yes.

7 Q. And I’ll take you to the procedure, right?

8 A. Yeah.

9 Q. Go to the next page. And you would see under different
10 headings throughout until at page 1038 a stage by stage
11 procedure like a method statement as to how to do it, correct?

12 A. Yes, that’s correct.

13 Q. And the method include air blowing?

14 A. Yes.

15 Q. Yes. Air blowing of the contents of the pipeline?

16 A. Yes.

17 Q. I have looked and you were involved—I notice this was
18 reviewed by you, your signature is there on the first page?

19 A. Yes, that’s correct.

20 Q. And unless I miss it, I have been looking to see whether
21 anywhere in these pages, this step by step procedure, there is as
22 to how much, what is the quantity of oil which existed and what
23 is the quantity of oil which had to be drained.

24 A. No.

25 Q. Could you help me if you could find that in these documents?

26 A. No, that was not identified.

27 Q. That was not identified?

1 A. No.

2 Q. Could you help us today to tell us, if you know, how much oil
3 was drained?

4 A. Er, no, I don't know.

5 Q. And therefore you can't help us as to how much oil was in the
6 pipeline which had to be drained?

7 A. No.

8 Q. How much liquid content?

9 A. No, not volume, no.

10 Q. But I also looked in these documents prepared by Paria, in
11 collaboration with LMCS, to see whether there is any mention
12 of a risk of a differential pressure if too much oil was drained
13 from the line. Are you in agreement with me there's no
14 mention of that?

15 A. There's no mention.

16 Q. So I would be correct in saying, Mr. Harrichan, that in the
17 preparation of this document for the execution of the works,
18 Delta P hazard was not identified?

19 A. Correct, that was not identified.

20 Q. Now, you're aware now—after the events of the 25th of
21 February, you are aware that there is expert evidence in these
22 proceedings to show that because of the void of the—or the
23 absence of liquid content in the line it created the Delta P
24 hazard?

25 A. Uh-huh. Yes, I saw some reports.

26 Q. And you're aware that that caused the migration barriers to be
27 sucked in, well, the—well, particularly the inflatable plug to be

1 sucked in and it created a vortex and the men were sucked into
2 the pipeline?

3 A. Yes.

4 Q. So would you agree with me that the extent of the draining of
5 the line on reflection was an important aspect to be considered
6 for the execution of these works?

7 A. Yes.

8 Q. And in the light of what has happened and your experience and
9 knowledge and what you know of what has happened, if you
10 had to do this again, you would certainly take a note of the
11 quantity of oil in the pipeline to be drained, am I correct?
12 Would you not do that if on reflection now if you have to do it
13 again?

14 A. Um, well, I was of the impression that the ullage was actually
15 giving you that amount in the line but, on reflection, um, I
16 suppose, yes, I would look more closely at the volume.

17 **Mr. Chairman:** I can't hear you, sorry.

18 **Mr. Harrichan:** Yes, I would look at the volume in hindsight,
19 yes.

20 **Continued Examination BY Mr. Maharaj SC:**

21 Q. But you don't know how much oil or how much of the liquid
22 content was drained from the underwater piping?

23 A. No.

24 Q. No. So, as—having regard to the position and your expertise
25 that you have and what you know, if it is that you had to review
26 this document again for a similar job, would you not agree with
27 me that one of the most important things in executing a job like

1 this to drain the line that you will have to know how much
2 line—how much content the quantity of the liquid content in
3 the line and how much you're going to drain?

4 A. Um, yes. Or you could also confirm with the level as well on
5 both ends, yeah.

6 **Examination By Mr. Chairman:**

7 Q. I'm a bit concerned about that—

8 A. Sure.

9 Q. —just doing it by level. The idea was to isolate this complete
10 pipe, was it not, ultimately?

11 A. Yes.

12 Q. Right. So, just dealing with it as a U bend for our purposes,
13 we've got the two risers 5 and 6 on either side with a piece of
14 pipe joining them together underwater, all right? This is the
15 piece of pipe. We know the diameter of the pipe, don't we?

16 A. Yes.

17 Q. We know the length, the overall length of the pipe, do we not?

18 A. Yes.

19 Q. It is a mathematical exercise to calculate how much fluid would
20 fill that pipe, is it not?

21 A. Yes.

22 Q. Right. So when you open one end and you opened it at the
23 other end, you can see where the level of the water or fluid, oil,
24 whatever it was, was in either side of this piece of pipe, correct?

25 A. Yes.

26 Q. Right. So you'll be able to measure from the top of wherever
27 you were down to that particular level of fluid on either side

1 which presumably would be the same unless the pipe is
2 higher—

3 A. Yes.

4 Q. —all right, and you'd be able to deduct that from the overall
5 amount of fluid that should be in this pipe, correct?

6 A. Yes.

7 Q. Right. So you would know then what the total amount of fluid
8 in this pipe was?

9 A. Yes.

10 Q. It would also tell you, wouldn't it, if you were to remove a
11 specified amount of fluid from that pipe where it would take
12 you down on either side?

13 A. Yeah.

14 Q. I take one pint it moves by this much. If I take two pints it
15 moves that much, correct?

16 A. Yes.

17 Q. I know you measure it in barrels but I don't really need barrels.
18 So I—so for me to understand, you, being responsible for this
19 exercise, would have wanted to know, surely, what is the total
20 amount of fluid that is in this pipe?

21 A. No, the focus was on the actual level. At the time of
22 discussions that was the focus.

23 Q. I follow that.

24 A. Yeah.

25 Q. My concern is this. If you knew what the total amount of fluid
26 was in this pipe—

27 A. Uh-huh.

- 1 Q. —and you removed, let's say, 30 barrels—
- 2 A. Uh-huh.
- 3 Q. —that should bring the ullage to a particular point, shouldn't it?
- 4 A. Yes, correct.
- 5 Q. If it didn't, what would it tell you?
- 6 A. If it didn't come down to that level?
- 7 Q. Yes. If you had the total amount of fluid in this U pipe—
- 8 A. Uh-huh.
- 9 Q. —and you removed—you knew what that was, all right, and
- 10 you removed 30 barrels—
- 11 A. Correct.
- 12 Q. —you'd know where that should take you, wouldn't you?
- 13 You'd be able to calculate it?
- 14 A. Yes.
- 15 Q. I can't. There are plenty of mathematicians, I'm sure, who can,
- 16 all right?
- 17 A. Yeah.
- 18 Q. And if it didn't go to where you expected it to go, what would
- 19 that tell you?
- 20 A. That, um, yeah, that the volumes—there's a issue with the
- 21 volume.
- 22 Q. Yes. There might have been air in the pipe?
- 23 A. Yeah.
- 24 Q. It would tell you that, wouldn't it?
- 25 A. Yeah.
- 26 Q. There could be no other explanation.
- 27 A. Yeah.

1 Q. Would that forewarn you of a danger that might exist into
2 differential pressures?

3 A. Yes, in hindsight, yes.

4 Q. Well, no, not with hindsight, with foresight.

5 A. Yes.

6 Q. Thank you.

7 A. Yeah.

8 **Continued Examination BY Mr. Maharaj SC:**

9 Q. And Mr. Harrichan, the procedure which Paria authorized in
10 collaboration with LMCS—

11 A. Uh-huh.

12 Q. —was air blowing?

13 A. Correct.

14 Q. At berth 5?

15 A. Yes.

16 Q. Correct?

17 A. Yes.

18 Q. And I am not a—I have no expertise but you could probably
19 help us.

20 A. Uh-huh.

21 Q. Wouldn't that air blowing good cause air pockets in the line?

22 A. Not that I am aware of.

23 Q. Not that you know of?

24 A. Yeah.

25 Q. Now, do you know whether Paria has records of how much oil
26 or how much liquid content was taken from the underwater
27 piping?

1 A. Um, no, I'm not sure.

2 Q. Did you take steps for a record to be kept as to how much oil or
3 liquid contents you were taking from the underwater piping?

4 A. There is records how much volume entered the tank, but that is
5 an estimate.

6 Q. Is there records of how much volume was taken out, how much
7 barrels were taken out?

8 A. Directly from the line?

9 Q. Yes.

10 A. No, I can't say that would have been directly from the line.

11 Q. Are you—we have on the record disclosed to us Paria's daily
12 work reports—

13 A. Uh-huh.

14 Q. —in respect of, in respect the removal of the liquid content. I
15 wouldn't go through them with you but I just want you—I want
16 to show them to you—

17 A. Uh-huh.

18 Q. —so you will tell me whether you know about those reports or
19 not. Okay?

20 A. Correct.

21 Q. They can be found at—it starts—in Volume II it starts at page
22 992. Nine nine two. Sorry, 994, sorry, 994. And you have
23 dates and it goes until—for some distance under the 1011, 1012
24 and it's there but have you ever seen these reports—are you—
25 sorry, I thought the witness had it?

26 A. No. It's on the—

27 Q. It's on the screen?

1 A. Yeah.

2 Q. Have you ever seen these reports?

3 A. No, I haven't.

4 Q. Well, they're part of the record in these proceedings and I just
5 want to put something to you. You know there were two
6 phases of the line clearing?

7 A. Yes.

8 Q. Phase I and Phase II?

9 A. Yes.

10 Q. Phase I was the removal of the liquid content from topside.

11 A. Uh-huh.

12 Q. And Phase II was the removal of the liquid content between
13 berth 5 and 6 underwater.

14 A. Correct.

15 Q. Right. Now, according to those daily reports, we have checked
16 it and I'm putting to you that over 800 barrels of oil was
17 removed by Paria in the Phase I air blowing of top side. Would
18 that surprise you?

19 A. Yes.

20 Q. Yes. And in the underwater piping Phase II, we have checked
21 it, over 500 barrels of oil was removed in the Phase II air
22 blowing.

23 A. Uh-huh.

24 Q. Would that also surprise you?

25 A. Yes.

26 Q. Now, you have seen—

27 **Mr. Chairman:** Sorry.

1 **Mr. Maharaj SC:** Sorry.

2 **Mr. Chairman:** [*Mr. Chairman writes*]

3 **Continued Examination BY Mr. Maharaj SC:**

4 Q. You have seen the In-Corr-Tech report in this matter, the expert
5 report?

6 A. No, I haven't.

7 Q. Well I just want to—it's at—it's in the supplemental core
8 bundle and it's at page 1394 and I just want to refer you to it.
9 Look at paragraph 2.3 on page 1394.

10 "The removal of fuel oil from line and the installation of
11 a migration barrier as stipulated in Paria's scope of works
12 section 2.1 and 3.1.12 respectively created a large
13 gaseous void in Sealine SL36. This void served as a
14 prerequisite for the latent differential pressure hazard that
15 was created when the habitat was installed and
16 pressurized to facilitate work within the said habitat. The
17 hazards associated with this void were overlooked by
18 both Paria and LMCS."

19 A. Uh-huh.

20 Q. Then I want to refer you to paragraph two five—2.5 on the next
21 page.

22 "This latent hazard existed at the onset of work within
23 the habitat and became active when the divers were
24 attempting to remove the primary seal, the inflatable
25 plug, from within the riser.

26 2.6: Not being aware of this latent differential pressure
27 condition, incorporating a gaseous void, divers proceeded

1 to deflate the plug after safe removal of the mechanical
2 seal. On reaching a deflated pressure of approximately
3 11.4 psig, the resistive force of the plug was then lower
4 than the downward force 14031 on the plug. This force
5 thrust the plug down the oily riser into the large gaseous
6 void previously created.”

7 And then it goes on to say that this created a vortex for the men
8 to be sucked into the pipeline.

9 So having become aware of that now, would you not agree that the
10 unlimited draining of the line, the underwater line, between
11 berth 5 and 6, should have been closely monitored if it had to
12 be drained?

13 A. Yes, and I thought it was closely monitored.

14 **Examination By Mr. Chairman:**

15 Q. You thought it was closely monitored?

16 A. Yes.

17 Q. By whom?

18 A. By, um, the contractor and the maintenance department.

19 **Continued Examination BY Mr. Maharaj SC:**

20 Q. Maintenance department of which?

21 A. Of Paria.

22 Q. I want to show you another document which is part of the
23 record and which I think that, since you were involved with it,
24 instruction, I want to show you because I think it's very
25 important. The scope of works, CB 2 at page 564.

26 **Mr. Chairman:** Which volume is it in?

27 **Mr. Maharaj SC:** Volume II of the core bundle.

1 [Document handed to Mr. Harrichan]

2 **Continued Examination BY Mr. Maharaj SC:**

3 Q. Five six four. Under the heading “Scope of Work”. Change
4 out section of subsea riser and tie in piping and then you have
5 the isolation list and then underneath that you see:

6 “Estimated volume of product between isolation points
7 2000 barrels.”

8 So according to—

9 A. Yes.

10 Q. —according to Paria records—

11 A. Uh-huh.

12 Q. —this is showing there were 2000 barrels of oil?

13 A. Uh-huh.

14 A. Okay.

15 Q. And according to what I am putting to you from the daily
16 records, Paria in collaboration with LMCS took out about 1300
17 barrels of oil.

18 A. Okay.

19 **Mr. Chairman:** At least.

20 **Mr. Maharaj SC:** At least 1300 barrels of oil.

21 **Continued Examination BY Mr. Maharaj SC:**

22 Q. I want to show you one other document.

23 **Mr. Chairman:** Before you move on—

24 **Examination By Mr. Chairman:**

25 Q. So that we’re clear about this, were you aware that the estimate
26 of 2000 barrels was the total amount of fluid in the pipe?

27 A. No.

1 Q. Had you not seen this document before?

2 A. No.

3 Q. Is today the first time you're seeing it?

4 A. Yes.

5 Q. So even after this incident this wasn't drawn to your attention?

6 A. No it was not.

7 Q. All right, thank you.

8 **Continued Examination BY Mr. Maharaj SC:**

9 Q. I also want to show you core bundle two Volume II page 598.

10 And these were some of the queries which were being done
11 during the tendering stage for this contract and questions which
12 were being asked, and at page 598 there was the query: "Who is
13 responsible for pumping back from berths to clear the lines with
14 water?" And the response from Paria was: "The contractor is
15 responsible for the safe removal of hydrocarbon contents from
16 the line and to ensure that the line is clear and dry." So Paria is
17 saying to the contractor, "Ensure, as part of the works, the lines
18 would have to be clear and dry."

19 A. Uh-huh.

20 Q. Do you see that?

21 A. Yes, I see it.

22 Q. Were you aware of this at the time when you were asked to do
23 this?

24 A. No.

25 Q. No.

26 A. I wasn't.

27 Q. This instruction?

1 **Mr. Maharaj SC:** Just give me one minute please, Mr.
2 Chairman?

3 **Mr. Chairman:** Sure.

4 **Mr. Maharaj SC:** [*Perusing documents and conferring with*
5 *Mr. Bissessar and Ms. Maharaj*] Just give me one minute
6 please, Mr. Chairman?

7 **Continued Examination BY Mr. Maharaj SC:**

8 Q. Look at paragraph 26 of your witness statement.

9 **Mr. Chairman:** You've read this to him already, yes?

10 **Mr. Maharaj SC:** Oh, sorry, I read this to him?

11 **Mr. Chairman:** You have, yes.

12 **Mr. Maharaj SC:** Sorry. I'm much obliged. I think that's all
13 for this witness.

14 **Mr. Chairman:** Thank you, Mr. Maharaj. Before we take our
15 break can I just ask you something else, please?

16 **Mr. Harrichan:** Yes sure.

17 **Examination By Mr. Chairman:**

18 Q. Before you, as it were, took the responsibility of dealing with
19 the line clearance here, and I asked you a number of questions
20 about the amount of oil that might have been in it, leaving that
21 aside, did you have any plans or description of how deep each
22 riser was, whether they were the same, for example?

23 A. Uh-huh.

24 Q. And what the lie of the pipe, the seabed was, in other words,
25 was it flat, was it horizontal, did it have any undulations in it,
26 anything like that? Did you have any plans helping you about
27 that?

1 A. No.

2 Q. So is that a no to all of those question? I appreciate I've put
3 them compendiously.

4 A. Yeah.

5 Q. Is it the case then that we can take it from your evidence that
6 you, at any rate, were wholly unaware of the shape of this pipe
7 completely?

8 A. No, I have an idea of the shape. I'm just—

9 Q. Well, we know it's a U?

10 A. U, yeah. Um—

11 Q. There's a difference, isn't there, between if one end is deeper
12 than the other end?

13 A. Yeah.

14 Q. Then the bottom—the piece of the pipe at the bottom would be
15 lower at one end—

16 A. Right.

17 Q. —than at the other, wouldn't it?

18 A. Yes.

19 Q. And equally if it was the other way around—

20 A. Yeah.

21 Q. —it would have a slope, wouldn't it?

22 A. Yes, correct.

23 Q. Similarly, if it was undulating, and I'm showing it quite as a
24 little wavy line, but there might have been, for example, in the
25 middle of it, a rise or a fall, mightn't there, depending on the
26 sea floor?

27 A. Yes.

1 Q. I mean, we're talking about twelve hundred feet, aren't we?

2 A. Yes.

3 Q. Were you aware of any such undulations or—

4 A. No, I wasn't.

5 Q. When you say no you were not aware, does that mean that you
6 had no idea or that you knew that there were not?

7 A. No, I didn't know if it was undulating or flat.

8 Q. Did anybody at Paria or anyone from anywhere else provide
9 you with any topography or map of the seabed to show the lie
10 of this—of the pipe or anything like that?

11 A. The drawings of the line you're talking about?

12 Q. Yes.

13 A. No, no drawings.

14 Q. Do you think it would have made a difference to your approach
15 to this if you knew there were undulations in the pipe?

16 A. Um, logically I can't see it making a difference because if
17 you're displacing from one end to the other, logically it would
18 displace any liquid in the undulations as well.

19 Q. Yes. What about the potential, though, of the air pockets
20 existing in the pipe?

21 A. Um, no, I would not have considered that, no.

22 Q. Never gave that any consideration?

23 A. No, because the liquid level would have been higher than the
24 actual horizontal section so, um, technically there will be liquid
25 on top, on both sides, which they shouldn't have any air pocket.
26 If there was an air pocket it would have existed before.

27 Q. Yes.

1 A. Yeah.

2 Q. Well if there's air pockets in the pipes—

3 A. Uh-huh.

4 Q. —I mean, pipes have air in them sometimes.

5 A. Right.

6 Q. That's why we have bleeds with valves at either end to try and
7 take that air out, don't we?

8 A. Yes.

9 Q. But anyway, none of that was calculated in your consideration
10 of what was happening here?

11 A. No. Well this, um—the scope of this job wasn't developed
12 solely by Paria. The method was actually developed by LMCS.
13 They provided the method and then Paria provided the actual
14 isolation.

15 Q. Forgive me—I follow that.

16 A. Yeah.

17 Q. Of course and—

18 A. Yeah.

19 Q. —but I—and, um, I understand why you say that?

20 A. Yeah.

21 Q. But just help me to understand—

22 A. Uh-huh.

23 Q. —there was only one company who would have the detail of
24 the—

25 A. Yes.

26 Q. —lay of the pipe, isn't there?

27 A. Yes, correct.

1 Q. I mean LMCS, whatever failings there may have been on their
2 part—

3 A. Yeah.

4 Q. —the fact of the matter is that they would not have had access,
5 without your giving it to them, of any pipeline or shape of the
6 pipe or anything like that, would they?

7 A. Yes, correct.

8 Q. You were the only ones who could have had that?

9 A. Yes.

10 Q. Thank you.

11 **Mr. Chairman:** Shall we take a short break? Quarter to
12 12.00? Please? Thank you. We're going to have a short break
13 now—

14 **Mr. Harrichan:** Okay.

15 **Mr. Chairman:**—and come back at a quarter to 12.00, please?

16 **Mr. Harrichan:** Okay, sure.

17 **11.24 a.m.:** *Enquiry suspended.*

18 **11.42 a.m.:** *Enquiry resumed.*

19 **Mr. Chairman:** All right, Mr. Harrichan, there will be some
20 questions, I anticipate, from a number of people. Ms. Persaud
21 Maraj?

22 **Mrs. Persaud Maraj:** Yes.

23 **Mr. Chairman:** Introduce yourself, please?

24 **Cross-Examination By Mrs. Persaud Maraj:**

25 Q. The name is Kamini Persaud Maraj, attorney-at-law for LMCS.

26 A. Morning.

27 Q. Mr. Harrichan, you were part of the ICT established by Paria?

1 A. No, I wasn't.

2 Q. You were relaying information, your—so, what was your
3 position in relation to the ICT, if any?

4 A. A supportive role relaying information back to the ICT and
5 executing any tasks that may be issued to me.

6 Q. So you were on site?

7 A. Yes.

8 Q. Right; and that would account for the information that you
9 relayed to LMCS?

10 A. Yes.

11 Q. I'd like you to confirm something. You had, in fact, informed
12 LMCS that your instructions from Mr. Piper it was?

13 A. Yes.

14 Q. —was that they should not do any diving. Is that correct?

15 A. No, that's not correct.

16 Q. You've not said that in your witness statement?

17 A. No. I said that—

18 Q. Uh-huh.

19 A. —Mr. Piper said he does not want any diving inside of the
20 pipeline.

21 Q. Inside of the pipeline?

22 A. Correct.

23 Q. All right. What time did you come on the scene at berth 6?

24 A. Give me one second.

25 Q. Uh-huh.

26 A. [*Perusing document*]*—16:15, one six one five.*

27 Q. That's 4.15?

1 A. Yes, 4.15.

2 Q. And you stayed throughout the night until what time?

3 A. [*Perusing document*]

4 **Mr. Chairman:** About two o'clock in the morning.

5 **Mr. Harrichan:** About two o'clock, yeah, correct, yeah, zero
6 two hundred.

7 **Continued Cross-Examination By Mrs. Persaud Maraj:**

8 Q. So you were there, and you said this in your statement, you
9 were there when the borescope came?

10 A. Yes.

11 Q. And that would have been at berth?

12 A. Number 6.

13 Q. Number 6. Besides yourself and the technician who would
14 have brought the borescope, was there any other persons
15 present, any other person present for the—when the borescope
16 went down?

17 A. Yes. There was an additional Paria person.

18 Q. Who was that additional Paria person?

19 A. Jason Beckles.

20 Q. All right.

21 A. And there were, I believe, some LMCS employees close by but
22 I can't remember who they were.

23 Q. Close by, but not with your team of the borescope operator,
24 yourself and Mr. Beckles?

25 A. Correct.

26 Q. All right. Are you in any way qualified as a diver?

27 A. No, I am not.

1 Q. Does Mr. Beckles—to the best of your knowledge, is he?

2 A. I do not know.

3 Q. All right. And at—can you remind us what time about the
4 borescope had gone down in berth 6?

5 A. I don't have an exact time but it would have been after 11.00
6 p.m.

7 Q. And it would certainly be before 2.00 a.m.?

8 A. Yes.

9 Q. Right. And during that time would you confirm that there were
10 divers, as far as you are aware, divers at the barge at berth 6?

11 A. Um, yes there were divers, yes.

12 Q. All right. And did you—being on site, did you report to anyone
13 that there were divers present at that time that the borescope
14 was going into the pipeline?

15 A. No. Um, there was another person on site on the barge liaising
16 with the divers.

17 Q. All right. But no diver was present while the borescope was
18 going to examine the pipeline to see what was being
19 transmitted?

20 A. At, at—

21 Q. When—

22 A. When it was happening?

23 Q. That's correct.

24 A. Not that I could recall.

25 Q. All right.

26 **Examination By Mr. Chairman:**

27 Q. Well can I ask you to look at paragraph 75 of your statement

1 please, because I need to be clear that this because what you
2 said seems to contradict that.

3 A. Uh-huh, sure.

4 Q. Paragraph 75.

5 “The LMCS employees together with the Atlantic LNG
6 employees made several attempts to manoeuvre the
7 borescope past the object but were unsuccessful.”

8 So were there LMCS people engaged in the task of moving the
9 borescope?

10 A. Yes. They were assisting but not viewing.

11 Q. Yeah. So we should not go away with the impression that they
12 were sort of standing over there somewhere not really part of
13 this, they were—

14 A. No, correct, yes. They were assisting with launching the
15 borescope into the riser.

16 Q. Assisting with launching the borescope into the riser?

17 A. Yes.

18 Q. How did they get the borescope into the pipe?

19 A. So it's a flexible tube—

20 Q. Yes.

21 A. —basically, so, it was manually lowered into the pipeline.

22 Q. By? By?

23 A. By LMCS employees.

24 **Mr. Chairman:** Yes, thank you.

25 **Continued Cross-Examination By Mrs. Persaud Maraj:**

26 Q. At paragraph six, 76, sorry, the paragraph just under, you said
27 you informed the incident commander of what you had

1 observed via the view footage from the borescope and he
2 informed you that a Heritage dive supervisor would be coming
3 to berth number 6. That is correct? How long af—is that
4 correct?

5 A. Yes, that's correct.

6 Q. How long after did that person arrive?

7 A. I can't recall exactly how long.

8 Q. How long—so, can you say to us when you were aware that the
9 borescope will be coming on site? Was that information
10 relayed to you?

11 A. No.

12 Q. A long before the borescope arrived were you aware that it
13 would have been coming?

14 A. When I was ashore I—that is the time I noticed the borescope
15 was coming.

16 Q. So that would have been before 4.00—

17 A. That was—

18 Q. —p.m.?

19 A. —around—that was shortly before I departed landing stage
20 2300, it would have been probably about 30 minutes before
21 that.

22 Q. So you had left the scene and gone back onshore?

23 A. Yes.

24 Q. And at that point you were aware so that would have been
25 about 11.00 p.m.?

26 A. 11.00 p.m., yes, before 11.00 p.m., just before.

27 Q. All right. And I know timing can be a little off but do you

1 know how long it took for it to actually arrive?

2 A. No, I don't know.

3 Q. All right.

4 **Mr. Chairman:** Well we know it had got there around eleven
5 o'clock at night.

6 **Mr. Harrichan:** Yes, correct.

7 **Mrs. Persaud Maraj:** This is all the questions I have for this
8 witness, please.

9 **Mr. Chairman:** Thank you. Anybody else, put up your hand
10 please? Thank you. Yep, Mr. Ramadhar, the floor is yours.

11 **Mr. Ramadhar:** Thank you so much.

12 **Cross-Examination By Mr. Ramadhar:**

13 Q. Good morning—

14 A. Good morning.

15 Q. —Mr. Harrichan.

16 A. Morning, Sir.

17 Q. My name is Prakash Ramadhar I represent, with my team, the
18 interest of the Kurban family and, of course, the daughter of
19 Yusuf Henry.

20 A. Yes.

21 Q. You still work at Paria?

22 A. No.

23 Q. When did you depart?

24 A. I departed in May.

25 Q. May?

26 A. Yes.

27 Q. Was it voluntary on your part?

1 A. Yes it was.

2 Q. Yes. Mr. Ramdhan, is he still at Paria?

3 A. Yes he is.

4 Q. Yes. Now, you arrived there, from what you told us, at what
5 time, at the scene at berth 5?

6 A. Sixteen—

7 Q. Sorry?

8 A. Sixteen fifteen.

9 Q. Four—

10 A. Four-fifteen.

11 Q. —4.15?

12 A. Yeah.

13 Q. Yeah? At that point in time you were the most senior person
14 from Paria at the scene. Is that accurate?

15 A. Yes, that's accurate.

16 Q. Were you able to get any important or helpful information from
17 your Mr. Ramdhan when you arrived?

18 A. Well information I got was divers were missing from the
19 chamber.

20 Q. Right.

21 A. Sea searches commenced, and he was unable to get any further
22 information from LMCS.

23 Q. I see. He was unable to get any further information from
24 LMCS?

25 A. Yeah.

26 Q. Did Paria, assuming that what you were told is accurate, that he
27 did not get further information from LMCS, did you make any

1 effort to ascertain what Paria itself did to inform itself as to the
2 circumstances?

3 A. Could you repeat that question? I, I, I—

4 Q. Of course.

5 A. —I'm a bit confused, sorry.

6 **Mr. Chairman:** I had to say I'm struggling to understand it as
7 well.

8 **Mr. Ramadhar:** Yes.

9 **Continued Cross-Examination By Mr. Ramadhar:**

10 Q. Simply this.

11 A. Uh-huh.

12 Q. Did Paria itself, or any personnel from Paria, make efforts on its
13 own behalf to ascertain further information?

14 **Mr. Chairman:** Well, what is Paria, I mean, it's an amorphous
15 identity of a company.

16 **Mr. Ramadhar:** It's, Sir, simply this.

17 **Continued Cross-Examination By Mr. Ramadhar:**

18 Q. Paria personnel.

19 A. Uh-huh.

20 **Mr. Chairman:** Well, can I ask you the question?

21 **Mr. Harrichan:** Sure.

22 **Examination By Mr. Chairman:**

23 Q. Did anyone from Paria seek to obtain information, so far as you
24 were aware, seek to obtain information about what was—what
25 had happened.

26 A. Yes. So, um, Johnathan Ramadan indicated he tried, he didn't
27 get any feedback, and I myself went on the barge and spoke to

1 Andrew Farah.

2 Q. Right.

3 A. But he didn't respond to me.

4 Q. I think he was lying flat on his back?

5 A. Flat on his back, yes, and his hands covering his face.

6 Q. And with his hands over his face?

7 A. Yeah.

8 Q. Do you think he might have been distressed?

9 A. Possibly.

10 Q. Yeah. Anyway he was unresponsive when you asked him
11 questions?

12 A. Yes, correct.

13 **Mr. Chairman:** Has that helped?

14 **Mr. Ramadhar:** Yes.

15 **Continued Cross-Examination By Mr. Ramadhar:**

16 Q. I think you were confused for a moment when I say Paria, I
17 mean Paria in its personnel, okay? So that as we move forward
18 you'll understand that, won't you? Yes?

19 A. Yes, yes.

20 Q. Oh, beautiful. So, having not achieved further information,
21 shortly after your arrival—

22 A. Uh-huh.

23 Q. —there came a time when you appreciated that the men most
24 likely were in the pipeline, isn't that correct?

25 A. No.

26 Q. It never came to your attention or belief that the men were most
27 likely within the pipeline?

1 A. No, not at that point.

2 Q. No? Well at what point, if any, did it come to your attention or
3 awareness that the men most likely were in the pipeline?

4 A. At the time when the shouting was heard from the chamber.

5 Q. And what time was this?

6 A. This was 17:22.

7 Q. Which is 5.22 p.m.?

8 A. Five twenty-two p.m.

9 Q. Yes. When did you first speak to Mr. Piper in relation to this
10 matter?

11 A. When I first got the—

12 Q. What time? Listen, man, you didn't read your statement before
13 you went in the box?

14 A. Yes, but I need to remember the exact—

15 Q. All right, go ahead, go ahead.

16 A. —okay? Right. So I first heard of the incident at 15:10 and
17 thereafter I called Collin Piper.

18 Q. Yes. When did you first see Mr. Piper on the scene, if at all?

19 A. Um, I can't recall. It would have been, um, I can't remember
20 what day but it would have been some day after.

21 Q. So up to the time you left that night, Mr. Piper, who is head of
22 the incident management team, had not come to the scene? Is
23 that accurate?

24 A. Yes, correct.

25 Q. Yes. And you were the most senior man on that scene till 2.00
26 a.m. the next morning?

27 A. No, until, um, Catherine Balkissoon arrived.

1 Q. Oh. She is senior to you?

2 A. Yes.

3 Q. And what time did she arrive?

4 A. Sometime around when Mr. Christopher Boodram was rescued.

5 I'm not sure exactly what time.

6 Q. Sometime just before—

7 A. No—

8 Q. —Christopher Boodram—

9 A. No. I'm not sure what time she arrived but I noticed her
10 sometime just after that.

11 Q. Just after what? Boodram—

12 A. Just after Mr. Boodram was rescued.

13 Q. Right. When Boodram was rescued—

14 A. Uh-huh.

15 Q. You were very eager, up to that point in time, being the most
16 senior man, to ascertain the condition of the men who went
17 missing, is that accurate?

18 A. Yes.

19 Q. You would have put yourself in a position to see and/or hear
20 what he had to say, is that true?

21 A. Yes, that's correct.

22 Q. Right. You heard him say men were behind and they were right
23 behind?

24 A. I didn't hear him say that directly but I heard that through
25 asking one of the other employees.

26 Q. Right. So it was, it was basically like common knowledge for
27 all those who were close to him—

1 A. Yes, correct.

2 Q. —right, that he had communicated with clarity that men were
3 just behind and that they should go and rescue them. Is that
4 accurate?

5 A. Yes, that's correct.

6 Q. Yes. You, of course, as the most senior man, forget Catherine
7 for a moment, took command of the situation, didn't you?

8 A. Yes.

9 Q. And command of the situation required., in your mind, the
10 highest priority being to what, not rescue the men?

11 A. Yes.

12 Q. Yes. What did you do to ensure that those men were rescued or
13 at least an effort made to rescue them?

14 A. Yes, so I, I coordinated with LMCS. They went down.

15 Q. Yeah.

16 A. I informed the incident commander that diving operations had
17 begun.

18 Q. Yeah.

19 A. Yeah.

20 Q. Right. Was there a moment when an instruction may have been
21 given that no one is to enter the pipe?

22 A. Yes.

23 Q. Who gave that instruction?

24 A. Um, Mr. Collin Piper.

25 Q. But he wasn't there so it came through what?

26 A. It came through me.

27 Q. Through you?

1 A. Yes.

2 Q. You were the mouthpiece of Piper who gave the instruction,
3 “No diving into the pipe” I want that very clear, correct?

4 A. Yes, I passed the—

5 Q. Yes. At that point in time, there had been no assessment as to
6 whether the pipe was safe or dangerous, isn't that true?

7 A. I, I can't say that.

8 Q. But you're the man on site.

9 A. Uh-huh.

10 Q. Was there any assessment by any personal from Paria that the
11 pipe was either safe or unsafe at that moment?

12 A. No, I don't know.

13 Q. No? But there we had in the balance you appreciate life is
14 about balance? Yes?

15 A. Yes.

16 Q. You had four men who you've been told were alive and just
17 beyond, correct?

18 A. Correct.

19 Q. And a decision and a choice was made to not save them. Is that
20 accurate?

21 A. No, I wouldn't say that.

22 Q. Well? A choice was made to rescue them?

23 A. No, I wouldn't say that either.

24 Q. So you're saying nothing?

25 A. Uh-huh.

26 Q. What are you saying? You would leave them there knowing
27 full well, hold on, this is a water environment and therefore life

1 sustaining air and oxygen—

2 A. Uh-huh.

3 Q. —was crucially important. You agree with that?

4 A. Yes, correct.

5 Q. So time is of the highest essence?

6 A. Yes.

7 Q. Yes. Did you have the luxury of an encyclopaedic examination
8 of all the circumstances?

9 A. No.

10 **12.00 noon.**

11 Q. No. So, therefore, my question still remains: At the time when
12 Christopher came out, Paria personnel did not know whether
13 the place was safe or unsafe. Is that still correct in your mind?
14 That is the pipeline.

15 A. I can't say if they determined it was safe or unsafe.

16 Q. Well, leh we talk about—not them, but you.

17 A. Uh-huh.

18 Q. You are the senior man on the site.

19 A. Uh-huh.

20 Q. Did you make that determination?

21 A. No, I didn't make that determination.

22 Q. No? So did you make a determination, as we have already
23 established, that the highest priority would be to save the men.
24 Is that still correct in your mind?

25 A. Yes.

26 Q. So who make—you didn't make a decision to rescue them,
27 because that was the highest priority.

1 A. Uh-huh.

2 Q. Yes?

3 A. Yes, correct.

4 Q. And you didn't care at that moment whether it was safe or
5 unsafe to do so?

6 A. It wasn't my decision to make.

7 Q. Whose decision?

8 A. I am following an incident command system. I'm taking
9 instructions—

10 Q. Whose decision was it to make?

11 A. The Incident Commander.

12 Q. Right. And at what time did he make that decision? There we
13 go again.

14 **Mr. Chairman:** What decision you are asking him to
15 examine?

16 **Mr. Ramadhar:** As to what time the decision was actually
17 made to not endeavour a rescue.

18 **Mr. Harrichan:** Oh, I don't know that.

19 **Mr. Chairman:** Well, I'm not sure he can answer that
20 question, can he?

21 **Mr. Harrichan:** No, no, I don't know that.

22 **Mr. Ramadhar:** Thank you, Mr. Chairman.

23 **Continued Cross-Examination By Mr. Ramadhar:**

24 Q. When was it communicated to you that no effort be made to
25 rescue?

26 A. That was never communicated.

27 **Mr. Chairman:** Just a minute. No.

1 **Examination By Mr. Chairman:**

2 Q. Was it ever communicated to you that there would be a decision
3 not to rescue?

4 A. No.

5 **Mr. Chairman:** No.

6 **Mr. Ramadhar:** Thank you. And that's the point.

7 **Continued Cross-Examination By Mr. Ramadhar:**

8 Q. So as far as you are concerned, you didn't make any decision,
9 nor was any communicated to you to not rescue. What
10 prevented the rescue? What prevented the rescue? You having
11 not—there was no communication from your seniors to not
12 rescue. You're there; your highest priority is rescue—

13 **Mr. Chairman:** Well, again, it's not an entirely fair question.
14 He's already told us that he had had an instruction from Collin
15 Piper, who was in charge, not to allow any diver to enter the
16 pipe. Given that that's where we knew they were, then it's
17 hardly his responsibility to countermand that instruction, is it?
18 So he was simply conveying that which he was being told.

19 **Mr. Ramadhar:** Right.

20 **Mr. Chairman:** And it's not really for him to go outside that
21 decision.

22 **Mr. Ramadhar:** I appreciate that, and that's why I specifically
23 asked whether any such thing was communicated to him.

24 **Mr. Chairman:** Well, we know it was, and we know what he
25 told the divers about entering the pipe. He made it clear that
26 they were not allowed to enter the pipe because it was regarded
27 as unsafe.

1 **Mr. Ramadhar:** Thank you; and that's the point. Thank you
2 so much, Mr. Chairman.

3 **Continued Cross-Examination By Mr. Ramadhar:**

4 Q. What time was it regarded as unsafe?

5 **Mr. Chairman:** Paragraph 60—59 first, actually.

6 **Mr. Harrichan:** Yeah. It don't have the exact time, but it
7 would have been sometime after Mr. Boodram was rescued.

8 **Continued Cross-Examination By Mr. Ramadhar:**

9 Q. Yes. Now, on what factual basis, as far as you're aware,
10 formed the opinion or decision that it was unsafe to rescue?

11 **Mr. Chairman:** Don't answer that question.

12 **Mr. Ramadhar:** Thank you, Mr. Chairman.

13 **Continued Cross-Examination By Mr. Ramadhar:**

14 Q. You appreciated that there were persons there willing, able, and
15 available, and who wished to pursue a rescue operation?

16 A. No, I was not aware of that.

17 Q. Were you aware that Mr. Kurban's son, Michael, together with
18 other divers had come onto berth 6, first of all?

19 A. At that time, I didn't know that was his son, but, yes, I saw
20 divers came.

21 Q. You certainly would have paid attention to anyone going into
22 the water?

23 A. Yes.

24 Q. Yes. You saw divers go into the water?

25 A. Yes.

26 Q. Did you ascertain as to who they were and what were they
27 doing, you being the senior Petrotrin personnel?

1 A. Yes.

2 Q. Having learned this, did you enquire of them, or did you find
3 out that they were ready, willing, able, and available to do a
4 rescue?

5 A. Yes, Sir, they were in the progress of rescue, yes.

6 Q. Yes. In your mind as the most senior person there, was it a
7 reasonable position to take that it was too dangerous to
8 endeavour a rescue?

9 A. Again, that's not my call to make.

10 Q. I'm not asking you whether it's your call. I'm asking you about
11 your opinion as the senior person on site who is feeding
12 information to the decision-makers?

13 A. No, I'm following my instructions. I wouldn't give an opinion
14 on it.

15 Q. Thank you. Did you further any information to your seniors, or
16 whomever the decision-makers were, that it was too dangerous
17 to go into that pipe?

18 A. No, I didn't pass that information to them.

19 Q. Are you aware of anyone in your chain of command who
20 passed that information from site to whomever is to make the
21 decision?

22 A. No, I'm not aware of that.

23 Q. So as far as you are concerned, no communication was made as
24 to the pipe being dangerous. Is that accurate?

25 A. Not from me.

26 Q. And as far as you are aware—

27 **Mr. Chairman:** Wasn't it already inherently dangerous?

1 **Mr. Ramadhar:** Sorry?

2 **Mr. Chairman:** Was it not inherently dangerous to dive into a
3 pipe irrespective of what had happened on that day? Is it not
4 inherently dangerous to dive into a pipe?

5 **Mr. Ramadhar:** As we say, all diving, there's inherent
6 danger, but they took a decision it was too dangerous—

7 **Mr. Chairman:** Well, I think you should address that question
8 to witnesses who are yet to come.

9 **Mr. Ramadhar:** Well, I don't know other than—

10 **Mr. Chairman:** You know who's coming.

11 **Mr. Ramadhar:** I expect, but I will foundationally prepare so
12 that when they do come we know where we stand and there'll
13 be no gap in that process.

14 **Mr. Chairman:** I think we know where we stand. I think we
15 should move to a different topic.

16 **Mr. Ramadhar:** Thank you so much, Mr. Chairman.

17 **Continued Cross-Examination By Mr. Ramadhar:**

18 Q. Now, when Christopher was rescued and brought out from the
19 water, you were very keen to ascertain the conditions of the
20 pipe from which he had just come. Isn't that accurate?

21 A. I didn't realize that he came from the pipe at that time. I
22 thought he was in the chamber.

23 Q. You made any effort to find out where they found him?
24 Because you must have certainly learnt that no one was found
25 in the chamber before that.

26 A. Yes, so afterwards I found out that—

27 Q. Pause, pause. I hear you.

1 A. Okay.

2 Q. Right. So at the time you believed he reappeared into the
3 chamber from where?

4 A. No, I didn't say that. I say—

5 Q. I'm asking you.

6 A. I didn't know at that time. It didn't come to me that he was in
7 the pipeline. When we heard the knocking I assumed that he
8 was actually in the chamber, that the guys came out from the
9 pipe into the chamber.

10 Q. Wait, you are the senior man on site. Before Christopher was
11 retrieved—

12 A. Yes.

13 Q. —you had no information that others went into the chamber to
14 ascertain whether it was empty or it was populated with
15 humanity?

16 A. Yes.

17 Q. And what was the information you knew? Wasn't it that the
18 chamber was empty?

19 A. Yes.

20 Q. Right. He's then brought out. So you thought he just
21 reappeared into the chamber?

22 A. No, I didn't say that.

23 Q. Well, I'm asking you.

24 A. I'm saying that when he was rescued I wasn't aware that he was
25 in the pipeline when he was rescued. I thought he was in the
26 chamber. He came out into the chamber and was being
27 rescued.

1 Q. Well, forgive me for having to do this. Whether he was in the
2 chamber on his own, at any stage you formed the opinion that
3 he was at some time in the pipe?

4 A. Yes.

5 Q. Right. And that would have been certainly before he was taken
6 away on the ambulance?

7 A. Yes, correct.

8 Q. Yes. Wouldn't he be the best source, as Mr. Maharaj had put it,
9 original information as to the conditions within the pipe?

10 A. Yes.

11 Q. You as the most senior operative for Paria, did you make any
12 effort whatsoever to ascertain the condition of the pipe so that
13 we could deal with the inherent dangers based on different
14 circumstances within the pipe?

15 A. Yes. So once he came out, I observed him—

16 Q. I didn't ask you what you observed.

17 **Mr. Chairman:** You got to let him answer.

18 **Mr. Ramadhar:** Thank you. Thank you. Thank you; of
19 course.

20 **Continued Cross-Examination By Mr. Ramadhar:**

21 Q. Do, please, carry on.

22 A. Yes. When he came out I saw that he was covered in oil and
23 shouting. He was saying some stuff so he was—he was
24 shouting. So he was in, like—he was okay, basically. I went—
25 I was on berth 6 at that time and I went across on the barge to
26 try and get to him. By that time the launch already took him to
27 shore.

1 Q. Oh, I see, I see. So you wish to make enquiry of him but you
2 didn't have the opportunity to do so?

3 A. I attempted to get first-hand information from him.

4 Q. Yes. Did you follow?

5 A. No, I didn't follow him.

6 Q. No. Did you communicate with anybody on shore to expect
7 and make enquiry from him when he arrives?

8 A. I informed the Incident Command Team that Mr. Boodram was
9 being taken to shore.

10 Q. Right. You called all of the team members or whom
11 specifically did you speak with?

12 A. No, I called the Incident Commander.

13 Q. Mr. Piper again?

14 A. Mr. Piper.

15 Q. To let him know, well, listen, we have a live one here who has
16 first-hand information and we could know the conditions within
17 the pipe. Is that it?

18 A. I passed the information to let him know that, yes, the injured
19 was coming ashore.

20 Q. Would it shock you to learn—and maybe we might be given a
21 different response from some other witness—that the first time
22 after Christopher was taken from berth 5, or thereabout—6,
23 sorry, that the first time anyone from incident management
24 team may have attempted to speak with him—sorry. Chairman,
25 do forgive me—not attempted, but actually from what the
26 statements claim, that the first time that Christopher was
27 actually spoken with was ten o'clock or thereabouts?

1 A. I wouldn't have that information.

2 Q. No. Were you interested to find out about his condition?

3 A. Yes.

4 Q. Were you interested to find out what he had to say?

5 A. Yes.

6 Q. Did you make any enquiry?

7 A. Yes, I asked—

8 Q. From whom?

9 A. From the personnel on the barge, "What did he say".

10 Q. Right. And you learnt, to repeat ourselves *ad nauseam*, that
11 men were right behind and saveable at that point in time.

12 Correct?

13 A. Yes, he indicated—

14 Q. You have, of course, paid close attention to the proceedings
15 thereafter. You know that there was an audio recording of
16 these men whilst they were in that pipeline. Yes?

17 A. No.

18 Q. You never even heard that there was an audio recording?

19 A. No.

20 Q. And, therefore, you never even—well, certainly if you didn't
21 know of it you didn't hear it. Would it shock you to learn that
22 there was an audio recording with these men speaking to each
23 other within the pipeline, alive, and viable?

24 A. I can't say. I mean, I have to hear it.

25 **Mr. Peterson SC:** Mr. Chairman, that's an unfair composition
26 of a question. My friend must be aware that that audio was
27 only released to the Commission the Friday before we started,

1 and it was played on the Monday. So no one knew of that until
2 the Commission was provided with it by OSH.

3 **Mr. Chairman:** Well, he can ask him if he knew of its
4 existence, and he said no. Right. It's not made generally
5 available on the website.

6 **Mr. Ramadhar:** Oh, it's not? I'm sorry.

7 **Mr. Chairman:** No. I made it clear that it wouldn't be, for
8 obvious reasons.

9 **Mr. Ramadhar:** Well, I know I heard it on the radio, so that's
10 why. Forgive me.

11 **Mr. Chairman:** Well, the part that was played in this hearing
12 during the opening, of course, that was public to everyone, but
13 we deliberately kept it short and deliberately kept it within a
14 small compass, and I've made it clear that whilst it's available
15 to the lawyers and those directly engaged in this matter, it is not
16 available, generally, to the public, and I will not make it
17 available generally to the public. It is not necessary to do so.

18 **Mr. Ramadhar:** I know. It's painful. It is beyond painful.
19 Thank you so much, Chairman.

20 **Continued Cross-Examination By Mr. Ramadhar:**

21 Q. So your function came to an end that evening at around 2.00
22 a.m.?

23 A. No, it didn't.

24 Q. Is there a white board at your office, back on shore—an event
25 board or something, whatever you want to call it?

26 A. I'm not sure.

27 Q. Was there an office of the incident command team?

1 A. Yes, there was.

2 Q. Did you ever enter that office—

3 A. Um.

4 Q. —after the incident?

5 A. On occasions.

6 Q. When did you next enter that office?

7 A. I would go in on the mornings of picking of shift to get my
8 instructions.

9 Q. Right. When next after the incident did you enter that office?

10 A. That would have been the next morning, Saturday morning.

11 Q. Saturday morning. Did you see and speak to any member of
12 the incident command team there that morning?

13 A. In the room?

14 Q. Yes.

15 A. I got—Mr. Piper instructed me at that point, yeah.

16 Q. What time?

17 A. I can't recall what time he spoke to me.

18 Q. What time did you come to duty?

19 **Mr. Chairman:** Ten o'clock.

20 **Mr. Harrichan:** Ten o'clock.

21 **Continued Cross-Examination By Mr. Ramadhar:**

22 Q. Yes. Did you have a look at any white board with the incident
23 notations on it?

24 A. No.

25 Q. Did you know at any stage as to when a decision was made by
26 the incident command team—forget when it was communicated
27 to you—but when a decision was made that it will be too

1 dangerous to endeavour a rescue?

2 A. No.

3 **Mr. Chairman:** Were you ever told that there was going to
4 be—that it was too dangerous to rescue by anybody?

5 **Mr. Harrichan:** No.

6 **Mr. Chairman:** No. Thank you.

7 **Mr. Ramadhar:** Mr. Chairman, I'm so grateful to you. Mr.
8 Harrichan, thank you, Sir.

9 **Mr. Harrichan:** Thank you.

10 **Mr. Chairman:** Anyone else? Mr. Peterson?

11 **Mr. Peterson SC:** Just one question.

12 **Mr. Chairman:** Is there something useful you can add, Ms.
13 Alfonso?

14 **Ms. Alfonso:** I don't want to add anything. I wanted a couple
15 questions answered, Mr. Chairman. I didn't have anything
16 useful to add. I was hoping Mr. Harrichan would help us with
17 some things.

18 **Mr. Chairman:** All right. Go on, then.

19 **Ms. Alfonso:** And I promise to be brief.

20 **Cross-Examination By Ms. Alfonso:**

21 Q. Good morning, Mr. Harrichan?

22 A. Yes. Good morning.

23 Q. My name is Nyree Alfonso, and I represent the interest of
24 SWWTU. Mr. Harrichan, could you tell us how long you've
25 worked with Paria?

26 **Mr. Chairman:** We've had the answer to that.

27 **Ms. Alfonso:** Okay. I'm sorry, I missed it. I probably was

1 outside the door. Okay.

2 **Continued Cross-Examination By Ms. Alfonso:**

3 Q. You worked with Petrotrin prior to Paria?

4 A. Yes.

5 **Mr. Chairman:** We have the answer to that too.

6 **Ms. Alfonso:** Okay. Thank you very much.

7 **Continued Cross-Examination By Ms. Alfonso:**

8 Q. So you've been there for some time?

9 A. Yes.

10 Q. Okay. You are Mr. Ramdhan's senior officer? He's junior to
11 you and you are senior to him?

12 A. Yes.

13 Q. At the time. I know you're no longer there.

14 A. Yes.

15 Q. At the time. At some point—where Mr. Boodram came up,
16 was that on berth 6 or was it on the barge? Where he was
17 brought up, it's closer to the barge, on the side of the barge?

18 A. He came up close to the riser, that was probably midway
19 between the barge and the berth.

20 Q. And you were on the berth?

21 A. Yes.

22 Q. What is the distance between where you were on the berth,
23 berth 6, and where Mr. Boodram would have come up?

24 A. The straight line distance you're talking 'bout?

25 Q. Yes.

26 A. Maybe about 20, 30 feet.

27 Q. Okay. So how would you get to that 20, 30 feet? You have to

1 walk across something?

2 A. You mean how I would get to the barge?

3 Q. Yes, how you'd get to the barge from berth 6?

4 A. Right. So from berth 6 you will walk along the berth. Then
5 there's a catwalk that extends maybe 200 feet, maybe, maybe
6 100 feet. There's a dolphin; you'd climb down the dolphin and
7 then get on to the barge from there and then walk back down
8 towards the berth.

9 Q. Okay. And if you're walking or climbing as the case may be,
10 how long would that take for you—for you? When you left
11 berth 6—not generally—when you left berth 6 and you were
12 making your way onto the barge, how long that have taken
13 you? You said 20, 30 feet, but it's as the crow flies. Right?

14 A. Yeah.

15 Q. But you're not jumping it over. You're walking down the
16 catwalk and you're coming across the dolphin and you're
17 reaching there. How long would it take you to get there?

18 A. A couple minutes.

19 Q. A couple minutes. Two? Three?

20 A. I can't say for sure.

21 Q. So following from Mr. Ramadhar's question to you, it would
22 only have taken you two to three minutes to leave where you
23 were on berth 6 to reach to where Mr. Boodram was brought
24 up?

25 A. Yes.

26 Q. Okay. Thank you very much for that, Mr. Harrichan. At some
27 point in time, Mr. Harrichan—and I promise I'm not going to

1 ask you much after this—did you receive an instruction from
2 Mr. Piper to—I don't want to say—I want to say to send Mr.
3 Farah, or you and Mr. Farah to make your way—Andrew
4 Farah, the diver—

5 A. Yes.

6 Q. —to the Incident Command Centre?

7 A. Yes.

8 Q. You did?

9 A. Yes.

10 Q. And that was around what time? You could help us?

11 A. Yes, sure.

12 Q. Around five, perhaps?

13 A. Let me get the time for you. Yes, around 1700.

14 Q. Okay. I'm like Mr. Ramadhar. You have to forgive us. I start
15 taking away two in my head. So it's five o'clock?

16 A. Yes 5.00 p.m.

17 Q. Okay. So at that time Mr. Farah was the only remaining diver,
18 as far as you knew, for LMCS?

19 A. Yes, correct.

20 Q. On site?

21 A. Yes.

22 Q. As far as you knew?

23 A. As far as I know.

24 Q. Yes. Did you find it at all strange to remove the one diver that
25 was present and to send him to the shore?

26 A. No, because there was no diving taking place at the time.

27 Q. There's no diving taking place. If a rescue had to be done,

1 would it be done by divers?

2 A. Yes.

3 Q. Okay. But the one diver that was available was being ferried
4 back on Mr. Piper's instruction to you?

5 A. Yes, correct.

6 Q. To the shore?

7 A. Yes.

8 Q. And at some point in time Mr. Farah, I beg your pardon,
9 received some information?

10 A. Yes.

11 Q. And that information was that knocking was heard or noise was
12 heard?

13 A. Yes.

14 Q. And he asked to come back to the barge?

15 A. I don't know if he asked—

16 **Mr. Chairman:** Forgive me. I'm sorry. Just wait a minute.
17 All of this is in his statement. The purpose of providing it to
18 everybody in advance is that they know what is in the
19 statement. You haven't asked anything yet, with the greatest of
20 respect, that has given us any fresh or new information. The
21 purpose of permitting cross-examination by anybody is to try
22 and elicit fresh or new information that we can as
23 Commissioners take into account in deciding what the outcome
24 of this Enquiry will be.

25 You've been asking questions for some time. All of the
26 answers to your questions are on his statement. So if there's
27 something you want to lead up to, just ask that question so that

1 we know where we are. All right?

2 **Ms. Alfonso:** Okay. So I would say this. Thank you very
3 much, Mr. Chairman.

4 **Continued Cross-Examination By Ms. Alfonso:**

5 Q. I have noted in your witness statement that you say that you
6 gave the directive to return to the barge with Mr. Farah on
7 learning of that information that I just identified.

8 A. No. I informed Collin and he told me to have Andrew Farah
9 return.

10 Q. Okay. Would you be surprised if you knew that Mr. Farah says
11 something different? He says that he demanded that the captain
12 turn the vessel around.

13 A. I can't say.

14 Q. You can't say. Thank you very much, Mr. Harrichan.

15 A. Sure.

16 **Mr. Chairman:** Okay, thank you. Mr. Peterson?

17 **Mr. Peterson SC:** One question, Mr. Chairman.

18 **Cross-Examination By Mr. Peterson SC:**

19 Q. Mr. Harrichan, you got instructions from Mr. Piper to indicate
20 to persons there at the berth and the barge not to dive into the
21 pipe. But after that instruction, persons continued to dive,
22 didn't they?

23 A. Yes, correct.

24 **Mr. Peterson SC:** Right. Thank you, Sir.

25 **Mr. Chairman:** Yes, thank you. Just one thing, please.

26 **Examination By Mr. Chairman:**

27 Q. Were you aware that Mr. Dobson went back with Mr. Boodram

1 on the boat, whatever boat it was, back to shore—escort him?

2 A. I know that an HSE person from Paria Kenson went with him
3 but I'm not sure if it was Dobson or someone else.

4 Q. We noticed. But you were aware at the time that there was
5 somebody accompanying him?

6 A. Yes, correct, yes.

7 Q. And who was—were you aware that he was able to—that he
8 was medically qualified in some, not as a doctor, but, you
9 know, medically qualified?

10 A. Yes.

11 Q. Did you consider it might have been useful if you'd suggested
12 that he accompany him all the way to the hospital so that he
13 might be able to ask the very questions that you wanted to ask?

14 A. I didn't know what the procedure was, if they were taking him
15 to the hospital with Petrotrin's ambulance, Paria's ambulance,
16 and he would be accompanied with him or if they were taking
17 him away with a government ambulance. So I wasn't—I'm not
18 aware.

19 Q. Right. Whichever ambulance he went in it clearly would make
20 some sense that somebody should accompany him both for his
21 own welfare and for the welfare of those that remained in the
22 pipe in order to try and discover as much information as he was
23 able to give?

24 A. Yes.

25 Q. All right. Anyway, you recognized that it was important to try
26 and speak to Mr. Boodram because he was in the position that
27 he was in?

1 A. Yes.

2 Q. Yeah. Unfortunately, you got there too late and he already was
3 being carted away?

4 A. Yes.

5 **Mr. Chairman:** All right. Thank you very much. Unless
6 anybody has got anything to ask arising from that—Mr. Wilson
7 has questions.

8 **Examination By Commissioner Wilson:**

9 Q. Good morning.

10 A. Good morning, Sir.

11 Q. From your statement I saw that you are trained in the permit to
12 work system and up to the level of an Area Authority. Were
13 you the area authority on that day?

14 A. Yes.

15 Q. Okay. From your training in the permit to work system,
16 supplemental certificates that are attached to the certificate—or
17 the permit to work, sorry—what are they in service of, to the
18 best of your knowledge or from your training?

19 A. Hot work.

20 Q. Just hot work?

21 A. In Paria only hot work at that time, yes.

22 Q. Only hot work at that time?

23 A. Yes.

24 Q. But in the work scope instructions, I saw this morning that the
25 pipeline was supposed to be isolated and deisolated. Is that
26 true?

27 A. Yes.

1 Q. All right.

2 **Commissioner Wilson:** Can I have the permit pulled up,
3 please? Permit to work.

4 **Continued Examination By Commissioner Wilson:**

5 Q. So you as the area authority, you're saying that there was a
6 requirement to isolate the pipeline for the—in service of
7 executing the scope of work that morning?

8 A. Yes.

9 Q. Right. I would like to bring your attention to the permit to
10 work, please.

11 **Commissioner Wilson:** If we could go down to
12 “Requirements for Equipment Isolation and Clearance”—

13 **Continued Examination By Commissioner Wilson:**

14 Q. Also, sorry, let me back it up a bit. I also heard mention of an
15 isolation checklist.

16 A. Yes.

17 Q. So since the work instruction indicated that the pipeline needed
18 to be isolated, was an isolation checklist completed and then
19 supported with an isolation certificate?

20 A. Paria only has an isolation checklist, and that was completed.

21 Q. Okay. So if I could go down to No. 3. So certificates/checklist
22 required. So I'm seeing certification number and/or not
23 applicable. I'm not seeing anything even referencing an
24 isolation checklist. And from the permit to work it looks as
25 though coming out of a checklist—and I'm alive to
26 correction—that there is supposed to be a certificate if there's
27 going to be an isolation.

1 A. Yeah, there was an isolation checklist.

2 Q. Checklist?

3 A. Yes.

4 Q. Okay. And you're saying in the permit to work, coming out of
5 an isolation checklist, an accompanying certificate is not
6 attached to the work permit as a supplemental certificate or
7 document?

8 A. No, not from my understanding of the permit to work.

9 **Mr. Chairman:** I can't hear you.

10 **Mr. Harrichan:** Not from my understanding from the permit
11 to work.

12 **Continued Examination By Commissioner Wilson:**

13 Q. In the isolation checklist, what are some of the components that
14 an isolation checklist would address in a—

15 A. So the isolation checklist that Paria has addresses where the
16 isolations were done and it addresses what time they were
17 inserted and removed.

18 Q. Okay. That's it? That's a checklist—a two-point checklist?

19 A. Well, it has a drawing showing where the system is isolated as
20 well.

21 Q. Okay. Now, in your training in permit to work and/or as an
22 Area Authority, what is the purpose of an isolation?

23 A. The isolation checklist?

24 Q. Not checklist, just isolating, whether it's mechanical, electrical,
25 process. Why do we isolate?

26 A. Well, in the case of the pipeline, you're isolating to prevent
27 hydrocarbons from entering into the workspace. So isolation is

1 to prevent hazards from coming into the workplace.

2 Q. Okay. So the thinking was, there was never any potential
3 stored energy inside or outside of the pipeline? It was just for
4 hydrocarbons?

5 A. For the hydrocarbons, yes.

6 Q. Okay. Also, under your roles and responsibilities, this goes
7 back to planning, in terms of having an idea of the amount of
8 barrels to be displaced or the amount of product in the pipeline
9 to be displaced, is it in your experience, given your roles and
10 responsibilities, that a Certificate of Environmental Clearance is
11 to be obtained before such activities, or is that Paria's practice?

12 A. That the certificate supposed to be obtained before which
13 activities? Clearing—line clearing?

14 Q. Clearing a pipeline?

15 A. No, I've never seen that done.

16 Q. Never seen it coming from the EMA?

17 A. No, I've never seen it from Paria.

18 Q. Okay. It's not a practice of Paria?

19 A. Yes.

20 Q. Okay. Thank you very much.

21 A. You're welcome.

22 **Mr. Chairman:** Yes. Thank you very much. You're free to
23 go.

24 **Mr. Harrichan:** Okay, thank you.

25 **Mr. Chairman:** And you can stay or go as you please. All
26 right? But thank you for coming.

27 **Mr. Harrichan:** Okay, thank you.

1 **Mr. Chairman:** I appreciate it. Thank you very much. All
2 right. Let's move to our next witness who I believe is Mr.
3 Marjadsingh.

4 **Mr. Maharaj SC:** Yes. The next witness is Mr. Houston
5 Marjadsingh.

6 **Mr. Chairman:** Yes. He's a Kenson employee, isn't he?

7 **Mr. Maharaj SC:** Yes.

8 **Mr. Chairman:** Yes, thank you.

9 **Mr. Maharaj SC:** Ms. Vijaya Maharaj would lead his
10 summary.

11 **Mr. Chairman:** Thank you. So Mr. Marjadsingh, please?
12 Thank you. Do you have questions for him, Mr. Maharaj?

13 *[Mr. Houston Marjadsingh sworn]*

14 **Mr. Marjadsingh:** I, Houston Marjadsingh, solemnly swear
15 that the evidence I shall give to the Commission in this case
16 shall be the truth, the whole truth, and nothing but the truth.

17 **Mr. Chairman:** Mr. Marjadsingh, take a seat. Thank you. If
18 you take that bottle away; thank you. What's going to happen
19 next is, Ms. Maharaj is going to read a summary of your
20 evidence. All right? Listen to it carefully, please, and in the
21 end if you agree with it you'll tell her you do. If there's
22 anything else you want to say about it, you can. All right? And
23 that, hopefully, will mean that your evidence will be shorter.

24 After that, Mr. Maharaj, he will be asking you some
25 questions. I anticipate we'll have lunch in the middle of
26 somewhere and then a number of the other lawyers here will
27 ask you some questions. So I'm afraid you're certainly going

1 to be required after lunch. All right? But if you pay attention,
2 first of all, to what Ms. Maharaj has to say, and then we can
3 proceed from there. Thank you very much.

4 **Ms. Maharaj:** Thank you.

5 Mr. Houston Marjadsingh submitted a witness statement
6 to the Commission dated 2nd December, 2022. He declined to
7 be interviewed by the Commission. His witness statement is at
8 the supplemental witness statement bundle, page 3049.

9 Mr. Marjadsingh is a Maintenance Technician at Paria
10 Fuel Trading Company. He began working at Paria in or
11 around August 2021. From the commencement of his
12 employment at Paria he was under the direction of his
13 supervisor, Mr. Terrence Rampersadsingh, Paria's Maintenance
14 Planner, who gave him directions on what work he was
15 supposed to do generally and on a daily basis.

16 As a Maintenance Technician he was assigned an office
17 at Paria, had a Paria email address, and a Paria identification
18 card. He was familiar with the works being carried out by
19 LMCS which started in January 2022 and was suspended on the
20 17th February because LMCS, under the supervision of its
21 employee, Dexter Guerra, sent a barge out to sea without the
22 required work permit. This led to Paria suspending the works
23 and Dexter Guerra being demoted. The works resumed on the
24 25th February.

25 Mr. Marjadsingh had seen the scope of work of LMCS.
26 The scope of work he refers to is exhibited at page 3058 of his
27 witness statement. He was aware that LMCS was a specialist

1 contractor providing all required supervision for the works they
2 were doing at berth 5 and 6. Mr. Marjadsingh says that he had
3 to be able to follow the job as laid out in LCMS' scope of
4 works to report to his supervisor daily on what percentage of
5 the job was completed, but he was not a supervisor and did not
6 have to supervise LMCS. Mr. Marjadsingh met with Mr.
7 Rampersadsingh in the week prior to the recommencement of
8 the works. Also on the morning of the 25th February he spoke
9 to Mr. Rampersadsingh in the presence of another Maintenance
10 Technician, Mr. Mangalee. On both occasions Mr.
11 Rampersadsingh told him what to do whilst LMCS was doing
12 the works.

13 On 25th February Mr. Rampersadsingh informed Mr.
14 Marjadsingh that there was to be a CARBER test on both berths
15 5 and 6 and the removal of the old riser and the installation of
16 the new riser section at berth 6. Mr. Marjadsingh explained that
17 his job for the 25th February, based on the instructions he
18 received from Mr. Rampersadsingh, was to do the following:

19 One, fill out the work permit; two, ensure there was an
20 inspection of the CARBER test at berths 5 and 6; and, three,
21 supply material where needed to LMCS.

22 On the morning of the 25th February, Mr. Marjadsingh
23 filled out section A of the work permit based on the information
24 he received from Mr. Rampersadsingh and he attached the
25 relevant documents. He signed the form as the applicant. The
26 form was authorised by the Offshore Team Supervisor, Mr.
27 Johnathan Ramdhan of Paria, a contractor representative Mr.

1 Rudolph Gonzales of LMCS also signed the form.

2 Mr. Marjadsingh stated that he did not approve any of the
3 documentation on the permit to work which was issued to
4 LMCS. He further stated it was not his job to approve LMCS'
5 method statement and job safety analysis as he did not have the
6 expertise to do this. The documents were approved before they
7 were handed over to him.

8 Mr. Marjadsingh stated he did not have specialist
9 knowledge about the job LMCS was doing because as a
10 Maintenance Technician he only knows of the work relative to
11 his field. He further stated that on the 25th February LMCS
12 had its supervisors on site. He recalls the following persons
13 being present at berth 6 on the 25th February. One, Andrew
14 Farah, LCMS' Dive Supervisor, whose job was to constantly
15 monitor the camera and have communication with the divers in
16 the chamber; two, Victor Dhillpaul, LCMS' Safety Officer;
17 and, three, Kazim Ali Jr., LCMS' supervisor. He further states
18 that Rudolph Gonzales was the LMCS supervisor on berth 5.

19 It was Mr. Marjadsingh's belief that LMCS was to
20 supply all supervision for the works and all labour, materials,
21 equipment, project engineering, transportation, consumables,
22 and insurance required to perform the works being conducted at
23 berth 6.

24 On the morning of 25th February Mr. Marjadsingh issued
25 the permit to work to LMCS supervisor, Kazim Ali Jr., and,
26 thereafter, LMCS commenced their work for the day. Mr.
27 Marjadsingh then boarded a launch vessel and proceeded to

1 berth 5 to monitor another maintenance job and keep his
2 supervisor updated accordingly. Upon his arrival at berth 5 he
3 participated in a toolbox meeting conducted by LMCS
4 supervisor, Rudolph Gonzales, and he recalls there was a
5 discussion on the CARBER test to be performed on berth 5 that
6 day. He remained on berth 5 on that day from the morning to
7 the early afternoon period and then went to berth 6 for a status
8 update and also to update his log for the day.

9 When he arrived at berth 6 he spoke to Andrew Farah to
10 find out if his team was getting through with the job. Mr. Farah
11 said yes and Mr. Marjadsingh then went to the screen monitor
12 on berth 6 and saw one of the divers in the chamber. He then
13 moved away from the screen. About 10 minutes later Mr.
14 Marjadsingh felt a shake on berth 6 and heard a noise. He
15 immediately went back to the monitor to see if something had
16 happened in the chamber and noticed the camera was not
17 focused in the chamber and it appeared to be showing the wall
18 of the chamber.

19 Andrew Farah was at the monitor as well. Mr.
20 Marjadsingh then asked Mr. Farah what happened but Mr.
21 Farah did not know. Mr. Farah went on the barge, put on his
22 dive gear, and went into the water to go inside the chamber to
23 see what had happened. Mr. Farah came back within 10
24 minutes and said he did not see anyone inside the chamber. Mr.
25 Marjadsingh then notified the operator, Mr. Scott, that
26 something may have gone wrong and also notified his co-
27 workers on shore.

1 Mr. Ramdhan came on site and deployed launch vessels
2 to search the surrounding areas for the missing divers. Mr.
3 Marjadsingh stayed on berth 6 until about 11.00 p.m. to see
4 what happened and to see whether they could locate the missing
5 divers. He played no role in the search efforts.

6 Is that a correct summary of your evidence, Mr.
7 Marjadsingh?

8 **Mr. Marjadsingh:** Yes, correct.

9 **Ms. Maharaj:** Thank you.

10 **Mr. Chairman:** Just before you ask any questions, may I just
11 confirm with you, please?

12 **Examination By Mr. Chairman:**

13 Q. You, I think, started working at Paria in August of 2021. Is that
14 right?

15 A. Yeah, correct.

16 Q. What were you doing before that?

17 A. Well, I have my own contracting business, and then before that
18 I used to work in Petrotrin. So when we got sent home from
19 Petrotrin, I opened up my own business.

20 Q. So you were working, first of all, with Petrotrin and when that
21 folded, there was a period when you were running your own
22 business as what? A consultant?

23 A. No, a contracting business doing maintenance work as well as
24 commercial buildings and property. And then in-between I
25 would work in one or two shutdowns.

26 Q. Right. So what sort of experience did you bring to this
27 particular task as a technician—Maintenance Technician?

1 A. Well, from my experience of working throughout the Point
2 Lisas area and within the refinery; so ah would have got
3 knowledge in pipefitting, fabricating, mechanical-wise.

4 Q. For how long?

5 A. I started to work in the oil and gas industry since in 2010.

6 Q. All right. Thank you. If you bring your chair—don't switch
7 that off and on. Leave it on. Bring your chair—that's it. And
8 if you speak there, then I think we'll all hear you. Slow down
9 just a little bit, all right, because I have to try and make a note
10 of what you're saying. Thank you very much.

11 Mr. Maharaj is going to ask you a few questions. All Right?

12 **Cross-Examination By Mr. Maharaj SC:**

13 Q. Mr. Marjadsingh, do you have any experience in offshore
14 subsea maintenance work?

15 A. No, not subsea, no.

16 Q. I have a report from OSHA, and just for the record, it's in Core
17 Bundle Volume 3, and it's at page 1239. And it says that:

18 "The Applicant to the permit, KOSL, Maintenance
19 Technician—Mr. Houston Marjadsingh, stated that he
20 has seven (7) months' experience in PARIA, and his
21 prior work experience was in construction and pipe
22 fitting."

23 Was that correct?

24 A. Yeah, correct.

25 Q. And you said you had no experience in offshore subsea
26 maintenance works?

27 A. Yeah, correct.

1 Q. And you were the applicant for this work permit, not so? You
2 signed as applicant. Am I correct?

3 A. Yeah, correct.

4 Q. Yes. And in paragraph 7 of your witness statement, you said
5 that in order for you to carry out your duties as Maintenance
6 Technician you had to be able to follow the job as laid out in
7 LMCS scope of works. You see that?

8 A. Yeah, correct.

9 Q. Correct. And you exhibited to you witness statement the scope
10 of works that you were referring to?

11 A. Yes.

12 Q. Correct?

13 A. Yes, correct.

14 Q. And I take you to page 3065 of the scope of works at paragraph
15 312. And you'll see there that it's "apart from cut, insert,
16 migration barrier, et cetera", and then you see "Note". Well, let
17 me read it.

18 "Cut, insert migration barrier and install a 30"Ø flange
19 onto the existing line. Inspection requirement for the
20 flange 100% PT (including root [*sic*] passes). VT and
21 hydrotest. Note video stream to be provided top side
22 during work activity for Paria's representative."

23 You see that?

24 A. Yes, I see it.

25 Q. And do you interpret that to mean that while the work was
26 being done, while work was being done on the 25th February,
27 2022, that a video stream was to be provided for Paria's

1 representative to view the works?

2 A. Yeah, correct.

3 Q. And from your experience that occurred whilst you have been
4 working with Paria? That happens? A video stream is there
5 and Paria's representative would view the works?

6 A. Yeah, correct.

7 Q. And would view the works, to monitor the works in order to
8 ensure compliance?

9 A. Yeah, to monitor.

10 Q. Permit to work. On the 25th February, you were present at the
11 time these works were being done?

12 A. I was on berth 5, because we were doing the CARBER test first
13 on berth 5. So I went to berth 5 first.

14 Q. First. But you came back—you came at berth 6 after?

15 A. A little while after.

16 Q. And when you came back at berth 6, were the works going on
17 with respect to what had to be done at berth 6?

18 A. At the time I reach at berth 6, yeah, the guys was inside the
19 chamber.

20 Q. The guys were inside the chamber. And what time—was that
21 in the afternoon, sometime in the afternoon?

22 A. Yeah, dah was in the afternoon.

23 Q. Around what time that would have been?

24 A. By the time I reach on berth 6 was around after 2.00.

25 Q. After 2.00?

26 A. Yeah.

27 Q. And how long you remained at berth 6?

1 A. Well, according to my statement I stayed on berth 6 until
2 around 11.00.

3 Q. Until 11.00. Well, you know that the works—you were the
4 applicant for the work permit, so you knew that the work was to
5 be done in accordance with the work permit. Not so?

6 A. Correct.

7 Q. And did you look on the video stream to see that the works
8 were being done in accordance with the work permit?

9 A. Right. So at the time that I looked at the monitor, I just saw one
10 person but he was just at the flange standing. He was not doing
11 any mechanical work or anything. He was just at the flange
12 standing up.

13 Q. All right. He was at the flange standing up. And did you
14 continue to look?

15 A. No. I just saw him by the flange standing up. I ain't see no
16 mechanical work going on so I went to a different point. So I
17 didn't stay long by the monitor.

18 Q. But you knew that afternoon that the work which had to be
19 done was to insert the new riser?

20 A. Yes.

21 Q. Right. So you saw one of the men at the pipe. And were you
22 interested to see whether they were complying with the terms of
23 the work permit?

24 A. Yeah.

25 Q. Well, did you decide to remain to look and see what was
26 happening?

27 A. No. Well, remember, I would get feedback from the

1 supervisor.

2 Q. And who was the supervisor?

3 A. Junior, Kazim. But at the time when I was on the berth he was
4 in the water, so it would have been impossible for me to get a
5 proper update, and he would be the onlies' one I would go to, to
6 get an update.

7 Q. So you would get an update from Junior Kazim who was
8 employed by LMCS?

9 A. Yes, because he was the supervisor for the site.

10 Q. But you were representing Paria?

11 A. Correct.

12 Q. And you were representing Paria to ensure that there was
13 compliance with the works being done by LMCS?

14 A. Correct.

15 Q. Because if LMCS was not doing the works in accordance with
16 the work permit, you would have to stop the works, not so?

17 A. Yeah, correct.

18 Q. Okay. So the works involved having this new riser inserted.
19 Correct?

20 A. Yeah.

21 Q. You saw one of the workers, according to you, one of the divers
22 over the pipe seeing about—exactly what you saw?

23 A. Well, I saw him and he was just standing up by the flange,
24 touching the flange face. So I don't know if he was cleaning
25 the flange face or what exactly, but his hand was on the flange
26 face.

27 Q. But you knew—what work you knew had to be done with

1 respect to that pipe that afternoon?

2 A. Yes, correct.

3 Q. What work you knew had to be done?

4 A. Well, I know we had to conduct the CARBER test and
5 install the riser section—[Inaudible]

6 Q. And according to you, according to you, you had a work permit
7 and on that work permit says, “Migration Barrier to be used”?

8 A. Yeah, correct.

9 Q. And would you agree with me that one of the things that you
10 had to ensure happened that day was that the LMCS workers
11 complied to ensure that the migration barrier was used?

12 A. Okay, correct.

13 Q. And the migration barrier had to be used in respect of the job to
14 insert the new riser?

15 A. Correct.

16 Q. So here it is, your job that day was to monitor this work.
17 Correct?

18 A. Yeah.

19 Q. So you saw one of the men over the pipe. Could you tell us
20 why you didn't stay to monitor to see whether the job was
21 being complied with?

22 A. Right. So let me explain. I not have to station by the monitor.
23 Right? The monitor is there for me to do checks when I am
24 passing on the site. So they have a guy who would be stationed
25 there who is seeing about the divers, which is the dive master.
26 So the monitor is basically for me to come and oversee, take a
27 look, everything assume, everything looking normal, and I go

1 to the berth, I check the other employees, and conduct my job
2 for the day.

3 Q. What was the most important thing you thought that you had to
4 do that afternoon with respect of those works? Not to monitor
5 to see how the work was being done?

6 A. Yeah, monitor.

7 Q. Yes. And you had to monitor it continually?

8 A. Right.

9 Q. Correct?

10 A. Periodically.

11 Q. Periodically?

12 A. Yeah. Not constantly stay by the monitor and watch each job
13 step.

14 Q. So are you telling us that Paria didn't give you instructions to
15 monitor the work continuously?

16 A. No. I don't have to station. That was not my instructions to
17 stay at the monitor and watch the work whole day.

18 Q. From your experience at Paria, does anyone at Paria monitor
19 works like this when it is being done continually?

20 A. Once we doing work, remember, sometimes we have two or
21 three works to see about for the day. So it's not really possible
22 that we could stay at one spot all the time.

23 Q. All right. I'll come back to that when I look at the permit to
24 work rules with you. Right? So let's look—but you would
25 agree with me that this video stream is to be used for the—in
26 order to see that the works are being done in accordance with
27 the rules. Not so?

1 A. And also for the Dive Master to watch over his guys.

2 Q. And who was the Dive Master?

3 A. Mr. Farah.

4 Q. Mr. Farah. So you had an LMCS representative there. Right?
5 But did you have a Paria—who was the Paria's representative
6 to monitor the works?

7 A. Well, I working Kenson on behalf of Paria.

8 Q. Paria. And Paria gave you instructions what to do?

9 A. Yeah.

10 Q. Right?

11 A. Uh-huh.

12 Q. And although you are Kenson employee, you take instructions
13 from Paria?

14 A. Correct.

15 Q. And you work at Paria?

16 A. Correct.

17 Q. And your job is to—the instructions you get from Paria, they
18 tell you what to do and how to do it?

19 A. Correct.

20 Q. Correct. So let's go to the scope of works that you said that you
21 referred to that your duties are. You see at page 3070 under
22 Paria's responsibility, 4.3. You see 4.3? You see that?

23 A. What page?

24 Q. 3070; the page number is at the bottom. It's on the screen.

25 A. Yeah.

26 **Mr. Maharaj SC:** In the core bundle it would be at Volume II,
27 Mr. Chairman, and it starts at page 558.

1 **Continued Examination By Mr. Maharaj SC:**

2 Q. You found it, Mr. Marjadsingh?

3 A. Yeah.

4 Q. 4.3, Paria's Responsibility.

5 "Provides slop barge (capacity 40 barrels) to assist in
6 the removal of line content."

7 What do you understand that as the applicant for this work
8 permit to be?

9 A. Exactly what it says: to provide the slop barge.

10 Q. For the oil—for the line contents?

11 A. Yeah, for the oil contents, yeah.

12 Q. So the oil had to be drained, not so?

13 A. Yeah.

14 Q. Right. Okay. And you see 4.5?

15 A. Yeah, correct.

16 Q.

17 "Provide personnel to oversee isolation/deisolation,
18 depressurization/pressurization and draining/filling..."

19 You see that?

20 A. Yeah.

21 Q. Yes. And that was Paria's responsibility. Not so?

22 A. Yeah, correct.

23 Q. And then if we go to—well, we have the Contractor's
24 Responsibility at 5.4 on page 3071.

25 "Provide live video feed during the subsea works."

26 A. Yeah.

27 Q. And then at page 3072 you will see the—

1 "Prepare a Job Hazard Analysis (JHA) and Risk
2 Assessment for review by Paria."

3 Okay. So I want to go to your responsibilities as the applicant.
4 But before I go there, you told us that you arrived at berth 6 at
5 about 2.00 p.m.?

6 A. About after that. I say around 2.00 or after that.

7 Q. What time did this work start that day? Sometime in the
8 morning?

9 A. Yeah, correct.

10 Q. So you didn't monitor the morning period?

11 A. No.

12 Q. And the first time you start to monitor was at 2.00 p.m.?

13 A. Yeah, dah when ah reach on berth 6.

14 Q. That's after lunch?

15 A. Yeah.

16 Q. Well, let's look at—as the applicant for this work permit, you
17 knew that there were rules which applied to the applicant. Am I
18 correct?

19 A. Yeah, correct.

20 Q. And they are contained in the permit to work rules.

21 **Mr. Maharaj SC:** And, Mr. Chairman and Commissioner, that
22 would be found at Volume I at page 26, but particularly at page
23 28.

24 **Continued Cross-Examination By Mr. Maharaj SC:**

25 Q. Now, before I start on this issue, you are the applicant on behalf
26 of Paria for this work permit. Correct?

27 A. Yeah, correct.

1 Q. Correct. And it says here—if you look at under Applicant it
2 says:

3 “The Applicant is the person who initiates the
4 job/activity by completing section A of the Work
5 Permit or Certificate.”

6 And that is what you did here. Right?

7 A. Yeah, correct.

8 Q. “The Applicant must have the necessary competence to
9 execute the job...”

10 Do you consider you have the necessary competence to have
11 executed these works?

12 A. Yeah, correct. Yes.

13 Q. You have the competence to execute these works?

14 A. The task for the day according to work permit, yes.

15 Q. Oh, I see.

16 A. Dah is wha’ I used to do in Petrotrin.

17 Q. Oh. So you have the competence to execute the works in
18 monitoring the job or in doing the works in the chamber?

19 A. No, well, I—all right. The work that I was doing in the
20 chamber—

21 **Mr. Chairman:** Just a minute. Could you read the entirety of
22 that sentence?

23 **Mr. Maharaj SC:** Okay, My Lord.

24 **Continued Cross-Examination By Mr. Maharaj SC:**

25 Q. “...necessary competence to execute the job, or to
26 supervise the execution of the job.”

27 Do you have any of those competence?

1 A. Yeah. The job that they was doing, right, according to the work
2 permit, right, is basically unbolting, making up of flanges, and
3 rigging. That is well within my field.

4 Q. That's all that is within your field as far as that job was
5 concerned?

6 A. Yeah.

7 Q. Yes. Then it goes on:

8 "He shall be knowledgeable of the hazards associated
9 with the job and the necessary controls for these
10 hazards."

11 A. Yeah, correct.

12 Q. "He shall be responsible for the job and for the safety of
13 people who work on the job."

14 You agree with that?

15 A. Yeah.

16 Q. Right. So let us go down to the next page, 0029. I won't take
17 you through all of this. But you see on the fourth bullet point:

18 "Continually monitor the job to ensure that it is
19 performed in a safe manner and within the conditions
20 prescribed in the Work Permit, Certificates and
21 JHA/Risk Assessment."

22 That is Job Safety Analysis, et cetera. You see that?

23 A. Yeah.

24 Q. So "continually monitor the job". But you were doing it
25 periodically?

26 A. Yeah.

27 Q. And, as a matter of fact, according to you, you came on the job

1 at two o'clock to monitor it?

2 A. Yeah.

3 Q. And after you came on the job at two o'clock you didn't
4 monitor it continuously?

5 A. Not continuously, continually, so that—basically—

6 Q. Well, not continually even. All right; let's go. You see that
7 you have the discretion to:

8 "Stop the work if there are changes in site conditions
9 that increase the risk or if new hazards are identified;
10 and promptly notify the Site Authority of these
11 changes."

12 So if you have to do this to identify if there are new hazards, et
13 cetera, don't you have to monitor the job for a long period of
14 time, at least?

15 A. Yeah, well, I was on site.

16 Q. Yeah, you were on the site. I'm talking about monitoring the
17 job. For how long, on any occasion, when you came there at
18 two o'clock you monitored the job? How long?

19 A. I don't have ah accurate time; for just a couple ah minutes to
20 the monitor.

21 Q. Were you there for the toolbox meeting for this job?

22 A. On berth 6?

23 Q. At berth 6?

24 A. No, I was not there.

25 Q. Look at page 28, the last bullet point. You as the applicant had
26 to:

27 "Ensure that pre-start meetings are conducted with the

1 work crew to discuss the job”

2 A. Correct.

3 Q. So you were not there?

4 A. Right. But they say ensure that the pre-start meeting are
5 conducted. Right?

6 Q. Yeah.

7 A. A way that I could ensure that is when I come on site I could go
8 through the documents and see that a toolbox talk was done.
9 And then from my discussion with the supervisor in the
10 morning, I would reiterate to him to make sure that the toolbox
11 talk is done and everybody sign the JHA.

12 Q. But you were not there on—I just want to get it clear. You
13 were not there that morning at berth 6 at the toolbox meeting?

14 A. No.

15 Q. But you knew that meeting was held that morning?

16 A. Afterwards.

17 Q. Yes. But you were at berth 5 at that period of time?

18 A. Correct.

19 Q. Now, I want to show you the toolbox form for berth 6. It's
20 page—volume 3.10.70. You see, Mr. Marjadsingh, I am seeing
21 you—well, let me show it to you. Look at page 1070. The last
22 name on the right-hand column, Houston Marjadsingh, and I
23 see your signature?

24 A. Correct.

25 Q. Is that your signature?

26 A. Yeah.

27 Q. So you were there at 9.15 a.m.?

1 A. No.

2 Q. So when did you sign this?

3 A. When I came on the berth and review over the documents to
4 make sure everything was signed up, ah will make sure that the
5 toolbox talk was conducted and ah woulda affix mih signature
6 to notifying that, well, a toolbox talk was conducted.

7 **Mr. Chairman:** Just pause for a minute, please.

8 **Examination By Mr. Chairman:**

9 Q. So that I understand you, your evidence on this. This represents
10 the toolbox meeting that took place on berth 6 at 9.15 on the
11 25th February of this year?

12 A. Correct.

13 Q. Toolbox meeting is a meeting which sets out what is to happen
14 and what the hazards might be?

15 A. Yeah.

16 Q. Yes?

17 A. Yeah.

18 Q. It's supposed to indicate who was present at that meeting. Yes?
19 Is that correct?

20 A. Yeah.

21 Q. So that we can be sure, if anyone wants to look later on, who
22 was there and what the discussion broadly was about. Correct?

23 A. Yep.

24 Q. You were not there. Correct?

25 A. No.

26 Q. But you looked at this form later that day. Is that right?

27 A. Yeah, correct.

1 Q. So it was on berth 6, was it?

2 A. Yeah.

3 Q. And when you examined it, did you verify with the people that
4 are listed there or Mr. Dhillpaul that this toolbox meeting had
5 taken place?

6 A. Yeah. Well, that's where ah get all the documents from. He
7 normally does keep the documents and when I—

8 Q. Who is—who?

9 A. Mr. Dhillpaul.

10 Q. So Mr. Dhillpaul gave you this document on berth 6, did he?

11 A. Yeah, correct.

12 Q. At what time?

13 A. Ah can't remember the exact time when ah reach on berth 6.

14 Q. Approximately?

15 A. Within about five minutes for me arriving on the boat, because
16 normally that will—ah will go and make sure all the
17 documents—

18 Q. Before or after lunch?

19 A. After lunch.

20 Q. Right. After lunch, so after two o'clock—

21 A. Yeah.

22 Q. —within minutes of your arriving he gave you this and then
23 you put your name on it. Is that your handwriting?

24 A. To the bottom, No. 40, yeah.

25 Q. Yes. And then you signed it, did you?

26 A. Yeah.

27 Q. Do you regard that as being compliant with the rules?

1 A. No.

2 Q. Well, why did you sign it, then?

3 A. Agreeing that ah ensure that a toolbox talk was conducted.

4 Q. So the first time that you verified that there was a toolbox
5 meeting on that day was sometime around two o'clock in the
6 afternoon?

7 A. Yeah, correct.

8 Q. Hours after the work had already commenced?

9 A. Yeah.

10 Q. How could you discharge your duties if that was the case?

11 A. I don't understand what you're saying there.

12 Q. You don't understand discharging duties?

13 A. Yeah, I understand discharging duties, but—

14 Q. Well, what was your duty?

15 A. To organize the work permits, facilitate the contractor with any
16 additional material, and arrange with inspections to come and
17 oversee the CARBER test.

18 Q. That's it? So whatever else might have happened before the
19 CARBER test, you weren't interested?

20 A. No, it's not that I wasn't interested, it's just ah was on another
21 job site.

22 Q. All right. Okay. Anyway, that's what you did.

23 A. Yeah.

24 **Mr. Chairman:** Thank you.

25 **Continued Cross-Examination by Mr. Maharaj SC:**

26 Q. Mr. Marjadsingh, what time you signed this document?

27 A. The toolbox?

1 Q. Yeah, this document; what time you signed it?

2 A. Ah doh have ah accurate time.

3 Q. You signed it the same day or the day after?

4 A. No, the same day when I came on the berth.

5 Q. Around what time?

6 A. It would be—ah doh have ah accurate time, but when I came on
7 the berth, within a couple minutes. Ah does normally go and
8 ask for all the permits to make sure safety sign, and everybody
9 sign, and the toolbox talk conducted, and the JHA, and
10 everybody sign the JHA.

11 Q. Okay. But when you wrote 9.15, you knew you were not
12 writing the correct information?

13 A. I doh have any time—you doh have a time on the toolbox.

14 Q. No, no. The meeting is 9.15. But you knew you were not
15 giving the right information to say that you were present at the
16 toolbox meeting?

17 A. No, I just—ah sign to know that, well, a toolbox talk was—

18 Q. Okay. I want to go to another issue. On the work permit
19 form—

20 **Mr. Chairman:** Can I ask, before you move on, how long do
21 you think you're going to be?

22 **Mr. Maharaj SC:** About five minutes.

23 **Mr. Chairman:** All right. Well, let's get your part done and
24 then we'll break for lunch then. You're all right to carry on
25 until after lunch?

26 **Mr. Marjadsingh:** Yeah, not a problem.

27 **Continued Cross-Examination by Mr. Maharaj SC:**

1 Q. On the form it has—you have the form before you? I think I
2 should get the form, the permit to work. It's at—I have the
3 reference 9838.

4 **Mr. Chairman:** You want the permit to work?

5 **Mr. Maharaj SC:** Yes, the permit to work.

6 **Mr. Chairman:** Page 1074.

7 **Mr. Maharaj SC:** 1074.

8 **Continued Cross-Examination by Mr. Maharaj SC:**

9 Q. You see on the comments there in the column B1; "Comments:
10 Line drained"

11 A. Yeah.

12 Q. You knew as the applicant then that the line, the sealine was
13 drained?

14 A. Yeah, from the OTS.

15 Q. From what that note says?

16 A. Yeah.

17 Q. Can you help us? Did you play any part in the draining of the
18 line?

19 A. In-between, same thing, we would arrange with the permits for
20 the draining so LMCS coulda conduct the draining.

21 Q. So you—this happened over a period of time and you were part
22 of it?

23 A. Yeah, in and out, because remember I not alone.

24 Q. Right. And would I be correct in saying from—well, could you
25 tell us, was the line completely drained?

26 A. No, I can't say that.

27 Q. You don't know?

1 A. No.

2 Q. So you don't know how much of the line was drained?

3 A. No, I don't know.

4 **Mr. Maharaj SC:** No further questions.

5 **Mr. Chairman:** All right. Well, we'll take our break there
6 now. All right? What progress are we making? We're making
7 good progress. We'll have an hour for lunch. So quarter past
8 2.00, please; quarter past 2.00.

9 You're free to go now. Don't discuss this with anybody
10 else. All right? Come back at quarter past two and we hope to
11 get your evidence done fairly quickly. All right. Thank you
12 very much. Thank you everybody. Quarter past 2.00, please.

13 **1.21 p.m.:** *Enquiry suspended.*

14 **2.19 p.m.:** *Enquiry resumed.*

15 **Mr. Chairman:** Good afternoon. Give me a moment, please,
16 Mr. Marjadsingh. Just a couple things I want to ask you, if I
17 may, please?

18 **Examination By Mr. Chairman:**

19 Q. Would you have a look at your witness statement. Yes, first of
20 all, if you look at paragraph 10 of your witness statement which
21 you were directed to, you told us that your job for the 25th
22 February was to do the following things, all right, first of all, to
23 fill out the work permit; secondly to ensure that the inspection
24 of the CARBER test of berths 5 and 6. Yes?

25 A. Uh-huh.

26 Q. And then supply material where needed. What did you
27 anticipate was to be needed by way of material.

1 A. Right. So they were bolting up the flange, right, so just in case
2 one of the bolts got damaged ah hah tuh go tuh our material
3 stall and see'f ah get a replacement one.

4 Q. Right. So you were sort of standby in the event that something
5 needed replacing of that kind?

6 A. Yes, if they want material [*Inaudible*].

7 Q. So in the ordinary way of things, you might not be needed for
8 that at all?

9 A. Yeah.

10 Q. Right. So essentially what you understood your task to be for
11 that day was to fill out the work permit as the applicant.
12 Correct?

13 A. Yeah.

14 Q. You sound a little doubtful. Is that right?

15 A. Yes, yes.

16 Q. And then, secondly, to ensure that there was your inspection of
17 the two CARBER tests that needed to be done.

18 A. Yes.

19 Q. Right. Can you look at paragraph 7 of your statement please?
20 You say in that paragraph:

21 "In order for me to carry out my duties as Maintenance
22 Technician I had to be able to follow the job as laid out
23 in LCMS' scope of works to report to my supervisor,
24 Mr. Rampersadsingh, daily on what percentage of the
25 job was completed by LMCS. However, I'm not a
26 supervisor and I did not have to supervise LMCS."

27 All right. And I accept that. All right? But one of your duties

1 as the technician was to follow the job laid out by LMCS in
2 their scope of works?

3 A. Yeah.

4 Q. Had you seen that document?

5 A. The scope of work?

6 Q. Yes.

7 A. Yes.

8 Q. Did you understand it?

9 A. Fuh my roles, yes.

10 Q. Sorry?

11 A. Yes, fuh my level, yes.

12 Q. Yes.

13 **Mr. Chairman:** Can we just have the scope of works up,
14 please, for a moment? It's in our core bundle at—somebody,
15 help me please. Yes. Forgive me.

16 *[Document passed to Mr. Marjadsingh]*

17 **Continued Examination By Mr. Chairman:**

18 Q. So can I take it that since you referred to it in your statement
19 you'd examined this document prior to this taking place on the
20 day?

21 A. Not on the day but before the total job.

22 Q. So before the 25th February you had a copy of this document,
23 had you?

24 A. Yes, correct.

25 Q. Because it's quite an old document, isn't it, bearing in mind
26 the time when you were doing this?

27 A. Yes.

1 Q. All right. The document we can see is dated the 29th April,
2 2021. Yes?

3 A. Yes.

4 Q. So it's some ten months earlier. Were you made aware if there
5 were any changes to that document or anything that should be
6 different?

7 A. Not to my knowledge.

8 Q. Not to my knowledge. All right. And you took your
9 instruction from Mr.?

10 A. Rampersadsingh.

11 Q. Mr. Rampersadsingh, at all times?

12 A. Yes, correct.

13 Q. All right. And just looking at that document, please, we have
14 already had it pointed out to us at page 565 at No. 3.1.12 that
15 there was a note there that there was a video stream to be
16 provided top side during work activity for Paria's
17 representative. And I don't want to dwell about that. You've
18 been asked about that already. Then at 3.1.21 this:

19 "The contractor shall supply video footage during the
20 subsea works. And this video must form part of the
21 handover package."

22 Do you see that?

23 A. Yes.

24 Q. So was it your understanding then that the video of the subsea
25 works was to be recorded?

26 A. Yes.

27 Q. And such a recording was to be handed back to Paria for their

1 purposes after the works had been completed?

2 A. Yes, but that might be to the end of the total—

3 Q. I'm sorry?

4 A. That could be to the end of the job.

5 Q. At the end of the job, perhaps, well, whatever. It's certainly a
6 handover of that video material?

7 A. Yeah.

8 Q. Are you aware if it was being recorded or not?

9 A. On the day of question, the 25th?

10 Q. Yes.

11 A. Ah not aware. Ah can't remember seeing it recording, but ah
12 know from previous jobs it was being recorded.

13 Q. Right. So from previous jobs you've done—at Paria?

14 A. On this same sealine here; on this same job.

15 Q. Right; the same job.

16 A. Yeah, because remember we had weld on a flange inside the
17 chamber about—I can't remember the exact date. It within the
18 work report.

19 Q. A couple of weeks before?

20 A. Right. We had weld on the flange inside the chamber.

21 Q. Right.

22 A. And on that day it was recorded.

23 Q. Yes. So you knew that previously there had been recordings,
24 and you knew that there was to be a recording or should have
25 been?

26 A. Yeah, to my knowledge, yeah.

27 Q. Right. Have you ever seen such a recording?

1 A. The day that the flange was welded—

2 Q. Uh-huh?

3 A. —ah was watching the screen and yuh could actually see that it
4 was recorded. But I didn't see like a playback then.

5 Q. Right.

6 A. I didn't see a playback.

7 Q. And on this occasion, on the 25th when this tragic event took
8 place, do you know if it was being recorded then?

9 A. No, I can't recall.

10 Q. Have you ever heard of a recording being provided?

11 A. For the day?

12 Q. Yeah?

13 A. In question?

14 Q. Yeah.

15 A. Nah, not to my knowledge.

16 Q. All right. And would you turn, please, next to paragraph 4
17 under Paria's Responsibility. You've been asked a little about
18 this by Mr. Maharaj. But can I just be clear about what you
19 understood this to be. These are what characterizes the
20 responsibilities that lie with Paria. Yes?

21 A. Yes.

22 Q. So these are their obligations. There aren't very many of them.
23 But be that as it may:

24 "4.1 Supply personnel for organizing all work
25 permits/certificates, monitoring contractor's
26 performance & work standards..."

27 That's you, really, isn't it? Or you were part of that, weren't

1 you?

2 A. Yeah, I was part of that, yeah.

3 Q. Yes. And you see that it does say “monitoring contractor’s
4 performance”?

5 A. Yeah, correct.

6 Q. And you have already agreed that you had to understand and
7 follow the job that LMCS provided in this scope of works or in
8 those scope of works in order to report to your supervisor. So
9 we can take it that you would need to understand what was to
10 be done and how it was to be done?

11 A. Yes.

12 Q. At 4.3:

13 “Provide slop barge...”

14 I’m going to skip over that. We’ve already dealt with that.

15 “4.4: Provide personnel for acceptance of work
16 executed.”

17 So that’s sort of if somebody is signing off on the work,
18 presumably?

19 A. Yeah. It could be multiple persons. It could be inspections. It
20 could be different departments.

21 Q. It could be a different department?

22 A. Yeah.

23 Q. All right. Well, I’m not going to dwell on that either. But this
24 one:

25 “Provide personnel to oversee isolation/deisolation,
26 depressurization/pressurization and Draining/filling
27 product from lines at berth #5 and berth #6.”

1 Do you see that?

2 A. Yes.

3 Q. What is isolation and deisolation?

4 A. Right. So that point would fall under the operations.

5 Q. Nothing to do with you?

6 A. No, no.

7 Q. But you have to understand it though, don't you?

8 A. Yes, yes, I understand it.

9 Q. So what is your understanding of that?

10 A. If anything need to be locked off, like, leh we say a valve or
11 something, you either close it or you open it for like the
12 draining procedure, the draining part, because—

13 Q. Opening and closing valves?

14 A. Correct. So when yuh ready to start the air blowing, yuh would
15 open up all the systems, and then when yuh finish the draining
16 fuh the day yuh would close back yuh system.

17 Q. That's what you mean by isolation/deisolation?

18 A. Correct, pertaining to the draining.

19 Q. What's pressurization/depressurization?

20 A. All right. Well, that one—that is pertaining, like, if the line
21 woulda have any pressure, yuh woulda release the pressure
22 before.

23 Q. How would you know if it had any pressure?

24 A. Well, it have a gauge on de line.

25 Q. Right. So you check the gauge?

26 A. Yeah.

27 Q. Did this particular line have a gauge on it?

1 A. Yes.

2 Q. Did you check the pressure or was that somebody else's
3 responsibility?

4 A. Yes, that was somebody else.

5 Q. Somebody else to do?

6 A. Yeah.

7 Q. All right. And then draining/filling products, somebody else's
8 responsibility?

9 A. Correct.

10 Q. Lastly, please, if you turn to paragraph 5.17—this is under the
11 contractor's responsibilities. So this is LMCS. All right? You
12 got it?

13 A. You could tell me back the page?

14 Q. Yes. It's page 572.

15 A. Yeah, ah have it.

16 Q. It says there, doesn't it:

17 "Work Schedule

18 i. Supply Work Schedule for the Entire Project with
19 Daily Updates in Microsoft Project Format before
20 work execution."

21 Had you seen that?

22 A. No.

23 Q. And then, secondly:

24 "ii. Supply Daily Look-Ahead Schedule to Paria's
25 Representative and report on job
26 Progress and expected completion."

27 Were you shown any daily look-ahead schedule?

1 A. No.

2 Q. All right. But were you able to report on job progress and
3 expected completion?

4 A. Correct, at the end of the day, yeah.

5 Q. Right. Because that you regarded as one of your
6 responsibilities, didn't you?

7 A. Yeah.

8 Q. Right. So does it follow that had this tragedy not taken place
9 on the 25th when you decided to arrive at riser No. 6, you
10 would have monitored the remainder of the works on that riser
11 so that you could tell them how far they've got—tell your
12 supervisor?

13 A. Correct.

14 Q. Yes. And did you know whether or not the barriers that were in
15 that pipe were to be removed or not?

16 A. No.

17 Q. You didn't know one way or the other?

18 A. No.

19 Q. Is that because you were not at the toolbox meeting that took
20 place at 9.15 that morning on berth 6?

21 A. No. I would have known from discussion from my superior.

22 Q. I'm sorry?

23 A. I would know from discussion with my superior for the job task
24 for the day. And from that information, that is what I know
25 would have to be done for the day.

26 Q. You see, your job as applicant is set out in the manual. Isn't it?
27 You've been taken to it by Mr. Maharaj?

1 A. Yeah.

2 Q. It includes, doesn't it—well, let me put it this way. Do you
3 regard it as your responsibility to be at a toolbox meeting as the
4 applicant?

5 A. If possible, yes.

6 Q. Only if possible?

7 A. No, well, remember, ah have multiple jobs going on at the same
8 time.

9 Q. No, no, no, I remember that. But I have it very well in mind,
10 trust me. What I'm anxious to understand is whether you
11 regarded it as—bearing in mind what your functions were, did
12 you regard it as important to be present, at the very least,
13 present, at the toolbox meeting?

14 A. As I say, yes, once that I could.

15 Q. Well, you could have, couldn't you?

16 A. No, because ah was attending another toolbox at berth 5.

17 Q. Now, the next toolbox meeting didn't take place until 9.30 and
18 it had taken place by many of the same people who had been
19 attendant upon the first toolbox meeting, or a number of the
20 same people?

21 A. No, I doh think so.

22 Q. Well, I do. And I want you to not tell me whether or not—did
23 you regard it as more important, therefore, to be at the toolbox
24 meeting at berth 5 where all that was going to happen was a
25 CARBER test, or at berth 6 where there was rather more to be
26 done?

27 A. All right. At the point of time of the job, right, is not that I say

1 that berth 6 more important than berth 5. Is just I know that
2 they was going and do the CARBER test on berth 5 first, so that
3 is why I decided to go at berth 5. So is not to say that I choose
4 that that was more important than the next.

5 Q. Did Mr. Rampersadsingh tell you to go to 5 rather than 6?

6 A. No.

7 Q. So that was of your own initiative, was it?

8 A. No. It had the jobs going on at both places. So I would go at
9 the two different locations ah de day. So we doh have a
10 specific one to go at first. But because of the CARBER test
11 being conducted first at berth 5, I went at berth 5.

12 Q. Yes. Just a minute please. Would you turn to page 1070
13 please? This is the toolbox meeting form which bears your
14 name, but you told us you weren't there. You got it?

15 A. Nah, I doh have it.

16 Q. It's at page 1070. You may not have it there. Just bear with
17 me, please, Mr. Marjadsingh. It'll be brought to you, all right.

18 This is the toolbox meeting form given by the safety
19 officer, Mr. Victor Dhillpaul. Do you see his name? If you
20 scroll down a little, please. Yes. Do you see his name at the
21 top right-hand corner of that?

22 A. Yes.

23 Q. It says "Speaker(s)", doesn't it?

24 A. Yes.

25 Q. Did you take the boat across with him?

26 A. No.

27 Q. No. But he was the speaker and the safety officer, wasn't he,

1 according to this document, delivering the toolbox meeting?

2 A. Yeah.

3 Q. Yes. Well, you told us about your name being on it. I don't
4 need to dwell upon that. But you see the time at 9.15?

5 A. Yes.

6 Q. Right. And do go over the page, please, to the next page. This
7 is a toolbox meeting being conducted at berth 5. All right? It's
8 only a few hundred yards, isn't it, between the two?

9 A. Yes.

10 Q. But a matter of minutes to get from one to the other by boat?

11 A. Technically, no.

12 Q. Or technically, yes, because I've done it, and I can tell you, it
13 takes a matter of minutes to get between one and the other?

14 A. Could I explain something?

15 Q. You can.

16 A. Okay, all right. To go from berth 5 to berth 6, right, the day
17 that you went you would have been provided with a launch
18 service immediately. But, remember, they might have other
19 operations going on within the facility.

20 Q. Right. You're saying we had a privileged trip?

21 A. If you want to say that.

22 Q. I'll say that, all right. So you just help me, though, about this.
23 Whatever the position might be, one thing is for sure, isn't it,
24 that we can see from this form that Mr. Dhillpaul also had a
25 privileged trip on that day, because he managed to deliver the
26 toolbox meetings for both?

27 A. Well, I doh know 'bout that one, but—

1 Q. Well, we do, don't we? We can see it from the form. You
2 signed it having verified that that was a toolbox meeting at
3 which you were present?

4 A. Yeah, correct.

5 Q. Right. Both you and him, according to these two forms, were
6 present at both. You tell us, and I accept, that you were not at
7 the first one?

8 A. Yeah.

9 Q. But what is clear is Mr. Dhillpaul delivered them both within
10 15 minutes of each other. Now, you explain, please, why it was
11 not possible for you to be at the toolbox meeting at 9.15 on
12 berth 6 so that you would know what was to be done on that
13 day?

14 A. All right. So could I explain now?

15 Q. Well, I'm asking you to.

16 A. Right, nice. So at the morning when I delivering the work
17 permits, right, I would talk to the supervisors, LMCS
18 supervisors, and I would explain the job right there and then I'll
19 tell them make sure the guys conduct their toolbox, because
20 they know I can't be at two places at once.

21 Q. Well, they could wait for you, couldn't they? Mr. Dhillpaul
22 managed it in 15 minutes, both delivering it and making the
23 distance between one and the other. Why couldn't you do that?

24 A. He probably have—they have a designated pirogue that stays
25 with them. So probably he could get transportation faster than I
26 could.

27 Q. Do you know Mr. Dhillpaul?

1 A. Yeah, I know Mr. Dhillpaul, yeah.

2 Q. You know he works for Paria, doesn't he?

3 A. No, LMCS.

4 Q. LMCS. Forgive me. LMCS. He works for LMCS, doesn't he?

5 A. Correct.

6 Q. Yes. Did you know that he was going to deliver these toolbox
7 meetings?

8 A. No. It could either be the safety or the supervisor.

9 Q. All right. Anyway, you didn't attend?

10 A. On berth 6, no.

11 Q. No. And you're not able to help us why that might be?

12 A. Well, only as far as ah could explain what ah already did.

13 Q. Have you ever yourself conducted a toolbox meeting?

14 A. No. If I'm there ah would just give ah—ah could give ah input.
15 They will just ask if ah want to say anything and, yeah, but not
16 to conduct it. It is not required for me to do that.

17 Q. So that being the case, you were not at the toolbox meeting,
18 which is the last opportunity to explain what is to be happening
19 on that particular day, isn't it?

20 A. You could say that, yeah.

21 Q. Yes, I am saying that. And the safety issues that might arise on
22 that specific day?

23 A. Yeah.

24 Q. You were the applicant for the work permit for that specific
25 day, weren't you?

26 A. Yes.

27 Q. Just give me a moment. Yes, thank you. It's on the screen and

1 I think you have it in front of you. Do you have it in front of
2 you? It's 1074 in our core bundle three. Yes. Just help me in
3 this way, please. Who gave you the information for you to be
4 able to fill in box or Section A?

5 A. From my discussion with my superior.

6 Q. Mr.?

7 A. Mr. Terrence, yeah.

8 Q. Mr.?

9 A. Mr. Terrence Rampersadsingh.

10 Q. Rampersadsingh?

11 A. Yeah.

12 Q. He gave you the information so that you could fill that in, is it?

13 A. Correct.

14 Q. So if it's wrong it's not your fault because you were simply
15 doing as he bid you?

16 A. Correct, following instruction.

17 Q. Following instructions, exactly. So the next part of that
18 document, which is Section B—scroll up, please. You didn't
19 fill in any of that, did you?

20 A. Just the number 2634.

21 Q. The what number, sorry?

22 A. 2-6—next to "hot work certificate", it have a number 2634.

23 Q. Right. So you're a little ahead of me, right. Yes. I was going
24 to the earlier passage, please. You didn't fill out any part of
25 B1. Did you?

26 A. No.

27 Q. No.

1 **Mr. Chairman:** Scroll back further up please.

2 **Continued Examination By Mr. Chairman:**

3 Q. And the only part of that document that you filled in or that part
4 of B3 is the number of the hot work certificate. Yes?

5 A. Yes.

6 Q. Right. Thank you. And you signed it as coming from you at
7 7—have I got it right? 7.10 or 7.30?

8 Scroll right up, please. You can see your handwriting better
9 than me.

10 A. Thirty.

11 Q. Sorry?

12 A. Thirty.

13 Q. Thirty. At 7.30 you signed it, did you, in the morning?

14 A. Yes.

15 Q. Thank you very much.

16 **Mr. Chairman:** Yes, that's all I need to ask. If anybody wants
17 to ask anything arising from that, please, feel free to do so.
18 You all have cross-examination anyway. Where should we
19 start? Yes, Ms. Persaud Maraj, yes.

20 **Mrs. Persaud Maraj:** Mr. Commissioner, your question was
21 actually the line of questioning I had for Mr. Marjadsingh.

22 **Mr. Chairman:** So you have nothing?

23 **Mrs. Persaud Maraj:** So I have nothing.

24 **Mr. Chairman:** Marvellous. I'm glad I pre-empted you in
25 that way then. Anyone else have any questions for this witness,
26 please? I think silence is—

27 **Mr. Pegus:** I do have a few questions, please.

1 **Mr. Chairman:** You do?

2 **Mr. Pegus:** Very, very simple, yes.

3 **Mr. Chairman:** Of course.

4 **Mr. Pegus:** Right.

5 **Cross-Examination By Mr. Pegus:**

6 Q. Good afternoon, Mr. Marjadsingh.

7 **Mr. Chairman:** Please, introduce yourself to Mr.
8 Marjadsingh.

9 **Mr. Pegus:** My name is Chase Pegus, attorney-at-law for
10 Kenson. Now, can the witness be shown the permit to work
11 procedure, please?

12 **Mr. Chairman:** The procedure?

13 **Mr. Pegus:** The permit to work procedure.

14 **Mr. Chairman:** Yes, not the permit to work, the actual
15 procedure.

16 **Mr. Pegus:** Not the permit to work; the procedure, yes. I am
17 focusing specifically on section 5 which lists the duties for the
18 applicant.

19 **Mr. Chairman:** 5.1.

20 **Mr. Pegus:** 5.1, yes.

21 **Continued Cross-Examination By Mr. Pegus:**

22 Q. Now, Mr. Marjadsingh, in answer to learned Senior Counsel
23 when he took you to this procedure, he pointed out to you that
24 one of your duties was to continually monitor the job to ensure
25 that it is performed in a safe manner and within the conditions
26 prescribed in the work permit, certificates and JHA risk
27 assessment, among other things. You see that there?

1 A. Yes.

2 Q. Right. Now, you indicated in your evidence to the Commission
3 that you spent part of the day at berth 5. Yes?

4 A. Yes, correct.

5 Q. Right. What do you understand “continually monitor” to
6 mean?

7 A. To my understanding, periodic checks.

8 Q. Right. Now, on the day in question, you indicated you took
9 instructions from Mr. Rampersadsingh. Yes?

10 A. Yes.

11 Q. Right. Who gave you the instructions to do the periodic
12 monitoring?

13 A. Said person.

14 Q. Right. There’s just one other thing I would like to address.
15 Now, in answer to the learned Chairman, you also indicated
16 that you performed specific tasks on berth 5. Yes?

17 A. Yes.

18 Q. Right. And in your statement you also indicated that on the day
19 in question you had some duties to perform at berth 5. Yes?

20 A. Yes.

21 Q. Who gave you those instructions?

22 A. Mr. Terrence Rampersadsingh as well.

23 **Mr. Pegus:** Much obliged. Thank you very much.

24 **Mr. Chairman:** Anyone else? No? Thank you very much. I
25 take it, Mr. Peterson, you have nothing? Well, thank you very
26 much. If I had realized it was going to be that short I might
27 have made everyone stay a little longer. But never mind that.

1 Thank you for coming. Your evidence is appreciated.
2 You're free to go at any point in time. You can stay if you
3 wish, but you're free to go.

4 **Mr. Marjadsingh:** I appreciate it too. I appreciate being here
5 too and giving my statement.

6 **Mr. Chairman:** Well, it might have been shorter had you
7 come and see my Counsel. But, never mind; you're here now.
8 Thank you very much.

9 It seems, Mr. Maharaj, that we're in the happy position of
10 having our last witness for the day.

11 **Mr. Maharaj SC:** Yes, Mr. Chairman.

12 **Mr. Chairman:** Marvellous. Well, perhaps, we can have Mr.
13 Dexter Guerra, please.

14 **Mr. Maharaj SC:** He's not here.

15 **Mr. Chairman:** I beg your pardon?

16 **Mr. Maharaj SC:** He was excused yesterday.

17 **Mr. Chairman:** Did I do that?

18 **Mr. Maharaj SC:** Yes.

19 **Mr. Chairman:** Oh dear. Well, that means we've drawn
20 stumps already. I have to say, I'm rather disappointed that I
21 was persuaded, no doubt, by somebody that we won't need Mr.
22 Dexter Guerra today. Well, we'll draw stumps now. Thank
23 you very much. We will start tomorrow. We've got four
24 witnesses to get through tomorrow—five, because we have Mr.
25 Guerra who we excused today.

26 Should we start on the 9.30? Is that all right for
27 everyone? 9.30 then, please, tomorrow morning; that's when

1 we'll commence. So today is closed. Thank you. Please, feel
2 free to gather your papers. I'll be doing the same.

3 **2.50 p.m.:** *Enquiry adjourned.*

1 **EVIDENTIARY HEARING DAY 7**

2 **9.37 a.m.: Enquiry commenced.**

3 [*Technical glitch*]

4 **Mr. Chairman:** ...evidence on Tuesday of next week called
5 Ralph Seales. We have nothing from him as yet. Is it proposed
6 we should have something from him?

7 **Mr. Pegus:** Good morning, Mr. Chairman. The Commission
8 will receive the finalized version of Mr. Seale's statement this
9 Friday. He's actually in possession of it and reviewing the
10 contents of same, so it has already been settled by Counsel.

11 **Mr. Chairman:** All right. Well, could I ask you to say by
12 twelve o'clock on Friday?

13 **Mr. Pegus:** I will try my best, and I understand that it's
14 something that's needed.

15 **Mr. Chairman:** Is it so long that it can't be dealt with between
16 now and twelve o'clock tomorrow? I mean, how long is this
17 statement?

18 **Mr. Pegus:** It's not that long, so it would be provided by
19 twelve o'clock on Friday.

20 **Mr. Chairman:** Very grateful to hear that. Thank you very
21 much, Mr. Pegus. Mr. Maharaj, our concern seems to have
22 been evaporated.

23 **Mr. Maharaj SC:** Yes, Mr. Chairman.

24 **Mr. Chairman:** And I'm pleased to say that. So we will have
25 it by twelve o'clock tomorrow.

26 **Mr. Maharaj SC:** Much obliged, please.

27 **Mr. Chairman:** Excellent. Yes. Shall we proceed?

1 **Mr. Maharaj SC:** Yes. Good morning, Mr. Chairman and
2 Commissioner Wilson. I just wanted to state that today we
3 intend to call five witnesses. They have all been interviewed by
4 the legal team of the Commission. They consented to be
5 interviewed and they have—based on those interviews, we have
6 had witness statements from them.

7 Witness summaries would be read. Those witness
8 summaries have been prepared based on the interviews which
9 were conducted. Having been interviewed, we would not be
10 asking them questions in respect of amplification of their
11 witness statements, but after cross-examination, if it is
12 necessary, we will ask to ask further questions in respect of
13 anything that may arise.

14 **Mr. Chairman:** Of course. Well, thank you for that. It's
15 certainly helpful when witnesses do come forth. That makes it
16 possible to get five witnesses in one day. So I'm grateful for
17 that. I may have some questions for them myself and Mr.
18 Wilson may do as well, of course. But I think the first witness
19 today is Mr. Dexter Guerra.

20 **Mr. Maharaj SC:** Is Mr. Dexter Guerra, and Mr. Ronnie
21 Bissessar will do the summary.

22 **Mr. Chairman:** Marvellous. Thank you very much, indeed.
23 Of course, all of their interviews and statements are online for
24 anyone to see. Thank you; marvellous.

25 *[Mr. Dexter Guerra sworn]*

26 **Mr. Guerra:** I, Dexter Guerra, solemnly swear that the
27 evidence I shall give to the Commission in this case shall be the

1 truth, the whole truth and nothing but the truth.

2 **Mr. Chairman:** Yes, do make yourself comfortable, Mr.
3 Guerra. Let me just tell you something of the process. So first
4 of all, good morning.

5 **Mr. Guerra:** Good morning.

6 **Mr. Chairman:** And what's going to happen is Mr. Bissessar,
7 who sits on the end of this front row here, is going to
8 summarize your statement to us and the interview that you
9 provided. All right? So please listen carefully to his summary.
10 If there's anything in it which you disagree with, please tell us
11 at the end, otherwise you can confirm, please, that that
12 summary accurately reflects that which you have told us. All
13 right?

14 After that happens, I or my colleague here may have a
15 question or two, and then some of the lawyers who are here
16 today may have some questions for you. All right? That's
17 going to be the process.

18 **Mr. Guerra:** Okay.

19 **Mr. Chairman:** All right. Well, thank you, Mr. Bissessar.

20 **Mr. Bissessar:** Thank you, Chair.

21 Mr. Guerra was LMCS' Construction Supervisor and has
22 worked with LMCS for over 20 years. He's a PADI Certified
23 Diver. Mr. Guerra submitted his principal witness statement
24 dated 5th October, 2022, to the Commission; this is at WB419.
25 Mr. Guerra was interviewed by the Commission on 7th
26 October, 2022, and then provided a supplemental witness
27 statement dated 31st October, 2022, and this is at WB426. Mr.

1 Guerra was represented by Counsel at the interview.

2 In his principal witness statement, Mr. Guerra gave the
3 following evidence. On 25th February, 2022, whilst the divers
4 were in the hyperbaric chamber, he was stationed on the barge
5 monitoring the compressor and airflow from the hyperbaric
6 chamber. At about 2.45 p.m. LMCS' Andrew Farah informed
7 him that the live feed he was monitoring suddenly went blank.
8 Mr. Guerra confirmed to him that nothing had gone wrong with
9 the compressor or the air supply. Andrew then searched the
10 chamber and water around the berth but found no one. Kazim
11 Ali Sr. arrived at 3.20 p.m. and concluded that the men were in
12 the pipeline and a rescue plan was devised. Further divers were
13 also contracted to come on site.

14 At around 4.20 p.m. three coast guard officers arrived.
15 Mr. Guerra heard knocking and shouting coming from inside
16 the habitat. At this time, Michael Kurban, Ronald Ramoutar,
17 and Corey Crawford were on the barge.

18 Paria's Visham Harrichan informed Mr. Guerra that no
19 one was to go into the habitat. Mr. Guerra told him that they
20 were going to retrieve the men and couldn't leave them there.
21 Corey Crawford and Ronald Ramoutar entered the habitat and
22 retrieved Christopher Boodram from the top of the riser.
23 Christopher indicated that Fyzal was right behind him and the
24 divers were alive in the air pocket.

25 Michael Kurban then entered the pipeline, reached about
26 10 feet into the horizontal, and he returned with a scuba set. At
27 this point, Paria's representatives instructed that no one was to

1 enter the habitat or pipeline and that the coast guard was going
2 to take over. No one thereafter entered the water. Conan
3 Beddoe arrived after speaking to Christopher in the ambulance.
4 He together with Michael Kurban, and Corey Crawford, and
5 Ronald Ramoutar asked to do a rescue and were denied.

6 At around 7.30 p.m. a dive vessel arrived on site with
7 men and equipment ready to assist. Mr. Guerra asked Paria's
8 representatives to allow the divers to perform the rescue and
9 they said that Collin Piper said that no one was to enter the
10 habitat and the pipeline.

11 As time was passing and nothing was happening, Mr.
12 Guerra asked Catherine Balkissoon to let them attempt a rescue
13 as they were willing and capable men with equipment available
14 to make the rescue. She said she would make a call, and she
15 did, but they again refused permission. At this time, there were
16 a number of armed coast guard officers on the barge.

17 At 9.00 p.m. permission was granted to install the riser
18 extension at berth , and this was done, but it was only at 3.00
19 a.m. on Saturday 26th February, 2022, that permission was
20 given to remove the blank at berth 5.

21 In a supplemental witness statement Mr. Guerra added
22 the following: He, Mr. Guerra, was involved in the line
23 clearing at the end of January 2022 over a period of about two
24 weeks. He said that LMCS removed all of the liquid from the
25 top side piping at berth into Sealine 66. LMCS then observed
26 that the liquid in the riser was not at the required 30 feet from
27 the top of the riser to install the plugs. They were having

1 difficulty in getting the liquid out into Sealine 66 riser. They
2 then removed the contents into a slop barge until the level in
3 berth was 30 feet from the top of the riser. He said
4 measurements were taken only at berth , not berth 5. The
5 measurements were not recorded by LMCS.

6 Mr. Guerra oversaw the installation of the mechanical
7 inflatable plugs on 13th February, 2022. Another dip
8 measurement was taken at berth which was not recorded, but
9 he is satisfied that the contents of the line were at the required
10 30 feet from the top of the riser. Mr. Guerra said that the
11 habitat was also installed on 13th February, 2022.

12 On 15th February, 2022, LMCS cut the riser and installed
13 the flange by welding it. On the morning of 25th February,
14 2022, Paria's Terrence Rampersadsingh and Houston
15 Marjadsingh brought the PTWs and LMCS had its toolbox
16 meeting and discussed what they were going to do. Kazim Ali
17 Jr. told everyone what the job was, which included that the
18 flange would be pressure tested, the plugs removed, and the
19 installation of the new piece of pipeline. He says that Paria's
20 Terrence Rampersadsingh and LMCS' Victor Dhillpaul gave
21 the safety briefing and the meeting went on for 15 to 20
22 minutes.

23 Mr. Guerra says that when the accident occurred on 25th
24 February, 2022, Paria's Visham Harrichan and someone known
25 as Scotty were on site, and by 3.20 p.m. LMCS' rescue plan
26 had been devised once LMCS concluded that the divers were in
27 the pipeline and not in the habitat or the water.

1 Mr. Guerra explains that LMCS was going to perform the
2 rescue plan which was that he and Andrew would go into the
3 habitat with an extra set of diving gear. Andrew would go into
4 the pipe with a rope feet first with an extra dive set and he
5 would play out the rope from within the chamber and Andrew
6 would have the free end in his hand. LMCS did not ask Paria
7 for permission but Visham Harrichan told them that Collin
8 Piper said that nobody could go into the habitat or the pipeline
9 and that the coast guard was going to take over.

10 Mr. Guerra says that he remained on site until 8.00 p.m.
11 on Saturday and returned on Sunday morning. Mr. Guerra said
12 that he doesn't understand why Paria did not allow LMCS to
13 conduct a rescue. He says that since LMCS was dealing with a
14 preservation of life, that Paria could have waived all of the
15 requirements of the permit to work to conduct a rescue. For
16 instance, Paria waived the CARBER testing on 25th February,
17 2022, and instead relied on the penetrant test which had been
18 done on that day—the day the riser was cut.

19 Mr. Guerra, is this a fair and accurate summary of your
20 principal and supplemental witness statement?

21 **Mr. Guerra:** Yes, it is.

22 **Mr. Bissessar:** Thank you.

23 **Examination By Mr. Chairman:**

24 Q. Can I ask you, please, a few questions about your evidence?
25 First of all, can I deal with paragraph 8 of your supplementary
26 statement, please? I want to ask you a little about the—you
27 haven't got it in front you. I'll wait a moment while you get

1 this, while it's produced for you. There you are. All right.

2 This is the supplementary statement that you provided to
3 the legal team when you came to their offices? Do you
4 remember, Mr. Guerra?

5 A. Yes.

6 Q. Yes. If you have a look at paragraph 8, it says this:

7 "We removed all of the liquid from the top side piping
8 at berth . We then observed that the liquid in the riser
9 at berth was not low enough to install the plug."

10 Let's just pause there, if I may, for a minute. All right? That
11 pipework that is above the waterline and the pipework that's
12 below the waterline—right?

13 A. Yes.

14 Q. There was a break put between the two. I think the elbow was
15 taken out from the riser. Is that right?

16 A. Not before we cleared it.

17 Q. Right. So you cleared, did you, the top side first?

18 A. Yes, we did.

19 Q. Right. So we can put that to one side, because I'm not
20 interested in that. All right?

21 A. Yes.

22 Q. What then had to happen is that you needed to clear the
23 bottom—the subsea level of the pipe. Correct?

24 A. Yes, we did, yes.

25 Q. And from what you say in your statement, the plan was not to
26 completely drain the line but to remove sufficient of the liquid
27 to leave you with an ullage of a certain distance. Is that right?

1 A. Yes.

2 Q. And that distance was 30 feet?

3 A. Yes.

4 Q. I don't know if you are much of a mathematician, but it's
5 capable of being worked out how many barrels that would
6 represent. Wouldn't it?

7 A. Yes.

8 Q. And when you exposed the top of this pipe, you could see that
9 it was about four feet down and not 30?

10 A. Yes.

11 Q. So you needed to remove another 26 feet or so. Correct?

12 A. Yes.

13 Q. Bearing in mind that it is a U pipe like this, [*Mr. Chairman*
14 *demonstrates*] roughly, if you took 26 feet out of that side, it
15 would necessarily mean you'd want to take the same amount
16 out of the other side, so that it levelled itself up?

17 A. Okay.

18 Q. Correct? So it wouldn't be 26 feet in total; it'd be 52 feet,
19 wouldn't it, so that you got the 26 on either side. Am I right
20 about that?

21 A. Yes.

22 Q. Am I?

23 A. Yes.

24 Q. Yes. Thank you. So in order to get 26 on one side you have to
25 take 52, because you'd need 26 on the other side as well,
26 because water has that habit of levelling itself, doesn't it, unless
27 there is a pressure on it?

1 A. Yes.

2 Q. All right. Good. So it was perfectly possible to calculate how
3 many barrels of fluid—oil or water, whatever it was—needed to
4 be removed in order to achieve that?

5 A. Yes.

6 Q. At berth 5, was it open or closed?

7 A. It was closed.

8 Q. Closed?

9 A. Yes, it was.

10 Q. I mean sealed or closed?

11 A. Yes. It had the elbow on.

12 Q. It had the elbow on it?

13 A. Yes.

14 Q. Not a flange?

15 A. No.

16 Q. And when you were at berth , you were doing a dip test to see
17 how far down it was?

18 A. Yes.

19 Q. And once you got to your 30 feet you were happy?

20 A. Yes.

21 Q. Is that right?

22 A. Yes.

23 Q. Right. But you didn't do a consummate dip test at the other
24 end, did you?

25 A. No, we did not.

26 Q. So at that point in time, at any rate, you wouldn't know where
27 that level was, would you?

1 A. No.

2 Q. You might reasonably guess that it was at 26 or 30 feet?

3 A. Yes.

4 Q. Yes. Do you know how much the removal of 26 feet from
5 either end would amount to in barrels?

6 A. No.

7 Q. Have you heard the expression “approximately one barrel per
8 foot”?

9 A. No.

10 Q. You’ve never heard that before? Well, we’ve been told that
11 that’s the position, and such calculation as I am able to do
12 seems to suggest that that’s approximately right?

13 A. Okay.

14 Q. Just so that you understand and everybody else does, I’m
15 suggesting that approximately 50 barrels or so would do the
16 job. All right?

17 A. Okay. Yes.

18 Q. Do you know that more than 500 barrels were taken out?

19 A. After the—

20 Q. From the Sealine 36—

21 A. In total?

22 Q. Not including above the line—not above the water. Just from
23 the subsea level, do you know that something in the order of
24 500 barrels were removed?

25 A. No, I don’t.

26 Q. Would that surprise you?

27 A. Yes, it would.

1 Q. I mean, it's way too much, isn't it, on any view; potentially, at
2 least 10 times more than it should have been. Yes?

3 A. Yes.

4 Q. If when you did your dip at berth it was at 30 feet and you had
5 removed 500 plus barrels, the other end at 5 would be a lot
6 lower than that, wouldn't it? It would have to be?

7 A. Well, assuming the line is difference in height and difference in
8 level.

9 Q. Yes. What is it that causes difference in levels on a piece of
10 pipe work?

11 A. Wherever it's situated, depending on where you—okay the
12 seabed, depending on how the seabed is.

13 Q. The shape of it?

14 A. Shape of it.

15 Q. Right. What about pressure or air pockets? Would that make a
16 difference?

17 A. That's what we, um, getting now, because we didn't know.

18 Q. But did you consider that at all at the time?

19 A. No, we did not.

20 Q. No. All right. And did anyone else?

21 A. I can't say.

22 Q. I mean, it took an extraordinary long time to achieve, didn't it?

23 A. Two weeks, yeah.

24 Q. Well, you only have to take 50 barrels out. How does it take
25 50—

26 A. No, no, in total.

27 Q. How long does it take to take 50 barrels out of a piece of pipe?

1 You can do it with a cup. All right. That was a flippant
2 remark, and I apologize. But 50 barrels removal from a
3 pipeline doesn't take two weeks, does it? Surely.

4 A. Well, it's the complete draining took two weeks.

5 Q. The complete draining?

6 A. Yes.

7 Q. Is that what you did?

8 A. Yes. The top side; the—

9 Q. All right. You did some work on the top as well. All right,
10 very well. Can I ask you, please, to have a look—you told us in
11 this supplemental statement at paragraph 18, please—turn to
12 paragraph 18. You say in that statement:

13 "I reviewed the two method statements for the clearing
14 of the lines before the job was done. The job was done
15 in accordance with the method statements."

16 Then the job would have to stop for approval from Paria. All
17 right? That's the method statement in relation to the removal of
18 the material from the pipe. Correct? Paragraph 18; you're
19 seeing that?

20 A. Can you repeat it?

21 Q. Yes. I'm just paraphrasing that you considered the method
22 statement for the removal of the oil and material in the pipeline
23 at 18—at paragraph 18 of your statement. Do you see that?

24 "Paria issued permits to work for the installation of
25 plugs and the clearing of lines which stated the task to
26 be done. I also reviewed the two method statements
27 for the clearing of the lines before the job was done.

1 The job was done in accordance with the method
2 statement. If there were any changes to be done in
3 terms of the method stated in the method statement
4 then the job would have to stop and approval given by
5 Paria.”

6 That’s what you say, isn’t it?

7 A. Yeah.

8 Q. So you looked at the method statements for the purposes of
9 removing the oil from the line?

10 A. Yes.

11 Q. Thank you. That’s all I wanted to ask you to confirm. Right?
12 Now, paragraph 29, you deal there with the toolbox meeting
13 that took place before the work was to start on the 25th, because
14 there was a gap, wasn’t there, between the removal of the oil on
15 the previous period of time—what was it—about 14 days, or
16 so—13 days between that and the work starting on berth .
17 Correct?

18 A. Correct.

19 Q. Thank you. All right. And that paragraph 29 you say:

20 At the toolbox meeting not everyone was present to
21 read the permit to work. The workers broke up into
22 groups and discussed what was relevant to their task.
23 Everyone signs the toolbox form (and so on) and there
24 was a job safety analysis which everyone viewed.
25 This was signed before. This was prepared by Ahmad
26 Ali. I did not view the method statement attached to
27 the permit to work on this day.

1 Pausing there. Had you seen the method statement that was
2 attached to the permit to work before that day?

3 A. Yes, before.

4 Q. Right. So can we have, please, page 1048, which we're all
5 becoming very familiar with now, up on the screen please?
6 That's the method statement you see; it's on the screen. It says:

7 "Method statement

8 To Install Subsea Slip-on Flange on Ø30" Sea Line
9 #36 (SL36) at berth."

10 That's what you were involved with, isn't it?

11 A. Yes.

12 Q. Yes. Can I ask you, please, to turn, if you would, to page 1051.
13 It's not in that bundle. It's being provided for you in a moment.
14 But if you look at the screen, we can see page 1051 at the top of
15 that page. We have paragraph 56 and 57.

16 **Mr. Chairman:** Sebastien, is that on page 1051 for him?
17 Could you turn it to 1051? Right, thank you.

18 [Assistance given by Sebastien]

19 **Continued Examination By Mr. Chairman:**

20 Q. All right. So you see at the top of that page 56 and 57. It says:

21 "56. Manually remove migration barrier from line.

22 57. Manually deflate line plug and remove from line."

23 Do you understand what that mean?

24 A. Yes.

25 Q. That's removing the plug, isn't it?

26 A. Plug, yes.

27 Q. Can I just take you back a little bit, please, to the previous page,

1 and would you turn to No. 51. Did you understand that on that
2 day that what was to happen, Mr. Guerra, was that at berth 5
3 they were going to perform a dye penetration test on wells to
4 determine the acceptability of the wells?

5 A. That was when the flange was welded?

6 Q. Yes.

7 A. Yes.

8 Q. That had already been done, hadn't it?

9 A. Yes.

10 Q. And there was a team coming on at berth 5 to test, I think, a
11 thing called a CARBER test?

12 A. Yes.

13 Q. To test the integrity of the well?

14 A. Yes.

15 Q. Correct? That was to happen on berth 5 and then it was to
16 come over to berth—that same team to come to berth , weren't
17 they?

18 A. Yes.

19 Q. That's as you understood it, isn't it?

20 A. Yes.

21 Q. Where were you?

22 A. On the barge.

23 Q. On the barge at?

24 A. No. 6.

25 Q. At 6. So when you had seen this before, had you read this
26 method statement with others as to what was to take place or
27 did you read it on your own?

1 A. Well, I read it on my own and then—

2 Q. All right. So on that day 51, 2, and 3, was to do with the
3 various tests that were to be taken on the—at 5 and later to
4 come to 6. All right?

5 A. Yes.

6 Q. 54:

7 “On completion of the weld, conduct pressure test on
8 flange weld.”

9 This is now—I think it’s 6, but anyway, it doesn’t matter.

10 “55. On acceptance, remove test hardware.”

11 So right to the bottom of that page, these are the tests that
12 needed to be carried out?

13 A. Yes.

14 Q. The next thing that happens is what we’ve just been looking at,
15 is at 56, 57.

16 “56. Manually remove migration barrier from line.

17 57. Manually deflate line plug and remove from line.”

18 A. Yes.

19 Q. Right. Why? Why was that necessary at all?

20 A. To remove the—

21 Q. Yes, those plugs? Why was it necessary to remove those plugs
22 from the line at that time?

23 A. Because, um, the riser we—the new riser was at a random
24 length, which was longer than the other.

25 Q. Right. So because the new riser was going to be longer than the
26 old one that you cut off, does that mean you would have had
27 difficulty reaching down into getting it?

1 A. Yes, it was.

2 Q. Right. So the reason that you understood for these barriers to
3 be removed was so that you were able to reach them from the
4 new riser that was being fitted?

5 A. Yes.

6 Q. Do you know how long the new riser was?

7 A. I can't remember exactly; could be about 25 feet.

8 Q. How long was the old riser?

9 A. The piece we took off, approximately—about 15 feet,
10 approximately.

11 Q. Fifteen feet?

12 A. Average.

13 Q. So why was the new one 10 feet longer?

14 A. The top side piping had a little variation in it.

15 Q. Right. So it was longer. And that was the sole rationale, was it,
16 for the removal of the plugs at that time?

17 A. Yes.

18 Q. Thank you. Of course, you understood that by removing those
19 plugs inside the hyperbaric chamber, there was a downward
20 force from the pressure in the chamber, wasn't there?

21 A. Yes.

22 Q. I mean, the sea level was being forced down inside the chamber
23 in order for it to be dry even though much of it was below water
24 level?

25 A. Forced out of the chamber, yes.

26 Q. Yes. That took some pressure. Didn't it?

27 A. Yeah.

1 Q. Well, you don't sound like you're too sure about it, Mr.
2 Guerra?

3 A. Yes, it took some—

4 Q. Do you know how much?

5 A. No, I don't.

6 Q. No. Yes. After the incident when the men were sucked into the
7 pipe there was a number of attempts, plans for potential rescue?

8 A. Yes, it was—there was.

9 Q. And were you privy to those plans?

10 A. Yes. It was discussed between me, Kazim Sr. and Andrew
11 Farah.

12 Q. Right. And the plans that existed, there were plans prior to Mr.
13 Boodram coming out of the pipe?

14 A. That was it; yes.

15 Q. And were those plans revised after Mr. Boodram came out of
16 the pipe?

17 A. Well, yes.

18 Q. Well, again, you don't seem too sure.

19 A. Yes.

20 Q. Can you help me, please, to understand. What was the plan
21 prior to Mr. Boodram coming out of the pipe?

22 A. When Christopher came out—

23 Q. No, before.

24 A. Before?

25 Q. Yes. What was the plan before he came out of the pipe?

26 A. Both me and Andrew will go into the chamber with a rope.

27 Q. Both of you would go in?

1 A. In the chamber, yes.

2 Q. Into the chamber. Yes?

3 A. Andrew would go in feet first with two sets of dive gear; go
4 along the line—

5 Q. So you were in the chamber with him?

6 A. Yes.

7 Q. And Andrew Farah would go into the pipe feet first?

8 A. Yes, and I will be feeding him—

9 Q. With two sets of dive gear?

10 A. Yes.

11 Q. One for him and one for anyone he might encounter?

12 A. Yes.

13 Q. Each set has two breathers, don't they?

14 A. Yes.

15 Q. Yes. So potentially he could bring three other people out with
16 that?

17 A. Well, no, just one. Well, a dive set does have two breathing—
18 we weren't going to use two to bring another person together
19 with one person. So one person would come with one set.

20 Q. Are you a diver yourself?

21 A. Yes, Sir.

22 Q. Well, the spider that fits on to the tank—

23 A. Yes, it's for buddy breathing. It's for buddy breathing if you're
24 in the open and the person can be next to you.

25 Q. Well, or in front of you?

26 A. Or in front of you. Well, not too far from you.

27 Q. Yes, all right. Anyway, that was the plan before. And the plan,

1 after Mr. Boodram had come out, changed?

2 A. Yes.

3 Q. Because by now you knew, didn't you, that there was air
4 pockets in the pipe?

5 A. Yes.

6 Q. How did you know that?

7 A. Because Mr. Boodram said so.

8 Q. Right. So he told you that when he came out of the pipe?

9 A. When he came out.

10 Q. And once you found that information, that there were air
11 pockets inside, to what extent did your plans change?

12 A. We had the hat and hose with—

13 Q. You had what, sorry?

14 A. The helmet with the hose to go into the chamber.

15 Q. Right. Did some other divers arrive?

16 A. Yes, and other divers—

17 Q. Who had some other equipment?

18 A. Yes.

19 Q. Which would have allowed someone to go into the pipe—

20 A. Yes.

21 Q. —with effectively an umbilical cord?

22 A. Yes.

23 Q. Yes?

24 A. Yes.

25 Q. So that the air supply would be from outside the pipe?

26 A. Surface supply, yes.

27 Q. Yes. And the person would be able to go into the pipe

1 unencumbered by tanks?

2 A. Yes.

3 Q. Because he'd be able to breathe through a mask that was fitted
4 to his face?

5 A. Yes.

6 Q. Is that right?

7 A. Yes.

8 Q. And did that also have communications?

9 A. Yes, it did.

10 Q. So that the person who went into the pipe could actually speak
11 to people who are outside?

12 A. Yes.

13 Q. Why was that not done?

14 A. Beats me. I have no—

15 Q. Well, help me. Why do you say it was not done?

16 A. Because we were denied.

17 Q. Denied by whom?

18 A. By Paria.

19 Q. Who at Paria? Who did you speak to yourself?

20 A. I spoke to Mr. Piper—Collin Piper.

21 Q. By telephone?

22 A. Yes.

23 Q. So you called him or he called you?

24 A. He called me and told me in his words, we are not to do
25 anything; that the coast guard is taking over.

26 Q. He told you the coast guard was taking over?

27 A. Yes, he did.

1 Q. Can you recall when he told you that?

2 A. After the incident.

3 Q. Yeah, well, obviously after the incident. Forgive me, Mr.
4 Guerra, it's unlikely to happen before, but before or after Mr.
5 Boodram came out of the pipe?

6 A. Before.

7 Q. Before Mr. Boodram came out of the pipe he told you that you
8 were not to go into where?

9 A. Into the chamber nor the pipe.

10 Q. Neither chamber nor pipe?

11 A. No.

12 Q. He told you that on the telephone?

13 A. Yes.

14 Q. All right. Did you speak to him ever again on that day?

15 A. Sometime later. But I spoke to Ms. Catherine.

16 Q. That's Balkissoon, isn't it?

17 A. Balkissoon.

18 Q. Ms. Balkissoon?

19 A. Yes.

20 Q. And she is a representative for Paria?

21 A. Yes.

22 Q. Did you understand her to be in touch with Mr. Piper?

23 A. Yes.

24 Q. What did she say to you about going into the chamber and into
25 the pipe?

26 A. That we didn't have any permission to do any diving, and I
27 asked her if we could do the rescue some time, and she said she

1 would call and find out. She call—she did make the call and
2 said no—they said no.

3 Q. Were you standing next to her when she was making the call?

4 A. Yes. I was about five feet from her.

5 Q. Right. Could you hear what she was saying?

6 A. No, I couldn't. Sorry. We were not too far from the
7 compressor.

8 Q. Did the coast guard assume responsibility for the rescue?

9 A. Not from my knowledge, no.

10 Q. Did the coast guard have any divers?

11 A. No one in gears.

12 Q. No one in?

13 A. In gears—dive gears.

14 Q. No one in dive gear?

15 A. No.

16 Q. Did you speak with the coast guard?

17 A. No, they were speaking to Catherine and those of Paria.

18 Q. Did the coast guard ever interfere with your efforts to try and
19 effect a rescue?

20 A. When Michael was attempting to go into the chamber—

21 Q. Michael Farah?

22 A. Michael Kurban.

23 Q. Kurban, forgive me. Yes, Michael Kurban.

24 A. The coast guard was standing over the railing and Paria was
25 giving instructions that no one to go in the chamber.

26 Q. And I ask the question again: Did the coast guard ever interfere
27 with your plans to effect a rescue?

1 A. They didn't directly say don't—they were going to do the
2 rescue, no, they did not.

3 Q. They didn't tell you they were going to do the rescue, but did
4 they do anything to prevent you from carrying out the rescue?

5 A. Well, they were standing there with guns and pointing at—
6 down in the water.

7 Q. With their guns in their hands?

8 A. And the gun, well, pointing at the water when—

9 Q. Well, let's be clear about this, Mr. Guerra, please. I need to
10 understand this.

11 A. Yes, they did stop us.

12 Q. Well, you seem reluctant earlier, now you're saying they did
13 stop you?

14 A. Yes.

15 Q. What did they physically do to stop you?

16 A. Well, they were—from my understanding with Mr. Piper, that
17 the coast guard was taking over.

18 Q. They were taking over the rescue operation?

19 A. Yes.

20 Q. Right.

21 A. And that we weren't to do anything. So by they telling us that
22 you were not to go there, who were there enforcing that, and the
23 coast guard—I took that to be that the coast guard was
24 enforcing it.

25 Q. Let's be clear. Did they point a gun at you or anything like
26 that?

27 A. They were standing over the railing with the gun facing the

1 water, but I wasn't paying attention to them *per se*. I was
2 paying attention to more Michael, and at that same time we
3 were getting Christopher into the boat.

4 Q. And did they interfere at any other time during the course of
5 your period on that—

6 A. No.

7 Q. All right.

8 A. But at that time it was clear that we weren't to do anything.
9 And we couldn't ask for anything else.

10 Q. Thank you very much. I think I could—last question is this. At
11 some stage it appears that there were many, many different
12 divers on that barge?

13 A. Yes.

14 Q. And on the berth?

15 A. Yes.

16 Q. From different companies?

17 A. Yes.

18 Q. Answering to the call for help?

19 A. Yes.

20 Q. Were any of them permitted to effect a rescue?

21 A. No.

22 **Mr. Chairman:** Thank you. Right. I think that we'll do
23 this—Ms. Persaud Maraj, you're first, I think.

24 **Ms. Persaud Maraj:** I have no questions.

25 **Mr. Chairman:** Thank you. Anyone else before I turn to Mr.
26 Peterson?

27 Yes, Ms. Alfonso.

1 **Ms. Alfonso:** Thank you, Mr. Chairman.

2 **Cross-Examination By Ms. Alfonso:**

3 Q. Good morning, Mr. Guerra. My name is Nyree Alfonso.

4 A. Good morning.

5 Q. I represent the interest of the SWWTU. Just a couple questions,
6 Mr. Guerra. On the 25th February, who—I've read all of the
7 divers' statements. I wasn't clear who—if you could assist me,
8 who were the rescue divers? I'm talking assigned to the job,
9 not after the incident happened.

10 A. Kazim Ali was the rescue diver at the time.

11 Q. Okay. So there was only one rescue diver?

12 A. Yes. And we were standby; me—both me and Andrew for any
13 assistance.

14 Q. Okay. Mr. Guerra, my understanding—and I might be entirely
15 wrong—if you are a standby diver and you have divers in the
16 water or in a habitat, wouldn't the standby divers be people
17 who are standing by fully geared up and ready to get into the
18 water immediately?

19 A. Well, that is Kazim.

20 Q. Okay. Is it usual that a standby diver will be in the water and in
21 the same space with the persons who are diving?

22 A. Well, unfortunately, he was there at the time.

23 Q. Okay. You are a diver yourself, Mr. Guerra?

24 A. Yes.

25 Q. Okay. Is it usual that the standby diver is in the same
26 environment with the persons who may find themselves in
27 difficulty?

1 A. What he was doing was making checks in-between.

2 Q. Okay. So Kazim Ali was the standby diver and he was making
3 checks in the habitat?

4 A. Yes; but he would spend most of his time top side.

5 Q. Top side. So the only standby diver that was available
6 designated as a standby diver on that day was Kazim Ali Jr.?

7 A. Yes.

8 Q. Okay. Thank you for that. There was one other issue, Mr.
9 Guerra, I don't know if you could assist me, because I really
10 couldn't work out on my own. After the incident happened and
11 well into the night—

12 A. Yes.

13 Q —there's some issue of installing the riser late into the night of
14 the 25th?

15 A. Yes.

16 Q. And then going across—sorry, to be fair to you, at berth ?

17 A. Yes.

18 Q. And then going across to berth 5 to remove the blank?

19 A. Yes.

20 Q. Which you didn't do. The blank—you didn't remove the blank
21 on berth 5?

22 A. No, not until—

23 Q. Okay. Is there some purpose for going to remove the blank and
24 putting on the riser? Was that something to do with the rescue
25 or you just continuing the job?

26 A. No. We were hearing knocking coming from the pipe. So
27 removing the blank was to—

1 Q. Okay. So that knocking was at the other end on berth 5?

2 A. Well, yes. We were hearing it at No. 5.

3 Q. Okay. So that, you're moving the blank in order to get access
4 into berth—well, the riser at berth 5?

5 A. Yes.

6 **Ms. Alfonso:** Okay. Thank you. That will be all. Thank you
7 very much, Mr. Guerra.

8 **Mr. Chairman:** Thank you. Yes. Please, Mr. Ramadhar,
9 please—can I ask is there anyone else going to be asking
10 questions apart from—I will obviously invite Mr. Peterson.
11 Mr. Ramadhar, yes, please.

12 **Mr. Ramadhar:** Thank you. Good morning.

13 **Cross-Examination By Mr. Ramadhar:**

14 Q. Good morning, Mr. Guerra. My name is Prakash Ramadhar.

15 A. Morning.

16 Q. We represent the interest of the family, Kurban, and of Yusuf
17 Henry for this trial. I'm going to be very brief with you this
18 morning. Going into a pipe, of course, is inherently dangerous
19 underwater. Correct?

20 A. It would pose some—yes.

21 Q. Yes, some. But it is not out of the ordinary work within the oil
22 industry, isn't that correct?

23 A. No.

24 Q. No. And after the accident, you didn't, being on site, anticipate
25 any extended level of danger to divers going in to rescue, did
26 you?

27 A. No.

1 Q. No. In fact, you were prepared to do whatever necessary it was
2 to save the lives of your colleagues. Isn't that true?

3 A. True.

4 Q. So too was Andrew Farah?

5 A. Yes.

6 Q. So too was Michael Kurban?

7 A. Yes.

8 Q. Conan—you know Conan?

9 A. Yes.

10 Q. And who else?

11 A. Rolly, Corey.

12 Q. So there was an abundance of persons who were willing,
13 available, and able. These are able men—

14 A. Yes.

15 Q. —to do the rescue. Yes?

16 A. Yes.

17 Q. Now, you heard it said or asked whether the coast guard
18 basically pointed a gun at you. Right? They didn't actually
19 point a gun at you?

20 A. No.

21 Q. But they were there with Paria who had issued an instruction?

22 A. Yes.

23 Q. That no one is to go in. Is that accurate?

24 A. Yes.

25 Q. Yes.

26 **Mr. Chairman:** I think you need to be careful not to align
27 those two together before establishing the basis for doing so.

1 **Mr. Ramadhar:** Well, I'm about to do so.

2 **Mr. Chairman:** Well, do it first and then ask that question.

3 **Mr. Ramadhar:** Yes. Thank you, Sir. I always learn from my
4 Seniors.

5 **Continued Cross-Examination By Mr. Ramadhar:**

6 Q. So in your mind, was the coast guard there to support you or to
7 support Paria?

8 A. To support Paria.

9 Q. Yes. And let us be clear, Paria was very clear that no one was
10 to enter, not just the pipe, but even the chamber. Is that
11 accurate?

12 A. Yes.

13 Q. And the coast guard, did they take any step to go into the
14 chamber or into the pipe?

15 A. No.

16 Q. No. None of them came with diving gears. Is that accurate
17 also?

18 A. Yes.

19 Q. Now, so when Paria's agents, that is Catherine and maybe
20 others, were speaking, where were the coast guard? Were they
21 close by?

22 A. Yes, around and on—on the barge and on the berth.

23 Q. Right. In the same vicinity of Paria's agents, Catherine and
24 others. Is that accurate?

25 A. Yes.

26 Q. Yes. What did you believe—because that is important—their
27 presence to be in relation to the instruction from Paria not to go

1 into the pipe?

2 A. Well—

3 Q. I will repeat it so it will be clear. What did you—because
4 you're entitled to your beliefs. What did you believe the coast
5 guard was there for when Paria was giving its instruction that
6 no one is to go in?

7 A. Okay. By the information I got?

8 Q. Yes.

9 A. That they were to perform the rescue.

10 Q. Yes. But their presence with the guns, were you afraid of them
11 in some form or fashion?

12 A. Yes, we didn't want to aggravate nobody, otherwise they
13 woulda move us off the site.

14 Q. Ah, thank you. Now, you have been involved with maritime
15 affairs, that is your swimming, and so, and you're diving long,
16 long period of time. Correct?

17 A. Yes.

18 Q. You've had interactions with the coast guard in the past.
19 Correct? Yes or no? Is either yes or no.

20 A. No.

21 Q. No. Is that an authority you believe that you could easily
22 dismiss and ignore?

23 **Mr. Peterson SC:** Mr. Chairman—

24 **Mr. Ramadhar:** I'm asking if he believes.

25 **Mr. Peterson SC:** Mr. Chairman, what's the benefit of this
26 line of cross-examination except sensationalism?

27 **Mr. Ramadhar:** Well, you know, with all due respect to my

1 learned friend, this is a very sensational issue, that four men
2 were permitted to die under the authority of the State and
3 others, and that is—if you consider this sensationalism, well, I
4 don't know what you imagine facts to be.

5 **Mr. Chairman:** Just a minute, just a minute. It's a perfectly
6 reasonable line of enquiry—

7 **Mr. Ramadhar:** Thank you.

8 **Mr. Chairman:**—as I have already pursued to the extent of
9 identifying whether or not the coast guard prevented anyone
10 from carrying out a diving rescue operation. My understanding
11 from this witness is that they didn't physically do that. Their
12 mere presence may have been interpreted, rightly or wrongly;
13 but they didn't physically prevent anyone from doing so. And
14 if you want to pursue that, I'll permit it to a limited degree, but
15 not beyond. All right?

16 **Mr. Ramadhar:** Of course.

17 **Continued Cross-Examination By Mr. Ramadhar:**

18 Q. And, in fact, that would have been my last question. So if we
19 have that clarity on your answer, yes, as sensational as my
20 friend thinks it is—crucially important. Yes. Did you believe
21 that the coast guard was there to enforce the instruction from
22 Paria? Yes or no?

23 A. My opinion, yes.

24 **Mr. Ramadhar:** Thank you so much. My Lord.

25 **Mr. Chairman:** Mr. Peterson.

26 **Mr. Peterson SC:** Thank you, Mr. Chairman.

27 **Cross-Examination By Mr. Peterson SC:**

1 Q. I'll take you to that last question. But the coast guard was there
2 before any instructions came from Mr. Piper?

3 A. Yes.

4 Q. So, therefore, the instructions came post—after the coast guard
5 arrived?

6 A. Yes.

7 Q. Are you aware—you may or may not be—that you are the only
8 person who was on berth that evening that is saying that Mr.
9 Piper said no one was to dive or enter the chamber and the line?

10 A. I could affirm that.

11 Q. Right. Let me put to you from the beginning that what Mr.
12 Piper's instructions was, is that persons weren't to dive into the
13 pipe?

14 A. You are wrong.

15 Q. All right. And those instructions came—let me put that out of
16 the way one time—in a speakerphone that Ms. Catherine
17 Balkissoon held up with a group of persons there, a lot of
18 LMCS people, and on speakerphone when Mr. Piper issued
19 those instructions. You recall that?

20 A. No.

21 Q. You don't recall a speakerphone being held up by Ms.
22 Catherine Balkissoon?

23 A. No.

24 Q. All right. Well, I'm putting that to you.

25 A. Okay.

26 Q. Let me take you back to where I want—

27 **Mr. Chairman:** Sorry. Can I—Mr. Peterson, can I just

1 understand? Who was on the other end of this speakerphone?

2 **Mr. Peterson SC:** Mr. Piper.

3 **Mr. Chairman:** Mr. Piper was on the other end?

4 **Mr. Peterson SC:** Yes.

5 **Mr. Chairman:** Are you able to say what it was that he was
6 saying?

7 **Mr. Peterson SC:** He was saying that it was dangerous and—
8 the conditions were unknown and it's dangerous to dive into the
9 pipe. So no one—

10 **Mr. Chairman:** Conditions unknown and dangerous to dive.

11 **Mr. Peterson SC:** No one should be diving into the pipe.

12 **Mr. Chairman:** I take it that's not verbatim. It's just a
13 summary of the—

14 **Mr. Peterson SC:** That's a summary.

15 **Mr. Chairman:** I got it. Thank you very much.

16 **Continued Cross-Examination By Mr. Peterson SC:**

17 Q. But let me also get from you now, notwithstanding those
18 instructions from the commander of the incident command,
19 those instructions were not obeyed and diving continued. Isn't
20 that so?

21 A. The diving continued when Christopher came out.

22 Q. When Christopher came out, that was after 5.30, thereabout?

23 A. Yes.

24 Q. And after that, diving continued?

25 A. Diving continued, yeah—

26 Q. For a substantial period of time.

27 A. Can I explain?

1 Q. Yeah, I'll give you to explain right as I finish. Let me finish
2 put what I'm putting to you—for a substantial period of time
3 into the night.

4 A. Into the night was when we got permission to install the riser.

5 Q. I'm coming to the riser. I am talking about even before the
6 riser, diving continued after Christopher Boodram came out.

7 A. Yes, not too long—for not too long.

8 Q. How long is not too long for you?

9 A. Well, about half an hour?

10 Q. Half an hour?

11 A. Forty-five minutes.

12 Q. No, I'm putting to you more than that.

13 A. That's your belief.

14 Q. Right. So half an hour take us to six o'clock?

15 A. About. A little after six.

16 Q. A little after six?

17 A. Then Conan came and he went in with Michael.

18 Q. Right. When Conan came, Conan went into the chamber with
19 Michael?

20 A. Yes.

21 Q. And anyone else?

22 A. Well, Corey and Rolly was there. I—

23 Q. To execute a dive for rescue. That must be the purpose they
24 went down and then going into the chamber?

25 A. Conan wanted to get a view of inside and—

26 Q. To do what?

27 A. To do the rescue.

1 Q. To do the rescue. The coast guard stopped him?

2 A. No, after he came out, yes.

3 Q. No, just now. Coast guard stop him from going down?

4 A. No.

5 Q. The CG, the coast guard stopped Michael from going down?

6 A. Not at that time, no, but as they came out.

7 Q. They went down there to rescue?

8 A. Yes.

9 Q. Not to just see. Let me put to you, they went down there to
10 rescue. Isn't that so? We want the truth.

11 A. Yes, we wanted to attempt the rescue, yes.

12 Q. Right. That team that went down there that weren't stopped by
13 the coast guard, went down there, not to see.

14 A. Okay.

15 Q. They went to rescue. Isn't that the truth?

16 A. Yes.

17 Q. And the truth also is that that team came back up having
18 aborted their attempt?

19 A. And—

20 Q. Is not—no. One thing at a time.

21 **Mr. Chairman:** Let him answer the question, please. The
22 question was they came out having aborted the attempt. Let
23 him answer that.

24 **Mr. Peterson SC:** Yes.

25 **Continued Cross-Examination By Mr. Peterson SC:**

26 Q. They came out having aborted the attempt.

27 **Mr. Chairman:** Is that right or wrong?

1 **Mr. Guerra:** They came out because they were instructed to
2 come out.

3 **Continued Cross-Examination By Mr. Peterson SC:**

4 Q. All right. Who instructed them?

5 A. Paria.

6 Q. Paria, how?

7 A. By, um—

8 Q. Remember, they're already in the habitat. Let me help you.
9 They're already in the habitat, right?

10 A. Yes. And they came back out—

11 Q. No, no, no, wait. You said they were in the habitat; they came
12 back out because Paria tell them come back out.

13 A. Okay, sorry. They came back out and—

14 Q. Just now. You want to change what you said first?

15 A. What, the coast guard—

16 Q. That they came back because Paria called them out?

17 A. Yes, yes.

18 Q. You want to change that?

19 A. Yes.

20 Q. Just now. So when you said that to the Chairman and the other
21 Commissioner, that wasn't true?

22 A. What's that?

23 Q. That Paria called them back out?

24 A. No, sorry, I phrase it wrong.

25 Q. No. You phrase it untruthfully, not wrong.

26 A. Okay. But—

27 Q. How did Paria call them back out from the hyperbaric

1 chamber?

2 A. No, they didn't call them back out, sorry. When they came
3 out—

4 Q. Just now. I'll give you that opportunity to go to what you're
5 about to say. But before you deal with the coming first, and
6 when they're out—because you're at the stage of when they
7 came out. I dealing with before they came out. You're
8 ascribing all blame that you could at any moment to Paria. So
9 they come back out from the chamber; Paria did that. But that
10 wasn't true. Tell us. It was not the truth.

11 A. No, not—they didn't come out.

12 Q. Right. Leh we get to your stage now. They come back out.

13 A. Right. They came back out and they were instructed by
14 Andrew that Paria don't want nobody to go back in.

15 Q. Right. Andrew?

16 A. Yes.

17 Q. That's Andrew Farah?

18 A. Yes.

19 Q. Right. Leh we stick a pin and put him aside. Did you know
20 why they came back out? Because they out now.

21 A. Because Conan wasn't too comfortable with Michael, and he
22 said he would wait for his brother.

23 Q. He was not comfortable with Michael's state of mind to
24 participate in a rescue?

25 A. Right.

26 Q. Isn't that the truth?

27 A. And he will wait for his brother.

1 Q. Yeah, I'll get to that. Isn't that the truth?

2 A. Yes.

3 Q. So they went down there to do the rescue, pursuant to which
4 plan?

5 A. To our rescue plan.

6 Q. Whose rescue plan?

7 A. LMCS.

8 Q. No. LMCS is a company. We hearing people now; we hearing
9 Paria and LMCS. Who developed that plan?

10 A. Mr. Kazim Ali.

11 Q. Right. What were the risk assessment of that plan?

12 A. I can't answer.

13 Q. Well, they did no risk assessment. Isn't that so?

14 A. I can't say, because—

15 Q. You can't say. But you were part of the planning—

16 A. On the barge when the incident happened.

17 Q. Right. When do you mean by that? Were on the barge when
18 the incident happened.

19 A. When the incident happened [*Inaudible*] between me, Mr. Ali
20 Sr., and Mr. Andrew Farah.

21 Q. That's the first plan?

22 A. Yes.

23 Q. Is that the plan that Mr. Beddoe and Mr. Michael Kurban and
24 they were executing when they came back up?

25 A. He would have spoken to Mr. Ali on shore.

26 Q. No. Is that the plan—

27 **Mr. Chairman:** Sorry. Forgive me for interrupting you. I'm

1 just not clear which Ali you're talking about?

2 **Mr. Guerra:** Senior.

3 **Mr. Chairman:** Kazim Ali Sr.; not Ahmad Ali?

4 **Mr. Guerra:** No.

5 **Mr. Chairman:** Thank you.

6 **Mr. Peterson SC:** Thank you, Mr. Chairman.

7 **Continued Cross-Examination By Mr. Peterson SC:**

8 Q. So the plan—was that the plan that was being executed that was
9 aborted?

10 A. Aborted? We didn't abort no plan.

11 Q. When I say aborted, when they came back up. When Michael
12 and they went down—Michael Kurban and Beddoe and the
13 other two went down to execute, and they came back up
14 without going into the line, was that the plan that they went to
15 execute? The plan that you, Mr. Ali Sr.—

16 A. Yes. Only one—the changes was we were going to use the
17 umbilical.

18 **Mr. Peterson SC:** Mr. Chairman, I'm just advised that the
19 three LMCS witnesses are in a room watching these
20 proceedings live. They sent somebody to check it and it's, in
21 fact, so.

22 **Mr. Chairman:** Right. We will pause there. Can you please
23 go and find out?

24 [10.35 - 10.41 a.m.: *Enquiry suspended*]

25 **Mr. Chairman:** Right. So this is the position. Thank you for
26 bringing it to my attention, Mr. Mootoo and Mr. Peterson.
27 Apparently, witnesses yet to give evidence are in the witness

1 room as we've made arrangements in the past, and they were all
2 looking at their telephones, apparently watching the
3 proceedings.

4 I thought I made it perfectly clear right at the outset to all
5 counsel, that, whilst I did not, and could not prevent anybody
6 from watching these proceedings on the live link, I expected
7 Counsel to advise the people that they represent and, therefore,
8 the witnesses that are being called by this Commission, not to
9 view the proceedings. That has been in deliberate violation of
10 what I have said. I regard it as a contempt. I am not going to
11 take any action in pursuit of that contempt today. If it were to
12 happen again, I make it absolutely clear, I will. I have
13 considerable powers to do so and I will use them.

14 I will not have this Enquiry thwarted by people
15 deliberately flouting the obvious and plain rules that exist, in
16 order to preserve the integrity of this Enquiry. I'm very
17 disappointed that anyone should feel the need to do that. They
18 have now had their telephones taken away from them. They're
19 put in separate rooms. What am I dealing with? Children?
20 They will wait there until I'm ready to hear them give their
21 evidence. I'm sorry that this has happened whilst you're giving
22 evidence, Mr. Guerra. All right? And I'm now going to let Mr.
23 Peterson continue his cross-examination of you.

24 **Mr. Peterson SC:** Thank you, Mr. Chairman.

25 **Continued Cross-Examination By Mr. Peterson SC:**

26 Q. Mr. Guerra, when we were interrupted by the events, you were
27 about to tell us about a second plan or something? I think you

1 were on to a plan. Could you tell us?

2 A. No. I said that would have been discussed with Conan and Mr.
3 Ali.

4 Q. The same plan that you all had at the beginning?

5 A. Their plan; their plan.

6 Q. When you say, "their plan", what—

7 A. What Conan was about to do.

8 Q. Well, that's what I'm asking you. You told us earlier about a
9 plan that you developed with Mr. Kazim Ali Sr. and—

10 A. Oh, that was on the barge at the time.

11 Q. Right. Is that the same plan—what were the details of that
12 plan?

13 A. The first plan?

14 Q. Yes.

15 A. That me and Andrew would go into the chamber; Andrew will
16 go into the pipe feet first with two scuba sets and a rope—a
17 lifeline.

18 Q. Right. Do you know what plan that Mr. Beddoe, Mr. Kurban,
19 and I think two other persons you named, what plan they were
20 going to execute? Were you aware of that plan?

21 A. No, I wasn't.

22 Q. Right. That first plan that you developed with you and Andrew,
23 did you share that with Paria?

24 A. No one was interested.

25 Q. No, I didn't ask you about their interest. Did you—

26 A. We couldn't.

27 Q. Let's do it this way. What steps you took to share those plans?

1 A. When I spoke to Mr. Piper to do the rescue, Mr. Piper said, no,
2 coast guard was taking over and that me—that we weren't
3 supposed to do anything; that the coast guard would do it.

4 Q. What time was that, approximately?

5 A. That was about—could be a little after five.

6 **Mr. Chairman:** Pre or post Boodram?

7 **Mr. Guerra:** Excuse?

8 **Mr. Chairman:** Before Mr. Boodram came out or after Mr.
9 Boodram came out?

10 **Mr. Guerra:** All right. That would be before. But, no, Mr.
11 Piper spoke to me after. When we came up with the plan, Mr.
12 Piper via his people on the boat, said he wanted me and Mr.
13 Farah ashore.

14 Q. Right. Just ashore?

15 A. Yes—to come into the office.

16 Q. To come into the office?

17 A. Right.

18 Q. Which office is that?

19 A. Shipping office.

20 Q. Which is the command centre?

21 A. Well, I don't know if it was a command centre at the time.

22 Q. You didn't know it was the Incident command centre?

23 A. No.

24 Q. Okay. All right. Go ahead.

25 A. But, yes, it was his office, shipping office, and, um—for a
26 meeting.

27 Q. Yes.

1 A. I told him I myself wouldn't leave the site and that I spoke to
2 Andrew and Andrew will come, will be there; he and, um—

3 Q. Right. So you told him that Andrew would come?

4 A. Yes.

5 Q. Right. And that's the end of the conversation?

6 A. Yes.

7 Q. So nothing in that conversation did you tell him about the plan
8 that you had?

9 A. After he said no; no diving, okay? How can I?

10 Q. He told you no diving in that first conversation?

11 A. Yes.

12 Q. And that is before Boodram came out?

13 A. Yes.

14 Q. But you didn't take him on. You continued your plan?

15 A. Well, when Boodram came up and you hearing that somebody
16 in distress—

17 **Mr. Chairman:** No, no, no, can you just state one thing at the
18 time please?

19 **Examination By Mr. Chairman:**

20 Q. Before Mr. Boodram came out, you've told us that you did not
21 explain the detail of your plan to Mr. Piper.

22 A. No.

23 Q. He had told you no diving?

24 A. Yes.

25 Q. Did that include into the chamber?

26 A. Into the chamber, and—

27 Q. Did he say that or did you just understand it as that?

1 A. No, he said that.

2 Q. He said no diving into the chamber?

3 A. Yes.

4 Q. And no diving into the pipe?

5 A. Right.

6 Q. That's what he told you?

7 A. Yes.

8 Q. So you didn't then tell him, well, look, we have a plan?

9 A. No.

10 **Mr. Chairman:** Right. There you are, Mr. Peterson.

11 **Continued Cross-Examination By Mr. Peterson SC:**

12 Q. And he told you no diving. Now, let us get this clear. My
13 instructions are, he—Mr. Piper, never told you about no diving
14 into the chamber. But let's go with your version for the while.

15 After he told you that, you ignored him, because you
16 went into the chamber? Well, one of your colleagues went into
17 the chamber?

18 A. Wait, you mixing me up here for a second.

19 Q. I'm trying not to.

20 A. But we talking 'bout when Andrew went into the chamber?

21 Q. No. I'm talking about when Mr. Piper told you no going into
22 the chamber.

23 A. Okay. Where that piece of diving you are talking 'bout, is
24 when the incident happen, for us to have some sort of
25 information or to share, we had to make checks on what
26 happened, what we see. That is the only diving that took place
27 then. The next piece ah diving was when Mr. Boodram came

1 out, right, and I was instructed while hearing Mr. Boodram
2 knocking and bawling in the chamber that no one was to go in
3 the chamber, and I myself said that I don't care what anybody
4 say, I am hearing my colleagues in there hoping that is
5 everybody and that I was going to get them.

6 Q. Well, that's what I said to you. After that conversation with
7 Mr. Piper it was—the instructions weren't enforced. They were
8 ignored and you all continued?

9 A. Yes, because we were hearing people in distress.

10 Q. Yes. That's a good reason to explain it. But what I'm saying to
11 you is, don't convey to the Commission that you obeyed what
12 Mr. Piper said. I am not saying you weren't justified to ignore
13 it, but the fact is you ignored it?

14 A. Yes.

15 Q. Right. So let's deal with that. So you ignored it and you all
16 continued?

17 A. Right.

18 Q. Now, Kazim Ali came, you said, and you all had a discussion of
19 a plan?

20 A. Right.

21 Q. You were part of that plan?

22 A. Yes.

23 Q. The second plan, if you could call it that?

24 A. Second plan?

25 Q. Involving Mr. Ali and Mr. Beddoe, were you part of that?

26 A. No. You mixing up the first plan that we had on the barge with
27 their plan.

1 Q. I know. No, I'm not mixing it up. I am speaking of that plan
2 and you are speaking of the plan, and I brought into that second
3 plan, Mr. Beddoe. Right?

4 A. Well, for some reason I'm getting that you are kinda crossing
5 the two.

6 Q. I am not. Do you know of—let us call it the Beddoe plan. Do
7 you have a plan involving Mr. Beddoe?

8 A. I was not involved in that.

9 Q. That's what I'm asking you. And Michael Kurban, you weren't
10 involved in that—Kurban?

11 A. No, that was with Mr. Andrew and—

12 Q. And who?

13 A. Andrew Farah and—

14 Q. Let's get the names. Don't just throw your hand. Who you
15 said were involved in that plan?

16 A. Andrew Farah.

17 Q. And Mr. Beddoe?

18 A. Beddoe.

19 Q. And Mr.?

20 A. Mr. Ali.

21 Q. Mr. Ali.

22 A. Kazim Ali.

23 Q. Kazim Ali Sr.?

24 A. Yes.

25 Q. And Mr. Michael Kurban?

26 A. Well, I can't say for Mr. Kurban.

27 Q. You can't say. Right. But you learnt of that plan. Let's call it

1 the Beddoe plan, just for this conversation. You were aware of
2 that plan?

3 A. I just told you no.

4 Q. So when you first heard of that plan?

5 A. When I first heard of that plan?

6 Q. Yes.

7 A. Sometime in the night.

8 Q. Around what time?

9 A. About seven, half seven, eight, somewhere dey.

10 Q. Right. But you know that that is the plan that they went down
11 to execute and came back up without doing it?

12 A. Yes.

13 Q. Right. Is when they came back up, that's when you knew of
14 that plan?

15 A. Yes.

16 Q. Right. But you saw when they went into the water, when Mr.
17 Beddoe and Mr. Kurban went into the water?

18 A. Yes.

19 Q. Right. No one stopped them?

20 A. No.

21 Q. Why you smiling? No one stopped them?

22 A. No.

23 Q. No Paria person stopped them?

24 A. At that time, no.

25 Q. Right. No coast guard person stopped them?

26 A. At that time, no.

27 Q. Right.

1 **Examination By Mr. Chairman:**

2 Q. Can I ask before you go on? And I hear what you say—they
3 were not stopped. Did you understand if they had permission?
4 What Mr. Peterson has been asking you, really, is whether or
5 not they were defying the permission?

6 A. I can't say.

7 **Mr. Peterson SC:** That's not what I'm asking, Sir.

8 **Mr. Chairman:** Well, they had no permission. They were the
9 defying the fact that they had no permission but were,
10 nonetheless, prepared to carry out these—is that not what
11 you're asking him?

12 **Mr. Peterson SC:** No, Mr. Chairman, that's not what I'm
13 asking.

14 **Mr. Chairman:** Then I'm misrepresenting you. Forgive me,
15 and I—

16 **Continued Cross-Examination By Mr. Peterson SC:**

17 Q. I am asking the point—well, you answer it already—that they
18 went into the water uninhibited; no one stopped them. You got
19 that already, so you can't change that unless you want to.

20 A. *[No response heard]*

21 Q. You don't want to change it. Right. You know about
22 something called a saturation diver?

23 A. Explain?

24 Q. No. I'm not a diver. Do you know the concept of someone
25 being trained as a saturation diver?

26 A. No.

27 Q. What level diving you are trained to?

1 A. PADI.

2 Q. PADI. You know Mr. Beddoe's qualifications as a diver?

3 A. Well, I know he's advanced and confined space.

4 Q. Right. How advance you know him to be?

5 A. I think he's—

6 Q. You know he was trained all in Scotland and other places.

7 Right? Do you know that?

8 A. No, I don't.

9 Q. Right. Do you know of something called a—it may not be
10 diving at that level, but do you know of something called a
11 hazmat suit as a diver?

12 A. Hazmat suit?

13 Q. Yes.

14 A. I know a full suit. But I don't think that could work in this.
15 That's the full suit with the helmet and—

16 Q. Well, you don't know what it is? Before—in fairness to you,
17 you don't know what it is?

18 A. No.

19 Q. Right. Well, I'll deal with that later with someone else. But I
20 was getting back to dealing with the aborted plan. Well, what I
21 call the aborted plan, when Michael Kurban and they went
22 down in the water and came back up; the Beddoe plan. Your
23 plan—did you do any risk assessment as to if something goes
24 wrong what is going to happen, your earlier plan, the one that
25 you devised with Andrew?

26 A. Well, we took into consideration the system had normalized.

27 Q. Who was the standby diver in that?

1 A. I was.

2 Q. Who was the rescue diver in that?

3 A. Andrew Farah.

4 Q. And who was doing the diving?

5 A. Who was doing the?

6 Q. Who was actually going to do the diving to retrieve the men in
7 the—

8 A. Well, Andrew Farah.

9 Q. Right. So Andrew was going to go down with the rope?

10 A. Yes.

11 Q. And you putting down some rope?

12 A. Right.

13 Q. You would have been involved in that process—

14 A. In the chamber, yes.

15 Q. So you couldn't be the standby diver?

16 A. Well, I was in the chamber.

17 Q. Umm?

18 A. Yes, I would be in the chamber.

19 Q. Yeah, you will be in the chamber but you will not be the
20 standby diver?

21 A. No.

22 Q. A plan like that properly thought out ought to have a standby
23 diver? That must be a compelling yes.

24 A. To me it's argumentative.

25 Q. It's argumentative?

26 A. Yes.

27 Q. All right. So it is safe to go down—send one man down in the

1 pipe, you alone in the chamber hoping to be able to assist him,
2 no other person nearby, everybody else top side. That you'd
3 say was safe?

4 A. Well, yes, considering the system had normalized and—

5 Q. Put another way.

6 A. We had to check—

7 Q. There was no need for a standby diver there?

8 A. There would have been need for if we had one at the time.

9 Q. Why you needed to have one?

10 A. To assist.

11 Q. No, to be safe. Mr. Guerra, let's be frank with the Commission.
12 There ought to have been a rescue—a standby diver to assist in
13 that process?

14 A. Well, at the—we had called out other divers at the same—um,
15 at that time too.

16 Q. No, that wouldn't be the answer. I am talking about you down
17 in the chamber there by yourself; you're going to send a man
18 down in the pipe. That's highly risky. Isn't it?

19 A. *[No response]*

20 Q. You know about risk assessment for diving?

21 A. Yes.

22 Q. That will not be an approved plan, would it? After a risk
23 assessment, that will not be an approved plan?

24 A. *[No response]*

25 Q. We need to get on.

26 A. Well—

27 Q. It will not be. Just say that. Be truthful; be frank with us?

1 A. Under normal circumstances, no.

2 Q. Right. I want to take you to something that you said. I may
3 have misheard you, but I think I did not. You said the elbow at
4 5 during the clearing process, was attached?

5 A. Yes.

6 Q. When was that broken?

7 A. After we had cleared the riser at No. 6.

8 Q. So you all were pumping with that elbow attached?

9 A. We were air blowing.

10 Q. Air blowing with the elbow attached at 5, which is connected
11 back to the rest of the system?

12 A. And for the final stages—

13 Q. No, no, no, wait, we will get there. At a stage where you were
14 blowing—

15 A. Yes.

16 Q. —the elbow is telling us that 5 was attached.

17 A. And removed blanked and blown from on the riser.

18 Q. Eventually.

19 A. Yes.

20 Q. Don't take me there yet. We're not there yet. At a blowing
21 stage—because it jumped out to me when you said it to the
22 Chairman. The elbow at 5 was attached to the loop whilst you
23 connect a nipple—let's call it that—and blowing product
24 hopefully to get the line cleared down to your ullage?

25 A. Yes, because it was a closed system.

26 Q. Right. And at some point after blowing—how many days you
27 all blew for?

1 A. The whole process took about two weeks.

2 Q. When you all broke that elbow?

3 A. We took off the one—when we finished?

4 Q. No, 5, 5.

5 A. When we brought down the liquid. The first was No. 6 blank
6 and No. 5 and blanked with valves and to blow from there.

7 Q. Now, I know you weren't supposed to hear Mr. Kazim Ali's
8 evidence so I'm assuming you didn't. I was putting to Mr.
9 Kazim Ali, when I sourced one of the daily reports, that that
10 other side beyond the elbow at 5 had an 8-foot lowering in that
11 other line called the—

12 A. At No. 6?

13 Q. B—5; the BS80 or Bend 80—Pipe Bend 80—PB80, and he
14 almost dismissed me. But you are telling us the elbow was still
15 connected there. That could explain that lowering on the pipe
16 bend 80. You know what I'm talking about?

17 A. Pipe bent 80?

18 Q. Yes.

19 A. No.

20 Q. No, what? You don't know?

21 A. How could it?

22 Q. You don't know what I'm talking about or you know Pipe Bend
23 80?

24 A. Because we were slip blanked by the valve.

25 Q. Right. But it wasn't broken as we were conveyed, it was—you
26 were what? By the valve?

27 A. Yes.

1 Q. Did you pressure test that valve to see if it was holding?

2 A. What valve?

3 Q. The valve you just mentioned, Sir.

4 A. I said it was slip blanked by the valve.

5 Q. Yes. When you say slip blanked by the valve, you mean the
6 valve was closed?

7 A. It's a plate that was cut and slipped between the both flanges at
8 the valve.

9 Q. Right. Did you pressure check that to see if when you were
10 blowing if product could have seeped from that?

11 A. Product cannot pass that.

12 Q. Did you check it?

13 A. I am telling you that product cannot pass that. It's a solid
14 plate—

15 **Mr. Chairman:** Just pause for a minute, because I'm not
16 understanding, I'm afraid, Mr. Peterson.

17 **Examination By Mr. Chairman:**

18 Q. It may be useful if you use that board behind you just so that
19 you can draw what you mean.

20 A. This is No. 5, right?

21 Q. Why don't you start again. Right? You're just doing it to the
22 right of the drawing that's on there. There's a pen below you.
23 Don't touch that drawing. Just draw the elbow area that you're
24 talking about. Start afresh.

25 A. Okay.

26 Q. Explain what you mean.

27 A. There's a valve here and this here tee off going down; this

1 going back to Bend 80. There's a slip blank here, and then you
2 go in here.

3 Q. That part is the riser, is it?

4 A. This, yeah.

5 Q. Yes. That's the riser?

6 A. Yes. And the flange is this here.

7 Q. Okay. So when you put the wavy line now, that's the water
8 level, is it?

9 A. Yes.

10 Q. Right. And then that pipe goes down; that's the riser?

11 A. Yeah.

12 Q. It has an elbow above it, which goes off to the right as we're
13 looking at it. Yes? That's above the water line?

14 A. Yes.

15 Q. That's on berth No. 5?

16 A. Five.

17 Q. And then you put a little squiggle, for want of a better
18 expression. What's that?

19 A. A valve.

20 Q. That's a valve, is it? And that allows, what, air in and out?

21 A. No, that's where if they're using the line at No. 5 you close that
22 valve and the product will go to No. 5. If you want it to go at
23 No. 6 using 36, it would go to No. 6.

24 Q. So that valve transfers any product—

25 A. Yes.

26 Q. —from either being on the site at 5 or 6?

27 A. Yes.

1 Q. Right. And you were asked about PB80?

2 A. That's where you pass—

3 Q. That's a bend, is it?

4 A. Well, yeah. It turns like east then swing south and down.

5 Q. And goes to one of the tanks?

6 A. Well, it goes to Pile Bent 80 and eventually to a tank.

7 **Mr. Chairman:** Yes, all right. Now I understand. Mr.
8 Peterson, you take it from wherever you want to take it.

9 **Continued Cross-Examination By Mr. Peterson SC:**

10 Q. What I'm really interested in is that when the blowing process
11 was taking place there had not been a detachment of the elbow
12 during the blowing process.

13 A. Uh-huh.

14 Q. You got that?

15 A. Yes.

16 Q. Right. Since I'm on the pipe and the risers, I would stick with
17 it for the time being. The learned Chairman asked you about
18 the removal of the plugs and you say that you would—and
19 correct me if I'm wrong, or if I misquote you—that the plugs
20 were removed in this case because you had to put in the riser
21 that was at a—this riser was at a random length?

22 A. Yes.

23 Q. What you mean by that?

24 A. It was longer than the original.

25 Q. Right. But it's supposed to be the length of the original?

26 A. No, it wouldn't.

27 Q. Well, how it connecting back with the elbow on top?

1 A. Because there was a new piece of fabrication to be done.

2 Q. Where?

3 A. On the top of the riser to connect. We were supposed to use a
4 tee there and not an elbow.

5 Q. Right. And you would need barriers?

6 A. It was supposed to be installed at the top.

7 Q. Right. So there was work to be done, welding work to be done
8 on the new riser at the top?

9 A. Yes.

10 Q. Right. So it was not finished and polished and had no hot
11 works to be done?

12 A. It had no hot work to done at the time on the 25th.

13 Q. No, no, no, no; on the riser. Don't jump forward; on the riser.
14 There was no hot work intended to be done on the new riser to
15 be installed. That's what you are saying?

16 A. When?

17 Q. Ever.

18 A. The riser was—well, we had to do hot work on the riser. The
19 plug and the migration barrier were to be reinstalled on the top
20 of the new riser.

21 Q. Right. Because the new riser was, according to you, at a
22 random length and needed to be worked on?

23 A. Yes.

24 Q. In order to get to the proper length to connect back to the
25 original elbow that was removed?

26 A. Yes.

27 Q. All right. Just assist us a bit. If that riser was not that one at a

1 random length, you would have installed a finished riser at the
2 proper length without removing the plugs? You follow my
3 question? If you want me to repeat it, I'll do it.

4 A. I am going, based on our method statement, to this particular
5 job. I can't foresee—

6 Q. No, I'm asking you for assistance; I'm asking you for help.

7 A. No, I can't. I can't answer you. Sorry.

8 Q. Why can't you answer me or won't answer me?

9 A. I can't give you an answer to that.

10 **Mr. Chairman:** I'm not sure I'm following at the moment.
11 Can you ask the question again, please?

12 **Continued Cross-Examination By Mr. Peterson SC:**

13 Q. You said that this one was at a random length so you had to cut,
14 and all of that, at the top?

15 A. Yes.

16 Q. But there are times when the risers are at the fitted length or the
17 correct length. It wasn't random length as you call it. This one
18 happened to be random length. Did you not say that? That
19 this—

20 A. Yes, it was at a random length, so we had to remove the plug
21 because—

22 Q. Not all risers to be installed tends to be at a random length.
23 Sometimes they are already finished and exact?

24 A. Okay.

25 Q. No, I don't know. I'm asking you?

26 A. Yes, yes.

27 Q. Right. In such a case—in such a case, you should remove the

1 plugs using a tee tool after installing the riser. You smile.

2 A. You could.

3 Q. Right. Explain to us how you use the tee tool to remove the
4 plugs after installing the new riser. Explain to us how that is
5 done physically?

6 A. It's a socket onto a bar.

7 Q. Right?

8 A. And you remove the bolts, you slack the bolts and take the
9 migration barrier out. You lift the hose and you release the air
10 in the plug.

11 Q. And you pull up the plugs?

12 A. And you pull it up.

13 Q. Right. And at that stage when the plugs come up, that new riser
14 would be above sea level?

15 A. Yes.

16 Q. To connect to the elbow that's going back into all the racks of
17 pipes. Isn't that so?

18 A. Yes.

19 Q. Right. In such a case, that new riser being above sea level and
20 the plugs now being removed by via the long tee tool, there
21 would be no occasion for a Delta P factor, latent or patent. Isn't
22 that so?

23 A. I would guess not.

24 Q. I like your guess. In the hyperbaric chamber with the men
25 working there, you know the quality of air is supposed to
26 remain pristine—clean.

27 A. Yes.

1 Q. Hydrocarbons coming into hyperbaric chamber is not making
2 the air pristine; it compromises the air. Doesn't it?

3 A. Yes, but can I explain something?

4 Q. You're going to be able to explain. All I ask you is being in a
5 hyperbaric chamber with hydrocarbon fumes coming into the
6 chamber compromises the air in the chamber. That is a yes?

7 A. Yes.

8 Q. Right. You want to explain. Go ahead now.

9 A. Firstly, for you to get fumes from that liquid, oil—you have
10 to—it have to reach a certain temperature to emit fumes.

11 Q. Yes.

12 A. And, secondly, we had a vent at the top where we were testing
13 the air quality at all times in the chamber and if that had
14 changed the divers would have—

15 Q. Been alerted?

16 A. Yes.

17 Q. All right. I know that. But you don't know what fumes were
18 possibly coming up from that line, that could have gone in the
19 chamber; you didn't know that. That's why you had to keep
20 checking it. Isn't that so?

21 A. To maintain the air quality, yes.

22 Q. Right. Yes. The reason you keep checking it is because you
23 know it could go wrong, so you want to be able to alert the
24 divers?

25 A. Yes.

26 Q. Right. Do you know—and tell me if you know or you don't
27 know—that Mr. Beddoe was concerned about diving into the

1 pipe even on the Sunday because of the possibility of radiation
2 coming from that line?

3 A. I don't know that.

4 Q. You don't know that?

5 A. No.

6 Q. And he wanted Paria to give him an undertaking that if
7 anything go wrong with him they would pay him for the
8 medical bills for the next 20 years if he goes in there and get
9 radiation. You know about that?

10 A. No, I don't.

11 Q. Right. You realize that Mr. Beddoe is a more highly qualified
12 diver than you are?

13 A. Yes.

14 Q. And his risk on Sunday is that he could be exposing himself to
15 a danger on that pipe because he doesn't know—

16 **Mr. Chairman:** Just a minute, just a minute. First of all, if
17 there's to be some evidence about radiation from the fumes—
18 radiation exists everywhere.

19 **Mr. Peterson SC:** Well, I don't know that, Sir.

20 **Mr. Chairman:** Well, I do. Radiation exists in minerals and
21 in the earth, and so on. The issue here is whether it can be
22 released, and the question of releasing of radiation by the use of
23 extraction of oil whether through our gases, through fracking,
24 or through other processes, is a controversial topic. If you're
25 going to be relying on that I need to understand on what basis
26 you're doing so. If Mr. Beddoe is saying that he wanted
27 reassurance about potential dangers to him and that is why he

1 was less than enthusiastic about going into the pipe, I'm not
2 clear about that at the moment on the evidence that I've had.

3 My concern is, if you're going to introduce something
4 like that as being the basis for why he was not prepared to go
5 into the pipe, two things arise. First of all, I want the expert
6 evidence to support it. And, secondly, there is a distinction
7 between taking a risk when people's lives are in danger which
8 might have been in the case on Friday or Saturday, from that
9 which might be risking yourself when the people are already
10 dead. And if that was the case on Sunday you could understand
11 why that might be a risk factor that he would wish to take into
12 account in risking his own health.

13 **Mr. Peterson SC:** Mr. Chairman—

14 **Mr. Chairman:** So I need to be clear about what it is that's
15 being put here.

16 **Mr. Peterson SC:** Yes. Mr. Chairman, I am not using it in the
17 manner in which you are saying that I'm using it. I am using it
18 to the extent that it is a risk to be considered, and as you said,
19 depending on the time of the Friday, Saturday, or Sunday, one
20 could dispose of the risk because of it being Friday or Saturday
21 and be more tolerant to the risk because it's Sunday.

22 **Mr. Chairman:** So what are you asking?

23 **Mr. Peterson SC:** I just want to identify it as a possible risk
24 that a trained diver had considered in his plan. That's all I'm
25 using it for.

26 **Mr. Chairman:** Well, if you are identifying it as a potential
27 risk with this witness, you're going to need to ask him, first of

1 all, whether he even recognized it as it existed as a risk, because
2 not everybody does.

3 **Mr. Peterson SC:** Yes, Sir. I'm going to ask him that.

4 **Mr. Chairman:** All right.

5 **Mr. Peterson SC:** Well, I will ask him if he was aware, and if
6 he's not aware, as I told you, tell me yes or no.

7 **Continued Cross-Examination By Mr. Peterson SC:**

8 Q. Were you aware that Mr. Beddoe was considering radiation as a
9 risk factor on Sunday?

10 A. No.

11 Q. Right. That's what I was at. You know you can get radiation
12 from your cell phone and that's why people don't want to use
13 5G? Do you know that? Now, the toolbox meeting, you
14 attended that?

15 A. Yes.

16 Q. This is not the first job like this you did. You said you did one
17 in 2020?

18 A. Yes.

19 Q. Similar riser been installed, and that kind of thing?

20 A. Yes.

21 Q. You know the installation and removal of the migration barriers
22 are important steps in the process, don't you?

23 A. Yes.

24 Q. The toolbox meeting—you signed that form?

25 A. Yes.

26 Q. The removal of the barriers on the 25th was never mentioned on
27 that form?

1 A. Because Kazim Ali was supposed to fill in a section on that
2 being the supervisor for that day.

3 Q. I ain't ask yuh that yet. Have you ever seen the form?

4 A. Which form?

5 Q. For the 25th that you signed.

6 A. Yes.

7 Q. You know that the removal of the plugs, the barriers, that was
8 not mentioned on the form?

9 A. Because I told you Mr. Kazim Ali—

10 Q. I asked you if you know it's not there?

11 A. No, it's not there.

12 Q. Right. When you signed it? At what stage? You recall?

13 A. Right after the toolbox talk.

14 Q. Right after the toolbox—after Mr. Kazim Ali wrote up the
15 form?

16 A. No, after the talk was done we had to do the air quality test on
17 the compressor.

18 Q. So you signed a blank form?

19 A. I signed when Mr. Victor Dhillpaul put in his section.

20 Q. Put in his section?

21 A. Yes. And Mr. Kazim Ali would do his own after.

22 **Mr. Peterson SC:** Could you pull up—Mr. Chairman, with
23 your leave, could you pull up 1070, the toolbox form please for
24 berth ?

25 **Continued Cross-Examination By Mr. Peterson SC:**

26 Q. That's the form? You recognize it?

27 A. Yes.

1 Q. Could you scroll down so you could see your signature? Where
2 is your signature on that form?

3 A. Right there where the pointer is.

4 Q. Right. Where Dexter Guerra is there. Right. When you signed
5 this form, what was not on it?

6 A. The discussion between the removal of the—well, the works to
7 be done that day.

8 Q. Right. You see topics discussed? Were those filled in?

9 A. Yes.

10 Q. You read that before you signed it?

11 A. Yes.

12 Q. You saw anything there about moving of plugs?

13 A. It not on the form, no.

14 Q. Right. Did you call the attention to Mr. Kazim Ali Jr., “aye, the
15 removal of them plugs, you didn’t have it there?” You tell us
16 about it, but you didn’t put it there. Look, look; it’s not there.
17 Did you do that?

18 A. No, I did not.

19 Q. Is it that you didn’t do that because it was never discussed?

20 A. It was discussed.

21 Q. I’m talking about them?

22 A. I talking about them.

23 Q. Right. You’re sure you’re not saying that now because of what
24 happened?

25 A. No, I’m not.

26 Q. Because you like to follow procedure?

27 A. We were—yes.

1 Q. No, you?

2 A. We try to, yes.

3 Q. No, you, not we?

4 A. Yes.

5 Q. You, not we?

6 A. Yes.

7 Q. You like to follow procedure?

8 A. Try my best.

9 Q. You is a man who stick to procedure and what is to be done?

10 A. I try my best, Sir.

11 Q. What about the removing of the barge that caused the
12 suspension?

13 A. Okay. I did not do that on my own, Sir.

14 Q. So when you have company you does do the things out of
15 sequence?

16 A. Can I explain?

17 Q. You'll get a chance, you know. You see this lady across
18 there—very competent.

19 A. No, but can I explain to you now?

20 Q. No, no. I'm not interested in that now, yet. But that activity of
21 yours in February 18th—when was it? When did you do the
22 wrong thing?

23 A. 17th.

24 Q. 17th, a mere eight days before this sad event of the death of
25 these divers?

26 A. Yes.

27 Q. You in this same contract, same job, you removed a barge

1 without authorization?

2 A. You didn't give me chance to explain.

3 Q. I'm coming to give you the chance.

4 A. Okay.

5 Q. I just want to know if you removed the barge without
6 authorization?

7 A. No.

8 Q. Right. So you saw that Mr. Kazim Ali—he's of LMCS right?

9 A. Yes.

10 Q. He investigated the event?

11 A. Yes.

12 Q. You want to explain? Go ahead. Let me hear this.

13 A. The morning of the incident, that particular incident—

14 Q. The 17th?

15 A. Yes. We had an arrangement between us, the maintenance, to
16 move early, six o'clock.

17 Q. Yes.

18 A. Okay? The maintenance crew, they came in minutes to
19 seven—about ten to seven, somewhere there. I, normal
20 channels, and the normal thing with the crane barge is we try to
21 move early when going in-between structures, because of the
22 wind, and that creates a hazard because we could either put a
23 hole in the barge, sink right there. So we try to do it at that
24 time. I called shipping office normal, because they govern the
25 harbour. I asked the OTS at the time—

26 Q. Well, I don't want to spend too long on this, because that's not
27 what the Commission really looking into.

1 A. No, but you're looking into this, so I'm giving you the
2 explanation.

3 Q. So, basically, you're saying it's not your fault only?

4 **Mr. Chairman:** I know he's taking his time but he's allowed
5 to say.

6 **Mr. Peterson SC:** Yes, Mr. Chairman. I just didn't want to—

7 **Mr. Guerra:** I spoke to the person in charge of the port and
8 told him we did not have a permit and explained to him that we
9 wanted to go with the barge before the wind and water get
10 choppy because of where we were going to position the barge.
11 Right? And we spoke of the permit. And I told him that Rajiv,
12 well, the maintenance people, will come with the permit. We
13 didn't have a permit. Normal procedure is we go out and
14 permits come on the barge to be signed.

15 **Continued Cross-Examination By Mr. Peterson SC:**

16 Q. So it was more convenient to move at that time—

17 A. It was more safe to move at that time.

18 Q. It was more safe to move at that time. Right. And you move,
19 even though you know you supposed to have the permit first,
20 but it was more safe to move then?

21 A. Because permission was granted.

22 Q. Okay. Permission was granted?

23 A. Yes.

24 Q. But you got demoted as a result of that, didn't you?

25 A. Because nobody wanted to hear my side of it.

26 Q. Including your Kazim Ali?

27 A. He agreed with Paria.

1 Q. Including your Ahmad Ali? Nobody wanted to hear you?

2 A. That's it—yeah.

3 Q. None of them wanted to hear you?

4 A. No. I spoke to Mr. Ali and Mr. Kazim.

5 Q. But they demoted you?

6 A. Yes.

7 Q. Isn't that the kind of thing that happened on the 25th when it
8 was more convenient to remove the plugs there and then than to
9 try to remove it with the tee—

10 A. Can I say one more thing on that?

11 Q. On which?

12 A. On the moving of the barge?

13 Q. No. Well—

14 A. Can I, please?

15 Q. Go ahead.

16 A. The same thing was done on that day when we were going out
17 on the 25th that we did the week before.

18 Q. Right. So you—even though you got demoted, you do the same
19 thing again?

20 A. I weren't in charge.

21 Q. All right. Who was in charge then?

22 A. Mr. Kazim Ali Jr.

23 Q. Mr. Kazim Ali Jr.

24 A. And it was given to him same way, via the same steps.

25 Q. That's what I'm trying to get from you. That isn't it that the
26 plug was probably removed on the 25th because it was more
27 convenient to do it at that stage than to try to do it after you

1 installed the riser?

2 A. Did any talk came up—discussion came up with removing the
3 plug? No discussions was made on removing the plug, notten
4 on that; notten happened on that. Because the method
5 statement would have to be changed, right? How we were
6 going to retrieve it? How were we supposed to reach it?

7 Q. That's the reason you all removed it? Because you all couldn't
8 figure out how to reach it from on top?

9 A. Well that—

10 Q. Umm?

11 A. We would have—I feel we—if we did that we might ah had to
12 lower down somebody with the crane inside the pipe to remove
13 it.

14 Q. Or get a longer tool, because that tee tool is made by—well—

15 A. Okay.

16 Q. Get a longer tool.

17 A. We would remove the migration barrier with the tee tool.

18 Q. Because the tee tool is made by LMCS, isn't it?

19 A. Well, how we going to the air hose?

20 Q. Isn't the tool—and you all will make a longer one if you need a
21 longer one; you will make a shorter one—

22 A. Correct.

23 Q. Right.

24 A. But what are we going to do with the hose?

25 Q. That was an issue too. How you're going to remove the hose so
26 we should remove the barriers now. Isn't that what happened?

27 A. Well, that is what it stated here, that at that time it was to be

1 removed.

2 Q. That's not in the toolbox meeting.

3 **Examination By Mr. Chairman:**

4 Q. Can I ask you something, please? You told me in answer to
5 questions to me earlier and now to Mr. Peterson that the piece
6 that you were putting on was very much larger?

7 A. Longer.

8 Q. Longer, yes, than the piece that you've taken off?

9 A. Yes.

10 Q. It was at a random length I think you described?

11 A. Yes.

12 Q. But, presumably, it was at that random length so that somebody
13 on the outside could then measure where they wanted to cut and
14 then cut that piece off?

15 A. Okay.

16 Q. That's right. Don't say "Okay".

17 A. Yes, yes.

18 Q. I'm not the manufacturer, you know. So one can understand
19 you're putting on a piece of pipe that is much longer than you
20 would otherwise need. You cut that pipe off where you think
21 you need it, once it's in place. Yes?

22 A. Yes.

23 Q. Then it would be shorter, wouldn't it?

24 A. A bit.

25 Q. Well, how much is a bit?

26 A. About two, three feet longer.

27 Q. Two or three feet you cut off. Is that all? Did you know?

1 A. Well, no, I can't give you an exact measurement.

2 Q. Forgive me, Mr. Guerra, but, you know, this is obviously quite
3 important, all right. It makes obvious sense that if you could
4 safely remove the barriers when they were closer to you, you
5 would do so. All right? And I understand that the method
6 statement says that's when they should be removed—when
7 you're in the chamber.

8 A. Yes.

9 Q. But you are telling us, as I understand it, that the only reason
10 you were removing them on that occasion at that time was
11 because it was too—when you put the new piece on it, it would
12 be too far down?

13 A. Yes.

14 Q. Right. And that I understand. But you must have put them in
15 when you had the old piece on?

16 A. Yes.

17 Q. So we know you can do it that far. It can't have been much
18 taller, the new piece that you are putting on, once you cut it to
19 where you needed it, or are you telling us that it was quite a lot
20 taller?

21 A. It was longer.

22 Q. I appreciate it was longer. You've told us that.

23 A. It would have been longer if you didn't cut.

24 Q. What are we talking about? A foot? Five feet? Ten feet?

25 A. Between three, four feet.

26 Q. Three or four feet taller. That's it, is it?

27 A. Yes.

1 Q. I just want to make a note of this. So the new piece attached,
2 once cut to the right length would be about two or three feet—
3 three or 4 feet?

4 A. Longer.

5 Q. Longer; three or four?

6 A. Three or four.

7 Q. All right. Hold on. Three or four feet longer.

8 A. And that's just an estimate.

9 Q. Now, I follow that. I'm not going to hold you to exactly, right.
10 But that is what you understood the position to be?

11 A. Yes.

12 Q. Now, so, obviously, you fitted the barriers into the pipe?

13 A. Yes.

14 Q. And when you did that, it would have been just three or four
15 feet shorter than where you would end up being?

16 A. Yes.

17 Q. Right? Was there anything to prevent you from extending the
18 tee pipe by three or four feet?

19 A. No.

20 Q. You could have done that, could you?

21 A. Yes.

22 Q. And then that would take care of the mechanical barrier that
23 was on there?

24 A. Yes.

25 Q. Then you got the inflatable one below that, haven't you?

26 A. Yes.

27 Q. How would you attach a hose or something to the valve to let

1 the air out? How would you do—how would you let the air out
2 of that?

3 A. There's a valve.

4 Q. Right.

5 A. The hose that comes with the plug has a valve with the gauge
6 on it.

7 Q. Right. Do you just press a button and it lets the air out?

8 A. No, you turn a valve.

9 Q. Sorry?

10 A. You turn the valve.

11 Q. You turn it?

12 A. Yes.

13 Q. So there's some sort of tool to turn it, is there?

14 A. Yes. It's like a ball valve.

15 Q. A ball valve?

16 A. Yes.

17 Q. Right. But you were able to inflate it once in place. Yes?

18 A. Yes.

19 Q. Could you have deflated it—well, you did deflate it from
20 exactly the same place, didn't you?

21 A. Yes.

22 Q. Was there any reason why you would not have been able to
23 deflate it with this once cut extended piece of pipe?

24 A. Because it would be so much lower than where we did the
25 inflation from that it will higher—

26 Q. It would have been far?

27 A. Yes. I think somebody would have to lean in—or hold

1 somebody by dey foot and carry them in to—

2 Q. You'd have had to put someone into the pipe?

3 A. Yes.

4 Q. But it would have been dry?

5 A. Right.

6 Q. And it would have been above ground?

7 A. Yes.

8 Q. What was the distance between the—roughly, again—between
9 the water level, now that you've put this new piece on, what
10 would have been the distance between that and the top of the
11 cut pipe, the new section where you'd cut it? What would that
12 distance have been?

13 A. An average?

14 Q. Yes?

15 A. Nineteen, average.

16 Q. How much?

17 A. About 19 feet, I think.

18 Q. About 19 feet as an average.

19 A. An average.

20 Q. Right. Now, would it have been possible—if it were
21 impossible to remove the barriers with that length of pipe, you
22 could have done it in two section, couldn't you? One above the
23 water line so you could reach in and then put another section on
24 so you get to the height you want it to be. I mean, I appreciate
25 it's more work.

26 A. I can't say *per se* to the contract.

27 Q. I'm sorry?

1 A. That would be dependent on the contract?

2 Q. I know, but, I mean, like anything else, things change and it
3 may be that once considered it was not possible to remove the
4 barriers without cutting the pipe lower down, a new flange,
5 another piece of pipe put on and a new flange. That would be
6 one way of doing it, wouldn't it?

7 A. Yeah, that would—yes, and it would have to be discussed at a
8 higher level.

9 Q. All right. It's not your responsibility. I understand.

10 A. Yes.

11 **Mr. Chairman:** All right. Thank you. Mr. Peterson, I'm
12 sorry.

13 **Continued Cross-Examination By Mr. Peterson SC:**

14 Q. It's more convenient to remove the barriers when you did—
15 when they were removed, isn't it? Less work. The exchange
16 you just had with the learned Chairman sounds a fair amount of
17 work. So it's easier to remove it before you bring in the new
18 piece, isn't it?

19 A. I cannot speak about—towards the contract, okay. So I can't
20 answer that question.

21 Q. All right. Or won't?

22 A. I cannot answer you on that, because—

23 Q. The piece, the new piece as you were demonstrating to the
24 Chairman, has to be the same length to fit. When it goes in it
25 has to end at the same length to connect back with the elbow
26 from the main set of lines, isn't it?

27 A. No.

1 Q. So when you install the random piece, don't you have to cut it
2 to get it to line up with the elbow that is already existing?

3 A. As I explained to you before, it weren't going to be an elbow.
4 It was going to be a tee.

5 Q. That's how it connecting—well, better yet. It has to line back
6 up with a tee. Now, it now has to line up with two sides,
7 because a tee is this [*Mr. Peterson SC demonstrates*] an elbow
8 is just this.

9 A. Okay.

10 Q. So it's only one side it has to line up with. But you're telling
11 me now—and thank you for that—it's a tee—

12 A. Right.

13 Q. So it is a greater responsibility to bring it down to the level to
14 line up with both sides. Isn't that so? Draw if you want.

15 A. A tee is shorter than an elbow. You know that? I'm telling
16 you. A tee is shorter than an elbow.

17 Q. I ain't doubting you, yuh know. All I'm saying is that whatever
18 that random thing is, you have to cut off piece.

19 A. Yes.

20 Q. And after you cut that off, you can use your tee, adjust your tee
21 as you want, your tee tool, to do the work on the barriers?

22 A. What you asking me is what I just explained to—

23 Q. Right. So that's a yes?

24 A. Right.

25 Q. And to get to deflate the inflatable plug, tell me if you know
26 this, the manufacturers also sell an extended hose so you can
27 remove yourself out of the zone to deflate the plug?

1 A. Okay.

2 Q. They have short hose, long hose, extended hose. You know
3 that?

4 A. Okay.

5 Q. No, not okay. You know that?

6 A. You telling me I—

7 Q. Well, I'm asking you it. Don't you know that?

8 A. Yes.

9 Q. Right. So if you have to get a longer hose to safely deflate the
10 plug to prevent the Delta P, you buy one. You ever hear about
11 something colloquially called "cutting corners" or "half
12 baked"?

13 A. [*No response*]

14 Q. I want to suggest to you that the plans that you all had
15 developed on that Friday evening were half baked—Friday
16 afternoon, Friday evening the rescue plans were half baked;
17 incomplete.

18 A. Okay. We didn't do anything to help the guys, though.

19 Q. I didn't say that.

20 **Mr. Peterson SC:** One minute, please, Mr. Chairman. Just
21 checking my list. I should be finished.

22 **Continued Cross-Examination By Mr. Peterson SC:**

23 Q. Were you ever interviewed by the police after this incident?

24 A. No.

25 **Mr. Peterson SC:** Thank you very much, Mr. Chairman.

26 **Mr. Chairman:** Yes, I think we'll take a break here.

27 **Mr. Peterson SC:** I didn't realize I was so long, Sir.

1 **Mr. Chairman:** We did. I don't mean that offensively in any
2 way at all.

3 **Mr. Peterson SC:** Yes, I know.

4 **Mr. Chairman:** We'll take a break now, I think, rather than
5 troop on. Do you have anything, Mr. Maharaj?

6 **Mr. Maharaj SC:** No.

7 **Mr. Chairman:** No. Then I have one question only and then
8 you can go, all right, and so does Mr. Wilson. Well, let's take a
9 few minutes and see if we can deal with this, so that you can
10 leave. All right?

11 **Examination By Mr. Chairman:**

12 Q. My question is simply this. Is the document that's on the
13 screen at the moment, which is the toolbox document you were
14 referred to by Mr. Peterson—all right?

15 A. Yes.

16 Q. And he pointed out to you nowhere on that document does it
17 mention anything at all to do with removing the barriers.
18 That's right, isn't it?

19 A. Yes.

20 Q. You told him that the position is, is that Mr. Kazim Ali Jr. was
21 supposed to put it in later on.

22 A. Yes.

23 Q. Well, I mean, the fact and the matter is there is nothing on there
24 about the actual jobs that you were supposed to do at all, is
25 there? I mean, the CARBER testing, anything. There's nothing
26 on there about the work that was to be done on that day?

27 A. Yes.

1 Q. Is there?

2 A. No.

3 Q. So it's not as though the barriers were the only things that have
4 been left out, lest anyone should get the false impression?

5 A. No.

6 Q. There was no indication on this document about topics that
7 were discussed at all beyond safety?

8 A. Yes.

9 **Mr. Chairman:** All right. Thank you. That's all I wanted to
10 ask you. Mr. Wilson.

11 **Examination By Commissioner Wilson:**

12 Q. Good morning, Mr. Guerra.

13 A. Morning.

14 Q. Just want to ask you, how much experience you've had working
15 with these types of jobs and—sorry, go ahead.

16 A. Some.

17 Q. Okay. And you've been diving with LMCS as well?

18 A. Yes.

19 **11.31 a.m.**

20 Q. All right, so, in your experience of diving in these types of
21 scope of works, just outside of the job of the day, are you aware
22 of other capabilities of other diving companies or, let's just say,
23 the local dive industry?

24 A. Yeah.

25 Q. You're aware of them, right? So I want to go to coast guard.
26 So, are you aware of coast guard's capabilities?

27 A. No.

1 Q. All right, so you know industries' capabilities but not coast
2 guard's?

3 A. Yes.

4 Q. Right? Had you known the capability of coast guard to enact a
5 rescue or participate in a rescue when you were being told that
6 coast guard is coming to rescue, in your experience, well in
7 hindsight now, why didn't you challenge that coast guard may
8 not have the capability to rescue where on site and we can
9 probably begin a plan but—sorry, but go ahead, but to begin a
10 plan?

11 A. Okay. Firstly we didn't want to aggravate anyone, meaning
12 that we had an incident the Saturday morning—

13 Q. Uh-huh.

14 A. —where they sent security to remove some of our crew
15 members.

16 Q. Paria security?

17 A. Yes.

18 Q. All right.

19 A. Because of an incident on number 5 where the guys wanted to
20 take a look in the pipe, our guys wanted to take look in the pipe
21 and everybody was just telling them "Move from here. Don't,
22 don't come here", after they removed the flange—

23 Q. Okay.

24 A. —the line flange, so that's the reason we weren't showing any
25 aggression toward anybody.

26 Q. Okay, thank you. Well I've removed the question I have for
27 your knowledge about coast guard's capability but you said

1 something very interesting in managing the incident. From
2 your statement I pick up that you are LMCS leadership on site
3 in term of with the dive supervisor. Would you consider
4 yourself LMCS leadership on site?

5 A. Yes.

6 Q. Because you indicated to either the incident commander or
7 Collin Piper his request to come to the shipping office—

8 A. Right.

9 Q. —that you're not going to move, so obviously you had some
10 sort of experience where you felt you had an authority to
11 decline the client because you're managing a site?

12 A. Yes. We would—well, both of us wouldn't leave.

13 Q. All right.

14 A. I would stay and Andrew would go.

15 Q. So you were essentially the dive supervisor's delegate in his
16 removal from the site and/or was it agreed? How that—um,
17 how did that come about.

18 A. Well, just, just a discussion between me and Andrew.

19 Q. All right. All right, one last question. In terms of the manning
20 power at that time to effectively initiate a rescue, would you say
21 that manning power existed?

22 A. At the time was just—well, was me and Andrew and we called
23 in for support.

24 Q. Right. And, sorry, I just have to continue on from that. So, at
25 the time it's just you and Andrew Farah in terms of manning
26 resources, LMCS, with a capability to go into the water?

27 A. Yes.

1 Q. How long it took before, in your eyes, from what you
2 witnessed, before help reached on the scene?

3 A. Er, just about the time when Boodram came out.

4 Q. Boodram came out.

5 A. Yes.

6 Q. You could put a hour time period on that, or, from the time it
7 was just both of you all to when Boodram came out?

8 A. I can't.

9 Q. No problem. All right, thank you.

10 **Mr. Chairman:** All right. Good. Well then you are free to
11 go. Please, do not discuss the evidence that you have given
12 with any of your colleagues who are outside in various different
13 rooms with or without their telephones, all right? Please? Do
14 not do so. I suggest the best thing for you to do is to leave,
15 leave the building, all right? You want to watch proceedings,
16 do so on the screen. All right? But thank you very much for
17 coming. Appreciate your evidence. You're free to go now.

18 **Mr. Guerra:** Thank you.

19 [*Mr. Dexter Guerra leaves Enquiry room*]

20 **Mr. Chairman:** We'll resume at 5 to 12.00. Thank you.

21 **11.38 a.m.:** *Enquiry suspended.*

22 **11.54 a.m.:** *Enquiry resumed.*

23 **Mr. Maharaj SC:** The next witness is Andrew Farah.

24 **Mr. Chairman:** Yes. I'm wondering, Ms. Persaud Maraj,
25 whether you would not be better placed going last.

26 **Mrs. Persaud Maraj:** I would be most grateful, please.

27 **Mr. Chairman:** You should have asked me.

1 **Mrs. Persaud Maraj:** There were no further re-examination
2 questions after the counsel had asked of Mr. Guerra.

3 **Mr. Chairman:** Right. Well we'll just change the order for
4 these witnesses for the moment, all right?

5 **Mrs. Persaud Maraj:** I'm most grateful.

6 [*Mr. Andrew Farah sworn*]

7 **Mr. Farah:** I, Andrew Farah, solemnly swear that the evidence
8 I shall give to the Commission in this case shall be the truth, the
9 whole truth and nothing but the truth.

10 **Ms. Maharaj:** Mr. Chairman, I will be summarizing the
11 evidence, Chairman.

12 **Mr. Chairman:** Mr. Farah—

13 **Mr. Farah:** Uh-huh.

14 **Mr. Chairman:**—what's going to happen is that Ms. Maharaj
15 is going to read a summary of your evidence and the interview
16 that you provided, so that your—please listen to what she says,
17 and, assuming that you agree with her summary you'll say so at
18 the end. That will avoid the necessity of taking you through
19 each and every part of your evidence, all right? After that
20 myself, Mr. Wilson and/or any of the other counsel who want to
21 ask you questions will be permitted to do so. Let's see if we
22 can try and dispose of your evidence this side of lunch. We're
23 going to try anyway. We'll see how we go, all right? So listen
24 please to Ms. Maharaj and she will provide you with the
25 summary.

26 **Ms. Maharaj:** Thank you.

27 Mr. Andrew Farah submitted a witness statement to the

1 Commission dated 5th of October, 2022. It's in the witness
2 statement bundle at page four three nine Volume I. He was
3 interviewed by the Commission on the 21st of October and a
4 witness statement was prepared for him based on that interview
5 and Mr. Farah signed that witness statement on the 29th of
6 October. And that statement is in the witness statement bundle
7 page four four three Volume I.

8 Mr. Farah is a commercial diver and had been employed
9 with LMCS Limited for the last eight to nine years. He was
10 involved in the preparation of the risk assessment for the diving
11 part of the job which was being conducted on the 25th of
12 February, and that risk assessment is at core bundle page 1062.
13 The hazards which he identified included drowning, equipment
14 failure, incompetent workers and weather conditions. Control
15 measures were implemented for those hazards. The rescue plan
16 in place was that for each diver in the habitat there was a
17 standby diver present and there would be two standby divers
18 topside.

19 The hazard of the men being sucked into the pipeline was
20 not considered by him. This is because in the method statement
21 provided for the installation of the plugs just above the liquid in
22 the pipeline and this would have eliminated the hazard of the
23 differential pressure. He states that this would have been within
24 his knowledge, training and experience to identify such a
25 differential pressure hazard because LMCS did exactly the
26 same type of job at berth 5 in the past.

27 The job scope for the 25th of February included pressure

1 testing the weld on the flange, removal of the plugs, the
2 installation of the new section of the riser and the removal of
3 the habitat itself. Mr. Farah's knowledge of the work-plan
4 came from previous jobs, the toolbox meeting as well as the
5 method statement and from doing the risk assessment. The
6 toolbox meeting was conducted by Victor Dhillpaul at around
7 8.00 a.m. on the barge. The job for the day and general safety
8 was discussed.

9 Mr. Farah was the dive supervisor on the 25th of
10 February. After the toolbox meeting he proceeded to the
11 platform on berth 6 at the dive monitor station where he
12 monitored the habitat operations via a live CCTV video with a
13 Paria representative. According to Mr. Farah, the divers were
14 conducting the works in accordance with what he understood
15 the scope of works to be. Based on his knowledge of the
16 project and the permit to work system, Mr. Farah states that
17 Paria always had a representative present to supervise the works
18 whilst they're being conducted. There were about three or four
19 persons present from Kenson or Paria and they were coming
20 and going on the 25th of February.

21 At about 2.45 p.m. on Friday, the 25th of February, Mr.
22 Farah observed a gush of water on the screen and the screen
23 then went blank. This was also observed by the Paria
24 representative present. The last thing Mr. Farah observed
25 before the gush of water was the men removing the mechanical
26 plug.

27 Mr. Farah confirmed with Mr. Guerra that the

1 compressor was working. He then searched the waters around
2 berth 6 and he also entered the habitat. He observed it was dry
3 and there was water in the riser approximately three to four feet
4 below the top of the riser—the pipeline. Mr. Farah concluded
5 at this point that the men were probably in the pipeline.

6 Mr. Farah, together with LMCS' Dexter Guerra and Mr.
7 Kazim Ali Sr., then devised the following plan. Mr. Farah
8 would enter the riser feet first with an extra set of diving gear so
9 if he found anyone he could provide it to them to assist them to
10 take them back up. He would then—he would have had
11 connected to him a tag line which he would use to communicate
12 with Mr. Guerra who would be topside in the habitat and would
13 assist to pull him back up the riser.

14 Mr. Farah said that he called Conrad Beddoe for surface
15 supply equipment and told him to call whoever he could for
16 them to make their way down to Paria. Mr. Farah stated that he
17 dived into a pipeline in or about 2010 or—in about 2009 or
18 2010 to install a gasket in vertical section of a pipeline. He felt
19 confident about the rescue plan which was to be immediately
20 implemented. He states that he and Dexter Guerra discussed
21 the plan with Paria personnel present but they kept saying that
22 they had to get permission from their management team, that
23 Paria pulled the permits and LMCS were not allowed to dive.

24 According to Mr. Farah, whilst he was trying to action
25 the plan by getting Paria to allow LMCS to carry out the rescue,
26 he was told that Collin Piper wanted to have a meeting with
27 him. Whilst he was in a vessel proceeding onshore, Mr. Guerra

1 called him and indicated that they were hearing knocking from
2 the habitat. Mr. Farah then returned to berth 6. When he
3 arrived, divers, Michael Kurban, Corey Crawford and Ronald
4 Ramoutar were already there and were putting on their gears to
5 enter the water.

6 They went into the habitat and asked, and assisted
7 Christopher Boodram out of the riser and brought him to the
8 surface. As soon as Christopher Boodram came to the surface,
9 he started shouting that everyone was alive and Fyzie was
10 behind him. He started to tell Michael Kurban that his dad was
11 behind him. He said, "Go in and rescue him." Mr. Farah states
12 that although Paria and/or Kenson persons were saying not to
13 dive, they knew at this point that the divers were alive so they
14 had to attempt a rescue.

15 Mr. Farah discussed the rescue plan with Michael
16 Kurban. The plan was the same except Mr. Kurban would enter
17 the pipeline instead of Mr. Farah, assisted by Mr. Ramoutar and
18 Mr. Crawford. They entered the water and when they came
19 back up Mr. Kurban indicated to Mr. Farah that he went to the
20 top of the riser and went as far as he could with the umbilical,
21 that is about 10 feet into the pipeline. Mr. Kurban also
22 indicated that he found a set of dive gear just past the elbow and
23 he brought it back.

24 At this point in time, Conan Beddoe arrived and Mr.
25 Farah discussed the plan with him. Conan Beddoe, Michael
26 Kurban, Corey Crawford and Ronald Ramoutar then entered the
27 water. After the divers entered the water, coast guard officers

1 told Mr. Farah to get all of the divers out of the water and that
2 they had to stand down. At about 6.00 p.m. Mr. Farah indicated
3 this to the divers when they emerged from the water.

4 Around 6:30 p.m. Conrad Beddoe arrived with surface
5 supply equipment and the rescue plan was modified so that
6 divers could now enter the water with commercial equipment
7 instead of scuba equipment. Mr. Farah stated that he repeatedly
8 tried to convince the Paria representatives to permit LMCS to
9 make at least one rescue attempt, but they kept saying that they
10 were not in charge and would relay to their supervisors. He
11 stated he kept going back and forth with the representatives
12 including one Catherine who kept saying that LMCS didn't
13 have permission and had to just stand down.

14 Mr. Farah also tried to convince the coast guard, but they
15 just kept saying that LMCS could not dive and they had to
16 stand down until they received instructions. In addition to
17 Conan's equipment, two other dive support vessels arrived,
18 fully equipped with surface supply equipment and willing
19 divers. Mr. Farah stated that Paria was aware that all of the
20 resources came in and he had discussions with Catherine and
21 other Paria personnel present as to what resources were
22 available to LMCS.

23 Mr. Farah stated that communications between himself
24 and Paria personnel present at berth 6 were cordial and good
25 and he provided all the information requested of him. On late
26 Friday night, works were done to install the spool piece on the
27 riser in order to shut down the compressor in the chamber and

1 to open the pipeline on berth number 5. There is, on the screen,
2 the diagram which would show how the riser would have
3 looked after it was connected top side.

4 After midnight, Paria arrived with cameras. However,
5 Mr. Farah did not see the footage. There was also a second
6 attempt with a crawler. Mr. Farah stated that he did not see that
7 footage either. Mr. Farah left berth 6 at around 8.00 p.m. on
8 Saturday the 26th February.

9 On Sunday the 27th of February, Mr. Farah accompanied
10 Mr. Kazim Ali Sr. to two meetings with Paria to inform Paria of
11 the rescue plan and to convince them to at least give LMCS one
12 chance to make a rescue attempt. At this point in time, Mr.
13 Farah stated that he wanted to give the benefit of the doubt that
14 someone was still alive and there could still be a rescue. After
15 the first meeting, LMCS had to go back to the office because
16 Paria wanted LMCS to do a method statement and a risk
17 assessment for the rescue operation. Mr. Farah assisted with
18 the preparation of the documents.

19 LMCS returned for the second meeting with Paria but
20 Paria did not give permission to carry out the rescue. He states
21 that one person on behalf of Paria at the meeting mentioned that
22 there could have been oil in the pipeline and spoke to the
23 possibility of radiation to the diver. Mr. Farah, however, stated
24 that in previous times that he dived into a pipeline this was
25 never raised as an issue. He also says that LMCS has been
26 involved in many oil spill clean ups and radiation was never
27 brought up as a possible problem.

1 Mr. Farah also stated that he was confident about the
2 rescue plan. LMCS had equipment and the competent
3 personnel to execute the rescue and there was no concern that
4 there could have been another incident occurring which would
5 have sucked the men in to the pipeline. Mr. Farah said that he
6 was also prepared to enter the pipeline.

7 Mr. Farah, is that an accurate summary of your evidence?

8 **Mr. Farah:** It is.

9 **Ms. Maharaj:** Thank you.

10 **Mr. Chairman:** Yes, thank you. Thank you, Mr. Farah.

11 **Examination By Mr. Chairman:**

12 Q. I just want at this stage to ask you one thing, really. The
13 various plans that there may or may not have been to effect a
14 rescue, did you regard any of those plans as having with them a
15 risk to those who were going to effect the rescue, including
16 yourself?

17 A. Um, well at the initial stage with the rescue plans to dive on
18 scuba, there would have been a risk but at the end of the day we
19 had lives in the pipeline and we were willing to execute that
20 dive using scuba.

21 Q. Is the short answer to my question that there was a risk attached
22 to doing so?

23 A. There would have been.

24 Q. Yeah. Were the divers that you dealt with prepared to take that
25 risk?

26 A. They were.

27 Q. Did they know what that risk might be?

1 A. They would.

2 Q. Yeah. Is there a sort of fraternity amongst divers in this world,
3 particularly in this country?

4 A. Yep.

5 Q. Probably everywhere. If you were in the pipe, would you
6 expect someone to come and try and save you?

7 A. Most definitely.

8 Q. Even if it was a risk to them?

9 A. Yep.

10 **Mr. Chairman:** Thank you. All right, can I ask this, so I can
11 ask everybody else first if they would like to ask any questions,
12 and, if they do, put their hand up? [*Hands raised*] Yes, all
13 right. Well what we'll do is we'll hear first of all from Ms.
14 Alfonso, please?

15 **Ms. Alfonso:** Thank you, Mr. Chairman.

16 **Cross-Examination By Ms. Alfonso:**

17 Q. Good afternoon, Mr. Farah. My name is Nyree Alfonso. I'm
18 representing the interest of the SWWTU. I know that you say
19 you were the diving supervisor on the 25th of February of this
20 year in respect of this matter. Do you have any special—I don't
21 know what the right term is, is it ticket or card as a dive
22 supervisor? You have any specific training as a dive
23 supervisor? Not as a commercial diver. You've said you're a
24 commercial diver.

25 A. No, not as a dive supervisor.

26 Q. Okay.

27 A. Only commercial diver.

1 Q. Okay. To your knowledge, is there specific training to be
2 certified as a diver supervisor?

3 A. There is, yes.

4 Q. Okay. But you don't have it?

5 A. No.

6 Q. Okay. Have you received training as a dive supervisor as
7 opposed to certification?

8 A. No, no, no training.

9 Q. Okay. Thank you very much for that. On this day on the 25th
10 in the afternoon of the 25th, who were the—you're the dive
11 supervisor, who were the standby divers?

12 A. Well, at that point in time we had Kazim Jr. as a standby diver,
13 but, once a dive operation is going on, all divers are considered
14 as standby divers.

15 Q. Okay. Help me out with that, Mr. Farah. You had four divers
16 in the habitat?

17 A. [*Nodding*]

18 Q. Yes?

19 A. Yes.

20 Q. So they could—they were actually doing things in the habitat?
21 They were doing work in the habitat?

22 A. They were doing work, yes.

23 Q. Okay. So they couldn't be—those four people could not be
24 standby divers?

25 A. Yeah, they could. They could be sitting back whilst the other
26 two divers were working, and, if anything happened, they
27 would assist those divers and take them out of the chamber.

1 Q. Mr. Farah, would you—you would know whether all four
2 divers were assigned tasks in the habitat that day?

3 A. A particular task for each diver?

4 Q. Yes.

5 A. No.

6 Q. Okay. So how many divers would have been used to do the
7 work in the habitat?

8 A. Two divers.

9 Q. Two divers. So you're saying that two were active participants
10 in the work and two were standby?

11 A. Yeah.

12 Q. Okay. Is it normal, in your experience, that the standby divers
13 would be in the same environment as the actual divers so that if
14 there was—something untoward happened in the habitat, or
15 around the habitat, they wouldn't be in the same situation of the
16 active participants, the active divers?

17 A. Well, whilst working in the chamber, it was a dry environment
18 so it would—it was not considered that they were diving at that
19 point in time.

20 Q. Okay. So, if you remember, who were the standby divers on
21 the 25th of February?

22 A. Whilst the four divers were working in the water, well, in the
23 chamber, we had Kazim Ali and, if required, Dexter Guerra.

24 Q. Help me out, Mr. Farah. If you have a standby diver, isn't it a
25 best practice that that standby diver, or divers as the case may
26 be, would be topside?

27 A. Yeah.

1 Q. And geared up?

2 A. Uh-huh. He was, yes.

3 Q. And able, and able to get into the water very quickly?

4 A. Yeah.

5 Q. Who is he?

6 A. Kazim, Kazim Jr.

7 Q. Okay. But Kazim Ali seemed, at least from the video we saw,
8 to be ferrying tools to the four people in the habitat?

9 A. Yeah, yeah. He was also assisting them with carrying out that
10 task as well. If they needed any additional tools he would carry
11 it down and give it to them.

12 Q. Okay. So how would Mr. Ali, Mr. Kazim Ali, be a standby
13 diver able to assist in the event of an emergency with the four
14 people in the habitat if he himself was in the habitat?

15 A. Um, it's very unfortunate that at that point in time when he
16 went down that this event occurred.

17 Q. Okay. So he was a participant in the work then? He wasn't a
18 standby diver?

19 A. He was. He was a standby diver.

20 Q. But he was a standby diver exposed to the same risk in the
21 event that he had to effect a rescue? He'd be in the same
22 environment of those he was asked to rescue?

23 A. Correct.

24 Q. Would you agree, Mr. Farah, that would not be best practice?

25 A. Well, I, I would say yes, I agree with that, but how the job was
26 planned, to eliminate the hazards of the Delta P which caused
27 this accident, it was—that was not supposed to occur.

1 Q. Okay. I wouldn't get to Delta P at this point in time. I'm just
2 asking in the environment that you had, you should have had—
3 the best practice would have been a diver or divers fully geared
4 up and waiting to get into the water quickly, immediately?

5 A. Correct.

6 Q. Correct. And that didn't happen here?

7 A. No.

8 Q. Okay. I notice in paragraph two of your—I think this is the
9 original witness statement, yes, your original witness statement
10 at four three nine, you named yourself at D, 2D, as a standby
11 diver as well?

12 A. Yep, uh-huh.

13 Q. You agree with me?

14 A. Yeah, yeah.

15 Q. Yeah? Okay. So, would it be best practice for the dive
16 supervisor to also be a standby diver?

17 A. No, but, given the circumstances that happened that day, yes I
18 was the only one that could have acted as a standby diver,
19 myself and Dexter.

20 Q. Okay. Was Dexter geared up and waiting to go into the water
21 immediately?

22 A. No.

23 Q. Okay. Isn't it true, Mr. Farah, that you yourself had to take the
24 time to put on your gear in order to get down to the habitat, so
25 that caused a delay as well in you getting to the inside of the
26 habitat?

27 A. Well I had the time because I had to wait before the habitat

1 blew back down before I can enter.

2 Q. Okay, but you had to gear up? You had to put on fins and tank
3 and harness—well, it's not harness, the pack that you put—

4 A. Yeah.

5 Q. —the tank on and so on, you had to do—and get your mask and
6 so on?

7 A. Correct.

8 Q. Okay. So wouldn't a standby diver be somebody geared up just
9 like that and waiting to get into the water, as you say, when the
10 water settled in the habitat?

11 A. Yes.

12 Q. Okay.

13 A. Correct.

14 Q. And you had, Mr. Farah, specific duties on the 25th in terms of
15 monitoring some sort of live feed of the habitat?

16 A. Correct.

17 Q. Okay. Wasn't that your primary duty?

18 A. It was.

19 Q. So you would agree with me, then, that the—okay. So do you
20 think in retrospect that having a true standby diver fully geared
21 up, fully able to get into the water immediately, not taking away
22 the dive supervisor off the job, that would be the best practice?

23 A. Correct.

24 Q. Thank you, Mr. Farah. In your supplemental witness statement
25 at page 444, you mentioned that there were two standby divers
26 in the habitat and two standby divers topside. Is it that you
27 were counting yourself and Mr. Guerra as the two standby

1 divers—sorry, I'll let it come up. That's paragraph 14. You
2 see that there?

3 A. Yeah.

4 Q. Is that correct?

5 A. Uh-huh.

6 Q. Were you counting Mr. Guerra and yourself as the two topside
7 standby divers?

8 A. No. That would have been Kazim Jr. and Dexter.

9 Q. And Dexter. Okay, thank you. Going back to best practice,
10 best practices, Mr. Farah, you've already said that this job was
11 done with scuba?

12 A. Uh-huh.

13 Q. Right? Scuba equipment?

14 A. Yeah.

15 Q. Right, and people who were certified to use scuba equipment.
16 Even if it is in hindsight now, in your view would it have been
17 better to have commercial divers undertake these duties that
18 were required of them, such as like Mr. Conan Beddoe and so
19 on and yourself? Yourself and Mr. Beddoe are both
20 commercial divers?

21 A. Right.

22 Q. Would it have been better to use commercial divers? I'll ask
23 you that first.

24 A. No, it would not have mattered.

25 Q. Okay. So that—

26 A. Because we weren't using commercial surface supply
27 equipment.

1 Q. Okay. And that was the next question.

2 A. Right.

3 Q. Would it have been better to use commercial diving equipment?
4 And I'll give you an exam—I'll give you what I mean, all
5 right? Surface air—

6 A. Right.

7 Q. —with an umbilical cord, some form of tether, meaning
8 something attached to your hip, so that if you got into difficulty
9 there will be somebody topside?

10 A. Uh-huh.

11 Q. A tender, that's the right word?

12 A. Yeah.

13 Q. Right, who would be holding the rope that—

14 A. Yes.

15 Q. —is attached to your hip and it would have surface air and that
16 surface air could be supplied not only with a helmet but
17 something, I think the term is hat, isn't it? Is—that is correct?

18 A. Yeah, or dive hat.

19 Q. A dive hat. So something light?

20 A. No, not light.

21 Q. Okay. Aren't there dive hats that are just about a pound, a
22 pound and a half?

23 A. Definitely not.

24 Q. Not the big metal ones.

25 A. Uh-huh.

26 Q. Something that you strap under your chin.

27 A. No.

1 Q. Also known as a dive mask.

2 A. A barn mask.

3 Q. Pardon?

4 A. Barn mask.

5 Q. Barn mask?

6 A. Yes.

7 Q. Yes.

8 A. That's about 18 pounds.

9 Q. Okay.

10 A. Yeah.

11 Q. No. Yeah. Mr. Farah, they're not lighter newer versions of
12 that?

13 A. Not that I am aware of.

14 Q. Okay. Okay. I've leave that and ask it to somebody else but
15 I'm told that they're much lighter units that are about a pound, a
16 pound and a half.

17 A. Okay.

18 Q. Okay. So setting aside, I can't—if you don't know you don't
19 know but with respect to the harness where you could have a
20 rope, where you could have a tender topside holding on to that
21 rope, in retrospect, in hindsight, now that you know what
22 transpired with—in, in, in—on that day, would it not have been
23 safer, best practices, would it not have been safer for the four
24 divers, five?

25 A. In hindsight, yes. It would be.

26 Q. And that's something very—I mean, for want of a better term, I
27 say I've never dived, that's very low-tech, isn't it?

1 A. Low-tech, what, what?

2 Q. Meaning you have a harness, you have a rope, you have
3 somebody topside who's a tender, who is holding that rope so if
4 something happens they're able to hold on to the diver, yes?

5 A. Yeah.

6 Q. So when I say low-tech it's not like—

7 A. Okay, yeah.

8 Q. —you know, expensive equipment, you know, it's state of the
9 art equipment, right, standard stuff?

10 A. Correct.

11 Q. So I say even in hindsight, in retrospect, would it not have been
12 better to have these divers with the harness, with somebody as a
13 tender topside?

14 A. Yeah. In hindsight, yes.

15 Q. But you didn't plan for that eventuality?

16 A. Nope.

17 Q. And you would have worked out, as you said in your witness
18 statement, what would be potential hazards involved in this
19 job?

20 A. Correct.

21 Q. And that, that potential hazard of having to retrieve a diver?

22 A. Uh-huh, was not, no, never considered to that extent.

23 Q. To that extent?

24 A. Yeah.

25 Q. Mr. Farah, I want to ask you a hypothetical. If you can't
26 answer you can't answer. If something had gone wrong with
27 the atmosphere in the habitat—

1 A. Uh-huh.

2 Q. —and forget the pipe, people went down in the pipe, and you
3 had to retrieve a diver because they fell unconscious for
4 argument's sake—

5 A. Right.

6 Q. —that would also be the mechanism you would use to pull
7 them above the water, yes?

8 A. What, what—

9 Q. If they were harnessed—

10 A. Right.

11 Q. —if there was—I'm just trying to say I don't want to just say
12 it's only if they went into the pipeline that that would be useful.
13 If something happened to them in the habitat, having them
14 tethered at a harness, would that not assist in retrieving your
15 divers?

16 A. Yes it would, yes.

17 Q. Yes? Okay. So you would agree then, best practice would
18 have been to have this type of equipment?

19 A. [*Nodding head*]

20 Q. Even if you can't agree on the lighter mask?

21 A. Right.

22 Q. Okay. Mr. Farah, we've heard—I wouldn't go over the original
23 plan which involved only yourself and Mr. Guerra, because
24 that's all you had? Those are the only two divers you had
25 available for the first plan. Let's call it the first plan.
26 Subsequently other divers like Conan Beddoe and Michael
27 Kurban and those sort of—Ronnie Ramoutar and so on, they

1 came on scene?

2 A. Yep.

3 Q. And I see, I take it about 6.30 Mr. Beddoe would have come on
4 scene?

5 A. With?

6 Q. With some equipment, that's Conrad?

7 A. Conrad?

8 Q. I'm sorry, you're correct, they're two brothers?

9 A. Yep.

10 Q. Right? And he came on scene, Conrad I believe it is, with
11 surface air?

12 A. Yeah.

13 Q. That's the right thing. Is it that the barge from which these
14 operations were staged belongs to LMCS, you didn't have
15 surface air there?

16 A. No.

17 Q. Okay so you didn't have—

18 A. We had a air compressor but—

19 Q. You had a air compressor?

20 A. Yeah.

21 Q. But you didn't have like the long umbilical cords that you could
22 have—

23 A. No.

24 Q. —provide—

25 A. No.

26 Q. Okay. At some point in time, it looks to me but I am not sure
27 so you please confirm, around 7.00, 7.30 of that evening, you

1 had not one but three vessels—

2 A. Right.

3 Q. —arrive?

4 A. Well, two.

5 Q. Two?

6 A. Two.

7 Q. Okay, two vessels arrived which were fully equipped with
8 surface air and commercial divers and other equipment?

9 A. Correct.

10 Q. Correct. And at that point in time, because we won't talk about
11 the first plan, another plan was available because you had
12 different equipment?

13 A. Correct.

14 Q. And what was that plan, Mr. Farah?

15 A. To use surface supply equipment and Conan Beddoe would
16 have entered the pipeline to execute the rescue using surface
17 supply equipment and not scuba.

18 Q. So you would have the umbilical cord and you would go—

19 A. Umbilical, communications, lighting, camera.

20 Q. Okay. And, to your knowledge, why wasn't Conan Beddoe
21 able to go down with all that equipment?

22 A. Well, at that point in time we were told that we weren't allowed
23 to dive and we had to stand down until we receive further
24 instructions.

25 Q. Okay. So the first thing I'll ask you is who is "we"?

26 A. LMCS.

27 Q. Okay. You, were you told?

1 A. Yeah.

2 Q. Okay. And other persons who were on the barge—

3 A. Yeah.

4 Q. —employed by LMCS. Okay. And was that—and who told
5 you that?

6 A. At that point in time it would have been Catherine.

7 Q. Okay. Catherine Balkissoon?

8 A. Yeah.

9 Q. And was that prohibition from diving extended to Mr. Beddoe
10 and others who were on these other vessels?

11 A. For everyone.

12 Q. Well, okay. So, how was that communicated to them?

13 A. Well, they told me that the—

14 Q. They told you?

15 A. They told me we were not allowed to dive, um, I don't know if
16 Paria was in communications with the other vessel that they had
17 alongside, but I know they told me that we weren't allowed to
18 dive or anyone else was allowed to dive and enter the pipeline.

19 Q. Okay. But you don't know if they communicated with other
20 divers, you just know they told you?

21 A. Yeah.

22 Q. Did you tell those other divers that you, you—did you pass on
23 the information?

24 A. Yeah. Everybody kept coming and asking me what was going
25 on. I told them that we were waiting for instructions from Paria
26 to execute the rescue.

27 Q. Okay. Did the coast guard have any role there to play in

1 prohibiting people from making a dive?

2 A. Yeah. They came to me personally and told me that I had to get
3 all the divers out of the water.

4 Q. You have to get all the divers out of the water?

5 A. Yep.

6 Q. Okay. And who would those divers have been at that time?

7 A. At that point in time it was Michael.

8 Q. Kurban?

9 A. Yeah, Michael Kurban, Rolly Ramoutar, Conan Beddoe and
10 Corey.

11 Q. I see. And did they comply?

12 A. Yep.

13 Q. They came out of the water?

14 A. They came out.

15 Q. And they went where?

16 A. On to the barge.

17 Q. On to LMCS' barge?

18 A. Yep.

19 Q. I see.

20 **Ms. Alfonso:** Thank you very much, Mr. Farah. Thank you
21 for that.

22 **Mr. Farah:** Thank you.

23 **Mr. Chairman:** Mr. Pegus, did you want to ask any
24 questions?

25 **Mr. Pegus:** I do have a few questions, thank you very much.

26 **Mr. Chairman:** Go ahead.

27 **Cross-Examination By Mr. Pegus:**

1 Q. Good afternoon, Mr. Farah.

2 A. Good afternoon.

3 Q. My name is Chase Pegus and I represent the interest of Kenson.
4 I'd like to take the witness to paragraph 20 of his supplemental
5 witness statement which could be found at page four four five
6 of the witness statement bundle. At paragraph 20 you stated:

7 "Based on my knowledge of the project and the permit to
8 work system, Paria always has a representative present
9 while works are being conducted. Based on what I am
10 aware, their function is to supervise."

11 Yes? Now, based on that statement at paragraph 20, we can
12 take it that you are familiar with the contractual obligations
13 between LMCS and Paria as outlined in the scope of works?

14 A. Yeah.

15 Q. Right. And you are also familiar with the permit to work
16 procedure?

17 A. [*Nodding*]

18 Q. Right.

19 **Mr. Pegus:** And, Mr. Chairman, I'd like to take the witness to
20 the permit to work procedure which could be found—sorry, not
21 the permit to work procedure, the scope of works which could
22 be found at page 546 of the witness statement bundle. It's
23 attached to the statement of Kazim Ali. It's also in the core
24 bundle but I'm using it from this location.

25 **Mr. Chairman:** Yes. Let's have it up then please? Where are
26 we? Just remind me of the page number? Five six four.

27 **Mr. Pegus:** No, I'm seeing 546.

1 **Mr. Chairman:** Five four six?

2 **Mr. Pegus:** Yes.

3 **Mr. Chairman:** Of the witness statements you mean?

4 **Mr. Pegus:** Of the witness statements, yes.

5 **Mr. Chairman:** Just a minute. [*Perusing documents*] Yes.

6 **Mr. Pegus:** Thank you very much.

7 **Continued Cross-Examination By Mr. Pegus:**

8 Q. Now, Mr. Farah, this is the document that you say you
9 familiarized yourself with, yes?

10 A. Yeah.

11 Q. I'd like to focus your attention to clause 2.0. You can indicate
12 when you had the opportunity to read it, please?

13 A. [*Perusing document on screen*] Right, yes.

14 Q. Right. Now, pursuant to clause 2.0, you agree that it provided
15 for supervision of the entire job, yes?

16 A. Yes.

17 Q. And the supervision for the entire job was to be done by LMCS,
18 according to that particular clause?

19 A. [*Perusing document on screen*] According to that clause, yes,
20 LMCS is supposed to supervise the job.

21 Q. Thank you. Now, as far as you know, before the execution of
22 the contract, I'm just asking this based on your knowledge, as
23 far as you know, before the execution of the contract, LMCS
24 did not identify someone from Paria with the expertise to
25 supervise?

26 A. I, I am not aware of that.

27 Q. Okay. Now, in your witness statement you spoke of Paria

1 representatives, yes?

2 A. Yes.

3 Q. You know the name Houston Marjadsingh?

4 A. Yeah.

5 Q. Right. You worked with Houston Marjadsingh, yes, as dive
6 supervisor? For LMCS you would have worked with Houston
7 Marjadsingh?

8 A. On this job, particular job?

9 Q. Yes, Sir.

10 A. I can't—when you say worked with him what do you mean by
11 that?

12 Q. Whether you worked with Houston Marjadsingh on this
13 particular job, whether you saw him, whether you interacted
14 with him?

15 A. No, I don't, I don't know him. I can't put a face to the name so
16 I can't, I can't answer that.

17 Q. Okay. So let me ask the question another way, then. The Paria
18 representative that you speak of in your witness statement, were
19 you familiar with that person's job title as it relates to—

20 A. No.

21 Q. —what was taking place?

22 A. No.

23 Q. Just for my clarification, you know the name Kirt Scott?

24 A. Er, now I do, yeah.

25 Q. Right. You know the name Kirt Scott now but you were
26 familiar with the person at the time you all were doing this
27 particular job?

1 A. No.

2 Q. When you were executing your duty as dive supervisor on this
3 job, is it that you did not interact with the offshore operator?

4 A. Which would have been Kurt?

5 Q. Yes.

6 A. Yeah, he—I interacted with him.

7 Q. Good. You interacted with Mr. Scott before the day of this
8 incident?

9 A. Yeah.

10 Q. Right.

11 A. Correct.

12 Q. Now, based on your interaction with Mr. Scott, you would have
13 been aware that he didn't have the expertise to supervise
14 LMCS, yes?

15 A. No. I can't, can't answer that.

16 Q. All right. We have to take your answer. I'd like to draw your
17 attention again, at the risk of being repetitive, to clause 5.1 of
18 the scope of works and I'd read it for you in the interest of time.

19 "5.0 Contractor's responsibility.

20 Supply adequate, competent and certified/licensed labour
21 for the specific job functions, full-time supervision,
22 materials..."—et cetera.

23 You see that there?

24 A. I do.

25 Q. Right. So here again, in addition to the general provision at
26 clause 2, which was brought to your attention earlier, there's
27 another provision under the scope of works where—which

1 provides, sorry, for LMCS providing full-time supervision for
2 the execution of this job. Agreed?

3 A. Agreed.

4 Q. Look at clause 5.11, a very short provision. And if I may assist
5 you, you agreed that clause 5.11 says:

6 “To have a designated person on site who can report on
7 activities and progress to Paria’s maintenance and
8 operations personnel.”

9 A. Correct.

10 Q. This was LMCS’ responsibility, yes?

11 A. Correct.

12 Q. Almost through it. Can I direct your attention to clause 8.8.2?
13 Eight point eight two, and I’m looking at subclause (h) in
14 particular. The contractor, tell me if you see this:

15 “The contractor shall provide competent and qualified
16 management and technical personnel required for
17 completing the following tasks. Project management,
18 Gantt Charts and project execution plan.”

19 **Mr. Chairman:** Can somebody help me what a Gantt Chart is,
20 please? [*To Commissioner Wilson*] Don’t you tell me, let him.

21 **Mr. Pegus:** What is a Gantt Chart?

22 **Mr. Chairman:** Yes.

23 **Mr. Pegus:** I don’t think that I have the knowledge to give that
24 answer, respectfully.

25 **Mr. Chairman:** Oh, I see, yes. Do you know what a Gantt
26 Chart is?

27 **Mr. Farah:** Neither do I.

1 **Mr. Chairman:** No. Mr. Wilson, perhaps you can help us.

2 **Commissioner Wilson:** Sorry?

3 **Mr. Chairman:** Or am I embarrassing you as well?

4 **Commissioner Wilson:** A Gantt Chart, where is it, H? Project
5 management, Gantt Charts, it's essentially a tool, a software
6 tool used in project management.

7 **Mr. Peterson SC:** I think it's a chart that sets out the stages
8 and progress of the contract so they could look at a particular
9 points and see where the work supposed to be matched against
10 the time to know if you're lagging or ahead of time.

11 **Commissioner Wilson:** Project management tool, yes.

12 **Mr. Peterson SC:** Yes.

13 **Mr. Chairman:** Mr. Peterson, you never cease to astonish me.
14 Thank you.

15 **Mr. Pegus:** Thank you very much.

16 **Continued Cross-Examination By Mr. Pegus:**

17 Q. Mr. Farah, my question, based on this provision, is simple. In
18 order for this to be effectively done, LMCS had to consciously
19 supervise the works that's ongoing, agreed?

20 A. Agreed.

21 Q. Let me direct your attention to clause 9 which can be found at
22 page five seven nine. Now, Sir, for yet another time, there's a
23 provision which states:

24 "The contractor shall provide competent supervision at
25 all times during the execution of the job."

26 And I wouldn't bother to read the rest because that's what is
27 important for our purposes. You see that there, yes?

1 A. Yes.

2 Q. And you agree that that provision places an obligation on
3 LMCS to provide supervision at all times throughout the job?

4 **Mr. Chairman:** I think you should read the rest of it. I think
5 it's important.

6 **Mr. Pegus:** My apologies.

7 **Continued Cross-Examination By Mr. Pegus:**

8 Q. "Contractor supervision must ensure that all employees
9 on the job are aware of the hazards related to the job and
10 the relevant control measures."

11 You see that there, yes?

12 A. Correct.

13 Q. So in addition to providing constant what I would say non-stop
14 supervision, for the execution of these works, there was an
15 obligation on LMCS as well to ensure that all employees on the
16 job, that's your employees, are aware of the hazards related to
17 the job and the relevant control measures. You agree with that?

18 A. Agreed.

19 Q. Now, having familiarized, having reviewed and familiarized
20 yourself with the contract, I mean, I'm sorry to interfere with
21 my friend's case but it is of some importance for us as well.
22 Having reviewed and familiarized yourself with the scope of
23 works, can you identify any contractual obligations on Paria to
24 supervise the works?

25 A. From what you've shown me here, no, nothing.

26 Q. Thank you very much. Now, there is something, just one last
27 area I'd like to address with you. Now, while these works were

1 ongoing, I heard reference made to a monitor that was topside
2 on the berth. Yes?

3 A. Correct.

4 Q. Right. Now, one of the purposes of this monitor was for you to
5 have sight of the divers inside the chamber. Agreed?

6 A. Agreed.

7 Q. Right. Now, for someone who is not familiar with what was
8 going on on the day in question, I mean of course you are
9 familiar so you could look at the monitor and you might have a
10 general idea with respect to what is going on, yes?

11 A. Correct.

12 Q. Right. For someone who is not familiar, I show up on berth 6
13 and work going on tomorrow, can I look at that monitor and say
14 with some degree of certainty the specific task that was going
15 on?

16 A. If you, if you have no idea what the job is about, no, you would
17 not know.

18 Q. Thank you very much, Mr. Farah. I appreciate your attention.

19 **Mr. Pegus:** And much obliged, Mr. Chairman.

20 **Mr. Chairman:** Yes, thank you, Mr. Ramadhar.

21 **Mr. Ramadhar:** I'll [*Inaudible*]. Chairman, thank you very
22 much. The questions you had posed dealt adequately—
23 [*Crosstalk*] Not at all. Chairman, I'm most grateful but the
24 questions that the Chairman himself had posed covered the
25 areas that I intended, so, thank you very much.

26 **Mr. Chairman:** Mr. Peterson.

27 **Mr. Peterson SC:** My friend, Mr. Mootoo—

1 **Mr. Chairman:** Mr. Mootoo, you're going to deal with—

2 **Mr. Mootoo:** I'm going to deal with it.

3 **Mr. Chairman:** Thank you.

4 **Cross-Examination By Mr. Mootoo:**

5 Q. Good afternoon, Mr. Farah. I have a few questions for you. I
6 represent Paria. Your supplemental statement, perhaps I can
7 pick it up here, if I can take you directly to paragraph 22 which
8 is on page 446, now I'd like us to look at this evidence in
9 context but let me just read the paragraph to you.

10 "Before I saw the gush of water, the last thing I saw was
11 when the men were removing the mechanical plug. After
12 the gush of water the camera went blank."

13 You see that paragraph?

14 A. Yes.

15 Q. This bit of evidence concerns the events of the 25th of
16 February, correct?

17 A. Correct.

18 Q. And when you say you saw the gush of water, that was from
19 your position on top the berth looking at the monitor, is that
20 correct?

21 A. Correct.

22 Q. But, as I understand it, and you'll correct me if I'm wrong, after
23 the mechanical plug was removed, the inflatable plug then had
24 to be removed or at least dismantled?

25 A. Yeah.

26 Q. Correct?

27 A. Correct.

1 Q. I think it's common ground in this case, well, the men also—
2 Christopher Boodram gave this evidence—the men removed
3 the mechanical plug and then they attempted to remove the
4 inflatable plug. You accept that?

5 A. Yeah.

6 Q. What's missing, at least to me, is that from your statement you
7 give no account whatsoever of any activity in relation to the
8 removal of the inflatable plug. You accept that?

9 A. Right, yeah.

10 Q. And you also accept that chronologically speaking, the gush of
11 water would have had to have come after the inflatable plug
12 was touched by the workers?

13 A. Correct.

14 Q. So, in the context of your, your, I mean LMCS' overall duty to
15 fully supervise the works, and to undertake that supervision at
16 all times, it's clear that LMCS was not supervising the work at
17 a material time. Would you not accept that?

18 A. No, I won't accept that.

19 Q. Okay. Apart from you, well actually let's get back to your
20 obligations. I think you say in your primary witness statement
21 that, at paragraph two, your obligation on the 25th of February
22 was to supervise the aspect of the diving workers involved in
23 the job to ensure everything is carried out in accordance with
24 the job scope. That's correct?

25 A. Correct.

26 Q. So you were the supervisor on that day and you accept that you
27 were to fully supervise?

1 A. Correct.

2 Q. Yes? But notwithstanding that obligation, you did not see any
3 activity in relation to the deflation of the inflatable plug. Is that
4 correct?

5 A. Yeah, I did.

6 Q. You did?

7 A. They moved the mechanical plug and they were now attempting
8 to deflate the inflatable plug.

9 Q. So, insofar as you say in your statement, “Before I saw the gush
10 of water, the last thing I saw was when the men were removing
11 the mechanical plug”, that’s inaccurate?

12 A. Um, it’s where? Is it here, up here?

13 Q. Well it’s your statement. Paragraph 22. It should be in front of
14 you.

15 A. Where is that? [*Perusing document*] Right. Could you repeat
16 the question now?

17 Q. My question is, you never said in your statement that you saw
18 any activity in relation to the removal or deflation of the
19 inflatable plug. You accept that?

20 A. Yeah, that’s—it’s not here.

21 Q. Yes. And also in your statement you say the last thing that you
22 saw before the splash was the men removing the mechanical
23 plug.

24 A. Correct.

25 Q. And you also accept that before that splash some activity must
26 have taken place in relation to the inflatable plug?

27 A. Correct.

1 Q. Yes. And I'm suggesting to you on the—on your sworn
2 testimony before this Commission, there's therefore a glaring
3 omission in your duty to supervise. Would you accept that?

4 A. No.

5 Q. Are you telling us for the first time today, after giving two
6 statements to this Commission, you are now telling the
7 Commissioners that you saw activity in relation to the removal
8 of the inflatable plug?

9 A. The one—

10 Q. Are you telling us that today for the first time, Mr. Farah?

11 A. I am.

12 Q. Yes. Okay. Well, we're all very keen to hear what happened,
13 so tell us.

14 A. Right. So they removed the mechanical plug and one of the
15 divers had—they pulled the air hose that was connected to the
16 inflatable plug and he had it in his hand, and, soon after that is
17 when the gush of water entered the chamber.

18 Q. So this happened all under your direct supervision?

19 A. Correct.

20 Q. We saw a video on the first day of this Commission with men
21 in the chamber. It seemed to me, and maybe you can help us
22 with this, was one man down in the pipe on the inflatable plug?

23 A. Well, I have not seen that video.

24 Q. Well, let's, okay, let's leave the video aside for one moment.
25 You were there. You were looking at this thing on the monitor?

26 A. Correct.

27 Q. Who deflated the inflatable plug?

1 A. At that point in time it was not deflated.

2 Q. Who attempted to deflate it?

3 A. I can't recall who had the hose in their hand.

4 Q. I see. How many men were in the chamber?

5 A. Four.

6 Q. That was the important aspect of the job?

7 A. With the removal?

8 Q. Yes.

9 A. Yeah.

10 Q. You and you were the man supervising?

11 A. Correct.

12 Q. Your duty was to supervise?

13 A. Correct.

14 Q. Can't remember who it was?

15 A. At this point in time who it was, no.

16 Q. Okay. So how far down were they in the pipe?

17 A. They weren't in the pipe.

18 Q. They weren't in the pipe. So they were standing on the floor of
19 the chamber bending over to remove it?

20 A. No, they were standing above looking down into the pipeline.

21 Q. Right. But did they have to reach down into the pipeline to
22 remove the plug or you can't remember?

23 A. No, no. You wouldn't have to reach down. The hose was
24 connected to the mechanical plug so when they removed that
25 they then got access to the air hose so nobody had to go into the
26 pipeline to—

27 Q. From the top of the pipe how far down was the plug?

- 1 A. Which plug?
- 2 Q. The inflatable plug?
- 3 A. Er—
- 4 Q. From what you could see?
- 5 A. From—no, I would not be able to see how far down it would
- 6 be—
- 7 Q. You wouldn't be able to—
- 8 A. —on the camera. No.
- 9 Q. So the camera wouldn't give you that information?
- 10 A. No.
- 11 Q. Okay. You know Mr. Johnathan Ramdhan from Paria?
- 12 A. I know the name.
- 13 Q. Yeah. He was the site authority on the day?
- 14 A. I believe so.
- 15 Q. You recall him encountering him shortly after there was a
- 16 splash in the chamber?
- 17 A. No, I don't.
- 18 Q. Mr. Ramdhan has given evidence before this Commission of
- 19 Enquiry that he arrived on the barge shortly after the splash.
- 20 A. Right.
- 21 Q. You were on the barge?
- 22 A. After the splash, yeah.
- 23 Q. Yes. His evidence is also that you were laying down on the
- 24 barge holding your head. You dispute that?
- 25 A. No.
- 26 Q. Because you were distraught?
- 27 A. Correct.

1 Q. Extremely distraught?

2 A. Not extremely but—

3 Q. Quite distraught?

4 A. Quite distraught.

5 Q. You had worked with this company for seven or eight years?

6 A. Correct.

7 Q. You had gained all of your commercial diving experience under
8 them?

9 A. Correct.

10 Q. Most of the men, well, most if not all of the men were well-
11 known to you?

12 A. Correct.

13 Q. You will agree with me that one element in an emergency
14 situation, one of the things that is required for the development
15 of a rescue plan is a person who has a clear head and is not
16 emotional. Would you not agree with me?

17 A. Correct.

18 Q. And it's also preferable to have someone who's not emotionally
19 connected to the parties.

20 A. No.

21 Q. You don't agree with that?

22 A. No.

23 Q. You think it's a better practice to have someone making
24 decisions who is emotionally connected to the persons
25 involved?

26 A. If, if, if that is who is available at that point in time.

27 Q. I'm not asking you who was available. I'm asking best

1 practice.

2 A. I—yeah, I believe, yea.

3 Q. It's best practice to be emotionally connected to the person in
4 the situation who has to be rescued?

5 A. I do.

6 Q. And you formed that position based on your extensive training?

7 A. Correct.

8 Q. They taught you that in your safety training?

9 A. Nobody taught me that that's what I believe.

10 Q. That's what—so that's a personal belief?

11 A. Yes.

12 Q. It's not one gained through a process of education?

13 A. No.

14 Q. Okay. Would you agree that in order to execute a rescue plan it
15 is important to have as much relevant information as possible?

16 A. Correct.

17 Q. Yeah? And one of those things is really to understand actually
18 the nature of the event which has taken place?

19 A. Correct.

20 Q. Which has caused the incident?

21 A. [*Nodding*]

22 Q. But when this happened, nobody knew it was Delta P. You
23 accept that?

24 A. When it happened?

25 Q. Yes.

26 A. At the exact moment when it happened, no.

27 Q. In fact, in fact, all the prior planning to that, the hazard of the

1 men being sucked into the pipeline was not considered by
2 LMCS?

3 A. Correct.

4 Q. Good. So when this happened, you actually had no real idea of
5 what had transpired?

6 A. No.

7 Q. And it was against that backdrop that you decided that a, you,
8 among others, that a rescue plan should be formulated in that
9 void of information?

10 A. Correct.

11 Q. Yes. Do you agree, that, in executing a rescue, it is equally
12 important to consider the safety of the persons who are going to
13 be engaged in the rescue?

14 A. Correct.

15 Q. In fact, in LMCS' emergence, well, I mean I know it's
16 described as an emergency response plan but I hesitate to call it
17 that, but, in your emergency response plan, we can pull it up if
18 need be, but would you accept that one of the priorities is to
19 safeguard human life, yes?

20 A. Yes.

21 Q. And in this kind of, in this sort of context, the life you'll be
22 safeguarding as well would be the divers who are to implement
23 that plan?

24 A. Correct.

25 Q. And, in fact, I'm going to read this to you, you tell me if you
26 disagree with this statement:

27 "Following the assessment, onsite personnel are required

1 to respond accordingly, without panic and once it is
2 reasonably safe to do so.”

3 Do you accept that as a good general guide?

4 A. I do.

5 Q. You consider a man holding his head laying down on a barge as
6 being one who could properly be categorized as a man without
7 panic?

8 A. If it was someone else—

9 Q. I’m not asking you that. I’m asking you whether you think that
10 could properly be characterized as a man acting without panic.

11 A. No.

12 Q. No. But you were the, you were the head man on the scene?

13 A. Yeah, well I was more frustrated that we were told that we were
14 not allowed to execute the rescue.

15 Q. But you weren’t—you weren’t told that at that time?

16 A. Of course we were.

17 Q. You weren’t told that. You were told that later on.

18 A. At what time?

19 Q. You were told that later on in the afternoon.

20 A. At what time?

21 Q. Closer to five o’clock but let me take you back to Mr.
22 Johnathan Ramdhan. When he came on the barge, that was—

23 A. At what time did he arrive?

24 Q. He arrived on the barge minutes after 3.00.

25 A. Right.

26 Q. Right? That’s when you were holding your head. We can go to
27 his witness statement if you like but that’s when this was

1 happening.

2 A. Right, but what time, what time was—

3 Q. Don't you—do you—I'm asking the questions. You are not
4 asking the questions. What time was that? Wasn't that shortly
5 after 3.00?

6 A. It would have been there shortly after 3.00.

7 Q. And by that time Paria hadn't issued an instruction to anyone
8 not to dive.

9 A. The permit was pulled from LMCS at just shortly after 3.00,
10 which would have meant we were not allowed to do any diving.

11 Q. Okay. We'll come to the circumstances in which permits are
12 pulled. But Paria didn't give you an instruction at that time that
13 required you not to dive. Isn't that so?

14 A. No. That's not true.

15 Q. Okay. So on your evidence you received your instruction not to
16 dive when?

17 A. Shortly after I returned onto the barge and reported that the
18 divers were not in the chamber.

19 Q. I see. And who gave this instruction to you?

20 A. It was given to Dexter then—

21 Q. No, no, no, I'm talking about you.

22 A. Yeah, Dexter.

23 Q. And this was communicated to you at what time?

24 A. I would say just after three o'clock.

25 Q. Okay can you—that would be an important matter, yes, the
26 timing of that?

27 A. Yep.

1 Q. Right. Can you show me in your statement where you tell us
2 about that, at that time?

3 A. Yeah, I don't have a time to it—

4 Q. Oh.

5 A. —in my statement.

6 Q. All right. It would have been important to put it there, wouldn't
7 it?

8 A. Yes. If I could recall the exact time.

9 Q. All right.

10 A. But I know it was shortly after I returned onto the barge from
11 making my dive in the chamber.

12 Q. Right. That's your evidence. Well we'll look at it. In relation
13 to the rescue plan as well, I, um, I want to suggest to you that in
14 fact LMCS had no real rescue plan at that time but what, in fact,
15 was occurring was simply a mad scramble to try and get men
16 out of the pipe.

17 A. That's not true.

18 Q. Mr. Ahmad Ali came and he gave evidence before the
19 Commission. Are you aware of that?

20 A. I am.

21 Q. You never contacted Mr. Ali to put forward a rescue plan, did
22 you?

23 A. Ahmad Ali?

24 Q. Yes.

25 A. No.

26 Q. You didn't ask him to derisk any plan, did you?

27 A. No.

1 Q. You're not aware of anyone from LMCS who did at that time,
2 are you?

3 A. Not—no.

4 Q. Right. But at that time, your plan had been formulated,
5 according to you?

6 A. Correct.

7 Q. So the plan had been formulated in circumstances where there
8 was a complete absence of any input from the health and safety
9 manager of LMCS, correct?

10 A. Correct.

11 Q. I'm also suggesting to you that on the 25th of February, you
12 never, you, never shared any details of your rescue plan with
13 Paria personnel.

14 A. That's what they say.

15 Q. Now, I'm suggesting that that is the truth.

16 A. Uh-huh, okay.

17 Q. Do you accept it?

18 A. No.

19 Q. I'm also suggesting with you that you didn't share it with
20 Catherine Balkissoon at all. That's what she says. Do you
21 accept it?

22 A. No.

23 Q. You spoke about the revocation of the permits to work. You
24 are familiar with the permit to work system?

25 A. I am.

26 Q. Don't you accept from that system in the event of an emergency
27 or risk situation the permits are to be surrendered?

1 A. Yeah, it should be.

2 Q. Yes. And it should be surrendered as a matter of general safety
3 in order to manage the site?

4 A. Correct.

5 Q. So that there was no real basis to complain about the permits
6 actually having to be surrendered at that time. Would you
7 agree with that?

8 A. At that time, no, but knowing that we had missing divers in the
9 water, it should not have been done.

10 Q. But the permits which were pulled at that time in relation to the
11 work on that day didn't really deal with that situation, so the
12 permits didn't authorize that. Would you not agree with me?

13 A. Did not authorize?

14 Q. The carrying out of rescue diving operations.

15 A. If it did not?

16 Q. It didn't deal with it. It wasn't the subject matter of the permit.

17 A. It was. That was the general work permit for the job.

18 Q. To undertake rescue operations on the 25th?

19 A. It wasn't—the permit was not there to undertake rescue
20 operations but once they pulled the permit Dexter said we were
21 not allowed to do any diving, no one was allowed to enter the
22 water.

23 Q. I see. So that's your interpretation of the consequence—

24 A. Right.

25 Q. —of the permit being surrendered?

26 A. Right.

27 Q. You accept the permit doesn't actually talk about that at all?

1 A. No it does not.

2 Q. Right. Now, you—do you accept that it's a practice in the
3 industry that once an event like this occurs, or some high-risk
4 event like this, it's a practice that all permits should be
5 surrendered or pulled, for the works in question? If you don't
6 have the experience—

7 A. For the works or—

8 Q. For the works. Let's take it in stages. The permit relates to
9 certain works.

10 A. Right, correct.

11 Q. Right? And if you don't know the answer to this question
12 that's fine, but, from your knowledge do you accept that when
13 an accident or an incident of this nature happens, it's industry
14 practice to stop the works and have the permits surrendered?

15 A. Correct.

16 Q. Yes, okay. Now, would I be—you've never conducted a rescue
17 of divers trapped in a pipeline, have you?

18 A. No.

19 Q. Right. So when this occurred on the 25th, in a sense this was,
20 well this was very new to you?

21 A. Yep.

22 Q. Yeah. Have you seen any of the witnesses, witness statements
23 in relation to the evidence by the witnesses to be given in this
24 Enquiry?

25 A. No.

26 Q. Okay. You're aware of a Lieutenant Hargreaves from the coast
27 guard?

1 A. I'm aware of the name.

2 Q. Right. Was he one of the people you interacted with on that
3 day?

4 A. I can't recall.

5 Q. Do you possess, because it's unclear, I had a look at your CV
6 but it was a little bit slim, do you possess any PADI
7 certification as a search and recovery diver specialist?

8 A. No.

9 Q. Okay. Do you have any certification in relation to hazard and
10 risk management awareness?

11 A. Er, yeah, I do.

12 Q. Okay. From OSHA?

13 A. From OSHA, no.

14 Q. Okay. And where did you get that certificate?

15 A. From NEBOSH.

16 Q. Okay. Okay you haven't provided us with a copy of it, have
17 you?

18 A. No.

19 Q. Would it be too much trouble to ask you to have it provided
20 through your lawyers?

21 A. Sure.

22 Q. Okay. And when was that certification obtained?

23 A. In 2010.

24 Q. Twenty ten. So some 12 years prior?

25 A. Yes.

26 Q. Did you, um—is—the nature of this certification I imagine
27 would require some kind of refresher courses?

1 A. No.

2 Q. No?

3 A. No.

4 Q. So you get one certificate in 2010 and you're done?

5 A. Yes.

6 **Mr. Chairman:** It's just like being a lawyer. [*Laughter*]

7 **Continued Cross-Examination By Mr. Mootoo:**

8 Q. Any form of continuing education in relation to that certificate?

9 A. I've done risk assessment training over the years.

10 Q. Right. Any public safety certifications?

11 A. No.

12 Q. Any advanced public safety diver certification from PADI?

13 A. No.

14 Q. Okay. I want to take you to the risks involved at the time your
15 plan, as you call it, was being considered. And tell me if you'll
16 accept the following. Well I think you accepted this one earlier.
17 The cause of the incident was unknown?

18 A. Yes.

19 Q. You accept that?

20 A. Delta P.

21 Q. All right? No, at the time, the cause, the cause was unknown?

22 A. At the exact—

23 Q. Yes.

24 A. —moment in time?

25 Q. Yes.

26 A. Yeah.

27 Q. And while the rescue plan was being formulated?

1 A. No.

2 Q. Okay, so there came a point in time when you were aware that
3 it was Delta P?

4 A. Yep.

5 Q. Okay. And you communicated that to whom?

6 A. To Dexter and Kazim Ali.

7 Q. I see. Did they say anything you to at the time you
8 communicated it to them?

9 A. No, not, no.

10 Q. Okay. They didn't agree—

11 A. We started discussing what could have caused it and—

12 Q. Did they agree, did they disagree?

13 A. They agreed, yeah.

14 Q. Okay.

15 A. They agreed.

16 Q. So at the time it occurred, Delta P was unknown, at least for
17 some time?

18 A. Yeah.

19 Q. All right. Would you agree with me that a risk was that the
20 environment, at least, had some quantities of oil?

21 A. The—yeah.

22 Q. And, in fact, at the time because LMCS had essentially not
23 emptied the pipeline—

24 A. Uh-huh.

25 Q. —because they had operated on the removal of the—on the
26 creation of ullage—

27 A. Yes.

1 Q. —at that time a risk would have been or you believed a risk to
2 be that the pipeline was filled with water and oil?

3 A. Water.

4 Q. Not oil?

5 A. Well, when I went into the chamber and looked into the
6 pipeline there was only water.

7 Q. Okay, but—

8 A. If there was oil it would have floated up to the top.

9 Q. I see. But there came a point in time when Christopher
10 Boodram came out a lot later when you were convinced—

11 A. Yeah.

12 Q. —there was oil in the pipeline?

13 A. Correct.

14 Q. So at that point in time when you were formulating your rescue
15 plan, there was—

16 **Mr. Chairman:** Sorry, I'm sorry to interrupt you, Mr. Mootoo,
17 but there was more than one rescue plan. I just want—can you
18 just at least define it pre-Boodram or post Boodram?

19 **Mr. Mootoo:** Yes.

20 **Continued Cross-Examination By Mr. Mootoo:**

21 Q. Pre-Boodram, the first rescue plan, at that—at the time you
22 were formulating that plan, you believe there was water only in
23 the pipeline is what you told us?

24 A. From what I saw in the riser—

25 Q. Right.

26 A. —yeah.

27 Q. So the plan would have been contemplated on the basis that

1 there was water only?

2 A. Correct.

3 Q. But we now know, after Boodram came out, that there was a
4 fair amount of oil in the pipeline too?

5 A. Correct.

6 Q. Yes? So that when you were contemplating the plan at that
7 time, there was a live risk which you were ignorant of?

8 A. No.

9 Q. So you didn't consider oil in the pipeline to be a risk, as you sit
10 here today?

11 A. I, I, I did but if Christopher came out.

12 Q. No, no, come, come, come Mr. Farah, come. We're dealing
13 with a chronological flow of events here. My question is
14 straightforward. You've told us, and if I get your evidence
15 wrong tell me. You've told us at the time that you formulated
16 the first plan, you believed that the pipe was filled with water,
17 not oil.

18 A. Correct.

19 Q. I think you've also told us that when Christopher Boodram
20 subsequently emerged, you accept that he was covered in oil
21 and that there was therefore a quantity of oil in the pipeline?

22 A. Correct.

23 Q. Okay. Do you consider oil in the pipeline to be a risk to take
24 into account when planning a rescue operation?

25 A. It could be, yes.

26 Q. Yes.

27 A. I would take it into consideration.

1 Q. And my question therefore is, at the time that you contemplated
2 the first plan, that plan was contemplated in ignorance of a real
3 risk that existed in the pipeline. Would you agree with me?

4 A. I, I do not agree.

5 Q. Okay. Now, when that first plan was being contemplated, did
6 you know what was in the pipeline, apart from water and your
7 speculation that the men were in the pipeline? Did you know
8 that anything else was in the pipeline?

9 A. The scuba tanks were in the pipeline.

10 Q. You formed—you operated on that assumption?

11 A. Yeah.

12 Q. Okay. Would you not—apart from the scuba tanks, the, the in,
13 the, the inflatable plug, did you form any view about it at the
14 time?

15 A. No.

16 Q. Did you consider whether it would have been in the pipeline?

17 A. No.

18 Q. Okay. Do you accept that if it was in the pipeline it might have
19 been a risk—

20 A. No.

21 Q. —as to the rescue operations?

22 A. If the diver went in and he encountered that plug we would
23 have to remove it so it would not have been a risk to the diver.

24 Q. Okay.

25 A. At that point in time.

26 Q. So you didn't consider the existence of the plug in the pipeline
27 to be any kind of risk?

1 A. No.

2 Q. Irrespective of the state of the plug?

3 A. Yep.

4 Q. Okay. The plug was—we've gotten some evidence about this
5 and I may have it wrong so you'll correct me if I have it wrong,
6 but the plug was to be, was to be anchored for the purpose of
7 removal? There was a cable involved?

8 A. Which plug?

9 Q. The inflatable plug.

10 A. Yeah.

11 Q. Yes.

12 A. There was a cable.

13 Q. Okay. Did you take into account, when you were conceiving
14 the first rescue plan, where that cable might be?

15 A. No.

16 Q. Okay. Did you think—did you rule out the possibility that it
17 might have been in the pipeline as well?

18 A. Er, if it was connected to the inflatable plug, yeah.

19 Q. Yeah. Did you consider it or you didn't consider it?

20 A. No.

21 Q. Okay. Do you accept that persons entering the pipeline, that
22 that might have been a potential hazard for divers entering the
23 pipeline?

24 A. No.

25 Q. Okay. So the possibility of a diver or a series of divers entering
26 the pipeline and getting entangled in a cable—

27 A. Uh-huh.

1 Q. —you didn't—or, sitting here today you don't consider that to
2 be a risk that sued have been considered at the time?

3 A. Nope.

4 Q. Okay. Did you consider at the time, when that first rescue plan
5 was being considered, the mental state of the divers, of what
6 that state might have been like in the pipeline?

7 **Mr. Chairman:** Which divers, the ones going in or the ones
8 that were already in there?

9 **Mr. Mootoo:** I'll clarify, Sir.

10 **Continued Cross-Examination By Mr. Mootoo:**

11 Q. The divers who were already—who you believed to be already
12 in the pipeline—

13 A. Uh-huh.

14 Q. —did you take into account what their mental state might be?

15 A. Yeah.

16 Q. Did it occur to occur to you that some of or all of them, if they
17 were alive at the time, might have been in a state of panic?

18 A. Quite possible.

19 Q. All right. Did you take into account that if that was possible
20 that that could impair the rescue operations and endanger the
21 divers who were engaged in rescue?

22 A. It would—that would have been a possibility, yes.

23 Q. Right. Did you take that into account?

24 A. I did.

25 Q. And what—how did you mitigate against that?

26 A. Well the diver that was entering would have been connected to
27 a tag line and if he gave the signal to pull him back up—

1 Q. Right.

2 A. —he would have given it and the topside personnel would pull
3 them back up.

4 Q. Yeah. But in the—in a situation with someone trapped in a
5 confined space, do you think it's reasonable that the person
6 seeking to be rescued may try and hold on to the rescue diver?

7 A. Yes.

8 Q. And not let go?

9 A. Yeah. I would hold on, yeah.

10 Q. Right. And might that not pose a serious complication to the
11 rescue diver in a 30-inch diameter pipeline?

12 A. No.

13 Q. Okay. And what about the space, the narrow space in which
14 the rescue divers had to work?

15 A. Uh-huh.

16 Q. That—would you accept that that too was a risk, space
17 confinement?

18 A. No.

19 Q. Okay. When you conceived of this plan, what means of verbal
20 communication did you have with the rescued—with the
21 proposed rescue divers?

22 A. The—could you repeat?

23 Q. What means of verbal communication did you have with the
24 proposed rescue divers?

25 A. Yeah, we discussed the rescue plan together.

26 Q. No, no. When you are—let's fast-forward the scenario. A
27 rescue diver is now down in the pipeline.

1 A. Right, okay.

2 Q. What—did you have any verbal means of communicating with
3 that diver?

4 A. No.

5 Q. None. Don't you think that that would have been important?

6 A. Yeah, we had, we would have a tag line.

7 Q. So all you had was a pull and a tug?

8 A. Correct.

9 Q. And that was tell you everything that you needed to know about
10 what was going on in the pipeline? That's what you're asking
11 us to believe?

12 A. Not everything.

13 **Mr. Chairman:** Be fair. That isn't what he said.

14 **Continued Cross-Examination By Mr. Mootoo:**

15 Q. From your perspective it would be sufficient, I'm asking you?

16 A. It would.

17 Q. Right. Do you consider having some means of verbal
18 communication would be better?

19 A. Yeah, I would.

20 Q. Yes. Did you make any attempt to acquire any apparatus or
21 anything to allow for that to happen?

22 A. I did.

23 Q. You did?

24 A. I did.

25 Q. And none was made available?

26 A. It was.

27 Q. You used it?

1 A. We—

2 Q. You intended to use it?

3 A. Of course we will.

4 Q. But you didn't mention that in relation to what the first plan
5 was, did you, in your witness statement?

6 A. No, that, that was not in the first plan.

7 Q. Well that's what I'm talking about. I'm talking about you—

8 **Mr. Chairman:** Ah, come on. Mr. Mootoo, it's a little unfair
9 of you to jump from one plan to the other which is why I've
10 said to you from the start which one are you talking about?
11 Many of the questions you've asked are perfectly pertinent to
12 the first plan. You've now asked him a question which clearly
13 does not relate to the first plan, it relates to the second one, so
14 you should say. Clarify, at least from him, where we are and
15 what your question is aimed at. Perfectly reasonable question
16 but you must make it clear what you're saying to him, first or
17 second plan or even a third.

18 **Mr. Mootoo:** I'm happy to do so. I just have never moved off
19 of the first plan.

20 **Mr. Chairman:** No, but that—but—

21 **Mr. Mootoo:** Yes.

22 **Mr. Chairman:**—the fact of the matter is that it is self-evident
23 and clear from all of the evidence that there was no verbal
24 equipment available at that stage. It became available later, as
25 we know.

26 **Mr. Mootoo:** Yes.

27 **Mr. Chairman:** When there was a further plan being

1 formulated, so if you want to address that then I'm perfectly
2 happy to hear it.

3 **Mr. Mootoo:** I'm happy to get to that, but what I'm trying to
4 deal with this witness on is the first plan and the feasibility of
5 the first plan, whether any real thought had gone into that first
6 plan, whether the first plan placed men at risk, and, if so what
7 was the nature of the risk.

8 **Mr. Chairman:** All of that seems perfectly relevant to me but
9 I've made my position clear. You must be clear yourself about
10 which plan you're talking about and I certainly wasn't so I'm
11 not surprised if the witness wasn't.

12 **Mr. Mootoo:** I'm happy to make the correction.

13 **Continued Cross-Examination By Mr. Mootoo:**

14 Q. Mr. Farah, unless I tell you otherwise, the only plan I'm talking
15 to you about at the moment is the first plan.

16 A. [*Nodding*]

17 Q. Do you accept that poor visibility in the pipeline would be
18 considered to be a risk—

19 A. No.

20 Q. —to be considered?

21 A. [*Shaking head from left to right*]

22 Q. No? Okay. Do you accept that with the presence of oil in the
23 pipeline, that that could impair visibility?

24 A. It can.

25 Q. Yes. Are you aware of a concept called fatigue management?

26 A. No.

27 Q. Okay. It's not something you've ever heard of?

1 A. No.

2 Q. Okay. For the rescue divers, do you think it would have been
3 important to also have had in place a rescue plan for them in the
4 event that something went wrong?

5 A. We did.

6 Q. I didn't ask you that.

7 A. It would have been important, yes.

8 Q. Yes, okay. You have not, unless I've missed it and if missed it
9 please direct me to it, but I don't see any mention of that in
10 your witness statement. Is it there?

11 A. No, no, not there.

12 Q. Okay. So today is the first time you're telling us about this
13 rescue plan for the rescue divers?

14 A. Er—

15 Q. The first plan, huh?

16 A. Right.

17 Q. This is the first plan.

18 A. In, in my statement?

19 Q. Yes.

20 A. It's not, no it's not in the statement.

21 Q. Okay. It's not in any of the statements?

22 A. I verbally stated on that day.

23 Q. Okay I want to try and understand that rescue plan. I presume
24 that to have a rescue plan to rescue the rescue divers, you need
25 to have other personnel on site?

26 A. Correct.

27 Q. Yeah. How many divers did you have on site when the first

1 plan was conceived?

2 A. We had my—well, initially it was just myself and Dexter.

3 Q. Right. And Kazim Ali Sr., he came?

4 A. Yeah, he came.

5 Q. So three of you all were there and at that point in time you had
6 conceived the first plan?

7 A. Correct.

8 Q. And you intended to execute that first plan straight away?

9 A. Straight away.

10 Q. Right. But don't you accept, given the personnel you had then,
11 you didn't have enough people to safely execute the first rescue
12 plan and have in place a team of people to rescue the rescue
13 divers?

14 A. No. I, I wouldn't agree.

15 Q. Okay, you don't agree. Okay. Who else was there at the time
16 with the capability to dive?

17 A. At that point in time?

18 Q. Yes.

19 A. Myself and Dexter Guerra.

20 Q. Yeah, we just went through that I think.

21 A. Yeah.

22 Q. Okay. So that's—there are four people there at that time who
23 can dive?

24 A. Two.

25 Q. Two?

26 **Mr. Chairman:** Three if you include Kazim Ali Sr., yes.

27 **Mr. Mootoo:** Kazim Ali, yes.

1 **Continued Cross-Examination By Mr. Mootoo:**

2 Q. So you have a contingent of three people and that contingent of
3 three people you say is adequate to execute the rescue and also
4 have a rescue team to rescue the rescue diver if something
5 guess wrong? That's your evidence?

6 A. Correct.

7 Q. Okay. You gave evidence that you had, in fact, worked in a
8 pipeline before. Yes?

9 A. Correct.

10 Q. I think you say that at paragraph 28 of your supplemental
11 witness statement. And you say this was in about 2009 to 2010.
12 You recall that?

13 A. Correct.

14 Q. But that pipeline was 50 inches in diameter, isn't that correct?

15 A. Forty-eight, yeah.

16 Q. Forty-eight. Okay.

17 A. Yes, correct.

18 Q. Would you accept that that's substantially bigger than 30
19 inches?

20 A. It is.

21 Q. Yes. Do you accept that you actually could turn around in a
22 pipeline like that of that size?

23 A. You can.

24 Q. Yes. Do you accept that in a 30-inch pipeline you can't do
25 that?

26 A. No, I, I don't, I've never tried it before.

27 Q. But you think it's unlikely?

1 A. No.

2 Q. Okay. So you think that you can—

3 A. I can, yeah.

4 Q. Okay and you think the divers who were with you on that day,
5 given their size and so on, could readily flip around in the
6 pipeline with 30-inch—

7 A. They had no need to flip around.

8 Q. I didn't ask you that.

9 A. No, they won't, it wouldn't be possible for them to flip around.

10 Q. Right. Okay, but you could?

11 A. I could.

12 Q. Okay. And also, that job you did in 2009, 2010, the pipeline
13 there was in pristine condition?

14 A. I wouldn't say that.

15 Q. But it was the replacement or the renewal of a riser, wasn't it?

16 A. Correct.

17 Q. So when the riser was being inserted, it was being inserted
18 having been renewed?

19 A. Right.

20 Q. So the portion of the pipeline into which you had to go—

21 A. Yes.

22 Q. —didn't have any oil on it, didn't have any substance?

23 A. No.

24 Q. It was free and clear?

25 A. Correct.

26 Q. Yes. You talk about the toolbox meeting.

27 **Mr. Chairman:** I think before we go there we should have a

1 lunch meeting.

2 **Mr. Mootoo:** I'm guided, Sir.

3 **Mr. Chairman:** My watch says 25 past, I know my watch is a
4 little fast so let's see where we are. Yes, I have it as 22 minutes
5 past. Shall we resume at quarter past 2.00? Would that be all
6 right for everyone? Quarter past 2.00? All right, we'll do that.

7 Mr. Farah, would you please adjourn for lunch now? Do not
8 discuss the evidence that you've been giving or any of the
9 question you've been asked with anybody else at all, including
10 your lawyer, all right? Please, have a bit of lunch, come back at
11 quarter past 2.00 and we'll carry on, all right?

12 **Mr. Farah:** Yes.

13 **Mr. Chairman:** Thank you very much.

14 **1.23 p.m.:** *Enquiry suspended.*

15 **2.15 p.m.:** *Enquiry resumed.*

16 **Mr. Chairman:** Good afternoon. All right, just a moment.

17 Mr. Farah, you're still on oath, all right?

18 **Mr. Farah:** Pardon?

19 **Mr. Chairman:** You're still on oath.

20 **Mr. Farah:** Correct.

21 **Mr. Mootoo:** Thank you.

22 **Continued Cross-Examination By Mr. Mootoo:**

23 Q. Mr. Farah, at—can I ask you to turn up paragraph 10 of your
24 principal witness statement, the main one, first one, I beg your
25 pardon, of the 5th of October? And I just want to get some help
26 with a timeline.

27 A. Where—which?

1 Q. This is the first—your first statement dated 5th of October. It's
2 the short one.

3 A. Four four four?

4 Q. Yes. It's on the screen, actually, if that's easier?

5 A. Okay.

6 Q. Right? Before we go to it, I want to ask you, you've given us
7 some times in both witness statements. Those timelines that
8 you have extracted from memory as best as you can?

9 A. From, yeah, from what I could remember.

10 Q. Right. So—

11 **Mr. Chairman:** Could you make sure you move the
12 microphone across a little bit if you're going to be turning your
13 head that far? That's it.

14 **Continued Cross-Examination By Mr. Mootoo:**

15 Q. So you accept there may be errors in some of the timelines?

16 A. Could be.

17 Q. Yeah. Okay. I want to suggest something to you. Well my
18 instructions are that Mr. Piper actually arrived at Paria on the
19 Friday at 4.55 p.m. All right? And there's discussion in your
20 statement at paragraph 10 about going to shore to meet with
21 Mr. Piper, but the boat had to turn back.

22 A. With Mr. Ali?

23 Q. You say this at paragraph 10. Your third sentence:

24 "We were on Paria's boat heading ashore when Dexter
25 messaged from the barge that they were hearing
26 knocking noises coming from the chamber. We turned
27 around to return to the berth."

1 All right? Now, immediately before that you're talking—you
2 say Mr. Ali left for shore to secure additional resources at
3 approximately 15:40 hours so that's 3.40. About 20 minutes
4 later, so that's 4.00 p.m., "I was actioning the rescue plan. I
5 was told that I had to go ashore to a meeting with Mr. Piper."
6 Now, in fairness to you, you don't actually fix a time there but
7 what I'm—what I would like to suggest to you is that you
8 didn't actually—you weren't actually summoned to go to shore
9 to meet with Mr. Piper until after 5.00 p.m., shortly after 5.00
10 p.m.?

11 A. No, no. I was before, but I, I didn't want to leave the site.

12 Q. Okay.

13 **Mr. Chairman:** You're going to have to do better with
14 microphone please?

15 **Mr. Farah:** Oh, right.

16 **Mr. Chairman:** Just so you just move the whole thing over a
17 little bit further? Move, move it—that's it. Move your pad out
18 the way. Pull that—that's it. You got it. Right, so you said, I
19 thank you said no that's not correct. Is that what you said?

20 **Mr. Farah:** Yeah.

21 **Mr. Chairman:** Right.

22 **Continued Cross-Examination By Mr. Mootoo:**

23 Q. Just so we can be clear, because Mr. Piper will come and give
24 evidence, who do you say summoned you to go to meet with
25 Mr. Piper, you recall?

26 A. Pardon?

27 Q. Do you recall the name of the person who told you you had to

1 go to meet with Mr. Piper?

2 A. I remember Dexter coming to me and telling me that Collin
3 Piper requested for me to come ashore to meet with him.

4 Q. Or, I see. So that's just based on what Dexter said you to?
5 Nobody from Paria told you directly—

6 A. Um—

7 Q. —that you had to come to shore to meet with Mr. Piper?

8 A. Someone from Paria, but I can't recall their name. I can't.

9 Q. Okay and you can't recall the time they—

10 A. Um, no.

11 Q. —they told you? Okay, that's fine. Now, there is a toolbox—
12 there was a toolbox meeting held on the 25th of February. We
13 heard evidence from other witnesses about it. But as I read
14 your statement, you tell us you were at that toolbox meeting,
15 yes?

16 A. Correct.

17 Q. You say it happened at 8.30. But can that be an error? Because
18 from what we've seen, the documents suggest the meeting was
19 held at 9.15 and another one held at 9.30.

20 A. Yeah, could, could be an error.

21 Q. Yeah, okay all right. Now, at that meeting, am I right that your
22 primary concern would have really been diving operations?

23 A. Yeah.

24 Q. Yeah? And do you say somewhere in your statement, I believe,
25 that there was a general safety discussion with respect to scope
26 of works for that day?

27 A. Right.

1 Q. Right? Would it be fairly accurate to say that the discussion at
2 that meeting was very general in nature, very high level?

3 A. Correct.

4 Q. Yes? And I want to suggest to you, because some witnesses
5 have given this evidence but that there was no discussion about
6 the removal of the plugs on that day at the meeting.

7 A. Not [*Inaudible*].

8 Q. Is that correct? Would you accept that?

9 A. No.

10 Q. Okay. So your evidence is that there was discussion about that?

11 A. Correct.

12 Q. Okay and I'm suggesting to you that that is, is not, is not, in
13 fact, the case, that there was no discussion about it on that day.
14 Yes?

15 A. If that's your suggestion, yeah, okay.

16 Q. Okay. You don't, you don't treat with that item specifically in
17 your witness statement, do you, in either of them?

18 A. No.

19 Q. Okay. So you're telling us, at least today for the first time, that
20 that's the case. You accept that?

21 A. Telling you?

22 Q. You're telling us today—

23 A. Right.

24 Q. —that that's the first time, or today, rather, is the first time that
25 you've actually said that there was a discussion?

26 A. That there was? Yeah.

27 Q. Yes?

1 A. Yes.

2 Q. Yes, okay. The last area I want to take you to concerns the
3 vents of Sunday the 27th of February. Now you deal with this
4 issue at paragraphs 62.

5 **Mr. Chairman:** I think before you move on, in fairness, Mr.
6 Mootoo, he does raise it, might be slightly ambiguous, but he
7 does raise the issue of a discussion in relation to the removal of
8 the riser. If you go to paragraph 15 of his supplementary
9 statement, he sets out what the job scope was for the 25th of
10 February, and then at 17 he says:

11 “At the toolbox, all the persons involved in the entire job
12 gathered on the barge. The meeting was conducted by
13 Mr. Dhillpaul. We discussed the job scope for the day.
14 Whoever had any concerns or questions had a chance to
15 discuss. There was general safety discussion with the
16 scope of works for that day. I cannot recall which Paria
17 persons were present at the toolbox meeting.”

18 As I say, I accept it might be slightly ambiguous but to say
19 there was no mention of at all is probably not entirely fair. You
20 can perhaps ask him if that’s what he meant by it.

21 **Mr. Mootoo:** No, I accept the correction. I accept the
22 correction.

23 **Continued Cross-Examination By Mr. Mootoo:**

24 Q. Well on the events of Sunday the 27th, you deal with that at
25 paragraphs 60 to 67 of your witness statement. Now, you talk
26 about two meetings having occurred on that day, you recall?

27 A. Yep.

1 Q. Yeah. I want to suggest to you that by the time you went to the
2 first meeting—well let me ask you this. By the time you went
3 to the first meeting, I imagine you had spoken to Kazim Ali Sr.
4 extensively about the incident in general and about rescue
5 plans? Would that be correct?

6 A. Correct.

7 Q. And at the time that you both went to that meeting, the first
8 meeting on Sunday, I want to suggest to you that LMCS'
9 attitude was that by that time the divers had already been lost?

10 A. Not true.

11 Q. Okay. Now you talk about having been asked at the first
12 meeting to go back and do a method statement and risk
13 assessment for a rescue operation. Yes?

14 A. Yeah, correct.

15 Q. I want to take you to look at the submissions bundle which is at
16 page one zero six seven of that bundle. I'm working off the
17 electronic version.

18 **Mr. Chairman:** One zero?

19 **Mr. Mootoo:** Six seven. I think I have one—or, I think it's
20 one, sorry, it's 10167 forgive me. This cannot be right. I'm not
21 sure that I have the right—

22 **Mr. Chairman:** *[Inaudible]*

23 **Mr. Mootoo:** I'm not sure that I have the right—I've been
24 given the right reference. Can I have one moment, please?

25 **Mr. Chairman:** What is the document you're after? I might
26 be able to help you.

27 **Mr. Mootoo:** I'm looking for the email of the 27th of

1 February.

2 **Mr. Chairman:** Yes, we did look at that already once. It's on
3 the screen now.

4 **Mr. Mootoo:** Yes.

5 **Mr. Chairman:** What is the page number, that is one, 10167?
6 We really have that many pages in this?

7 **Mr. Mootoo:** It's the bundle of submissions, okay, right, so, I
8 was right.

9 **Mr. Chairman:** Yes, I'm sorry, Mr. Mootoo.

10 **Mr. Mootoo:** Thank you, thank you.

11 **Continued Cross-Examination By Mr. Mootoo:**

12 Q. Have you seen this email before?

13 A. No.

14 Q. Okay. You won't dispute that it's an email from Mr. Kazim Ali
15 to Mr. Paul Yearwood sent on the 27th of February at 2.20
16 p.m., right?

17 A. Correct.

18 Q. And this email was after you had the first meeting on the
19 morning?

20 A. Correct.

21 Q. Yes? And this is the—this email follows what you say was a
22 discussion about a method, the need for a method statement and
23 risk assessment for a rescue operation, yes?

24 A. [*Nodding*]

25 Q. And if I ask the operator if they could just go down the screen a
26 bit, you will see, you should see—it's not on this document.
27 Stop. Or, sorry, the email the body of the email itself says:

1 "See attached documents for the above captioned job."

2 You have the method statement, risk assessment and emergency
3 response plan. You see that?

4 A. Uh-huh.

5 Q. So, this would have been an email following the request for
6 these documents earlier on in the day, okay. Okay. I want to
7 take you now to 10200. So 10,200 of that bundle.

8 **Mr. Chairman:** Sorry what's that page number again?

9 **Mr. Mootoo:** One zero two zero zero. It's a document you
10 would have seen previously, Commissioner.

11 **Continued Cross-Examination By Mr. Mootoo:**

12 Q. So, Mr. Farah, I'm suggesting to you that this is the method
13 statement, this is LMCS' method statement, in fact prepared by
14 you, which accompanied the email on that day. Have a look at
15 it.

16 A. Yeah.

17 Q. This is document prepared by you?

18 A. Correct.

19 Q. All right. And the top of that method statement talks about
20 entry into the riser pipeline to retrieve three scuba tanks. Yes?

21 A. Yeah.

22 Q. And I'm suggesting to you that this method statement, as
23 outlined there, is really about the retrieval of equipment, not
24 divers?

25 A. Correct.

26 Q. Yes? Okay, good. And similarly, the risk assessment which
27 was done is at page 10198 of that bundle. You were involved

1 in the preparation of this risk assessment?

2 A. Correct.

3 Q. And this—I'm suggesting to you that this risk assessment was
4 also the risk assessment that accompanied the email.

5 A. Correct.

6 Q. And this risk assessment, I'm suggesting to you that when you
7 look at it, is essentially about a risk assessment to retrieve
8 equipment, not divers.

9 A. I wouldn't, I wouldn't say that.

10 Q. Okay. Are you seeing anything in this document that expressly
11 speaks about the rescue of divers? I'm suggesting to you,
12 actually, that nothing in the document deals with specifically
13 the rescue of divers.

14 A. Well at that point in time—

15 Q. No, no.

16 A. —Paria—

17 Q. I'm not asking you about that point in time. I'm asking you
18 about the document.

19 A. Right, could you repeat the question?

20 Q. There's nothing in this document that expressly treats with the
21 rescue of divers.

22 A. Yeah, it does.

23 Q. Okay. Can you direct us to what portion of the document
24 you're looking at?

25 A. Well, it gives you the risk assessment based on a diving
26 operation.

27 Q. No, I'm not saying it's not a diving operation. We just looked

1 at the method statement.

2 A. Right.

3 Q. The method statement dealt with the retrieval of equipment,
4 right? That, that, that plan to retrieve equipment involved the
5 utilization of divers to go and retrieve the equipment.

6 A. Correct.

7 Q. Good. I'm not—I'm suggesting to you that this is the risk
8 assessment which accompanies that method statement.

9 A. Correct.

10 Q. Right. And I'm also suggesting to you that this risk assessment
11 is a risk assessment done in relation to that method statement.

12 A. Correct.

13 Q. Good. And therefore, it is not a risk assessment treating with
14 the retrieval of the divers or the rescue of the divers, that's a
15 better word.

16 A. Because we at that point in time—

17 Q. Um, Mr. Farah, I'm not asking you about the time. I'm asking
18 you about the—will you accept—if you don't want to accept it
19 that's fine.

20 A. Well I don't accept it.

21 Q. Okay, good.

22 **Examination By Mr. Chairman:**

23 Q. Well, I'd like to hear what he has to say about that. What do
24 you say it is?

25 A. No, at that point in time Paria's main concern for us not to dive
26 in the pipeline was because there was obstructions in the
27 pipeline, so they told us to do a risk assessment and a, um,

1 gosh, methodology to retrieve the bottles that were—obstructed
2 us from doing the dive which is what we did.

3 Q. For what purpose?

4 A. So they could then send down a camera that would be able to
5 travel further than the obstructions that they encountered—

6 Q. Right.

7 A. —the day before.

8 Q. So what Mr. Mootoo is saying is right, this is not to do with
9 rescuing divers specifically?

10 A. Correct.

11 Q. You weren't going to be pulling out a diver, if—but let me
12 understand this, what you were doing is providing a risk
13 assessment and a programme for retrieval of three scuba tanks?

14 A. Correct.

15 Q. Yes. Are we to take it then that if you encountered a person
16 down there you would leave them there?

17 A. No.

18 Q. Right. So that I'm clear, the three scuba tanks were the
19 obstruction for a camera to be able to go further into the pipe?

20 A. Correct.

21 Q. You provided this assessment to send divers into the pipe to try
22 and retrieve bottles?

23 A. Correct.

24 Q. Yes. Well, I don't suppose they're particularly expensive,
25 those bottles, so it can't be for the value in the bottle? It was in
26 order to provide access to the pipe?

27 A. Correct.

1 Q. Either by camera or perhaps later on if somebody was still
2 alive, a person?

3 A. Right.

4 **Mr. Chairman:** All right. Thank you, Mr.—

5 **Continued Cross-Examination By Mr. Mootoo:**

6 Q. I want to suggest to you that at the time this risk assessment
7 was done and sent, the purpose was, of retrieving this
8 equipment was because LMCS and Paria were of the view at
9 that time that the lives had been lost. That's the first thing I
10 want to suggest to you.

11 **Mr. Chairman:** All right, well, let him answer that first.

12 **Mr. Mootoo:** Yes.

13 **Mr. Farah:** No, definitely not.

14 **Mr. Chairman:** Can I be clear please, Mr. Mootoo?

15 **Mr. Mootoo:** Yes.

16 **Mr. Chairman:** Is the suggestion that Paria were prepared to
17 allow divers to go into the pipe to retrieve bottles but not men?

18 **Mr. Farah:** Correct.

19 **Mr. Chairman:** You're saying that your, your instructions are
20 that this assessment was designed to allow men to go in this
21 pipe to retrieve three bottles?

22 **Mr. Mootoo:** My instructions are that LMCS was repeatedly at
23 that point in time asking for permission to go into the pipe
24 because, one, they were of the view that lives had been lost and,
25 two, that the bodies had to be retrieved, and in order to retrieve
26 those bodies in a humane manner, there was—um, the
27 obstructions had to be removed, and Kazim Ali was of that

1 view and, in fact, on the evidence, on the audio evidence which
2 is before the Commission, he says that and Paria's position is
3 not that they were sending men into the pipe but Paria's
4 position is that at all times it was open to entertaining any risk
5 assessment or any plan that anyone had in relation to the pipe.
6 But they were not prepared to allow anyone to go in there in a
7 way which was unsafe.

8 **Mr. Chairman:** Right.

9 **Mr. Mootoo:** So they were open to hearing all possibilities but
10 they wanted it properly documented.

11 **Mr. Chairman:** I think I understand.

12 **Mr. Mootoo:** Yes.

13 **Mr. Chairman:** What you're saying is whether then or at any
14 other time, whether to retrieve scuba tanks or anyone else, they
15 wanted this sort of documentation risk assessment and method
16 statement in advance?

17 **Mr. Mootoo:** At minimal, yes.

18 **Mr. Chairman:** As a minimum?

19 **Mr. Mootoo:** Yes.

20 **Mr. Chairman:** Right. And you say that the purpose of this
21 was in order to retrieve scuba tanks. Was this done at your
22 client's behest?

23 **Mr. Mootoo:** No.

24 **Mr. Chairman:** No. This is being done at Mr. Kazim Ali's
25 behest?

26 **Mr. Mootoo:** Yes.

27 **Mr. Chairman:** Right.

1 **Mr. Mootoo:** They had an earlier meeting in the day. As you
2 will appreciate, events had moved on significantly since Friday.
3 Persons were concerned about the lives being lost and, I mean,
4 Paria was, Paria was very concerned that time to try and be as
5 humane as they could have been in the circumstances.

6 **Mr. Chairman:** All right, well you could make a speech later
7 on, but I do want to understand about this, that the—Paria were
8 prepared to entertain a diver going in, a diver or divers, going
9 into the pipe on Sunday to retrieve a number of bottles so that
10 that wouldn't interfere with the bodies that they believed were
11 now dead being removed from the pipe being damaged in any
12 way? Is that what I understand?

13 **Mr. Mootoo:** I think that's subset of the general position,
14 which is, Paria at all times was prepared to entertain persons
15 going into the pipe, provided that it could be shown that it could
16 be done in a safe manner, for whatever purpose.

17 **Mr. Chairman:** And do you have instructions as to whether or
18 not this was regarded as safe?

19 **Mr. Mootoo:** No I don't but I can take instructions on it.

20 **Mr. Chairman:** I'd want to know.

21 **Mr. Mootoo:** Yes.

22 **Mr. Chairman:** Yeah, thank you. All right, thank you very
23 much.

24 **Continued Cross-Examination By Mr. Mootoo:**

25 Q. So, coming back to, and this is the last aspect of your evidence I
26 want to deal with, I want to suggest to you that when you say at
27 paragraph 62 of your witness statement that Paria wanted

1 LMCS to do a method statement and a risk assessment for a
2 rescue operation, that is incorrect because that's not what
3 LMCS was contemplating at the time. You're free to reject it.

4 A. I reject.

5 **Mr. Chairman:** What did he say?

6 **Mr. Mootoo:** He rejects it.

7 **Mr. Chairman:** He rejects it. All right.

8 **Mr. Mootoo:** Yes. Sir, I have no further questions for this
9 witness. Thank you Mr. Farah.

10 **Mr. Chairman:** Thank you, Mr. Mootoo. Ms. Persaud Maraj.
11 Is it Maraj or Maharaj?

12 **Ms. Persaud Maraj:** Maraj, please.

13 **Mr. Chairman:** Maraj. I thought so. Everyone kept telling
14 me it was Maharaj, but it's Maraj, isn't it?

15 **Mrs. Persaud Maraj:** Everyone else is wrong.

16 **Mr. Chairman:** And I'm blaming everybody else and you—
17 I—okay, so it's Persaud Maraj?

18 **Mrs. Persaud Maraj:** Yes, please.

19 **Mr. Chairman:** Okay.

20 **Mrs. Persaud Maraj:** Mr. Farah, I'll take you back to
21 paragraph 60 of your witness statement.

22 **Mr. Chairman:** The supplementary or the original?

23 **Mrs. Persaud Maraj:** The supplemental.

24 **Mr. Chairman:** The supplementary.

25 **Examination By Mrs. Persaud Maraj:**

26 Q. In that paragraph, this is in relation to the meeting on the 27th
27 of February—

1 **Mr. Chairman:** Can't hear you.

2 Q. This, this is in relation to the meeting on the 27th of February,
3 Sunday the 27th of February at paragraph 60.

4 "Confirm that the purpose"—this is what you have.

5 "Can you finally confirm that the purpose of the meeting
6 was to tell them"—them being Paria?

7 A. Paria.

8 Q. "—of our plan and convince them at least give us one
9 chance to make a rescue attempt."

10 So, just for clarification in relation to the meetings and the
11 preparation of the documentation that followed the first
12 meeting, what was your understanding of your intention in
13 relation to the meeting that you attended?

14 A. To convince them to do a rescue.

15 Q. Right. But then you prepared documents in relation to retrieval
16 of bottles. Can you explain why that came to be?

17 A. Um, yeah, I, I believe they would have told us that we could not
18 do the rescue because they were unsure of the conditions in the
19 pipeline and the only way for them to reach further past the
20 bottles were to get them removed, so they asked us to do a dive
21 plan to retrieve the bottles from the pipeline.

22 Q. Great. So I'd just like to ask you a few things to clarify what
23 you've said earlier. You were the dive supervisor in relation to
24 this project—

25 A. Correct.

26 Q. —on the 25th. There was another supervisor for the works on
27 the 25th at berth 6?

1 A. Correct.

2 Q. And that would have been Kazim Ali Jr.?

3 A. Correct.

4 Q. In answer to questions posed to you, you said it was unfortunate
5 that he was in the chamber at the time of the incident. Just for
6 clarification, you already have it in your statement, but just for
7 clarification, can you explain what you mean by that so that we
8 understand it? Was he always in the chamber?

9 A. No. He was not.

10 Q. Where was he stationed?

11 A. Alongside the barge.

12 Q. All right. So he wasn't always—

13 A. No.

14 Q. —in the chamber with the men. And in relation to best
15 practice, you have agreed with Ms. Alfonso that it may have
16 been best practice to have a harness with the extension at
17 topside. You recall that?

18 A. Yeah.

19 Q. Right. Now, not in relation to best practice but in relation to
20 what actually occurred on the day in question—

21 A. Uh-huh.

22 Q. —the Delta P as we now know it to be, would you accept that
23 that would have been best practice at that time of that incident?

24 A. No.

25 Q. Could you care to explain in your words why that would not
26 have been?

27 A. Well, if they had a tag line attached to them that could have got

1 caught up on their neck whilst they were making their way into
2 the pipeline and could have resulted in—

3 Q. Further injury?

4 A. —further injury.

5 **Mrs. Persaud Maraj:** All right, I think that's all please, Mr.
6 Commissioner.

7 **Mr. Chairman:** Well I am afraid I have a few questions for
8 you.

9 **Examination By Mr. Chairman:**

10 Q. Can I deal first of all with a question asked by Mr. Pegus? He's
11 the gentleman sitting in the middle there, and you remember he
12 took you to the document that is the scope of works and took
13 you to a number of different sections in that, and inviting you to
14 say it was LMCS' responsibility to supervise the works, and I
15 don't think there's any dispute that it was your responsibility to
16 supervise the works. I want to understand if anybody else had
17 any similar responsibilities, all right? So can I—and a couple
18 of other thing as well, but can I just ask you to have that
19 document please? It's at page five five eight of the bundle.
20 And I want to ask you please to look first of all at paragraph
21 3.1.12 and 3.1.21, so those two. Let's look at 12 first so I want
22 to ask you about it. This is describing the works that were to be
23 carried out as drafted by Paria, correct?

24 A. Correct.

25 Q. It says there:

26 "Cut, insert migration barrier and install a 30-inch flange
27 on to the existing line. Inspection requirement for the

1 flange 100 per cent PT, including root passes VT and
2 hydrotest.”

3 I don't pretend to understand half of that but it probably doesn't
4 matter for my purposes. What it says after that is this.

5 “Note: video stream to be provided topside during work
6 activity for Paria's representative.”

7 Did you provide such a video stream during the work activity
8 for Paria's representative?

9 A. We did.

10 Q. You did. Did they avail themselves of it?

11 A. They did.

12 Q. Over at paragraph 3.1.21:

13 “The contractor”—that's you, yes—“shall supply video
14 footage during the subsea works.”

15 That's what you were doing on that day, subsea works?

16 A. Correct.

17 Q. “And this video must form part of the handover
18 package.”

19 Did you understand that?

20 A. No, I, I was not—that was not my part of the job.

21 Q. No, but you understood that it needed to be recorded?

22 A. No, no.

23 Q. You didn't? That's what it says, doesn't it?

24 A. Yeah, yeah.

25 Q. You can't hand over a video package at the end of the job if
26 you haven't recorded it?

27 A. No, I was never told to record it.

1 Q. Nobody ever told you that?

2 A. No.

3 Q. Nobody at LMCS?

4 A. No.

5 Q. Or at Paria?

6 A. Nope.

7 Q. Anyone?

8 A. Nope.

9 Q. So you didn't?

10 A. No.

11 Q. Could you have?

12 A. Yeah.

13 Q. Paragraph four, please, page five seven zero. Mr. Pegus asked
14 you if you had—if there was any obligation on the—on Paria
15 to, if you could find anywhere in the document, any obligation
16 on Paria to, as it were, supervise or monitor in any way. Can I
17 just ask you to have a look at 4.1 please?

18 "Supply personnel for organizing all work permits and
19 certificates, monitoring contractor's performance and
20 work standards."

21 How did you understand that Paria would monitor contractor's
22 performance and work standards?

23 A. They would be on site and supervising the job—

24 Q. Or looking at it at least?

25 A. —that day, or—correct.

26 Q. How else would they know? Who was doing that?

27 A. They had—as I said they had a couple guys from Paria, Kenson

1 that were on the berth that were popping by and looking at the
2 video from time to time but I can't recall who they are or what,
3 um, positions they hold in the company.

4 Q. To carry on that paragraph, it says, "Approving work done by
5 the contractor", so they had to approve the work you'd done
6 and carrying out quality assurance audits. All right. Yes. All
7 right, I don't think I need to trouble you with any more of that.
8 Now, I do want to ask you a little about what Mr. Mootoo was
9 asking you because you'll recall that he took you through a
10 litany of potential problems that you—or he was suggesting you
11 might not have considered when assessing whether there was a
12 proper plan to rescue these men. You remember he was asking
13 you—

14 A. Yeah.

15 Q. —a number of question before we had our lunch break, all
16 right? And I want to ask you a little about that because he
17 sought to confine the questions about that to the first plan that
18 you had. All right? I'm going to call it plan one, two and three
19 so that I have a clear understanding of what you're saying. All
20 right? Plan one was—is set out at paragraph 26 of your
21 statement. So can we have that up, please? Plan one:

22 "The rescue plan which we devised was that, A, I was
23 going to enter into the riser with an extra set of diving
24 gear so that if I found anyone I could provide it to them
25 to assist them to take them back up."

26 Yes?

27 "B: I would have connected had connected to me a tag

1 line which I would have used to communicate with
2 topside in the habitat, Dexter, who would assist to pull
3 me back up to the riser and I would—

4 C: I would enter feet first.”

5 All right? Now, can I just be—understand what was
6 happening? This is pre Boodram?

7 A. Pre, yeah.

8 Q. So at this stage, did you know whether the men were in the pipe
9 or not?

10 A. I had a, a fair idea that they were.

11 Q. Well, that’s why I asked you, did you know? You didn’t know,
12 did you?

13 A. No.

14 Q. No. You suspected?

15 A. Suspected.

16 Q. Or believed or some other such adjective, but you couldn’t have
17 known for sure, is that right?

18 A. Correct.

19 Q. Right. Were you, nonetheless, prepared to risk your own life to
20 see if they were in there?

21 A. I was.

22 Q. Did you understand that that was a significant risk?

23 A. I do.

24 Q. Especially as has been pointed out to you, very fairly by Mr.
25 Mootoo, that there were a number of issues which either you
26 didn’t consider or ignored? Do you agree?

27 A. Possibly.

1 Q. Possibly?

2 A. But by that time—

3 Q. Almost certain, isn't it?

4 A. —I was willing to go and attempt a rescue.

5 Q. Yes, all right. Well, you could perhaps understand why you
6 weren't wholeheartedly welcomed in attempting such a rescue
7 by those who were responsible for the site? You can
8 understand that, can't you?

9 A. Completely.

10 Q. All right. That's coupled with the fact that when you were first
11 seen after this, almost immediately after it had happened, you
12 were yourself distraught, weren't you? You were laying flat on
13 your back on the barge with your hands over your head clearly
14 upset?

15 A. Correct.

16 Q. Was that borne of the fact that they—you thought they may
17 have died?

18 A. Correct.

19 Q. And how close were these men to you?

20 A. Very.

21 Q. Right.

22 A. Very close.

23 Q. So perhaps we can all understand why you might have been a
24 little distraught, but, what I want to ask you is whether any of
25 the matters that had been identified by Mr. Mootoo in his
26 examination of you were considered later? Do you follow me?
27 There were two other plans that you formulated when other

1 divers had arrived, were there not?

2 A. Yep, correct.

3 Q. In your plan number two, which is set out in your paragraph 37
4 and 38, this is now post Boodram coming out, all right? So the
5 plan changed. First of all, could I ask you this? When Mr.
6 Boodram came out of the pipe, did that change your attitude,
7 bearing in mind it's now two plus hours, two and a half hours
8 after they first disappeared, did it change people's attitude
9 about whether they were still alive or not?

10 A. It did, yeah.

11 Q. Did it or didn't it?

12 A. It did.

13 Q. Yes. Did it give you new hope?

14 A. Definitely.

15 Q. Were you—did you collect yourself by then? Were you less
16 distraught?

17 A. I was, yeah.

18 Q. Right. Now, in effecting a plan number two, were there other
19 divers present?

20 A. There were, yeah.

21 Q. Did Mr. Conan Beddoe arrive?

22 A. He did.

23 Q. Who is Conan Beddoe?

24 A. He is a commercial diver that I work with as well.

25 Q. Commercial diver like you or better qualified than you?

26 A. Well he is a saturation qualified diver.

27 Q. I dent know what saturation qualified diver means. What does

1 that mean?

2 A. Where you live in a chamber and you—

3 Q. You're permanently under pressure?

4 A. Yeah.

5 Q. Right. So that you can go from one job to the next without
6 having to come back to the surface—

7 A. Right.

8 Q. —or surface pressure anyway. All right. So he, would you say,
9 was as experienced as it gets?

10 A. He was.

11 Q. Yes or no?

12 A. Yes.

13 Q. Did you have confidence in him?

14 A. I did.

15 Q. Did Mr. Kazim Ali have confidence in him?

16 A. He did.

17 Q. Was he prepared, when he arrived, to help?

18 A. He was.

19 Q. What did he say? Or what was the approach taken by him with
20 you?

21 A. Well, I explained to him what happened and he then told me
22 that he would go into the chamber to make his own assessment,
23 along with Michael and Rolly.

24 Q. Who's Rolly?

25 A. Rolly, Ronald Ramoutar.

26 Q. Ramoutar. And who is he?

27 A. He is another diver.

- 1 Q. Qualified diver?
- 2 A. Qualified yeah, commercial.
- 3 Q. Like you?
- 4 A. Yeah.
- 5 Q. Commercial diver?
- 6 A. Commercial diver.
- 7 Q. Good diver? You know him?
- 8 A. Yep.
- 9 Q. Have you dived with him?
- 10 A. Many times before.
- 11 Q. As good as you, better than you?
- 12 A. Better than me.
- 13 Q. Right. Did you have confidence in him?
- 14 A. I did.
- 15 Q. Did you formulate a plan between him and Mr. Beddoe?
- 16 A. We did, yep.
- 17 Q. Built around your original plan?
- 18 A. Yep.
- 19 Q. Or changed?
- 20 A. No, same, same plan, using scuba, except Conan would have
- 21 been going into the pipeline.
- 22 Q. Right. So you're now going to go into the pipeline, Dexter's no
- 23 longer involved, is he?
- 24 A. He was on the topside.
- 25 Q. Right.
- 26 A. Yeah.
- 27 Q. But in terms of actually effecting a rescue, who was it going to

1 involve this time?

2 A. It would have been Conan, Michael, Ronald, Corey and myself.

3 Q. Five divers?

4 A. Five.

5 Q. Who were going to be standbys?

6 A. Conan would have been in the pipeline, Michael, um, Corey
7 and Ronald would have been standby.

8 Q. And what would you have been doing?

9 A. I would have been on the top supervising.

10 Q. Right. So that was a plan that you formulated and it still
11 necessitated using scuba equipment. Is that right?

12 A. Yep.

13 Q. You say he went and made an assessment of his own, that's Mr.
14 Beddoe?

15 A. Yeah.

16 Q. At that time you'd obviously learned what you could from Mr.
17 Boodram. Had Michael Kurban been into the pipe?

18 A. He, yeah, he was, yeah.

19 Q. Sorry?

20 A. Yeah, he was in the pipeline.

21 Q. So, did he come back and tell you anything that he had learned
22 from being in the pipeline?

23 A. No. He just told me that he went down and he reached maybe
24 about 10 feet past the elbow and he retrieved one dive tank.

25 Q. What was he using when he went down?

26 A. He was using the hookah connected to a scuba tank.

27 Q. A hookah, that's a long tube?

1 A. Long right.

2 Q. With the ordinary mouthpiece?

3 A. Yes.

4 Q. Yes? So free into the mouth, not part of the mask, free into the
5 mouth, is that right?

6 A. Correct.

7 Q. And so he went down with a tube that was connected ultimately
8 to a tank or some other air source?

9 A. Correct.

10 Q. At the surface?

11 A. At, yeah, in the chamber.

12 Q. In the chamber. And he went down so he was able to tell you
13 conditions inside the pipe?

14 A. Yeah.

15 Q. And to tell Mr. Beddoe conditions inside the pipe?

16 A. Correct.

17 Q. So you were asked a number of questions about what might or
18 might not have been considered by you. By then did you—had
19 you considered whether the accident was a Delta P or not, by
20 this time, this second plan?

21 A. Yeah.

22 Q. Yes? Did you discuss it at all with Mr. Beddoe?

23 A. I did.

24 Q. And what was his view about it?

25 A. Well I explained to him that in order for the chamber to blow
26 back down that everything would have—should have been
27 equalized and that it should not occur again.

1 Q. What was his view?

2 A. He said all right. He was willing to enter the pipe.

3 Q. If you had, given that you now had considered Delta P as being
4 the cause, did it enter your minds at all that there might be some
5 potential latent Delta P still in existence?

6 A. At that point in time, no.

7 Q. Because you thought it had equalized?

8 A. Correct.

9 Q. Is that right?

10 A. Yep.

11 Q. You were asked about oil and that would affect both toxicity
12 and visibility, wouldn't it?

13 A. Yep.

14 Q. Mr. Boodram had been in the pipe for how long?

15 A. I believe maybe close to two hours.

16 Q. Yes, I think perhaps a little more but there or thereabouts?

17 A. Yep.

18 Q. Did he have a mask when he came out?

19 A. No.

20 Q. And did he have any mouthpiece when he came out?

21 A. No.

22 Q. He was covered in oil?

23 A. Covered in oil.

24 Q. And did, um—were you able to ascertain from Michael Kurban
25 who had been down to the elbow and some 10 feet or so past it,
26 as to what the visibility was like?

27 A. He said it was water and he had visibility.

1 Q. He had visibility?

2 A. Yeah.

3 Q. Of course you could have torches. Did you have torches?

4 A. We did.

5 Q. There were, we're told, scuba tanks in the actual pipeline itself.
6 We know that there were. Did you regard that as being a
7 problem in terms of rescue by the time you were taking this
8 second dive?

9 A. No.

10 Q. Did you consider it even?

11 A. No.

12 Q. No. Did Mr. Boodram come out with a tank?

13 A. He came up with a tank but I believe he—when Rolly pulled
14 him out he would a left the tank in the—

15 Q. Dropped it?

16 A. —pipeline.

17 Q. Did Michael Kurban come out with a tank?

18 A. He came out with a tank, yeah.

19 Q. He brought one out, did he?

20 A. Brought one out.

21 Q. And given that you've got a 30-inch pipe, I mean you say you
22 can turn around in it. I think I might quite like to see that, but,
23 um, in a 30-inch pipe, would it be possible to get past the tank?

24 A. It—definitely.

25 Q. Did you consider whether the tanks might have provided a life
26 source for those that were in the pipe?

27 A. It, it could have, yep.

1 Q. You were asked whether you considered the inflatable plug.

2 A. Uh-huh.

3 Q. Did you know where the plug was before the accident
4 happened?

5 A. Before, yeah.

6 Q. Right. And if you had considered Delta P to be the problem
7 that had caused this, where would the plug be? Which side of
8 the people would the plug be?

9 A. Below.

10 Q. Below or past them?

11 A. [*Inaudible*]

12 Q. Would the plug be between you, at the riser 6, and the people
13 that were down there, or the other side of them?

14 A. You're talking about after the incident?

15 Q. After the accident, yes.

16 A. Okay, yeah.

17 Q. Where would the plug be?

18 A. In front.

19 Q. Of them?

20 A. Of them.

21 Q. Yeah. But not between you and them?

22 A. No.

23 Q. Did you consider that?

24 A. No, I, I knew that the plug would have been the first thing to
25 enter the pipeline.

26 Q. You knew that?

27 A. I knew that.

1 Q. All right. Apparently there was a cable attached to it. Did that
2 cause you any concern that there might be a cable attached to it
3 and that you might be, as Mr. Mootoo puts it, snagged by it or
4 caught up in it in some way?

5 A. No.

6 Q. Did you even consider it?

7 A. No.

8 Q. You can consider it now would you please? Would that stop
9 you going in to effect a rescue—

10 A. Definitely not.

11 Q. —if that existed as a possibility?

12 A. It would not stop me.

13 Q. Do you think it should?

14 A. No.

15 Q. He asked you also to consider the mental state of the divers
16 who were in the pipe. First thing I want to ask you is this: is
17 how long have they been diving, these men?

18 A. Over 10 years.

19 Q. Experienced divers?

20 A. Yes.

21 Q. Do you have any training at all, even in the most basic forms of
22 PADI training, what to do if there is an emergency underwater,
23 breathing shallowly, taking not too rapid breaths, things of that
24 kind? Is there a sort of understanding or training about that?

25 A. Yeah.

26 Q. There is?

27 A. Well, once you do your PADI course you would learn—

1 Q. Even the basic PADI course?

2 A. —what to do and what not to do.

3 Q. Yeah?

4 A. As a diver.

5 Q. And whilst they may not be exactly happy about being down
6 there, did you think that it was likely to be a problem and not an
7 unfair point Mr. Mootoo makes, is it, that they might be a bit
8 panicky thinking they're stuck in a pipe?

9 A. They would be.

10 Q. I want to ask you in respect of that. You had, I think
11 formulated in your mind that you were going to go in feet first,
12 is that right?

13 A. Yep.

14 Q. Did you know which way they were in the pipe?

15 A. Yeah, I, I, I do.

16 Q. How?

17 A. From Christopher.

18 Q. Right. What had he told you about that?

19 A. He told me that they were all making their way back towards—
20 well, at that point in time he wasn't sure which direction they
21 were going but he said that he was dragging, I believe it was
22 Kazim Jr.

23 Q. We've heard it as a chain he described.

24 A. Yeah.

25 Q. Did he tell you that or did you know that?

26 A. No, he didn't tell me that, that there was a chain but he told me
27 that all of them were making their way back towards the—

1 Q. Right.

2 A. —the elbow.

3 Q. Because if you go in feet first and the others were in the pipe
4 headfirst, you'd only touch feet to feet, wouldn't you?

5 A. You would.

6 Q. And that would be a problem, wouldn't it?

7 A. It would be.

8 Q. Did you consider that?

9 A. At that point in time, no.

10 Q. All right. The seventh point he made to you is this was a
11 confined space. Well, a pipe is a confined space. Was that a
12 problem as far as you were concerned?

13 A. No.

14 Q. Or indeed any of the other divers who were offering to go into
15 the pipe?

16 A. No, it wasn't. It wasn't a problem.

17 Q. He asked you, before I interrupted him, whether there was any
18 means of verbal communication and at that stage, this is now
19 plan two, were there any facilities at plan two for verbal
20 communication? There's a third plan which, when I think
21 people did arrive with such equipment but not at that stage.

22 A. No.

23 Q. Am I right?

24 A. Yes, you're right.

25 Q. So if you were to formulate this plan two with Mr. Beddoe and
26 others, how were you going to communicate with each other?
27 Did you work out how you would communicate with each other

1 once somebody went into that pipe?

2 A. A tag line.

3 Q. A tag lie?

4 A. Tag line, yes.

5 Q. Various pulls?

6 A. Yes.

7 Q. Had you described to each other what one pull would mean or
8 two or three?

9 A. Yes.

10 Q. Had you worked that out?

11 A. Yep.

12 Q. Between you?

13 A. Yeah.

14 Q. And was everybody happy with that arrangement?

15 A. They were.

16 Q. Right. The next arrangement or issue that he raised was poor
17 visibility. Well, of course, it would have been not ideal, would
18 it? Well, you knew someone had come out the pipe and you
19 knew that Mr. Kurban had gone into it. Did you have torches,
20 as I think you told me you already, you did?

21 A. Yeah, we do.

22 Q. Well obviously oil can impair visibility, but you would have
23 had masks, wouldn't you?

24 A. Correct.

25 Q. He asked you something about fatigue management but since I
26 don't know what it is I'm not going to ask you about it either,
27 but I'm—I imagine it's becoming exhausted or something of

1 that kind. I would simply ask you about adrenalin. Is that
2 something that might have kicked in?

3 A. Definitely.

4 Q. All right. We've taken a little time, and forgive me for doing
5 so, because Mr. Mootoo also took some time, and I want to say
6 not unreasonably, questioning the things that you should and
7 properly ought to have considered and no doubt which others
8 were considering. What I want to know from you please, is, if
9 you had had to put all of those matters in some sort of writing
10 and address them in some sort of way by way of a risk
11 assessment, how long would that take you to do?

12 A. Very long.

13 Q. Did you regard the position that you were in when Mr.
14 Boodram came out of that pipe as being something in which
15 you had to act with a degree of speed if not haste?

16 A. I do.

17 Q. Why?

18 A. Well we had divers trapped in a pipeline, it did not have a—
19 there were a limited amount of air, so we had—

20 Q. Do you have any deer how much air they had?

21 A. No.

22 Q. Was time therefore of the essence?

23 A. Definitely.

24 Q. After you had formulated this new plan with Mr. Beddoe post
25 Mr. Boodram coming out of the pipe, was that plan conveyed to
26 anybody at Paria?

27 A. I can't recall.

1 Q. You didn't anyway?

2 A. We were already in the water.

3 Q. No, no I appreciate, but you didn't?

4 A. No.

5 Q. All right. When you were in the water as you say, about to
6 effect this plan, was it just you in the water or were there
7 others?

8 A. No, I was on the boat.

9 Q. Right.

10 Q. They were in the water?

11 A. They were in the water.

12 Q. Who's they?

13 A. Conan, Michael.

14 Q. Mr. Beddoe, Michael Kurban.

15 A. Beddoe, er, Rolly?

16 Q. And Rolly, do you know his surname?

17 A. Which one?

18 Q. Rolly.

19 A. Ramoutar.

20 Q. Ramoutar, all right. So the three of them were already in the
21 water, were they?

22 A. They were.

23 Q. And what happened when they were in the water about to effect
24 this plan?

25 A. At that point in time, the coast guard came to me and requested
26 that I get the divers out of the water.

27 Q. You need to speak a little closer to that microphone. The coast

1 guard came to you. Can you remember who it was?

2 A. No.

3 Q. Anyway, a coast guard?

4 A. A coast guard, yes.

5 Q. Said to you what?

6 A. That we had—I need to get the divers out of the water.

7 Q. You needed to get them out of the water?

8 A. Yes.

9 Q. Why did he say that? Did you ask him why?

10 A. At that point in time he said that he received instructions from
11 Paria to get all the divers out of the water.

12 Q. He told you that he had received instructions from Paria. You
13 hadn't received any such instructions from Paria?

14 A. Yeah, I did.

15 Q. At that time?

16 A. Yeah, at that time.

17 Q. Who?

18 A. But I disobeyed.

19 Q. From whom?

20 A. I can't recall exactly.

21 Q. Well there was a lady on the barge and a gentleman, wasn't
22 there?

23 A. Catherine was there but I'm not sure if she was there at that
24 point in time. I can't recall.

25 Q. Right. So it wasn't her?

26 A. I can recall.

27 Q. All right, well anyway, somebody you say?

1 A. Somebody.

2 Q. Who was the first person to say to you, "Take the divers or get
3 the divers out of the water"?

4 A. Paria personnel.

5 Q. And what did the coast guard say?

6 A. A that point in time?

7 Q. Yes.

8 A. Nothing. They were—

9 Q. Right, you've got me a little confused now because I thought
10 you said to me that the three of the men were in the water about
11 to effect your plan?

12 A. When you said the first time, I'm talking about this was from
13 plan—

14 Q. This is plan number two we're on.

15 A. Okay, plan number two.

16 Q. Mr. Mootoo was asking you all about plan number one. I'm
17 asking you about plan number two, all right? And these three
18 men Beddoe, Rolly and Michael were in the water.

19 A. Right.

20 Q. About to effect plan number two.

21 A. Sure.

22 Q. Which you've described for us, all right?

23 A. Okay.

24 Q. And I thought you said that the coast guard had asked you to
25 ask them to get out of the water.

26 A. For plan number two, it was the coast guard.

27 Q. Right. So let's just stick with that. The coast guard asked you

1 to get them out of the water not Paria?

2 A. Not Paria.

3 Q. Right. And did you ask them why?

4 A. I did.

5 Q. And what did he say?

6 A. He said that he received instructions that they had to get us out
7 of the water and I asked him why, he said that he couldn't tell
8 me exactly why. At that point in time we had to come out of
9 the water.

10 Q. And did you tell them that were in the water to come out?

11 A. I did.

12 Q. Were they all above surface or there was some—

13 A. They were in the chamber.

14 Q. They were already in the chamber. How were you able to tell
15 them?

16 A. I sent Corey. Corey was at the surface of the water, so I
17 instructed him to go and tell the divers that they had to come
18 out.

19 Q. Corey was at the surface, in the water but on the surface, all
20 right. And did they come out?

21 A. They did.

22 Q. A little while later, a further—a number of other divers arrived.
23 I want to have some sort of idea, please, of timing. So this plan
24 number two when this was happening these men were in the
25 water about to effect and the coast guard's telling them to get
26 out of the water and they do. What sort a time was that? And
27 do it by how long it was after Mr. Boodram came out.

1 A. I think it might have been between six o'clock and 6.30.

2 Q. Right. So some hours anyway?

3 A. Yeah.

4 Q. Right. Plan number three, that was formulated, according to
5 your evidence, when a man by the name of Conan—

6 A. Conrad.

7 Q. —Conrad. He arrived, did he? Who's he?

8 A. He is another commercial diver.

9 Q. Experienced commercial diver?

10 A. Very experienced.

11 Q. Better than you?

12 A. Better than me.

13 Q. Did he arrive with additional equipment?

14 A. He did.

15 Q. And did this equipment include the sort of equipment that Mr.
16 Mootoo was asking about, verbal communication equipment?

17 A. It did.

18 Q. So that divers could now go in with commercial diving
19 equipment into the pipe and be able to speak to those on the
20 surface?

21 A. Correct.

22 Q. Did you tell anybody from Paria that you'd now had this
23 capability?

24 A. Catherine.

25 Q. You told Catherine. Did you ask her—er, did you make an
26 adjustment, therefore, to the plan number two that you'd had—

27 A. I did.

1 Q. —to accommodate this new equipment?

2 A. We did.

3 Q. Did the new equipment also include facial masks?

4 A. It did, yes.

5 Q. You wouldn't be able to talk otherwise would you? It must be
6 a complete mask over the face of a lightweight type that I think
7 Ms. Alfonso was trying to extract from you?

8 A. Well it wouldn't have been lightweight but—

9 Q. It was a facial mask anyway and so that you could
10 communicate. And did that mask have a hose that was going to
11 supply air from the surface?

12 A. It did.

13 Q. How long was that hose?

14 A. Three hundred feet.

15 Q. Three hundred feet. So it would have allowed anybody who
16 was willing to, to have gone down by the 60 or 70 feet to the
17 bottom and then along by some 200 and odd feet, yes?

18 A. Yeah.

19 Q. Did you explain that to Ms. Balkissoon?

20 A. I did.

21 Q. And did you say that you had these experienced commercial
22 divers willing to do it?

23 A. I did.

24 Q. Were they willing to do it?

25 A. They were.

26 Q. What was Ms. Balkissoon's response?

27 A. That she had to receive instructions from Collin Piper.

1 Q. Right. Did you get the impression whether she thought this
2 might work?

3 A. I, I can't say.

4 Q. All right. But in any event, she spoke to Mr. Piper. Do you
5 know if she spoke to him or not?

6 A. I can't say.

7 Q. Did she make a phone call?

8 A. She—I'm sure she would have.

9 Q. But you didn't see her do it?

10 A. No.

11 Q. Or hear what she was saying?

12 A. No—yeah.

13 Q. All right. In any event, did there ever come a time, ever come a
14 time when you were permitted to effect any kind of rescue
15 given the number of people that you had there?

16 A. Yeah?

17 Q. Did there ever come a time?

18 A. That we were permitted?

19 Q. Yes.

20 A. No.

21 Q. And was there something more that you would have liked to
22 have had in an ideal world, is there something more by way of
23 equipment that you would have liked to have had in order to
24 effect this rescue?

25 A. No.

26 Q. Is there anything else that we could have had?

27 A. Nope.

1 Q. Yes, thank you.

2 **Mr. Chairman:** Well I recognize that I've taken quite a bit of
3 time dealing with those issues and anybody else who wants to
4 ask a question arising from that they will be permitted to do so.
5 Does anybody else want to? I see Mr. Mootoo you have your
6 light on and I'll come to you last if I may. Does anybody else
7 wish to ask anything? No. Mr. Mootoo, you're more than
8 welcome to.

9 **Mr. Mootoo:** Thank you.

10 **Continued Cross-Examination By Mr. Mootoo:**

11 Q. The Commissioner has just asked you a series of questions and
12 you've given a series of answers. None of that is set out in any
13 of your witness statements, is that correct?

14 A. I, I can't say that right now.

15 Q. Okay. Well to the best of your recollection?

16 A. To the best of your recollection.

17 Q. It's not.

18 A. Er, no.

19 Q. Right. You—so I can understand this process, you submitted a
20 first witness statement and?

21 **Mr. Chairman:** Can you raise your voice slightly, Mr.
22 Mootoo, please?

23 **Mr. Mootoo:** Yes.

24 **Further Continued Cross-Examination By Mr. Mootoo:**

25 Q. After you submitted a first witness statement, you, help me with
26 this because I'm sure, you came in to the Commission and did
27 you subject yourself to an interview process?

1 A. I did.

2 Q. And that process produced the second statement. How long
3 was that process?

4 A. What, the interview itself?

5 Q. Yes.

6 A. Maybe two to three hours.

7 Q. Okay. And you—the information that's in your second witness
8 statement, that's information that you volunteered when you
9 came in or it was the product of a question and answer?

10 A. A question and answer.

11 Q. And answer sequence? And when you came in for that process,
12 I imagine you were asked about the details of your various
13 plans, is that correct?

14 A. I, I can't recall.

15 Q. But help me if you can, the witness statement which came
16 following that interview process, is the witness statement in
17 which you spoke extensively about the rescue plans, am I right?

18 A. I believe so.

19 Q. Because in the first one you—

20 A. Yes.

21 Q. —you didn't.

22 A. Right.

23 Q. And, in fact, as I read it, would you agree with me that a
24 substantial part, if not the vast majority, of your second
25 statement, deals with the rescue plan, the development of the
26 plans and so on? Is that a fair assessment?

27 A. Yeah.

1 Q. Yeah. And, um, the exchange that the you just had with the
2 Commissioner, all of those details, if they were in your mind at
3 the time, would have been highly relevant to that statement,
4 would you agree?

5 A. I agree.

6 Q. Would you agree with me that it's reasonable to expect that
7 they would have found themselves into that statement?

8 A. Pardon?

9 Q. Would you agree with me that it's not unreasonable to think
10 that if those details were in your mind you would have put
11 them—

12 A. Yeah.

13 Q. —you would have put them in the statement?

14 A. I would have.

15 Q. But notwithstanding that, you didn't?

16 A. I didn't.

17 **Mr. Mootoo:** Okay. No further questions, Mr. Commissioner.

18 **Mr. Maharaj SC:** I would like to ask Mr.—

19 **Mr. Chairman:** Of course. Just a moment. Let me see if
20 there's—I don't think anybody else, Ms. Persaud-Maharaj.

21 **Mrs. Persaud Maraj:** I don't.

22 **Mr. Chairman:** No? All right. Yes, Mr. Maharaj.

23 **Mr. Maharaj SC:** It's in respect of what Mr. Mootoo asked
24 the witness I just want to get one question in respect of—

25 **Mr. Chairman:** Of course.

26 **Mr. Maharaj SC:**—his statement.

27 **Mr. Chairman:** Of course.

1 **Further Examination By Mr. Maharaj SC:**

2 Q. I want you to look at the statement you gave to the
3 Commission. It's at 443 in Volume I. And I want you to look
4 at from paragraph 34, page 448 and you would see that at
5 paragraph 34 you stated that you, you told Michael that his dad
6 was behind him and that to go and rescue him. At paragraph
7 35, I want you to follow me here and see whether I'm saying
8 what you said. And then you said at this time Michael, Rolly,
9 Corey, went back to the habitat and you recall Paria/Kenson
10 person was saying not to dive.

11 "At that point in time we knew that the guys were alive
12 so that we had to attempt a rescue. I discussed with
13 Michael the rescue plan. The plan was the same as I
14 described above except that Michael would enter the
15 pipeline"—

16 And then you went through the plan in that paragraph. Correct?

17 A. Uh-huh.

18 Q. Look at it. And then at paragraph 37, you said:

19 "At this point Conan arrived and I discussed the plan
20 with Conan. Conan, Michael, Corey and Rolly were
21 going to execute the same rescue plan. We were on the
22 boat, Paria and Kenson persons were between the barge
23 and the berth."

24 You see that?

25 A. Uh-huh.

26 Q. And then you went on:

27 "The divers entered the water from the small boat and

1 entered the chamber. The coast guard officers came to
2 me and told me that we had to stand down. They said
3 that no one was allowed to dive and get the divers out”—
4 et cetera.

5 You see that?

6 A. Yes.

7 Q. Then you said:

8 “Cory was on the surface. I told him to go down and tell
9 the divers to stand down, that everyone has to come back
10 to the surface.”

11 You see that paragraph?

12 A. [*Nodding*]

13 Q. And then:

14 “At around 6.30 p.m., Conrad arrived with all the surface
15 supply equipment which we brought onto the barge. The
16 rescue plan was modified so that we would now enter
17 with the commercial equipment. I remember there was a
18 lady from Paria named Catherine who I was
19 communicating with. I was trying to convince Catherine
20 and whoever else was there from Paria as they were all
21 there together. I was trying to convince them for us to
22 make at least one attempt to rescue. She said she was not
23 in charge and kept telling me that she would relay my
24 request to her superiors. I gave her the details of the
25 rescue plan.”

26 Then your next paragraph:

27 “I also tried to convince the coast guard. I don’t

1 remember the officers I spoke to. They just kept saying
2 we couldn't dive and that he had to stand down until they
3 received instructions. I kept going back to Catherine and
4 she kept saying that we don't have permission, just stand
5 down. She said they themselves had additional
6 equipment coming down. She said that a camera was
7 going to come in. It was back and forth, back and forth
8 with the Paria persons. Their position was to stand
9 down. In addition to Conan's equipment, two other dive
10 support vessels arrived, fully equipped with the same
11 surface supply equipment which we had. They also had
12 willing divers as well I discussed the rescue plan with
13 them. The main person to enter the pipeline would have
14 been Conan."

15 **Mr. Mootoo:** I'm terribly sorry to interrupt Mr. Maharaj.

16 **Mr. Chairman:** Somebody has to turn their microphone off.

17 **Mr. Mootoo:** Yes. I'm sorry to interrupt Mr. Maharaj but he
18 said or I understood him to say that he had a question arising,
19 one question rising out of my questions. Perhaps the
20 misunderstanding is mine but I'm not quite sure what's
21 happening.

22 **Mr. Chairman:** Well we haven't had a question yet that's for
23 sure.

24 **Mr. Mootoo:** Well yes.

25 **Mr. Maharaj SC:** I said one issue arising or words to that
26 effect.

27 **Mr. Chairman:** Very well. Look, I mean, if you're seeking to

1 remind the witness of what he said previously in the light of
2 what Mr. Mootoo has put to him, which is not unreasonable, it
3 seems to me it's not unfair either, one of the processes of this
4 exercise is that witnesses don't get an opportunity to give their
5 evidence-in-chief so that they're reminded of their evidence-in-
6 chief. I would encourage them all to read their statements
7 before they come into this room so that they are aware of what
8 they said previously. But how much further are you going to
9 go, Mr. Maharaj?

10 **Mr. Maharaj SC:** I don't know but Mr. Mootoo was putting
11 to the witness that he did not say these things before at the
12 interview with the Commission.

13 **Mr. Chairman:** That's right.

14 **Mr. Maharaj SC:** And I was pointing out, I was pointing out
15 to the witness that what he said here is what he said to the
16 Commission in his statement.

17 **Mr. Chairman:** Certainly in part, yes.

18 **Mr. Maharaj SC:** Yes.

19 **Mr. Chairman:** All right, well, um—

20 **Mr. Maharaj SC:** So I won't be—just, just a few more. I just
21 want to point him out to these last three paragraphs.

22 **Mr. Chairman:** Very well, all three paragraphs at most
23 according to him.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. At paragraph 45 you said that Paria was aware that all the
26 resources came in for the boats to enter the channel and make
27 their way and tie off along side the berth, and then paragraph 46:

1 "I had discussions with Catherine and the other Paria
2 personnel present as to what resources were available us
3 to. Collin Piper whilst I was there did not visit berth 6."

4 And then at paragraph 47:

5 "No one from the management of Paria called me..."—et
6 cetera, et cetera.

7 Okay? So, in your statement to the Commission, you basically
8 gave the three rescue plans, not so?

9 A. Correct.

10 **Mr. Chairman:** Yes. I think in fairness to Mr. Mootoo he was
11 putting it that all the issues that he had asked in cross-
12 examination were not raised by any of the question and answer
13 session that took place and I think that's the point he was trying
14 to make.

15 **Mr. Maharaj SC:** Correct. At that time we didn't have the
16 benefit of Mr. Mootoo.

17 **Mr. Chairman:** I was about—you took the words out of my
18 mouth. Of course we didn't have the benefit of how
19 perspicacious Mr. Mootoo is in seeing this forward, but
20 anyway, thank you very much. Mr. Farah, thank you very
21 much—ah, sorry Mr. Wilson has.

22 **Examination By Commissioner Wilson:**

23 Q. Good afternoon, Mr. Farah. Thank you for coming. I heard
24 you mention in your statement that surface supplied equipment
25 coming. Do you have any recollection of the longest umbilical
26 in any of the equipment that showed up on the site?

27 A. Six hundred feet.

1 Q. Six hundred feet. And that was the longest?

2 A. Yeah.

3 **Commissioner Wilson:** Okay, thank you.

4 **Mr. Chairman:** Thank you very much, Mr. Farah. You are
5 free to go. You can now stay if you like. You can now even
6 watch the screen if you like, all right? But, um, please, don't
7 discuss your evidence with anyone else, all right, that's yet to
8 give evidence, please? Thank you. You're free to go.

9 *[Mr. Andrew Farah leaves Enquiry room]*

10 **Mr. Maharaj SC:** Our next witness is Mr. Michael Kurban.
11 And, um—

12 **Mr. Chairman:** Mr. Kurban is next. We may only be able to
13 deal with Mr. Kurban, I think.

14 *[Mr. Michael Kurban enters enquiry room and is sworn]*

15 **Mr. Kurban:** I, Michael Kurban, solemnly swear that the
16 evidence I shall give to the Commission in this case shall be the
17 truth, the whole truth and nothing but the truth.

18 **Mr. Chairman:** Mr. Kurban, everybody here knows you lost
19 your father and you will be treated with courtesy and respect.
20 I'll make sure of that, all right? I understand that this is not
21 going to be easy for you. I'm sure it's something you've lived
22 with ever since that day. What we're going to do is, is it Mr.
23 Bissessar?

24 **Mr. Bissessar:** Yes. I, I—

25 **Mr. Chairman:** Mr. Bissessar is going to summarize the
26 evidence you've given to us so far, all right? That, I hope, will
27 make it a little easier. Listen to him carefully and if you agree

1 with his summary of your evidence, that will serve as your
2 evidence, all right, and then everybody else here will restrain
3 themselves in asking you such questions as are vital for the
4 purposes of our enquiry and no more. All right? If you have
5 any difficulty or you want to take a break or anything of that
6 kind, you've only to raise your hand, you ask me and you'll get
7 it. All right? Do you understand?

8 **Mr. Kurban:** Yes.

9 **Mr. Chairman:** So please take your time, you've got some
10 water in front of you. I know it's not going to be easy but thank
11 you for coming. All right?

12 **Mr. Kurban:** Okay.

13 **Mr. Bissessar:** Thank you, Chair.

14 Michael Kurban is a marine captain and a certified
15 commercial diver with his own diving company and he also
16 works with different companies. His father was Faizal Kurban,
17 one of the deceased divers. Michael Kurban, following an
18 interview with the legal team, gave a witness statement dated
19 31st O October, 2022. This is at WB 1601. He was
20 represented by counsel during the interview. In his witness
21 statement, Michael Kurban said that the facts in his witness
22 statement were true and correct.

23 Michael Kurban says that on 25th February, 2022 around
24 3.30 p.m. his brother, Nicholas Kurban, called him and told him
25 that there was an incident on berth 6. He spoke to Andrew
26 Farah who believed that the divers were in the pipeline.
27 Michael Kurban arrived at berth 6 with Corey Crawford and

1 Ronald Ramoutar and Corey and Ronald went into the habitat
2 and brought Christopher out of the pipeline. Christopher told
3 him, that is Michael Kurban, that his father, Faizal Kurban, was
4 right behind him and Kazim and Yusof were waiting for him.
5 He said Christopher said to him to go and rescue them.

6 Michael Kurban complains that Paria told him not to dive
7 in the pipeline but he responded that the men's lives were at
8 risk and Paria could not stop them from going to rescue the
9 divers. He recalls that the Paria person told him that he was
10 just telling him what management was saying. The Paria
11 person said that he knew the situation and Mr. Kurban should
12 do what he wants to do.

13 Michael Kurban says that the Paria guys were in the
14 office and were not seeing what was going on at the site. He
15 said that he, Corey, Ronald and Dexter Guerra formulated a
16 new dive plan to go into the pipeline and they assembled the
17 dive equipment and he then went into the habitat and Corey and
18 Ronald assisted him, holding on to the rope while he went into
19 the pipeline feet first.

20 He met one dive tank in the riser which he pushed aside
21 and continued going down the riser, made the bend and entered
22 the horizontal for about 10 to 15 feet. Michael Kurban says it,
23 it was completely dark in the pipeline but he had his dive light
24 with him, and, with the exception of the tank he pushed away
25 and another floating to the top of the riser, he did not see any
26 other objects there. He heard pounding in the pipeline. He said
27 no one was pounding from the outside because he, Corey and

1 Ronald made it clear going in that no one should pound.

2 Michael Kurban explains that the entire length of the
3 pipeline which he entered was full of water. He says that when
4 he arrived at the airtime limit, he was approximately 10 to 15
5 feet in the horizontal and he then came back. Michael Kurban's
6 evidence is that he reported to Corey and Ronald what he saw
7 when he came back and everything was set up to go back into
8 the water. He had commercial helmets connected to an
9 umbilical and Conan was willing to go into the pipeline with
10 him with Andrew and Conrad monitoring from the top.

11 Michael Kurban says that Catherine Balkissoon told them
12 that they were not allowed to go in the pipeline again because
13 management was having a meeting and that Paria will make a
14 decision and let them know. He remembers that the coast guard
15 officers told him that the coast guard were there to make sure
16 that they, meaning Michael Kurban and the divers, do not go
17 back into the pipeline.

18 Around 11.00 p.m. on Friday, Catherine Balkissoon told
19 Michael Kurban and the divers that Paria had appointed Subsea
20 Global to use their divers to bolt the riser back at berth 6 to
21 equalize the water displacement in the pipe and take off the cap
22 on top of the riser at berth 5 as they wanted to bring a crawler
23 camera to send into the pipeline. Michael Kurban says that the
24 job to connect the riser was done at 12.30 a.m. on Saturday
25 morning and the crawler arrived at 3.00 a.m. and left at 5.00
26 a.m., but he was not allowed to see the footage.

27 Michael Kurban recalls that Andrew Farah and Dexter

1 Guerra told him that Paria wanted LMCS to have a permit for
2 anything they wanted to do. Michael Kurban left Paria at about
3 midday on Saturday and he said nothing was happening. He
4 tried to come back on Saturday but Paria did not want him to
5 come back on site. So he went to berth 6 with a friend's boat
6 and stayed at berth 6 until night-time.

7 Michael Kurban says that on Sunday morning while
8 LMCS was trying to remove the habitat with a crane, the
9 emergency brake on the crane failed and the habitat fell into the
10 sea, after which Paria stopped all operations. On Sunday at
11 about 7.46 a.m. Michael Kurban made an international
12 broadcast on canal 16VHF radio from Sunny Day which was
13 the marine channel. He says he made the broadcast to explain
14 what was taking place at Paria. Paria then told him not to
15 broadcast information on channel 16.

16 He says that in the meantime all of Paria's shipping
17 operations were continuing as normal with berthing ships. He
18 left Paria on Sunday morning. Michael Kurban says that his
19 extended family, including his mother, waited at Paria's main
20 entrance car park and he was interviewed by Phillip Alexander.
21 He says that his family was not informed, before the media
22 conference on Sunday, that Paria had moved from rescue to
23 recovery and no one from Paria visited his family before the
24 bodies were recovered. He says that a rescue was possible and
25 that Paria waited out the time and that Paria's officials should
26 have been on site to respond and not in an office.

27 Michael Kurban believes that a rescue could have

1 occurred. He said that LMCS rescued Christopher and this
2 gave them hope that everyone was alive. Christopher told them
3 where everyone was and that his father, Faizal Kurban, was
4 alive and right behind him. Michael Kurban says that even
5 though Christopher was injured, he came out of the pipeline.
6 Mr. Kurban explains that he entered the pipeline and just came
7 back out. He didn't see any reason for Paria to stop them from
8 doing the rescue. He says that Paria waited out the time.

9 Mr. Kurban questions why Paria was having a meeting if
10 they knew that people's lives were at risk. He says that Paria
11 sued have been on the site to respond and that whatever
12 decision was taken should have been taken on site and not from
13 an office. Mr. Kurban further states that LMCS had all of the
14 equipment on site.

15 Mr. Kurban's evidence is that Paria knew about the
16 rescue plan and the equipment because LMC had told them, and
17 told this to Catherine, what the dive plan was. He says that they
18 do not—that they did not do this in a document form because
19 these things take time. They wanted a rescue and they didn't
20 need to present any documents for a rescue operation. Mr.
21 Kurban also said that attempts were made to communicate with
22 Paria about the rescue plans through Catherine and through
23 radioing them.

24 Mr. Kurban, is that a fair and accurate summary of your
25 evidence?

26 **Mr. Kurban:** Yes.

27 **Mr. Bissessar:** Thank you.

1 **Examination By Mr. Chairman:**

2 Q. Mr. Kurban, there's just one thing I'd like to ask you, please? I
3 think you told us in your statement that you had previously
4 dived in a pipeline yourself. Is that right?

5 A. Yes, correct.

6 Q. How long ago was that?

7 A. That was on the same job with Christopher Boodram.

8 Q. I'm sorry, I can't hear you?

9 A. On the same job with Christopher Boodram and my dad.

10 Q. You see, you speak very fast.

11 A. Yeah.

12 Q. I, I—

13 A. On the same job on berth 6 Christopher Boodram was talking
14 about.

15 Q. Right.

16 A. Yeah, that same job.

17 Q. So on berth 6 when the riser there was being repaired—

18 A. Yes.

19 Q. —did you dive in the pipe there?

20 A. Yes.

21 Q. So it's a 30-inch pipe, is it?

22 A. Yes, I—yes, that is correct, it is, yeah.

23 Q. And why did you do that?

24 A. The same thing that needed to put a gasket on the riser to, um—

25 Q. From the inside?

26 A. Yeah.

27 Q. How far into the pipe did you go?

1 A. I couldn't estimate that at that time.

2 Q. Not far?

3 A. Not, probably about 20 feet.

4 Q. Right.

5 A. Yeah.

6 Q. Is it the—and was that the own time you've been, apart from
7 this occasion, the only time you'd been in the pipe?

8 A. Yes, correct.

9 Q. Yeah, all right. Yes, thank you very much.

10 **Mr. Chairman:** I've no other questions. Does anyone else
11 wish to ask Mr. Kurban any questions? Yes, Ms. Alfonso?

12 **Ms. Alfonso:** I'll be very brief, Mr. Chairman.

13 **Cross-Examination By Ms. Alfonso:**

14 Q. Good afternoon, Mr. Kurban. My name is Nyree Alfonso and I
15 represent the interest of the SWWTU. In paragraph 38 of your
16 statement, your witness statement, that is page 1606—

17 **Mr. Chairman:** It's going to be brought to you, Mr. Kurban.
18 It's being handed to you.

19 [*Document handed to Mr. Kurban*]

20 **Continued Cross-Examination By Ms. Alfonso:**

21 Q. You see that paragraph, Mr. Kurban?

22 A. Yeah.

23 Q. Could you explain who the "we" is you're referring to? "We
24 repeatedly tried to convince Paria." Who is "we"?

25 A. Means that we me, Ronald and Farah, Dexter.

26 Q. Okay. And when you say Paria, could you assist me in who in
27 Paria you were referring to?

- 1 A. The Paria personnel that was on site.
- 2 Q. Okay. You know any names at all?
- 3 A. No, not—
- 4 Q. No? Okay, was there a lady by any chance?
- 5 A. Well at that time Catherine didn't arrive.
- 6 Q. Okay, so you know Catherine Balkissoon?
- 7 A. Well I know her that night.
- 8 Q. You know—oh, from that night.
- 9 A. Yes.
- 10 Q. But you didn't know the other persons, the other Paria
11 personnel?
- 12 A. No I wasn't on that job so—
- 13 Q. Okay.
- 14 A. —I don't know the Paria personnel.
- 15 Q. Okay, that, that—fair enough, fair enough. And could you also
16 assist me, later on in that same paragraph, "Paria's plan was to
17 equalize the air, um, to equalize the air. It was not a rescue
18 plan. Paria did not attempt to rescue." So let me just go with
19 that first sentence. Could you assist us in when you say Paria
20 wanted to equalize the air, what did that mean? In your mind,
21 what did that mean?
- 22 A. Well, they say they wanted to remove the cap by number five,
23 the blank.
- 24 Q. The?
- 25 A. The blank.
- 26 Q. I see. Oh—
- 27 A. So they wanted to equalize by connecting the riser by number 6

1 and removing the cap by number 5.

2 Q. Okay. So that is the—that's what they mean?

3 A. That means equalize, they want to equalize the pressure.

4 Q. Oh, I see.

5 A. Equalize the pressure.

6 Q. Thank you very much, because I was a little bit lost when I read
7 that. I thought it was something to pump or something like
8 that. And I just wanted to be clear, Mr. Kurban, you were able
9 to swim past two tanks, as far as you could go down into the
10 pipe with the umbilical?

11 A. First tank was in the surface in the pipe.

12 Q. I see.

13 A. Second tank is where you're seeing the camera.

14 Q. Okay. And you were able to swim past that—

15 A. Yes.

16 Q. Well, twice?

17 A. Once.

18 Q. Once. In, out, okay. Or, so you didn't go past it?

19 A. Yes, I passed the tank.

20 Q. Okay. And on the way out?

21 A. Well yes, I pushed the tank down further and I continue
22 ascending down.

23 Q. Okay, so you passed it—

24 A. Yes.

25 Q. —twice?

26 A. Yeah.

27 **Ms. Alfonso:** Okay. That is all for you, Mr. Kurban. Thank

1 you very much.

2 **Mr. Chairman:** Anyone else? Yes.

3 **Mr. Peterson SC:** Thank you, Mr. Chairman.

4 **Cross-Examination By Mr. Peterson SC:**

5 Q. Afternoon, Mr. Kurban.

6 A. Good afternoon.

7 Q. Just—I wouldn't be long with you. I understand the
8 circumstances. But, the pipe that you said that you had entered
9 previously, on a previous job, was that—what size of pipe was
10 that? Wasn't it a 50-inch?

11 A. I can't be approximately on the size but probably was a bigger,
12 a, a—

13 Q. A bigger pipe. Because I thought it was 50. Was that a dive in
14 which Andrew Farah was involved?

15 A. Yes.

16 Q. Yes. Thought so.

17 **Mr. Chairman:** Was it on the same occasion?

18 **Mr. Peterson SC:** Yes.

19 **Mr. Chairman:** Both you and he had entered that pipe?

20 **Mr. Kurban:** Yes.

21 **Mr. Peterson SC:** Yes.

22 **Mr. Chairman:** Okay, thank you very much.

23 **Mr. Peterson SC:** So you could take it from us it was 50
24 inches? I think—

25 **Mr. Chairman:** Just take it from him that it was 48 since
26 that's the evidence.

27 **Mr. Peterson SC:** Well 48—it was 48? [*Crosstalk*] Well, 48

1 inches or thereabouts.

2 **Continued Cross-Examination By Mr. Peterson SC:**

3 Q. The plan to enter—just now, you are a commercial diver, right?

4 A. Yes.

5 Q. Are you a saturation diver?

6 A. No I'm not.

7 Q. But you know that Mr. Beddoe is a saturation diver? You know
8 that?

9 A. Who's Beddoe?

10 Q. Um, well you know him by Conan?

11 A. Conan.

12 Q. Conan Beddoe?

13 A. Yeah.

14 Q. You know him to be an experienced saturation diver?

15 A. Yes.

16 Q. And that I understand is one of the highest levels of
17 qualifications you can get as a commercial diver? Do you
18 know?

19 A. Right, yeah.

20 Q. That's correct, eh?

21 A. Yes.

22 Q. When you got—approximately what time you got to the scene?

23 A. Approximately 4.30.

24 Q. Four-thirty. So you were there when Christopher Boodram
25 came out?

26 A. Well me, Corey and Ronald was on site.

27 Q. Right.

1 A. We assisted Corey to come, um—Christopher out the chamber.

2 Q. At 4.30 when you arrived, you weren't at that point being
3 restricted by anyone from entering the pipeline?

4 A. At that time, no.

5 Q. Right. And tell me this, when you later were informed that
6 there was a restriction on entering the pipeline, you understood
7 the restriction was not to enter the pipeline as opposed to the
8 habitat?

9 A. Okay, um, so when I reach on site, at that time we dived the
10 chamber. We didn't dive the—

11 **Mr. Chairman:** Could you pull the microphone a little closer?

12 **Continued Cross-Examination By Mr. Peterson SC:**

13 A. We dived in the chamber. We didn't dive in the pipeline.

14 Q. Right.

15 A. The second attempt was to go in pipeline.

16 Q. The second attempt was to go in the pipeline?

17 A. Because when we rescued Christopher.

18 Q. Right. I understand that there were five divers present when
19 you were going to execute a plan. There was—they were
20 Corey, Ronald, Andrew, Dexter Guerra and yourself?

21 A. Correct.

22 Q. But you said that there were—two of those persons were
23 prepared to go into the pipe, two of those five that I just set out
24 there, four and yourself. Who are the two that were prepared to
25 enter the pipe?

26 A. It was only me was—planned to enter the pipe with Corey and
27 Ronald.

1 Q. With Corey and Ronald?

2 A. Assisting me, not going in the pipe, two of them going,
3 assisting me.

4 Q. Beg your pardon?

5 A. They was assisting me in the chamber—

6 Q. Yes.

7 A. —for me to go in the pipe.

8 Q. So who—you were the one willing to go in the pipe or was
9 there any other person?

10 A. I was the one willing to go in the pipe.

11 Q. You were the one willing to go into the pipe. And, in fact, you
12 all went—left topside and went into the habitat to execute that
13 plan to go into the pipe at some stage, right?

14 A. That's what we did.

15 Q. Beg your pardon?

16 A. That's what we did.

17 Q. Yes.

18 A. Yeah.

19 Q. And you had gone down there with Mr. Beddoe also when he
20 arrived?

21 A. That's after.

22 Q. After, yeah?

23 A. After we came back, when I went in the pipeline—

24 Q. Yes.

25 A. —came back out—

26 Q. Yes.

27 A. —with Corey and Ronald—

1 Q. Yes.

2 A. —then we execute a next plan with Mr. Beddoe.

3 Q. Right. Thank you for that.

4 A. Yeah.

5 Q. So you went down with Corey and Ronald, you came back up,
6 then when Mr. Beddoe arrived there was the plan to go to do a
7 rescue, a second attempt?

8 A. The second attempt because the air line, I reach a limit of the
9 air line.

10 Q. Right. That is down the riser and about 20 feet, thereabout,
11 inside?

12 A. Approximately 10 to 15.

13 Q. Or 10 to 15, sorry. All right.

14 A. So basically, when we came back out, we formulate a plan—

15 Q. Right.

16 A. —to go with a scuba tank.

17 Q. Right.

18 A. And that's when Mr. Beddoe was involved.

19 Q. And that's when Mr. Beddoe was assisting you?

20 A. Yes.

21 Q. That plan, what—when—how were you to execute that plan?

22 A. How?

23 Q. Yeah. What was the plan?

24 A. Try to reach a further limit with the scuba tank because we
25 didn't have a limit on a scuba tank.

26 Q. Yeah, but how you all were—who were to be in the pipe, who
27 was to be in the chamber, who was to be up topside, you

1 remember?

2 A. It was Mr. Beddoe, Ronald and myself.

3 Q. Who were in the chamber?

4 A. Yeah.

5 Q. Right.

6 A. And I supposed to go down in the pipe.

7 Q. You supposed to go down in the pipe?

8 A. Yeah.

9 Q. Was—you were the one who volunteered to go down in the
10 pipe at that stage?

11 A. At that stage I was the onlies' one volunteered. Mr. Beddoe
12 was there as well.

13 Q. Anyone else and what—

14 **Mr. Chairman:** Sorry Mr. Kurban, can I ask you to move that
15 whole microphone to your left? That's—yes.

16 **Continued Cross-Examination By Mr. Peterson SC:**

17 Q. Apart from you, understandably, wanted to go into the pipe,
18 was there anyone else at that stage with respect to that plan
19 prepared to enter the pipe?

20 A. Well Mr. Beddoe was prepared as well.

21 Q. To go into the pipe?

22 A. Yes.

23 Q. Yes. That plan, when you all got into the chamber, you all
24 were sitting on the rim of the pipe at that stage?

25 A. Not the rim.

26 Q. Yes.

27 A. It was in the chamber.

1 Q. In the chamber?

2 A. Yeah.

3 Q. Yeah.

4 A. Around the rim.

5 Q. Around the rim?

6 A. Yes. Not on top of the rim.

7 Q. Not on top of the rom. But that plan was aborted?

8 A. Yes.

9 Q. By Mr.—who made that call to abort it, Mr. Beddoe?

10 A. I made that call.

11 Q. You made that call?

12 A. Because when we checked the psi on the tank that we had, and
13 we estimate the depth and the time to take that inside a pipeline,
14 it wasn't enough air.

15 Q. Repeat that?

16 A. It wasn't enough air in the tank that we had.

17 Q. It wasn't enough air in the tank that you had and that's why you
18 all abort it and came back up?

19 A. Came back up to rig the commercial equipment this time.

20 Q. Mr. Beddoe says it a bit differently.

21 A. Uh-huh.

22 Q. And I want to be accurate as to what he said. Mr. Beddoe said
23 that he aborted it because he did not like—he was not—he
24 doesn't—didn't think you were in a sound mind to properly
25 tend him.

26 A. Mr. Beddoe wasn't in a sound mind?

27 Q. You. Let me read his full paragraph to you.

1 "Michael, Ronald and I"—this is Mr. Beddoe.

2 A. Uh-huh.

3 Q. "Michael, Ronald and I then entered the habitat."

4 That's correct, right?

5 A. Correct.

6 Q. "When we entered the habitat, I sat on the RIM of the
7 pipeline to enter and just when I looked at Michael"—I
8 take it that's you—"he did not look as if he was in a
9 sound mind to properly tend me."

10 I guess that's a diving expression. What does that, what does
11 that mean?

12 A. Tend means assist him.

13 Q. To assist him.

14 "So, I made a decision let's wait until my brother come
15 so that we would be in a better—we'll be better equipped
16 to enter the pipeline and we would have better air source
17 as well as communication."

18 So, do you accept—well, you are telling us that the aborting
19 was due only to the shortage of air but Mr. Beddoe is saying
20 when he looked at you, understandably, because your father
21 was at that stage missing, he did not think you were of sound
22 mind to carry out the exercise.

23 A. I wouldn't say so.

24 Q. Yeah, you wouldn't say that?

25 A. Because three of us remained—

26 **Mr. Chairman:** I'm going, I'm going to call a halt to this.

27 Yes, thank you. I don't think this is necessary and—I don't

1 think this is necessary.

2 **Mr. Peterson SC:** Very well, Sir.

3 **Mr. Chairman:** We all understand the position. We
4 understand there's a diversity of opinion here.

5 **Mr. Peterson SC:** Yes.

6 **Mr. Chairman:** But I don't think it's necessary to put that in
7 detail to this witness. I'm very conscious of what Mr. Beddoe
8 says.

9 **Mr. Peterson SC:** Very well, Sir. Once—well, I didn't do it
10 gladly, Sir, but I had to let him know what Mr. Beddoe said as
11 the—

12 **Continued Cross-Examination By Mr. Peterson SC:**

13 Q. So when you—at that stage when you came back up, before
14 you all went into the chamber, on that occasion, where was the
15 plan formulated?

16 A. On the barge.

17 Q. On the barge. Was that plan communicated to the coast guard?
18 Did you see them at that stage?

19 A. Yeah there was—they was around.

20 Q. But at that stage do you recall if the plan was communicated to
21 them or you can't remember?

22 A. Actually, when we was in the water, when we was in the water
23 add we came back out, coast guard told us to come out the
24 water.

25 Q. All right.

26 A. So we came out. We came on the barge, discuss with them
27 what we going to do, what was the plan.

1 Q. Right.

2 A. Coast guard say they wasn't fit to dive in the pipe. Them
3 wasn't trained to dive in the pipe.

4 Q. They said they weren't trained to dive in the pipe?

5 A. They say they not trained to dive in the pipe. Was we
6 formulate a plan as commercial divers we going with
7 equipment in the pipeline.

8 Q. Do you recall, by chance, if you know, which officers told you
9 that from the coast guard?

10 A. I don't recall the name. I don't recall the name.

11 Q. You don't know any of them before?

12 A. Is multiple of them so I can't recall.

13 Q. Yes.

14 A. I was more focused on getting equipment, putting the gear
15 together.

16 Q. No, I was just wondered if you knew any of them before that,
17 you're familiar. But, um, I just want to take you to paragraph
18 14 of your statement where you said that a Paria person then
19 responded to you and was telling you that wash management
20 was saying, but he said that you know the situation and do what
21 you want—14—what you want to do and you said you
22 understand that to be unofficial authorization. So he didn't stop
23 you from doing what he thought you wanted to do. Paragraph
24 14.

25 A. No, he didn't, he didn't—he could—he didn't stop me but—

26 Q. Right.

27 A. But you are—I asked him who stop me—who was telling you

1 to stop me and he said it was Piper.

2 Q. Uh-huh.

3 A. So I told him, I say, men lives at risk, why you—why Piper
4 telling us to stop, not to go in the pipe?

5 Q. Right. And he told you do what you have to do. What I'm
6 trying to get from you is that he didn't tell you you cannot go in
7 the water at that stage?

8 A. We actually was in the water when I was talking to him.

9 Q. Or, okay, right.

10 A. Yeah.

11 Q. And that's when you—after that, that's when you went into the
12 hyperbaric—the habitat?

13 A. Yes.

14 Q. Right. [*Pause*] Just two more questions, Mr. Kurban. Did you
15 tell anyone from Paria what you had encountered in the pipe
16 when you went down and the 10 or 15 feet? Did you speak to
17 anyone?

18 A. Yes, Catherine.

19 Q. And you told her what you encountered?

20 A. Yes.

21 Q. Right. When—do you remember in the series of events at what
22 stage that was?

23 A. That is when we came out the water.

24 Q. When you came out the first time?

25 A. The second time.

26 Q. The second time.

27 A. Came out the water. That's when I met Catherine on the barge.

1 Q. Right.

2 A. And they was asking questions on the—I had reported Andrew
3 Farah and Dexter instantly.

4 Q. Right.

5 A. But they had probably done told Catherine.

6 Q. No well you can't speculate on that?

7 A. So I, I already—when I came I talked to Catherine, I explained
8 to them what was the condition of the pipe.

9 Q. Right that's when you came out from the water the second time
10 or the first time?

11 A. I was in the water all the time. I didn't came out the water.

12 Q. No well the hyperbaric chamber—so you went in the chamber,
13 you went down and you went the 10, the 15 feet and you came
14 back, you came out the chamber?

15 A. Right.

16 Q. Then you went back into the chamber a second time. Is when
17 you came out that second time you said that's when you met
18 Catherine?

19 A. That's when the coast guard let us come out the water.

20 Q. That's when?

21 A. That's when the coast guard let us come out the water and
22 that's when I talk to Catherine.

23 Q. Okay.

24 **Mr. Peterson SC:** That's all I have for this witness, Sir.

25 **Mr. Chairman:** Thank you. Anything else? No? Good. Mr.
26 Maharaj?

27 **Mr. Maharaj SC:** No.

1 **Mr. Chairman:** No. Well I'm pleased to say that that is your
2 evidence today. Thank you. We don't need you again.
3 Grateful for you coming. What I want you to know that
4 certainly everybody over here, and I imagine everybody over
5 there, deeply feel your loss and I'm very sorry about it indeed.
6 We will get to the bottom of this, I can assure you, all right?

7 **Mr. Kurban:** I appreciate that.

8 **Mr. Chairman:** Well, thank you very much for coming and
9 you're free to go. You can stay or leave as you please now and,
10 um, thank you.

11 *[Mr. Michael Kurban leaves enquiry room]*

12 **Mr. Chairman:** We'll take a 10-minute break, please, or shall
13 we make it five? Five-minute break.

14 **3.57 p.m.:** *Enquiry suspended.*

15 **4.03 p.m.:** *Enquiry resumed.*

16 **Mr. Chairman:** Yes thank you. We're going to have next—

17 **Mr. Maharaj SC:** Mr. Conan Beddoe.

18 **Mr. Chairman:** Beddoe, yes. Thank you, Mr. Maharaj. Mr.
19 Beddoe was unavailable on Monday so we've changed the
20 order slightly so he's going to be giving evidence now and he's
21 going to be the last witness today. So, as soon as we all finish
22 with him we can all go home.

23 *[Mr. Conan Beddoe enters enquiry room and is sworn]*

24 **Mr. Beddoe:** I, Conan Beddoe, solemnly swear that the
25 evidence I shall give to the Commission in this case shall be the
26 truth, the whole truth and nothing but the truth.

27 **Examination By Mr. Chairman:**

1 Q. Good afternoon, Mr. Beddoe.

2 A. Afternoon, Sir.

3 Q. What we're going to do is, I understand you're not available on
4 Monday that's why we've moved you slightly out of turn. All
5 right, well, we're trying to accommodate you so, um, what's
6 going to happen next is Mr. Bissessar who sits on the end of the
7 row here is going to read a summary of your statement, all
8 right? Listen to him carefully. If it accurately reflects that
9 which you have told us—

10 A. Yes.

11 Q. —then we need take it no further, otherwise, please tell us
12 otherwise so that we know what you're saying. Then there'll
13 be a number of questions from those who are interested and
14 hopefully we'll get—well we will get you done today. All
15 right?

16 A. Okay.

17 **Mr. Bissessar:** Thank you, Chair.

18 Mr. Conan Beddoe was interviewed by the legal team
19 and submitted a witness statement dated 27th October, 2022.
20 This is at WSB one two four one. He said that the facts stated
21 in his witness statement are true and correct to the best of his
22 knowledge, information and belief. Mr. Beddoe was
23 represented by counsel at the interview.

24 Mr. Beddoe says that he has been a certified saturation
25 diver since 2017 which is the highest level of diving. Part of
26 his training involved living in a pressurized container on a ship
27 for over 20 days in a confined test. This is the same pressure as

1 in underwater. Mr. Beddoe explained that all of the diver
2 courses he had done included rescues as part of the training and
3 he has worked as a diver in the United States, Guyana,
4 Trinidad, Barbados amongst other countries.

5 He has worked locally for OTSL, Hull Support and Trin
6 Dive Underwater Services and internationally for Subsea
7 Global, Miami Divers, Seaquest Diving, Carl Diver and S&J
8 Diving. The type of work which he did as a diver including
9 flanging pipelines, inspection of pipelines, installation of risers,
10 making ties on pipelines, salvage and repairs on pipelines.

11 Mr. Beddoe received information of the accident at
12 around 3.37 p.m. on Friday, 25th February, 2022 from his
13 brother, Conrad Beddoe, who is also a commercial air diver and
14 he arrived at Pointe-a-Pierre at around 5.00 p.m. He says he
15 knew one of the divers, Faizal Kurban, and he had diving
16 equipment and tanks with him. He arrived just as Christopher
17 Boodram was being taken to the hospital and he said he spoke
18 to Christopher Boodram who he knew before the accident. He
19 said Christopher told him “Boy, Conan, go for them boys”, and
20 Mr. Beddoe told him “I”, meaning of course, Mr. Beddoe, “was
21 going.”

22 Mr. Beddoe says he spoke to Andrew Farah, Michael
23 Kurban, Corey Crawford, he knows him as Cor X, and Ronald
24 Ramoutar and together they made a rescue plan by which Mr.
25 Beddoe would enter the habitat to make an assessment using
26 rope while Andrew Farah and another person would be tending
27 the rope from the barge. If Mr. Beddoe assessed that he could

1 do the rescue he would go back in the habitat with Michael and
2 Rory and he would go into the pipeline using a rope and scuba
3 feet first. He said no one at that stage tried to stop them from
4 going into the habitat or the pipeline.

5 Mr. Beddoe entered the habitat and assessed the pipeline
6 and then gave a thumbs up to the others before he, Michael
7 Kurban and Ronald Ramoutar entered the habitat. He looked at
8 Michael and felt that Michael was not in a sound mind to
9 properly assist him, so he decided to wait until his brother,
10 Conrad Beddoe, came to enter the pipeline with better
11 equipment, air source and communications, so they returned to
12 the surface. Andrew Farah then told him that coast guard said
13 they had to wait and after about 15 minutes he was told by his
14 brother, Conrad, that he was at the front gate waiting and
15 Conrad was also waiting on another vessel with surface supply
16 equipment, umbilicals and helmets.

17 When Conrad came they set up the equipment and it was
18 agreed that Conan would go in feet first and someone would
19 tend the hose. He said he had a 300-foot umbilical. Mr.
20 Beddoe explained to his brother, Conrad, how it looked in the
21 pipeline. The plan was for Mr. Beddoe to go in feet first and
22 someone would tend the hose. His intention was to go as far as
23 the umbilical would allow. If he didn't see anything after 300
24 feet, then there was nothing he could do. If he came into
25 contact with one of the men the plan was that he would bring
26 him out. The plan was also that if he encountered any
27 obstructions, he would take them out one at a time at as many

1 times as he could.

2 Mr. Beddoe at this time found out that they were not
3 permitted to go into the water because Paria was waiting on the
4 coast guard. He said he was not involved in any talks with
5 Paria about the rescue plan at this time and Andrew dealt with
6 Paria. After 8.00 p.m. an officer arrived from coast guard and
7 spoke to Conrad and Andrew. Andrew told him that they
8 informed the coast guard of the rescue plan. Mr. Beddoe also
9 observed that other vessels arrived at the site while he was on
10 the barge. The vessel owned as Gulf Stream Marine was
11 owned by OTSL and the vessel known as Waterworld was
12 owned by Subsea Global, used to be called Miami Divers.

13 They arrived to give assistance. They had their full dive
14 spread which included an unlimited source of air and also other
15 divers. Mr. Beddoe says that the coast guard did not render any
16 assistance. They simply arrived and did nothing. He explains
17 that he has done diving in a confined space in the past. He did
18 this at PowerGen when he cleaned their salt water in takes
19 which sucks water from the sea.

20 At 8.30 p.m. Mr. Beddoe went into the habitat with
21 Ronald Ramoutar and bolted on the riser extension to prevent
22 any suction happening again. Adam Houlier from the
23 Waterworld and Subsea Global was in the water holding the
24 light for them. Mr. Beddoe stayed on the barge until 8.00 a.m.
25 Saturday morning hoping that they would get the go-ahead for
26 the rescue. He then went home and waited all day for a call to
27 rescue the men. He was on standby. His brother, Conrad, also

1 left at this time.

2 On Sunday morning, Mr. Beddoe accompanied Kazim
3 Ali Sr., Imtiaz Ali and Andrew Farah to a meeting with Collin
4 Piper, Mushtaq Mohammed and a Paria team to discuss LMCS'
5 rescue plan. The rescue plan was more or less the same as
6 before. The difference now was that Paria would not say that
7 there would be another suction event again because the riser
8 was now extended out of the water. Mr. Beddoe's dad, Russell
9 Beddoe, who is also and ADCI diver was at this meeting.

10 Mr. Beddoe says that in the morning meeting Collin
11 Piper and others were present on behalf of Paria which said that
12 they wanted LMCS to submit the rescue plan and that it wanted
13 a risk assessment, a job hazard analysis and basically a full dive
14 plan that would be required in normal circumstances. Mr.
15 Beddoe says he went back to the office with the LMCS persons
16 who prepared the documents which they showed to him.

17 Kazim Ali Sr., Imtiaz Ali, Andrew Farah and Mr. Beddoe
18 returned on Sunday at about 4.00 p.m. with his father, Russell,
19 and Mr. Haseeb Ali and met with the Paria team where they
20 were eventually advised that Paria was moving from rescue to
21 recovery and would flush the divers out. Mr. Beddoe said that
22 more persons were present at this meeting than the other one.
23 When they got to the meeting everyone announced themselves.
24 Some persons attended via voice conference. He said that there
25 was a person from the coast guard also on voice conference.
26 Kazim Ali Sr. then presented the plan.

27 He says that Krishna Fuentes one of the divers that Paria

1 had on the video—Mr. Fuentes is also a saturation diver and
2 he's also an IMCA certified supervisor. Mr. Fuentes was
3 asking how LMCS was going about doing the plan and who
4 would be going in as it would be a voluntary mission as this is
5 not normal diving. Mr. Beddoe then stepped in and he
6 identified himself to Krishna Fuentes who knew him
7 personally.

8 Mr. Fuentes told him that he agreed with the plan and
9 had no doubt that Mr. Beddoe could execute the plan, that his
10 only concern was the radiation build-up of hydrocarbons inside
11 the pipeline and what side effects this would have on Mr.
12 Beddoe. This was now a concern to Mr. Beddoe because he
13 never took this into account. Collin Piper said that he did not
14 think that radiation would be an issue. Mr. Fuentes asked
15 whether Paria was willing to guarantee that if any side effects
16 happened to him, that is Mr. Beddoe, within 20 years whether
17 Paria would he accountable. At this point, everyone went
18 silent. No one from LMCS responded.

19 Mr. Beddoe explains that he was still willing to go into
20 the pipeline once Paria agreed that they would be accountable
21 to him medically if anything were to go wrong 20 years in the
22 future from radiation. Paria rejected the plan and LMC left.
23 With the exception of Mr. Fuentes, no one said that they had
24 any safety concerns with respect to the plan. However, Mr.
25 Beddoe recalls someone on the video call, as well as the coast
26 guard person, saying what if the line cut? However, according
27 to Mr. Beddoe, there was nothing to cut the line. The coast

1 guard person asked how LMC S was going to move along the
2 pipeline and recover anything. Kazim Ali Sr. answered these
3 questions and the JHA dealt with those issues.

4 Mr. Beddoe had the impression that Paria didn't want the
5 rescue due to the fact that they wanted a recovery due to the
6 fact they were pointing out all the negatives of the plan without
7 actually listening to the entire plan. Mr. Beddoe says he had no
8 hesitation in the plan and he was fully confident in it. His
9 father, Russell, would have been the standby diver to go in if
10 anything were to happen to him. He had no concerns about
11 going into the pipe. Mr. Beddoe says that there was enough
12 room to go in.

13 Mr. Beddoe concludes that diving is his profession, and
14 he would like to know that should anything happen to him that
15 there would be other people who would be willing to come and
16 get him back the same way he was willing.

17 Mr. Beddoe, is this a fair and accurate summary of your
18 witness statement?

19 **Mr. Beddoe:** That is correct.

20 **Mr. Bissessar:** Thank you.

21 **Mr. Chairman:** Mr. Beddoe, just a couple of things please
22 before I hand you over to others?

23 **Examination By Mr. Chairman:**

24 Q. First of all, at paragraph 26 of your statement—it's going to be
25 handed to you now. Just wait one moment please?

26 A. All right. [*Document handed to Mr. Beddoe*]

27 Q. This is a little after I think eight o'clock that night?

1 A. Yeah.

2 Q. Because previous paragraph deals with it at that time. So, what
3 we know at this stage is this, isn't it, that a few hours earlier,
4 Mr. Boodram had emerged from the pipe.

5 A. Correct.

6 Q. And you and a range of others were invited to come and see
7 what you could do to rescue?

8 A. Correct.

9 Q. You're a very experienced highly qualified diver?

10 A. To a point, yeah, I would say so but not really.

11 Q. Well you're being I think a little modest if I may say so. Your
12 qualifications speak for themselves. What I want to ask you is
13 this. First of all, is there a fraternity amongst divers like
14 yourself working in the commercial diving world?

15 A. Yes, we have a association.

16 Q. Right. And do you know many of the people in this country
17 and elsewhere who engage in this kind of work?

18 A. Diving, yes.

19 Q. Yes. And I imagine it's a relatively small compass of people?

20 A. Correct.

21 Q. And no doubt you would expect, if you were in that situation,
22 others like yourself would come to your aid?

23 A. Yeah, I would like to believe so.

24 Q. And so you answered the call to come and help?

25 A. Correct.

26 Q. Did you know the people that were involved in the pipe?

27 A. I've worked with them in the past, yes.

1 Q. And by the time, I was referring you to paragraph 26 of your
2 statement in which you say:

3 "I observed that other vessels arrived at the site whilst I
4 was on the barge. The vessel known as Gulf Stream
5 Marine owned by OTSL and the vessel known as
6 Waterworld is owned by Subsea Global also Miami
7 Divers."

8 You've told us, I think that you used to work for them as well?

9 A. Yeah.

10 Q. "They arrived to give their assistance. They had their full
11 dive spread which included an unlimited source of air
12 and also divers."

13 A. Correct.

14 Q. Pausing there please, at this time around eight o'clock or so—

15 A. Yes.

16 Q. —that evening, a few hours after Mr. Boodram had come out of
17 the pipe, was there anything more that you could have wanted
18 or demanded before entering that pipe to—

19 A. No.

20 Q. —rescue these men?

21 A. No.

22 Q. I mean, in an ideal world could you have said, "Give me this
23 and I will go"?

24 A. Just—we had everything already. We didn't need anything
25 else.

26 Q. All right. That's the first thing. The second thing is this,
27 please? At paragraph 33, would you turn to that please? This

1 is now many, many hours later—

2 A. Yeah.

3 Q. —after Mr. Boodram had emerged from the pipe and one would
4 be forgiven for thinking that perhaps these men may not have
5 survived by now.

6 A. Uh-huh.

7 Q. In any event, this is now Sunday the 27th of February, all right?

8 A. Yeah.

9 Q. And it is in the morning, so something like 36 plus hours after
10 the event happened?

11 A. Correct.

12 Q. Yeah? In the morning, there was a meeting with Collin Piper
13 and others who were present on behalf of Paria and you
14 attended that meeting?

15 A. Yes, I did.

16 Q. “Paria said that they wanted us to orally submit a plan
17 that they wanted a risk assessment, a job hazard analysis,
18 basically a full dive plan that will be required in normal
19 circumstances.”

20 A. Yeah.

21 Q. Right. Now, were these normal circumstances?

22 A. No it's not.

23 Q. Did you regard that demand as reasonable?

24 A. Not exactly.

25 Q. Well you'd better explain what you mean by not exactly?

26 A. Because—

27 Q. Could you turn to that microphone or bring the microphone to

1 you whichever? Yes.

2 A. Basically is, diving is not physically safe on most instances
3 because it's not—we're not designed to be below there.

4 Q. We're not fish?

5 A. No.

6 Q. Right.

7 A. So, in this instance it's entering a pipeline. This is way above
8 normal.

9 Q. Right.

10 A. And we already had everything set to go, we already—

11 Q. So there is an inherent risk whatever you do?

12 A. Regardless what, is risk.

13 Q. Right.

14 A. So, it's not in the normal practice to enter a pipeline.

15 Q. Did you not think that given that it was a significant risk for
16 anyone to be asked to enter that pipe—

17 A. Yeah.

18 Q. —that a demand or a request for a risk assessment, a job hazard
19 analysis, and a full dive plan was not an unreasonable request?

20 A. No. I mean, it fairly is but at the same time it's a rush. We
21 needed a rush on it.

22 Q. You need a rush on it?

23 A. Yeah, because, I mean in my instance I still hoping that they
24 would have been alive.

25 Q. You were still hoping they would be alive?

26 A. Yeah.

27 Q. Well, I dare say everybody else was still hoping they'd maybe

1 still be alive, but that hope was diminishing quickly?

2 A. Correct.

3 Q. Right. What would you regard as the best possible time within
4 which to operate once you knew Mr. Boodram had come at out
5 alive?

6 A. The same Friday night.

7 Q. That Friday night?

8 A. Yeah. We already had everything there.

9 Q. You had everything there?

10 A. Yeah.

11 Q. Do you believe you could have effected a rescue?

12 A. I would like to believe so, yes.

13 Q. On the final day there was some mention of radiation. Are you
14 aware of this radi—or had you—

15 A. At the time—

16 Q. —had you heard of that?

17 A. —at the time, no.

18 Q. You'd never heard of it?

19 A. No.

20 Q. Had you done any research since?

21 A. Not much just minor lil small read-up on it.

22 Q. Yeah. It's a highly controversial—do you know whether that's
23 the case or not?

24 A. Well, without specific facts I can't really dig up in it fully.

25 Q. I don't have anything.

26 **Mr. Chairman:** All right, thank you very much. There'll be, I
27 suspect, some questions from others. I'm going to ask from the

1 back of the courtroom first, please, anybody wishes to ask any
2 questions? Mr. Mootoo? Mr. Mootoo? Then I think it's up to
3 you. Or Mr. Peterson's going to ask?

4 **Mr. Peterson SC:** Yes, thank you.

5 **Mr. Chairman:** All right.

6 **Mr. Peterson SC:** Thank you, Mr. Chairman.

7 **Cross-Examination By Mr. Peterson SC:**

8 Q. Mr. Beddoe, good afternoon.

9 A. Good afternoon, Sir.

10 Q. You're a saturation diver.

11 A. Yes.

12 Q. First time I heard of the term but I gather it's the highest
13 qualification of a diver?

14 A. Yes.

15 Q. Or very high. And at the meeting on the Sunday there was
16 another saturation diver, Mr. Fuentes?

17 A. Correct.

18 Q. Yes. You've known him before that Sunday?

19 A. I knew him before, yes.

20 Q. Yeah, in the industry?

21 A. Yes.

22 Q. You have any reason to doubt his competence in the area of
23 diving?

24 A. No.

25 Q. He is the person who raised the issue of the radiation?

26 A. Correct.

27 Q. Did you—you were hearing about radiation in that context for

1 the first time?

2 A. Correct.

3 Q. And did you ask him to elaborate on—

4 A. Well he did, he did elaborate on it.

5 Q. Because he was saying that that was a risk that you all did not
6 factor in?

7 A. Correct.

8 Q. After he elaborated, were you still convinced that he was just
9 being overly cautious or he didn't know what he was talking
10 about?

11 A. No, well I know him on personal level and I don't think he
12 would put my life at risk by—or just trying to hinder me—

13 Q. Yes.

14 A. —for no apparent reason.

15 Q. For no apparent reason. The coast guard was also part of that
16 meeting?

17 A. Correct.

18 Q. And there was some issue about a hazmat diving suit?

19 A. Yeah.

20 Q. I don't know what that is.

21 A. Well Fuentes mentioned the hazmat suit.

22 Q. And he said there were none in the country?

23 A. Yeah.

24 Q. And it will be too long to bring one in?

25 A. Well, I say it might a take too long to bring one.

26 Q. Or, you said it would take too long?

27 A. Yeah.

1 Q. But did you know if there was any in the country at the time?

2 A. Not hundred per cent but, I mean, it still—it's not something we
3 does use in Trinidad.

4 Q. It's a rare thing?

5 A. Yes.

6 Q. Because, you don't dive into—well, you don't have events like
7 this in Trinidad really?

8 A. No and it's something will dry rot if you—

9 Q. And it's something that will dry rot if it's not used?

10 A. Yeah.

11 Q. The coast guard being part of that discussion, did they volunteer
12 to participate in the rescue?

13 A. No.

14 Q. No.

15 A. They say they not trained to do that.

16 Q. They say they not trained to dive into pipelines?

17 A. Correct.

18 Q. From your experience as a saturation diver which I was
19 impressed when I saw the mode by which you were trained, do
20 you know of any other persons in Trinidad qualified to dive into
21 pipelines like that in that kind a space?

22 A. Confined space?

23 Q. Yes.

24 A. A few. A few.

25 Q. But are those persons also saturation divers?

26 A. Some yes, some no.

27 Q. So it's a rare skill?

1 A. Yeah.

2 Q. When you arrived at the—at Paria's site, that Friday evening I
3 think you got there around five o'clock?

4 A. Yeah.

5 Q. You spoke with Christopher Boodram who you saw was just
6 being boarded onto an ambulance?

7 A. Correct.

8 Q. Yes. And he told you that you should go for those guys?

9 A. Correct.

10 Q. Did he tell you anything about the condition within the pipe?

11 A. No. We didn't have much conversation because they were
12 checking him out, the medic.

13 Q. Did he tell you that they were—

14 **Mr. Chairman:** I'm struggling to hear you, Mr. Beddoe.

15 **Mr. Beddoe:** Or, sorry.

16 **Mr. Chairman:** Just make sure you use that microphone,
17 please.

18 **Mr. Peterson SC:** Yes.

19 **Continued Cross-Examination By Mr. Peterson SC:**

20 Q. You didn't have much conversation, but—

21 A. No.

22 Q. —you realized he was covered in what appears to be black,
23 thick oil?

24 A. Correct.

25 Q. Yeah. And did that inform an opinion you make at that stage as
26 to what the condition in the pipe might have been?

27 A. At the time I wasn't focused on how he was looking. I was just

1 happy to see that he alive and he just tell me, “Ey, the rest a
2 them there. Go for them.”

3 Q. Did he tell you anything about air pockets at that stage?

4 A. No.

5 Q. Right. How did you get from there out to the berth?

6 A. The coast guard vessel.

7 Q. The coast guard vessel took you?

8 A. Yeah. There was a small craft there.

9 Q. Yes. And you got out there and when did you formulate a plan
10 to dive?

11 A. When I got out there probably like about 10 minutes within
12 being there, I spoke with Andrew, I spoke with a couple other
13 guys there and I got dressed and entered the water just to make
14 a assessment for mihsself.

15 Q. And at that stage the coast guard didn't try to stop you?

16 A. No.

17 Q. Neither did any Paria security try to stop you?

18 A. Correct.

19 Q. Yes. And you went into the water and went into the habitat?

20 A. Correct.

21 Q. Yes. You did your assessment?

22 A. Yes.

23 Q. And you came back out?

24 A. Correct.

25 Q. And you what, reformulated a plan or you used the same plan—

26 A. Well, we reformulated a plan which is the same rope to tend the
27 divers down inside.

1 Q. And then you revisited the chamber—

2 A. Yeah.

3 Q. —to execute the plan?

4 A. Correct.

5 Q. And you aborted the plan when—

6 A. At that stage, yes.

7 Q. At that stage. And in the details that were set out we got the
8 reason why you did not—

9 A. Correct.

10 Q. —think that Michael could have assisted you?

11 A. That is correct.

12 Q. You have done rescues before?

13 A. In school, yes, because we don't get to use this as often.

14 Q. Sorry.

15 A. We don't get to do rescues on a real life situation on a normal
16 [*Inaudible*]. Before every job you get to practise a dive.

17 Q. Or you get a—

18 A. Yeah.

19 Q. It's part of your training that persons who are intimately and
20 emotionally involved with a target that you're going to rescue
21 should not be part of the decision-making process?

22 A. I would like to say it depends on the situation.

23 Q. Yes. What you mean by that?

24 A. Because, if it is, if it is your family in there you will be a lil
25 more hasty, yes, which is what you're saying but in my case
26 they are not physically my family, I just know them.

27 Q. Yes.

1 A. But not on a personal level. I know them.

2 Q. Not on personal level.

3 A. I just know them.

4 Q. Yes.

5 A. But I still have the drive to go for them regardless.

6 Q. Yes, yes, no, no, that's commendable. I not attacking that at
7 all. That's understandable. But in the—you have been through
8 drills for rescues?

9 A. Yes.

10 Q. And have you ever had a drill with respect to this type of rescue
11 like in a pipeline or anything that type?

12 A. No.

13 Q. So you said you form—you went in, you assess and you came
14 up and you formulated a plan. Having formulated that plan, did
15 you communicate it to the coast guard?

16 A. No.

17 Q. Did you communicate it to anyone apart from—

18 A. Andrew.

19 Q. Andrew?

20 A. Yeah.

21 Q. Andrew Farah?

22 A. Correct.

23 Q. Part of your team?

24 A. Yes.

25 Q. The first time you were speaking to Paria persons would have
26 been when, the Saturday, the Sunday when?

27 A. Sunday.

1 Q. When you went to that meeting the morning?

2 A. Correct.

3 Q. With Mr. Kazim Ali Sr.?

4 A. Yes.

5 Q. Tell me something. A rescue in something like that 30-inch
6 pipeline, part of a risk assessment would be what size bottles
7 you will use or what source of air you would use?

8 A. Yes.

9 Q. And I saw in your statement you referred to small bottles? Was
10 what is—

11 A. The pony bottle. Is not actually a pony, it's like a cubic feet
12 smaller. It have the 80 and it have the 50. It have some a them
13 come as 30. We were going with the 50.

14 Q. All right. That would have been part of your risk assessment?

15 A. Yes.

16 Q. Yes. I think you told the Commission that the request by Paria
17 to have a risk assessment before a dive like that is not
18 unreasonable?

19 A. No.

20 Q. In fact it's a standard requirement for a dive especially in a
21 confined space like that?

22 A. Yes.

23 **Mr. Peterson SC:** One minute, Mr. Chairman.

24 *[Mr. Peterson SC confers with Mr. Mootoo]*

25 **Continued Cross-Examination By Mr. Peterson SC:**

26 Q. Right, so I was at the stage where you said the plan was
27 formulated and you have your team and you were ready to go.

1 Having seen earlier the oil and Mr. Boodram's skin, did you
2 realize that you were diving into a pipe that may have had
3 hydrocarbons?

4 A. At the same Friday night? No.

5 Q. Right.

6 A. I wasn't thinking about all that at the time.

7 Q. Were you aware as to what may have caused the men to enter
8 the pipe?

9 A. Well that would be differential pressure.

10 Q. Right. Oh, so you're familiar with what we call—

11 A. Yes.

12 Q. —Delta P?

13 A. Yes.

14 Q. All right. And were you aware that the Delta P occurred where
15 a inflatable plug had disappeared into the line?

16 A. At the same Friday night the same said time, no, but it's only
17 after when the—when I entered the water to extend the pipe I
18 got that from it.

19 Q. To extend the riser?

20 A. The riser, yes.

21 Q. Which would have eliminate the possibility of the—

22 A. Correct.

23 Q. —of any Delta P?

24 A. Correct.

25 Q. But earlier in the Friday afternoon when you were—formulated
26 the plan to go into the pipe you did not factor in the possibility
27 of a second—

1 A. A second slip, no.

2 Q. A second Delta P, all right. You call it a slip. All right. What
3 time did the riser go in to eliminate the possibility of a second
4 event, you remember?

5 A. That might have been a lil after 10.00, after 11.00, somewhere
6 there so. It was late.

7 Q. It was late?

8 A. I know it was late already.

9 Q. It was late already. And you had no idea whether there were
10 any other obstructions within the pipe?

11 A. At the time, no. Only when they stuck the camera down inside
12 I saw it on the video.

13 Q. Right. Because your initial survey that you said you did when
14 you were formulating the plan did not—

15 A. Yeah. It did not have anything right there and the water black,
16 so—

17 Q. Right, it did not have any—

18 A. Floating on the surface.

19 Q. Any floating on the surface, and you did not enter the pipe at
20 that stage?

21 A. No.

22 Q. So it's only when the camera was inserted—

23 A. Yes.

24 Q. —and you saw that there was a blockage?

25 A. Yeah.

26 Q. That was Saturday morning?

27 A. That would have been—when the camera went in, yes.

1 Q. Yes, around 3.00—I think was 3.00 a.m.? It was 3.00 a.m. It
2 was around 3.00 a.m. Saturday morning. So you were prepared
3 on Friday night to go in but you realized what I just went
4 through there with a set of risk, you would have been going in
5 without those risks being addressed?

6 A. Yah, but, you will take them out one by one as normal the same
7 way.

8 Q. You will take out?

9 A. Whatever would have been blocking it.

10 Q. Right.

11 A. Because for it to enter it must be able to come back out.

12 Q. Yes, I know.

13 A. It was nothing—

14 Q. I take that. That is with the execution of the plan.

15 A. Yes.

16 Q. But what I'm saying is that when you formulated the plan, all
17 those factors I just pointed out to you, the hydrocarbons, the
18 possibility of the plug being in the line, the possibility of a
19 second event, the blockage, all those factors, those are risk
20 factors you would accept?

21 A. Yeah, at the time, at the Friday night, yes.

22 Q. Those weren't—right, but those weren't factored in in your
23 earlier plan because you weren't—

24 A. No.

25 Q. —aware of them?

26 A. Correct.

27 Q. As part of that, um—one of the risks, you did not have any idea

1 as to how the—well, I know it's a obvious question but we need
2 to get it for the record. You did not know how the men were
3 positioned in the pipe?

4 A. Correct.

5 Q. And your plan to rescue them took into account what—any
6 particular position the men may have been in?

7 A. At the time, no.

8 Q. Because if they were in—

9 A. Because at the time it's more a question of light.

10 Q. If they were head in first it would have been more difficult than
11 if they were feet in first?

12 A. Correct.

13 Q. Yes. I saw something curious from Mr. Fuentes' comment at
14 the meeting on the Sunday. He was asking how you are going
15 to do the plan and who would be going in and he said it would
16 be a voluntary mission. What he meant by that?

17 A. Because at the time you have to volunteer to go inside a
18 pipeline. This is not something that no company has ever hired
19 anyone to enter a pipeline.

20 Q. Yeah, because you said it was not a normal dive?

21 A. Correct.

22 Q. Right.

23 **Mr. Peterson SC:** I want to thank you very much, Mr.
24 Beddoe, for your time.

25 **Mr. Beddoe:** Okay.

26 **Mr. Chairman:** Thank you, Mr. Chairman.

27 **Mrs. Persaud Maraj:** I have one question for Mr. Beddoe.

1 Thank you.

2 **Cross-Examination By Mrs. Persaud Maraj:**

3 Q. Mr. Beddoe, was there any significance of the fact that Mr.
4 Boodram was alive in operation in your mind when you had
5 planned on going in for the dive, the rescue?

6 A. On the Friday night?

7 Q. On the Friday night.

8 A. On the Friday night I didn't actually think much about the
9 dangers of it. I was just more seeing it as a next diver inside
10 there in assistance.

11 Q. All right.

12 A. Need assistance.

13 Q. But what I'm asking you, the fact that Mr. Boodram—you had
14 seen—you said you saw—

15 A. Yes, I saw him.

16 Q. You saw Mr. Boodram. And the fact that he was alive—

17 A. Alive.

18 Q. —and you saw him, did that operate in your mind to any
19 significance?

20 A. Yeah, that would mean that the other guys still alive, because if
21 he came out, the others would be there and then he said go for
22 them, so in other words he would like to believe that they right
23 there too.

24 Q. Thank you.

25 A. So—

26 **Examination By Mr. Chairman:**

27 Q. All of the issues that Mr. Peterson has raised with you that you

1 didn't consider, you've been frank enough to tell us, on the
2 Friday night—

3 A. Yes.

4 Q. —such as the possibility of another Delta P, the oil, the
5 hydrocarbons that were inside there and so on, you remember
6 he was asking you about those?

7 A. Yeah.

8 Q. You knew that Mr. Boodram had come out of the pipe?

9 A. Correct.

10 Q. And was alive.

11 A. Yes.

12 Q. And do you, do you—did you know that the other divers were
13 said to be in air pockets within the pipe?

14 A. At the Friday night? No.

15 Q. So you hadn't acquired that information that others were in air
16 pockets?

17 A. At the Friday night, no.

18 Q. What did you think they were breathing?

19 A. Well, the scuba bottles would have gone in with them and the
20 volume of air would have been trapped somewhere I was
21 hoping it would have have but I didn't guarantee or I didn't
22 even heard about it before.

23 Q. Did you know how long Mr. Boodram had been in the pipe?

24 A. Probably like a hour. I, I, I assuming.

25 Q. Do you know now?

26 A. Not exactly, no.

27 Q. Do you know that it was two and a half hours?

1 A. Two and a half?

2 Q. Yes.

3 A. No I didn't.

4 Q. Well the best diver in the world could he last on one tank for
5 two and a half hours?

6 A. No.

7 Q. Even—no matter how shallow you breathe?

8 A. Correct.

9 Q. But you didn't know that at the time?

10 A. No.

11 Q. Your natural instinct was, "I'm a diver, they're divers, let me
12 help"?

13 A. Yes.

14 Q. Now that was it, isn't it?

15 A. That is correct.

16 Q. And you wouldn't be surprised that there were others at Paria
17 and so on who were saying, "Hold on a minute. We need to
18 take stock before you go charging in there"? You wouldn't be
19 surprised about that, would you?

20 A. No.

21 Q. No. However, there came a time when you did know more?

22 A. Yes.

23 Q. And there came a time when there were a good deal more
24 professionals on site?

25 A. Yes.

26 Q. Did you have in your mind at any point in time, even now
27 looking back on it, any doubt that you might have been able to

1 effect a successful rescue?

2 A. The Friday night I—looking back at it now, I still would have
3 gone.

4 Q. Yeah. There's one other thing I wanted to ask you. Yes. This.
5 You may have been persuaded, because of some argument
6 about potential radiation, not to enter the pipe. I don't think
7 you necessarily are saying that, but, even if you were persuaded
8 not to enter the pipe, were there other divers who were prepared
9 to enter the pipe?

10 A. I didn't speak to anyone else about if they were willing to go in
11 the Sunday after—

12 Q. No, no.

13 A. —we heard about it.

14 Q. Before that, up until that time. I mean, were you the only
15 volunteer?

16 A. I don't know. I didn't ask, I didn't ask much about that. I
17 didn't ask much people.

18 Q. You just volunteered yourself?

19 A. Yeah.

20 **Mr. Chairman:** Yes, thank you very much. Anything else?
21 No? Thank you very much. You're free to go. Thank you for
22 coming.

23 *[Mr. Conan Beddoe leaves Enquiry room]*

24 **Mr. Chairman:** Now, I understand we still have Mr.
25 Ramoutar. Is there any reason why we can't try and dispose of
26 this witness today? Let's have Mr. Ramoutar, shall we? Let's
27 do our best. Do you think you're likely to be lengthy with him?

1 What I don't want to do is to call and then not have him back
2 until Monday with a three-day break bearing in mind what
3 happened today.

4 **Mr. Peterson SC:** After today, Sir, I—

5 **Mr. Chairman:** Y-S.

6 **Mr. Peterson SC:** Yes, we could probably try to get him. Yes,
7 let's have him. That's because he doesn't have anything long.

8 **Mr. Chairman:** Good. Excellent. Thank you, thank you for
9 that, Mr. Peterson.

10 **Mr. Peterson SC:** It's a repetition of areas we have covered
11 before.

12 [*Mr. Ronald Ramoutar enters arbitration room and is sworn*]

13 **Mr. Ramoutar:** I, Ronald Ramoutar, solemnly swear that the
14 evidence I shall give to the Commission in this case shall be the
15 truth, the whole truth and nothing but the truth.

16 **Mr. Chairman:** Do take a seat. Now, it's very important that
17 when you do speak you lower that microphone down so it's
18 level with your mouth and bring it a little closer to yourself.
19 That's perfect, all right.

20 Now, what's going to happen now is Ms. Maharaj, who
21 sits there, is going to be summarizing your evidence you've
22 given, all right, in your statement. That will serve as your
23 evidence-in-chief. It will hopefully save us a little time. Please
24 listen carefully to her summary, all right, and if you disagree
25 with it tell us at the end.

26 **Mr. Ramoutar:** Okay.

27 **Mr. Chairman:** She's going to read that to you now. We're

1 expecting to dispose of your evidence today so that you'd be
2 able to go and not have to return, unless you want to, when
3 you're allowed to, to sit at the back of the court all right? But
4 for now pay attention to what she has to say. Am I right in
5 understanding you're known as Rolly?

6 **Mr. Ramoutar:** Yes.

7 **Mr. Chairman:** Right, okay, thank you. All right, Ms.
8 Maharaj.

9 **Ms. Maharaj:** Thank you.

10 Mr. Ramoutar attended an interview at the Commission
11 and a witness statement was prepared for him. He reviewed
12 and signed his witness statement on the 31st of October. His
13 witness statement is at the witness statement bundle page 1610
14 Volume IV.

15 Mr. Ramoutar is a certified commercial diver. He was
16 the brother-in-law of Faizal Kurban. At about 5.20 p.m. on the
17 25th February Mr. Ramoutar arrived at Paria's compound and
18 headed to berth 6 with Michael Kurban and Corey Crawford to
19 assist in rescue efforts of the missing divers. When they arrived
20 at berth 6 they were told multiple times by Paria personnel that
21 they did not have permission to enter the water. At this point,
22 Mr. Ramoutar stated that he still wasn't sure if the divers were
23 in the pipeline or in the water.

24 Mr. Ramoutar stated that Michael Kurban and Paria
25 personnel had a few words back and forth but he, Mr.
26 Ramoutar, and Corey Crawford entered the water. Corey
27 Crawford and Michael Kurban proceeded with caution to the

1 hyperbaric—sorry, Corey Crawford and Michael Ramoutar
2 proceeded with caution to the habitat. They entered the
3 chamber and heard a voice calling and a knocking sound. Mr.
4 Ramoutar climbed into the habitat. He looked into the pipeline
5 and saw Christopher covered in oil. Christopher got scared
6 when he saw him and pulled back. He asked, “Who is you?”
7 Mr. Ramoutar bent down and told him his name.

8 Mr. Ramoutar then tried to pull him up but he was too
9 slippery. Corey Crawford came into the habitat at this time and
10 they both assisted Christopher out of the pipeline. Christopher
11 kept telling him that Fyzie was right behind. Corey Crawford
12 took Christopher to the surface but Mr. Ramoutar remained in
13 the habitat for about 10 minutes to see if anyone was coming
14 out of the pipeline. He tapped the pipeline with a four-tap
15 emergency, using the chain block, and he felt a vibration of four
16 taps coming back from inside the pipeline. He repeated this
17 code a few times and every time he got the same response.

18 Mr. Ramoutar then went back to the surface and he and
19 Michael and Corey decided to go into the pipeline since at this
20 point they knew that everyone was in the pipeline because
21 Christopher said they were in an air pocket. They then returned
22 to the habitat with a dive tank with a hose on it called a hookah.
23 Mr. Crawford and Mr. Ramoutar assisted Michael Kurban into
24 the pipeline.

25 They held the dive tank and Michael Kurban entered the
26 pipeline with the hookah. He went as far as he could until he
27 reached the limit of the hookah. Mr. Ramoutar and Mr.

1 Crawford tugged him to let him know that the hookah had
2 reached its limits. When he came back out Michael Kurban
3 told him that he reached a little after the elbow and saw
4 nothing. He didn't take anything out of the pipeline.

5 Another diver known to Mr. Kurban as Conan arrived at
6 the site. Michael Conan and Mr. Kurban decided to go back
7 into the habitat. The new plan was that Conan and Mr.
8 Ramoutar would assist Michael Kurban into the pipeline with
9 one tank and with two regulators and two second stage so that
10 two persons could breathe out of the same tank. However, in
11 the habitat Michael Kurban wasn't feeling comfortable and they
12 decided to abort.

13 According to Mr. Ramoutar, they then proceeded to the
14 surface and started making phone calls to get other divers and
15 other equipment. At about 7.30 p.m. Mr. Alvin Seeterram from
16 Subsea Global arrived with his vessel which was fully equipped
17 with commercial diving gears such as hats and a hose with
18 communication and camera. A rescue dive was planned for
19 commercial equipment. Conan volunteered to go inside the
20 pipeline with commercial equipment. However, when they
21 were about to start the dive they were told by Paria officials to
22 wait until the coast guard arrived.

23 The coast guard came around after 8.00 p.m. and after
24 they were briefed by Paria officials, the coast guard indicated
25 that they did not have equipment to go inside because they were
26 not trained for that. Mr. Ramoutar stated that he and the other
27 divers decided to stick to the rescue plan but they were told by

1 Paria officials that they didn't have permission to go into the
2 pipeline and used the coast guard to stop them. According to
3 Mr. Ramoutar the coast guard was armed and told them that
4 they couldn't go into the pipeline.

5 Mr. Ramoutar stated that LMCS as well as Michael and
6 Corey tried on several occasions to convince the Paria
7 personnel and the coast guard for permission to do the rescue
8 by giving them details of the rescue plan, however they said no.
9 Later on Friday the 25th February, Mr. Ramoutar assisted in
10 works to connect the riser at berth 6. He says this was done at
11 about 10.30 p.m. He stated this was done to open the riser at
12 berth 5 as there were reports that knocking was being heard at
13 berth 5.

14 Mr. Ramoutar stated that he was present when Paria
15 inserted cameras into the pipeline in the early hours of
16 Saturday, 26th February. On Saturday, Mr. Ramoutar attended
17 a meeting with Paria and the Minister of Energy and Energy
18 Industries. After the meeting he went back to berth 6 but
19 nothing was happening. He left that evening and returned on
20 the morning of Sunday the 27th February. On Sunday evening
21 he was at Paria's media conference where it was announced
22 that Paria was now moving to a recovery.

23 He was present on Sunday 28th on LMCS' vessel whilst
24 the recovery efforts were ongoing. On Monday the 28th, Paria
25 officials came with special forces at berth 6 and requested
26 LMCS personnel to leave. LMCS personnel refused and their
27 phones were taken from them but Paria asked that LMCS vessel

1 Sunny Day moved to a different location and when they arrived
2 at this new location Paria put tarpaulin in front of where they
3 were going to conduct work to block LMCS from seeing what
4 they were going.

5 Mr. Ramoutar says that LMCS was able to position the
6 boat to try to see the recovery effort and he saw when bodies
7 were retrieved. Mr. Ramoutar stated that based on the
8 information Christopher gave, he believes that the rescue plan
9 would have worked. He says Michael entered the pipeline feet
10 first and if he had gotten into difficulty the hose was tied to him
11 and Mr. Ramoutar and others could have assisted by pulling
12 him back out with the hose. He says the process of Michael
13 going in and out of the pipeline took about 5 minutes.

14 Mr. Ramoutar, is that an accurate summary of your
15 evidence?

16 **Mr. Ramoutar:** Yes.

17 **Ms. Maharaj:** Thank you.

18 **Mr. Chairman:** Yes.

19 **Examination By Mr. Chairman:**

20 Q. Mr. Ramoutar, it hasn't escaped me that Fyzal Kurban was your
21 brother-in-law, wasn't he?

22 A. Yes.

23 Q. Yes, so please accept our condolences, all right?

24 A. Thank you.

25 Q. And I know this can't be easy, so, let me just ask you a couple
26 of questions please first? One thing is for sure, isn't it, in your
27 own mind, is that when Mr. Boodram emerged from that pipe,

1 there was at least one other person who was alive because you
2 were tapping on that pipe and he was tapping back?

3 A. Correct.

4 Q. So in your mind there was no question that there was at least
5 one other person alive?

6 A. Yes.

7 Q. And Mr. Boodram had told you Fyzie, your brother-in-law, was
8 right behind him.

9 A. Yes.

10 Q. Yes.

11 **Mr. Chairman:** I don't think there's anything else I need to
12 ask. Does anybody—I'm going to ask at the back of the court
13 first, does anybody need to ask Mr. Ramoutar any questions?

14 **Mr. Ramadhar:** No thank you.

15 **Mr. Chairman:** No. All right, thank you. Well, um, Mr.
16 Peterson.

17 **Mr. Peterson SC:** Just a few questions.

18 **Cross-Examination By Mr. Peterson SC:**

19 Q. Afternoon, Mr. Ramoutar.

20 A. Good afternoon, Sir.

21 Q. You saw when your colleague, Mr. Beddoe, arrived at the
22 location?

23 A. I—which person is that?

24 Q. Beddoe, Mr. Beddoe, Conan?

25 A. Well, I didn't actually see when he arrived but I—when I—the
26 first time I saw him he was in the water.

27 Q. Or, he was in—okay, right.

1 **Mr. Chairman:** What you need to do is you see that
2 microphone in front of you, move it right to your left. A little
3 more. A little bit more. Thank you. Right, now when you turn
4 to face Mr. Peterson we'll hear you.

5 **Continued Cross-Examination By Mr. Peterson SC:**

6 Q. At that time was it dark or it was just dusk?

7 A. Dusk dark.

8 Q. Right. The coast guard was already there?

9 A. Yes the coast guard vessel was there when I arrived also.

10 Q. Which is what, 5.00, 5.20 thereabouts?

11 A. Yeah. Well, no, when I arrived on the berth was closer to 6.00,
12 minutes to 6.00.

13 Q. And the vessel was already there?

14 A. Yes.

15 Q. The coast guard vessel was already there. Did they prevent you
16 from going into the water at that point?

17 A. No.

18 Q. Did any security from Paria prevent you from going into the
19 water at that point?

20 A. There was no—only was words. They were just telling us we
21 don't have permission.

22 Q. But you all—well, you ignored that anyhow and you all were
23 diving?

24 A. Yes.

25 Q. When Mr. Beddoe arrived you all put a plan together to attempt
26 to rescue?

27 A. Yes.

1 Q. And you attempted to execute that rescue but you aborted it at
2 some point?

3 A. Yes.

4 Q. Yes. You weren't working with LMCS at that time you were
5 working with Neptune?

6 A. Yes.

7 Q. That's another diving company?

8 A. Correct, yes.

9 Q. One of the specialist companies that came was Subsea Global?

10 A. Yes.

11 Q. Were they prepared to dive?

12 A. Yes.

13 Q. Who from that company had joined your plan to dive, if any?

14 A. Well, Mr. Conan also is work with them.

15 Q. Or, he works with them.

16 A. He's a—you know, we freelance with different companies.

17 Q. Or, okay. And Mr. Conan was the person you're talking about
18 from Subsea who was prepared to assist in the dive?

19 A. Yes.

20 Q. Okay, great.

21 A. Among with other divers.

22 Q. Among with other divers, but from other companies?

23 A. Yes.

24 Q. What about the coast guard, did anybody discuss with them
25 their ability to assist in diving?

26 A. Well we were told to—okay, when we told Paria about our plan
27 they told us to wait on the coast guard, divers this time. The

1 coast guard was there but the divers, like coast guard divers was
2 not there, so they told us to wait on the coast guard divers, and
3 when the coast guard divers arrived they say they don't—
4 they're not trained for that, to go down in—you know?

5 Q. To go down in the—because at that point, you knew—

6 A. We knew they was inside the pipeline.

7 Q. Right. And you would be able to tell them the size of the
8 pipeline?

9 A. Yes.

10 Q. The possible conditions of the pipeline?

11 A. Yes.

12 Q. And you formed the view as to the conditions in the pipeline
13 based on what you saw when Christopher Boodram was
14 rescued?

15 A. And what he told me, yes.

16 Q. And what he told you, because you were the one who assisted
17 in taking him at the head of the pipe out of the chamber?

18 A. Yes.

19 Q. Right. And having seen Mr. Boodram, you saw him covered in
20 what appeared to be oil?

21 A. Yes.

22 Q. So you know that the—at least the—one of the hazards in that
23 pipe would have been the oil, presence of oil?

24 A. Yes.

25 Q. All right. Also you knew about Delta P factor?

26 A. Yes.

27 Q. And you understood that that—at that stage did you understand

1 that that could have been a possible reason how your colleagues
2 ended up in the pipe?

3 A. Yes.

4 Q. Right. So you know that—did you also know that there was
5 possibility that equipment would also be in the pipe?

6 A. Yes.

7 Q. And did you know the possibility from that Delta P event that
8 there could have also been a plug, an inflatable plug, in the
9 pipe?

10 A. Yes.

11 Q. Because you have done this kind a work before?

12 A. Yes.

13 Q. And you also knew, apart from the inflatable plug, apart from
14 the equipment, that you did not know how many persons might
15 have been particularly in the pipe or you thought all the men
16 were in the pipe?

17 A. Christopher told us all of them were there.

18 Q. Or, Christopher told you all the men were in the pipe. Have
19 you ever done any rescue close to that or anything like that?

20 A. Well we trained for rescue in the confined space. When we
21 doing course, part of our course is training for, you know,
22 confined space rescue and stuff.

23 Q. Right. So, you—and you will describe that pipeline as a
24 confined space?

25 A. Yes.

26 Q. But in this case with added hazards like the presence of oil, the
27 equipment in the line. You have to say yes, because—

1 A. Yes.

2 Q. And one more thing, the—you said you were familiar with the
3 concept, the principle of the Delta P factor?

4 A. Yes.

5 Q. Did you also consider that there could have been a possible
6 second event?

7 A. Well, yes, but at that time life, you know, saving life was more
8 important.

9 Q. Yeah. All right. So that's what I want to know. So you
10 considered it but you chose—

11 A. Yeah.

12 Q. —that life is—yes. [*Mr. Peterson SC confers with Mr. Mootoo*]
13 Sorry, I thought I—I thought—I thought you had answered it. I
14 asked you about whether you had conducted such a rescue
15 before, you said you were trained to conduct confined space but
16 I asked you if you ever participated in an actual rescue of that
17 kind?

18 A. Not inside a pipeline.

19 Q. Not inside a pipeline, but confined space rescue?

20 A. Yes.

21 Q. Right. So where? Could you tell us what circumstances? Not
22 the exact particulars.

23 A. Well inside vessels. Right? We mostly deal with salvage in
24 vessels, ships, sunken ships and thing, and—

25 Q. Yes.

26 A. —and guys get stuck inside there, you went to rescue them.

27 Q. All right.

1 **Mr. Peterson SC:** Thank you very much, Mr. Chairman.

2 **Mr. Chairman:** Thank you. I think Mr. Wilson has a
3 question.

4 **Examination By Commissioner Wilson:**

5 Q. All right, good afternoon Mr. Ramoutar. I'm hearing about
6 your training in terms of confined space but are you aware of
7 the difference in diving in a pipeline if it's—if any at all, if
8 you're aware of it?

9 A. No.

10 Q. I offer you that diving in a pipeline is called penetration diving
11 or penetrant diving, penetration diving, so it might be slightly
12 different than confined space. Have you ever trained for diving
13 and/or rescue in penetration diving?

14 A. Well no, not inside pipelines.

15 Q. Not inside pipelines. All right. Your commercial diving ticket,
16 it's to a known standard or for from an accreditation body,
17 right?

18 A. Repeat that?

19 Q. Your commercial diving ticket, it's from a known diving body?

20 A. Yes.

21 Q. S trade association with accreditation. And that trade
22 association, there are stipulations into the methodologies of
23 diving throughout and how you execute diving safe works
24 scopes?

25 A. Yes.

26 Q. Right. In your training, in the accredited training site, did you
27 ever come across, a kind a repeating myself here, but I'm

1 getting to something, did you ever come across penetrant
2 diving, penetration diving?

3 A. But that's dealing with the pipeline, right?

4 Q. Yes.

5 A. Well, no.

6 Q. Well, no. In your experience as a commercial diver, then,
7 removing the standards, have you ever made penetration dives?

8 A. I made one, yes, I made penetration—diving is like, um,
9 pipeline, it's the same way in vessel. It have the pipeline, you
10 went into the pipeline to see what is inside there and thing.

11 Q. Uh-huh. At that time were you diving to a known standard or a
12 standard was absent?

13 A. Well probably standard was absent.

14 Q. Standard was absent. Thank you.

15 **Commissioner Wilson:** That's all.

16 **Mr. Chairman:** Yes, thank you very much. Mr. Maharaj,
17 anything?

18 **Mr. Maharaj SC:** No please.

19 **Mr. Chairman:** No, well, I think we made the right decision.
20 Thank you very much indeed for coming, Mr. Ramoutar. As I
21 say, you have our condolences.

22 **Mr. Ramoutar:** All right.

23 **Mr. Chairman:** Thank you for coming. All right, we'll call it
24 a day. You may go.

25 *[Mr. Ronald Ramoutar leaves Enquiry room]*

26 **Mr. Chairman:** Well that's the conclusion of this week. I did
27 indicate previously that we would entertain any question that

1 there might be from the media. If there is any query, given the
2 hour, I suggest you come and ask me later.

3 **Mr. Peterson SC:** Mr. Chairman, I have two housekeeping
4 matters.

5 **Mr. Chairman:** Of course.

6 **Mr. Peterson SC:** We have the pathologist, the experts, the
7 pathologists' reports. We would like to formally—well, we did
8 inquire as to whether we could have gotten images, notes,
9 photographs or any video recording of their examinations but
10 that request will have to come from the Commission to those
11 pathologists to provide it because they're the—

12 **Mr. Chairman:** What is it exactly you want? Have you
13 written and asked for this?

14 **Mr. Peterson SC:** Yes we did, yes.

15 **Mr. Chairman:** Just a minute. [*Mr. Chairman confers with*
16 *Ms. Sinanan*] Well, what I propose to do is this. I understand
17 you have written and asked us to obtain it. I will effect a
18 further request. Do you want them from both pathologists for
19 all four bodies?

20 **Mr. Peterson SC:** Yes, Mr. Chairman. We would like to
21 con—we have—we would like to consult our expert to give us
22 assistance and they have requested that they need, in order to
23 fully advise us, that material, which is—which I'm advised in
24 the examination of a—a post-mortem examination it's a
25 standard thing that notes, videotapes, slides, photographs would
26 have been taken so that, together with the report, would assist
27 our expert to tell us—

1 **Mr. Chairman:** I'm very, I'm very sensitive obviously to
2 photographs of those who have died being used for any purpose
3 other than what is strictly necessary in the process that this
4 Enquiry is engaged in. What I am prepared to do, you say you
5 have an expert. What expert? Is he another pathologist.

6 **Mr. Peterson SC:** Well, it's another pathologist. We're going
7 to be—we are get—seeking expert advice from pathologists.

8 **Mr. Chairman:** Right.

9 **Mr. Peterson SC:** And that is what they would need in order
10 to—

11 **Mr. Chairman:** Can, can I make—

12 **Mr. Peterson SC:**—because apart from that they just have the
13 reports.

14 **Mr. Chairman:** I understand, Mr. Peterson. What I'm going
15 to suggest is this, is that if you give us the name of the
16 pathologist that you want to examine the records obtained by
17 the existing pathologists in this case, what I will do is to arrange
18 for those pathologists to pass the material to your pathologist.
19 You don't need them unless you can persuade me that do you
20 for some reason. It seems to me if it's an—a matter of experts,
21 why is it necessary for you to have pictures?

22 **Mr. Peterson SC:** Well because, Sir, well, we have to get
23 advice. We have to consult with our expert and we will need to
24 cross-examine or examine our experts with respect to the
25 reports and the expert—Sir, the point is that if those are given
26 us to as counsel in the matter, we will give an undertaking that
27 they will be used between the experts for—

1 **Mr. Chairman:** No, I'm sure that that's right, Mr. Peterson.
2 I'm not suggesting that anything other than that, but you'll
3 appreciate that the families of those who have died will be a
4 little sensitive to the company who they may hold in some way
5 responsible for their death is now pouring over pictures of the
6 bodies. And I want to be sensitive to that, and, insofar as it is
7 strictly necessary were your pathologist to have additional
8 information I don't wish to, in any way, prevent you from
9 having that information if it's going to provide assistance to us,
10 but I am anxious to understand precisely why it is necessary to
11 have video footage or photographs and/or the notes of
12 pathologists in your hands if your pathologist is going to give
13 you an opinion. Presumably you have the questions you
14 already have in your mind for him to give you an opinion on
15 them.

16 **Mr. Peterson SC:** I have those too, Sir, but when I'm
17 consulting with our expert we will be in a conference and he
18 would be pointing out certain—and we will be interrogating his
19 conclusion if it's different from the experts.

20 **Mr. Chairman:** Right.

21 **Mr. Peterson SC:** But without that—Sir, I, um, I'm sorry, I
22 got the—

23 **Mr. Chairman:** Mr. Peterson, all right.

24 **Mr. Peterson SC:** You have our undertaking that it will be
25 kept solely for the purpose and—

26 **Mr. Chairman:** I think I want a slightly more restrictive
27 undertaking. I have no difficulty with you and Mr. Mootoo

1 having sight of this material but I would like to restrict it to you
2 two. Is there any reason why that shouldn't apply?

3 **Mr. Peterson SC:** No, Sir. we had planned to keep it to us
4 and our expert, as opposed to even the—

5 **Mr. Chairman:** I think if we can restrict it to you two—

6 **Mr. Peterson SC:** And our expert.

7 **Mr. Chairman:**—and your—obviously your expert yes.

8 **Mr. Peterson:** Yes.

9 **Mr. Chairman:** But you two as part of a team, I will agree to
10 that and I'll arrange for, insofar as I'm able, such notes as may
11 exist or photographs as they exist for you two, together with
12 your expert, all right?

13 **Mr. Peterson SC:** Thank you. Sir.

14 **Mr. Chairman:** And I take you—take it that you'll make sure
15 that that is the position and I know you will. All right, er—

16 **Mr. Peterson SC:** And the second request is we are in course
17 to comply with my undertaking to this commission with respect
18 to the outstanding—

19 **Mr. Chairman:** IMT note.

20 **Mr. Peterson SC:** Videos, um, WhatsApp material. We got a
21 jump drive and we'll be, um—tomorrow.

22 **Mr. Chairman:** Well, I think it's—what we've asked for at
23 the moment is the notes from the IMT.

24 **Mr. Peterson SC:** Yes, and also communication, electronic
25 communication.

26 **Mr. Chairman:** All communications that would have taken
27 place that were part of the process between the various parties

1 at the IMT.

2 **Mr. Peterson SC:** Yes, that's, that's what I understand. That's
3 the undertaking we gave that it will be available by tomorrow.

4 **Mr. Chairman:** Marvellous.

5 **Mr. Peterson SC:** Sir, we have a request in fairness of our
6 client if you can also request from LMCS the communication
7 with respect to that evening where, after the occurrence of the
8 event at 2.50 between the—yeah, between Friday the 25th and
9 Sunday the 27th, WhatsApp communication, emails
10 communication and/or notes, Sir, because we can't do it
11 ourselves.

12 **Mr. Chairman:** So you're asking me to obtain from LMCS
13 there WhatsApp communication. Do you know that there was
14 any?

15 **Mr. Peterson SC:** Sir, that's—well it's, if there are
16 communication. I will not know that, Sir, but the request is
17 always and that subpoena.

18 **Mr. Chairman:** Well it's very wide. I'm not sure I can deal
19 with it. If you're saying—there's a fundamental difference,
20 isn't there, between an IMT, which is a requirement, that it
21 automatically engages in a tragedy such as this, where there are
22 communications between the members of the IMT and minutes
23 to be kept at meetings, notes to be kept, and if you choose to
24 use a telephone to do it, by way of WhatsApp messages, well
25 that's matter for you or for the IMT. That is very different from
26 communications between individuals at the, a completely
27 separate company who don't have any legal obligation to create

1 an IMT or any obligation to keep a particular note. I mean if
2 it—I'm not sure what you're asking.

3 **Mr. Peterson SC:** No, Sir but contractually in this matter
4 LMCS are the first call emergency responders and Paria
5 contractually was to be the second tier. So that first, that's what
6 we are after, what was the communication with respect to
7 LMCS with respect to engaging that emergency provision
8 under the emergency plan which they contractually are obliged
9 to provide in the course of this contract.

10 **Mr. Chairman:** Communications between whom?

11 **Mr. Peterson SC:** Between members of LMCS, Sir, because
12 we heard that there were supervisors, there was the diving
13 surviving supervisors, there was Mr. Ali and all of that, we
14 want to see what was the response at that time with respect to
15 this incident.

16 **Mr. Chairman:** I have to say I'm extremely reluctant to make
17 some sort of Order that is going to disclose potentially personal
18 types of information, concerns that exist between family
19 members, I don't know the bounds of what you're asking me
20 are. Can I put it in this way? Given the hour—

21 **Mr. Peterson SC:** Mr. Chairman, I had that concern too that I
22 don't want to know who loves who but there's the redacting
23 process for that and also when we are disclosing emails, we are
24 scrubbing them to see if they're purely irrelevant material.

25 **Mr. Chairman:** Yes well I don't want anything that's
26 irrelevant obviously.

27 **Mr. Peterson SC:** Yes.

1 **Mr. Chairman:** But I am concerned about drafting any kind of
2 order that would meet what you're asking me for. So what I'm
3 going to do is this, Mr. Peterson. I suggest that since this is the
4 first you've raised of it and here we are in the end of the second
5 week of these hearings, that you put into writing the nature of
6 the Order that you would wish me to make.

7 **Mr. Peterson SC:** Sure.

8 **Mr. Chairman:** You draft it, send it to me via Ms. Sinanan
9 and then we will consider it.

10 **Mr. Peterson SC:** We will—

11 **Mr. Chairman:** There's no reason why we can't correspond,
12 as we have done, by email and if I feel it's fair, then I will make
13 that request but at the moment I'm not prepared to make any
14 kind of Order until I see exactly what it is that you're after.

15 **Mr. Peterson SC:** Sure, Sir. The request, I guarantee you, will
16 be a fair one.

17 **Mr. Chairman:** I'm sure. All right, well you've heard what
18 Mr. Peterson has been saying, Ms. Persaud Maraj, and we'll see
19 what comes my way, all right, and then I'll obviously engage
20 with you on that.

21 Are there any other housekeeping matters that I need to attend
22 to before we break off for Monday? No? Marvellous. Well,
23 look, thank you all very much for your cooperation this week.
24 Much has been learned, I hope, and I hope that the public
25 generally have been both interested, intrigued and informed by
26 what we've heard this week. So thank you all and I will see
27 you all on Monday. Apparently we're not finished. Start time

1 on Monday and it's been suggested 9.30. It's not going to be
2 9.30.

3 **Mr. Peterson SC:** Who suggested that, Ms. Sinanan?

4 **Mr. Chairman:** Relax, Mr. Peterson, I shan't be flying in,
5 unfortunately, until nearly midnight on Sunday night, so I can
6 assure you it won't be 9.30. We'll say ten o'clock, shall we?

7 **Mr. Peterson SC:** Yes, Sir.

8 **Mr. Chairman:** Ten o'clock. Thank you. Please feel free
9 because I have to pack my own things.

10 **5.12 p.m.:** *Enquiry adjourned.*

EVIDENTIARY HEARING DAY 8

10.00 a.m.: *Enquiry commenced.*

Mr. Chairman: Good morning, everyone. Good morning.

Parties Present: Morning.

Mr. Chairman: Good morning. May I deal first of all with a couple of housekeeping matters? The first is this.

It has become clear that amongst those who were contacted by Paria, Heritage and others during the wake of the incident that we are investigating that Mr. Wilson, who sits with me as a Commissioner, was also contacted. I am satisfied that the contact with him was peripheral, no more than a general inquiry. It seemed to have extended to nothing more than that, “There was an incident. Are you able to help?” And then no further contact after saying, “Well call me”, and that seems to be about as far as it went.

So in those circumstances, I’m satisfied in no way affects at all his independence in this Enquiry but I thought it appropriate to mention it now, and if there are any issues they can be raised with me. If anyone needs to know to what extent there is any documentary support for any of that, I can point them, through my Secretary, in that direction. But I’m satisfied in it in no way affects his independence. So that’s the first thing.

The second thing is rather more problematic, I’m afraid, and it is this, that we will not be sitting tomorrow. The reason why we won’t be sitting tomorrow is because I have had to make a decision about preparedness for this Enquiry. That

1 includes having in our possession all the material that we need
2 in order to carry out this Enquiry. I'm rescheduling the
3 witnesses for tomorrow so that we have them starting on
4 Wednesday.

5 What has happened is this. Paria or their team have been
6 asked to provide a number of documents over a period of time.
7 During the course of this weekend and as late as four o'clock
8 this morning, we were provided with what is, on any view,
9 hundreds and hundreds of pages. It looks what the Americans
10 call a document dump, this [*Mr. Chairman drops bundle of*
11 *documents on desk*] handed to us in the course of halfway
12 through this Enquiry when we have been seeking this material
13 for months.

14 So that there could be no misunderstanding about it, this
15 Enquiry was announced on the 22nd of April of this year. It is
16 inconceivable that those who are responsible for providing
17 material to this Enquiry could not have appreciated that this
18 material was likely to be relevant. We get it this weekend,
19 notwithstanding the fact that we have asked for it on numerous
20 occasions.

21 On the 19th of July, we wrote to Paria asking for all the
22 material that they were obliged to provide. That's ignoring the
23 fact that they already must have appreciated for a period of
24 three months that they were likely to need to provide this
25 material. On the 6th of September they asked for and were
26 granted standing so that the lawyers who are now here, and I
27 don't in any way hold them responsible for this, they will know

1 what enquiries have or have not been made and this is not
2 intended to upbraid anybody. I'm simply making the
3 observation.

4 On the 9th—the 6th of September of this year they asked
5 for and were granted standing. So the lawyers from that day
6 became involved. Rule 16 makes it absolutely clear that they
7 must provide, that is their clients must provide, everything in
8 their possession and control having any bearing on the subject
9 matter of this Enquiry. Clearly they did not, since we've got
10 this over the weekend. That was followed by a specific request
11 about this very material on the 8th of November when we wrote
12 to them asking for it to be provided by the 11th of November,
13 bearing in mind where we were in relation to this Enquiry.
14 Nothing happened.

15 On the 11th of November they asked for an extension.
16 They were granted an extension to the 17th of November. On
17 the 15th of November, they sought a further application for a
18 further extension. They got a further extension to the 22nd of
19 November. On the 22nd of November, having promised to give
20 it to us, they didn't. On the 23rd of November, when they
21 promised to give it to us, they didn't. On the 24th of
22 November, when we wrote to them asking them where is it, we
23 were promised we would get it the next day. We didn't.

24 On Sunday, the 4th, they indicated they were putting together
25 their ICT records to send to us by email. They didn't. Today,
26 or rather on the 6th, I should say, we asked once again and we
27 were told that we would get it by that Friday. They did not

1 provide it. So what we have is the very first time we got
2 anything from them at all in relation to this was during the
3 course of Friday. We got nothing further on Saturday and we
4 got more on Sunday and I still don't know if we have it all.
5 This is not acceptable.

6 I will not permit our legal team, or indeed any of the
7 other legal teams, to have to present their cases half-cocked
8 because that's where we are at the moment, because I haven't
9 been able to read it, Mr. Wilson hasn't been able to read it and
10 most of our team, notwithstanding their best efforts, have not
11 been able to assimilate or read it. We can't provide it to
12 everybody else because it needs redacting. There are phone
13 numbers, names and things like that that are in there. So it's
14 not right that the other teams should not have this material
15 before principal witnesses from Paria are called.

16 So, we will not sit tomorrow so that I and others can read
17 this material so that we know what's there. They include the
18 IMT records. On Wednesday morning we will hear from
19 Catherine Balkissoon. After her we will hear from Collin
20 Piper. He will almost certainly go into Thursday, and on
21 Thursday we will hear from Mushtaq Mohammed. Those are
22 the last three witnesses that we will hear before Christmas. We
23 will get through them. If it means sitting too late I don't care.
24 We will sit until they have been heard this side of Christmas.

25 The other witnesses, Archibald, Fuentes, Yearwood and
26 Flemming Holder will have to be heard next year. I apologize
27 to them for inconveniencing them having been told that they

1 were going to be required this week. It's not fair on them as
2 witnesses and it's not fair on us. Anyway, I don't propose to
3 say anything more about it. That is what will happen. If—and
4 beyond that, I'll make this observation. If there is any more,
5 please, Mr. Peterson, if there is any more, can we have it today?

6 **Mr. Peterson SC:** Yes, Mr. Chairman, I'd make inquiries, but
7 I know that a lot of WhatsApp messages were sent over the
8 weekend, um, IT material. I know initial—I don't have all the
9 details now, I can enquire from my team, but I know that there
10 was some difficulty with loading it on to a jump drive and an
11 external drive, I know there were those difficulties, and, also
12 there was some scrutinizing for doing the same thing you said
13 with respect to redacting irrelevant material that has nothing to
14 do with the Enquiry and persons' personal information and that
15 kind of thing, so that was back and forth, I know, but I didn't
16 realize the—

17 **Mr. Chairman:** All of that, Mr. Peterson—

18 **Mr. Peterson SC:**—but I'll make inquiries.

19 **Mr. Chairman:** All of that would be okay if we were talking
20 about August.

21 **Mr. Peterson SC:** Yes.

22 **Mr. Chairman:** We're in December. This has to have been
23 available. This isn't new material. This has to have been
24 available to your clients since it happened. This isn't
25 something that's just arisen in the recent weeks. This is
26 contemporaneous material. The ICT notes, they must have had
27 it. I mean it's—look, I don't want to apportion blame

1 anywhere.

2 What upsets me, as you will obviously have understood,
3 is that we have lost a day as a result and I don't know whether,
4 for example, Mr. Wei, who's already given evidence, I see that
5 he's evolved in this, obviously he may have to be recalled
6 because there's material here that we may want to deal with,
7 with Mr. Wei, it's not fair on him as a witness for me to make
8 conclusions with Mr. Wilson, at the end of this, that he hasn't
9 been given an opportunity to deal with, which has now been
10 provided us to.

11 It is simply not acceptable. You don't need me to tell
12 you this, Mr.—you know, Mr. Peterson. You've done many of
13 these yourself, I know, and it is not an acceptable way to
14 proceed. It may be that, for some reason or other, people
15 thought that this was going to be an enquiry that could be
16 conducted at a leisurely pace over several years. Well that's
17 not what was happening, it never was what was happening,
18 which is why I set a very strict timetable at the outset. And it,
19 you know, I don't know whose fault this is but it's somebody's
20 fault. I don't really care at this stage.

21 What I want to do is to make sure that we have all of the
22 material that is necessary for us to conduct this Enquiry that
23 anybody to be saying later on, "Well, you didn't have this or
24 didn't have that." So that's where we are at the moment, all
25 right? We will not sit tomorrow. We will deal with the
26 witnesses that we have arranged for today in the hope that
27 there's nothing here that will impact on any of them, and

1 proceed to spend the day tomorrow reading the material that we
2 have now been provided with. All right?

3 Unless there's anything else that anybody else wants to
4 say, I propose that we get on with the first witness. Right.
5 Good. Let's do that, please? I think it's Mr. Seetaram, is it
6 not?

7 **Mr. Maharaj SC:** Yes, Mr. Chairman. Mr. Seetaram, he's at
8 Volume I page 395 and Ms. Vijaya Maharaj will do the
9 summary.

10 **Mr. Chairman:** Thank you. Where might I find him?
11 Volume I, 395, thank you.

12 [*Mr. Alvin Seetaram enters Enquiry room and is sworn*]

13 **Mr. Seetaram:** I, Alvin Seetaram, solemnly swear that the
14 evidence I shall give to the Commission in this case shall be the
15 truth, the whole truth and nothing but the truth.

16 **Mr. Chairman:** Good morning, Mr. Seetaram.

17 **Mr. Seetaram:** Pleasant morning.

18 **Mr. Chairman:** Thank you for coming. What's going to
19 happen is that Ms. Maharaj who sits in the middle of the row
20 opposite you is going to summarize your evidence, all right?
21 Listen carefully, please? Make sure that she's getting it right.
22 If there's anything you disagree with let us know and then, once
23 that's done, do you have any questions Mr. Maharaj?

24 **Mr. Maharaj SC:** Yes, yes.

25 **Mr. Chairman:** So there'll be a few questions to be asked of
26 you afterwards by Mr. Maharaj and then the other counsel who
27 are here may want to ask you some questions, all right?

1 **Mr. Seetaram:** Yes.

2 **Mr. Chairman:** Thank you very much.

3 **Ms. Maharaj:** Thank you. Mr. Alvin Seetaram was
4 interviewed by the Commission. The Commission prepared a
5 witness statement based on that interview and Mr. Seetaram
6 signed his witness statement on the 31st of October. His
7 witness statement is in the witness statement bundle at page
8 395.

9 Mr. Seetaram is a ship captain at Subsea Global
10 Solutions Limited, an international ship servicing and
11 maintenance company. He is the captain of Waterworld which
12 is an 85-foot vessel owned by Subsea Global Solutions. On
13 Friday 25th February at about 4.00 p.m. Mr. Seetaram received
14 a telephone call from Ronald Ramoutar seeking assistance to
15 rescue five divers who'd been sucked into a 30-inch pipeline at
16 berth number 6 Pointe-a-Pierre.

17 Mr. Seetaram stated that at the time of receiving the call
18 he was on board Waterworld which was involved in a job at the
19 Pt. Lisas anchorage. Mr. Seetaram informed Mr. Ramoutar that
20 he needed permission from Subsea's management. When he
21 called back Mr. Ramoutar he indicated that management had
22 given permission to render assistance to the divers.

23 This assistance included the use of Subsea's vessel and
24 their topside connected diving equipment which included
25 diving helmets equipped with communication and lighting with
26 surface supply air. However, Mr. Seetaram said that
27 management indicated that none of Subsea's divers were to go

1 into the pipeline. Mr. Ramoutar indicated that he had divers
2 certified to use Subsea's diving equipment at the incident.

3 Mr. Seetaram stated that the Subsea's team arrived at the
4 site at around 7.15 p.m. Paria gave them permission to proceed
5 to berth number 6. At berth number 6 he recalls seeing other
6 diving companies and vessels. At about 8.45 p.m., Mr.
7 Seetaram recalled seeing another vessel believed to be operated
8 by Hull Support and he also saw a coast guard vessel. A team
9 of five to six coast guard divers in scuba gear came on board
10 the Waterworld vessel and inspected some of their diving
11 equipment.

12 Mr. Seetaram received information from Mr. Ramoutar
13 that permission had been given by Paria to connect the flanges
14 of the pipeline and to install a blank on the pipeline to allow the
15 insertion of a camera in the pipeline to allow for video—for
16 surface video monitoring. Mr. Seetaram explained this job of
17 connecting the pipeline to permit surface video monitoring was
18 done by Conan Beddoe and Mr. Ramoutar and they were
19 assisted by Subsea's Adam Houllier using Subsea's surface
20 supply equipment and his diving suit camera to provide a light
21 source to Ronald and Mr. Ramoutar.

22 The video footage taken of the pipeline was taken by the
23 robotic camera operated by Paria. The coast guard divers left
24 the Waterworld vessel when Ronald, Conan and Adam came to
25 the surface and some returned to the coast guard vessel and
26 some went on to berth number 6. At about 3.30 a.m. when no
27 further requests were made of subsea, they sought permission

1 from Paria to leave berth number 6, however, permission was
2 not granted until about 5.00 a.m. on the morning of Saturday
3 the 26th February, as Paria wanted them to remain on standby
4 as it was still coming up with a rescue plan.

5 Mr. Seetaram, do you agree with that summary of your
6 evidence?

7 **Mr. Seetaram:** Yes, correct.

8 **Ms. Maharaj:** Thank you.

9 **Mr. Chairman:** Thank you. Yes, Mr. Maharaj.

10 **Examination By Mr. Maharaj SC:**

11 Q. Mr. Seetaram, I just have one or two questions for you. You
12 said that you had on board diving equipment and lighting
13 material for diving?

14 A. A full [*Inaudible*]

15 Q. Yeah, available to be used?

16 A. Correct.

17 Q. And you also stated in your witness statement that the coast
18 guard, some coast guard divers came on board and inspected
19 your equipment, your diving equipment?

20 A. Correct.

21 Q. And am I correct to say—well could you give us an idea of
22 what equipment you have, if you could describe them for us?

23 A. He have super lights, band masks, that is helmets, we have
24 diving umbilicals, we have high pressure, low pressure backup
25 air supply, umbilicals length of 375 feet and 200 and—350 feet.

26 **Examination By Mr. Chairman:**

27 Q. Pause there, just so that I understand that, please? The

1 umbilical is literally a tube with a mouthpiece at the end of it, is
2 it, or—

3 A. No, no, no, no, no. The umbilical is the hose with the
4 communication and lighting cables run on to it that is attached
5 to the helmet or the band masks.

6 Q. So that somebody can dive without the need for a tank to be
7 attached to them?

8 A. It still have a tank on your back but a small tank, that's for like
9 a third supply air.

10 Q. Right.

11 A. You're diving off low-pressure air and then it have a switch on
12 the panel in case your low pressure run low you could go to
13 high pressure just by switch.

14 Q. Right.

15 A. And then, the one on your back is the third source a air.

16 Q. Right. So that I am clear, a diver now about to go into the pipe,
17 for example, has got a helmet on, he's got this umbilical cord,
18 yes?

19 A. Uh-huh.

20 Q. Which allows him to breathe air from the surface rather than
21 anything, and that is both high and low pressure which he can
22 adjust depending on what he needs?

23 A. By—on the panel, on the dive station.

24 Q. On the—up, up—

25 A. The diver don't have to do anything.

26 Q. The diver doesn't have to do anything?

27 A. No.

1 Q. Right. So it's done by somebody who's manning that, one of
2 your team?

3 A. Yes.

4 Q. Right. So it allows him to go into the tube with that but he has
5 a backup, which is a smaller tank, on his back so that if
6 anything went wrong he could discard this and put it—

7 A. No, just turn a valve.

8 Q. Just turn a valve?

9 A. Yes.

10 Q. That's all he'd have to do, then?

11 A. Right.

12 Q. What happens if he lost the umbilical for any reason that got
13 severed or—

14 A. It's not so easy to sever.

15 Q. It's not?

16 A. No.

17 Q. So you don't have to worry about that?

18 A. No.

19 Q. Right, okay, thank you very much. And the lengths were—
20 sorry, the lengths were? There are two?

21 A. The line—the longest one is 375 feet.

22 Q. Three hundred and seventy-five feet, yes.

23 A. Then we have two at 350 feet.

24 Q. You had two others?

25 A. Yeah.

26 Q. At 350 feet?

27 A. Yes.

1 Q. And this allowed you both communications to speak as well as
2 breathe.

3 A. Communication, lights, if you want you could hook up video
4 system on it too so you could get footage.

5 Q. Okay. And can they be joined together?

6 A. It's not so easy to join because the cables could—you have to
7 solder the cables and connect it. It's not like a snap-on fitting
8 that you could do it.

9 Q. Right. I appreciate in a—but aside from any Heath Robinson
10 episode—exercise of putting tape around it, is there a method
11 by which they could be?

12 A. Yeah, there is a method they could connect it.

13 Q. All right, lovely. Thank you very much.

14 **Mr. Maharaj SC:** Much obliged.

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. And these equipment, from your knowledge and experience,
17 could be used by divers to dive into a 30-inch diameter
18 pipeline?

19 A. Yes once they certify you, because our company has strict
20 rules and policies so our divers was out a dive time due to we
21 was on the rig so they max out their time. That's why we asked
22 if it have qualified divers to use the equipment, and they had.

23 Q. And they had.

24 **Examination By Mr. Chairman:**

25 Q. All right, so it's not that your divers weren't willing to go, it's
26 because they'd already used up the amount of time that they
27 were allowed to be at certain depths?

1 A. Correct.

2 Q. Because they'd been working that day?

3 A. Correct.

4 Q. And, just so that everybody understands that, that's something
5 that's quite strictly enforced, isn't it, that—the amount of dive
6 time that person might have?

7 A. That's correct.

8 Q. And that's dependent on the depth that they'd been?

9 A. Depth and time.

10 Q. And the amount of time that they'd been down there?

11 A. Correct.

12 Q. Right. And they'd already been doing that all day so they were
13 not fit, they would not be permitted on any—

14 A. We scruffle [*Phonetic*] just probably one or two but that's who
15 dive early.

16 Q. Uh-huh.

17 A. They had enough surface interval so they coulda probably do a
18 short period a time—

19 Q. Right.

20 A. —but not much.

21 Q. Right. But it made no sense to use them if you had other divers
22 that could be used?

23 A. Exactly.

24 Q. Right. Thank you very much indeed.

25 **Continued Examination By Mr. Maharaj SC:**

26 Q. You were contacted by Mr. Ronald Ramoutar from—on behalf
27 of LMCS?

1 A. Correct.

2 Q. And, based on what you were told and based on your
3 knowledge, you were aware that Ronald Ramoutar had
4 available divers who could have used the equipment?

5 A. Correct.

6 Q. To be able to dive into the pipeline?

7 A. Correct.

8 Q. And you remained there from around 7.15 p.m. on the Friday?

9 A. Correct.

10 Q. And until about 5.00 a.m. on the Saturday?

11 A. Correct.

12 Q. And, during that period of time, you were available to make the
13 equipment available for the divers to use?

14 A. Correct.

15 **Mr. Maharaj SC:** I have no further questions, Mr. Chairman.

16 **Mr. Chairman:** Can I ask you, I'm sorry, before—

17 **Mr. Maharaj SC:** I forgot to ask one question. Can I?

18 **Mr. Chairman:** Please do.

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. Um, you said the coast guard divers came on board and they
21 inspected the equipment?

22 A. Correct.

23 Q. And were they impressed with the equipment that you had?

24 A. Yes they were, because they're not aware to that type a diving.

25 Q. Okay, thank you.

26 A. They only know about, um—

27 **Mr. Chairman:** Scuba.

1 **Mr. Seetaram:**—scuba. The hat was something new to them.

2 **Mr. Maharaj SC:** Much obliged.

3 **Examination By Mr. Chairman:**

4 Q. Just a short question, please? Bearing in mind the expertise that
5 you were able to bring to bear together with the equipment that
6 you had, is there anything more that you could have wanted or
7 desired in order to effect the rescue, over and above what you
8 already had?

9 A. No.

10 **Mr. Chairman:** Thank you very much. Yes, would anyone
11 else like to ask any questions? Please put your hands up now?
12 No? I see—yes, just one minute. Anyone else?

13 **Mr. Peterson SC:** [*Inaudible*]

14 **Mr. Chairman:** Of course.

15 **Mr. Peterson SC:** Just one clarification I need, Mr. Chairman.

16 **Mr. Chairman:** Well, I think Ms. Alfonso—I'm going to let
17 you go last. Ms. Alfonso has one matter—well, she has
18 something to ask. Ms. Alfonso.

19 **Ms. Alfonso:** Thank you, Mr. Chairman.

20 **Cross-Examination By Ms. Alfonso:**

21 Q. Good morning, Mr. Seetaram.

22 A. Morning.

23 Q. My name is Nyree Alfonso. I represent the interest of the
24 Seamen and Waterfront Trade Union. I just have one or two
25 questions because my learned Senior, Mr. Maharaj, would have
26 asked a couple of the questions that I wanted to have answers
27 to. With a previous witness I had asked, aside from a diving

1 helmet, is there something lighter that a diver can use and you
2 mentioned earlier this morning a band mask. Could you
3 explain what that is, please?

4 A. A helmet which is a super light.

5 Q. But it's super light?

6 A. Yeah, yeah. It's a complete helmet that goes over your head—

7 Q. Uh-huh?

8 A. —with a horseshoe—

9 Q. Uh-huh.

10 A. —that your head cannot get wet.

11 Q. Okay.

12 A. A band mask is only structured to fit the face—

13 Q. Uh-huh.

14 A. —with straps—

15 Q. Uh-huh.

16 A. —but you still have communication and lights.

17 Q. Could you give me an estimated weight of the band mask?

18 A. Could be over 10 pounds.

19 Q. Okay, could be over 10 pounds?

20 A. Yes.

21 Q. And what's the weight of a diving helmet?

22 A. That's very heavy.

23 Q. Significant? Significant? Okay. You have any idea of that
24 significant weight?

25 A. Over 20-something, depends, 30-pound.

26 Q. Oh, much heavier?

27 **Mr. Chairman:** Why, you've all got big necks.

1 **Continued Cross-Examination By Ms. Alfonso:**

2 Q. I know that Mr. Ramoutar would have called you, Ronald
3 Ramoutar would have called you. Aside from Mr. Ramoutar,
4 did you see any other commercial divers that you recognized
5 and that you felt were competent—well let me—that you
6 recognized?

7 A. Yeah, um, I think was Hull Support. That's a good company
8 too.

9 Q. Okay.

10 A. And theirs is safe—

11 Q. Any individual divers?

12 A. Huh?

13 Q. Any individual divers?

14 A. Where, on barge?

15 Q. No, anywhere, besides Mr. Ramoutar?

16 A. No, it had commercial divers on site there too.

17 Q. Okay because I see one of your colleagues, Mr., I don't know, I
18 hope I'm pronouncing it correct, is it Houllier?

19 A. Adam?

20 Q. Adam? I think there are two of them, so Adam.

21 A. Yeah.

22 Q. He referred to some volunteer divers who could use the
23 equipment in his own statement. Do you know who he was
24 referring to?

25 A. That will be his family, Conan, Conan Beddoe, Conrad Beddoe,
26 Ronald Ramoutar, Corey, all of those are commercial divers.

27 Q. And in your view, Mr. Seetaram, those were divers who were

1 qualified or had the experience?

2 A. Yes, certified, yes.

3 Q. And certified. Good. Thank you very much for that. And
4 certified to go down into the pipeline?

5 A. Certified commercial, yes.

6 Q. Certified commercial divers and who were capable of utilizing
7 the equipment which you have described to the Commission
8 this morning?

9 A. That is correct.

10 Q. Thank you for that. You mentioned Hull Support so when
11 you—when Waterworld arrived at approximately 7.15 p.m. on
12 the Friday, did you see other dive ves—vessels which are used
13 in diving operations?

14 A. They were approaching. We, um, had to get permission to
15 proceed to the site.

16 Q. Okay.

17 A. And direct contact was with through Ronald Ramoutar.

18 Q. Okay.

19 A. And then Paria gave the instruction for us to come alongside the
20 barge.

21 Q. Okay. So it was Waterworld, um, was, what is the name of the
22 vessel that Hull Support came in, you know?

23 A. I'm not sure the name of the vessel.

24 Q. Okay, but Hull Support came with another diving vessel?

25 A. Yeah, them, them get the permission to proceed to the berth.

26 Q. Okay, so they came after—

27 A. We was on the barge and them was on the berth landing.

1 Q. And what about OTSL?

2 A. I not sure.

3 Q. You're not sure. You didn't see OTSL there? So, you—so
4 that, as far as you were concerned, there were two vessels?

5 A. I not sure if it's OTSL or Hull Support, eh.

6 Q. Oh, I see. So there was another dive vessel?

7 A. I think it's Dot Com—

8 Q. Okay.

9 A. —the boat name or something like that. I not sure.

10 Q. Okay, I—well, I don't know the name of the Hull Support
11 vessel, I have to confess. OTSL is Gulf Stream Eagle or Gulf
12 Eagle, something of that nature. You mentioned towards the
13 end of your witness statement that after a certain time, I think it
14 was three o'clock, that you asked permission to depart?

15 A. Yeah because I had to reattend the rig job to finish off that day.
16 We didn't have much to do so at 3.00 a.m. I went on the barge
17 and I spoke to a lady, I cannot recall her name, and asked—
18 explained and asked permission depart. She did not give
19 permission to depart. She said Collin Piper want us to stay still,
20 should in case they want to utilize us, and then, coming closer
21 to 5.00 I went back to her, she made the call and then they—
22 Collin said, um, we can proceed to depart. Permission is
23 granted.

24 Q. Okay. When you first asked the lady who you can't identify
25 but a Paria person—

26 A. Yeah.

27 Q. —at 3.00 a.m. to depart the scene, did she tell you, as you have

1 in your witness statement, something, that they were trying to
2 devise a—they want you to stay for a reason?

3 A. Should in case they need us.

4 Q. And what would they need you for?

5 A. In case they come up with a plan to—

6 Q. Okay, did they tell you—

7 A. —to rescue.

8 Q. —they were trying to come up—this, this lady, sorry.

9 A. Uh-huh.

10 Q. Did this lady tell you they were trying to come up with a plan?

11 A. Not necessarily. She say just in case they want to utilize us.

12 Q. I just want to draw your attention, Mr. Seetaram, to paragraph
13 18 of your witness statement and it will come up on—it's on
14 page 398?

15 A. Uh-huh.

16 Q. There it is? Is that correct there, Mr.—

17 A. Yeah, it's correct.

18 Q. —Seetaram? So they asked you to stand by for an additional
19 two hours in the event that a rescue plan—

20 A. No, no, she didn't say two hours, you know.

21 Q. No, no, no, no, but in the end, between 3.00—

22 A. Yeah.

23 Q. —and 5.00.

24 A. Yeah.

25 Q. But you were asked to stand by for additional time? Let me just
26 say additional time.

27 A. Yeah.

1 Q. In the event that you were needed for a rescue plan?

2 A. Correct.

3 Q. Correct. And were you ever, were you—either the equipment
4 on Waterworld or divers, the volunteer divers, I'll use the same
5 terminology, were they ever used prior to 5.00 a.m. in a rescue
6 plan that you're aware of?

7 A. Negative.

8 Q. Thank you very much, Mr. Seetaram.

9 **Mr. Chairman:** Yes. Thank you. Turn your microphone off.
10 Only this.

11 **Examination By Mr. Chairman:**

12 Q. Did anyone speak to you about a plan that they might have had
13 to effect a rescue, anyone at all?

14 A. Well most of my communication was through Ronald
15 Ramoutar.

16 Q. Right.

17 A. So he devised, they say what the plan was for Conan to go into
18 the pipe using our equipment.

19 Q. Right. So he did explain a plan to you?

20 A. Yeah.

21 Q. And you're an experienced diver yourself. How many years?

22 A. I diving since I is 18 years old commercially.

23 Q. Well that would be helpful—

24 A. I is 48—

25 Q. —if I knew how old you were now?

26 A. —yeah.

27 Q. And I'm reluctant to ask, but, how many years does that make?

1 A. A lot.

2 Q. A lot. Well, you're going to have to help me a bit more than
3 that, I'm afraid.

4 A. More than—

5 Q. You started this so you're going to have to tell me now.

6 A. More than 20-something years.

7 Q. Twenty something. Twenty-one or 29?

8 A. Could be around that.

9 Q. [*Laughter*] I detect a certain reluctance and I'm not going to
10 press you any further, but, well over 20 years of diving
11 experience, is that fair?

12 A. Correct.

13 Q. Right. And you're a commercial diver?

14 A. Correct.

15 Q. Did you see anything wrong in the plan that was described to
16 you by Mr. Ramoutar?

17 A. No.

18 Q. Thank you.

19 **Mr. Chairman:** Mr. Peterson?

20 **Mr. Peterson SC:** Thank you very much, Sir. I'll start there.

21 **Cross-Examination By Mr. Peterson SC:**

22 Q. Mr. Seetaram, what were the details of the plan that were
23 described to you?

24 A. The detail of the plan was for Conan Beddoe to use the
25 equipments, our equipment, to go into the pipe, we have lights,
26 communication, backup air, main air, standby air. And they
27 would a go down to the, well, varies from the barge to the pipe

1 coulda be about 40 feet, so you use 40 feet from 375 feet down
2 into the pipe, they would a travel the whole length of the
3 umbilical and reach to that distance.

4 Q. Three hundred and fifty—75 I think you said or 350?

5 A. Three seventy-five.

6 Q. Three seventy-five was the longest one you had?

7 A. Yeah.

8 Q. But what about the condition inside the pipe and whether the
9 pipe was clear, all of that, you had all those details?

10 A. No, they didn't have no details of the condition inside the pipe.

11 Q. Yeah.

12 A. Besides what Christopher said and that's it.

13 Q. Did you have, did you discuss a risk assessment as to the dive?

14 A. I wasn't planning the risk assessment. I is just the captain of
15 the boat.

16 Q. No, no, I mean, no, when you were discussing with Mr.
17 Ramoutar, did you all discuss the attendant risk in such a dive
18 into a pipe of 30 inches?

19 A. It wouldn't have that discussion with risk with me as I said.

20 Q. Beg your pardon?

21 A. It wouldn't have a discussion with me with risk.

22 Q. Okay.

23 A. I'm the captain. I'm not the dive supervisor.

24 Q. Or, okay, right. All right. Now paragraph 14 of your
25 statement, could we just look at it? I wasn't too clear what you
26 were referring to there when you said Ronald, Conan and Adam
27 remained under the sea for a hour and a half? When was that in

1 relation, if you could tell us?

2 A. Approximately midnight. That's when Paria devised the plan
3 to put on the spool piece, the flange—

4 Q. Yes.

5 A. —to send down the camera, they get the okay for—to bolt up
6 the flange. Adam Houllier is our diver.

7 Q. All right.

8 A. So he went to assist Ronald and Conan in bolting up the flange
9 by using our light communication so that they could see what
10 going on inside for them guys to work to bolt up the flange.

11 Q. Or, so, that hour and a half is around midnight you're—

12 A. Yeah, is around midnight.

13 Q. Right, because I couldn't tell from—right. In answer to the
14 Chairman, you were trying to describe that the cords couldn't
15 be snapped together as a hose. How do you join that and what
16 kind a time frame it takes to join that, if you can help us?

17 A. Once you have the fitting on board, it could be 20 minutes.

18 Q. When you say the fitting what you mean by that?

19 A. It's just something to screw up two a them together and you
20 could join the wires and tape the lights and the communication.

21 Q. Or, I thought was a welding, a solder?

22 A. Nah, nah, no, notten welding.

23 Q. Right. And how—

24 A. The end ah de hose is screw fittings.

25 Q. Did you have those fittings on board?

26 A. Yeah, we have a lot ah fittings on board.

27 Q. Right, okay. And it takes about 20 minutes to join them and

1 you could join them and make it what, about 600 feet
2 thereabouts?

3 A. Yeah, if you want.

4 **Mr. Peterson SC:** Thank you very much, Mr. Chairman.

5 **Examination By Mr. Chairman:**

6 Q. Or if you joined all three it would be a thousand feet—

7 A. Yeah.

8 Q. —nearly the length of the pipe.

9 A. If you wanted to.

10 Q. Yes. Well, no doubt rescue was foremost in everyone's mind.

11 A. [*Nodding*]

12 **Mr. Chairman:** Thank you. All right. Well I think that's it
13 from me, Mr. Seetaram. Thank you very much indeed for
14 coming. Much appreciated.

15 **Mr. Seetaram:** Yeah, thank you.

16 **Mr. Maharaj SC:** The next witness, Mr. Chairman, is
17 Commander Michael Maharaj. And Ms., um—we do not have
18 a summary.

19 **Mr. Chairman:** You got no statement from him?

20 **Mr. Maharaj SC:** No, no statement so we have no summary.

21 [*Mr. Alvin Seetaram leaves Enquiry room*]

22 **Mr. Maharaj SC:** So I would have to ask him a few questions.

23 **Mr. Chairman:** Will you be asking him why he hasn't
24 provided one? Please do.

25 **Mr. Maharaj SC:** Yes, I do—I—

26 [*Lieutenant Commander Michael Maharaj enters enquiry room*
27 *and is sworn*]

1 **Lt. Commander Maharaj:** I, Lt. Commander Maharaj,
2 solemnly swear that the evidence I shall give to the
3 Commission in this case shall be the truth, the whole truth and
4 nothing but the truth.

5 **Mr. Chairman:** Please take a seat. First of all, it's Lieutenant
6 Commander, is that right?

7 **Lt. Commander Maharaj:** Yes, Sir.

8 **Mr. Chairman:** Well thank you for coming, Lt. Commander
9 Maharaj. I appreciate your making the effort and I know that
10 you have a medical condition which affects your back, so I
11 want you to feel free, if you need to, to stand or sit or both as
12 you give your evidence, whatever makes you feel more
13 comfortable. If you're uncomfortable at any point, you need a
14 break, please just let me know, all right, and we'll take a short
15 break so that you can make yourself comfortable, all right?
16 And I do appreciate your coming. And I understand that
17 you've come a little distance and that it is uncomfortable for
18 you generally travelling, so I appreciate your efforts, but, as I
19 say, if there is any issue at all you let us know, all right?

20 **Lt. Commander Maharaj:** Yes, Sir.

21 **Mr. Chairman:** And Mr. Maharaj there is going to be asking
22 you some questions.

23 **Examination By Mr. Maharaj SC:**

24 Q. Good morning, Lt. Commander Maharaj. [*Microphone*
25 *switched on*] Sorry. Yes, good morning Lt. Commander
26 Maharaj.

27 A. Morning, Sir.

1 Q. You were aware that there was this Commission of Enquiry
2 appointed to enquire into the circumstances in which these five
3 divers were trapped in the pipeline and four died?

4 A. Yes, Sir.

5 Q. And you were aware that there were invitations and public
6 notices for you to provide a statement, a submission?

7 A. No, Sir.

8 Q. You were not aware of that?

9 A. No, Sir.

10 Q. Is there any reason why you didn't provide a statement to us?

11 A. I first became aware when I was contacted with a summons to
12 attend, Sir, and, once I was contacted then I contacted the
13 Commission immediately to find out what was the manner and
14 form in which things should proceed. There were several
15 communications made between myself and the Commission,
16 and, based on that, I was then given a date, which is today's
17 date, to turn to. I have, however, on my own, placed down my
18 recollection of the events.

19 **Examination By Mr. Chairman:**

20 Q. Do you have that with you?

21 A. Yes, Sir, but I was told not to come in here with anything.

22 Q. All right. But you made your own note of what your
23 recollections of these events were, did you?

24 A. Yes, Sir. I have at the—in the holding area.

25 Q. Right. So you—at least you've turned your mind to it?

26 A. Yes, Sir.

27 Q. Yes. All right. Well, Mr. Maharaj is going to ask you some

1 questions.

2 A. Yes.

3 Q. All right? If you have any difficulty recollecting or you think
4 you might need a document in order to assist you, you'll let me
5 know, all right?

6 A. Yes, Sir. I think, I think that might be best.

7 Q. Right. Well, I think there's a difference between any notes that
8 you might have made of your own, um, doing your best to
9 recollect events as opposed to a contemporaneous document
10 that might have existed that might assist you—

11 A. Okay.

12 Q. —in coming to a conclusion about the facts. All right?

13 A. Yes, Sir.

14 **Continued Examination By Mr. Maharaj SC:**

15 Q. Okay. Well let's see. In respect of that incident, that accident
16 on the 25th of February this year, you were at Paria on the 25th
17 of February?

18 A. No, Sir.

19 Q. When did you get there?

20 A. I got there on the 26th, but I was made aware on the 25th.

21 Q. You were made aware on the 25th?

22 A. Yes, Sir.

23 Q. And from the 25th were you aware of the activities which the
24 Trinidad and Tobago Coast Guard was involved in, in respect
25 of that accident?

26 A. Not entirely, Sir. I'll explain. So I am an officer in the
27 Trinidad and Tobago Defence Force Coast Guard, but since

1 2018 I am posted at Defence Force headquarters. On that day,
2 the 25th of February, 2022, I got a call from Mr. Eric Mackie
3 who is at the ODPM, sometime after 6.30 in the evening, and
4 he asked me, um, if I could assist him with getting on to the
5 coast guard. So I let him know well, you know, I'm no longer
6 with the coast guard per se, I'm at headquarters, but what was
7 the issue.

8 He mentioned to me that there was an incident at Paria.
9 He wasn't entirely sure what the incident was but he knew that
10 there were some people missing at sea and indicated that he in
11 turn was contacted by somebody by the name of Mr. Archbald
12 who, according to him, was not able to get a response from the
13 coast guard so he asked if he knew anybody who could assist
14 him with that, so Mr. Mackie called me. I told him, I said, look
15 you know, I'm not stationed there but I could certainly reach
16 out to find out if there was some sort of response, so I did call
17 the coast guard ops room and they did tell me that, yes, they
18 were aware of the incident and, yes, an asset or assets were
19 dispatched and were dealing with the incident.

20 Q. But, but, you were a senior officer at the time of this incident at
21 the coast guard?

22 A. No, Sir. That's what I'm trying to explain to you.

23 Q. You were not a senior?

24 A. No, Sir. So the Trinidad and Tobago Defence Force comprises
25 four formations, the coast guard, the regiment, the air guard and
26 the reserves. I joined as a member of the coast guard but since
27 2018—

1 Q. You were—

2 A. —I now am at Trinidad and Tobago Defence Force
3 headquarters.

4 Q. Okay. But I want to draw your attention to what—you
5 mentioned the name of Mr. Archbald.

6 A. Yes, Sir.

7 Q. Um, you know Mr. Archbald?

8 A. No, Sir. I never heard of his name before that.

9 Q. But you know he was connected to Paria?

10 A. I know he was connected to Paria.

11 Q. Right. I want to read to you what Mr. Archbald said in his
12 statement and it's Volume IV page one three two zero at
13 paragraph 33.

14 **Mr. Chairman:** One three two zero?

15 **Mr. Maharaj SC:** One three two zero, Volume IV. One three
16 two zero at paragraph 33.

17 **Continued Examination By Mr. Maharaj SC:**

18 Q. And I'm going to read the important part to you.

19 "Around 1824 hours, Lt. Commander Maharaj called me
20 and informed me that the TTCG Interceptor, which was
21 the vessel then engaged in conducting an open water
22 search for the missing divers, must return to Staubles Bay
23 to pick up a TTCG dive crew and equipment to possibly
24 attempt a search and rescue exercise within the pipeline.
25 He asked me to get a message to the TTCG personnel at
26 Pointe-a-Pierre and inform them that he gave that
27 instruction. I then contacted security lead Sheldon

1 Subero who advised that the TTCG had left already to go
2 to Staubles Bay.”

3 Is that an accurate statement?

4 A. Not entirely, Sir.

5 Q. Not entirely. Well what in it is not accurate?

6 A. Right, so, as I mentioned, I got the call from Mr. Mackie who
7 told me that Mr. Archbald, who he knows, was trying to get in
8 touch with somebody from the coast guard. He also
9 WhatsApped, he being Mr. Mackie, also WhatsApped me Mr.
10 Archbald’s contact so I could give feedback directly to him. I
11 contacted the coast guard operations room, found out that,
12 contrary to what was being relayed to me, the coast guard was
13 aware of the incident and they did, in fact, deploy an asset to
14 the site.

15 Now, when I contacted—relayed that information to Mr.
16 Archbald, he then indicated to me that there was no dive team,
17 so at that point I was under the impression that, you know, there
18 were people in the water who were being looked for, um, and
19 then he said there was no dive team so I mentioned to him, I
20 said, well, look, is there anybody—is there any way you can get
21 in touch with the person who is in the Interceptor so I could
22 probably understand what is happening?

23 He then indicated to me that vessel had already left. So,
24 what I told him I would do is that I would get back on to the
25 coast guard operations and find out what was happening. I did,
26 in fact, contact coast guard operations again and they did tell
27 me that the Interceptor was there, was rendering assistance in

1 terms of transporting persons and material to and fro and they
2 did, in fact, leave to embark a dive team. He told me—well,
3 whoever the operator at was at the time told me that the dive
4 team was on the way and should be there in about 50 minutes. I
5 then sent a WhatsApp message to Mr. Archbald on his phone
6 sometime after seven o'clock, maybe 10 to 8.00, and I said
7 ETA 50 minutes and I got a message back from his—

8 **Mr. Chairman:** Fifty or 15?

9 **Lt. Commander Maharaj:** Five zero.

10 **Continued Examination By Mr. Maharaj SC:**

11 A. Then I got back a message from his phone saying thanks.

12 Q. But you were aware that assistance was being required for
13 diving into the pipeline to rescue the divers?

14 A. Not at that time, Sir.

15 Q. Not at that time?

16 A. No.

17 Q. So what Mr. Archibald said here, therefore, is not correct
18 because, according to his statement, he is saying that you gave
19 instructions for the TTCG to return with a dive crew and
20 equipment to attempt a search and rescue exercise within the
21 pipeline?

22 A. That is not accurate, Sir.

23 Q. Okay.

24 **Examination By Mr. Chairman:**

25 Q. Say that again?

26 A. That is not accurate, Sir.

27 Q. That's not accurate. Can I ask you, did you know that a man

1 had by now come out of the pipeline?

2 A. I learned of that later, Sir.

3 Q. You didn't know that at the time you—

4 A. No, Sir.

5 Q. —were speaking to Mr. Archbald?

6 A. No, Sir. When I got the call, like I said, it was about to find
7 people missing in the water—

8 Q. Uh-huh.

9 A. —and apparently there was no coast guard response which is
10 why Mr.—

11 Q. What time are we talking about?

12 A. I got the call from Mr. Mackie shortly after 6.30.

13 Q. After 6.30?

14 A. Yes.

15 Q. So you're speaking to Mr. Mackie about 6.30 on the Friday
16 afternoon and you're saying us to that you were not told at that
17 time that a man had been rescued from the pipe?

18 A. No. What I was told by Mr. Mackie is that there is no—well,
19 what he told me—

20 Q. Yes.

21 A. —right, again, I had no involvement in this operation. Right?
22 What he told me was that he got a message from somebody at
23 Paria, and he called the name of Mr. Randy Archbald who, um,
24 was having difficulty, in his words, getting in touch with the
25 coast guard.

26 Q. Right you said all that.

27 A. Right.

1 Q. I got that bit, sorry.

2 A. Yeah.

3 Q. I just want to cut you off a little. I understand that bit. All I'm
4 interested in is this. Is that when you were WhatsApping with
5 Archbald and when you were speaking with Mr. Mackie,
6 neither of them informed you that a man had been rescued from
7 the pipe itself?

8 A. No, Sir.

9 Q. Both of those conversations were around 6.00 or so or later that
10 afternoon or earlier?

11 A. Right, so I got the call from Mr. Mackie at 6.30—

12 Q. Right.

13 A. —thereabouts and then subsequent to that I think I mentioned
14 that I sent a WhatsApp to Mr. Archbald at about 10 to 8.00.

15 Q. Got you. So can I take it, then, that your first involvement,
16 such as it is, was after 6.30?

17 A. Yes, Sir.

18 Q. Right. And nobody told you that a man had been rescued from
19 the pipe itself?

20 A. Not at that time, Sir.

21 Q. All right thank you.

22 **Mr. Chairman:** Thank you Mr.—

23 **Continued Examination By Mr. Maharaj SC:**

24 Q. Well, could you help us? When was the first time you got to
25 know that a man was rescued from within the pipe?

26 A. Right, so, I became aware, um, I think that would have been
27 sometime, sometime much later, um, because I—after such

1 going to—speaking to Mr. Archibald at that time and then
2 sending that message, I then got in, well I can't remember if I
3 was called or I called, I think I was called by somebody called
4 Ms. Catherine Balkissoon, who was then informing me that the
5 dive team was, in fact, on site and the dive team was, in fact,
6 assisting and that there was somebody who came out of the
7 pipeline at that point in time. That would have been sometime
8 after ten o'clock.

9 Q. After ten o'clock?

10 A. Yeah.

11 **Examination By Mr. Chairman:**

12 Q. You said somebody coming out of the pipe at that point in time.
13 Are you suggesting you were being told that they had only just
14 come out of the pipe?

15 A. No.

16 Q. No. Right. It—

17 A. I was told at that point in time.

18 Q. Yeah, you were told at that point in time—

19 A. At that point, yes, Sir.

20 Q. —that someone had come out of the pipe earlier on that
21 evening?

22 A. Yes, Sir.

23 Q. Right. Did they tell you when?

24 A. No. I, I—so, when I found out that, I asked Ms. Balkissoon,
25 um, if he said anything and she indicated to me that, um, he
26 didn't because when she came he was being medically
27 evacuated or something like that, so she did not speak to him.

1 Q. She did not speak to him?

2 A. No.

3 Q. So she gave you no information about what he may or may not
4 have said when he came out of the pipe?

5 A. No. She said she didn't speak to him.

6 **Mr. Chairman:** Thank you.

7 **Continued Examination By Mr. Maharaj SC:**

8 Q. Lieutenant, you have told us you have been in the coast guard
9 for period of time and you're now in the Defence Force?

10 A. No, Sir, I was always in the Defence Force. It's just that I am
11 assigned to Defence Force headquarters.

12 Q. Oh I see. Okay. Okay.

13 A. Yes, Sir.

14 Q. So, from your knowledge, and what you know of the coast
15 guard—

16 A. Yes, Sir.

17 Q. —can divers at the coast guard dive into confined spaces?

18 A. To the best of my knowledge they have no confined space
19 training, um, and to the best of my knowledge the equipment
20 with which they are outfitted is not of a commercial nature, Sir.

21 Q. And if that is the case, that would be readily known to the coast
22 guard from the time the coast guard knows that it's a dive for
23 within a pipeline?

24 A. Well I can't say when they found out, if they found out before
25 or after they actually got on site, Sir.

26 Q. Okay. But, based on what you have told us, the coast guard
27 would not have the expertise to dive within a pipeline in order

1 to rescue anyone?

2 A. To the best of my knowledge, Sir.

3 Q. Yes. And that would be known by senior officers of the coast
4 guard?

5 A. I'm sure it would be, Sir.

6 Q. He's sure it would be.

7 **Examination By Mr. Chairman:**

8 Q. It's a very specialized business isn't it, going into a pipeline or
9 any confined space, and that's not something that the coast
10 guard would ordinarily become involved in?

11 A. No, Sir.

12 Q. No. My understanding is that you have dive teams available
13 but they're for really open water searches or perhaps if a ship
14 has sunk or something like that they might want to go down and
15 have a look if there's anybody in an air pocket or something,
16 but it's really limited to that, isn't it?

17 A. As far as I'm aware, Sir.

18 Q. As one would readily understand with the coast guard—

19 A. Yes.

20 Q. —this is very specialized and clearly needs expertise beyond
21 that which is normally provided by the, by the coast guard?

22 A. Yes, Sir.

23 **Mr. Chairman:** Yes, thank you very much.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. And would it be correct to say that during that, um—on the
26 Friday, on the Friday evening you were kept informed several
27 times by Paria as to the status of what was happening in respect

1 of the possible rescue?

2 A. Just twice. I mentioned once when I spoke to Ms. Balkissoon,
3 and then sometime after midnight I got a call from Mr.
4 Archbald who indicated to me that the dive team having come
5 on site, made an assessment and indicated that they would not
6 be able to enter the pipeline.

7 **Mr. Chairman:** The coast guard? The coast guard?

8 **Lt. Commander Maharaj:** Yes.

9 **Mr. Chairman:** Yes.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. But from your knowledge, the coast guard had gone there since
12 about 4.00, between four to 5.00 p.m. that evening?

13 A. Well prior to that call at 18:30 I had no idea of what was
14 happening at all there, Sir.

15 Q. Now, on the Saturday—well, have you had any communication
16 with Mr. Collin Piper?

17 A. Yes, Sir.

18 Q. I want to—when did you meet Mr.—well, did you meet Mr.
19 Piper?

20 A. Yes, Sir.

21 Q. When, that was on the Saturday?

22 A. Yes, Sir.

23 Q. At around what time?

24 A. Maybe in the afternoon, after lunch.

25 Q. Were you part of the incident command team?

26 A. No, Sir.

27 Q. Did you attend the meeting of the incident command team at

1 Paria?

2 A. No, Sir.

3 Q. Did you advise the incident command team at Paria?

4 A. No, Sir.

5 Q. Did you have any conversation with members of the incident
6 command team at Paria on the Saturday?

7 A. With Mr. Piper, yes, Sir.

8 Q. With Mr. Piper. And so, let me read to you what Mr. Piper says
9 about that conversation and I want you to tell me whether that
10 is correct. At Volume IV, page 1373 of the witness bundle, at
11 paragraph 166 on—

12 **Mr. Chairman:** Sorry, which page? One?

13 **Mr. Maharaj SC:** One three seven three, Mr. Chairman. One
14 three seven three.

15 **Mr. Chairman:** Paragraph?

16 **Mr. Maharaj SC:** Paragraph 166.

17 **Continued Examination By Mr. Maharaj SC:**

18 Q. “Sometime around midday Lieutenant Commander
19 Michael Maharaj of the TTCG visited the ICP for an
20 update. I updated him as to the current status of the
21 rescue efforts. We then moved to a private area where he
22 advised me that his personnel were not certified to use
23 the dive helmet. He also indicated that it was unlikely
24 that the divers in the pipeline were still alive because it
25 was unlikely that they would have had sufficient air to
26 survive for this long. He also advised that we should
27 consider recovery efforts.”

1 Is that an accurate statement?

2 A. No, it is not.

3 Q. Well, let us take it, um—he said that you visited the ICP, which
4 is the incident command post, for an update. Is that correct?

5 A. That is correct, Sir.

6 Q. But you had instructions to visit the incident command post to
7 get an update?

8 A. No, Sir. So, once I was made aware of it, part of my job in
9 Defence Force headquarters is to provide situational updates
10 across the Defence Force to Director Operations and the Chief
11 of Defence Staff and how that is done is we assimilate
12 information from different operations rooms like the coast
13 guard, the regiment and so on, and then we provide a brief
14 synopsis on a daily basis to the Chief of Defence Staff.
15 However, if they ask any questions based on that we should be
16 able to have this contemporaneous information.

17 So while I wasn't involved directly, once I got the call,
18 having received no further information overnight, because the
19 last information I received as I said from Mr. Archbald who
20 indicated that the dive team could not have entered, and then,
21 based on the information I was getting from the OCC at HQ, I
22 understood the dive team to be redeployed for another operation
23 on that Saturday and there was no further updates, so, I went to
24 get an update.

25 Q. Okay. But did you give advice that your personnel were not
26 certified to use the dive helmet?

27 A. No.

1 Q. No. And did you indicate to him that it was unlikely that the
2 divers in the pipeline were still alive because it is unlikely that
3 they would have had sufficient air to survive for this long?

4 A. Absolutely not, Sir.

5 Q. Not.

6 **Mr. Chairman:** Pause there, please? I need to make a note.

7 [*Writing*] Thank you.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Did you advise him that Paria should consider recovery efforts?

10 A. Absolutely not, Sir.

11 Q. Well, you have indicated to us—

12 **Mr. Chairman:** Sorry, Mr. Maharaj, have you finished with
13 that paragraph?

14 **Mr. Maharaj SC:** Yes, yes.

15 **Examination By Mr. Chairman:**

16 Q. Can I just ask you, you said earlier that you attended the ICP,
17 the command post, to update yourself on what was happening,
18 is that right?

19 A. Yes, Sir.

20 Q. And that you were required to put into writing some sort of
21 appraisal of where—update. To whom were you providing
22 that?

23 A. All right, so we get operation reports from different operations
24 arise within the Defence Force.

25 Q. Yes.

26 A. That is then sent to the headquarters operations room. That is
27 then synopsized and sent forward to the Director Operations

1 and the Chief of Defence Staff.

2 Q. Director of Operations?

3 A. Yeah.

4 Q. In the Defence Force?

5 A. Yes, Sir.

6 Q. Right. And did you do that?

7 A. Yes, Sir.

8 Q. So is there a document somewhere which sets out what you
9 were telling the Director of Operations at that time?

10 A. What that document sets out is the—

11 Q. Well, first of all, is there such a document?

12 A. Yes, there are documents—

13 Q. Right.

14 A. —for the—for reports that were sent forward on a daily basis.
15 Those reports are collated from the operations feeds that we get,
16 so yes there are documents that—

17 Q. Which you are the author of?

18 A. I collate the documents, yes Sir.

19 Q. Well, collating is putting together. I'm collating documents but
20 I'm not the author of them, right?

21 A. Right.

22 Q. As I understood it, you were up, you were updating yourself as
23 you regarded it as your responsibility to do so in the absence of
24 having any other operation. So you attended the command
25 post, you thereby updated yourself on what was, you thought,
26 important, you reduced that to writing so that you could send it
27 to the Director of Operations. Have I got that right?

1 A. So—

2 Q. Have I got it wrong? Just tell me one way or the other then you
3 can explain.

4 A. You got it partially right, Sir.

5 Q. Partially right. So tell me the bits that I've got wrong.

6 A. Right, so the information that I get from the different operations
7 rooms—

8 Q. Right.

9 A. —are in detail. It's a very brief synopsis that we send forward
10 to Director Operations and the Chief of Defence Staff. I went
11 to get an update because sometimes, based on the brevity of the
12 information that we send forward, questions are asked by either
13 Chief of Defence Staff to Director Operations to myself or from
14 director operations to myself—

15 Q. Yeah.

16 A. —so that information that I got, having visited the ICP, was in
17 case I am asked to elaborate on any information that I sent
18 forward, yes, Sir. So—

19 Q. There is document that you were the author of?

20 A. There is a document that I signed and sent forward.

21 Q. Right, signed by you?

22 A. Yes, Sir.

23 Q. And sent to your Director of Operations?

24 A. Yes, Sir.

25 Q. Do you have that document?

26 A. I think so. I'll have to check. I think that I—

27 Q. Did you bring it with you, for example?

1 A. Yes, I believe so.

2 Q. Is there any reason why you can't get it?

3 A. Well I was told to leave all the documents outside.

4 Q. No, no, I understand that, but, I mean, it's here, is it, in the
5 building?

6 A. Yes, Sir.

7 Q. Well think we'll take a short break while you get it and provide
8 it to counsel, please?

9 A. Okay.

10 Q. Do you mind? Would you do that?

11 **Mr. Chairman:** We'll take 5 minutes. Ten, 10 minutes
12 please?

13 **11.03 a.m.:** *Enquiry suspended.*

14 **11.10 a.m.:** *Enquiry resumed.*

15 **Mr. Chairman:** Thank you, Lieutenant Maharaj. I appreciate
16 it. What we've done is we've both had a look at it. It doesn't
17 seem to add, to my mind, anything. I don't think Mr. Maharaj
18 does either. So what we're going to do, in the interest of
19 fairness to everyone, the relevant passage, which is just a small
20 part, is going to be copied. The remainder is like, as far as I can
21 see, is irrelevant to any other matters here and they are
22 obviously matters which may be regarded as sensitive, so they
23 are redacted and I'll show it to you before we circulate it. All
24 right?

25 Does that meet with your approval? Are you content
26 with that? Please sit down unless you want to stand. You may
27 prefer standing.

1 **Lt. Commander Maharaj:** That's a document addressed to
2 Director Operations and/or the Trinidad and Tobago Chief of
3 Defence Staff, so, it's not within my remit to say if it should be.

4 **Mr. Chairman:** No, no, I apologize, but it is in mine. So I
5 shall redact everything that is irrelevant. The only part that
6 seems to me to have even some modicum of relevance is the
7 short passage you told us you wrote which is directly to do with
8 this matter. All right? So that small part will be made available
9 to everybody, but I don't think it's going to compromise
10 security in this country. All right? All right, very well.

11 **Mr. Maharaj SC:** Much obliged.

12 **Continued Examination By Mr. Maharaj SC:**

13 Q. So, I want to question you a bit on the updates that you were
14 getting. So you got updates during the Saturday from the IMT?

15 A. No, Sir.

16 Q. Oh no. So how many updates you got on the Saturday?

17 A. Just when I went there. You mean to Paria, right?

18 Q. Yes.

19 A. Yes, so just when I went there like I said I was introduced to
20 Mr. Piper who I was told was the person in charge. I asked him
21 for an update. He indicated to me, that, based on the
22 information that was received from the coast guard dive team
23 and the fact that they can't or were not equipped to conduct the
24 rescue operation, he was getting advice from commercial divers
25 and he—what they were saying is that they were formulating
26 some plans to try to rescue the divers. In fact, he drew a
27 diagram which resembled a—two right angles facing each other

1 like a kind a U and he indicated to me—

2 **Mr. Chairman:** Like behind you?

3 **Lt. Commander Maharaj:** Yes, like directly behind me.

4 **Continued Examination By Mr. Maharaj SC:**

5 A. Um, right, so he drew that diagram or one similar to it
6 indicating that, um, what was happening. They were doing
7 some maintenance works and at that point he also mentioned to
8 me that there were divers still in the pipeline and he was
9 consulting with commercial experts to try to rescue them.
10 Yeah, so that was the update I received.

11 He mentioned there was an option that was being
12 explored for trying to cut the line and get them out, but he said
13 that was not feasible because, based on the information he
14 received, the line was—well, they were not sure where exactly
15 divers were positioned. He also mentioned that the line was
16 concrete coated and that the possibility of cutting the line could,
17 in fact, cause it to be flooded and then it will take a long time,
18 so that option was not deemed to be viable. He also mentioned
19 that—

20 **Mr. Chairman:** Just pause for a moment, please?

21 **Lt. Commander Maharaj:** Yes.

22 **Mr. Chairman:** [*Writing*] Thank you. He also mentioned,
23 you say?

24 **Continued Examination By Mr. Maharaj SC:**

25 A. Yes, he also mentioned that there were information—there were
26 bits of information he was getting from commercial dive
27 experts who indicated to him that, based on their, I suppose,

1 knowledge, it may be unlikely that the divers would have
2 survived. He asked me what I thought. I told him I was here
3 just to get information. I am not directly prosecuting the rescue
4 operation because I'm not part of the chain of command for the
5 coast guard and the coast guard rescue efforts. My job, as I
6 indicated before, is to get information to pass on. He then said
7 that there was also an option being explored, if, in fact, they
8 were deceased, to, er, use a mechanism to flush the line so that
9 a plug of some sort that Paria believed to be in the pipeline
10 would then assist in getting the divers and tools out of the other
11 end.

12 At that point, he asked me if I was okay and I said, yes,
13 but if you consider what you just told me, that would basically
14 extinguish any hope of anybody inside there. He said that this
15 is just an option being considered, like all the options, like the
16 cutting of the line option, and nothing was, you know, decided
17 firmly yet in stone. I reiterated to him that this is something
18 that, I mean, nobody knows for sure what is the status of the
19 people in the pipeline. They didn't even know. But something
20 like this could guarantee their status.

21 Q. Okay, so he was giving you—

22 **Examination By Mr. Chairman:**

23 Q. Sorry, can I, sorry, what sort of time are we talking about when
24 this is taking place when he's explaining these different options
25 to you.?

26 A. Yes, so this is—well, I visited the ICP at shortly after midday.

27 Q. Shortly after midday?

1 A. Yeah, on Saturday.

2 Q. I thought you said after lunch?

3 A. Well, after lunch, yeah. Well—

4 Q. Well, just so that I have a clearer picture, please—

5 A. Yeah.

6 Q. —I mean I have lunch normally between 1.00 and 2.00.

7 A. Right, so, between 12.00 and 2.00, then, some—

8 Q. Between 12.00 and 2.00?

9 A. Yes.

10 Q. That's the time you attended the post, yes?

11 A. That's the time I was speaking to Mr.—yeah.

12 Q. Right, thank you very much.

13 **Mr. Chairman:** Sorry.

14 **Continued Examination By Mr. Maharaj SC:**

15 Q. And after that you left?

16 A. Yes, Sir.

17 Q. And did you go back on the Sunday?

18 A. No, Sir.

19 Q. No. Well, you told us he was giving you all the options—

20 A. Yes, Sir.

21 Q. —that he was contemplating and he was taking—

22 A. Yes, Sir.

23 Q. —in order to effect a rescue?

24 A. Yes, Sir.

25 Q. Did he tell you about the option that the LMCS divers had
26 rescue plans and they are prepared to go into the pipeline?

27 A. No, Sir.

1 Q. No. Did he tell you that Christopher Boodram had come out of
2 the pipeline and said that one of the men was just behind him
3 and the other men were alive in the pipeline?

4 A. No, he didn't mention any name, Sir. He just indicated that a
5 diver came at of the pipeline alive and that at that time he was,
6 he being the diver, said to him, to Mr. Piper, that he was
7 speaking to other divers or he spoke to other divers.

8 Q. So, in your updates, you did not get any information from Mr.
9 Piper or Mr.—anyone, apart from Mr. Piper, you didn't get any
10 information from either Mr. Piper or Ms. Balkissoon or anyone
11 at Paria that LMCS had divers prepared, commercial divers,
12 prepared to go into the pipeline?

13 A. No, Sir.

14 Q. Did you get any information from him that Paria was taking
15 steps, through the coast guard, to prevent LMCS divers from
16 diving into the pipeline?

17 A. No, Sir.

18 Q. No. So all the instructions you got from Paria as to the options
19 that Paria was considering to exercise or was exercising were
20 options that Paria said that they were going to exercise?

21 A. Based on the advice in consultation with the commercial dive
22 experts they were speaking to, Sir.

23 **Mr. Maharaj SC:** I have no further questions for this witness.

24 **Examination By Mr. Chairman:**

25 Q. Did you ever speak to anybody in the coast guard who were at
26 the scene?

27 A. I think when I spoke to Ms. Balkissoon, I think she handed the

1 phone to Lt. Hargreaves and he indicated to me, um, exactly
2 what was then told to me again later by Mr. Archibald, that,
3 based on the assessment they would not be able to enter.

4 Q. They would not be able to?

5 A. To enter the pipeline.

6 Q. Right. So, did you understand that there was the possibility of
7 entering the pipeline to effect a rescue but that you, the coast
8 guard, didn't have the necessary personnel to carry that task
9 out?

10 A. Yeah, I understood that the—

11 Q. Is that—have I got it right?

12 A. Yes, I understood that the coast guard could not have attempted
13 based on their equipment and training.

14 Q. No, no, I follow that.

15 A. Yeah.

16 Q. Not that part of it. It's the bit before that, really. Did you
17 understand that there was at least the potential for a plan to
18 effect a rescue from within the pipeline, that is to say, people
19 actually diving into the pipeline but that you, the coast guard,
20 didn't have that facility?

21 A. No, I wasn't aware of any other plan.

22 Q. You were not aware of any other plan to dive into the pipe?

23 A. No, not outside of the coast guard, no.

24 **Mr. Chairman:** Right, okay, thank you. Yes, first of all, Mr.
25 Ramoutar, anyone else? Right. Well there's a range of people
26 who've put their hands up so I'll ask Ms. Alfonso, please? You
27 can go first and then I'll come to Mr. Ramoutar and then front

1 row.

2 **Mr. Ramadhar:** Ramadhar.

3 **Mr. Chairman:** Ramadhar.

4 **Mr. Ramadhar:** Thank you so much.

5 **Mr. Chairman:** Yes, um, Ramoutar—Ramadhar, forgive me
6 yes. Ms. Alfonso.

7 **Ms. Alfonso:** Thank you, Sir.

8 **Cross-Examination By Ms. Alfonso:**

9 Q. Good still morning, good morning Lt. Commander Maharaj.

10 A. Morning, Ma'am.

11 Q. My name is Nyree Alfonso. I represent the interest of the
12 SWWTU and I just have one question for you really. The
13 others have been taken care of prior to my putting up my hand.
14 I see some interaction between an Interceptor having been sent
15 to Paria's location and that Interceptor being asked to come
16 back for the dive team. Did you mention that or—earlier?

17 A. Yes. So what I mentioned was that the initial call, again it
18 seemed to be a bit confused, the initial call indicated to me that
19 there were no responding coast guard assets.

20 Q. Okay.

21 A. Which I then clarified by calling the operations room and they
22 said yes they were aware of the incident and, yes, in fact, they
23 did deploy an asset.

24 Q. Okay.

25 A. Um, I understood then, subject only to that, that the Interceptor
26 was engaged in searches for personnel, because, I guess the
27 same information that I had which they probably had, I can't be

1 sure, that there was an incident involving people missing in the
2 water and then, as the time went on, I then, in communication
3 with Mr. Archbald he then indicated to me that, you know,
4 there's an Interceptor, yes, but there's no dive team.

5 Q. Okay. So—

6 A. Right? And then—

7 Q. I'm sorry.

8 A. Right. So and then I asked him, I said, well, okay if you're in
9 contact with the Interceptor, could I then speak to somebody
10 from the Interceptor? He got back on to me and said well the
11 Interceptor has already left. So I then contacted the operations
12 room and found out that the Interceptor did, in fact, leave, after
13 having done what I said they did trying to assist in different
14 ways, to get a dive team to return.

15 Q. Okay, so for my clarification, there would have been another
16 team of TTCG officers on site at Paria's facilities prior to the
17 dive team attending?

18 A. Well as far as I'm aware, Ma'am.

19 Q. Okay, so, would you have—in any of your briefings, would you
20 have come across a time at all when, let's call it the first
21 contingent, the first contingent of coast guard officers arrived
22 on the scene, would you have an idea of the time?

23 A. Yes, I think that is in the document that I supplied. I can't
24 remember the time but I could look at the documents and get
25 the time when the—that was the one dated on the 26th. It says
26 a time.

27 Q. Okay.

1 **Mr. Chairman:** It's being copied. You'll have it in due
2 course, Ms. Alfonso.

3 **Ms. Alfonso:** Okay.

4 **Continued Cross-Examination By Ms. Alfonso:**

5 Q. You don't remember four o'clock, five o'clock any of those
6 times?

7 A. No, Ma'am. It's in the document.

8 Q. Okay. So I will—but certainly there was one contingent there
9 before the Interceptor left to collect the dive team?

10 A. I don't understand the question, Ma'am.

11 Q. Okay, so, one asset, you said one asset which is an Interceptor,
12 would have left Staubles, one presumes, left from somewhere
13 and come on Paria's facilities. That Interceptor returned later in
14 the day when you got involved with Mr. Mackie and so on,
15 returned to collect the dive team, yes? So that two contingents
16 from the coast guard would have been on scene, one at an
17 earlier time and I believe, from my reading maybe around 8.40,
18 43 I think is the time, the dive team arrived on the scene. So
19 was there ano—to your knowledge, was there another
20 contingent of coast guard officers which arrived prior to the
21 dive team which did not come till 8.43, as I see from one
22 witness statement?

23 A. I am not sure, Ma'am.

24 Q. Okay. So you don't know if there were any coast guard officers
25 there before the dive team came then?

26 A. Well, I said there were—

27 Q. Yes, okay.

1 A. —I said there was—

2 Q. Yes, okay.

3 A. —[*Inaudible*]

4 Q. So—and the only thing is you don't know what time those
5 officers arrived?

6 A. It's in the document, Ma'am. I can't remember.

7 Q. Okay, so we'll wait for the document. Thank you very much
8 Lt. Commander Maharaj.

9 A. Yes, Ma'am.

10 **Mr. Chairman:** Yes, Mr. Ramadhar.

11 **Cross-Examination By Mr. Ramadhar:**

12 Q. Good morning, Sir. My name is Prakash Ramadhar and I
13 represent the interest of the Kurban family and Yusuf Henry's
14 child.

15 A. Yes, Sir.

16 Q. First of all thank, you for your involvement and your efforts to
17 assist on that day. Now, you've heard and was shown a
18 statement from Mr. Piper in which certain things were said,
19 apportioned to what you would have told him that was
20 inaccurate at best. Is that accurate? Is that true?

21 A. Yes, Sir, just the part that I saw.

22 Q. Remind us which part that was.

23 A. I think it's on page 1373.

24 Q. Yes.

25 A. Paragraph 166.

26 Q. And the relevant part?

27 A. Well the part that I agree with is that it was some time around

1 midday I attended the ICP. I also agreed that we moved to a
2 private area and then he updated me, as I indicated, about
3 different options that they were considering. I disagree
4 fundamentally with what he said about me advising him about a
5 helmet, and furthermore, about shifting the efforts to recovery
6 and not rescue.

7 Q. Explain that for us. What, what did you actually tell him and
8 what is he saying that you told him?

9 A. Well that's what he said, Sir, in the statement here.

10 Q. Yes.

11 A. All right? What I told him—well, I came for an update.

12 Q. Yes.

13 A. All right? And he mentioned to me what the update was. He
14 draw a diagram like this.

15 Q. Yes.

16 A. Indicated, um, where they were working, what happened, or
17 what they think happened which was somehow, he wasn't sure
18 how, the divers became trapped with a—

19 Q. Yeah, forgive me. We heard that. The question I asked you is
20 this. What, in your mind, was the most important difference
21 between what you actually said and what he said you told him?

22 A. Most important difference, Sir, is that what he said is that I
23 made a comment about their ability to survive.

24 Q. Yes.

25 A. And I also made a comment about the fact that they should turn
26 the operation from rescue to recovery. I fundamentally
27 disagree with that because I am in the business of saving lives,

1 as a ship captain prior to my taking up my present position—

2 Q. Yes.

3 A. —and, apart from that, as I indicated to him and to everyone
4 here, I was made to be involved through a call which required
5 assistance.

6 Q. Of course.

7 A. I was not part of the effort that was actually prosecuting the
8 rescue, so how that operates is that the coast guard, we're
9 speaking about the coast guard, the coast guard has of course
10 somebody in charge, the commanding officer, he has different
11 departments one of which is operations and the operations
12 department has assets and personnel to deploy to effect rescue.
13 So I explained, I mean, that I wasn't a part of that. I'm here to
14 get an update—

15 Q. Yes.

16 A. —to provide to my superiors.

17 Q. Thank you.

18 A. So I say all that to say—

19 Q. Yes.

20 A. —there would have been no—it would not have been my place
21 to comment on anything mentioned here—

22 Q. Yes.

23 A. —with respect to survivability and things like that.

24 Q. Right.

25 A. And as a matter—

26 Q. So let me get this clear. You are saying effectively that you as
27 a representative at that time, in the widest sense of the Defence

1 Forces, did not indicate that it should convert itself, that is any
2 effort, from rescue to recovery?

3 A. Absolutely not.

4 Q. Of course. Because, as you just told us, and help us if you
5 could, what is the highest priority in an accident in terms of
6 your training in the coast guard and in the Defence Force?

7 A. To save lives.

8 Q. Save lives. And you appreciate that you're—you're a military
9 man, and, of course, there are risks in all sorts of endeavours,
10 correct?

11 A. Yes, Sir.

12 Q. And in particularly in the water, yes?

13 A. Yes, Sir.

14 Q. But you have to overcome the fear of the risk sometimes to
15 save a life. Is that accurate?

16 A. I would—

17 Q. Once it is—once there is, what shall I say, a viable opportunity
18 to save the life, you balance that with some risk and if there is,
19 you know, no certainty that you're going to fail, you go ahead
20 and you do it, isn't it?

21 A. I would agree theoretically from my own point of view with
22 respect to this operation. I'll have to respect the—and a
23 determination made by the dive team that was onsite.

24 Q. Thank you very much. Now, you are still a member of the
25 Defence Force?

26 A. Yes, Sir.

27 Q. Right? And it was very troubling, to me at least, to have heard

1 that no one from either the Defence force or the coast guard
2 made any effort to coordinate a statement from you for the
3 benefit of the Chairman, the Commission and, of course, all of
4 us.

5 A. As am I, Sir.

6 Q. As you are. And it is by summons then you became aware of
7 the need for you to assist?

8 A. Yes, Sir.

9 Q. And we must thank the legal team and the Commission for that,
10 correct? You got it from whom, the summons?

11 A. Well I was called by the, um, the welfare officer in the coast
12 guard—

13 Q. Yes.

14 A. —who told to me, or who told me that a WPC from the
15 Carenage Police Station—

16 Q. Yes.

17 A. —wants to get in touch with me—

18 Q. Yes.

19 A. —um, because she had summons for me, so obviously I was
20 asking well what was this—

21 Q. Yes.

22 A. —summons about?

23 Q. Thank you very much. That was the first time you realized that
24 it was an effort to communicate with you to get important
25 information?

26 A. Yes, Sir.

27 Q. Thank you. Now, many of us may know and some may not.

1 You referenced Mr. Mackie from the ODPM. What does
2 ODPM stand for?

3 A. The Office of Disaster Preparedness and Management, Sir.

4 Q. The Office of Disaster Preparedness and Management.

5 A. Yes.

6 Q. Was there any level, or an institution that you were aware of,
7 whether in the past or at present, to coordinate issues of
8 disasters preparedness and management outside of the ODPM?

9 A. Well—

10 Q. I'll help you.

11 A. —a former incarnation was NEMA.

12 Q. Right, and, have you ever heard of the NOC?

13 A. I'm sorry, Sir?

14 Q. The NOC, National Operations Centre?

15 A. Yep, I have heard of it, Sir.

16 Q. Yes. Are you aware that it was to coordinate all the arms of the
17 State so that we could have a coordinated effort, and, instead of
18 Mr. Mackie seeking you out, you could have that coordinated
19 effort between the different arms to assist?

20 A. Well, it's my understanding that Mr. Mackie reached out to me
21 because we worked together in the past.

22 Q. Yes.

23 A. And, um, when they asked for—when he was asked if he could
24 find somebody who he could get a response from, from the
25 coast guard, I guess he called me. Um, as to what the NOC
26 does and how they function, I was never a part of the NOC, Sir.

27 Q. You were never part of the NOC?

1 A. No, Sir.

2 Q. So as you were aware, at this point in time, that you would not
3 have been involved in this unless Mr. Mackie, thanks for his
4 assistance from the ODPM, making contact with you?

5 A. Yes, Sir.

6 Q. Thank you. Now, the coast guard, you were a member of the
7 coast guard for how many years?

8 A. I still am, for, it's going on 21 years and three months now.

9 Q. Wow. And that the coast guard is part of our military asset?

10 A. Yes, Sir, one of the four formations that comprises the Defence
11 Force.

12 Q. Thank you. And in terms of the use of force, you have
13 authority to use force to carry out instructions, isn't that
14 accurate?

15 A. In certain circumstances, yes, Sir.

16 Q. Yes, of course. Yeah, in fact, the coast guard is armed with
17 machine guns and other artillery and so, is that accurate?

18 A. Not artillery, Sir.

19 Q. But let me put it, with firearms?

20 A. Yes, Sir.

21 Q. [*Inaudible*] artillery.

22 **Mr. Chairman:** There's a big difference between firearms and
23 artillery.

24 **Mr. Ramadhar:** I brought it back down but I do know that the
25 coast guard does have those high level bores and, and—
26 anyhow, I shan't go into that at this point in time.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. So the coast guard members are armed with firearms, is that
2 accurate?

3 A. No, when carrying out their duty and—

4 Q. Yes, yes of course.

5 A. —according to what that duty is, yes, Sir.

6 Q. Yes. And some of the guns have large guns—I mean some of
7 the boats have large guns on them?

8 A. Some of the vessels, yeah.

9 Q. Yes. In fact, you're aware in the month of February, there was
10 an awful scandal through the country where a baby was shot
11 and killed by members of the coast guard on the open waters?

12 **Mr. Chairman:** Yes, don't answer that. Move on.

13 **Mr. Ramadhar:** Yes.

14 **Continued Cross-Examination By Mr. Ramadhar:**

15 Q. You're aware that the coast guard have the authority to use
16 deadly force in certain circumstances?

17 A. Yes, Sir.

18 Q. Yes. And part of that endeavour or part of the duty is
19 protecting national assets?

20 A. Yes, Sir.

21 Q. Yes. And they receive instructions from whom?

22 A. To do what, Sir?

23 Q. To, to do their duty. Who does the coast guard get its authority
24 from?

25 A. Who the coast guard get its authority from?

26 Q. Yes.

27 A. Well, the commander-in-chief of the military is the President

1 and she divests that operational control of the Force to the Chief
2 of Defence Staff who in turn devolves the, er, management of
3 the different formations to the commanding officers of each
4 formation.

5 Q. You've been extremely helpful. Now, tell us, who gave the
6 coast guard authority to go on to Paria's property on that day?

7 A. I can't say, Sir.

8 Q. But you appreciate the coast guard doesn't act on its own? It
9 has to get instructions, yes?

10 **Mr. Chairman:** Is that right? Is that right the coast guard
11 can't act on its own? It needs permission to enter somebody
12 else's land?

13 **Mr. Ramadhar:** My Lord, let me finesse that question.

14 **Mr. Chairman:** Right.

15 **Mr. Ramadhar:** I appreciate it.

16 **Mr. Chairman:** Then—

17 **Mr. Ramadhar:** Yes.

18 **Continued Cross-Examination By Mr. Ramadhar:**

19 Q. The coast guard has its normal duties, you appreciate that,
20 which all the coast guard members know, and, as a matter of
21 course coastal patrol and so, yeah? Do you know who
22 instructed the coast guard to go on site at Paria that day?

23 A. I can't say, Sir.

24 Q. No.

25 **Examination By Mr. Chairman:**

26 Q. Well, that rather presupposes that there was such an instruction.
27 Now, you need to break that down a little bit. So, are you

1 aware of whether there was any instruction at all to attend
2 Paria's site, of the coast guard? Were they instructed at any
3 point, so far as you are aware, to come on to Paria's waters?

4 A. On the 25th?

5 Q. Yes.

6 A. I'm not aware.

7 Q. You're not aware?

8 A. But I presume there—

9 Q. Well don't presume.

10 A. —has to be.

11 Q. Don't presume, it's fine.

12 A. Yes.

13 Q. You're not aware of any instruction to do so?

14 A. No, Sir.

15 **Mr. Chairman:** Thank you.

16 **Continued Cross-Examination By Mr. Ramadhar:**

17 Q. Lieutenant Commander, were you aware on the afternoon and
18 into the evening of the 25th of February, 2022 who members of
19 the coast guard were taking instructions from at Paria's
20 installations?

21 A. No, Sir.

22 Q. Of course. Did you make any enquiry of them?

23 A. No, Sir.

24 Q. No. Now, as you have told the Chairman, that the highest
25 priority is to save life. Now, as an experienced coastguardsman
26 where persons may have succumbed, well become victim of an
27 accident within—on a water environment, and that there being

1 no sight of persons above the sea's surface, would you consider
2 a rescue effort to be one where time is of the ultimate essence?

3 A. Am I to understand that you're asking if there are people at
4 sea—

5 Q. Yes.

6 A. —below the surface—

7 Q. Yes.

8 A. —and we know that they're below the surface—

9 Q. Yes.

10 A. —if time would be of the essence?

11 Q. Of, not just the—of, you know, the highest level of essence,
12 time?

13 A. Yes, Sir, according to the—

14 Q. Yeah.

15 A. —circumstances, yeah.

16 Q. And you would appreciate, then, that whatever need be done in
17 terms of risk assessment and plans and so, should be
18 accelerated and one does not then have the luxury of reflective
19 thought on all the possibilities that can go wrong? You agree
20 with that?

21 A. It depends on the situation, Sir.

22 Q. Yes, and in the situation where persons, there was certainty of
23 proof of life, in other words, one of the divers had come out and
24 say others were alive within the pipe, the proof of life, would
25 that not create a higher level of urgency in executing a plan?

26 A. It would, Sir.

27 Q. Sorry?

1 A. I say I suppose it would, Sir.

2 Q. Yes.

3 **Mr. Ramadhar:** Thank you very much, Commissioner.

4 **Mr. Chairman:** Thank you, Mr. Ramadhar. Yes.

5 **Cross-Examination By Mrs. Persaud Maraj:**

6 Q. Good morning, Lieutenant Commander. I'd like to take you
7 back to—Kamini Persaud Maraj.

8 **Mr. Chairman:** Could you introduce—

9 **Mrs. Persaud Maraj:** Kamini—

10 **Mr. Chairman:** Yeah, I was going to say introduce yourself
11 first, please?

12 **Continued Cross-Examination By Mrs. Persaud Maraj:**

13 Q. Kamini Persaud Maraj and I act on behalf of LMCS Limited.
14 I'd like you to take you back to Saturday after lunch, or, after
15 12.00 between 12.00 and 2.00 that you had with Mr. Piper. Can
16 you say exactly which room you would were taken to when you
17 would have met Mr. Piper?

18 A. That was in a building close to the terminal area. The room
19 was—it's like a long file room, two desks in it, I'm not sure
20 there was a sign on the door. It was kinda long but overlooking
21 the terminal area.

22 **Mr. Chairman:** Ground floor or first floor?

23 **Lt. Commander Maharaj:** First floor.

24 **Continued Cross-Examination By Mrs. Persaud Maraj:**

25 Q. And when you entered that room with Mr. Piper, was there any
26 other person present?

27 A. Not that I could recall.

1 Q. Was there any recording of the meeting between you and Mr.
2 Piper to the best of your—

3 A. Not to the best of my knowledge.

4 Q. —recollection?

5 A. Recollection.

6 Q. All right. You were taking notes from that conversation and
7 discussion with Mr. Piper?

8 A. Well, it was a discussion like we're having now, um, and I took
9 not at the time, um, well I took note of what he said certainly.

10 Q. You said that you would have moved to a different location, a
11 private, a more private area?

12 A. No, that was the area.

13 Q. That was the area.

14 A. Yeah, so when I—

15 Q. So it's just one area that you would have met him?

16 A. Yes. So, when I came up, I was introduced to him as the person
17 who was in charge.

18 Q. Right.

19 A. I can't remember whom by and then I went—well he pointed
20 me in the direction of this room, um, and he went there and he
21 gave me the update and—

22 Q. All right. You've been helpful.

23 **Mrs. Persaud Maraj:** That is all that I have, Mr.
24 Commissioner.

25 **Mr. Chairman:** Thank you.

26 **Mr. Peterson SC:** Thank you, Mr. Chairman.

27 **Cross-Examination By Mr. Peterson SC:**

1 Q. Morning, Commander.

2 A. Morning, Sir.

3 Q. I'm Gilbert Peterson for Paria and Heritage.

4 A. Yes, Sir.

5 Q. That Saturday when you arrived at Paria's compound, the
6 building you went—you said you went to the ICP in that—

7 A. Well, I presume it was the ICP, because that's where—

8 Q. —incident command post. Right.

9 A. Because that's where—

10 Q. Because it's near the, it's near the, the—overlooking the
11 harbour, I think you said, or the berth?

12 A. Yes, Sir, the terminal area.

13 Q. And you had a conversation with Mr. Piper?

14 A. Yes, Sir.

15 Q. I couldn't help but notice the detail of that conversation without
16 notes. Did you take notes?

17 A. Yes I did, Sir.

18 Q. All right. Of the conversation with him?

19 A. Yes, Sir.

20 Q. All right. As a coastguardsman, a commanding officer, you
21 arrived there almost a day after the initial incident. Were you
22 aware of that?

23 A. Yes, I was aware of the incident from the time I was called
24 and—

25 Q. Right, so it was almost, about 20 hours thereafter that you were
26 arriving at Paria. Isn't that so, give or take?

27 A. Maybe.

1 Q. Yes. You had no view as to the likelihood of the survival of
2 these men as a trained coast guard commander?

3 A. Well I was told by Mr. Piper that there were, in fact, people
4 who survived, at least when he mentioned to me, as I said
5 earlier today on today, right, um, that he said that, um, one
6 person came out, he didn't give me a name, and that person
7 spoke to other people who were in there.

8 Q. Yeah. No, I'm speaking about the Saturday now.

9 A. Because that's what he told me on the Saturday.

10 Q. Yeah, I know. When you're at the Saturday, being aware that
11 these men went missing in the afternoon of the Friday, you did
12 not have a view as to the likely survival of these men as a
13 trained coast guard commander?

14 A. Are you asking me my view now, Sir, or if I had a view then?

15 Q. No, then. Did you not try to muster a view at that point in
16 time?

17 A. I was given certain information.

18 Q. Yeah, I know that. But you, having been given this
19 information—

20 A. The information I—

21 Q. —that a man came out the pipe and all of that.

22 A. The information—yes, so the information that I got on the day
23 before, as I mentioned, initially spoke to an incident that say
24 people missing.

25 Q. Right.

26 A. I later became aware that people were in some sort of pipeline
27 for some works being done.

1 Q. Right.

2 A. I was told later in the evening, by Ms. Balkissoon I think it was,
3 that somebody was taken out of the pipeline.

4 Q. Yes, we got all—yeah, we got all of that. I don't know if I
5 losing it. We got all of that. You visited Paria around midday
6 just after lunch I think you said on the Saturday.

7 A. Yes, Sir.

8 Q. At that stage, knowing all that you know, up to that point, you
9 did not consider a view as to whether those men would have
10 survived, having been missing for about 20 hours now? You
11 didn't think about that?

12 A. Yes, Sir.

13 Q. Having thought of that, what did you do with that thought when
14 you were talking to Mr. Piper?

15 A. Well, as I mentioned when Mr. Piper was exploring the
16 different options, he was exploring options for rescue, one of
17 which I mentioned in terms of was cutting the pipe which he—

18 Q. That's not my question, you know. We got all of that already.

19 A. Well I'm answering the question, Sir, so—

20 Q. Well—

21 A. —which was, did I form an opinion as to it, and the opinion I
22 had, up to that point when you mentioned that, was that there
23 was the possibility of surv—I would not consider—I have no
24 ability to pronounce people alive or dead.

25 Q. We know that. Neither do I, but I am asking you as a trained
26 commander if you had a view as to the likelihood of the
27 survival of those men having been missing in a watery situation

1 for about 20 hours, if you had that view you told me, yes.

2 A. Yes.
