24 Holder received a telephone call advising of an incident at Paria
25 and that it required his support, as a result of which, at 5.33
26 p.m. he reported to Paria's shipping building spending most of
27 the time at the incident command post, ICP. He said he

1 attended meetings and discussions held by the ICT and Mr.
2 Collin Piper as incident commander. He also described his first
3 meeting with the ICT that Friday at 6.08 p.m. during which he
4 was the only Heritage representative present and said that there
5 was a scribe taking note of the discussions.

6 Mr. Flemming-Holder says that he reported the ICT
7 discussions to the Heritage executive team comprising its CEO,
8 Arlene Chow and Chief Operating Officer, Patricia King. Mr.
9 Flemming-Holder describes being part of some of the ICT
10 meetings and that plans changed as scenarios did, so that after
11 the rescue of Christopher Boodram the ICT's plans also
12 changed to search and rescue in the pipeline.

13 He explains that following Boodram's rescue the ICT
14 discussed different options and plans including, one, to
15 determine the conditions inside the pipeline via a borescope and
16 cameras, two, to send in a rescue team into the pipeline, three,
17 to pump down the line so that it would be emptied of fluid and
18 then to send a rescue team inside the dry pipeline and, four, to
19 cut the pipeline to extract the divers.

20 Mr. Flemming-Holder said that on Friday at 6.15 p.m. he
21 attended a virtual meeting of Heritage's executive team to
22 update them and was instructed to provide whatever support
23 was required by the ICT and to focus on logistics. Mr.
24 Flemming-Holder said he then requested a dive vessel and
25 Heritage responded by sending two vessels, the Gulf Stream
26 and the Spearfish. Mr. Flemming-Holder also made requests
27 for underwater lights, confined space entry experts and pumps.

1 He also explained that the main risks to a person entering
2 the pipeline was becoming stuck, and he began to document the
3 draft risk assessment but was called back to the ICP by Paul
4 Yearwood and never completed the risk assessment. He said
5 that on Friday at about 8.00 p.m. he was in a room with
6 someone holding a cell phone that was on speaker, and he was
7 informed that the person on the line was Christopher Boodram
8 who had been rescued and he heard Boodram saying that, one,
9 he was 80 feet down the horizontal side of the pipeline, two,
10 there was only one person behind him, three, he passed young
11 Kaz who looked broken up, four, he got through and got to the
12 vertical section of the pumps, and, five, Faizal Kurban helped
13 him.

14 Mr. Flemming-Holder recalls that the call lasted about 3
15 to 5 minutes and Collin Piper led the conversation which was
16 heard by the other persons in the room, including Michael Wei,
17 Randy Archbald, Mushtaq Mohammed, Paul Yearwood and
18 Nerissa. Heritage's Dive Supervisor, Rolph Seales, arrived at
19 about 9.00 p.m. and Mr. Flemming-Holder took him to the ICP
20 and updated him and was informed that two dive teams were on
21 their way. Mr. Flemming-Holder then described events in the
22 ICP and discussions in relation to Mitchell's Diving, Offshore
23 Technology Services Limited, that's OTSL, HHSL and Eastern
24 Divers Limited.

25 He said that on Saturday, 26th February, 2022 at about
26 1.08 a.m., he recalls Rolph Seales informing the ICT that based
27 on his review of the video footage that the dive supervisors

1 from OTSL and Mitchell's said that the risk was too high to
2 deploy their divers. Later, Mr. Vierra of HHSL, after
3 unsuccessfully deploying their line crawler, said that HHSL
4 was unable to perform a rescue of the divers.

5 Later, on Saturday 26th February, 2022 he says, in
6 preparation for returning to Paria for the night shift, he called
7 Rawle Arneaud, Heritage's operations and maintenance
8 manager, who told him that Eastern Divers had said, based on a
9 mock-up of the confined space entry into the pipeline that
10 Eastern Divers had prepared, they were not able to perform a
11 rescue. He reported to the ICP for the night shift at about 10.03
12 p.m. but there was not much in terms of logistic support for him
13 to provide at that stage.

14 Mr. Flemming-Holder continued providing logistic
15 support to the ICT on Sunday, Monday, Tuesday, Wednesday
16 and finally Thursday 3rd March, 2021, during which time he
17 updated the Heritage executive team.

18 Mr. Flemming-Holder, do you agree that what I have
19 presented is a fair and accurate summary of your witness
20 statement dated 22nd September, 2022 as amended today?

21 **Mr. Flemming-Holder:** Yes, with one clarification. So, when
22 I left, this is Rawle Arneaud's feedback, when I left that
23 Saturday morning the instructions to Eastern Divers was to
24 perform a mock-up. When Rawle gave me the handover he
25 said that it, um, it was too risky for them to enter. They never
26 did the mock-up so that's the just one correction.

27 **Examination By Mr. Chairman:**

1 Q. Can I be clear, is that a correction to this statement or a
2 correction generally?

3 A. So, that's a correction to really to the truth basically. So when I
4 left Paria, right, the last instruction—

5 Q. Which day are we talking about?

6 A. This is Saturday.

7 Q. This is on Saturday, right?

8 A. Correct. So, when I left Paria the last—in my handover to
9 Rawle, Eastern Divers was supposed to do a mock up in a 30-
10 inch to ensure that they could perform the rescue, right?

11 Q. Yes.

12 A. When I was handed over, Rawle told me that they could not
13 perform the rescue so I thought that they did the mock-up, so
14 I'm just correcting the statement based on that fact.

15 Q. Okay, thank you.

16 A. No problem.

17 **Mr. Chairman:** Yes, Mr. Maharaj.

18 **Examination By Mr. Maharaj SC:**

19 Q. Mr. Flemming, good afternoon.

20 A. Good afternoon, Sir.

21 Q. I just want to ask you a few questions. At paragraph four of
22 your witness statement, you said you served as an incident
23 commander at Heritage from 2021 to January, well, to January
24 2022.

25 A. That's correct.

26 Q. I want some help from you. From your experience as an
27 incident commander, would you say that the incident command

1 team, one of the main purpose of it is to prepare for an
2 emergency?

3 A. Yes it is, by conducting drills and also checking their
4 emergency response plans.

5 Q. And you conduct drills in respect of the—a possible emergency
6 scenario?

7 A. So it's based on risk scenarios, that is correct.

8 Q. Yes. And in Heritage, whilst you were there, how often you
9 would say the incident command team performed and conduct
10 drills?

11 A. So you have two factors in terms of drills, right? So you have
12 your field operations team, this is Heritage, you have your
13 incident command team and you have your business continuity,
14 your BST.

15 **Examination By Mr. Chairman:**

16 Q. Sorry, hang on. I want to make a note of that. Field operations
17 team?

18 A. Field operations team which will deal with emergencies on a
19 site, right?

20 Q. On the site?

21 A. Correct. Your IMT is called in based on the extent of the
22 emergency. If your FOT cannot handle that emergency and
23 your BST is also called in based on business continuity.

24 Q. Field operations team, what was the other team?

25 A. IMT and BST.

26 Q. Thank you.

27 **Continued Examination By Mr. Maharaj SC:**

1 Q. So the field operation team would be the team that would have
2 the drills in respect to, let's say if you have a Delta P?

3 A. So, your field operations—so you're talking Heritage here now,
4 right?

5 Q. I know, I talking Heritage, yes.

6 A. So in your field operations team you will drill based on a drill
7 matrix. All right? So you may drill based on severe weather,
8 fire, gas release, um, et cetera, and that is to really check
9 preparedness, maintaining a state of readiness to ensure that
10 what are the gaps from your emergency response, you highlight
11 them and you close them out so that you always remain ready
12 in the event of an emergency.

13 Q. Well, let me ask a more focused question, all right?

14 A. Sure.

15 Q. As far as Heritage concerned, did it ever consider there would
16 be a scenario for Heritage to have a drill, I'm not talking about
17 Paria, for Heritage to have a drill for Delta P?

18 A. It would be based on a job or project. If you have a job or a
19 project you go through based on what is the risk, right, you look
20 at what are the scenarios, what is the methodology, you go
21 through that and then you develop an ERP to suit the job or
22 project.

23 Q. Yeah. Well, let me ask you this, then. Has Heritage, since you
24 were there as an incident commander of the team, ever had a
25 drill for a scenario of a Delta P hazard?

26 A. No.

27 Q. No. Okay.

1 **Examination By Mr. Chairman:**

2 Q. Mr. Maharaj asked you a few questions back how often you
3 would drill.

4 A. So, in Heritage we drill at least once a month, right? In prior
5 companies where I would have worked we would drill every
6 two weeks, two drills per week. So I was the—I've been an
7 incident commander probably for the last 11 years in different
8 companies.

9 Q. The importance of drilling, you've explained, because you need
10 to be ever ready in a hazardous environment in which you're
11 working?

12 A. Correct. You live on a time bomb.

13 Q. Yeah, thank you. Well put if I may say so. So there's really no
14 difference in these terms, when you're dealing with a site that is
15 Heritage's or indeed a site that is Paria's?

16 A. Correct. You need to do drills in order to make sure that you
17 can deal with emergencies. Emergencies are your last line of
18 defence and you need plans to make sure—

19 Q. Sure.

20 A. —that you could deal with them.

21 Q. So there hasn't been a drill that your—let's say you joined a
22 firm and you discover in your role in that firm as operations
23 manager, that there hadn't been a drill for a year, what would
24 be your reaction?

25 A. I would intervene with CCMER, we'd sit down with the
26 frontline teams and we would make sure and start drilling.
27 Would attend the drills, would see what are the feedback and

1 see what are the closure of actions.

2 Q. Yeah. And what would be your initial reaction on discovering
3 that there hadn't been a drill for a year?

4 A. Well you understand why there's no drill and then you show the
5 methodology of why—the importance of drilling.

6 Q. Thank you very much.

7 **Examination By Commissioner Wilson:**

8 Q. Good afternoon, Mr. Flemming.

9 A. Good afternoon.

10 Q. In all those drills that you've just identified at Heritage, did you
11 ever drill with Paria in a scenario as supporting Paria?

12 A. Negative, no.

13 Q. Thank you.

14 **Continued Examination By Mr. Maharaj SC:**

15 Q. At paragraphs 16 and 17 of your witness statement, you stated
16 that you refer to being requested by Collin Piper and Randy
17 Archbald to do a risk assessment for the possible rescue of the
18 divers from inside the pipe. Okay?

19 A. That is correct.

20 Q. Was that risk assessment ever done?

21 A. So the risk assessment was started, so. when Rolph came he
22 was briefed by myself, Paul and then he was briefed by the IC,
23 which is Mr. Collin Piper. After that he asked for us to do a
24 risk assessment since we had the dive expert on board with us.
25 We then left that building, the shipping building, and went to
26 HSE which is the HSE building which is probably 20 feet from
27 the building, and then we sat down, we contacted Ms. Catherine

1 Balkissoon and we had a discussion and started the risk
2 assessment, yes. So item number 17 details—

3 **Examination By Mr. Chairman:**

4 Q. Sorry, I want to keep a note of this because it's quite important.

5 A. Yes.

6 Q. Just so that I understand it you're using first names, not
7 everybody is as familiar with them as you are

8 A. Okay. So—

9 Q. So call and Paul and Rolph.

10 A. So Collin Piper, Randy Archbald, is who made the request.

11 Q. Right.

12 A. Paul Yearwood and Catherine Balkissoon.

13 Q. Right.

14 A. Rolph, myself and Paul went to the safety office to start the risk
15 assessment.

16 Q. Thank you.

17 A. Paul then left, Rolph, myself, Catherine and another person on
18 the line and we were doing a risk assessment looking at the
19 different scenarios with respect to how could you safely rescue
20 somebody within the pipeline.

21 Q. Sure.

22 A. That started at approximately 9.10 p.m. that night.

23 Q. Nine ten p.m.?

24 A. Correct.

25 Q. On the Friday night?

26 A. That's correct.

27 Q. So—it, it—I mean, after Paul had left it's you, Rolph and

1 Catherine Balkissoon?

2 A. And it had another person on the line, I can't remember their
3 name, as well with Catherine that was on the barge.

4 Q. Right. But, but they—those two were together on the barge?

5 A. Correct.

6 Q. Do you remember who they represented, even if you can't
7 remember their name?

8 A. So I know Catherine represented Paria.

9 Q. Right.

10 A. But I can't remember who was the next individual but we were
11 doing a risk assessment at that time.

12 Q. Right. Was it someone who was a diver?

13 A. We had Rolph who was the diver.

14 Q. Rolph who was the diver?

15 A. At that point in time.

16 Q. The person at the other end was it from a diving company, or
17 you—

18 A. I can't remember.

19 Q. All right, very well.

20 **Mr. Chairman:** Thank you.

21 **Continued Examination By Mr. Maharaj SC:**

22 Q. Right, now in your statement you said the risk assessment was
23 not done because this is because the need for the risk
24 assessment was overtaken by what emerged in the video
25 footage which was obtained by the ICT of inside the pipeline as
26 described later in the statement.

27 A. So just to correct that, so while we were doing the risk

1 assessment, right, Paul came back into the room and summoned
2 myself to the ICT. This is for the call with Christopher
3 Boodram. Because at that point in time we did not run footage
4 as yet. The only footage that was run was the PISL camera
5 which was 7.30 and that was—the light, we didn't get any
6 footage on that at that point in time.

7 Q. Well, in this statement you said the risk assessment was
8 overtaken by what emerged because of the video footage which
9 was obtained. At no place you said here that the risk
10 assessment continued.

11 A. So the—so at 9.10 we started the risk assessment, just to give a
12 timeline—

13 Q. Just answer me the question. At paragraph 17—

14 A. Yeah.

15 Q. —did you, did you say in your witness statement that the risk
16 assessment process continued?

17 A. When I went back to ICT the risk assessment process was not
18 continued because I was put on other duties.

19 Q. Okay. Now, um—

20 **Examination By Mr. Chairman:**

21 Q. So it stopped?

22 A. It stopped yes.

23 Q. And it stopped because Mr. Yearwood came to see you and said
24 we've got some video footage?

25 A. No, he came to see me to take me back to the ICT. That's when
26 way they had the discussion with Christopher Boodram around
27 close to ten o'clock.

1 Q. Right. So you'd already spend what, the—

2 A. About 35 to 40 minutes working on the risk assessment.

3 Q. Right spent 40 minutes working?

4 A. That's correct.

5 Q. Was that in writing in any place?

6 A. It was typed on a PC.

7 Q. Thank you.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Now at paragraph 16 you said that the ICT communicated with
10 Catherine from time to time words to that effect. Well, in
11 fairness to you:

12 "A request was made by the ICT, Collin and Randy for
13 Paul, Catherine Balkissoon who was offshore, Rolph ant
14 I to do a risk assessment and there was the"—okay and
15 I'll read it for you—"for a possible rescue of the divers
16 from inside the pipeline. This is when I left the sipping
17 building to go to the safety office. We contacted
18 Catherine to join the discussions."

19 A. That is correct. So Catherine was contacted and we were
20 looking at the risk with respect to sending someone into the
21 pipeline, manoeuvrability, et cetera, at that point in time.

22 Q. And you contacted Catherine who was at berth 6?

23 A. Paul would have contacted Catherine who was at berth 6, and
24 she—

25 Q. Because you knew as a member of the ICT then that Catherine
26 was in communication with the LMCS divers?

27 A. She was at the berth. that's correct.

1 Q. And she was giving feedback to the ICT as to what the LMCS
2 divers were requesting?

3 A. She was giving feedback with respect to the risk assessment
4 because at that point in time I was not in ICT.

5 Q. Whilst you were at the ICT did you have any feedback from her
6 in—

7 A. Not directly. That would have come through either the
8 planning section chief, Michael Wei, or the IC. The first time, I
9 had contact with Catherine Balkissoon was to do the risk
10 assessment in the safety office.

11 Q. Well did she make any input in that risk assessment?

12 A. Yes she did. We started the risk assessment, we started the
13 discussion and her feedback was critical in terms of finding out
14 what was going on on the site.

15 Q. Well did she tell you, as part of that, that the LMCS rescuers
16 wanted to do a rescue?

17 A. Not at that point in time because, Sir, you need to assess before
18 you go to rescue.

19 Q. Now—

20 A. So that's why we were doing the risk assessment to assess.

21 Q. So around what time was this when this assessment was
22 requested?

23 A. Nine-ten.

24 Q. Nine-ten. Up to that time, did you have any information from
25 Catherine?

26 A. No.

27 Q. Did the ICT?

1 A. I didn't have any information from Catherine. I dealt strictly
2 with Mr. Michael Wei and Collin Piper based on requests for
3 resources.

4 Q. So you had no information about any rescue efforts?

5 A. Not at that time, no.

6 Q. Not at that time. Okay. Now you said you talked about the
7 video footage. I want to go to that—

8 **Mr. Chairman:** Before you do that, Mr. Maharaj.

9 **Mr. Maharaj SC:** Right.

10 **Examination By Mr. Chairman:**

11 Q. You said a moment ago that somebody was typing this
12 particular plan.

13 A. Yes.

14 Q. As far as they got—

15 A. Yes.

16 Q. —the risk assessment into a PC.

17 A. Uh-huh.

18 Q. Who was typing that?

19 A. Me.

20 Q. You?

21 A. Yes.

22 Q. Right. Is it still on your PC?

23 A. I would have to look for it.

24 Q. Would you mind doing that?

25 A. I will try.

26 Q. Right. Has no one asked you for this before?

27 A. No.

1 Q. No, all right. Well I'd be grateful if once you're finished here
2 today, I don't ask you necessarily to come back to the hearing,
3 but if you could find it for us please?

4 A. No problem.

5 Q. Send it to your lawyers. They'll then send it to, us all right?

6 A. Okay.

7 **Continued Examination By Mr. Maharaj SC:**

8 Q. Now, in respect of the video footage, you dealt with that at
9 paragraphs 37 and 38 and 39 of your witness statement.

10 A. That's correct.

11 Q. And at paragraph 37 you referred to HHSL Safety Systems
12 Limited? You see that on the slide?

13 A. So there were two video footage.

14 Q. Right.

15 A. So if you go back up to—

16 Q. Okay, I'm talking about the—

17 A. Okay, no problem.

18 Q. Okay. The, the one that you are talking about at paragraph
19 37—

20 A. No problem.

21 Q. —you would have seen there that you refer to Hull, right?

22 A. No that's not Hull that HHSL.

23 Q. Sorry, HHSL. All right. And then at paragraph 38 you said
24 Mr. Vierra of HHSL subsequently reported to the ICT in my
25 presence that they inserted the line crawler at berth 6 and
26 attempted to dislodge the dive cylinder but was unsuccessful.

27 A. Yes, that's correct.

1 Q. Now, the video the video footage, you saw the video footage?

2 A. Of HHSL?

3 Q. Yes.

4 A. Not at that time. So, as I said, there's two video footage.

5 Q. I know. Did you ever see the video footage of HHSL?

6 A. Way after.

7 Q. Huh?

8 A. After, another day.

9 Q. After. When?

10 A. Probably the Saturday afternoon or something.

11 Q. The Saturday afternoon. Now—but you have put in your
12 witness statement that the crawler was unable to dislodge the
13 dive cylinder.

14 A. That is what Mr. Vierra told Mr. Collin Piper that I overheard,
15 yes.

16 Q. So you would not know as a fact whether the crawler pushed
17 the video—pushed the tank and it caused the blockage?

18 A. No. The, the, the crawler would not have caused the blockage.
19 So if you go back to my statement, Atlantic LNG would have
20 run cameras, they arrived at 10.45, and at—before eleven
21 o'clock they came back and provided feedback that there was a
22 lodged cylinder at 45 feet into the horizontal section of the line.
23 HHSL came after Atlantic LNG, so there were two independent
24 video footage stating that there's blockage in line.

25 Q. Well, I want to—you said, um, I just want to take you to what
26 the operators of the crawler said about the crawler. If I go to
27 315—3155 of the supplemental witness statement bundle?

1 **Mr. Chairman:** Page, sorry?

2 **Mr. Maharaj SC:** I'm sorry, 3153.

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. It's dated December 16th, 2022. This statement, right? And its
5 heading: "The position of Crawler Operator", right, the position
6 and if you look at the second to last paragraph:

7 "At 4.02 a.m. we were looking at ways of moving the
8 tank. The operator began to gently push the tank in
9 attempts to get as much distance as possible into the pipe.
10 After several attempts in pushing the tank, the operator
11 was able to move the tank approximately 9 feet, then an
12 additional 7 feet and finally 3 feet for an overall total of
13 19 feet."

14 You see that?

15 A. Yes, I'm seeing it.

16 Q. And then if you go to page 3154—

17 A. Uh-huh.

18 Q. —on the first par—well the sec—at the beginning of the words:

19 "Our persistence resulted in an additional 2 to 3 feet
20 forward being achieved, however the tank showed
21 negligible signs of changing the orientation from a
22 vertical to a horizontal position which could have given
23 the crawler the clearance it needed to pass the tank. At
24 4.30 a.m. and 200.3 feet inside the pipe, having
25 exhausted all attempts to dislodge the dive tank, the
26 recording was stopped."

27 So, this shows that the crawler was pushing the tank for some

1 distance. Would you agree with that?

2 A. Based on the report, yes.

3 Q. Yes. Now it also showed, if I refer you to page three one five
4 five, yeah, this is for the 1st of—this would be for the—is it the
5 3rd? Sorry, the 1st of March which would be the Tuesday, at
6 page three one five five, if you look at the fourth paragraph:

7 “We then quickly realized that pulling excess tether out
8 of the case would be best suited as the rubber tracks on
9 the crawler were not getting sufficient traction due to the
10 residual oil on the surface of the pipe.”

11 So this suggests to me, and from what I read here, that it
12 couldn't go further because the traction on it, it couldn't get the
13 traction because of the oily substance. Am I correct?

14 A. Well based onto report, it suggests that, yes.

15 Q. Now, the, the—I also want to show you what was the state of
16 inside the pipe according to the note made by the—made at the
17 IMT. And if I take you to Volume II of the supplemental core
18 bundle—

19 **Mr. Chairman:** Page one five seven two?

20 **Mr. Maharaj SC:** At page one five four one.

21 **Mr. Chairman:** Four one?

22 **Mr. Maharaj SC:** It's at—at the bottom of the page it's at
23 202—yeah, this will be 2.02 a.m.

24 **Mr. Chairman:** So these are the handwritten notes.

25 **Mr. Maharaj SC:** Yes it is.

26 **Mr. Chairman:** Of the IMT?

27 **Mr. Maharaj SC:** Yes.

1 **Mr. Chairman:** Yes, thank you.

2 **Continued Examination By Mr. Maharaj SC:**

3 Q. And you see at 202 it says:

4 "Clear water, no sign of oil, no air space, difficult to tell
5 if any air space because of the position of camera."

6 A. I did not see this handwritten note. I could only report on what
7 I heard Mr. Vierra tell Mr. Collin Piper in my presence and
8 that's what I heard.

9 Q. Well this was the earlier, this was the earlier, um, note. Well,
10 this was the note of the Atlantic LNG camera because of the
11 time.

12 A. So based on the report that Atlantic LNG would have given to
13 Collin Piper in the room that I was in, was that they found a
14 tank lodged at 45 feet in the horizontal and the camera could go
15 no more. That is what I heard. And that's in my report.

16 Q. Okay.

17 **Examination By Mr. Chairman:**

18 Q. Can I ask you about that, you're a diver, are you?

19 A. No, I'm not a diver.

20 Q. You've never been diving yourself?

21 A. No, but I've overseen and supervise lots of diving activities
22 from tight space, et cetera.

23 Q. You're familiar with—

24 A. Yes.

25 Q. Can I just ask you, we've got 30-inch—you know the size of a
26 tank?

27 A. Yes.

1 Q. An air tank that's being used by scuba divers, don't you?

2 A. Correct.

3 Q. Right. And, um, well I suppose about from the desk about this
4 tall [*Demonstrating by raising hand above head*]?

5 A. Yes.

6 Q. Yes? Round what I suppose 10 inches maybe?

7 A. Correct.

8 Q. Something like that, isn't it? If it's full it's heavy, isn't it?

9 A. That's correct.

10 Q. And obviously if it's empty it's very light?

11 A. Correct.

12 Q. If it's full in a pipe filled with fluid, would it sit on the bottom
13 of the pipe?

14 A. I think it should.

15 Q. Yeah. And if it was empty, would it be floating?

16 A. It should be, it should have some level of buoyancy, yes.

17 Q. Yes, I mean it be—because, because now it's empty. It's got—
18 it's obviously much lighter and so the equilibrium between the
19 fluid that it's in and the weight of the tank, it would just float
20 along, wouldn't it?

21 A. It should.

22 Q. Right. So, two things we can understand, from what we've got
23 here, is that if the pipe was sitting on the bottom of the—if the
24 tank was sitting on the bottom of the pipe full, and the whatever
25 scope was being used was slipping because it's slippery, we
26 could understand why it probably couldn't push the tank along
27 very much. If on the other hand it had been used and was

1 floating, it would be relatively easy to push in the water,
2 wouldn't it?

3 A. Correct, but the first camera that Atlantic LNG sent in did not
4 have any traction or any push, just basically go into provide
5 video feedback of what is in the pipeline.

6 Q. Yes.

7 A. That indicated that the—a cylinder was blocking the pathway
8 and it was lodged.

9 Q. You see I struggle a little to understand how it could be lodged
10 on its own bearing in mind sort of what we're talking about. I
11 mean, how would that lodge itself inside a slippery 30-inch
12 pipe? I just—

13 A. That's what the footage give, showed, Sir.

14 Q. Well, what it did was to come up against—

15 A. A cylinder.

16 Q. —a tank?

17 A. Correct.

18 Q. Whether there was anything else behind it is another question,
19 isn't it?

20 A. Right and the pipe crawler also confirmed that there was a, that
21 there was a tank that was lodged as well, based on the feedback
22 that—

23 Q. No, no, no I follow what you're saying.

24 A. Right.

25 Q. What I'm asking you is for you to deduce what you can from
26 that. You see, if you've got a heavy tank which is full of air
27 and it's sitting on the bottom of the pipe and you've got some

1 sort of camera, either with crawlers or not, and you can't push it
2 out the way because it's going to be heavy isn't it?

3 A. Correct.

4 Q. But if it's been used and it's floating in the pipe, then it would
5 be relatively easy to push?

6 A. That is correct.

7 Q. You would just do that and it would be able to shoot along the
8 pipe, wouldn't it?

9 A. That is correct.

10 Q. Unless there was something the other side of it? Do you
11 follow? So when perhaps it got to the point, whichever camera
12 it was, and found that this tank couldn't move any further,
13 perhaps that was because there was something behind it? Was
14 that considered?

15 A. So that was thought of, but we had no verifiable evidence
16 because we never got around the tank.

17 Q. No but it's—I appreciate you couldn't get the other side of it.
18 That was the problem. You couldn't get the camera the other
19 side, but it doesn't prevent you from making deductions from
20 the evidence that you had. The evidence was, "We, we've a
21 encountered a tank." One of them I think you could actually
22 read the numbers on the tank, the fluid in the pipe was so clear
23 you could still—you could actually read the numbers on the
24 tank. Did you know that?

25 A. That's the correct, yes.

26 Q. Right. So you've got that far so it's almost certainly mostly
27 water, right? That tank is in mostly water. It's either sitting on

1 the bottom or it's got some buoyancy, one or the other?

2 A. Correct.

3 Q. If it's sitting on the bottom, and I've seen the video footage, it's
4 not, right, so it must have some buoyancy, there must be
5 something behind it to stop you being able to push it, don't you
6 think?

7 A. Correct, and that was thought of as well.

8 Q. Right. What do you think that might have been?

9 A. It could have either been a person or a plug.

10 Q. A plug?

11 A. It could—well it had to be something. It could have been a
12 person. The thinking was—

13 Q. Well—

14 A. —it could have been a person but we was not sure.

15 Q. Let's be clear, right, again using our best skills of deduction the
16 plug is sucked or pushed into the pipe?

17 A. Correct.

18 Q. Followed by—

19 A. Persons.

20 Q. —a whole range of tools and people.

21 A. Right.

22 Q. Right? So it was unlikely that this tank was coming up against
23 the plug?

24 A. So it could have been a person, yes. It was unknown at that
25 point in time.

26 Q. Of course it's unknown. Of course it's unknown. But the
27 question is, what could it reasonably be?

1 A. So the thinking was it could have possibly been a diver but
2 again there was no verifiable evidence to basically confirm that.

3 Q. What else could it be? Stab a guess.

4 A. I don't want to guess.

5 Q. No. All right, that's because it couldn't be anything else
6 realistically, could it?

7 A. I, I don't know. I can't say. It's not verifiable from the video
8 footage and I don't want to say something that I'm not sure
9 about.

10 Q. No, no. I, I—look, nobody's going to hold you to this, Mr.
11 Holder. The fact is, though, is that your task that day was to
12 assist them has best you could—

13 A. Correct.

14 Q. —in coming to a conclusion about the condition of the pipe and
15 whether a rescue was achievable.

16 A. That's correct.

17 Q. You'd sent cameras down, taken some time to achieve that but
18 you've got some cameras down into the pipe. You've
19 encountered these tanks and it's described as lodged or wedged
20 or various different descriptions given to it, but it's, it's really
21 difficult to conceive of a tank of its own just lodging itself in a
22 slippery 30-inch pipe, isn't it?

23 A. Well—

24 Q. Or so?

25 A. That's the footage that we saw, Sir, and that's the deduction
26 that we made.

27 Q. No. Well the deduction wasn't made. You didn't make any

1 deduction. All you said was it stopped there. The deduction to
2 be drawn from it is that there's something behind it stopping it
3 going any further. That's the deduction, isn't it?

4 A. And that was discussed, yes.

5 Q. And discussed to what end?

6 A. In terms of there's a tank that was lodged, there's the possibility
7 that there is a person or something behind there, which could
8 not be confirmed via camera.

9 Q. Right, but you—the possibility, well it was more than a
10 possibility, do you not agree, a probability?

11 A. It's probable but not confirmed.

12 Q. Unconfirmed but probable?

13 A. Correct.

14 Q. That would be a fair deduction to arrive at, wouldn't it?

15 A. Yes.

16 Q. So, perhaps, at that point whatever distance it got to at that
17 stage, there was a body or someone alive, who knows?

18 A. At that time that data was not confirmed or verified, Sir.

19 Q. So the likelihood is, isn't it, that the tanks of air would have had
20 the spiders attached to them, wouldn't they? You know what I
21 mean by the spiders?

22 A. Yeah.

23 Q. The various bits that you put in your mouth, the depth gauge,
24 all of that stuff yes, right?

25 A. Correct.

26 Q. So perhaps, since when you look at the video footage, all you
27 can see is the side or the back end of the tank, there was a, a, a,

1 a, er, spider attached to a man?

2 A. That was not confirmed.

3 Q. Well of course it's unconfirmed. Of course it's unconfirmed,
4 but what I'm asking you is what deductions were reasonably
5 made as to why it was that inside a 30-inch slippery pipe a tank
6 appeared to be wedged or stuck? What were the, what were
7 the—well did you arrive—the conclusion can I suggest that the
8 only reasonable conclusion could be that there was a man the
9 other side of it?

10 A. Possibly, yes, and that was discussed as I said.

11 Q. Well, it was more than possible. I think we'd already agreed it
12 was probable.

13 A. Correct.

14 Q. All right. Okay, thank you.

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. But the risk assessment was stopped because of the video
17 footage?

18 A. No, the risk assessment, the process was stopped because of the
19 call by Boodram. When I reported to ICT after the call, I was
20 instructed to follow up on some other items and I never
21 resumed the risk assessment because the thinking at that time
22 was, after the video footage, that the dive companies would
23 complete the risk assessment, Sir.

24 Q. But that's not what you said at paragraph 17. You said:

25 "This is because the need for the risk assessment was
26 overtaken by what emerged in the video footage which
27 was obtained by the ICT of inside the pipeline and

1 described later in the statement.”

2 And later in the statement, later in the statement you described
3 at paragraphs 37, 38 and 39 that Mr. Vierra subsequently
4 reported to the ICT in my presence that they insert the line
5 crawler at berth 6 and attempted to dislodge the dive cylinder
6 but was unsuccessful. So the, the risk assessment was stopped
7 because the ICT interpreted the footage.

8 A. No, that’s incorrect. So, the time that we were doing the risk
9 assessment, my timing is probably a bit off, was 9.10 to around
10 9.15, 9.45, right? At that time only one camera was run into the
11 line and that was PISL and there was no visibility. Atlantic
12 LNG reported to Paria around 10.45 and that was the first time
13 that they had actual footage to see, and that was not available
14 until around eleven o’clock, right?

15 After that was looked at, Rolph was deployed to OTSL and Mitchell’s
16 to see if they could view the footage to basically establish a
17 rescue. The first sign of any video footage was after Atlantic
18 LNG run their cameras, not before.

19 **Examination By Mr. Chairman:**

20 Q. Right. But what, what, what Mr. Maharaj is asking you is,
21 well, you might be saying that now. That is not what you say in
22 your statement, so you need to correct your statement. Is that
23 your position.

24 A. Yes, Sir.

25 Q. Because you understand, don’t you, Mr. Holder, that this
26 Enquiry asked of Paria for its representatives and Heritage for
27 its representatives to provide statements. You’re represented by

1 the same—

2 A. Correct.

3 Q. —legal team, aren't you?

4 A. Yeah.

5 Q. Now, you were invited to come for an interview, you decided
6 on, no doubt on advice, and I don't wish to go behind that, not
7 to. All right? So you wrote your statements and sent them to
8 us.

9 A. Correct.

10 Q. Presumably you took some care and consideration in the
11 writing of those statements.

12 A. Yes.

13 Q. And indeed in your case you wrote your statement as late as the
14 22nd of September of this year. Correct?

15 A. Correct, yeah.

16 Q. [*Crosstalk*] Sorry? Last year, yes, forgive me. Last year—

17 A. Yeah.

18 Q. —22nd of September last year, and did you have any notes or
19 anything, any other documents to work with in the writing of
20 that statement?

21 A. Just some light notes, et cetera, in terms of, um, looking at and
22 writing back the statement, also checking with the scribe and
23 some of the conversations had with the Heritage team.

24 Q. Right. So you did what you could to access such information as
25 you could—

26 A. Correct.

27 Q. —in order to assist you to get this right?

1 A. Correct.

2 Q. And you did that because you knew it was important?

3 A. Correct.

4 Q. And then you say, you see, as Mr. Maharaj has pointed out to
5 you at paragraph 17:

6 "I began to document the draft risk assessment."

7 That's you telling me you're putting it on the PC?

8 A. Correct, yeah.

9 Q. "However, we were called back to the incident command
10 post by Mr. Yearwood and never completed the risk
11 assessment."

12 A. That is correct.

13 Q. And that's all correct, isn't it?

14 A. That is correct. The last part is where I erred.

15 Q. Yes. So Mr. Yearwood interrupts you, your task as you were
16 given, he interrupts you, and, um, you never actually complete
17 it as a result of that interruption?

18 A. Correct, I reported to the ICT.

19 Q. Just take the statement as it says it. This, you say, is because,
20 so you're now giving an explanation:

21 "This is because the need for the risk assessment was
22 overtaken by what emerged in the video footage that was
23 obtained by the ICT of inside the pipeline as described
24 later in this statement."

25 Right? So when you're writing this yourself, you know you're
26 going to go on to describe this later in the statement and you
27 say that the reason Mr. Yearwood interrupts your putting

1 together a risk assessment, he interrupts that, you get called
2 back to your, to the—the office—

3 A. To ICT.

4 Q. —to the ICT, and the reason why he's interrupted you is
5 because the whole process was overtaken by virtue of the video
6 footage that had arrived?

7 A. We didn't run any video footage. The only video footage that
8 was run at that time was PISL.

9 Q. I'm going to come to what you say the position is now, right?

10 A. Correct.

11 Q. Are you saying that that sentence, "This is because the need for
12 the risk assessment was overtaken by what emerged as a video
13 footage was obtained by the ICT inside the pipeline as
14 described later in this statement", are you saying that that
15 sentence is wrong?

16 A. At the time, yes. At the time I was—

17 Q. At the time of what?

18 A. So, based on the timing, right, from 9.00 to 9.50 we did not run
19 any video footage that was—that you could look at.

20 Q. Right. Just pause there. That sentence is wrong?

21 A. Yes it is.

22 Q. Right. So I can happily scratch that out—

23 A. Yes, Sir.

24 Q. —as having been completely wrong?

25 A. Yes, Sir.

26 Q. All right? So when you say in the previous sentence:

27 "I began to document the draft assessment, however we

1 were called back to the incident command post by Paul
2 Yearwood and never completed the risk assessment”—
3 why were you being called back to the command post by Mr.
4 Yearwood?

5 A. That was because of the call to Mr. Boodram.

6 Q. Right. So you were being called back in order to be party—

7 A. Yes, Sir.

8 Q. —to the call to Mr. Boodram?

9 A. Yes, Sir.

10 Q. Is that because Mr. Boodram would have been able to give you
11 some information which might have assisted you in making a
12 risk assessment?

13 A. Possibly, yes, Sir.

14 Q. Well almost certainly, isn't it?

15 A. Yes.

16 Q. Otherwise what's the point of you being there?

17 A. Correct.

18 Q. There's not lots of people listening right? So the point of you
19 being called back by Mr. Yearwood was to hear what Mr.
20 Boodram had to say?

21 A. That is correct.

22 Q. Because Mr. Boodram had come out of the pipe?

23 A. That's correct.

24 Q. And he was the best person who could tell you what was in the
25 pipe.

26 A. To hear his account of what happened, that's correct.

27 Q. Yes. So that you could return to your risk assessment armed

1 with that information?

2 A. That is correct.

3 Q. Did you return to your risk assessment?

4 A. No. After the call, um, the instruction was to verify where the
5 Atlantic LNG camera was in, to get an assessment, further
6 assessment of what was the conditions in the pipeline.

7 Q. So you've already got Mr. Boodram's account and now you're
8 going to wait for the camera's account, as it were?

9 A. To verify, yes Sir.

10 Q. Right. After you got the camera's account did you return to
11 your risk assessment.

12 A. No. Rolph Seales was sent to talk to the divers, two dive teams,
13 to look at the footage and complete the risk assessment to see if
14 they would complete the dive and they said it was too risky.

15 Q. Right, no, no, no. Was the risk assessment ever completed?

16 A. No, Sir.

17 Q. Right. So—

18 A. The risk assessment was completed by me and the team, no.

19 Q. No. And the one that you were typing into this, into your PC
20 did you give that to Mr. Seales to take to the divers?

21 A. I think I emailed it. I'll have to double-check.

22 Q. Please, could you do that as well, please?

23 A. As [*Inaudible*], yes.

24 Q. Because this this all new, you see?

25 A. Correct.

26 Q. This isn't in your statement. That's the point of asking you to
27 come for an interview. Do you understand?

1 A. Understand.

2 Q. We're doing this now on Friday afternoon at five o'clock
3 because you didn't come for an interview to iron out these
4 problems.

5 A. No problem.

6 Q. Well it is a problem, because we are all here on Friday
7 afternoon instead of two months ago. All right? So that part of
8 your statement is wrong and you want to change it?

9 A. Correct.

10 Q. Thank you.

11 **Mr. Chairman:** Mr. Maharaj.

12 **Continued Examination By Mr. Maharaj SC:**

13 Q. You said that Mr. Rolph Seales was given some instructions?

14 A. So at—after the video footage from Atlantic LNG was looked
15 at, right, Collin Piper asked Rolph to go and speak to Mitchell's
16 and OTSL to have a look at the footage, look at the site, and
17 basically give feedback if they could perform a rescue. That—
18 he was dispatched at around midnight or—

19 Q. To give feedback if Mitchell and the—

20 A. OTSL could—

21 Q. Yes, on a rescue?

22 A. That is correct.

23 Q. Not if he was of the opinion that a rescue could be done?

24 A. Correct.

25 Q. Correct.

26 **Mr. Maharaj SC:** No further questions for this witness.

27 **Mr. Chairman:** Yes, just a minute.

1 **Examination By Mr. Chairman:**

2 Q. Before this, before you came to give your evidence and just
3 after you'd sworn your oath, you indicated that you wanted to
4 change a particular time—

5 A. Yes.

6 Q. —on your, um, in your statement and thee did that at paragraph
7 27. Do you remember you changed it from eight o'clock to
8 9.55?

9 A. To around 9.00, after 9.00 yes, Sir.

10 Q. Yes. Can I take it from that that you read this statement before
11 coming into this courtroom?

12 A. Yeah.

13 Q. And you didn't spot this error on paragraph 17 rather more
14 substantial than the time error on paragraph 27?

15 A. Yes, I did actually but I remembered—

16 Q. Could you tell us—

17 A. But I remembered the mock-up, and in reading the first part of
18 the statement I missed in terms of declaring that.

19 Q. So you did spot the error but you didn't say anything about it?

20 A. I missed it, yes.

21 **Mr. Chairman:** Yes, who else would like to ask Mr. Holder
22 some questions? Yes. Ms. Alfonso please?

23 **Ms. Alfonso:** Thank you, Mr. Chairman.

24 **Cross-Examination By Ms. Alfonso:**

25 Q. Good afternoon, Mr. Flemming-Holder.

26 A. Afternoon.

27 Q. Right, my name is Nyree Alfonso. I am the representative of

1 the SWWTU and I just have a couple questions to ask you.

2 A. Sure.

3 Q. I want to go to paragraph 14 of your witness statement which is
4 at—well, partially on 1492 and partially on 1493. You say
5 there, rescue efforts in the pipeline and the inspection of the
6 inside of the pipeline as a priority, so you say that was the
7 priority while you were, I don't want to say on duty, but while
8 you were re isn't in Paria's ICT unit. You saw that as the
9 priority?

10 A. So when I arrived the search and rescue at sea was going on.
11 When Mr. Boodram came out of the pipeline there was a
12 scenario change and now efforts were now directed to confined
13 space, understanding what was the conditions in the pipeline in
14 order to have a plan to rescue the individuals in the pipeline.

15 Q. Okay.

16 A. So that was the scenario change.

17 Q. Would you—okay, thank you. Would you agree in the time
18 that you were on duty, because you handed over to somebody
19 called Mr. Arneaud, yes?

20 A. That's correct.

21 Q. Right. So at the time—in the time that you spent there, would
22 you agree that the focus of the efforts going on was in respect
23 of inspection or, or finding out the, the con, the conditions in
24 the pipe rather than performing a rescue?

25 A. So for confined space, um, one of the requirements under
26 OSHA, IMCA, ROGP before you commit anyone or any team
27 to a confined space, it must be safe, suitable and sufficient.

1 You have to assess before sending any person into a confined
2 space. So, for confined space incidents, there are numerous
3 lessons learned on single and multiple fatalities. There's
4 something called stop, think, assess and respond, and that is
5 what the IOC did in terms of stopping to assess the conditions
6 into the pipeline. So I'll explain this. The confined space in the
7 habitat space is different from the confined space in THE
8 pipeline, right?

9 Q. Thank you.

10 A. The team had an emergency response plan for the habitat. It
11 did not have an emergency response plan for the pipeline, two
12 different scenarios. Same confined space but you have to, you
13 have more manoeuvrability in the habitat than in the pipeline
14 and you cannot use the same ERP for that. So, first thing the
15 IOC did, based on the scenario change, was stop and assess. I
16 need to understand what are the conditions in the pipeline. You
17 cannot send a rescuer in there and you don't understand
18 because it's not trial and error. You need to make sure and
19 understand what are the conditions in order to draft a proper
20 rescue plan. You cannot send a diver, bring him back out, send
21 a diver, bring him back out, no. It has to be pinpoint accuracy
22 and you need to know exactly what is required in order to
23 perform a rescue.

24 Q. Okay, and the way that you were going to achieve that is
25 getting camera footage, yes?

26 A. So the camera footage would have told you what was the
27 conditions in the pipeline, where the divers were and from there

1 you make further assessment because you have to give the dive
2 times teams that in order for them to do their necessary
3 emergency response plan, and rescue plan, before entering the
4 confined space.

5 Q. From your recollection, what is the time that the first camera
6 went in? Was that the borescope?

7 A. The first camera went in I believe around 7.30.

8 Q. Around 7.30.

9 A. Correct.

10 Q. That's the one without sufficient light?

11 A. That's correct.

12 Q. And the next one went in?

13 A. So Atlantic LNG reached on site about 10.45, briefed and I
14 think they were back probably by 11.30 11.45 with feedback to
15 the IC.

16 Q. I see. And that was the crawler that wasn't able—

17 A. No, the crawler came after.

18 Q. Oh, I see. And the problem with that—

19 **Mr. Chairman:** That second one was after twelve o'clock.

20 **Ms. Alfonso:** Okay.

21 **Continued Cross-Examination By Ms. Alfonso:**

22 Q. So that second one, the limitation of that was what, the length
23 of the cable? What was it?

24 A. So the second one basically was to dislodge the cylinder—

25 Q. Or, okay, right.

26 A. —in the—that was seen in the first video.

27 Q. Okay. And the crawler is the one that came in after midnight?

1 A. Correct, yes, because there were some issues in terms of
2 mobilizing HHSL, there were numerous calls until we got on to
3 them, and then they responded to Paria.

4 Q. But each of those cameras gave you an incomplete picture of
5 the conditions in the pipe, that'd be correct to say?

6 A. So it gave the conditions that we saw at that point in time and
7 we used—the IC and the team used that to make a decision.

8 Q. And what was that decision, Mr. Flemming-Holder?

9 A. So the decision, based on the video footage, was that there was
10 a cylinder that was lodged and we need to remove the cylinder
11 without again committing a person, and that's where the
12 crawlers came in.

13 Q. Okay, so the crawler was trying to dislodge the tank?

14 A. That is correct.

15 Q. It moved it 19 feet or something like that? Yes?

16 A. That is correct.

17 Q. Okay. But couldn't dislodge it further than that?

18 A. That is correct.

19 Q. Okay. I just want to be clear, Mr. Flemming-Holder. We have
20 had a lot of dive team names thrown around and you contacted
21 Eastern Divers?

22 A. So in, after—so let me just walk through scenario change. So
23 first search and rescue scenario change, getting footage, right,
24 then when Rolph went to ask the divers if they could do the
25 dive or not based on the footage, that was no. The next step
26 HHSL with the crawlers, right, they couldn't dislodge, they also
27 said that they could rescue. After they said that the next option

1 that was thrown out was to pump down and do a dry rescue.
2 then started to get looking at mobilizing pumps and was asked
3 in terms of if we know any confined space rescue teams,
4 Eastern Divers and Eastern Divers was contacted and told to
5 report to Paria.

6 Q. Okay. So you contacted—did you contact Eastern Divers the
7 dive company or Eastern—and I don't want to, I want to get the
8 name right, Eastern Emergency Response Services?

9 A. So Eastern Emergency Response Services was contacted by
10 Heritage and sent to Paria.

11 Q. And they are not divers?

12 A. They are, they are used in the industry to perform rescue.

13 Q. Okay.

14 A. They are, they are very competent in terms of rescue.

15 Q. In dry environments?

16 A. In dry environments.

17 Q. Okay. And, as far as you knew with the limited information
18 you had, the environment where the divers were was not dry?

19 A. That is correct. So the, the, the strategy at that time or the
20 thinking was to pump down the line and perform a dry rescue
21 because the dive teams which were consulted said that it was
22 too risky to enter the pipeline at that point in time.

23 Q. Well, the line was never pumped down?

24 A. So, pumps were mobilized, yes, right, so got through with
25 ROCL and pumps began to mobilize round 4.00 to 5.00 in the
26 morning, and then they were en route to Paria to effect that
27 strategy.

1 Q. As far as you know was that strategy employed?

2 A. So I left Paria at probably eight o'clock Saturday morning and
3 that's the plan that was discussed at that point in time. When I
4 came back on shift that plan was not put in place, no.

5 Q. Okay so Eastern Di—well, Eastern, let's make it easy, Eastern
6 Response?

7 A. Eastern did respond.

8 Q. No, no, no the name of the company is Eastern Response?

9 A. That's correct, yes.

10 Q. Right, right? I'm just trying to distinguish it between—

11 A. Okay.

12 Q. —Eastern Divers, right? They—I said they were never utilized
13 because it was not in—a dry environment was not created in the
14 pipeline?

15 A. So they also looked at the response as far as I know and I
16 believe they said it was too risky as well.

17 Q. Okay. But the environment for them to undertake their
18 duties—

19 A. It was not pumped.

20 Q. —that was not created?

21 A. Correct.

22 Q. Okay, thank you very much, Mr. Flemming-Holder.

23 A. No problem.

24 **Mr. Chairman:** Mr. Ramadhar, as you'll have probably
25 noticed my patience is running very thin at the moment so I
26 want to finish by 5.30.

27 **Mr. Ramadhar:** Thank you very much, Chairman.

1 **Cross-Examination By Mr. Ramadhar:**

2 Q. Good afternoon, Mr. Holder.

3 A. Good afternoon, Mr. Ramadhar.

4 Q. We appreciate certainly the difficult circumstances that you
5 were all placed under that afternoon and into the night where
6 this tragedy occurred, yes? So, you understand that nobody
7 expected perfect circumstances, correct?

8 A. Correct.

9 Q. Yes. You said something very interesting there that it should
10 be safe, suitable and sufficient before you move?

11 A. That's correct.

12 Q. You appreciate there are grades of safety, degrees of safety?

13 A. It depends on the risk.

14 Q. Always, always does. You crossed a road recently?

15 A. Yeah, and look left look right before crossing.

16 Q. Right, exactly. But there's always the risk, correct?

17 A. You only cross when there's no risk available.

18 Q. When there's no risk available, of course.

19 A. Correct.

20 Q. So that you will never cross a road, as an example if there is a
21 car maybe a mile away?

22 A. So to answer that question, Sir, right, there are road crossings,
23 there are traffic lights.

24 Q. Yes.

25 A. There are rules. You follow the rules in crossing the road so
26 you get to the next side safely.

27 Q. Beautiful. And of course you know there are persons who

1 sometimes take the risk and get killed?

2 A. Those are other persons. You're asking me the question.

3 Q. Yes.. No, but, you appreciate there are other persons who
4 sometimes take that risk, yeah?

5 A. And they get killed, yes.

6 Q. And they get killed.

7 A. That's correct.

8 Q. And there are others who take the risk to get to the other side
9 and reach across wholesomely, correct?

10 A. It depends.

11 Q. All right. So let's deal with what we're dealing with here
12 today. So we are—we're dealing with degrees of safety.
13 Explain what you mean by suitability or suitable?

14 A. So for confined space as per OSHAC, IMCA and all these other
15 standards, right, you need to make sure, one, that entry and exit
16 into a confined space is safe for persons who have to occupy
17 the space and also for persons who have to rescue. If it is not
18 suitable and sufficient—

19 Q. Uh-huh.

20 A. —you shall not send in a rescue team.

21 Q. Right, beautiful. So that the definition of suitable is it
22 objective?

23 A. So suitable will mean that, one, you have to, if it's a tank or a
24 pipeline it needs to be isolated, one.

25 Q. Right.

26 A. Two, it needs to be drained. Three, the atmosphere in there
27 must be at a certain percentage, 19.5 to 22.9 I believe, right,

1 you must check your lower—your short-term exposure limit,
2 your long-term exposure limit. You need to check heat stress,
3 et cetera.

4 Q. Beautiful.

5 A. You need to have a proper rescue plan. You need to identify
6 that the isolations are suitable to the persons who are entering.
7 You need to do a drill prior—

8 Q. Great.

9 A. —to ensure that all those things are working and there are
10 standards that govern that, yes.

11 Q. Right. Of all those things, which were you able to ascertain?

12 A. So based on the pipeline on that day—

13 Q. Yes.

14 A. —right, without going into the pipeline there were many
15 unknowns. You didn't know where the persons were, you
16 didn't know what was the condition inside the pipeline—

17 Q. Right.

18 A. —and you need to establish that before you—as per standard
19 before you send any individual into the pipeline, Sir.

20 Q. So if you know nothing, you would allow men to die?

21 A. So if you know nothing, right, you cannot send a rescue team
22 into a unknown condition and I'll, and I'll take you there. You
23 take me across the road, I taking you to emergency response
24 now, right?

25 Q. I going—I going with you.

26 A. So, first responder—

27 Q. Yes.

1 A. —right, you cannot respond to an medical emergency unless
2 the scene is safe. Major emergency management, you cannot
3 commit to a search and rescue team unless it is safe to commit
4 the search and rescue team else you are wilfully and recklessly
5 endangering your search and rescue team.

6 Q. Beautiful. So this is where we are now. So it's about liability
7 that you were more concerned with?

8 A. No. It's about making sure, as per the standard, Sir—

9 Q. Yes.

10 A. —that it is safe and suitable to commit a rescue team.

11 Q. We heard that.

12 A. Correct.

13 Q. There are degrees of safety we're talking about. You agree
14 with that?

15 A. So in major emergency management it's either it's safe or it's
16 unsafe. It have no degrees.

17 Q. Oh, really?

18 A. Yes, Sir.

19 **Examination By Mr. Chairman:**

20 Q. Is that really right? I mean, if you deem it to be unsafe does
21 that mean, well, you can never do it, then?

22 A. So if it is unsafe you have two options, right?

23 Q. Right.

24 A. If it you have a gas release and it is unsafe to send persons in,
25 you either shut down, blow down, allow it to dissipate, so you
26 monitor wind direction, et cetera, or you abandon the facility.

27 Q. Well, all right, that's a gas release. I mean, we're talking about

1 going into a pipe here, so you're, you're carrying out or at least
2 you got partway through carrying out a risk assessment. If you
3 deem that it is unsafe to go in the pipe, that's it, it is it? That's
4 the end? You don't go in?

5 A. So, one, the pipeline the camera went in, there was blockage,
6 right?

7 Q. No, no, no. Can you just—

8 A. Let me, let me address—

9 Q. No, you need to address my question first—

10 A. Uh-huh.

11 Q. —which is Mr. Ramadhar's question really. Answer that
12 question then you could have whatever rider you like, but, is it
13 the case that once you determine it is unsafe, that is the end of
14 it?

15 A. So if it is unsafe you find another means to protect the rest of
16 the individuals.

17 Q. Right. So you look for ways to make it safer?

18 A. So if it—so if, again, if it is not safe for you to deploy a search
19 and rescue team, if you blow down and it's not safe, if you have
20 other scenarios and it's not safe, you either evacuate or you
21 abandon the facility or the, or the—based on the emergency.

22 Q. I know all of that. I think what you're trying to get at, and what
23 I'm trying to understand because Mr. Ramadhar has asked it
24 and it seemed to me relevant, is it say, you're doing the risk
25 assessment as you started?

26 A. Correct.

27 Q. You told us you did? You start by saying, well going in that

1 pipe is unsafe right? That's a given, I suspect. Nobody would
2 think it was safe to walk—to climb into a pipe that only 30
3 inches in diameter. So you're looking for ways, are you not, to
4 make it safer rather than safe. It is never safe, is it, to climb
5 maybe a hundred feet into a pipe that's only 30 inches in
6 diameter?

7 A. Correct, and how you make it safe by ascertaining what is
8 going on in the pipe via video surveillance and then making a
9 plan on that video surveillance to—

10 Q. No, no, you're not hearing my question. My question is, it is
11 never safe to go into the pipe? There's always an inherent
12 danger going in maybe a hundred, 200 feet into a pipeline like
13 that. It is always going to be unsafe. The question is, to what
14 extent can you mitigate that?

15 A. So you risk assess it.

16 Q. Yes.

17 A. You get the, you get the equipment, so your risk assessment
18 will tell you if it is safe to enter or not based on the conditions
19 in the pipeline, yes or no.

20 Q. You see, I'm struggling with that concept. I am genuinely
21 struggling with it. If you say it's only—it's black and white,
22 it's either safe or unsafe, I don't understand how you get from
23 being unsafe to something that's safe—

24 A. So—

25 Q. —in the scenario that we're dealing with because it's not a
26 case, is it, of to take Mr. Ramadhar's example of crossing the
27 road, waiting until midnight, there are no cars on the road at all,

1 and then you can walk across the road then it's safe. This is not
2 that scenario, is it?

3 A. And I understand that, so to understand what is going on in the
4 pipeline, because there were lots of unknowns—

5 Q. Yes.

6 A. —right, you needed to, one, make sure and understand what are
7 the conditions—

8 Q. Sure.

9 A. —before committing a person to enter the pipeline and you risk
10 assess that—

11 Q. Yes.

12 A. —and you try to bring it as low as reasonably practicable—

13 Q. Ahh. There it is.

14 A. —and your risk assessment will let you know if it is safe to
15 enter or—

16 Q. Bring it as, bring it as low as reasonably practicable means,
17 doesn't it, you're making it safer. It's not that it ever becomes
18 completely safe. It's simply safer by putting in different
19 ameliorating features that would help to make it safer.

20 A. So, if you don't know the conditions in the pipeline, Sir—

21 Q. Well no, forget that for the moment.

22 A. Okay.

23 Q. All right? Whatever the conditions are, whatever the position
24 is, right, however far they are in the pipe, however many men
25 there are in there, in order to get from unsafe to safe in a pipe
26 like that is not—it's just not achievable. What you can do, and
27 what I understood you to be saying when you looked at a risk

1 assessment, was to say, How, do I get it as safe as I can make
2 it?" That's not safe. It's simply as safe as you can manage it,
3 isn't that—

4 A. Correct and that is under—

5 Q. [*Inaudible*] about it but there is a difference, isn't there,
6 between complete safety so that you're not prepared to let
7 anybody go into the pipe unless there is a 100 per cent
8 guarantee that they would never be injured? That's never going
9 to be achievable, is it?

10 A. That's not what I'm saying.

11 Q. No, good. Then—

12 A. What I'm saying is, all right, according to standards you have to
13 risk assess and you have to understand the conditions before
14 entering a confined space, regardless if it's a pipeline, a vat, a
15 separator, right?

16 Q. Right.

17 A. At the time of the incident, that was unknown.

18 Q. So in your view—

19 A. So you—so you have—

20 Q. So your view is, your view is that without knowing the
21 condition inside that pipe, it would never be safe enough to
22 send anyone in?

23 A. You need to ascertain what is the conditions and you need to
24 plan for those conditions before you send a human being to
25 rescue.

26 Q. All right.

27 A. That is what I'm saying.

1 Q. So when you started your risk assessment you had no idea what
2 the condition inside the pipe was, did you?

3 A. So we know that it had fuel, right, we didn't know where the
4 persons were, right, we didn't know if it had blockage or
5 anything like that, but we started the risk assessment, you have
6 to find those unknowns. Where are the individuals, what is the
7 condition in the pipe, how you're going to rescue, what is your
8 methodology of rescuing to develop your rescue plan. You
9 would not know that from standing on the surface and not
10 understanding the conditions in the pipe. You have to send
11 some kind of surveillance.

12 Q. Yeah, all right.

13 A. And what was used was a camera. Why would I risk or why
14 would somebody risk sending a human being if they're not
15 sure. You send a rescue team in when you are a hundred per
16 cent sure that they can safely rescue the people.

17 Q. Ah, right. So then we got to where we are.

18 **Mr. Ramadhar:** Yeah, one hundred—

19 Q. So what you're saying is you need to be—

20 **Mr. Chairman:** No, Mr. Ramadhar, I'm asking questions at
21 the moment.

22 **Mr. Ramadhar:** I beg your—I apologize. My apologies. I'll
23 take my seat.

24 **Examination By Mr. Chairman:**

25 Q. What you're saying is, you would not be prepared to let anyone
26 enter that pipe unless you're one hundred per cent sure?

27 A. Meaning if the risk is as low as reasonably practicable, Sir.

1 Q. That's not the same thing, is it?

2 A. So, coming—so you need to risk assess as low as reasonably
3 practicable to ensure that the person who is going to rescue can
4 return safely.

5 Q. Of course. Nobody's suggesting otherwise, but that's not the
6 same thing as being a hundred per cent sure which you just
7 said.

8 A. Well as low as reasonably practicable, because you need to
9 make sure that the rescuer could return.

10 Q. Well you have—rescues happen all the time all over the world.
11 I used to be involved in a rescue team in the mountains in
12 Austria. That doesn't mean that there is no risk associated,
13 when somebody falls off a mountain we could try and rescue
14 them. It doesn't mean for a minute that there is a 100 per cent
15 chance that when I start climbing that mountain I'm going to
16 come down uninjured. There is always a risk. There is always
17 a risk in effecting some kind of rescue, and that's what I was
18 trying to get at and it seems to me you've let the cat out the bag
19 when you say it has to be a hundred per cent. The reality is it's
20 never going to be a hundred per cent.

21 A. So, Mr. Lynch, there are a number of rescuers who have died—

22 Q. I know that.

23 A. —as well, based on—

24 Q. That's what the—that's part of a hazard of being a first
25 responder, isn't it?

26 A. But I—

27 Q. But rescuers do die. They die all the time. They don't stop

1 rescuing just because rescuers died. What they try and do is to
2 mitigate the risk, and mitigating the risk doesn't mean reducing
3 it down to 100 per cent so that you're sure there is no question
4 of anybody not being able to come out of that pipe alive. It's
5 simply not a realistic approach, is it?

6 A. But that's not what the standard say. The standard says that
7 you get it down to as low as reasonably practicable and
8 you're—

9 Q. Yes, that's not a hundred per cent.

10 A. Well you need to make sure that the rescuer could return.

11 Q. You need to make sure that you've done everything you can to
12 give him the best chance of returning.

13 A. And that's why you need to, one, understand the conditions in
14 the pipe.

15 Q. Well I understand all of that.

16 A. Risk assess it—

17 Q. I—

18 A. —build your emergency response plan so that when the rescuer
19 go—if he goes in, if it is low as reasonably practicable, he can
20 return, Sir.

21 Q. Do we agree that you were wrong when you said a hundred per
22 cent?

23 A. It's supposed to be as low as reasonably practicable, yes.

24 Q. It's not a hundred per cent, is it?

25 A. That is correct.

26 Q. Right. So you're wrong about that, aren't you?

27 A. It's as low as reasonably possible.

1 Q. Do you want to withdraw that?

2 A. No problem.

3 Q. Well, do you want to withdraw it or not?

4 A. So, again, when you're doing risk assessment it's supposed to
5 be as low as reasonably practicable.

6 Q. Yes. Do you want to withdraw your observation, which we
7 have on the transcript, because I don't want to rely on it later
8 on, do you wish to withdraw the suggestion that it has to be a
9 hundred per cent?

10 A. I will leave—I will withdraw it and leave it as as low as
11 reasonably practicable.

12 Q. So you're replacing 100 per cent with as low as reasonably
13 practicable?

14 A. Yes, Sir.

15 Q. With which I think we can both agree.

16 A. No problem.

17 Q. Thank you.

18 **Mr. Chairman:** Mr. Ramadhar.

19 **Mr. Ramadhar:** Thank you so much, Chairman.

20 **Continued Cross-Examination By Ms. Alfonso:**

21 Q. You withdraw it today, but on the 25th of February that was
22 your position, wasn't it?

23 A. No, Sir, so—

24 Q. Hold, hold, hold, hold, hold. It was not your position you
25 required a hundred per cent on the 25th of February?

26 A. No, Sir.

27 Q. Good. What percentage would have been good for you?

1 A. So as I said, right—

2 Q. It's a simple question. What percentage would have been good
3 for you?

4 A. So we need to assess the con—

5 Q. No, no we don't need. I'm asking you. We're not assessing
6 here. The men dead. What percentage would have been
7 adequate for you?

8 A. It would have been based on the assessment that the camera
9 gave and the emergency response plan.

10 Q. Yes. All right. Ad nauseam, what time your camera reach?
11 Forgive me please? What time your camera reach?

12 A. Sir there were, there were three cameras.

13 Q. What time your camera reach?

14 A. One came at 7.30, one came at 10.45 one came after 1.00.

15 Q. Right, right. So the seven—let's deal with the seven
16 something. You got any useful information from that?

17 A. No, because the light intensity was inadequate.

18 Q. That failed. Second one?

19 A. There was information from it, yes.

20 Q. Right, about the tank?

21 A. That is correct.

22 Q. Good. Knowing that there was a tank, you think that was a
23 prohibition that will cause the death of a rescuer?

24 A. So knowing there was a tank, you need to assess how you're
25 going to—if—what are the means to remove the tank so you
26 could get around the tank to get further information to know
27 what is the position of the persons in the pipeline.

1 Q. So up to the tank, up to that tank, you knew that you could
2 safely go?

3 A. So up to the tank was probably 105 feet.

4 Q. Thank you, but you knew you could safely go?

5 A. At that time—

6 Q. Right.

7 A. —possibly, yes.

8 Q. Did you send anybody up to 105 feet up to the tank to make a
9 physical assessment? Because you knew there was no danger.
10 You knew all you could have at that 105 foot length, didn't
11 you?

12 A. But we didn't know what was behind the tank, Sir.

13 Q. Of course. But you could go to that point and then assess from
14 there, physically look upon it or push the camera even further,
15 isn't it?

16 A. So the camera was pushed further—

17 Q. Right.

18 A. —and the pipe crawler was sent in to remove the tank—

19 Q. So, I—

20 A. Let me finish.

21 Q. No, no I want you to understand my question.

22 **Mr. Chairman:** No, no let him finish.

23 **Mr. Ramadhar:** All right, all right.

24 **Mr. Chairman:** He's entitled to finish. He's got—you've got
25 to let him finish.

26 **Continued Cross-Examination By Mr. Ramadhar:**

27 Q. Okay, so that we wouldn't misunderstand each other, go ahead

1 please.

2 A. So the purpose of the crawler was to attempt to dislodge the
3 tank without sending somebody in there.

4 Q. Right.

5 A. So you have a clear understanding what is behind the tank so
6 that you can build a proper plan as low as reasonably
7 practicable to rescue someone if that was possible.

8 Q. What time did the crawler go?

9 A. The crawler went in after midnight.

10 Q. Beautiful. What was the timeline in my mind, you HSSE
11 whatever you call yourselves, I'm not too sure, right, but health,
12 safety and what?

13 A. Environment.

14 Q. And environment. What timeline did you as a practically
15 minded experienced person believe that these men had that time
16 to live? What time frame were you working with?

17 A. I just, based on if they had tanks, probably five to six hours.

18 Q. Right. From the time of the accident?

19 A. Correct.

20 Q. And what time would that take you to?

21 A. So again, understand this Mr. Ramadhar—

22 Q. I don't have to understand. You answer the question. What—

23 A. But I answering your question.

24 Q. —time six hours after—

25 **Mr. Peterson SC:** Mr. Chairman, could the witness answer the
26 question?

27 **Mr. Ramadhar:** No, because you—

1 **Mr. Chairman:** Just a minute. First of all, Mr. Ramadhar's
2 right. He's asked you a straightforward question. You can
3 answer that question. You can add a rider, anything you want to
4 say afterwards, I don't have a difficulty with that, but he asked
5 you, he asked you what time did that take you to? And you've
6 said five to six hours was your estimate of the period of time
7 that you they—you thought they had air. He then asked you,
8 well what time does that take you to? So answer that question
9 and if you want to add something afterwards, you're more than
10 welcome to. Answer the question first, please?

11 **Mr. Peterson SC:** Mr. Chairman when he asked that question,
12 all the witness said in answering um, Mr. Ramadhar, and that
13 was—that exploded Mr. Ramadhar.

14 **Mr. Chairman:** That's as far as he got, is it?

15 **Mr. Peterson SC:** Yes. He doesn't—

16 **Mr. Ramadhar:** My name is not an answer to the question.
17 So, could you tell us the number, because I am very painfully
18 aware of the time frame we're working with.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 A. So Mr. Ram D-R, right—

21 Q. Okay, there we go.

22 A. So, understand this, it took three hours, the team were doing
23 such and rescue at sea, right? And then when the scenario
24 changed, and this is important, right, then they knew that
25 persons were in the pipeline. There was no response plan for
26 that at that point in time.

27 Q. Yes.

1 A. So for three hours search and rescue was at sea, not in the
2 pipeline. Search and rescue, in terms of understanding the
3 conditions, only came into effect after Mr. Boodram was found.
4 So post Mr. Boodram was understanding what was going on in
5 the pipeline in order to effect a rescue.

6 Q. Right. So are you—

7 **Mr. Chairman:** You still haven't answered his question, in
8 fairness.

9 **Mr. Ramadhar:** Yeah. Thank you.

10 **Continued Cross-Examination By Mr. Ramadhar:**

11 A. So in fairness, so three hours, right, it took from the time of the
12 incident for search and rescue, right, and it also took about three
13 to four hours for mobilization of equipment to find out the
14 conditions in the pipeline and again I say you cannot send
15 someone into a confined space without understanding, as was
16 reasonably practicable, what are the conditions as per the
17 standard, Sir.

18 Q. We're talking about the life of the men. You said five to six
19 hours. What time then, from the moment of the accident to the
20 time of their death, did you contemplate? Forget all the
21 difficulties you had in between. What time?

22 A. So the six hours would take you from 3.00 to nine o'clock in
23 the night.

24 Q. Thank you so much. So you knew by nine o'clock, if they were
25 not rescued, consider them dead?

26 A. Sir, that was not the consideration. We—

27 Q. I'm asking you from the simple maths.

1 A. So, Mr. Ramadhar, that was not the consideration. We were
2 trying to put things in place to safely rescue the guys by finding
3 out information.

4 Q. Yes. And while you're making hay the horse will perish,
5 correct? You know that statement?

6 A. Can you repeat?

7 Q. Let's move on. You worked in your mind with a time frame for
8 life up to nine o'clock, correct?

9 A. Six hours, if you have oxygen, yes.

10 Q. Yeah, six hours from three is nine, yeah? But you still needed
11 to assess further and you knew by seven something that there
12 was a tank impeding—

13 A. By eleven o'clock we knew that there was a tank impeding.

14 Q. So not—before that you didn't even know, correct?

15 A. No, Sir.

16 Q. Right. But you did know that Michael Kurban had gone into
17 that pipe and went some short distance in 15 feet beyond the
18 elbow, correct?

19 A. That's correct.

20 Q. Yes. You also knew, by Christopher's mere, um, um, existence
21 that life was sustained within, the pipe?

22 A. Yes.

23 Q. And you knew that he was able to come out of the pipe?

24 A. That is correct.

25 Q. Yes. You knew at some point in time as to how far, from
26 information he would have given, he and others would have
27 been?

1 A. So the information that was heard was he was two pipe lengths
2 from the elbow. Two pipe lengths from the elbow puts you at
3 where the lodged cylinder was, 45 feet into the horizontal, Sir.

4 Q. Beautiful, 45 feet from the elbow?

5 A. That's correct.

6 Q. Thank you. And that's the point. And there was no danger up
7 to the point of the lodged tank, from what you told us that you
8 learned that subsequently, correct?

9 A. We learned that based on the camera footage, yes.

10 Q. Yes. So while you're waiting for camera, men dying. You
11 agree with that?

12 A. So, Sir, there was too procedural breaches—

13 Q. Yeah, yeah, we're hearing about procedure now. I would—my
14 ques—

15 A. No, no, no. You need to listen.

16 Q. I don't have to listen to you. You have to listen to the question
17 and you'll answer it.

18 A. Wow.

19 Q. Yes it's wow, it's wow, because you made decisions that night.

20 A. Really?

21 Q. You meaning Paria, as your group.

22 **Mr. Chairman:** The process is a question and an answer, not a
23 speech.

24 **Mr. Ramadhar:** Thank you.

25 **Mr. Chairman:** Right? So can we have—

26 **Mr. Ramadhar:** Yes.

27 **Mr. Chairman:** You can make your speech next week so

1 dressing up a question as a speech or rather dressing a speech as
2 a question is not acceptable.

3 **Mr. Ramadhar:** Thank you very much.

4 **Mr. Chairman:** Please, Mr. Ramadhar, I really would like to
5 stop soon so—

6 **Mr. Ramadhar:** And so would I.

7 **Mr. Chairman:**—can you get to the point that you want to
8 make—

9 **Mr. Ramadhar:** Right.

10 **Mr. Chairman:**—and then he can answer it.

11 **Mr. Ramadhar:** Yeah.

12 **Continued Cross-Examination By Mr. Ramadhar:**

13 Q. So that you knew, from what you had learned from the live
14 person, the direct evidence, that the men, or at least Mr.
15 Kurban, would have been shortly beyond 45 feet?

16 A. He never got to 45 feet, Sir.

17 Q. Who didn't get to 45 feet?

18 A. Kurban.

19 Q. No, I'm talking about Fyzie Kurban the deceased.

20 A. So if he was right behind Mr. Boodram, right, the camera
21 would a picked him up before the lodged cylinder. He was not
22 picked up before the lodged cylinder.

23 Q. How far was the lodged cylinder?

24 A. Forty feet the elbow.

25 Q. That's the point.

26 A. Forty-five feet from the elbow.

27 Q. Thank you. So just beyond that? That's what we're talking

1 about.

2 A. But there's no conclusive evidence to substantiate what you're
3 saying.

4 Q. Right. You know what the conclusive evidence is? Four dead
5 men, right? And as His Lud—as the Chairman has painfully
6 made it clear to us all, that you had to do all that which is
7 practically reasonable to achieve success?

8 A. And while I hear that and understand, right, you also need to
9 follow the rules of confined space because it's a procedural
10 breach that created an undesirable event. Are we now saying
11 that it's okay to breach procedure again and recklessly endanger
12 a rescuer? No. You'll have to follow the rules of confined
13 spaces.

14 Q. Have you heard the evidence that you gave?

15 A. I heard the evidence I gave.

16 Q. Right. Up to the blockage there was no danger. You agree
17 with that?

18 A. Up to the blockage based on the footage, it was clear except the
19 lodged cylinder.

20 Q. Thank you. Right, so there was no danger. Correct. You agree
21 with that? I want to move very quickly on.

22 A. Well, that's what the camera would have shown.

23 Q. Yes, and—

24 **Examination B Mr. Chairman:**

25 Q. Did it, did you know whether Mr. Boodram had used a tank in
26 order for himself to get out?

27 A. He would have to.

1 Q. Right. So it wouldn't surprise you, given that he'd come out,
2 that there was a tank between him and Fyzie, would it?

3 A. It could have been, yes.

4 Q. Well, all most certainly was, wasn't it?

5 A. Yes, it was.

6 Q. Right. So perhaps behind that tank was Fyzie.

7 A. We didn't confirm that.

8 Q. No. You didn't.

9 **Continued Cross-Examination By Mr. Ramadhar:**

10 Q. You didn't confirm a lot? You agree you didn't confirm a lot
11 that night?

12 A. So we I only confirmed what the camera showed, Sir.

13 Q. You appreciate—

14 **Mr. Chairman:** Is there much more, Mr. Ramadhar?

15 **Mr. Ramadhar:** No, not at all, not at all.

16 **Continued Cross-Examination By Mr. Ramadhar:**

17 Q. Risk, the amount of risk you will take is dependent on the value
18 you see, isn't it?

19 **Mr. Chairman:** We've done this.

20 **Mr. Ramadhar:** No, forgive me let me. Let me hear—

21 **Continued Cross-Examination By Mr. Ramadhar:**

22 Q. Or the value you see. Did you value the lives of those four men
23 sufficiently—

24 A. So Mr. Ramadhar I value everyone's life.

25 **Mr. Chairman:** You didn't really expect a different answer to
26 that did you—'

27 **Mr. Ramadhar:** No.

1 **Mr. Chairman:**—Mr. Ramadhar?

2 **Mr. Ramadhar:** No, no.

3 **Continued Cross-Examination By Mr. Ramadhar:**

4 Q. But the unknowns outweighed the value of their lives?

5 A. I disagree.

6 Q. Thank you.

7 A. So you need to confirm, right, before you again send someone
8 in to rescue and endanger them. They have to confirm the
9 conditions.

10 **Mr. Chairman:** Q. I think we understand your position,
11 Mr. Holder. You've made it very clear. Are there any other
12 questions of Mr. Holder? [*To Mrs. Persaud Maraj*] Do you
13 have any? Yes. How long do you think you're going to be?

14 **Mrs. Persaud Maraj:** Two questions.

15 **Mr. Chairman:** Two questions.

16 **Cross-Examination By Mrs. Persaud Maraj:**

17 Q. Good afternoon. My name is Kamini—

18 A. Hi, good afternoon.

19 Q. —Kamini Persaud Maraj and I'm for LMCS Limited. I heard
20 you said you have 11 years' experience in the IMT?

21 A. As an incident commander, yes.

22 Q. As an incident commander?

23 A. ICS.

24 Q. And how many incidents have you presided over as the incident
25 commander?

26 A. In Repsol a lot. So I would have done fires.

27 Q. You have any ballpark figure in your head, no, yes?

1 A. More than 15 probably.

2 Q. Any involving lives, actual saving of a life?

3 A. Medical treatment, outbreaks, gas, gas releases, yes, all
4 involved lives, 70 people 200 and something people, yes.

5 Q. All right. And then also earlier you were saying that during the
6 course of between 9.00, 9.15 whatever that timing was, you
7 were doing the risk analysis?

8 A. We started the risk analysis, that's correct.

9 Q. Do you recall how far or what the contents of that document
10 that you were typing up—

11 A. I would have to get back the document to see but I know we
12 would have gone probably about 35 to 40 minutes into the
13 document, yes.

14 Q. And, from the best memory that you can conjure at this
15 moment, do you remember how many pages you had?

16 A. No, we were still on the first page because we were discussing
17 manoeuvrability into the pipeline, how you're actually going to
18 rescue and looking at the risk associated with that.

19 Q. Okay. Thank you. That's it.

20 A. No problem.

21 **Mr. Peterson SC:** One question.

22 **Cross-Examination By Mr. Peterson SC:**

23 Q. Mr. Flemming-Holder, you are aware of the, well the removal
24 of the plug and all of that that caused a Delta P event? That's I
25 think accepted in this Enquiry by now?

26 A. Yes.

27 Q. The removal of the mechanical and inflatable plug, that would

1 require—well, just now, you're familiar with the permit to work
2 system I take it?

3 A. Very familiar.

4 Q. Yes. The removal of a plug in that scenario of that underwater
5 project—

6 A. Uh-huh.

7 Q. —would require a separate and distinct permit to work approval
8 for the removal of the plugs in that scenario, wouldn't it?

9 A. So, you're—so that's energy isolation, so yes.

10 Q. That's what?

11 A. That's energy isolation, so actually removing the plug which is
12 the barrier for vapours coming up to create an ignitable
13 atmosphere within the habitat and also prevent anybody from
14 getting in, so that it should be a separate permit risk assessment
15 emergency response plan based on the methodology, and if it is
16 supposed to be subsea, that is supposed to be properly risk
17 assessed with an emergency response plan, and if it is on
18 surface, same thing holds.

19 Q. And what is the thinking to have an independent, standalone
20 permit to work for the removal of the plug? Why is that a—

21 A. In order to control work.

22 Q. Thank you.

23 **Mr. Peterson SC:** Thank you, Mr. Chairman.

24 **Mr. Chairman:** Thank you. Mr. Maharaj [*sic*] just can I
25 remind you, you offered to check your computer—

26 **Mr. Maharaj SC:** Yes, Sir.

27 **Mr. Chairman:**—to find the partial risk assessment that you

1 were typing into the computer. I'd be grateful if you would do
2 that for me please and if you have it, as I say, pass it to the
3 lawyers.

4 **Examination By Mr. Chairman:**

5 Q. The question that you've just been asked in respect of the
6 removal of the plug requiring a separate permit to work, I think
7 there was a similar operation carried out on another riser two
8 years earlier in 2020?

9 A. Uh-huh.

10 Q. We've made a request for certain documents in relation to that.
11 Is it 2021? It's either 2020 or 2021. Somebody tell me.

12 **Mrs. Persaud Maraj:** 2020.

13 **Examination By Mr. Chairman:**

14 Q. But either way a very similar operation carried out by the same
15 firm, LMCS, on behalf of Paria, all right, and that involved
16 plucks as well as I understand it?

17 A. Okay.

18 Q. Can you find out for me please, I know you're Heritage rather
19 than Paria but perhaps you can convey this and I know Mr.
20 Peterson is listening to what I'm saying if there was a work
21 permit for the removal of the plug in that case?

22 A. I'll find out.

23 Q. Right? You can find out and somebody let me know if that is—
24 [*Crosstalk*]—or I'm told by Mr. Wilson, who knows more
25 about these things than, me an isolation checklist or certificate
26 Anything else? All right? Okay, thank you. So if that could be
27 just checked so that I could find out.

1 A. Okay.

2 Q. If it doesn't exist it doesn't. If it does, then, can I have it?

3 A. No problem.

4 **Mr. Chairman:** Right, look, thank you very much indeed for
5 coming. I appreciate it's quite late on a Friday afternoon and I
6 appreciate your being here, so, you're free to go and of course
7 you're at liberty then to watch or see any of this that you might
8 want to, but thank you for coming anyway. That is it for today.
9 Monday I set up a timetable already. Thank you. Please go.
10 I've set out the timetable. We'll start at 10.00 on Monday even
11 though we got now two extra witnesses, so what we were
12 hoping for was a short day but it won't be perhaps quite as short
13 as we thought. So that's where we are. Please all have a good
14 weekend I will see you all on Monday at ten o'clock. Thank
15 you very much Please feel free to go. I've got to tidy up my
16 own stuff. Thank you.

17 **5.39 p.m.:** *Enquiry adjourned.*

1 **EVIDENTIARY HEARING DAY 14**

2 **10.03 a.m.:** *Enquiry Commenced.*

3 **Mr. Chairman:** Good morning, everybody. I trust everyone
4 had a good weekend. I see some smiling faces anyway. Can
5 you just give me a moment, please? I just need to—thank you.
6 I'm sorry to keep you a few minutes this morning. There has
7 been a few administrative matters to deal with. And can I bring
8 you up to date with where we are?

9 On Wednesday I had scheduled a start for 10.30, I
10 think—whether it was 10.00 or 10.30, it's now going to be
11 eleven o'clock on Wednesday, please. I think Mr. Ramadhar is
12 going to be the first to address us at the conclusion. I see he's
13 not here at the moment. But we will not start on Wednesday
14 until eleven o'clock. I don't think that will affect our timetable
15 otherwise, but just to tell everyone that that's the position.

16 Next is this, is we received a statement from Dr. Glenn
17 Cheddie, a diving—a commercial diving expert on Friday. It
18 was posted on the website at four o'clock on Friday afternoon.
19 I didn't actually read it until this morning. Others have read it
20 over the weekend. It is clear to me that this is a witness who
21 ought to give evidence. The witness has been supplied to us by
22 Ms. Nyree Alfonso on behalf of her clients, as I say, somewhat
23 late in the day, if I may say so. I'm reluctant to delay these
24 proceedings beyond that. I don't know whether everyone has
25 had a chance to see it or not.

26 Mr. Peterson, have you had an opportunity to see this?

27 **Mr. Peterson SC:** I didn't have an opportunity to see it, Sir. I

1 mean, I was on the website but I didn't see it.

2 **Mr. Chairman:** I'm not surprised. I mean, I wouldn't have
3 been looking at the website [*Crosstalk*].

4 **Mr. Peterson SC:** So I was looking at—because I'm working
5 mainly with soft copies. But I got the impression from Ms.
6 Alfonso last week that that was just somebody that she was
7 assisting on the side, so to speak. I didn't realize it was a
8 witness that she was putting forward. But I would look and see
9 what he has to say. So once it's relevant—

10 **Mr. Chairman:** Well, I think you should—at the moment I
11 have him scheduled to give evidence this afternoon. I would
12 entertain and hear any application that that should not happen.
13 But if you could, as best you're able, either through one of your
14 assistants or some other method, get an overview as to whether
15 or not you feel able to deal with any issues that arise from his
16 statement. I can tell you that my reading of it within having
17 gone halfway through it, it was no doubt in my mind that he
18 should give live evidence to give everyone an opportunity to
19 ask him questions if they wish to do so.

20 **Mr. Peterson SC:** We will look at it, Sir.

21 **Mr. Chairman:** What's your position, Mrs. Persaud Maraj:?

22 **Mrs. Persaud Maraj:** Good morning, Mr. Chairman. I, in
23 fact, I have now seen this statement this morning. In fact, I just
24 started reading it before we started, so I'm not sure—I've only
25 reached page 6 of it. So I know that there is relevant aspect, but
26 I'm not sure—

27 **Mr. Chairman:** Can I ask—I mean, as I say, I have him

1 scheduled for this afternoon. Ms. Nyree Alfonso has been in
2 touch with him and has told us that he's available this afternoon
3 to give his evidence. But let's say whilst that is obviously ideal
4 from our point of view, it may not be from counsel's point of
5 view, and if you needed more time I would entertain such an
6 application. But for the moment, he's scheduled for two
7 o'clock. I mean, there's two of you. Perhaps, your assistant,
8 Mr. Garvin Narine-Rampersad [*sic*—is that you, Sir?

9 **Mr. Ramsepaul:** Yes.

10 **Mr. Chairman:** Right. I don't know if he might read it whilst
11 we're conducting proceedings this morning to give you a view.

12 **Mrs. Persaud Maraj:** I simply don't have an appreciation of
13 what the content is, though, so that I can tell you—

14 **Mr. Chairman:** No, I follow that.

15 **Mrs. Persaud Maraj:** —if I require any time at this point in
16 time. But, yes, certainly, Mr. Ramsepaul can read that.

17 **Mr. Chairman:** Thank you. Can I address everybody who's
18 going to be addressing the Commission from Wednesday
19 onwards this week in any concluding remarks? We would
20 welcome suggestions dealing with the recommendations that
21 we are asked to make as to the future of the industry, so that in
22 the submissions that you might make to us in the course of the
23 remainder of this week, we would be grateful to receive any
24 suggestions that there might be which would assist in
25 ameliorating the kind of incident that happened with which this
26 Enquiry is involved.

27 So for example, the Union might wish to consider

1 minimum standards. There may be some consideration given to
2 communication by those representing the families. OSHA, I
3 understand, are going to be providing us with their suggestions
4 by Wednesday at lunchtime—is that right—by Wednesday
5 lunchtime, and that sort of thing would be helpful from
6 anybody who is addressing the Commission. So I ask you to
7 give that some thought, perhaps, before you address us.

8 Lastly this: we had arranged for the families to be given
9 an opportunity to address this Commission originally for
10 tomorrow. I brought that forward to today. I understand there
11 may be some concerns about that, and if there are, Mr.
12 Peterson, you'll no doubt make such applications as you think
13 appropriate.

14 Can I just say this, that this Enquiry is involved in trying
15 to find out why four people died and what happened once they
16 were sucked into this pipe. We are very mindful of the fact that
17 there are families left behind who are obviously directly
18 interested in the outcome of this Enquiry. It would be wrong,
19 in our view as presently formed and obviously subject to any
20 other application that may be made, but as presently formed, it
21 would be wrong to stifle any of them from saying what they
22 want to say within the confines of what I have described.

23 I am not prepared to allow some rant pointing the finger
24 at specific individuals or anything of that kind. On the other
25 hand, the fact that they have been deeply affected by this is
26 something which this Commission feels is appropriate for them
27 to be able to voice themselves rather than just on a piece of

1 paper, which gets lost in the mire of the tens of thousands of
2 pages that have been supplied to this Commission.

3 I have also indicated that I would not permit cross-
4 examination of any of these persons who wish to give their
5 evidence live. Their evidence will be by virtue of reading that
6 which has been supplied. It is not intended to give free rein to
7 anybody beyond that which they have set out in their
8 statements.

9 That is our preliminary view. Anybody who has an
10 objection to that course will, in no doubt, express it. But for the
11 moment, they are scheduled to give evidence this afternoon and
12 that is what I plan to permit to happen.

13 All right, that's where we are today. I think our first
14 witness for today—

15 **Mr. Peterson SC:** Mr. Chairman, yes, you're correct. I did—
16 as the tradition of the profession requires, I did alert Counsel to
17 the Commission we wish to take an objection to the family
18 members giving evidence. I don't know if now is the
19 appropriate time, at your invitation, or whether just before. But
20 I think if I were able to persuade you to change your mind then
21 it will save some inconvenience of travel.

22 The ground of my objection is grounded in really
23 relevance. I did consume part of my weekend perusing and
24 scrubbing and perusing the Terms of Reference, and the fault
25 may be mine, but I was unable to discover the relevance of that
26 testimony within the strictures of the Terms of Reference as set
27 up by this Commission.

1 **Mr. Chairman:** Right, just before you go, so that I'm clear
2 about the application being made, the application is an
3 objection to the evidence at all?

4 **Mr. Peterson SC:** Yes, it's an objection to the evidence.

5 **Mr. Chairman:** So all of the statements written by those who
6 are the families of the victims should be removed from the
7 Commission altogether?

8 **Mr. Peterson SC:** Yes, Sir. I could find no relevance with
9 respect to assisting this Commission, with respect to what
10 caused the incident or the management of it right after. I can't
11 find any probative value in that evidence with respect to the
12 Terms of Reference of this Commission. I am not unmindful of
13 what the families may have experienced, and I'm sure there will
14 be adequate fora for them to indicate their feelings and the
15 impact of it on them, but with respect to the strictures of the
16 Terms of Reference of this Commission, I find difficulty
17 placing that evidence in the Terms of Reference.

18 My submission is that it is irrelevant and it's of no
19 probative value to assist this Commission in its work, and the
20 only thing I could find in it may be prejudicial effect against my
21 respectful clients, and I say this with the greatest deference to
22 you, Mr. Chairman.

23 **Mr. Chairman:** Again, so that I'm clear about it, that which
24 we have already been provided with and has been available on
25 the website for now some time should be removed and your
26 invitation is that the Commission should ignore that which is
27 set out in those statements?

1 **Mr. Peterson SC:** Yes, Sir. It was submitted so one couldn't
2 prevent it being submitted. But with respect to the Terms of
3 Reference of this Commission, my respectful submission is that
4 it not be taken into account in the discharge of the Terms of
5 Reference of this Commission.

6 **Mr. Chairman:** Does anyone else want to align themselves
7 with that application? I see Mr. Ramadhar who does represent
8 some of the families and his assistant is not here. Is there
9 anybody from Mr. Ramadhar's team present?

10 **Ms. Boodan:** Yes, Mr. Chairman. I know Mr. Ramadhar is—

11 **Mr. Chairman:** Sorry, remind me who you are? I can't see
12 you, actually.

13 **Ms. Boodan:** I am Niara Boodan. I act along with Mr.
14 Ramadhar. Mr. Ramadhar is on his way. He should be here
15 within the next five minutes if the Chairman is minded to allow
16 some time for him to arrive.

17 **Mr. Chairman:** Why is he late?

18 **Ms. Boodan:** I can't say, Mr. Chairman.

19 **Mr. Chairman:** All right. Well, I won't make a decision as
20 yet. I'll wait to hear if he has anything to add. So we'll take an
21 appropriate moment to hear that. In any event, I want to give it
22 some consideration. I've already indicated our preliminary
23 view and I will consider whether or not what Mr. Peterson has
24 said—I will consider what Mr. Peterson has said and make a
25 decision.

26 Even if I don't give reasons immediately, I would
27 certainly make a decision by the return from our break this

1 morning, so that everyone knows what our position is. But,
2 perhaps, you'll bring Mr. Ramadhar up to speed when he
3 arrives.

4 **Ms. Boodan:** Yes, Mr. Chairman. No problem.

5 **Mr. Chairman:** All right. Well, thank you, Mr. Peterson.

6 **Mr. Peterson SC:** Thank you very much, Mr. Chairman.

7 **Mr. Chairman:** I see somebody has his hand up at the back.
8 Is that **Mr. Hosein-Shah**?

9 **Mr. Hosein-Shah:** Yes, Chair. Good morning.

10 **Mr. Chairman:** Good morning.

11 **Mr. Hosein-Shah:** Just a quick word from the Union. Mr.
12 Peterson has referenced the mandate of the Commission, but
13 insofar as it relates to the SWWTU's position, we'll be asking
14 that the families be able to give that testimony.

15 **Mr. Chairman:** You're opposing his application?

16 **Mr. Hosein-Shah:** Yes.

17 **Mr. Chairman:** Would you like to give some consideration,
18 then, to the points that he has raised, rather than just saying I
19 oppose. In other words, addressing specifically—

20 **Mr. Hosein-Shah:** Yes.

21 **Mr. Chairman:**—he says it has no probative value; he says
22 that it is potentially prejudicial to his client, and that it is
23 irrelevant to the issues that this Commission have to consider
24 utilizing the Terms of Reference that we are mandated to
25 consider.

26 **Mr. Hosein-Shah:** Yes.

27 **Mr. Chairman:** All right. You might wish to address those

1 matters.

2 **Mr. Hosein-Shah:** Yes. I haven't had the opportunity to fully
3 consider it, but in terms of the Terms of Reference of the
4 Commission, one of those mandates relate to examining the
5 role of Paria and LMCS in dealing with the incident. And
6 another aspect of the Commission—

7 **Mr. Chairman:** Which one?

8 **Mr. Hosein-Shah:** It's—

9 **Mr. Chairman:** I'm not going to do this now. I think that the
10 realities are—

11 **Mr. Hosein-Shah:** It's 12 on the website. I'm not sure on the
12 actual listing what it will be.

13 **Mr. Chairman:** Can I suggest that you give it some thought.
14 Mr. Ramadhar has just, I see, walked into the room—gives it
15 some thought. What I will do is, before we have our break, I
16 will hear any arguments from Mr. Ramadhar and yourself and
17 then give Mr. Peterson an opportunity to reply to those
18 arguments once you've formulated them. I appreciate it's just
19 been sprung on you now, but, please, give it some further
20 thought. Put your arguments together and then I'll hear them
21 before we have our break this morning. All right?

22 **Mr. Hosein-Shah:** Fair enough, Chairman.

23 **Mr. Chairman:** And then I'll make a decision during the
24 break.

25 **Mr. Hosein-Shah:** Grateful.

26 **Mr. Chairman:** Thank you. Can we then proceed to the next
27 witness who I understand to be—

1 **Mr. Maharaj SC:** Mr. Andy Johnson is the next witness, Mr.
2 Chairman—

3 **Mr. Chairman:** Yes. Thank you very much.

4 **Mr. Maharaj SC:**—1525; and the summary of that evidence
5 would be given by Ms. Vijaya Maharaj.

6 **Mr. Chairman:** Good morning, Mr. Johnson.

7 **Mr. Johnson:** Good morning.

8 **Mr. Chairman:** Let's have the oath taken.

9 [*Mr. Andy Johnson sworn*]

10 **Mr. Johnson:** I, Andy Johnson, solemnly swear that the
11 evidence I shall give to this Commission in this case shall be
12 the truth, the whole truth, and nothing but the truth.

13 **Mr. Chairman:** Mr. Johnson, thank you very much for
14 coming. Can I apologize for you having waited patiently, I
15 think, most of the day on Friday—

16 **Mr. Johnson:** That's correct.

17 **Mr. Chairman:**—and then we didn't get to you. So I
18 apologize for that. I know it's inconvenient, but I'm grateful
19 that you're here this morning, and Ms. Maharaj is going to
20 summarize your evidence. So please listen carefully to what
21 she says, and then assuming you agree with the summary, we
22 can then proceed from there. Mr. Maharaj then, will, I think,
23 have a few questions for you and then anybody else who might
24 want to ask questions.

25 I don't anticipate your evidence will take very long,
26 though I have said that before and I've been wrong. So forgive
27 me if that happens to be the case, but that's where we are.

1 Please listen to what Ms. Maharaj has to say.

2 **Ms. Maharaj:** Thank you. Good morning, Mr Johnson.

3 **Mr. Chairman:** What page number? Sorry.

4 **Ms. Maharaj:** It's at page 1525 of Volume IV, the witness
5 statement bundle.

6 **Mr. Chairman:** Thank you very much.

7 **Ms. Maharaj:** Mr. Johnson was interviewed by the
8 Commission. The witness statement was prepared for him to
9 review based on that interview and Mr. Johnson signed that
10 witness statement on the 22nd September, 2022. Mr. Johnson
11 is the Chief of Operations of Eastern Emergency Response
12 Services Limited.

13 Mr. Johnson is also a confined space trained technician.
14 Confined space rescue service is a service provided when
15 someone enters a space that is not configured for continuous
16 occupancy and there are certain hazards associated with the
17 space so in the event the individual is not able to exit on his
18 own, the Eastern Confined Space Team would be on standby to
19 rescue that person. Confined Space Technicians are not trained
20 to conduct confined space underwater rescuing. They are not
21 trained as scuba divers, and, therefore, water in a pipeline
22 would be considered an obstruction.

23 Where an operation requires a change from breathing air
24 to scuba air, confined space technicians are not trained for this
25 and would not be able to provide a rescue service. Eastern has
26 not, in the past, provided any rescue services in relation to
27 subsea maintenance works at any company.

1 At around 11.40 p.m. on Friday, 25th February, 2022,
2 Mr. Johnson received a telephone call from Arlene Chow, CEO
3 of Heritage, requesting the services of Eastern to conduct a
4 confined space operation. Mrs. Chow informed him that there
5 were four persons trapped in a pipe. That is all the information
6 he received at this point.

7 At around 11.43 p.m. on Friday, Mrs. Patricia King of
8 Heritage contacted Mr. Johnson via telephone and informed
9 him that a diagram of the piping was sent to his phone via
10 WhatsApp, and, also, that the Incident Command Centre would
11 be expecting his team. A photograph of the diagram sent to Mr.
12 Johnson's phone is attached to his witness statement as AJ 1.

13 At around 11.45 p.m., Mr. Johnson contacted Eastern's
14 operation scheduler Team Leader, Junior Armstrong, and
15 activated the rescue team. A rescue team of four persons was
16 activated with all the necessary equipment, which is ropes,
17 pulley, carabiners, skeds, and, also breathing air to conduct a
18 confined space rescue. Mr. Johnson stated that all of these
19 things would have been needed to get a person out of a
20 confined space, such as a pipe. The sked would have formed an
21 encapsulation around the person and ropes would have been
22 used as a mechanical advantage to hoist the person out of the
23 pipe.

24 At around 12.20 a.m. on Saturday, Mr. Johnson and
25 Emergency Response Team Leader, Peirre Culzac, arrived at
26 Paria. At approximately 1.25 a.m., the remaining Eastern team
27 members arrived on the compound. At around 1.25 a.m., the

1 Eastern team was briefed by the Incident Commander and
2 advised of the time that the incident occurred and the possibility
3 that Paria may want to engage the services of Eastern for a
4 rescue. In addition, the Incident Commander advised that due
5 to variables around the incident, Eastern should prepare
6 themselves for a retrieval and not a rescue due to the possibility
7 that the divers may have expired.

8 Mr. Johnson asked to be taken to the site to conduct a
9 visual and dynamic risk assessment. The Incident Commander
10 also pointed out a drawing on the board in that room. The
11 drawing showed a sketch of the pipe which had two elbows and
12 two uprights and indicated that the length of the pipe was 120
13 metres across the seabed.

14 At around 2.15 a.m., the Eastern team boarded a vessel
15 and was taken to the scene of the incident. They arrived at
16 Berth 6 at around 2.35 a.m. and were met by Paria personnel at
17 the scene who gave a breakdown of the incident location and
18 pipe diameter by Paria person on the pipe diameter. The
19 Eastern team conducted a scene size-up and gathered
20 preliminary information from the live video footage of the line
21 provided from the HHSL Safety Systems Limited remote
22 observation vehicles, an ROV.

23 Mr. Johnson stated that his duty as team leader is to
24 conduct a risk assessment to ensure that where he is sending his
25 team is safe. He stated that Eastern needed to see the actual
26 area that they would make an entry to establish diameter of the
27 pipe and to figure out if the area was safe. Mr. Johnson stated

1 that the diameter of the pipe was 40 inches and that was not a
2 lot of room to move. It was, therefore, a high risk.

3 In addition, Mr. Johnson says that the live footage
4 showed that the pipe, as far as the ROV was able to go, was
5 filled with water. As such, Mr. Johnson had a conversation
6 with the Eastern team and told them that there was no way they
7 could make an entry into the pipe. In addition, in Johnson
8 stated that in the footage there was something lodged there
9 preventing the ROV from going forward and his recollection
10 was that the camera was able to go about 120 feet into the
11 horizontal pipeline. As such, Mr. Johnson stated that he also
12 considered the blockage as a factor in his assessment, but the
13 most important factor was that they were not trained to do a
14 water rescue.

15 Mr. Johnson stated that whether the divers were alive or
16 not was not part of his assessment as Eastern does not
17 determine whether someone was alive nor do they pronounce
18 someone dead after a period. He stated that they are called to
19 perform a rescue.

20 At approximately 3.45 a.m., Mr. Johnson made contact
21 with the management team of Eastern and reported his findings
22 and concerns relating to the high level risk involved in
23 conducting the rescue. The management decided the risk was
24 too high and unacceptable for them.

25 At 3.45 a.m. Mr. Johnson returned to the Incident
26 Command Centre from the incident site and informed the
27 Incident Commander of his findings. He informed the Incident

1 Commander that due to the video footage from the ROV, there
2 was no way his team would be able to make entry to perform
3 the rescue operation as approximately 120 feet of the 1200-foot
4 pipeline was filled with water, and because of the water, the
5 rescue required a diving team. Mr. Johnson also advised that
6 the level of risk must be assessed by such team before sending
7 any more people in the line to prevent a reoccurrence and
8 increase the number of casualties.

9 At about 5.00 a.m. the Eastern team was placed on
10 standby offsite pending a further assessment of the incident site.
11 The Eastern team provided standby services for the next 12
12 hours. At about 7.00 p.m. they were called off the assignment
13 by the Incident Management Team. Mr. Johnson stated that at
14 no point during the period 25th February until the recovery of
15 the bodies of the divers did he or anyone from Eastern have any
16 communication or attend any meetings with anyone from Paria
17 or Heritage or any other company in relation to any rescue
18 operation other than those described in his witness statement.

19 Mr. Johnson, is that an accurate summary of your witness
20 statement?

21 **Mr. Johnson:** Could you please just clarify the diameter of the
22 pipe that you read there for me, please?

23 **Ms. Maharaj:** You said that you were—well, you said 120
24 feet of—

25 **Mr. Johnson:** No, diameter.

26 **Ms. Maharaj:** Oh, the diameter; 30 inches.

27 **Mr. Johnson:** Yes, correct.

1 **Mr. Chairman:** I thought you said 40 as well.

2 **Ms. Maharaj:** Sorry, apologies if I did, sorry.

3 **Mr. Chairman:** Yes. Right. With that caveat, are you content
4 that that represents a fair summary of your evidence?

5 **Mr. Johnson:** Yes, it is.

6 **Mr. Chairman:** Thank you very much. Mr. Maharaj?

7 **Examination By Mr. Maharaj SC:**

8 Q. Mr. Johnson, good morning.

9 A. Good morning, Sir.

10 Q. I just have a few questions for you. The first time you were
11 contacted by Paria was at 11.40 p.m. on Friday night?

12 A. That's correct.

13 Q. And all that you were told by the person who contacted you
14 was that there were four persons trapped in a pipe?

15 A. That's correct.

16 Q. You were not told whether they were trapped in a pipe under
17 water?

18 A. No.

19 Q. You assumed it was above on land?

20 A. Confined space; that's correct.

21 Q. Because according to you, your team was not—

22 A. Trained to do water rescue.

23 Q. —trained to do a water rescue from a pipe, a pipe under water?

24 A. That's correct.

25 Q. And it was not until 1.25 a.m. on Saturday that you were
26 briefed. And you were told by Paria, if I understand your
27 evidence correctly, to prepare for a recovery and not a rescue?

1 A. No.

2 Q. What—

3 A. We should prepare ourselves in the event. Because in our job,
4 even though Paria didn't say it, in our job we prepare for both.
5 We look at the incident and we prepare for both. It could be a
6 recovery; it could be a rescue, because it is a confined space.

7 Q. Okay. So that was a feeling coming from your team and not
8 from Paria?

9 A. Yes.

10 Q. Okay. I understand.

11 **Examination By Mr. Chairman:**

12 Q. But it was not until 1.25 that you became aware that it was
13 filled with water and/or hydrocarbons?

14 A. That's correct.

15 Q. Right. That was the first you knew of it?

16 A. That's correct.

17 **Mr. Chairman:** Right. Thank you.

18 **Mr. Maharaj SC:** I think that's all for you. Thank you.

19 **Mr. Johnson:** Okay.

20 **Mr. Chairman:** Yes, anyone else? Yes. Ms. Nyree Alfonso,
21 please.

22 **Ms. Alfonso:** Good morning. Thank you, Chairman.

23 **Cross-Examination By Ms. Alfonso:**

24 Q. Good morning, Mr. Johnson.

25 A. Good morning.

26 Q. My name is Nyree Alfonso, and I represent the interest of the
27 SWWTU. Just a few questions for you, Sir. You referred in

1 your witness statement to something called a dynamic risk
2 assessment?

3 A. That's correct.

4 Q. Okay. Could you assist me and tell me what that would have
5 entailed in relation to the situation you met on—well, in your
6 case I'll say the 26th February?

7 A. Okay. What a dynamic risk assessment really is, we go on the
8 scene and observe what is going on. We gather information as
9 to what has happened, when it happened, what are we dealing
10 with, and we do a dynamic risk assessment as to how we are
11 going to formulate our rescue plan in order to retrieve the
12 person from within the confined space.

13 Q. And I see from your witness statement you would have gone
14 and—you did a visual inspection in your risk assessment?

15 A. That's correct.

16 Q. Could you give me an idea, that risk assessment is something
17 that you have to document? It's something that you formulate
18 in your mind?

19 A. And that's why we say dynamic. Dynamic risk assessment is
20 done on the spot. It's done within time. So you go on the scene
21 and the scene change ever so often. So we're doing a confined
22 space into a vessel or into a pipeline. The drawing that we get,
23 it shows us a pipeline, but within that pipeline now, there is
24 obstructions. So let's say it have up/down bends, then we need
25 to change our risk assessment to suit that. Right? So it's done
26 within the space of time. So it's not written down, but there is
27 risk assessment that is written down for certain process and

1 procedures.

2 Q. So in the wee hours of the 26th February, Mr. Johnson, when
3 you say you did a dynamic risk assessment, you did something
4 within a quick period of time or it's something that took you
5 some time before you formulated what the Company's position
6 would be or your position would be?

7 A. So gathering the information, we did gather information as to
8 what we were dealing with. Yes, we know it was a pipe but the
9 pipe had water. Right? So by doing a risk assessment we
10 eliminate that we could possibly make an entry because of this
11 water.

12 Q. What I'm trying to get at, Mr. Johnson, did that take you 10
13 minutes, 15 minutes, a half an hour, an hour?

14 A. Within 10 minutes.

15 Q. Within 10 minutes?

16 A. Yes.

17 Q. Okay. And you did your visit inspection; you did your dynamic
18 risk assessment?

19 A. Yes.

20 Q. And is it that if you had found that there was some part that
21 Eastern Emergency Response could play, you would have
22 continued to do other things?

23 A. That's correct.

24 Q. In terms of your risk assessment?

25 A. That's correct.

26 Q. Okay. But you did a brief analysis—kind of lawyers' term,
27 sorry—brief assessment?

1 A. That's correct.

2 Q. And you were able to do that within 10 minutes?

3 A. Yes.

4 Q. Thank you, Mr. Johnson. I have tried to understand exactly,
5 and I want to get the word correct, Eastern Emergency
6 Response Services; there's a related company, Eastern Divers?

7 A. So it's a group of companies. Eastern Divers is one of the
8 companies; Eastern Emergency is one of the companies also.
9 So it's a group of companies.

10 Q. Okay. When you realize that, you know, this was a water
11 environment, an environment that contained water, sea water in
12 particular, did you reach out to anybody from Eastern Divers?

13 A. No, that's not my call. That's the call of the IC.

14 Q. The?

15 A. That's the call of the Incident Commander.

16 Q. Oh, thank you, thank you.

17 A. I can't call out anyone.

18 Q. Okay, okay, I see. At any point in time, Mr. Johnson, were you
19 told by somebody—as you say the ICT, either—well, let me
20 rephrase that—either from Paria's ICT or from anybody from
21 Heritage, because it is Heritage who contacted you.

22 A. Um-hmm.

23 Q. Did anybody tell you that the lines, the pipeline that you had the
24 diagram in your WhatsApp would be pumped down?

25 A. I think that may have been a conversation within the room that I
26 was in when we were getting the brief, but it was not a direct
27 conversation to me.

1 Q. Okay. So it was something discussed generally in the room
2 while you were there?

3 A. Yes.

4 Q. Okay. Because I had the impression when I read it, not in your
5 witness statement, that, you know, this was a plan that would
6 allow Eastern, your company, Eastern Emergency Response, to
7 enter that confined space because it would now be—well, the
8 water would be pumped out of it, so it would be a dry
9 environment.

10 A. Um-hmm.

11 Q. I had that impression. But you didn't get that impression when
12 you were there?

13 A. Well, we were placed on standby.

14 Q. Okay.

15 A. We were placed on standby. So if that—as I said, that was a
16 conversation within the room. Probably that was their mindset
17 or their thought pattern as to when it is pumped down, then we
18 would be engaged again.

19 Q. And, ultimately, Mr. Johnson, you formed the view that your
20 organization, yourself, and your team present in the early hours,
21 could not assist—

22 A. That's correct.

23 Q. —in entering the pipe?

24 A. That's correct.

25 Q. And I see by five o'clock—about five or so hours after your
26 first call out, you were placed on standby offsite?

27 A. That's correct.

1 Q. That means you returned to your base?

2 A. That means that we return to our base.

3 **Ms. Alfonso:** Thank you very much, Mr. Johnson. Thank you
4 for your answers.

5 **Mr. Chairman:** Mr. Ramadhar.

6 **Mr. Ramadhar:** Good morning, Chairman. Good morning,
7 Commission.

8 **Cross-Examination By Mr. Ramadhar:**

9 Q. Good morning, Sir.

10 A. Good morning.

11 Q. First of all, thank you for spending some time with us today.
12 You got to Paria at what time? Remind us. Was it around
13 12.30 a.m.?

14 A. It was around 12.00, 12.30, yes.

15 Q. And I'm quite interested in what you described as your
16 dynamic rescue plan. I love the word dynamic. Could you
17 explain what that means for us?

18 A. So as I indicated—

19 Q. And let me make it quite clear, no trick questions here. Simple,
20 I just want to—

21 A. The dynamic risk assessment is done on the spot—

22 Q. Yes.

23 A. —so we could have a risk assessment that govern us for a
24 particular job. But during the time of the incident, there are
25 changes that take place, so we need to modify the risk
26 assessment on the spot, so we look at the situation and we
27 tweak our response in a safe manner to suit that situation.

1 Q. I appreciate that so much. Now, you got to the actual site of the
2 accident at around, I understand 2.30, some two hours after
3 your first arrival at Paria?

4 A. Yes.

5 Q. Correct?

6 A. Yes.

7 Q. And before you got to the site, you were amongst Paria
8 personnel and personalities. Is that correct?

9 A. Yes.

10 Q. At their office?

11 A. At the Command Centre.

12 Q. At the Command Centre. And, of course, you being a
13 professional wanted to get as much information as you possibly
14 could. Yes?

15 A. Yes.

16 Q. So that, as you've just told us, the dynamic rescue plan will be
17 determined by changing circumstances. Correct?

18 A. Yes.

19 Q. You observed, of course, so that there'd be no uncertainty, there
20 was written information on a whiteboard in that room?

21 A. Not where I was located, Sir.

22 Q. They didn't show you a whiteboard with step by step what
23 happened or anything like that?

24 A. No. The onliest whiteboard I saw was with a diagram on it.

25 Q. With a diagram?

26 A. Yes.

27 Q. Was it brought to your attention that from earlier in the day

1 Paria's view was that the likelihood of survival was limited?

2 A. No.

3 Q. No. Was that of interest to you?

4 A. Of course, it was of interest to me.

5 Q. As I say, no trick question. And you appreciate as a
6 professional, who we respect, that when divers go missing
7 under water there's a high level of urgency that is required to
8 rescue them?

9 A. I can't speak to diving rescue, Sir, because I do not have that
10 competence.

11 Q. Thank you so much. So your company was called for what
12 purpose?

13 A. Confined space rescue.

14 Q. Right. So when you got there, you did not have the expertise,
15 as you are telling us now, to ascertain the urgency that may be
16 required for divers under water in perilous conditions? Is that
17 what you're telling us?

18 A. Come with that question again?

19 Q. Certainly. When you got there, you did not have the expertise,
20 as you just told us, to determine even the urgency that may be
21 required to rescue divers who may have found themselves in
22 great difficulty under water?

23 A. Okay. So I'm going to repeat myself. As I indicated, I was told
24 it was a confined space rescue. Divers in the pipe and divers in
25 the water was not a conversation. Right?

26 Q. So you did not—I beg your pardon. Do finish.

27 A. After which I arrived—we were given a diagram on the board

1 indicating that the divers were in the pipe. Right? No water
2 was discussed. Right?

3 Q. Yeah.

4 A. So if we have divers in a pipe, a dry pipe, it's a confined space
5 rescue.

6 Q. Thank you so much. So nobody at Paria even gave you an
7 inkling—let's get this clear—that there was water in the pipe.
8 Correct?

9 A. Right.

10 Q. They didn't give you an inkling of information that there may
11 have been oil in the pipe?

12 A. I knew there were oil in the pipe.

13 Q. Who did you learn that from?

14 A. It's a riser.

15 Q. I didn't ask you that. From whom did you learn that there was
16 oil in the pipe?

17 A. No one.

18 Q. Thank you. So as far as you are concerned, the information that
19 you were fettered with was that men were in a pipe, as far as
20 you are concerned, without water and possibly some oil.
21 Correct?

22 A. Correct.

23 Q. Yes. And you were to use that information to come up with a
24 dynamic rescue plan?

25 A. No.

26 Q. Eh?

27 A. No.

1 Q. Well, a dynamic assessment—

2 A. The information that I would use to come up with my dynamic
3 rescue plan would be the information that I am seeing in front
4 of me; not the information that they are giving me. Right? All
5 I would—

6 Q. Oh, beautiful. Thank you. I could understand why you
7 wouldn't trust what they had to tell you. I could understand
8 that. You have to make your own assessment?

9 A. Correct.

10 Q. So by 2.35 you were first on the site. Correct?

11 A. That's correct.

12 Q. You went into the water?

13 A. No, I did not.

14 Q. You went into the pipe?

15 A. No, I did not.

16 Q. So you got other information?

17 A. From the visual camera. If you read the statement—

18 Q. No, no, no. Sir, you're here; live evidence.

19 A. From the visual camera, the ROV, I would have seen that there
20 were water in the pipe.

21 Q. Beautiful.

22 A. That is where I draw my conclusion from.

23 Q. And your conclusion was that there was water in the pipe?

24 A. Correct.

25 Q. What else?

26 A. Something stuck in the pipe.

27 Q. Something?

1 A. Yes.

2 Q. You didn't know what it was?

3 A. Yes, I knew what it was.

4 Q. What was it?

5 A. A breathing air bottle.

6 Q. Not a welded piece of metal that could not be removed?

7 A. A breathing air bottle, sir. That's what I saw from the camera
8 footage.

9 Q. Right. And as far as you know, breathing air bottles can be
10 mobile. You could push it and it will move in water?

11 A. Okay.

12 Q. Not okay, I'm asking you; you're the expert. You were called
13 in.

14 A. No, I'm not the diving expert, Sir.

15 Q. No, not diving. You're the man who had to make assessment to
16 come up with a rescue plan?

17 A. For confined space rescue.

18 Q. Yes, of course.

19 **Mr. Chairman:** Just a moment, just a moment.

20 **Examination By Mr. Chairman:**

21 Q. Mr. Johnson—

22 A. Sir.

23 Q. —if when you were first called, which I understand to be
24 shortly before midnight between the Friday and the Saturday
25 morning, yes?

26 A. Uh-huh.

27 Q. If you had been told by the person who called you, "Look, Mr.

1 Johnson, we have a pipe filled with water and hydrocarbons in
2 which four men are stuck. We have no idea whereabouts in this
3 pipe, but they're under water and/or hydrocarbons", are you
4 able to assist. What would your response to that enquiry have
5 been?

6 A. No.

7 Q. Thank you. So you would not have been there at all if you'd
8 been told what the position was from the beginning, would
9 you?

10 A. Correct.

11 Q. So it really doesn't matter that once you got there and having
12 then discovered that that was the position, whatever
13 contribution you could make was going to be virtually zero?

14 A. Zero.

15 **Mr. Chairman:** Thank you very much. Is there really
16 anything more that we can extract from this witness, Mr.
17 Ramadhar?

18 **Mr. Ramadhar:** Just bear with me a few moments. I shan't be
19 long.

20 **Continued Cross-Examination By Mr. Ramadhar:**

21 Q. So in terms of the—you chose, learning all that you did then,
22 that you couldn't do a rescue. Correct?

23 A. Yes.

24 Q. Yes. And from your experience from whatever source, you
25 knew this accident occurred at what time?

26 A. When I got the call.

27 Q. No, no, I didn't—I beg your pardon. I put it inelegantly. What

1 time you learn the accident to have occurred?

2 A. Minutes to 12.00 on Friday night.

3 Q. So you had no idea that this thing occurred around three
4 o'clock?

5 A. No. I was on work. I was on work practically whole day. I left
6 Guayaguayare and headed to Point Fortin in which on my way I
7 got a call.

8 Q. Of course. I know that's a serious journey. I appreciate that.
9 What I'm asking you, whilst at Paria or on the site, did you
10 learn as to what time the accident actually occurred?

11 A. Oh, you're now asking the question. Yes, I did.

12 Q. Oh, you want to play it this way? Okay.

13 A. No, no, no.

14 **Mr. Chairman:** I think there's a little misunderstanding
15 between the two of you.

16 **Examination By Mr. Chairman:**

17 Q. Mr. Johnson, were you ever told, Mr. Johnson, that this incident
18 in which these men were trapped in the pipe occurred at about
19 half past 2.00 that afternoon?

20 A. At the IC.

21 Q. Right. So when you were at the IC that's when you were told
22 that?

23 A. Yes, yes.

24 Q. So you didn't get to learn that until you arrived at the site?

25 A. That's correct.

26 **Mr. Chairman:** Does that help, Mr. Ramadhar?

27 **Mr. Ramadhar:** So generous of you, Sir.

1 **Continued Cross-Examination By Mr. Ramadhar:**

2 Q. Now, with common sense, you appreciate when you learnt that
3 there would have been water in that pipe, that men would have
4 needed air to survive? Correct?

5 A. Correct.

6 Q. Yes. Did you know whether they had viable tanks and how
7 long—there are two parts of this question—whether if first you
8 knew that they had viable tanks and how long at best those
9 tanks would have lasted in terms of oxygen?

10 A. No.

11 Q. No. At the time you got to the scene at 2.35, what was your
12 view of the likelihood of survival of these men in this pipe
13 since around three o'clock?

14 **Mr. Chairman:** How could he possibly answer that question?
15 He's not a dive expert. He has no idea how much air is in a
16 tank; how long a person can live with a tank; how much air is in
17 the pipe; if there is any air in it. None of this concerns him.

18 **Mr. Ramadhar:** Well, that is the point.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 Q. Why were you called?

21 **Mr. Chairman:** Well, the fact—

22 **Mr. Ramadhar:** Thank you very much.

23 **Mr. Chairman:** I share your view, Mr. Ramadhar, that there
24 was no need to call him at all. But that we have managed to
25 establish. Had he been told what the position was, he wouldn't
26 have even gone. He would have joined the rest of the revelry,
27 no doubt, for the Carnival that was existing in the course of that

1 week.

2 **Mr. Ramadhar:** He must have been too tired to have enjoyed
3 it that day.

4 **Mr. Chairman:** Oh, there were none. I'm told there was
5 none. Yes, of course, we were all ridden with Covid. Right.
6 Look, I don't think we could take this any further.

7 **Mr. Ramadhar:** One last question, one last question.

8 **Mr. Chairman:** Which is?

9 **Continued Cross-Examination By Mr. Ramadhar:**

10 Q. Your company, of course, would have billed Paria by now,
11 haven't they?

12 A. I do not know. I do not work accounts. I have no information
13 as it relates to accounting.

14 **Mr. Ramadhar:** Oh, thank you so much.

15 **Mr. Chairman:** Does anyone else have any questions for Mr.
16 Johnson? Could there be any other questions for Mr. Johnson?
17 No. I suspect not. Thank you.

18 **Mr. Peterson SC:** We don't have any, Sir.

19 **Mr. Chairman:** Right. Thank you. Mr. Johnson, for all the
20 time that you've waited to give your evidence, that is it. All
21 right? I'm very grateful for you attending, and you're free to
22 go. Thank you very much.

23 **Mr. Johnson:** Thank you very much, Sir.

24 **Mr. Chairman:** Thank you. Before the next witness is called,
25 Mr. Ramadhar, have you been brought up to speed with the
26 objection to certain evidence being given to this Commission
27 by Mr. Peterson on behalf of Paria?

1 **Mr. Ramadhar:** I have, in fact, been informed by Ms. Boodan
2 that Paria is taking a position that the families ought not to be
3 given any audience, whether in writing or so.

4 **Mr. Chairman:** Correct. Correct.

5 **Mr. Ramadhar:** I find it shocking.

6 **Mr. Chairman:** Well, just before how shocking you find it,
7 are you in a position to be able to deal with that objection at this
8 time or do you want more time?

9 **Mr. Ramadhar:** I think it would be better if we had a little
10 more time, but I shan't, if it should inconvenience the
11 Commission—

12 **Mr. Chairman:** I will hear the application before we have our
13 mid-morning break, please. I say I'll hear your response to the
14 application before our mid-morning break. So you will have to
15 do two jobs at once. All right? And I'll also hear from Mr.
16 Hosein-Shah who has indicated he also takes a position.

17 So before the break, which would probably be in the
18 course of the next 40 minutes or so, I would hear that
19 application. All right. Thank you.

20 Our next witness then, please, is, I think, Mr. Anderson
21 Gill. I got that right? Yes. Thank you. He's a commercial
22 diver with Hull Support Services. Yes? I think he's here. Yes.
23 Mr. Anderson Gill, the oath is going to be administered now, so
24 she's taking [*Inaudible*]

25 [*Mr. Anderson Gill sworn*]

26 **Mr. Gill:** I, Anderson Gill, solemnly swear that the evidence I
27 shall give to this Commission in this case shall be the truth, the

1 whole truth, and nothing but the truth.

2 **Mr. Chairman:** Mr. Gill, thank you very much for coming. I
3 know you were inconvenienced on Friday so I apologize for
4 that.

5 **Mr. Gill:** It's okay.

6 **Mr. Chairman:** All right. Well, thank you anyway for
7 coming this morning. I don't anticipate your evidence will take
8 very long.

9 Mr. Bissessar who sits opposite you is going to give a
10 summary of your evidence. All right? So listen carefully to
11 what he has to say and then at the conclusion of that if you
12 agree with it, we'll then be able to proceed. Mr. Maharaj will
13 have a few questions for you and then anybody else who might
14 want to ask you something. All right? Thank you very much,
15 Mr. Bissessar. What page are we on?

16 **Mr. Bissessar:** Thank you, Chair. Page 2998. It's of the
17 supplemental witness bundle.

18 Mr. Anderson Gill was interviewed by Counsel to the
19 Commission and on 17th November, 2022, gave a witness
20 statement to the Commission which is at WB or SWB2998.

21 Chair, with your permission I will actually read the
22 witness statement. It's fairly brief.

23 **Mr. Chairman:** All right.

24 **Mr. Bissessar:** I Anderson Gill of Carenage Commercial
25 Diver say as follows: I am a Commercial Diver and I was
26 certified in 2008 by the Professional Diving Centre in South
27 Africa. In 2018 I received my certificate of diving medic from

1 Institute National de Plongée Professionnelle in Marseilles,
2 France. I also received a First Aid and Commercial Diver
3 Certification in 2018 from INPP, as well as certification as an
4 Approved HSE/Recognized IMCA Surface Supplied Top-Up
5 Diver—and he's exhibited copies of his certificates. These
6 qualifications mean I am accredited as an internationally trained
7 Commercial Diver and I can dive with mixed gases, which is
8 called saturation diving.

9 There are about 19 commercial divers in Trinidad and
10 Tobago who are similarly qualified, which allows us to dive for
11 international oil and gas companies particularly those which
12 operate off the East Coast of Trinidad. Generally, commercial
13 diving relates to diving at depths in excess of 150 feet.

14 I provide diving services to Hull Support Services
15 Limited and other companies as an independent contractor. I
16 have worked with Hull since 2008 and generally, I assist in
17 relation to the inspection of and removal of debris from the
18 seabed before a pipeline is installed. I also assist in
19 maintenance and repair works on the pipelines and other
20 confined space projects.

21 I was not involved in the rescue of any of the divers
22 following the incident on 25th February, 2022. My only
23 involvement was on, I believe, 6th and 7th March, 2022, when I
24 was retained by Hull as part of a team of commercial divers to
25 detach the crane hook which was then attached to the habitat,
26 which was resting on the seabed approximately 50 feet below
27 off Berth 6.

1 The team comprised Anthony Nivet (Supervisor), Emile
2 Eligon, Mario Waldron, Roger Rose, and myself. The dive was
3 completed in about 15 minutes and Emile Eligon actually did
4 the dive to remove the crane hook from the habitat. This dive
5 was based on a surface supply of air, which means that oxygen
6 was generated on the vessel with an umbilical providing
7 communication, lighting, and rope.

8 I recall on Friday 25th February, 2022, at about 5.00 p.m.
9 or so, I received a text message for divers for an emergency
10 rescue. I was taking my children for swimming classes so I
11 could not respond.

12 And Mr. Gill certifies that the facts stated in his witness
13 statement are true and correct to the best of his knowledge,
14 information and belief. Thank you, Chairman.

15 **Mr. Chairman:** Thank you. Yes, Mr. Maharaj.

16 **Examination By Mr. Maharaj SC:**

17 Q. Mr. Gill, were you asked at any time by Paria to give any
18 advice in respect of a rescue operation of men who were
19 trapped in a pipeline?

20 A. No.

21 Q. If you were asked by Paria to give such an opinion, would you
22 have been prepared to consider giving such an opinion?

23 A. Yeah. Yeah, I am.

24 Q. And based on your experience as a diver, would you have had
25 any experience in either diving or giving opinions in respect of
26 persons trapped in a pipeline?

27 A. No.

1 Q. Or any person trapped underwater?

2 A. No, that's not—

3 Q. In a confined space?

4 A. No, no. No, no.

5 **Mr. Chairman:** I'm sorry, I missed that. I was speaking to
6 my colleague.

7 **Mr. Maharaj SC:** He said no to the question of any persons
8 trapped under water in a confined space. He never gave an
9 opinion on that.

10 **Examination By Mr. Chairman:**

11 Q. You didn't or you wouldn't?

12 A. I didn't.

13 Q. You didn't. All right. Thank you.

14 **Continued Examination By Mr. Maharaj SC:**

15 Q. But notwithstanding the fact that you have not given an opinion
16 in the past, would you consider yourself to be equipped with the
17 knowledge as a diver to consider giving such an opinion
18 depending on the circumstances?

19 A. If I had the right team, yeah.

20 Q. Yes. Okay. And if you were asked on the Friday, 25th
21 February, last year, to give such an opinion, you would have
22 obviously tried to get the team and give such an opinion?

23 A. Yeah.

24 **Mr. Maharaj SC:** No further questions.

25 **Mr. Chairman:** Yes. Does anybody else have any questions
26 for Mr. Gill? Yes, Ms. Nyree Alfonso.

27 **Ms. Alfonso:** Thank you, Chairman.

1 **Cross-Examination By Ms. Alfonso:**

2 Q. Good morning, Mr. Gill.

3 A. Morning.

4 Q. My name is Nyree Alfonso. I am the representative of the
5 SWWTU, and I just have a couple questions to ask you.
6 Following from my learned Senior, Mr. Maharaj, I see you have
7 experience in maintenance and repair works on pipelines?

8 A. Yes.

9 Q. Okay. Have you had the occasion—and I'm not talking about
10 rescue—to yourself in the course of your duties go into a
11 pipeline?

12 A. No.

13 Q. Okay. Can you tell me, Mr. Gill—well, following from Mr.
14 Maharaj's question as well, if you had the right equipment, if
15 you had the right team, and you'd been able to put together a
16 team of similarly qualified persons as yourself, would you
17 consider entering into a pipe to conduct a rescue?

18 A. Once they could fit, yeah.

19 Q. Once what?

20 A. Once they could fit.

21 Q. Once you could fit?

22 A. Yeah.

23 Q. Okay. And your fellow team members are not too big?

24 A. Yeah.

25 Q. Okay, I got you. Thank you very much for that, Mr. Gill. Mr.
26 Gill, just one last question for you. Do you recall—I
27 understood that you could not yourself—you received a text

1 message on the Friday requesting—or a text message
2 requesting divers for an emergency rescue. You recall that in
3 your witness statement. Yes?

4 A. Yeah, yeah.

5 Q. Okay. Mr. Gill, you recall who that text message came from?

6 A. It's a group ah divers. We have a group we does communicate
7 in.

8 Q. You have like a WhatsApp group?

9 A. Yeah, a WhatsApp group.

10 Q. Okay. So there was an emergency amongst your brother divers
11 and the group—

12 A. That, yeah, divers trap in a pipeline and they looking for divers;
13 the Coast Guard requesting divers.

14 Q. Okay. So the group was reaching out to available divers who
15 could assist?

16 A. Yeah.

17 Q. But I note that you couldn't assist?

18 A. No, no.

19 Q. Okay. Thank you very much, Mr. Gill. Thank you for your
20 time.

21 A. Okay. You're welcome.

22 **Mr. Chairman:** Anyone else?

23 **Mr. Peterson SC:** No, Sir.

24 **Examination By Mr. Chairman:**

25 Q. I want to ask you something which you haven't actually been
26 asked to deal with up until now. But in water, a person weighs
27 or appears to weigh rather less than they do on land?

1 A. Yeah.

2 Q. Much to the pleasure of those of us who are a little overweight.
3 But the fact is, is that that is true also of all obstacles in water?

4 A. Yeah, everything will have ah air—some kind ah air in it, so we
5 have lighter—

6 Q. And obviously, sea water is different from water in a lake
7 because there's salt in sea water which makes you more
8 buoyant. All of us who swim know that you can swim perhaps
9 a little farther in sea water than you can in fresh water. Yes?

10 A. Yup.

11 Q. And so, there are all kinds of factors which impact on your
12 buoyancy in water?

13 A. Yeah, correct.

14 Q. And that applies equally to the tanks that divers use for diving?

15 A. Yes.

16 Q. Scuba diving?

17 A. Scuba tanks, yes.

18 Q. I have one here. This one's full of air.

19 A. Yes.

20 Q. So it feels quite heavy. If there's any doubt you can tell there's
21 air in it.

22 A. Yeah, there's pressure in it, yeah.

23 Q. In water picking this up out of it—it's quite heavy as I say—but
24 in water, depending on how much air is in it, it can find a point
25 of buoyancy, can it not?

26 A. Yeah. As the pressure goes down the tanks get buoyant.

27 Q. If this was in a pipe with air in it, fully filled tank, the

1 likelihood is—let's deal with sea water, all right; forget
2 anything else. If that were in a pipe with sea water, would that
3 sit, do you think, on the bottom of the pipe?

4 A. Yeah, it would.

5 Q. It would, wouldn't, it; just lay on the bottom?

6 A. Yeah.

7 Q. If it were empty and partially empty, it may find a point of
8 buoyancy, might—

9 A. It should start to—

10 Q. Start to float?

11 A. Yeah. Because even if it on your back and yuh diving, yuh
12 could tell your tank reach 1000 psi; it does come off yuh back.
13 So you doh hah to watch yuh gauge. Yuh could feel the tank
14 actually leaving yuh back knowing you reach 1000 psi,
15 automatically, if yuh accustomed diving, you could know that.

16 Q. Right. All I'm trying to establish or understand, really, because
17 my knowledge of diving is very limited, and I've had to rely on
18 everybody else. But there is a suggestion, you see, that one of
19 these tanks was lodged in the pipe, stuck in the pipe. Now, the
20 pipe is 30 inches. This is 28. [*Mr. Chairman demonstrated*
21 *with hoop*] I'm trying to understand how it's possible for that
22 tank to lodge itself in a pipe that's 30 inches in diameter in such
23 a way that it could not be pushed.

24 A. What was pushing it?

25 Q. Well, some sort of camera or ROV was pushing it along, you
26 know, a crawler of some kind.

27 A. Probably the power of the crawler, the force the crawler had to

1 push it forward, probably.

2 Q. Right. So if it's filled with air, if that tank was filled with air,
3 and was laying on the bottom of the pipe, it would still be
4 relatively heavy, wouldn't it, even for a crawler to push it
5 along?

6 A. I don't know. I don't know what is the crawler exactly to say
7 what. The crawler couldn't crawl over it?

8 Q. Well, yeah, I think that's a different question. I'm just trying to
9 establish—we've had some evidence, you see, that this tank
10 was in some way lodged in the pipe such that it couldn't be
11 moved, and we know that the pipe inside was coated with a
12 very slippery, slimy, oily surface, that no doubt have been
13 accumulated over years of the pipe having been containing oil?

14 A. Yeah, but answering that question without seeing the crawler or
15 knowing what is the crawler, would be almost difficult to know
16 the ability of the crawler, nah.

17 Q. No, I follow that. It depends on the force of the crawler.

18 A. Yeah.

19 Q. But just in terms of a full, partially full, or empty tank, your
20 understanding would be that if it was full it's laying on the
21 bottom of the pipe and probably could be slid along. If it were
22 partially full, it might find a point of buoyancy.

23 A. Yeah.

24 Q. And it might be at an angle.

25 A. It would be lighter, yeah.

26 Q. And if it was empty, it would be floating.

27 A. Not floating, but the buoyancy will be more—

1 Q. A point of buoyant, I see—

2 A. Just to do what you want; you could push it up; push it across.

3 Q. It would be relatively easy?

4 A. Yeah.

5 Q. I mean, touch it and it would move, wouldn't it?

6 A. Yeah.

7 Q. All right. Just for completeness' sake, this is a regulator. I've
8 been calling them spiders, because scuba divers have two more
9 pipes that come out of this rather than just the two that we see
10 on this one. There are four pipes. You get an additional one of
11 these.

12 A. They does call dah working regulator.

13 Q. Yes, another regulator. And then you get also another pipe that
14 connects to your BCD, which you can then inflate. All right. If
15 this were in the pipe as well, either attached or unattached,
16 presumably attached, that might, I suppose, provide some
17 additional reason why it might get caught up on the inside
18 somehow. Yes. Thank you very much.

19 A. Okay.

20 **Mr. Chairman:** Does anyone else have any questions arising
21 from that little exercise which I've taken upon myself?

22 **Mr. Mootoo:** Certainly. Just one question.

23 **Mr. Chairman:** Of course.

24 **Cross-Examination By Mr. Mootoo:**

25 Q. The Chairman has put to you that if the tank was—I understood
26 the question if the tank was lying flat in the pipe. But if the
27 tank was horizontal in the pipe, given the diameter of the pipe

1 and the size of the tank, would you accept that it could become
2 stuck in that position?

3 A. Stuck; again, it depends on the forces. It could never lodge. It
4 could always—as I say, is a slippery pipe. If the tank even at
5 this angle and you push here, the tank would skate and end up
6 this way, lengthways inside the pipeline. It would never—

7 Q. Can you just lay that tank flat in that hoop for me, please?

8 **Mr. Mootoo:** Not you, Mr. Chairman. [*Laughter*]

9 **Mr. Chairman:** I would have done the exercise myself but the
10 fact that that hoop is actually only 28 inches, and so, it wouldn't
11 be a fair exercise. It's not exactly round either. So, I mean, I
12 think we can measure this and you might want to consider it
13 with this on.

14 **Mr. Peterson SC:** No, don't ask him to put on the spider; not
15 on the tank, you know, on himself.

16 [*Mr. Chairman puts the spider on the tank*]

17 **Mr. Chairman:** So that would be—you should bear in mind
18 there would be an additional pipe coming from the top and from
19 the bottom.

20 **Continued Cross-Examination By Mr. Mootoo:**

21 Q. Right. So I don't know if you're in a position to tell us, Mr.
22 Gill, but with the additional apparatus connected to that tank,
23 would it be fair to say that the distance between the base of the
24 tank and the top of the apparatus is in the order of or exceeds 30
25 inches? Are you able to say?

26 A. No.

27 **Mr. Mootoo:** Okay. No further questions for this witness.

1 **Mr. Chairman:** We can measure it, Mr. Mootoo. I think it
2 would be sensible to do that. But I think we also need to bear
3 in mind that the images that we do have of the inside, Mr. Gill
4 hasn't seen those; we have. The pipe isn't standing upright
5 in—the bottle isn't standing upright in the pipe. It is at a slight
6 angle as I recall it, in the pipe. So that's where I think we are.
7 But I'm perfectly happy to have that measured and to make
8 whatever representations you wish about it. As I say, the
9 spiders that scuba divers use—

10 **Examination By Mr. Chairman:**

11 Q. And, Mr. Gill, I think you've confirmed this—has two
12 additional pipes coming out of that breathing that the regulator
13 that I've just connected—

14 A. The octopus and the BCD hose.

15 Q. Yeah, yeah, spider or octopus. Anyway, it has two additional
16 pipes coming from it. Thank you very much.

17 **Mr. Chairman:** Does anybody else have anything to ask?
18 [Pause] All right. Thank you very much indeed. Mr. Maharaj,
19 anything else?

20 **Mr. Maharaj SC:** No.

21 **Mr. Chairman:** All right. Just before we call Mr. Donawa
22 next, I'm asked for a 5-minute break and we'll have a 5-minute
23 break. Thank you very much.

24 Thank you very much for coming, Mr. Gill. I'm glad it
25 was short and sweet. Thank you. We'll rise for 5 minutes.
26 Thank you.

27 **11.10 a.m.:** *Enquiry suspended.*

1 **11.15 a.m.:** *Enquiry resumed.*

2 **Mr. Chairman:** Thank you. Mr. Donawa I believe is next. Is
3 he not? Yes. Thank you. How long do we anticipate Mr.
4 Donawa to be?

5 **Mr. Maharaj SC:** I would just be about 10 or 15 minutes with
6 Mr. Donawa.

7 **Mr. Chairman:** Should we hear the application now, then,
8 before dealing with Mr. Donawa, and then I at least have that in
9 my mind—

10 **Mr. Maharaj SC:** I think that might be the best thing.

11 **Mr. Chairman:** Yes. Mr. Ramadhar seems to have gone
12 walking again.

13 **Mr. Trebouhansingh:** Good morning, Mr. Chairman. He just
14 stepped out to use the washroom. He shall be back.

15 **Mr. Chairman:** I'll wait a moment. I think we have, in any
16 event, a response from Mr. Hosein-Shah on behalf of the
17 Union?

18 **Mr. Hosein-Shah:** Yes, Chair.

19 **Mr. Chairman:** Are you ready to deal with that now?

20 **Mr. Hosein-Shah:** I wouldn't say ready, but we can deal with
21 it.

22 **Mr. Chairman:** Ready enough?

23 **Mr. Hosein-Shah:** Ready enough.

24 **Mr. Chairman:** Okay, good, very well. Let's make a start
25 then, shall we, while we're waiting for Mr. Ramadhar?

26 **Mr. Hosein-Shah:** I'm not quite sure whether the Procedural
27 Rules can be put on the screen or whether you have a hard copy

1 of it, but I'll be referring to the Procedural Rules.

2 **Mr. Chairman:** Yes, we do. We can have the Rules put on
3 the screen. No problem.

4 **Mr. Hosein-Shah:** Sorry, chair, you will let me know when
5 you have it before you.

6 *[Pause]*

7 **Mr. Chairman:** It's coming up on the screen in a moment.
8 While that's being done I've got it in front of me.

9 **Mr. Hosein-Shah:** Sure. If I can take you to Rule 4(a)(xii).

10 **Mr. Chairman:** Yes, I got it.

11 **Mr. Hosein-Shah:** Yes. So rule 4(a)(xii) of the Procedural
12 Rules provides that one of the mandates of the Commission is
13 to examine the role played by Paria and LMCS in dealing with
14 the incidents. And I also want to go to beyond examining. The
15 Commission is tasked with making observations and
16 recommendations with respect to the appropriate best practices
17 and policies and/or procedures to be utilized by companies such
18 as Paria and LMCS in response to these types of incidents, and
19 that mandate is found at Rule 4(b)(iv) of the Procedural Rules.
20 Now, clearly, the Commission is entitled—

21 **Mr. Chairman:** Just a moment. Let me just read it.

22 **Mr. Hosein-Shah:** Yes.

23 *[Pause]*

24 **Mr. Chairman:** Yes.

25 **Mr. Hosein-Shah:** Yes. So clearly, the Commission is entitled
26 to receive evidence with respect to those matters or which will
27 assist the Commission in fulfilling its mandate, and the mandate

1 we're looking at right now is the response and the role and how
2 these incidents were dealt with.

3 Now, the general rule for receiving such evidence is to be
4 found at Rule 23 of the Procedural Rules. And the rule is this:

5 "The Commission may receive evidence in such or any
6 form that it considers to be helpful..."

7 That's the word I want to focus on, "helpful".

8 "...in fulfilling the terms of reference whether or not such
9 evidence would be admissible in a court of law."

10 So the test is one of helpfulness, not necessarily relevance.
11 Though, in our respectfully submission, the evidence is
12 relevant. But just for the sake of putting the relevant matters
13 before the Commission, the test is one of helpfulness. And then
14 the second limb of the general rule is that the Commission is
15 not bound by the rules of admissibility as would be found, for
16 example, in the court of law.

17 Now, to be fair, the rules do mention relevance at Rule
18 43. So if you can bring that up. In the context of relevance, the
19 Rule provides that the resolution of such objections is that the
20 Commission shall give such weight to that evidence as you, the
21 Commission, deem appropriate. There are no exclusionary
22 wording—sorry. There's no exclusionary wording contained in
23 that. It is a matter of weight for the Commission to determine
24 and the Commission is perfectly in a position to determine the
25 weight of the evidence to be given by the families.

26 But in considering relevance—so should the Commission
27 not be minded to accept those, I guess, technical arguments, in

1 considering the relevance of the evidence, when we look at
2 dealing with the incident and responses to the incident, clearly,
3 those considerations would involve how LMCS and Paria dealt
4 with the families, and that would involve communication; that
5 would involve support; and it will involve quite naturally the
6 impact to the families.

7 This Commission has heard evidence with respect to how
8 LMCS and Paria dealt with the families. In fact, a core part of
9 the evidence of the ICT involved the opening of channels of
10 communications, communicating with the families, the
11 provision of psychological support, and financial support in the
12 form of—I believe it was groceries and a Massy card. So that
13 is evidence that the Commission has already heard.

14 In considering that evidence and in applying it to the
15 mandate, for example, in dealing with policies which may be
16 recommended or procedures which may be recommended by
17 this Commission, and having regard to the evidence that has
18 been heard thus far, which has thus far been considered to be
19 relevant, clearly, consideration must be given to the evidence of
20 the families who were directly involved, who received or were
21 involved in those deliberations. That evidence would be
22 directly relevant to those matters. The Commission can't
23 necessarily hear from one side and exclude the families
24 entirely; that would be a quite unfair proposition.

25 So that, just to summarize, the position of the Union is
26 that, one, the evidence is helpful within the meaning of the
27 rules; two, the evidence is relevant. And in any event the

1 Commission is entitled to hear whatever evidence it deems fit,
2 and it will ascribe whatever weight it considers necessary to
3 that evidence.

4 And unless there's anything else I can assist the
5 Commission with, those are our respectful submissions.

6 **Mr. Chairman:** Thank you very much. That's helpful. Mr.
7 Ramadhar.

8 **Mr. Ramadhar:** First of all, let me congratulate my learned
9 colleague for so clearly stating the authority and responsibility
10 of this Commission to allow such evidence. In fact, I want to
11 suggest that to do otherwise would be to perpetuate the accident
12 and the consequences of the accident.

13 If one is to take the narrowest and illogical view that the
14 accident ended on the 25th, going into the 26th, and on the
15 27th, and possibly onto the 28th February, one would be
16 missing the point altogether, because this Commission is fully
17 entitled to look at, not just the causes, but the consequences of
18 the accident. And if I may reference the Terms of Reference
19 literally at 2, and if I will be permitted to read it to you:

20 "To make such findings, observations—

21 **Mr. Chairman:** Just a moment. Just a moment.

22 **Mr. Ramadhar:** I beg your pardon, Sir.

23 **Mr. Chairman:** Where are we?

24 **Mr. Ramadhar:** At Terms of Reference of this Commission.

25 **Mr. Chairman:** Right, one and two.

26 **Mr. Ramadhar:** Yes. At 2.

27 **Mr. Chairman:** Yes.

1 **Mr. Ramadhar:** I shall read with your permission?

2 **Mr. Chairman:** Yes.

3 **Mr. Ramadhar:**

4 "To make such findings, observations, and
5 recommendations arising out of its deliberations as may
6 be deemed appropriate in relation..."

7 And I take you directly to vi:

8 "Making any other recommendations that may be
9 deemed necessary in the circumstances."

10 So under your Terms of Reference, I fully endorse and adopt
11 the arguments put forward by my learned friend, Mr. Shah.

12 And I'm making the bigger point that we cannot have an
13 accident or an incident without fully appreciating the
14 consequences, and the consequences is not just on Paria.
15 Indeed, the ultimate consequence would have been the loss of
16 human life and the loss to a daughter, Aliyah Henry, to her
17 mother Tia Seepersad, to the wife of Fyzal Kurban, the two
18 sons of Fyzal Kurban and the daughter of Fyzal Kurban.

19 They have to live on with an injury that has been inflicted
20 upon them, thankfully not physical, but yet worse than that, an
21 emotional injury that they could never, never heal. One can
22 only hope and pray that they could heal. So, therefore, this is
23 directly relevant to the accident and its consequences. And to
24 suggest that it does not fall within the confines of the authority
25 of this Commission would be to miss the point altogether.

26 This is a Commission, not for the lawyers, not for the
27 Commissioners, not for the Parias and the companies. This is a

1 Commission for the people of Trinidad and Tobago. And if the
2 people of Trinidad and Tobago need to hear who these men
3 were, that their lives mattered, and there are consequences on
4 their families—and we've heard from Mr. Mushtaq that the
5 lawyers stopped him from engaging in any meaningful remedy
6 moving forward. And I want to say upfront—and I know it's
7 not this group of lawyers; there's another group of lawyers
8 hired by Paria to deal with this. So this is directly relevant.

9 This amounts to what the Courts admit on a daily basis in
10 criminal proceedings and in other places: victim impact
11 statements. And I'm really surprised that my noble and
12 generous friend, Mr. Peterson, of course I am sure acting only
13 under instructions, will take this position to not allow the
14 country to know who these dead men were, what they
15 represented. And more importantly to suffocate the voices of
16 those who are so powerless—and I want to thank all those who
17 have assisted on this side representing the families—that
18 they're powerless and they're victimized to hear this, because
19 I've spoken—there are members of the family here today,
20 Yusuf Henry's family, and they are appalled to know that such
21 a position could be taken.

22 Mr. Nagassar's wife is also here. Because they are
23 interested in this. This is their Commission. This is their
24 Enquiry paid for by taxpayers' dollars. And if my friend, of
25 course, Mr. Peterson, will say, well, we have to go within the
26 confines of law and the remit of this Commission, it is directly
27 within Terms of Reference 2(vi) because the accident and its

1 consequences continue in the hearts and in the beings of those
2 who are left behind; those who are intimately connected; the
3 families and the wider relatives and the citizens of this country.

4 Unless I could assist you any further. Thank you.

5 **Mr. Chairman:** No. Thank you very much. Anyone else
6 from the various teams who want to say anything before I
7 return to Mr. Peterson after having asked Mr. Maharaj if he has
8 anything? No?

9 Mr. Maharaj, is there anything you want to say in
10 response to the application made by Mr. Peterson?

11 **Mr. Maharaj SC:** Mr. Chairman, it would seem to me that the
12 Terms of Reference permit the Commission to hear the
13 representations of the family, and in particular the Terms of
14 Reference which says that the Commission may make any other
15 recommendations that may be deemed necessary in the
16 circumstances.

17 **Mr. Chairman:** Yes.

18 **Mr. Maharaj SC:** It would seem to me that it would be an
19 abdication of the responsibility of the Commission not to allow
20 the families of the deceased persons to say what they want to
21 say on this occasion. That's all I have to say.

22 **Mr. Chairman:** Yes. Thank you.

23 Mr. Peterson, I invite you, obviously, to reply. Can I just say
24 this, that in relation to the specific Terms of Reference this
25 Commission have been given, I made very clear, I think, on the
26 very first day that it sat when I as the Chairman introduced the
27 issues to the Enquiry that I did not regard myself in any event

1 as being confined by them, but merely that they were the Terms
2 of Reference, and if I considered it appropriate to view any
3 other facts that might be of assistance in coming to the
4 necessary conclusions in this Enquiry, we would look at them.

5 I raise that because I don't regard myself necessarily as
6 bound by each and every clause and the wording of each and
7 every clause. I regard that as the primary source of our
8 responsibility, but if there were anything outside that, that was
9 necessary for the purposes of identifying issues that needed
10 tackling and/or recommendations that needed making, we
11 would look at them.

12 I say that just so that you're aware that I wouldn't
13 necessarily regard myself as being totally bound by them. All
14 right?

15 **Mr. Peterson SC:** Well, Mr. Chairman, I was under the
16 mistaken impression that the Terms of Reference is what
17 grounds and guides and circumscribes the jurisdiction of the
18 Commission.

19 **Mr. Chairman:** Grounds and guides, not circumscribes.

20 **Mr. Peterson SC:** Well, we seem to, respectfully, have a
21 different view on that, Sir, and I respect yours.

22 The point is that the Terms of Reference—as Counsel—
23 let me put it first up front. As counsel it's my duty to assist the
24 Commission not to exceed its Terms of Reference, if I am of
25 that respectful view. So I have a duty to assist the Commission.
26 I don't have the liberty of some of the other Counsel to make
27 speeches about emotion, and public, and all of that. That may

1 be fine, but the Terms of Reference as they stand—and my
2 experience has been—and the law has supported me—that if
3 after Terms of Reference have been issued and there's an
4 occasion to widen them to give wider jurisdiction, there's
5 always amended terms that are issued.

6 So I looked at the Terms of Reference when Mr.
7 Chairman indicated last week, the indication that where you
8 were going with the family, and I considered all what some of
9 the lawyers say about ventilating, and all of that; I considered
10 that. But then I also considered my duty as Counsel. And
11 when I marry it against the Terms of Reference, I came to the
12 percolated view that I had to assist the Commission because
13 this Commission is born out of section 7 of the Act and the
14 Terms of Reference, and it being out of the Statue, it gives it its
15 life and its jurisdiction circumscribed by the settled Terms of
16 Reference from Her Excellency the President. And that is what
17 informed my assistance—what I consider to be an assistance to
18 the Commission today, to object to that evidence as being
19 outside the Terms of Reference.

20 Let me also say there is no intent by my client, and by
21 extension me, to stifle any voice. That is not the reason for this
22 application or this objection. It is purely as a Counsel in the
23 Commission to assist the Commission.

24 Mr. Ramadhar referred to another team of lawyers in
25 some other proceedings. I understand just aside that there are
26 pre-action protocol letters, and all of that. So there's no
27 stifling. There will be full ventilation of that elsewhere, I

1 gather, but I'm not involved in that—well, at least at this stage.
2 That is not a plug for reconsideration elsewhere. But the point
3 is, Sir, that—so there is no intent to stifle anyone. It's just—

4 **Mr. Chairman:** But do you accept that that actually is the
5 effect of your application?

6 **Mr. Peterson SC:** Well, Sir, that's what we live by in courts
7 every day, that we have to stand by the law and the
8 consequences will flow therefrom.

9 **Mr. Chairman:** But this isn't a court, is it? I mean, I
10 appreciate we're governed by many of the rules of the court.

11 **Mr. Peterson SC:** It's not a Court, Sir.

12 **Mr. Chairman:** But it is a public Enquiry designed to bring
13 out all of the issues for the public's consideration as well as our
14 own. They should be entitled, shouldn't they, to hear all of the
15 things that impact upon the ultimate decisions that we will need
16 to make. I have in mind particularly, and, of course, nobody
17 else has suggested that this evidence is evidence which might
18 be given outside of the Terms of Reference. That was my
19 suggestion. And I, perhaps, put it rather inelegantly when I
20 suggested that we are not bound by the strictures of its terms.

21 I mean by that the terms themselves give us a very wide
22 latitude in its interpretation, so that when you look to, as has
23 been pointed out to me both by Mr. Maharaj and Mr. Hosein-
24 Shah, that paragraph 2(vi) of the terms make clear that we are
25 to make such findings, observations, and recommendations
26 arising out of these deliberations as may be deemed appropriate
27 in relation specifically to making any other recommendations

1 that might be deemed necessary in the circumstances.

2 And one of the factors that we are engaged in is the level
3 of communication between Paria and the families of those who
4 were still in the pipe. And that it seems to us is a proper
5 consideration.

6 **Mr. Peterson SC:** Sir, I understood the temptation that Mr.
7 Shah fell prey to when he ran to the recommendations in aid of
8 his submission. The recommendations are usually born out of
9 what the Terms of Reference gave jurisdiction to enquire into.
10 Having executed the Enquiry pursuant and in faithfulness to the
11 terms, then out of that, recommendations are born. But one
12 doesn't seek to pray the recommendations in aid of expanding
13 the Terms of Reference.

14 But, Sir, I don't know how much more time you could
15 spend on it, but that's my respectful submission and guidance.

16 **Mr. Chairman:** I appreciate that. Thank you very much. I
17 will make my decision after we've had our break. I will
18 probably reserve the reasons until tomorrow or a day later, but
19 I'll make my decision today so that everyone knows what the
20 position is. All right? Thank you very much.

21 Can we have the next witness, Mr. Donawa, please?

22 **Mr. Maharaj SC:** Mr. Antonio Donawa—and Mr. Bissessar
23 would do the summary.

24 **Mr. Chairman:** I see Mr. Hosein-Shah's hand up. Can I help
25 you?

26 **Mr. Hosein-Shah:** Sorry, Chair. I didn't want to interrupt my
27 friend, but there was one slight mischaracterization of my

1 submissions by him. I did not merely rely on subrule vi. I
2 relied on the mandate at 4(a)(xii) and 4(b)(iv) in making my
3 submissions.

4 **Mr. Chairman:** Yes. No, I know you did. I have a note of it.
5 That's fine.

6 **Mr. Hosein-Shah:** Yes. Thank you. I just wanted that
7 clarification. Thank you.

8 **Mr. Chairman:** I took careful note of what you submitted,
9 **Mr. Hosein-Shah.** Thank you.

10 **Mr. Hosein-Shah:** Grateful, Chair.

11 **Mr. Chairman:** Right. Mr. Donawa, please.

12 [*Mr. Antonio Donawa sworn*]

13 **Mr. Donawa:** I, Antonio Donawa, solemnly swear that the
14 evidence I shall give to this Commission in this case shall be
15 the truth, the whole truth, and nothing but the truth.

16 **Mr. Chairman:** Yes. Thank you for coming, Mr. Donawa. I
17 think you were here once before, were you not?

18 **Mr. Donawa:** No.

19 **Mr. Chairman:** Right. I know that certainly you asked to be
20 put back to this week rather than last week because you were
21 away. I'm happy to have accommodated you, not least because
22 had you been here the likelihood is you wouldn't have been
23 called anyway. So I think it's just as well. Thank you for
24 coming.

25 What's going to happen now is this. Mr. Bissessar is
26 going to read a summary of your evidence. All right? So listen
27 carefully to that. If you agree that it's correct you'll tell him so,

1 and then Mr. Maharaj will have some questions for you. But
2 before that happens—so between your summary and Mr.
3 Maharaj asking you questions, we're going to take our normal
4 morning break, 15 minutes or so. I know we had a short break
5 but that was for different reasons. All right? So we're going to
6 do that and then we'll resume again after that break. All right?

7 **Mr. Donawa:** That's acceptable.

8 **Mr. Chairman:** What I would like to think we might be able
9 to achieve is to conclude your evidence if we can before the
10 luncheon adjournment, even if it means eating into it for a little
11 bit. All right? Let's see where we go anyway. All right?
12 Thank you very much.

13 Mr. Bissessar.

14 **Mr. Bissessar:** Thank you, Chairman.

15 Mr. Antonio Donawa was interviewed by the legal team
16 to the Commission and his witness statement dated 31st
17 October, 2022 is at witness bundle 2785.

18 Chairman, rather than summarizing, it's a fairly short
19 statement. I will actually read the content.

20 **Mr. Chairman:** Yes, please. But can you just remind me
21 again, please, the page number?

22 **Mr. Bissessar:** 2785, Volume IV, the witness bundle.

23 I Antonio Donawa of Cascade, Port of Spain, says as
24 follows:

25 I am an Executive Director at Offshore Technologies
26 Solutions Limited (OTSL) with responsibility for its subsea
27 services including all diving and remotely operated vehicle

1 (ROV) services. OTSL which began to trade in May 2005 now
2 operates from Sea Lots, Port of Spain, and its principal business
3 is marine construction and diving. Before the COVID-19
4 Pandemic, OTSL had about sixty (60) permanent staff.

5 OTSL does not presently have any contractual
6 arrangements with Paria other than as a registered contractor.
7 By letter dated 20th August, 2022, I provided a brief statement
8 to the Commission in relation to the events which occurred on
9 25th February, 2022. I now wish to amplify what I said in that
10 letter, a copy of which is attached as AD1.

11 That afternoon (meaning 25th February, 2022) I received
12 a telephone call from someone at Heritage asking whether
13 OTSL had any divers working at Heritage. I cannot recall who
14 called or the exact time but I did say that OTSL did not have
15 any divers at Heritage and all its divers were accounted for.

16 Later that afternoon I was contacted by OTSL's Chief
17 Executive Officer, Mr. Ian Bertrand, who told me that Heritage
18 wanted OTSL to provide diving support for missing divers. I
19 told Mr. Bertrand that he should tell Heritage to immediately
20 notify the Coast Guard.

21 Between 5.30 p.m. and 6.00 p.m. there was a telephone
22 conversation between me and Conan Beddoe. I cannot recall if
23 I called him or he called me. Conan was a commercial diver
24 and he was at Paria's location. I recommended to Conan that a
25 hyperbaric physician should be in attendance. I asked Conan
26 whether he or Paria required any support and he told me that
27 they seemed to have had enough there. I told him that OTSL

1 was arranging to come down to berth 6 on Heritage's
2 instructions.

3 At about 7.00 p.m. I received a telephone call from
4 George Viera of EOG who told me that Paria's Michael Wei
5 was looking for an ROV and I told him that I would contact
6 Wei. I did, in fact, contact Michael Wei almost immediately
7 after the call and described the appropriate equipment to go into
8 the pipeline to look for the survivors. I explained that OTSL's
9 ROV would not be fit for purpose based on the size of the ROV
10 and the diameter of the pipeline.

11 I also suggested to Wei that he call Anthony Viera of
12 Hummingbird Safety Systems Limited, HSSL, to provide them
13 with its compact crawler system as it would reach further than
14 OTSL's ROV which would have buoyancy issues and stir up
15 debris in the pipeline which would affect visibility. I
16 subsequently telephoned and spoke to Anthony Viera of HSSL
17 who confirmed that he had, in fact, spoken to Michael Wei.

18 Later that night Michael Wei telephoned me. He told me
19 that he wanted me to speak to his incident team and I agreed for
20 him to put me on speaker phone. I was introduced to his team
21 but I cannot recall them now. They asked me what could have
22 happened to the divers and I believe what I said was that they
23 encountered a Delta P incident. They did not appear to
24 understand what a Delta P incident was, so I explained it and, in
25 fact, after my explanation I sent a video to Michael Wei
26 showing a crab being sucked into a pipeline because of a Delta
27 P incident and another giving a detailed scientific explanation.

1 I also explained in the telephone call that Delta P means
2 that extreme volumes of water were forced upon you like being
3 water boarded but with much larger volumes. I recalled asking
4 whether the pipeline was dry, meaning no liquid, and that
5 someone from the incident team said that it was dry.

6 I then said that this meant that the pipeline was under a
7 pressure of approximately two atmospheres. One of the
8 incident team members said, no, it is only 7 psi, but I explained
9 that it was 7 psi at ambient, meaning at the surface, but not at
10 minus 40 or 50 feet where the divers were.

11 My teleconference lasted about 10 to 15 minutes and I
12 asked Michael Wei to call me if he needed more information. I
13 did not speak to Michael Wei or anyone at Paria after this
14 teleconference.

15 A few days later before the retrieval of the bodies, I was
16 asked by OTSL's CEO, Mr. Bertrand, to join a telephone
17 conversation he was having with Heritage. I did join, although
18 I do not recall the exact date. It was me, Mr. Bertrand, and Mr.
19 Osei Flemming, Heritage's HSE Lead, and several others
20 whose names I do not recall. The purpose of the call was to
21 discuss the possibility of doing a penetration dive into the
22 pipeline to search for survivors. I advised of the safety issues
23 as there was no way to confirm that the pipeline was totally
24 equalized and flooded and free of the possibility of a Delta P
25 event.

26 I also discouraged the idea of drilling holes into the
27 pipeline to search for the divers; this was Heritage's idea. And

1 I also discouraged the idea of cutting the pipeline as drilling
2 holes and cutting the pipeline would not confirm that the
3 pipeline was totally equalized and flooded and free of the
4 possibility of a Delta P incident.

5 The meeting ended and Heritage said it would get back to
6 OTSL. They never got back to me and I do not know whether
7 they communicated with OTSL.

8 I was a member of the Trinidad and Tobago Bureau of
9 Standards Specification Committee for its revision of the 1997
10 standard for commercial diving and commercial diving training;
11 this was in 2007 or so for about a year. I made several
12 contributions and the committee devised a draft and voluntary
13 standard which, in my view, was consistent with international
14 best practice that would serve the national interest. I recall that
15 the draft standard did get to the public comment stage, but it
16 was never implemented.

17 Mr. Donawa certifies that the facts stated in his witness
18 statement are true and correct to the best of his knowledge,
19 information, and belief.

20 Thank you, Chairman.

21 **Mr. Chairman:** Yes. Thank you very much. What we'll do
22 then is to take our short break now.

23 Mr. Maharaj, I'll consider the submissions that have been
24 made. I'll come back at ten past twelve and make my ruling.
25 As I say, I'll probably reserve reasons. But I'll do that at 10
26 past 12.00, please.

27 So can you take a break now. I know you've been

1 waiting all morning. I'm sorry about that, but the reassurance is
2 that now you've been called, you will be finished. All right?

3 So we'll come back at 10 past 12.00, please. So take a
4 break and we'll see everyone then. Thank you.

5 **11.49 a.m.:** *Enquiry suspended.*

6 **12.15 p.m.:** *Enquiry resumed.*

7 **Mr. Chairman:** All right. Before Mr. Donawa comes back,
8 we have made a partial decision as to the evidence. I have
9 reviewed the evidence of Vanessa Kussie, Jamie Menodath-Ali,
10 Catherine Ali, Aliyah Henry, Tia Gopaul, and a statement that
11 is said to be from the Kurban family. I would like that to be
12 identified precisely who that is in due course.

13 Our decision is this, is that the evidence of Vanessa
14 Kussie, Jamie Menodath-Ali, and Catherine Ali, together with
15 somebody who will be identified, I anticipate, from the Kurban
16 family, are admissible and relevant to this Enquiry, and as such,
17 their evidence will be given in the manner in which I have
18 described. The reasons for that decision will be given
19 tomorrow morning. I have reserved, at the moment, our
20 decision in relation to Aaliyah Henry and Tia Gopaul. They are
21 respectively the daughter of Yusuf Henry and the mother of
22 Aliyah Henry. And in those circumstances, we will consider
23 them a little further before making a final decision on the
24 admissibility of their evidence.

25 So that's the decision we've reached at the moment. As I
26 say, reasons for the decision will be provided first thing
27 tomorrow morning before we hear the evidence. I normally

1 type it and hand it down to everybody who is interested, but I
2 may not have time to type it all up myself, and if not, it will
3 come a little later in type form. But we'll see where we go, but
4 I'll certainly give my reasons tomorrow morning, and I will
5 decide, together with my Co-Commissioner Mr. Wilson, as to
6 whether or not to admit the evidence of Aaliyah Henry and Tia
7 Gopaul in that same ruling.

8 All right, that's where we are at the moment. So can we
9 next have, please, back Mr. Donawa? Thank you.

10 Yes, Mr. Maharaj.

11 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

12 **Mr. Chairman:** You're still on oath, Mr. Donawa, and now
13 Mr. Maharaj is going to ask you some questions. All right?

14 **Examination By Mr. Maharaj SC:**

15 Q. Mr. Donawa, good day. I just want to ask you a few questions.

16 A. That's fine.

17 Q. OTSL is a company which is engaged in, and has been engaged
18 in marine diving?

19 A. Correct.

20 Q. And based on your statement, am I correct that up to midnight
21 on Friday 25th February, 2022, there was no specific request
22 from Paria to OTSL to assist Paria in a rescue of divers from
23 the pipeline?

24 A. As far as I am to understand, we were on standby awaiting
25 instructions at that time.

26 Q. Standby awaiting instructions?

27 A. Yes.

1 Q. And at—

2 **Mr. Chairman:** From Paria?

3 **Mr. Maharaj SC:** From Paria.

4 **Mr. Donawa:** This is what I understand.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. And that on Saturday, 26th February, at 5.30 a.m., OTSL was
7 told by Paria that they were no longer required to be on
8 standby?

9 A. I was told by my team that the vessel will be leaving the site.

10 Q. I'm sorry?

11 A. I was told by my team that the vessel will be leaving the site. I
12 was not told in those words what you are saying.

13 Q. Mr. Ian Bertrand is an officer of OTSL?

14 A. Yes. He's the CEO of the company.

15 Q. Okay. Can I—I want to refer you to what he said in his witness
16 statement at the supplemental witness bundle 2842 at paragraph
17 9.

18 *[Document shown to Mr. Donawa]*

19 At paragraph 9 he says:

20 “At about 5.30 a.m., OTSL was told by Paria that it
21 (OTSL) was no longer required to be on stand-by. These
22 instructions came from Paria to captain Mario Dyer and,
23 as a result, the vessel left Berth 6 at Point-à-Pierre and
24 proceeded to Heritage's base at Point Fortin arriving
25 there at about 7.20 a.m.”

26 You would accept that?

27 A. If that's his statement I have to.

1 Q. Yes. Now, according to your statement at paragraphs 12 to 14,
2 when Mr. Michael Wei telephoned you about—as you stated
3 there, Mr. Wei didn't seem to understand what Delta P was?

4 A. That's correct.

5 Q. And you had to explain it to him?

6 A. Yes. Maybe the terminology was something that he was not
7 familiar with.

8 Q. But you had explained that it was—involved differential
9 pressure?

10 A. Yes, I did.

11 **Examination By Mr. Chairman:**

12 Q. Can I ask you. You say maybe the terminology was something
13 he was not familiar with. But was he familiar with the concept?

14 A. That I can't answer, because I just merely explained what I
15 meant by Delta P.

16 Q. Yes. Did he appear then to understand what you were saying?

17 A. One would consider that he was getting an understanding of
18 what I was explaining. So I can't say yes he understood or no
19 he didn't. Maybe because—in my statement I told him I would
20 send him some information to further explain what it was.

21 Q. Right. Because, obviously, the expression Delta P might not be
22 an expression that people have heard, and certainly, it wasn't
23 one I was familiar with until I became involved in this matter.
24 The concept, however, was one that I was familiar with; just
25 didn't understand it would be Delta Ps. But if you're telling
26 someone or seeking to educate someone on something like that,
27 there's either an appearance that they understand what you're

1 saying and have heard it before or there isn't. Are you able to
2 help us about that?

3 A. It's a bit challenging when someone is on the other end of the
4 phone.

5 Q. No, I suppose that is—

6 A. Right? If it's a face-to-face discussion you would see that
7 facial expression that comes with that explanation. It's like—

8 Q. Fair point, fair point. I understand what you're saying. So
9 you're not able to say one way or the other whether he actually
10 understood the concept or appeared to understand that concept
11 before you were explaining it to him?

12 A. I would have to say yes to that. But, you know, in my mind of
13 him being in—running a plant with tanks, and so on, that there
14 would be some concept of differential pressure rather than
15 Delta P. In our environment in diving, Delta P, it's a clear
16 understanding what that is, you know.

17 **Mr. Chairman:** I got you.

18 **Continued Examination By Mr. Maharaj SC:**

19 Q. Okay. So let me take you to your statement at paragraph 12.
20 You have it there before you?

21 A. Yes, I do.

22 Q. "They asked me what could have happened to the divers
23 and I believe what I said was that they encountered a
24 Delta P incident. They did not appear to understand what
25 a Delta P incident was so I explained it and, in fact, after
26 my explanation..."

27 You sent a video. And then you went on, and you gave that

1 you also explained in the telephone call what it meant, and then
2 you said at paragraph 14, “I then said that this meant that the
3 pipeline was under a pressure”, and one of the incident
4 members said something, and then you explained again.

5 A. Correct.

6 Q. So would you not say, reflecting now on what happened, in that
7 conversation, they didn't appear to understand what you were
8 talking about, and you had to explain it?

9 A. I couldn't tell you that for certain. I'm on a telephone call with
10 someone and that's difficult. So I can surely tell you that you
11 have experienced Delta P, and you may not even know what it
12 is. A water bottle on an aircraft coming down in for landing
13 and when you get there—it was like this [*Mr. Donawa*
14 *demonstrated*] and when you've landed it's like this. [*Mr.*
15 *Donawa demonstrated*]

16 That's Delta P. You've experienced it because I know
17 you've been on an aircraft; I've seen you on one. But the
18 relevance of it is I try my best to explain what it is, because I
19 used a term, a loose term that is a familiar term in our
20 environment. It's a jargon but it comes from physics:
21 differential pressure; Delta P, as we call it. I did my best to
22 explain what it is, but I don't know if anyone got it or didn't get
23 it.

24 Q. Well, I suppose if anyone is on an aeroplane and the door
25 opens, they'll know that there's a Delta P.

26 A. But that's Delta P in the opposite direction.

27 Q. Okay. At paragraph 19, you said you advised of the safety

1 issues as there was no way to confirm that the pipeline was
2 totally equalized and flooded and free of the possibility of a
3 Delta P event. Well, I know you didn't have all the facts. So
4 this was an opinion and the best you could have given with
5 what you had at the time.

6 A. Yes.

7 Q. Well, we have in these proceedings an opinion on that from the
8 In-Corr-Tech from one Mr. Zayed Khan, President and CEO of
9 In-Corr-Tech. And that is at page 1534 of the supplemental
10 core bundle. And I want to read it to you and you'll tell me
11 whether you can dispute that.

12 **Mr. Chairman:** Paragraph?

13 **Mr. Maharaj SC:** Page 1534, paragraphs 4 and 5. Have you
14 got 1534 paragraphs 4 and 5?

15 **Mr. Chairman:** Sorry. Yes, you mean the further report that's
16 been added to.

17 **Mr. Maharaj SC:** Yes. He was specifically asked.

18 **Mr. Chairman:** Got it. Yes, thank you.

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. You have it before you, Mr. Donawa?

21 A. I can see it, yes.

22 Q. Okay, you can see it, sorry.

23 "Prior to Mr. Christopher Boodram's rescue the entire
24 system stabilized and equalized itself at both ends of
25 SL36, and thus allowed Mr. Boodram to negotiate the
26 pipe without any disruptions as the system was static.
27 This condition was the best opportunity to attempt a

1 rescue.”

2 Then they talked about something else about the blank. Well,
3 in the light of what this expert said, would you accept that or
4 would you deny that?

5 A. Well, this is after the fact.

6 Q. Yes.

7 A. But if this had to apply during the 25th, I would say that this
8 does not apply. All right? And I would go further to say that
9 even after Mr. Boodram was able to negotiate and get out, are
10 based on his statement—so this is after he was deposed—there
11 was no way to certainly know that the pipeline had no Delta P,
12 and there was some form of Delta P that existed if there was a
13 video that you presented to the public of them communicating
14 in an environment that had air. So there is some form of Delta
15 P. We don't know what that Delta P is.

16 Q. But there can always be a form of Delta P but it may not be a
17 Delta P that would be so pressing to prevent persons from going
18 back in the pipe?

19 A. But there's no gauge to tell you what that is. There's no
20 scientific way of telling you if there is or isn't.

21 Q. So you are saying that in spite of Mr. Boodram coming out and
22 he is saying that the system stabilized and was static, you are
23 disputing this opinion?

24 A. If he said it was stabilized and static, he was so frightful and
25 probably so concerned at the time—

26 **Mr. Chairman:** No, no, no, no.

27 **Mr. Donawa:** Mr. Boodram or Mr. Zayed Khan?

1 **Mr. Chairman:** Yes.

2 **Mr. Donawa:** Prior to Mr. Boodram's rescue, Mr. Khan or the
3 In-Corr-Tech Report is saying that it's stabilized. And I'm
4 saying, no, there's no way for you to know if there is a Delta P.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. What Mr. Khan is saying that the fact that Mr. Boodram could
7 have come out of the pipe when he came out, and just before he
8 came out the system had stabilized and that is why he could
9 have come out of the pipe.

10 A. Oh, I see where you're going at.

11 Q. So he's giving an opinion in respect of what happened on that
12 day.

13 A. On the individual?

14 Q. Yes.

15 A. Okay. At that point in time, he was able to negotiate himself
16 out.

17 Q. Yes, it may be that you didn't understand. What happened, Mr.
18 Boodram was able to come out of the pipe. He came out and
19 when he came out the system stabilized.

20 A. Well, you are trying to tell me that the entire pipeline stabilized
21 based on this report. Is that correct?

22 Q. No. I am not an expert.

23 A. I know. I said based on the report.

24 Q. Yes, based on the report?

25 A. I would say no.

26 Q. You would say no?

27 A. Yeah, in my opinion.

1 Q. In your opinion?

2 A. Yes.

3 Q. What are your qualifications, Mr. Donawa?

4 A. I am not an engineer.

5 Q. You're not an engineer?

6 A. But the only way for you to know that there's no Delta P, right,
7 is for you to gauge the pipeline and to know that it's now
8 equalized on either side. During—and I'm going beyond the
9 report—there is some form of air in the pipeline. Correct? At
10 some juncture during the 25th to when the individuals were
11 taken out the pipeline, right. We know this for a fact.

12 Now, paragraphs 4 and 5, based on the question you are
13 asking me for Mr. Boodram, he may not have been subject to
14 Delta P in that area of the pipeline. But there's nothing to say
15 that there was not Delta P in any other area of the pipeline.
16 Because if there's air, right, there is the potential for Delta P.

17 Q. Well, Mr.—I don't know how much you know of how this
18 incident happened. The Delta P occurred in the hyperbaric
19 chamber, which caused them to be sucked into the pipeline.
20 And then according to this opinion, the fact that they were
21 sucked into the pipeline during a Delta P, right, and he was able
22 to come out, and this opinion is saying that the fact that he was
23 able to negotiate the pipe and come out, there was a static
24 situation; it had stabilized. And you are saying you do not
25 agree with that?

26 A. I don't agree with that.

27 Q. But you would agree with me that you do not have the

1 qualifications of an engineer?

2 A. That is correct.

3 Q. Right, okay.

4 **Mr. Maharaj SC:** No further questions.

5 **Examination By Mr. Chairman:**

6 Q. But you are a diver?

7 A. I have been running diving operations and doing risk
8 assessments for diving operations for over 30 years.

9 Q. Over 30 years?

10 A. Over 30 years. If you were to calculate man-hours it's
11 enormous.

12 Q. You know your onions?

13 A. Yes.

14 Q. Yes, right. Can I ask you this. Referring to your paragraph 13,
15 please, you see there you say you're dealing with explaining on
16 the telephone call, Delta P. First of all, can you recall when that
17 telephone call was?

18 A. I believe it might have been around 7.00, roughly. I can't be a
19 hundred per cent.

20 Q. I wouldn't hold you to the minute. But that's your best guess?

21 A. It was somewhere in that time because I was shocked at the
22 time I was being called by Mr. Viera.

23 Q. When you say shocked, what do you mean?

24 A. Well, you know it's after 6.00, so I'm assuming it was around
25 7.00.

26 Q. You used the word "shocked". Why were you shocked?

27 A. Well, I would not have expected a call from Mr. Viera on an

1 afternoon when I'm not doing any work for his company.

2 Q. You mean you were surprised rather than shocked?

3 A. Yes, yes.

4 Q. Because of the timing of the call?

5 A. Yes, correct.

6 Q. And you go on in that paragraph to say this:

7 "I recall asking whether the pipeline was dry meaning no
8 liquid and that someone from the incident team said that
9 it was dry."

10 Do you see that?

11 A. Yes. So I would like to correct. Thirteen, when Mr. Wei and
12 his team was speaking to me it was around—it might have been
13 closer to ten.

14 Q. Ten o'clock?

15 A. Yes. Because I had spoken to him around 7.00 or 7.30
16 thereabouts and told him if he needed me he can call me at any
17 time. I'm available.

18 Q. Right. And that's all you said at seven, seven o'clock-ish?

19 A. Right, yes, when I spoke to Mr. Wei after Mr. Viera spoke to
20 me.

21 Q. Right. Let me just get this right.

22 A. Yes, yes.

23 Q. So around seven o'clock—I'm going to write this—around
24 seven o'clock, spoke to Wei and told him call me if you need
25 me?

26 A. Yes.

27 Q. And at ten o'clock, 10 plus, yes, sometime after ten o'clock—

1 would that be fair?

2 A. Correct.

3 Q. That's when you had the call with Mr. Wei and the team?

4 A. Yes.

5 Q. Yes?

6 A. Correct.

7 Q. And that's when you were explaining Delta P and all of this
8 stuff. Yes?

9 A. Yes.

10 Q. And you sent them a video of a crab being sucked into a hole?

11 A. Yes, I sent that earlier so that he can share.

12 Q. You had sent that earlier?

13 A. So he can have a—

14 Q. I've seen one like that where there's a piece of piping and
15 there's like a little grille on the top of the pipe. This little crab
16 is going along the top of the pipe, and the Delta P obviously
17 exists, and literally, the whole crab was sucked into the tiny
18 mesh of this pipe.

19 A. Correct. Actually, what you've seen there was something that
20 was simulated. They cut a groove in a pipeline and they had a
21 crab walk by just to demonstrate this situation. This is an
22 unfortunate situation that divers are exposed to working on
23 ships, working on drilling rigs. I mean, it's situations—

24 Q. It is arguably the singly most common cause of death in
25 commercial diving?

26 A. Well, it's not the most common cause. It accounts for about
27 quarter of the deaths in the diving industry globally, and that

1 was statistics, not very recent, but I can give you that as an
2 indication of what can happen.

3 Q. Certainly, a prevalent cause, and dangerous, because it's
4 unseen?

5 A. It is extremely unseen.

6 Q. All right. Next, I wanted to ask you about this, please. If a
7 Delta P event occurs as it did in this case, there is no doubt
8 about that now, such that it sucked tanks like this which weigh
9 quite a lot when they're full, and everything else that was in
10 that habitat into the pipe within, on the face of it, seconds, the
11 force is obviously very considerable?

12 A. Yes.

13 Q. I wouldn't begin to estimate the kind of force that we're talking
14 about, but very considerable. All right?

15 A. Yes.

16 Q. And these men get sucked into this pipe. It then somehow
17 stabilizes itself, because—we know that again, as a matter of
18 fact, because the water that had come into the habitat has now
19 subsided again; the pressure that's being applied to the habitat
20 has as it were—made it appear as if nothing had happened. Do
21 you follow?

22 A. Yes.

23 Q. So we see this incident occurring in the sense that within a
24 second or two, the suction is created, everything goes blank,
25 and then when somebody goes down a little while later into
26 the—I mean literally within minutes back in the habitat, they all
27 look like nothing's happened.

1 A. Yes.

2 Q. So it stabilizes itself quite quickly or appear to. We know that
3 Mr. Boodram is in the pipe for probably the better half of two
4 and a half hours, and you've made the observation that he was
5 breathing whatever air was in that pipe from air pockets that
6 existed. And you say that the very fact that there was an air
7 pocket existing in that pipe would lend support to the view that
8 there might be a yet further Delta P event. Is that right?

9 A. That is correct, because there may have been other air pockets
10 or volumes of air within the pipeline structure.

11 Q. Right.

12 A. So if that pipeline had a different topography on the bottom,
13 meaning that some parts were shallower than others, there may
14 have been a large enough volume of air in that section of the
15 pipeline to cause a Delta P.

16 Q. I follow. So there remained in your mind, at any rate, a
17 potential for a second Delta P event?

18 A. Correct.

19 Q. Would there have to be something to trigger it? Would
20 something have to happen to the condition that as it was
21 stabilized of its own motion, stabilizing itself, would something
22 have to happen to change that?

23 A. Yes. We can speculate whatever. So as an example—

24 Q. I'm not asking you to speculate. If you answer please, first of
25 all, the question?

26 A. Yeah.

27 Q. Would something have to happen to change the condition that it

1 was in for that secondary Delta P event to take place?

2 A. Yes.

3 Q. Right. And one can now, you say, speculate. We could, I
4 suppose, open the flange at one end. We might stop the
5 pressure on the habitat at the other end. Would those sorts of
6 things might change the condition in the pipe?

7 A. Well, in this case as further in my statement, it says drilling
8 holes or cutting the pipeline, if you had done any of that in any
9 of those areas you would have engaged a Delta P if there was
10 air in that area. No one knows if there was air or what the
11 volume of air was in that section of the pipeline.

12 Q. Right. Or, indeed, what pressure the water—even if there
13 wasn't air in that area, if there was water in that area, what
14 pressure that water was under, if it was different to the pressure
15 of the water at the bottom of the ocean?

16 A. Generally, that would have equalized, but it's the question of
17 where there was air encapsulated or trapped in any segment of
18 the pipeline.

19 Q. What happens if I opened the flange at one end?

20 A. If you opened the flange at one end?

21 Q. Yes.

22 A. You would have started equalizing but you would have had to
23 start it flooding the pipeline to remove—to help move whatever
24 air was in the—

25 Q. Just the act of opening?

26 A. Yeah. It would contribute to equalization.

27 Q. Right. So it might have created a secondary—

1 A. Yeah.

2 Q. So you wouldn't have recommended that as a good idea?

3 A. No, at Berth 5 I would have said yes.

4 Q. What?

5 A. You can open the flange at Berth 5.

6 Q. Because?

7 A. Because it would help equalize the pipeline. It would take any
8 air out of the pipeline.

9 Q. But you got men in the pipe breathing it?

10 A. Well, we didn't know that at the time.

11 Q. Well, we do now.

12 A. So, so—

13 Q. Just a minute. We know that Mr. Boodram came out of the
14 pipe and said he was breathing in a vac in an area in the pipe,
15 and the others were in there.

16 A. So in that case I would not remove anything.

17 Q. Right. That's what I'm saying. That's why I'm asking.

18 A. Yes.

19 Q. Removing the flange at Berth 5 might have—if there was the
20 potential for a second Delta P, might have actually triggered it
21 in your mind?

22 A. Potentially.

23 Q. Potentially.

24 A. Yes.

25 Q. I mean, all I'm asking, really, is an event has to take place for a
26 secondary Delta P, if there was one, to be triggered. It doesn't
27 just happen of its own volition, does it?

1 A. Correct.

2 Q. Right. So something has to happen. Whether it's taking the
3 flange off one end, boring holes in the pipe, or taking the
4 pressure off the habitat, any of those might have triggered it?

5 A. Correct.

6 Q. Correct. In your view—in your opinion?

7 A. Yes.

8 Q. All right. So I understand that. When you were told—going
9 back to paragraph 13—when you were told by someone that the
10 pipe was dry, what do you think of that? You see it says:

11 "I recall asking whether the pipeline was dry meaning no
12 liquid and then someone from the incident team said that
13 it was dry."

14 Was it your understanding or were you being told at that point
15 that those who were in that IMT, in that team, were suggesting
16 to you that before this event the pipe was completely empty?

17 A. Yes.

18 Q. Well, that was an obvious Delta P risk, wasn't it?

19 A. Yes.

20 Q. If the pipe was completely empty?

21 A. Correct.

22 Q. The sensible course here was to have that pipe flooded whether
23 with water or oil or whatever it was, with fluid at any rate?

24 A. Well, that would be one of the processes to remove the Delta P
25 in any risk planning exercise.

26 Q. Right. Let's be clear. The sensible course to prevent any
27 potential for Delta P is to make sure that that pipe is completely

1 full: water, oil, whatever it is, but it's filled?

2 A. Correct.

3 Q. Not air?

4 A. Correct. That will remove the differential pressure.

5 Q. Right. In that way, if you pull the plug out it wouldn't make
6 any difference?

7 A. Correct, absolutely.

8 Q. Gotcha.

9 A. If it's fill of oil, then you'd have an oil spill, because there is a
10 differential—

11 Q. Forgive me, I'm all for anti-pollution, but let me be clear, I'd
12 rather we spilt a little oil in the water than we're losing four or
13 five men.

14 A. Well, agreed.

15 Q. Right. Okay. Well, thank you very much.

16 **Mr. Chairman:** Are there any other questions, please?

17 Yes, Mr. Ramadhar.

18 **Cross-Examination By Mr. Ramadhar:**

19 Q. Thank you very much, Mr. Donawa, and we are grateful for the
20 witness statement which you had provided.

21 **Mr. Ramadhar:** Chairman, could I ask that his paragraph 3 be
22 put on the screen, please?

23 **Mr. Chairman:** Paragraph 3?

24 **Mr. Ramadhar:** Thank you.

25 **Mr. Chairman:** Yes.

26 **Continued Cross-Examination By Mr. Ramadhar:**

27 Q. Could you read that to us, please?

1 A. Would you like me to read it to you?

2 Q. Yes.

3 A. "OTSL does not presently have any contractual
4 arrangements with Paria other than a registered
5 contractor at the time."

6 Q. And you understand presently to mean at present?

7 A. That is correct.

8 Q. So you've had contracts before?

9 A. As OTSL with Paria, yes, I believe so.

10 Q. Thank you. And you're still on the list of registered contractors
11 in anticipation of future possible work. Is that accurate?

12 A. That is accurate and correct.

13 Q. Yes. You appreciate you've said to Mr. Maharaj in answer to a
14 very important question where you disagreed that at some point
15 in time the Delta P had stabilized?

16 A. Correct.

17 Q. Yeah. Well, you appreciate that that could not be accurate?
18 That statement—

19 A. My statement?

20 Q. Disagreeing—hold on—disagreeing with another person that
21 the Delta P had stabilized?

22 A. I don't understand your question.

23 Q. Well, I will help you.

24 A. Can you break it down for me?

25 Q. Of course. Delta P is a static position?

26 A. Yes.

27 Q. Yes. And stability means what to you?

1 A. Stability?

2 Q. Yes.

3 A. Still.

4 Q. Eh?

5 A. Still.

6 Q. Still. So at the time when Mr. Boodram exited, there was no
7 effective Delta P that forced him back into the pipe. Let me put
8 it like this, so we could be clear. There was no Delta P event
9 that prevented him from escaping death from that pipe?

10 A. Okay.

11 Q. Not okay. I want to hear you. You agree?

12 A. What do you want me to agree with?

13 Q. Whether, in fact, there was no Delta P event that prevented him
14 from being rescued whether on his own accord—

15 A. Well, clearly, there was not any restriction for him to get out. I
16 don't know what force was against him at the time.

17 Q. Beautiful. But you have disagreed with Mr. Zayed Khan that at
18 a relevant time the Delta P event had stabilized?

19 A. I disagree that there was no Delta P existing in the pipeline.
20 That's what I said.

21 Q. Well, forget now what Mr. Khan said and let's deal now with
22 your expertise of all these many years—

23 A. Okay.

24 Q. Right—that there was no prohibition as a result of a Delta P
25 event to allow one of the divers to escape? Isn't that correct?

26 A. Well, at the time I don't know exactly where Mr. Boodram was
27 in the pipeline and where he was found at the time he was

1 found. Right? His statement, as you've said, that there was
2 nothing restricting him from leaving the pipeline.

3 Q. Beautiful. Now—

4 A. So let's go with that.

5 Q. Let's go with that. You followed with some interest, I imagine,
6 I mean, the day you were called in as an expert to find out as
7 much as you can up till today all that you could have about the
8 conditions in that pipe and the rescue and who came out or—
9 because you're a Trinidadian and you care. Isn't that correct?

10 A. I don't see the relevance of your statement. So try and break it
11 down for me. Explain it differently.

12 Q. I'll break it down. You care about what happened that day?

13 A. Yes, I do.

14 Q. Yes. Because you're a past contractor and hopefully a future
15 contractor for Paria. Correct?

16 A. No, no, no, no, I don't agree with that statement.

17 Q. Well, let me help you a little bit. So you are a contractor and
18 you are not interested to find out if Paria has procedures that
19 could cause harm or danger to your employees?

20 A. Listen—

21 Q. I'm listening.

22 A. Anybody that engages myself or my company, we will do the
23 necessary risk and risk management to deal with those
24 scenarios and situations. So the question you said was, am I
25 caring about what had transpired that day? Yes, I do care.

26 Q. Thank you.

27 A. And I do care about the families, and their loss, and so on, and

1 so forth. But as to exposing somebody else to additional risk—

2 Q. Who ask you 'bout that? I'm not on that. You came here with
3 a tract? You came here with a programme to tell us that? Who
4 asked you that?

5 A. Well, I retract what I just said.

6 Q. Oh, because it just came out. You came here with a mission to
7 hindsight the awfulness of that day to try and justify it, isn't it?

8 A. I disagree with you, Sir.

9 Q. Well, let me explain why I will say so. Knowing that you care,
10 you paid attention to what was, you know, what's in the public
11 domain. Correct?

12 A. I'm listening.

13 Q. Listen good. Yuh would have heard on radio, did you not,
14 audio of the four men vital and alive within the pipe?

15 A. I have heard it, yes.

16 Q. Yes. So you knew that Christopher who escaped was in the
17 same location where he could have spoken with those other
18 men. Correct?

19 A. Was Christopher's voice on the video?

20 Q. Yes.

21 A. I am not aware. I'm just asking you a question.

22 **Mr. Chairman:** He's only making an enquiry. He's allowed
23 to ask.

24 **Continued Cross-Examination By Mr. Ramadhar:**

25 Q. Yes.

26 A. I'm not familiar with Christopher's voice or any of the others.

27 Q. Right. But seeing that you care and yuh paying attention, it

1 would have come to your attention as you are sitting here today
2 that Christopher, upon his escape, said words to the effect, “Go
3 back; the men right behind”. And in particular: “Fyzie right
4 behind me; the men right there; go and get them”. Correct?

5 A. Correct.

6 Q. Yeah. So that it wasn't like he was spread some hundreds of
7 feet away from the other men in a different Delta P
8 environment. You agree?

9 A. Let me say something here.

10 Q. Well, please, that's why I'm asking the question; so say
11 something.

12 A. You are speaking to me like if I was there when Fyzie came
13 out. I was not there.

14 Q. Sir, Fyzie never came out; he died.

15 A. Not Fyzie, sorry, sorry. Excuse me, excuse me. When Mr.
16 Boodram came out. Right? Excuse me for the misnaming of
17 Mr. Boodram.

18 Q. Of course.

19 A. We were not there.

20 Q. We know that.

21 A. The OTSL was not there. So we don't know and we didn't
22 have those details. Right? But if we are now going through the
23 process of processing this situation, right, then if Mr. Boodram,
24 Say “Go back; Fyzie is right there”, then the incident process
25 and the emergency response plan by Fyzie's and Mr.
26 Boodram's team should have kicked in.

27 Q. Thank you.

1 A. Right? Where and whatever as a caring individual who has
2 done many of these types of works, where is the emergency
3 process that the rest of Mr. Boodram's team could have gone
4 immediately. Because this is—when you're doing a diving
5 response, emergency response, it's immediate.

6 Q. Thank you.

7 A. Immediate. Now, now, I'm not talking about immediate—

8 Q. Yuh realize—

9 A. Just now—

10 Q. Pause, pause for a moment.

11 A. Wait, wait—

12 **Mr. Chairman:** One at a time, please.

13 **Mr. Donawa:** I believe I'm speaking.

14 **Mr. Chairman:** Just a moment, just a moment. Both of you,
15 please, just a moment. I can only—

16 **Mr. Ramadhar:** Don't watch meh so [*Inaudible*]

17 **Mr. Chairman:** I can only keep a note, and we can only have
18 a record of the events if one of you speaks at a time. Mr.
19 Ramadhar, he's giving his explanation. If he goes too far I will
20 stop him.

21 **Mr. Ramadhar:** Thank you.

22 **Mr. Chairman:** He's giving his explanation. Let him give it,
23 please.

24 **Mr. Donawa:** So therefore, an emergency response plan
25 should have kicked in. Not anyone else's other than Mr.
26 Boodram's, Fyzie, and the others. Whatever emergency
27 response plan or process for assisting a diver that has been

1 injured, trapped, or any incident related to that team member,
2 should have kicked in immediately without any waiting for a
3 third party, or fourth party, or fifth party; nothing.

4 **Continued Cross-Examination By Mr. Ramadhar:**

5 Q. Let's blame the dead.

6 A. No. That not what I'm saying.

7 Q. Yes.

8 A. No, that's not what I'm saying. So if that's the way you wish,
9 then that is it.

10 Q. I don't wish anything.

11 A. Then that is it. But that is not what I'm saying.

12 Q. All right. Well, let's—

13 A. So don't say blame the dead. It's not the dead. At the time
14 they weren't dead. At the time they were doing a job to the best
15 of their ability and they should have had that emergency
16 response that is necessary to help their counterparts in times of
17 this situation.

18 **12.55 p.m.**

19 Q. Thank you so much. You appreciate that the incident occurred
20 around three o'clock?

21 A. That's the time I'm, I'm—

22 Q. Yes.

23 A. —I'm told.

24 Q. You appreciate that Mr. Boodram came out around 5.00, 5.30
25 thereabouts?

26 A. Yes.

27 Q. Yes. You appreciate, notwithstanding the team may not have

1 had a plan or whatever to execute, that there were others who
2 should have taken some responsibility to help rescue the men,
3 yeah?

4 A. Not without a plan.

5 Q. Right.

6 A. A plan has to be put in place—

7 Q. Yeah.

8 A. —to do what you are saying.

9 Q. Right. So that when, when Boodram came out, at that point in
10 time would have been the perfect moment moving forward
11 from that time to execute a plan?

12 A. But by whom?

13 Q. Well we'll come to that. You are defending Paria [*Inaudible*]
14 as you are?

15 A. I am not defending anyone.

16 Q. Well it sounds much like that, Sir.

17 A. Well this is what I would have done, if—

18 Q. Yeah.

19 A. —I, as the individual—

20 Q. Yeah.

21 A. —was running a programme such as that.

22 Q. There you go.

23 A. And it has—

24 Q. Would it surprise you—

25 A. It has nothing to do with Paria, Sir.

26 Q. Of course not. Money to come, isn't it? Contracts to be made?

27 A. I, I, I—

1 **Mr. Peterson SC:** Chairman, this is not—

2 A. —I disagree with that and I don't think that is your right to tell
3 me something like that.

4 Q. I am putting it to you that you expect further work.

5 A. Well, you could—

6 **Mr. Peterson SC:** Mr. Chairman, with the greatest of respect
7 to my friend, Mr. Ramadhar, this is not my witness but you
8 can't be making wild allegations like that unless you plan to
9 call evidence to back it up. It's insulting to a witness who has
10 come to assist the Commission, I don't know how, by what
11 means he came, whether by subpoena or whatever, but I can't
12 sit here and hear this being done uninterrupted.

13 **Mr. Chairman:** First of all, the suggestion is being made to
14 you that the reasons why you're saying what you're saying is
15 because you are hopeful of obtaining further work, through
16 OTSL, with Paria. Is there any truth in that at all?

17 **Mr. Donawa:** Absolutely not.

18 **Mr. Chairman:** Right. Well then we'll move on. Mr.
19 Ramadhar.

20 **Mr. Ramadhar:** Thank you.

21 **Continued Cross-Examination By Mr. Ramadhar:**

22 Q. So standing, sitting as you are today, you have, you have such a
23 capacity to know and to tell all of us on the record under your
24 oath that that pipe hadn't stabilized at the time when
25 Christopher came out?

26 A. I said it was of my opinion—

27 Q. Yes.

1 A. —that there still was Delta P—

2 Q. Of course.

3 A. —there. I am not an engineer. You had an engineer do the
4 work to say that Mr. Boodram came out on his own power,
5 right, and steam, because there was no Delta P, right? I say and
6 what I said was, there was no way to know that there was any
7 additional Delta P within the pipeline.

8 **Examination By Mr. Chairman:**

9 Q. Right. So that I'm clear about that, Mr. Donawa, are you
10 saying that it is your belief that there was a Delta P in the
11 pipeline, an existing Delta P in the pipeline, or that there was a
12 risk that there was still a Delta P?

13 A. There is a risk that there was still Delta P in the pipeline.

14 Q. Right. So your position is, it may not have been, but my—I had
15 to—I would take the view that there was a risk of a Delta P
16 event that could occur in that pipeline?

17 A. Correct, and diving is a risk-based management program.

18 Q. No, no, I understand, I understand entirely that. So your
19 position is, “Before I was prepared to—before I would be
20 prepared to commit anybody going into that pipe to effect a
21 rescue, I would have to consider the question of whether there
22 was a risk of a secondary event by way of Delta P”?

23 A. Correct.

24 Q. That's your position, isn't it, right?

25 A. That is my position.

26 **Mr. Chairman:** Okay.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. You appreciate that this is an imperfect world, nobody is
2 infallible?

3 A. I don't know how to answer that question.

4 Q. So you think it's a perfect world?

5 A. I never said so.

6 Q. I'm asking you.

7 A. Well, I can't answer that question. I don't know how to answer
8 you.

9 Q. You think there's anybody that's infallible?

10 A. I'm sure you're not infallible, so if you're not infallible—

11 Q. I'm very fallible—

12 A. —I'm not infallible.

13 Q. Beautiful. So that your opinion, your opinion is not necessarily
14 a hundred per cent accurate?

15 A. And nor is yours.

16 Q. You, you want to, you want it that way?

17 A. No, I don't want it that way.

18 Q. Good.

19 A. But the of the matter is it's my opinion.

20 Q. Your opinion but you appreciate your opinion could be wrong?

21 A. And I appreciate that my opinion can also be correct.

22 **Mr. Chairman:** Yeah, well it will be for us to decide what
23 evidence we accept or don't accept.

24 **Mr. Ramadhar:** Thank you.

25 **Mr. Chairman:** He's a man of 30 years' experience in the
26 field and he's entitled, it seems to us, to an opinion based on
27 that. What weight we give it compared to the rest of the

1 evidence is a matter entirely for us.

2 **Mr. Ramadhar:** Thank you so much Mr. Chairman.

3 **Continued Cross-Examination By Mr. Ramadhar:**

4 Q. Now. You appreciate that up till today, there was no
5 confirmation that there was a clear and present danger and an
6 existing Delta P, up till today, after the accident. With all the
7 experience that you've had, all the knowledge that you've come
8 with.

9 A. My information was based on the communication with the
10 Heritage team at the time.

11 Q. Heritage?

12 A. Yes. I think that's what my statement says. Right? This has
13 nothing to do with Paria. Right? This is the Heritage team. I
14 had no communications with Paria, right? This is the Heritage
15 team because the Heritage team was lending assistance to the
16 Paria team, right? So our communication was clearly and only
17 with Heritage, my own.

18 Q. And who—

19 A. As to, as to the rest of my team who are part and parcel of
20 supporting Heritage, I, I don't know what communication they
21 had.

22 Q. Thank you very much.

23 A. Okay?

24 Q. So thanks for that bit that we overlooked. So are you at present
25 engaged in any contract with Heritage?

26 A. If we are?

27 Q. Engaged in any contract with Heritage?

1 A. Yes we are.

2 Q. Thank you. Who did you speak with, if at all, from Paria to get
3 any information that evening?

4 A. I didn't speak with anyone—

5 Q. Thank you.

6 A. —From Paria.

7 Q. So you appreciate the quality of your information was not of the
8 best source?

9 A. Define that.

10 Q. Well, your live and direct information from somebody who is
11 on site is best than that information which is relayed through a
12 third party?

13 A. Well, our point of contact was the Heritage command person
14 who was, I—if I'm not mistaken and you'll have to find out on
15 your own—was part of that incident team with Paria.

16 Q. And who is that? Who is that person?

17 A. What, what do you mean who is that person?

18 Q. From Heritage?

19 A. Well Heritage, that's Osei Flemming. It's in my statement.

20 Q. Thank you.

21 A. Right?

22 Q. We're interested in the—

23 A. And that's the only communication that I've had with anyone
24 from Heritage.

25 Q. Thank you so much. Mr. Flemming. Now, could we—

26 **Mr. Ramadhar:** Forgive me, the paragraph Mr. Maharaj, from
27 Mr. Zaid Khan's opinion, could we have that brought forward,

1 please?

2 **Mr. Chairman:** Just before you deal with that—

3 **Examination By Mr. Chairman:**

4 Q. Can I ask you, you said in your statement, Mr. Donawa, that
5 you had a conversation with Mr. Osei Flemming, Heritage
6 HSE's lead, and then you said, "and several others whose
7 names I do not recall"?

8 A. Yeah. I don't want to—I don't know who they were.

9 Q. No, but were they Heritage people?

10 A. Yes.

11 Q. Or were they Paria people?

12 A. As far as I know they were Heritage people.

13 **Mr. Chairman:** Right, thank you. Sorry.

14 **Mr. Ramadhar:** Sir?

15 **Mr. Chairman:** Yes.

16 **Mr. Ramadhar:** Or, thank you so much.

17 **Continued Cross-Examination By Mr. Ramadhar:**

18 Q. Look at that paragraph marked four and five, yes? Is it visible
19 to you and clear?

20 A. Yes it is.

21 Q. Could you read it to us please?

22 A. Why don't you read it to me?

23 **Mr. Chairman:** He's asked you to read it.

24 **Mr. Donawa:** All right. "Prior to Mr. Christopher Boodram's
25 rescue"—would you like me to continue?

26 **Mr. Chairman:** Yes.

27 **Mr. Donawa:** Yes, thank you.

1 **Continued Cross-Examination By Mr. Ramadhar:**

2 Q. Do you see why we—

3 A. “—the entire system stabilized and equalized itself at
4 both ends of SL36 and thus allowed Mr. Boodram to
5 negotiate the pipe without any disruptions. As the
6 system was static, the condition was the best opportunity
7 to attempt a rescue to remove the—as removing the blank
8 at berth 5 or shutting down the compressor would have
9 released the stored potential energy”—and I’m assuming
10 it’s the compressor at the habitat—“for the compressed
11 air and thus disturb the equilibrium thereby implying any
12 divers air pockets.”

13 Q. Imperil?

14 A. “...imperil any divers in air pocket.”

15 Q. All right, let’s look at the first line. Tell me which part of that
16 first line you disagree with?

17 A. Which part of this first line?

18 Q. Yes, the first line four and five.

19 A. When—let me ask you a question, all right?

20 **Mr. Chairman:** No, no, no I’m afraid you can’t.

21 **Mr. Donawa:** Okay.

22 **Mr. Ramadhar:** If you—

23 **Mr. Chairman:** Just a moment please, Mr. Boodram [*sic*], if
24 you don’t—Mr. Donawa. If you don’t understand something—

25 **Mr. Donawa:** Yes.

26 **Mr. Chairman:**—by all means you can say you want
27 clarification.

1 **Mr. Donawa:** All right, yes.

2 **Mr. Chairman:** What you can't do is ask questions of counsel.
3 If you have a problem you can ask me, all right?

4 **Mr. Donawa:** Yes, sure.

5 **Continued Cross-Examination By Mr. Ramadhar:**

6 A. So, can you repeat your question, please?

7 Q. Certainly. Which part, which—that first line, which part of it
8 you disagree with?

9 A. Well, this is after the fact.

10 Q. Sir, you gave an opinion. Let's hear—

11 A. But this is—this is after—this here is after the fact of my
12 communication with the Heritage team.

13 Q. I'm not—

14 A. So, so at that time—

15 Q. Uh-huh.

16 A. —at that time we didn't have this information. So you're
17 asking me to comment—

18 **Examination By Mr. Chairman:**

19 Q. No, no, no—yes, we understand—

20 A. Right.

21 Q. —there's a distinction between what you were telling Heritage
22 on the day in question and the days that followed.

23 A. Right, yeah.

24 Q. What you've been asked, both by Mr. Maharaj—

25 A. Yes.

26 Q. —and now Mr. Ramadhar, is, what is it about this particular
27 paragraph that's being drawn to your attention that you disagree

1 with. All right? And so the way in which Mr. Ramadhar is
2 doing it I suspect is taking you through it line by line to see
3 which parts of it you disagree with.

4 A. Right. So, so, to allow Mr. Boodram to come out the pipeline,
5 he would have—the, the flange was off at berth 5. I'm just
6 seeking clarity.

7 Q. No.

8 A. No.

9 Q. And I am anxious that we are clear that, um, you have made an
10 assertion—

11 A. Uh-huh.

12 Q. —that when this paragraph was brought to your attention by
13 Mr. Maharaj that you disagree with it. As I understood what
14 you were saying was you disagreed with the suggestion that the
15 entire system had stabilized and equalized itself at both ends of
16 SL36. That is what I understood you to be disagreeing with.
17 Have I understood you correctly?

18 A. Yes.

19 Q. You're saying that there remained a latent Delta P potential in
20 that pipeline?

21 A. Correct.

22 Q. Is that the extent to which you disagree with that paragraph?

23 A. Correct.

24 Q. There's nothing else with which you disagree?

25 A. No.

26 Q. Thank you.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. Would you just permit me? I appreciate what His Ludship—

2 **Mr. Chairman:** No, I won't. I'm not going to allow you to go
3 through it line by line. We've established what needs to be
4 established.

5 **Continued Cross-Examination By Mr. Ramadhar:**

6 Q. Maybe I missed it. What exactly you disagree with in that
7 paragraph?

8 **Mr. Chairman:** I've just made it clear and he's just agreed.
9 The part that he disagrees with is that the entire system
10 stabilizes and equalized itself at both ends of SL36. In other
11 words, he is of the view—

12 **Mr. Ramadhar:** Yes.

13 **Mr. Chairman:**—that there remained a potential for Delta P in
14 the pipeline at that time.

15 **Continued Cross-Examination By Mr. Ramadhar:**

16 Q. Yeah. We appreciate there's always a potential for anything,
17 but do you disagree hat at that time when he escaped that pipe
18 that the system was static?

19 A. No. I don't disagree with—

20 Q. Right.

21 A. —I don't agree with it.

22 Q. Do you disagree that the condition was the best opportunity to
23 attempt a rescue as removing the blank at berth 5 or shutting
24 down the compressor would have released the stored potential
25 energy from the compressed air and thus disturb the equilibrium
26 and thereby imperilling divers in the air pockets? You disagree
27 with that?

1 A. I, I really don't know how to answer your question.

2 Q. It's either you disagree or agree.

3 A. It's not as simple as that. You're talking about—

4 Q. No, no, there is a statement—

5 A. You're talking about, you're talking about what, me putting
6 people in a pipeline or somebody else putting—

7 Q. No. Nobody asked you about that.

8 A. I'll disagree. My—I have answered you and I will answer you
9 again. I do not agree with it.

10 **Examination By Mr. Chairman:**

11 Q. Well, we need to be clear what it is that you're disagreeing
12 with.

13 A. I, I, um—

14 Q. Mr.—

15 A. Yeah, go ahead sorry. My apologies.

16 Q. Mr. Donawa—

17 A. Go ahead.

18 Q. —Mr. Donawa, we need to understand precisely what it is that
19 you disagree with. I had understood you to say that you agreed
20 with everything in that paragraph except that you did not accept
21 that the, um, the entire system had stabilized and equalized
22 itself at both ends of SL36. You took the view that there
23 remained a latent or a risk of a latent Delta P event—

24 A. Correct. And in my—

25 Q. Nothing else about that paragraph, read it again to yourself
26 please, there's nothing about that paragraph with which you
27 disagree other than that? That's what I understood you to say

1 to me—

2 A. Yes.

3 Q. —a few moments ago.

4 A. Correct.

5 Q. That remains the position, is it?

6 A. Yes.

7 Q. Right.

8 **Mr. Chairman:** Well I think we've flogged that particular
9 horse as much as we possibly can, Mr. Ramadhar.

10 **Mr. Ramadhar:** Thank you very much.

11 **Continued Cross-Examination By Mr. Ramadhar:**

12 Q. Did it ever come to your attention that efforts were made to
13 endeavour a rescue but that Paria ordered it not to go forward,
14 close to that time?

15 A. I am not aware of that.

16 Q. No. And from your wide experience, your 30-odd years in the
17 diving business, what time frame, if you had an emergency like
18 that, would you consider it necessary to actually endeavour a
19 rescue?

20 A. As immediate as possible. Therefore the procedure and the
21 planning and the process would have catered for that.

22 Q. Thank you so much.

23 **Mr. Ramadhar:** I have nothing further for this flogged
24 witness.

25 **Mr. Chairman:** I clearly should have catered for that.

26 **Mr. Ramadhar:** Correct.

27 **Mr. Chairman:** Yeah. All right, are there any questions from

1 anyone else?

2 [*Ms. Nyree Alfonso raises her hand*]

3 **Mr. Chairman:** Well, you've had your opportunity, if I may
4 say so Ms. Mootoo—ah, Ms. Mootoo. I've done that again,
5 haven't I, because I was coming to you—no, Ms. Nyree
6 Alfonso. I asked earlier and you didn't put your hand up and
7 I'm not—what I'm not going to permit is this, if somebody asks
8 questions that come after you for you to then go back and see if
9 you can clarify it. You didn't have your hand up.

10 **Ms. Alfonso:** Mr. Chairman, that actually wasn't—there's no
11 question that evolves out of Mr. Ramadhar's cross that I had—I
12 had two or three questions to ask, but Mr. Ramadhar was
13 already on his legs when I was putting up my hand.

14 **Mr. Chairman:** Well, I did ask.

15 **Ms. Alfonso:** And I—this time I admit I was slow. The last
16 time you didn't see me but I say this time I apparently was too
17 slow.

18 **Mr. Chairman:** I looked specifically at you because I was
19 accused of not seeing you last time. Noting that it's quarter
20 past 1.00 are you—have you got 5 minutes or so? Is that it?

21 **Ms. Alfonso:** And I—Mr. Chairman, I can assure you in 5
22 minutes I would be, er—my questions to Mr. Donawa would be
23 completed—

24 **Mr. Chairman:** All right—

25 **Ms. Alfonso:**—and answers thereto.

26 **Mr. Chairman:**—subject to that, does anyone else have
27 questions? No? All right. Well Mr. Wilson may have and Mr.

1 Maharaj may want something, but, can we have your 5 minutes
2 of questions please? And then—

3 **Ms. Alfonso:** Thank you very much, Mr. Chairman.

4 **Mr. Chairman:**—hopefully we can take lunch.

5 **Cross-Examination By Ms. Alfonso:**

6 Q. Good afternoon, sorry, Mr. Donawa.

7 A. Afternoon.

8 Q. Mr. Donawa, you are aware that Gulf Stream Eagle was
9 somewhere in the location next to these pipelines at berth 5 and
10 berth 6, yes, at some point in time?

11 A. Er, yes, they were, they were in—at the facility.

12 Q. At the facility?

13 A. Yeah.

14 Q. Okay. And Mr. Donawa, could you give us an idea how—
15 we've already heard that they departed without any
16 participation, but could you give us an idea how this vessel is
17 outfitted—

18 A. Um—

19 Q. —what kind of equipment she has on her?

20 A. She has a full surface air diving system with hats, dive hats,
21 hoses, cameras.

22 Q. Umbilicals?

23 A. Yes, umbilicals as well.

24 Q. You have any idea of the length of the umbilicals available on
25 the Gulf Stream Eagle?

26 A. Typically, depending on the water depth, they will either be 300
27 feet. If it's deeper than, than, you know, a couple hundred feet

1 then we would go with longer umbilicals, 600 feet.

2 Q. Okay, so somewhere between 300 and 600 feet?

3 A. Well in this case when the vessel was at Paria, because we were
4 working at Heritage, we would have had 300-foot umbilicals on
5 board.

6 Q. Okay. And do you have any idea how many umbilicals?

7 A. Generally two and a spare.

8 Q. Two and a spare. So three?

9 A. Yes.

10 Q. Okay, thank you, Mr.—Mr. Donawa, could you—okay, I
11 accept what you say with regard to Delta P and I'm not in a
12 position to believe or disbelieve you, but, would you be able to
13 assist as to whether if there was a potential of a second Delta P,
14 if you disagree with the In-Corr-Tech findings, would that be, I
15 think I heard the terminology from another witness, a minor
16 event, a significant event, a, you know, would that be equally
17 powerful as the original event which caused the five divers to
18 be sucked into the pipe?

19 A. It's a very difficult thing to say because it's, it's un, unseen and
20 for me to answer that question and say it's either in one of those
21 three categories is extremely challenging.

22 Q. Okay.

23 **Mr. Chairman:** I would go further and say it's
24 impossible, isn't it?

25 **Mr. Donawa:** Yes.

26 **Continued Cross-Examination By Ms. Alfonso:**

27 Q. And maybe I got it wrong but you'll correct me I'm sure. Did

1 you mention you didn't have a gauge, there was no way to
2 gauge the, the air pressure in the line or the pressures in the
3 line?

4 A. At that time, you already had one end open, one end closed.
5 You weren't going to be certain where, where that pressure was
6 going to receive that pressure reading from.

7 Q. Okay. So there would be no mechanism or equipment that you
8 could introduce into the pipeline—

9 A. And that's, that's why—

10 Q. —that would assist you with that?

11 A. No. That's why I had suggested immediately to the team that
12 called it's—to get an ROV, a crawler, into the pipeline because
13 that was the fastest way to mobilize something to get some
14 information or to find a, um, anything or anyone or—and, and
15 they found debris that was blocking the way. So that, that's
16 why I recommended a crawler instead of an ROV.

17 Q. You'll accept that the debris was a tank?

18 A. Um, I haven't seen the video.

19 Q. Okay.

20 A. That's what I've heard.

21 Q. You've heard that there was debris? Okay.

22 A. I've heard that it was a tank.

23 Q. A diving tank?

24 A. But I, I don't know what it was.

25 **Ms. Alfonso:** Okay, thank you Mr. Donawa.

26 **Mr. Donawa:** You're welcome.

27 **Mr. Chairman:** Thank you. All right, anything arising from

1 that? All right. Well there is—before I pass to Mr. Wilson just
2 a couple of things, please?

3 **Examination By Mr. Chairman:**

4 Q. First of all, mobilizing a crawler into the pipe wouldn't tell you
5 if there was a latent Delta P issue, would it?

6 A. No.

7 Q. Right.

8 A. It would not.

9 Q. Thank you. And secondly this, is that when you in your
10 paragraph 19 of your statement, please have a look, it says, "I
11 advised of the safety issues as there was no way to confirm that
12 the pipeline was totally equalized and flooded and free of the
13 possibility of a Delta P." That was the position then, wasn't it?
14 That's what advice you were giving them then?

15 A. Yes.

16 Q. But that was predicated on your being told previously that the
17 pipe was completely empty of fluid?

18 A. Yes.

19 Q. Thank you. Did you—when did you, if ever, discover that, in
20 fact, there was a considerable amount of fluid in the pipe or
21 may have been?

22 A. This, this was after the fact. This was—

23 Q. Long time later?

24 A. Yeah, yeah this was when Mr. Boodram was giving his
25 recollection or information—

26 Q. Right.

27 A. —with the sketches, et cetera.

1 Q. What, when he was in the—

2 A. No, this is post.

3 Q. Days, weeks, months?

4 A. I would think it was a, a week later, if I, if I recall.

5 Q. Long after the event had closed?

6 A. Yes.

7 Q. That is to say the bodies had been recovered?

8 A. Yes.

9 Q. Right, thank you very much. So, I just need to be clear, that
10 opinion that you expressed, that you gave to the Heritage team,
11 was predicated on the fact that you had been told the pipe had
12 been cleared of all liquids—

13 A. Correct.

14 Q. —prior to the Delta P event?

15 A. Yes.

16 Q. Thank you very much. Mr. Wilson, I think, has a question for
17 you?

18 **Examination By Commissioner Wilson:**

19 Q. Good morning, Mr. Donawa.

20 A. Good morning, Mr. Wilson.

21 Q. In your 30 years of planning and risk assessment of subsea
22 scopes diving, have you ever planned a dive for an inspection
23 along the pipeline?

24 A. Yeah, yes we have.

25 Q. And so on the topic of Delta P, let me back it back, in that
26 planning, what are some of the risk you had identified to the
27 operator and/or if an operator would identify a risk to you just

1 in the inspection of a pipeline?

2 A. All right, so a pipeline inspection what we typically would do is
3 to ensure that the vintage of the pipeline, how old it is.

4 Q. Uh-huh.

5 A. Um, because you can, you can have a, a—during an inspection
6 you may clean an area and there may be so much corrosion that
7 it, it, it had—develops a leak during the inspection. We've,
8 we've also catered for, in that risk assessment process, to
9 ensure that the pipeline is not void of a liquid.

10 Q. Okay.

11 A. All right? Um, if the operator—

12 **Examination By Mr. Chairman:**

13 Q. Sorry, say that again?

14 A. Void of a liquid. Meaning there is—

15 Q. Not void of a liquid.

16 A. Yeah, yeah, not void of a, meaning that there is liquid in the
17 pipeline. We ensure that there's liquid in the pipeline, ensure
18 that there's an equal to the bottom pressure, saltwater bottom
19 pressure.

20 Q. Sorry, just again, before you're conducting the inspection of the
21 outside of a pipe, you would want to know the vintage, how old
22 it is?

23 A. Yes.

24 Q. Because if you're scraping off some part of the pipe that is
25 obviously corroded or whatever like that, it might then create a
26 hole?

27 A. Yes.

1 Q. Which might have the effect of creating a Delta P?

2 A. Yeah, if the—if that pipeline is in fact empty or out of service.

3 Q. Yeah, I've got that. That's one of the first things that you
4 would want to make sure of?

5 A. Yes.

6 Q. And when you say the pipeline should not be devoid of liquid,
7 in other words it should be full?

8 A. Yes.

9 Q. And when I say full I mean do we mean by that approximately
10 full or completely full?

11 A. Completely full. It could be at a lower pressure but once it's
12 full of liquid.

13 Q. Full?

14 A. Yes.

15 **Mr. Chairman:** Thank you. I'm sorry.

16 **Examination By Commissioner Wilson:**

17 Q. Is that industry practice?

18 A. Generally industry practice states to avoid all Delta P scenarios.
19 Over the years that has developed from incidents that have
20 occurred and lessons learned from those incidents.

21 Q. All right. So, where I want to go with that is, um, in your
22 experience and planning, and I want to kind of factor in human
23 conditioning, human thinking—

24 A. Yes.

25 Q. —what you're conditioned to through that experience and/or
26 industry practice. Are there any standards that point to a
27 pipeline should not be void anywhere along the length of the

1 pipeline?

2 A. Um, well, in standards such as, um, OGP 411, IMCA there's
3 always a section—

4 Q. Just a second, sorry, could you clarify OGP 411, IMCA for
5 the—

6 A. Yes. So OGP 411 is the standard for diving under the oil and
7 gas producers.

8 Q. Uh-huh.

9 A. And IMCA is the International Marine Contractors Association
10 and also the Association of Diving Contractors International,
11 the ADCI.

12 Q. Uh-huh.

13 A. All of those people who put standards out have included a
14 section in there for Delta P or for recognition for planning in
15 Delta P—

16 Q. Uh-huh.

17 A. —or working in a Delta P environment. So, they don't tell you
18 what those scenarios are but they, they give you the guidelines
19 what you need to do to look for Delta P, all right, or to cover
20 those Delta P scenarios, that Delta P exists in not just pipelines
21 alone, right? They exist in other areas.

22 Q. Okay. Just taking into account what you just said, just in
23 layman terms, those standards really granular, diving next to a
24 pipeline, what needs to be considered. I'm asking it a different
25 question but from the standards side?

26 A. Yeah from the standards side without going into verse and
27 paragraph—

1 Q. Uh-huh.

2 A. —they, they will identify within those standards that what
3 certain working conditions should be based on how you
4 proceed at that work. So you're not going to go do scuba where
5 Delta P could be exist—can exist, right? They've moved away
6 from those things. Right? They've outlined that. Scuba is not
7 for working at depths beyond a certain depth. Scuba is not for
8 working in working environment dives, meaning cutting,
9 burning, grinding, scuba is not meant for working around
10 pipelines.

11 Q. Well, where I was going with it is it's, um, the condition of the
12 pipeline rather than methodology of dive?

13 A. Right, yes. So the condition of—they, they don't say don't
14 work in a pipeline because it's 40 years old or 50 years old.

15 Q. No, not the vintage.

16 A. Right.

17 Q. In terms of the contents and that kind of thing.

18 A. The particulars of—

19 Q. The most granular—

20 A. Or, okay.

21 Q. The most granular thing when you're taking into consideration
22 the risk control.

23 A. Right.

24 Q. Like, do you, how do you—like there's the risk control
25 hierarcree [*Phonetic*].

26 A. Uh-huh. Hierarchy.

27 Q. Hierarchy. Thank you. Mr.—

1 A. It's lunch. So you start with, I don't know if you're familiar
2 with that hierarchy.

3 Q. I'm not familiar with it the way you are outlining the—so what
4 you're doing is the granular risk. So what it says is if you a
5 diving next to a pipeline the risk in your risk matrix is higher.

6 Q. No, not the risk matrix, the hierarchy where we, um, and I offer
7 for your consideration where it starts with eliminate, engineer
8 out, straight down to PPE, if you're aware of that hierarchy.

9 A. Right, well, yes. So I know at some people where they do their
10 risk, some tasks had catered where doing that task it's a fatality
11 and from that—

12 Q. Uh-huh.

13 A. —you then move up to what are you going to do to reduce that
14 or remove that?

15 Q. Yes.

16 A. And then you take it to the next level.

17 Q. Yes.

18 A. So it's the upside down pyramid.

19 Q. Yes.

20 A. You start at the worst case scenario and you work your way
21 down as to what ifs. So, for example, if I were doing a job like
22 this, I would say we start at the highest risk, death, and then we
23 work are way down to mitigate what that risk is.

24 **Commissioner Wilson:** Thank you for that.

25 **Mr. Chairman:** This all presupposes recognizing
26 Delta P as an issue in the first place?

27 **Mr. Donawa:** Correct.

1 **Mr. Chairman:** Mr. Maharaj—oh sorry, you're finished? Mr.
2 Wilson has—

3 **Examination By Commissioner Wilson:**

4 Q. So moving on from that point, I just want to touch base on the
5 Gulf Stream Eagle. Do you know whilst they were standing by,
6 and I appreciate they were just standing by and they were—did
7 that team take any consideration to the incident that they were
8 responding to?

9 A. Well, meaning? They were asked—

10 Q. Meaning that—

11 A. They were asked to head to Pointe-a-Pierre.

12 Q. Uh-huh.

13 A. Right? Um, details—

14 Q. No, I'm talking about when they got on site—

15 A. Or on standing by?

16 Q. —they were standing by?

17 A. Sorry.

18 Q. Were they—did they start to try to pull together a plan, given
19 the information that they had whilst they were standing by?
20 Are you aware of any?

21 A. As far as I'm aware of they weren't.

22 Q. They just arrived and told to stand by?

23 A. Yes. Okay.

24 Q. Thank you for that. The last one, when you, when you were
25 engaged by Heritage, did anyone, or the person contacting you,
26 identify that it was the Heritage IMT or ICT contacting you?

27 A. No. They did not outline it like that.

1 Q. Okay.

2 A. What it was is I was not part of that contact team because the
3 way are business unit is set up, they contacted Mr. Bertrand.

4 Q. Uh-huh.

5 A. Then Mr. Bertrand, if he needs input from me, he will contact
6 me, which he did.

7 Q. Okay.

8 A. Right? So they were asked to provide support—

9 Q. Uh-huh.

10 A. —to Mr. Bertrand. Mr. Bertrand then called me, I then said yes
11 we should. We need to support as best as we can and we let the
12 asset leave Heritage under Heritage guidance—

13 Q. Right.

14 A. —for what needs to be done.

15 Q. And finally, if I could tease out of you that conversation with
16 Mr. Bertrand, he just—what was that conversation like in terms
17 of giving you information for the incident?

18 A. Um, it was, it was very, um, limited—

19 Q. Uh-huh.

20 A. —as it—everything was happening so quickly, right, um, they
21 wanted us to, to head, head up and, and, take instructions as we
22 arrived and which we did.

23 Q. Or, take instructions. Okay, thank you for that. Right.

24 **Mr. Chairman:** Yes, Mr. Maharaj. Sorry, I should have—

25 **Mr. Mootoo:** Yes, Mr. Chairman, I just have one or two
26 questions or really one question arising out of your questioning
27 in relation to paragraph 19.

1 **Mr. Chairman:** Of course. Sorry, I should have invited
2 anybody who wanted to—out of that. Please do.

3 **Mr. Mootoo:** Thank you.

4 **Cross-Examination By Mr. Mootoo:**

5 Q. Good afternoon, Mr. Donawa.

6 A. Good afternoon.

7 Q. My name is Jason Mootoo and I'm one of the attorneys for
8 Paria. The chairman asked you in relation to question 19
9 whether the advice that you—forgive me, paragraph 19 of your
10 statement—

11 A. Yes.

12 Q. —whether the advice you gave was premised on the
13 information that the line was dry and I believe you said yes?
14 My question to you is this. Would you—would that advice, the
15 safety advice you gave in paragraph 19, would that advice have
16 remained the same if you were told that the, not that the line
17 was dry but that air pockets remained in the line?

18 A. You're going to have to break that that down for me a lil bit.

19 Q. Sure.

20 A. So I can—yeah.

21 Q. Okay. Up at paragraph 13 of your witness statement you were
22 told—your evidence is you were told that the line was dry.

23 A. Correct.

24 Q. At paragraph 19 you say you gave certain advice as to safety
25 issues. You told the Chairman that those—that advice which
26 you gave was based on your understanding that the line was
27 dry. My question to you is, would that advice have remained

1 the same if you were told not that the line was dry but that air
2 pockets remained in the line?

3 A. So, paragraph 19 was based on the meeting with Heritage when
4 they called us in to discuss a recovery.

5 Q. Yes.

6 A. Right. Um, and the concern was that would, there—for us, was
7 that there were still air pockets in the line or can have air
8 pockets in the line.

9 Q. Okay, am I therefore understanding you to say that whether the
10 line was completely dry—

11 A. Uh-huh.

12 Q. —or whether it was partially dry—

13 A. Right.

14 Q. —and air pockets remained, your advice that there were safety
15 concerns would have remained?

16 A. Yes.

17 **Mr. Mootoo:** Thank you.

18 **Mr. Chairman:** Yes.

19 **Cross-Examination By Mr. Hosein-Shah:**

20 Q. Good afternoon, Mr. Donawa. Just two quick things.

21 **Mr. Chairman:** Does it arise—

22 **Mr. Hosein-Shah:** Yes.

23 **Mr. Chairman:** Does it arise from questions I myself or Mr.
24 Wilson have asked?

25 **Mr. Hosein-Shah:** Mr. Wilson.

26 **Mr. Chairman:** All right.

27 **Continued Cross-Examination By Mr. Hosein-Shah:**

1 Q. In response to Mr. Wilson's question with respect to the use
2 scuba in certain environments, what would be your opinion on
3 the use of scuba in a habitat environment?

4 A. Absolutely not.

5 Q. And what would be the appropriate equipment?

6 A. Complete surface supplied hat and hose.

7 Q. Sure. And then, finally you mentioned two standards in
8 response to Mr. Wilson, the OGP 411 standard and the IMCA
9 standard.

10 A. Yes.

11 Q. Would you be in a position to provide copies of those standards
12 to the Commission?

13 A. I can.

14 Q. Thank you.

15 **Mr. Chairman:** They're available online.

16 **Mr. Hosein-Shah:** I tried to pull the IMCA one but it has a
17 pay wall.

18 **Mr. Chairman:** Or, you have to be a member? Talks to Mr.
19 Wilson. [*Crosstalk*] We'll get it.

20 **Mr. Hosein-Shah:** Thank you.

21 **Mr. Chairman:** Mr. Maharaj, I just want to make a note of
22 what was said.

23 **Examination By Mr. Chairman:**

24 Q. So you told Mr. Hosein-Shah that in answer to his question
25 about working with scuba in the habitat you said absolutely not
26 working in the habitat with scuba.

27 A. There should be no work done with the scuba.

1 Q. Yeah, I understand that. No scuba. Surface supply only?

2 A. Yes correct.

3 Q. And hat?

4 A. Hat, hat, er, a diving hat which is a solid like a helmet.

5 Q. Could you have look at the one we've got? [*Mr. Donawa*
6 *shown helmet by Mr. Wilson*]

7 A. That is it.

8 Q. Do you mean that?

9 A. That is correct. That is designed to take a impact. It's designed
10 to provide free and clear air flow.

11 Q. Looks like it's designed to break your neck, frankly. Can
12 you—

13 A. Well, yeah, if you try to run around.

14 Q. It's an extremely heavy piece of equipment.

15 A. Correct.

16 Q. Is it your evidence that that should be worn in a dry
17 environment whilst the person is carrying out work?

18 A. No, not in a, not in a—in, in that case there's a different set up
19 for that.

20 Q. Right.

21 A. There's a full face demand.

22 Q. When you say a hard hat—when you said hat, you don't mean
23 that someone should have to be wearing that working in a dry
24 environment?

25 A. No. They go into the habitat with that, they put on a dry mask
26 and a head shield.

27 Q. All right. So they would—in order to get into the habitat they

1 go down into the water on the side, wearing a helmet like that?

2 A. Yes.

3 Q. Come up into the habitat which is now dry?

4 A. Good.

5 Q. They remove that helmet, take that off, yes?

6 A. Correct.

7 Q. Breathing the air that is in the habitat?

8 A. Well, it depends on the type of work that they're doing, so they
9 should be harnessed and—

10 Q. Leave aside the harness thing. I—

11 A. But yes.

12 Q. So I just want to be clear what you're saying, okay? The man
13 who's going into the habitat to do the work has to wear a
14 helmet like that to go down—

15 A. Yes.

16 Q. —10 feet or whatever it is, not very far but about 10 feet
17 down—

18 A. Yes.

19 Q. —come up into the habitat.

20 A. Correct.

21 Q. When he comes up into the habitat, he's now in a dry
22 environment?

23 A. Correct.

24 Q. This thing is weighing on his shoulder. I mean, it's heavy, isn't
25 it?

26 A. Right.

27 Q. Now he's got to take that off.

- 1 A. Uh-huh.
- 2 Q. And he's got to put something different on?
- 3 A. Yes.
- 4 Q. Has he taken that down or is that in there already?
- 5 A. No, it should be set up in the habitat.
- 6 Q. Set up in the habitat? So he takes that off, puts that where,
7 hooks—on a hook somewhere?
- 8 A. Yes, there will be a stand or—they outfit the habitat
9 appropriately.
- 10 Q. Right. While he's doing that, he's got—has he got to
11 disconnect the air?
- 12 A. No, no. That stays connected to the air at all times.
- 13 Q. This does, the helmet?
- 14 A. Yes.
- 15 Q. But when he takes that off his head is he—now, what air is he
16 breathing?
- 17 A. He has—he will use a full face light—
- 18 Q. No, no, he has to put that on?
- 19 A. Yes, he's breathing the air—
- 20 Q. [*Inaudible*] the two?
- 21 A. Yeah, and that's connected to—through a hard point in the
22 habitat to the surface.
- 23 Q. All right. But when he takes that off, what air is he, breathing?
- 24 A. He can breathe the air in the habitat for a short period of time.
- 25 Q. Right. Okay. So he's now—taken out—I just want to be clear,
26 he's taken that off?
- 27 A. Yeah.

1 Q. He's now, like I am, perhaps not wearing a tie?

2 A. Yes.

3 Q. But he's in there without any breathing equipment other than
4 what's in the habitat?

5 A. Yes. And the risk, and the risk assessment will define what
6 needs to be worn at what periods of time.

7 Q. Okay. And then he's now putting on a different kind of mask.
8 Is it full face mask?

9 A. Yes.

10 Q. And he's got some sort of—

11 A. Head protection.

12 Q. Head protection, right, whilst he's in the habitat?

13 A. Yes.

14 Q. Then he can carry on the work, and that sort of mask is a lot
15 lighter than that, is it?

16 A. Extremely.

17 Q. Yeah, okay, thank you. I just needed to be clear to understand
18 what you're saying. All right, so, surface air supply only and a
19 hat to access the habitat. Yes. And then change to a
20 lightweight hat whilst carrying out the work. Have I got that
21 right?

22 A. Correct.

23 Q. Thank you. And that is something which, in your view, should
24 be standard in this kind of work?

25 A. Yes.

26 Q. And that should be recognized not only by those who are
27 performing the work but those who are asking for the work to

1 be performed?

2 A. That's what the standard's supposed to do.

3 Q. Yeah. Thank you very much indeed.

4 **Mr. Chairman:** Mr. Maharaj.

5 **Further Examination By Mr. Maharaj SC:**

6 Q. Mr. Donawa, I only want to—I want to ask you one question in
7 respect, and that has to do with your opinion that there was a
8 risk of a secondary Delta P. We had evidence here that after
9 Mr. Boodram came out, Mr. Michael Kurban went into the
10 pipeline and he came out and he was okay. Do you still
11 maintain your opinion that there was a risk of a second Delta P.

12 A. Yes I do.

13 Q. Okay.

14 **Mr. Maharaj SC:** That's it.

15 **Mr. Chairman:** All right, thank you very much. Well, that
16 will be it then for lunch. It's a little bit late for lunch, I'm
17 afraid, folks. So thank you very much, Mr. Donawa, for
18 coming. You're free to go and do as a you please now. All
19 right?

20 **Mr. Donawa:** Okay, thank you.

21 **Mr. Chairman:** You can go. What I'm going to say is, can we
22 have a slightly shortened lunch? Would we be content with 20
23 past 2.00? Yes? Good. I hear no dissenters. So 20 past 2.00
24 please, when we will first, I believe, hear from the witnesses
25 who I have approved can give their evidence in relation to the,
26 um—as family members, with the two reserved as I've
27 indicated. So that's what we will do when we return. Thank

1 you very much. Twenty past 2.00 please?

2 **1.40 p.m.:** *Enquiry suspended.*

3 **2.27 p.m.:** *Enquiry resumed.*

4 **Mr. Chairman:** Okay, I'm sorry to have kept you. A couple
5 of issues arose which I had to deal with. Right. So the first
6 witness, I understand, Mr. Maharaj, is going to be Vanessa
7 Kussie, is that right?

8 **Mr. Maharaj SC:** Yes.

9 **Mr. Chairman:** Where do I find it, please? Actually I've got
10 it separately. Yes, I've got it. I've got it. That's fine.

11 [*Ms. Vanessa Kussie enters enquiry room and is sworn*]

12 **Ms. Kussie:** I, Vanessa Kussie, solemnly swear that the
13 evidence I shall give to this Commission in this case shall be
14 the truth, the whole truth and nothing but the truth.

15 **Mr. Chairman:** Please, take a seat. Ms.—am I pronouncing
16 your name correctly, it's Vanessa Kussie.

17 **Ms. Kussie:** Kussie.

18 **Mr. Chairman:** Now pull that down towards you a little and
19 bring the whole thing a little bit towards you, all right? That's
20 it. Now that bottle of water is there for you to use, all right, and
21 I know that this is not going to be easy for you.

22 **Ms. Kussie:** No, it's not.

23 **Mr. Chairman:** We appreciate your coming along to tell us
24 what you have to say. You are unrepresented. That's not a
25 problem. I'm here to look after you, all right?

26 **Ms. Kussie:** Yes.

27 **Mr. Chairman:** So you take your time. You've provided a

1 statement to us which is in the bundle and everybody here has
2 it. All right? What you need to understand, Ms. Kussie, is
3 there's not a single person here who does not have a
4 considerable degree of sympathy for your position, all right?
5 So you take your time, just pause if you need to pause, it's
6 entirely up to you because I understand what you're going to do
7 is you're going to read the statement that you've provided for
8 us, all right? It's got a few pages so take a little while. And
9 you just take it—you want a break you just ask me for a break.
10 All right? You want to pause for a minute, take a drink of
11 water, you do that. All right? This is intended to provide you
12 with the best possible environment in which you can give your
13 evidence for everyone to hear. All right?

14 **Ms. Kussie:** Yes.

15 **Mr. Chairman:** So make sure you speak clearly because
16 we've got to hear what you have to say. As I say, pull that
17 thing right towards you a little bit. That's it.

18 **Ms. Kussie:** Yes, Sir.

19 **Mr. Chairman:** You've got the statement in front of you,
20 haven't you?

21 **Ms. Kussie:** Yeah.

22 **Mr. Chairman:** All right? So you start when you're ready, all
23 right, and tell us what it is that you've put into that statement
24 for us all to consider. All right?

25 **Ms. Kussie:** This is my statement that what I've been going
26 through since February.

27 **Mr. Chairman:** Well you start off by telling us at—

1 **Ms. Kussie:** Yes.

2 **Mr. Chairman:**—paragraph one, I am the common-law wife—

3 **Ms. Kussie:** Wife of—

4 **Mr. Chairman:**—of the late Rishi Nagassar.

5 **Ms. Kussie:** Rishi Nagassar.

6 **Mr. Chairman:** Right.

7 **Ms. Kussie:** [*Inaudible*]

8 **Mr. Chairman:** Take it from there if you would, please?

9 **Ms. Kussie:** What I want to say, Sir, is that prior to this what
10 I'm going to say now, my husband and I had this conversation
11 before this tragedy had happened two days before it had
12 happened. So I were like a detective asking him questions, and,
13 when it came to reality it was my nightmare. So what I'm
14 stating here is what I had went through personally.

15 **Mr. Chairman:** Yes.

16 **Ms. Kussie:** Okay?

17 **Mr. Chairman:** Right. Well that's what we want to hear.
18 Yes.

19 **Ms. Kussie:** I, Vanessa Kussie, state as follows. I am the
20 common law wife of the late Rishi Nagassar. We were together
21 for 13 years. Our son, Nashhik Ranveer Nagassar is three years
22 old. Rishi was also known as Ryan at home and as Blacks at
23 work. I called him Ryan. Ryan was a diver. He was a
24 permanent employee of LMCS. He worked for LMCS for over
25 25 years.

26 Friday, 25th February, 2022. On the 25th February, 2022
27 I received a phone call about 5.00 p.m. from my sister-in-law,

1 Ria. She asked if Ryan was at home or at work. I told her he
2 went to work. I heard the trembling of her voice and she asked
3 if anyone called from LMCS. I said no. I asked her what
4 happened. She took a few minutes to answer. She said she did
5 not know how to tell me but she understood there was an
6 accident at work and Ryan, her brother, and others were sucked
7 into a pipeline Fuel Company Limited, Paria. She said that she
8 knows this because she knows someone out at sea who called
9 her and told her they had known Ryan as her brother and he's
10 one of the persons who was sucked into the pipe. This was the
11 first phone call I received.

12 About half an hour later, I got a phone call from someone
13 asking me to call a fisherman at sea. I had known this guy. His
14 name's Avinash. I waited and called him on my phone. He
15 told me that he had to tell me my husband died and he gave his
16 condolences to me. He told me they were looking for Rya's
17 body out at sea. I asked him how he got his information. He
18 said his coast guard—his friend, called him, told him they were
19 looking for bodies out at sea and they alerted all fishermen to
20 help look for them.

21 I then called LMCS' office but no one answered. I also
22 called some of Ryan friends. Nobody picked up. I started
23 panicking. My uncle Allan, a local councillor, called me. He
24 heard my voice and asked if I was sick. I told him no. He hung
25 up the phone and I called my mom and within minutes my
26 family was at my home. They heard my screaming. I was
27 screaming so loud, the corners of my street could have heard

1 me. I pounded the ground, I rushed to my son, Nashhik. I
2 picked him up. I went to my prayer room and I started to pray.

3 I kept calling Ryan's phone. I keep begging God to let
4 him answer his phone, but it kept ringing out. My uncle Allan
5 came and his wife Shamilla came out. He asked me what I
6 wanted to do. I just wanted to be at Paria. I told my uncle this.
7 Everyone who was at my home left. We would head up to
8 Paria. Within about half an hour or so we were at Paria, Pointe-
9 a-Pierre. This is about 6.30 to 7.30—7.00 p.m., sorry. When I
10 got there, I was still shaking.

11 My uncle Allan went up to the security at the entrance.
12 There were four of them. He told them he understood there was
13 an accident and we came to find out. He told them I was the
14 wife of Rishi. The reply from the security was this is the first
15 time they are hearing about an accident and they didn't know.
16 My uncle Allan asked the security officers for a phone number
17 to call a secretary at Paria. They said they had nothing to give
18 him. They didn't know the phone number at the office. He told
19 them, the security officers, he was a local government
20 councillor for Couva/Tabaquite/Talparo but they told him they
21 didn't have any number for him.

22 By this time we saw vehicles coming in and out of the
23 compound. We were right outside by the security booth on the
24 road. My uncle stopped a few vehicles and asked if there were
25 an accident inside. One person who said he works for Paria he
26 told us he understood there was an accident, the guys are
27 trapped in the pipeline but they are hearing knocking so don't

1 worry, Ma'am. He said they, Paria, was trying to help rescue
2 them. I then relaxed a little bit based on what I heard. My
3 uncle, Allan, told him Rishi Nagassar is my husband. The man
4 said, don't worry, Ma'am, we are going to get help. We are
5 going to get help for them. Help is on its way.

6 About five or 10 minutes or so, a few of LMCS workers
7 going into the compound, I saw them. I stopped them. One of
8 them known as Brown, he's one of Ryan's friends. He said he
9 cannot say much because Paria wasn't giving any information
10 about what is going on inside. Another person who was with
11 him, who's also an employee at LMCS, told me they were
12 stopped from getting help from the coast guard. I felt they
13 didn't want to scare me and were giving me like small details.

14 In less than half an hour, we saw an ambulance coming
15 out of Paria and, when they were halfway through, my uncle
16 Allan stopped the driver. He asked the driver if there were any
17 accident that took place in there. The driver said he didn't
18 know exactly what is going on but he can only say that
19 someone took—get took out from a pipe. He wasn't even sure
20 if was a pipe or if he got injured but he was full with oil. They
21 took him to San Fernando General Hospital. We asked him if
22 the person they took out was Rishi or what was his name. He
23 said he don't know. We should go to Sando hospital if we want
24 to find out.

25 My uncle asked him if there was someone in the
26 ambulance at that time. He said no. My uncle asked if he knew
27 someone we could call. He told us to hold on a few minutes.

1 When I found out, it was Christopher Boodram who came out.
2 My uncle Allan went back to the security and said, “All these
3 vehicles going in and out of this—for the second time, an
4 ambulance is coming out of the compound” and they still
5 saying no accident, they still don’t know anything about what is
6 going on and not even number to call the secretary. He said, “A
7 big company like this and you don’t have a number to call
8 someone and there is no one to help us to give us information?”

9 One of the security ladies came out, two others came out
10 after her. They told us we can park inside the car park. There
11 are two other vehicles inside there. She said she doesn’t know
12 if there are families of the victim. My uncle Allan just nodded.
13 We went into the compound in the car park. There were two
14 vehicles parked inside. I saw Ryan’s van.

15 **Mr. Chairman:** That’s when you told your son, Nicholai, to
16 walk with you?

17 **Ms. Kussie:** I told my older son, Nicholai, to walk with me by
18 the van. He held my hand and walked by the van hugging me.
19 We were both crying. I held on to his van and I begged God
20 not to let anything happened to him. I said please let this be a
21 dream. Don’t let this be happening. We stayed at the car park
22 until 4.00 a.m. on the 26th February, 2022. No one from Paria
23 came at and spoke to me. No one from LMCS called me or told
24 me what happened.

25 Saturday 26th February. We went home to shower,
26 change our clothes and were taken back. From like the vehicles
27 we went to be taken back with my uncle Allan and others, my

1 brothers and my sister, my cousins, everybody, we just went up
2 back to Paria. Nobody went to work. My son, Nicholai and
3 Nigel also went. My brothers Chase and Navin, my sister
4 Anisa as well as her husband, everybody just headed back to
5 Paria. The security said the car park is full. We can park and
6 wait at side by the road.

7 The security had no information this morning. Part of the
8 barrier was up at the car park and we still went and we drove
9 inside and parked. We went under the shed in the car park. I
10 think it's a breakfast shed. There were no chairs but some of us
11 brought our own chairs. There were other families there. The
12 Kurban family was there. Faizal Kurban's wife, Celisha, and
13 her sister were present. His son, Michael, was also there. They
14 spoke to me and shared what information they had. I believe
15 that because of the state I was in they didn't want to frighten me
16 with too much details.

17 They told me based on the information they had, there
18 was a swirl in the water at first thinking they were—the men
19 were at sea. They said then that they realized the men were
20 trapped into the pipeline and there was a suction. They said
21 that Ryan got sucked in first into the pipeline. They, the
22 Kurbans, also said some people from inside Paria heard
23 pounding on the line. They said Paria also didn't wanted the
24 Kurbans to go inside the compound.

25 Michael told me when Christopher came out he told him
26 his father was right behind and they didn't want to try and save
27 his father and the rest of them—they did went to save his father

1 and the rest of them but the hose was too short. He said they
2 came back out to get equipment and then they were stopped by
3 the coast guard. We waited outside under the shed. I saw
4 someone parked in the car park across from where we were. I
5 assumed it was another family. I walked by, asked who they
6 were related to. They were Yusuf Henry's mother and sister.
7 His father and stepfather also were there.

8 None of the families had any information from Paria or
9 LMCS. Everyone was just there being supportive to each other
10 hoping we would get chance to go into the compound.
11 Nicholas and his brother, Michael, were trying to get into the
12 compound but they were denied. They were told they needed
13 to get a pass. Members of the public start coming in to drop
14 water, chairs, food for the families. This started as the incident
15 was being reported in the news. The media also came at the car
16 park. Paria turned away trucks, tents, toilets and chairs.

17 The Oilfield Workers Trade Union (OWTU) also came to
18 give us support. They spoke to Paria and told them the ladies
19 who were in the car park had to go all the way to KFC,
20 Church's Chicken, to use the washrooms. Paria then permitted
21 toilets and the tents and chairs to be delivered to them. Many
22 times just so we were at the car park the security told us we
23 weren't supposed to be there. The police also came to the car
24 park. Some of the officers had guns. The OWTU spoke to the
25 police. The OWTU tried to give us hope, encourage us to be
26 strong. The OWTU was getting their information through some
27 resource from the workers at the compound at Paria.

1 Around lunchtime, someone from Paria came to the car
2 park to let us know Paria wanted to have a meeting with us at
3 the Petrotrin Sports Club but the meeting would be held at 2.30
4 p.m. At the meeting, 2.30 p.m., the immediate families were
5 there. One member of the media who I know as Ms. Radica
6 was present. She started to record the meeting but she was
7 asked to stop. Everyone was asked to turn off their phone. I
8 think after the arguments within both companies and family
9 they were asked—they can record after.

10 Minister Stuart Young, Mr. Mushtaq Mohammed and
11 Mr. Collin Piper were present. Minister Young said they were
12 doing everything in their power to get the divers out. Mr.
13 Young said we had his word on that. He looked at Mr. Piper
14 and Mr. Mohammed and he asked them if he was right and they
15 said yes. They are doing what they can at the moment to get
16 the divers out. Mr. Mohammed laughed. He chuckled, he bent
17 down his head and laughed. People were annoyed by his
18 laughter. Someone asked him what the joke was about? We
19 were in a crisis. I told them, “I have a little baby waiting home
20 for his dad and all you can do is laugh?” People asked
21 questions about the pipeline. Most of the time the Kurbans
22 were asking questions. Minister Young could not have
23 responded to any of the questions. He didn’t know the details
24 of the pipe.

25 Mr. Mohammed, Mr. Piper answered the questions.
26 They were arguing back and forth. I cannot recall all the
27 question and answers. Paria did not give us any detail of any

1 rescue plan. They didn't know who was there. Yusuf, Faizal
2 and Ryan's families were in attendance. I can't recall if anyone
3 from LMCS was there. This meeting lasted about two hours.
4 We signed our names, put our telephone numbers on a sheet of
5 paper. When the meeting ended, we went back to the car park.

6 After the meeting, a person named Tara called me. She
7 said she was a secretary at Petrotrin, sorry, Paria. She told me
8 that Paria wanted to communicate by WhatsApp or email rather
9 than speak with me on the phone. The other families didn't
10 want this. We wanted answers. We didn't want to be texting.
11 We wanted Mr. Mohammed or Mr. Piper to come out and speak
12 to us. Tara kept calling me three to four hours during that day
13 and every day forward. As the hours passed by to say there was
14 no update, Paria was trying its best to rescue the divers. That's
15 what Tara told me. This information I got all through the night.

16 I stayed under the shed the whole time to go home just
17 change and come back. Sunday, 27th February, 2022.
18 Sometime between 7.30 a.m. to 8.30 p.m. Sunday 27th
19 February, 2022 we heard it through the news that instead of
20 recovery Paria is now moving to recovery. I then called Tara to
21 confirm. This is how we found out about the change in plan.
22 We stayed in the car park all day Sunday.

23 Monday, 28th February, 2022. On Monday, Tara called
24 me in the afternoon before it got dark, whilst I was in the car
25 park at Paria. She told me they recovered three, bodies, and
26 one was Rishi Nagassar, Yusuf Henry and Faizal Kurban. I
27 remember I started like seeing dark. There was a generator

1 close by which I tried to grab because I knew I was going to
2 fall. When I called my sister, Anisa, who was not too far from
3 me. My sister and my uncle Allan came looking for me at that
4 time. My family held me as I fainted. Someone brought a
5 chair, put me to sit down.

6 Coming out of the daze, my sister asked who called me.
7 I told her what Tara told me. They then put me into my
8 brother-in-law, Inky's, car. We were trying to get me to come
9 out of the daze. The media was there. I recall some persons
10 were quarrelling with the media to get away from me. Faizal
11 Kurban's wife, Celisha, also came out and asked me who told
12 me the bodies had been recovered? I told her it was Tara. My
13 sister, Anissa then took my phone from me and took messages
14 from Tara on that day forward.

15 Tuesday, 1st March, 2022. I left home 6.00 a.m. on
16 Tuesday, 1st March, 2022 to go to the Forensic Science Centre
17 in St. James to identify Ryan's body. The body I viewed was
18 swollen very badly and covered in oil. I could not recognize
19 the body. It was eventually determined the body was Kazim
20 Ali Jr. and not Ryan based on the clothing. My family,
21 including my uncle, remained under the tent all day Tuesday. I
22 went home after viewing the body.

23 Wednesday, 2nd March, 2022. I went to Paria car park
24 on Wednesday, however, Paria didn't want me on the
25 compound. During one conversation with Tara, a man took
26 away the phone from her, told me very roughly that it doesn't
27 make sense I am at the car park. When there is news they

1 would let me know. I told him I am not going anywhere, I'm
2 staying right there. Come move me. During this time, Tara and
3 I had a few words and I know I did gave her some Trini nice
4 slang and I did apologize to her the next morning.

5 At some point, there were a meeting with LMCS and
6 families. I can't recall if this was on Tuesday or Wednesday.
7 Mr. Kazim Ali Sr. told us he did try to help in any way he
8 could. He said he tried many times to get through to Paria but
9 Paria keep asking him to show a plan for a rescue which he did.
10 He said Paria kept him going to his office to do a rescue plan to
11 show Paria what they have. He said Paria keep tuning him
12 down, telling him it would not work, even though he had divers
13 who were willing to go in. He said he tried everything in his
14 power to get through to the coast guard but they stopped
15 LMCS. Michael Kurban also told me there were two speed
16 goats came with divers with gears to help but the coast guard
17 pointed guns at a distance to shoot anyone who came closer.
18 There were no more news on Wednesday from Paria.

19 On Thursday, I, together with all my family, about 12.20
20 a.m. my uncle, my mom, were at my home. They left that time.
21 I went upstairs with my sons. My phone rang about 12.35 a.m.
22 I recognized the number from the time the phone was ringing.
23 It was Paria. Tara called. She said, "Condolences. We have
24 found Rishi." She said that I should go to the Forensic Science
25 Centre 7.30 a.m. the next morning which I did. I went with my
26 brother-in-law, Inky, my eldest son, Nicholai and my uncle
27 Allan.

1 A lot of people had been telling me Ryan died first so his
2 body would be decomposed by the time, he would be in pieces.
3 Tara had also told me they wanted to make sure they would do
4 their very best to take him out in one piece. Everything Tara
5 told me I stopped believing. After I had seen the body on
6 Monday, I prayed and prayed because I kept begging God
7 please don't let Ryan come out in pieces.

8 I put myself to view the worst but I was able to identify
9 his body in less than 10 seconds. He looked normal. I formed
10 the view that he died not too long ago. I identified him based
11 on his clothes and a scar he had on the back at a previous
12 accident he had from a falling gate not too long ago home at my
13 house. Ryan's body looked like to me like if you take a bucket
14 a water and you just throw it on my husband. He was not
15 swollen. He was nowhere into decompose, nowhere.

16 I would like to add that Ryan was the breadwinner of the
17 family. I am a housewife. He is the only father my elder boys
18 knew. I loved him. He loved them as their own. We were
19 together for 13 years. He started building a home for us. We
20 were going to get married this year. We were going to do
21 something to invite everyone. He said he wanted a real
22 wedding. This year he said we were going to finish the house.
23 All his friends used to give him jokes about when he's going to
24 get married.

25 Our son, Nashhik, was Ryan eyeball. For years we
26 wanted to have a child. We got pregnant 12 years ago. I had a
27 miscarriage. We named her Nicolette, so he kept dreaming for

1 this child. Finally we did have our own son. Ryan was so
2 happy when he found out I was pregnant. He did everything for
3 me. This had been a great loss to my family. My second son,
4 Nigel, he's not speaking with anyone. He just shakes his head
5 and nod if anyone talks to him. My other son, Nicholai, he's
6 always with me all the time. They are not the same children.

7 **Mr. Chairman:** Take a moment. Take a moment, Ms. Kussie.
8 Self-evident, it's not easy. Thank you very much indeed for
9 coming. I appreciate your evidence very much and we'll be
10 taking it into account in our decisions that we have to make.
11 All right? Thank very much for coming. You can stay or leave
12 as you choose, all right? But if you want to stay you know
13 where you sit at the back.

14 **Ms. Kussie:** I'll stay, Sir.

15 **Mr. Chairman:** Thank you very much indeed.

16 **Ms. Kussie:** Because I want to give the other families support.

17 **Mr. Chairman:** Of course. Of course, thank you.

18 *[Ms. Vanessa Kussie leaves witness table]*

19 **Mr. Chairman:** I think, Mr. Maharaj—

20 **Mr. Maharaj SC:** Mrs. Catherine Ali.

21 **Mr. Chairman:** Is it Catherine Ali.

22 **Mr. Maharaj SC:** Page 1597.

23 **Mr. Chairman:** What of Ms. Jamie Manodath-Ali?

24 **Mr. Maharaj SC:** *[Inaudible]* her page number is 1593.

25 **Mr. Chairman:** Thank you, yes.

26 *[Mrs. Jamie Manodath-Ali sworn]*

27 **Mrs. Manodath-Ali:** I, Jamie Manodath-Ali, solemnly swear

1 that the evidence I shall give to this Commission in this case
2 shall be the truth, the whole truth and nothing but the truth.

3 **Mr. Chairman:** Yes, please take a seat.

4 **Mrs. Manodath-Ali:** Good afternoon.

5 **Mr. Chairman:** Thank you very much for coming. You are
6 Jamie, is that—

7 **Mrs. . Ali:** Yes.

8 **Mr. Chairman:** I've got that right? And you're the wife of
9 Kazim Ali?

10 **Mrs. Manodath-Ali:** Yes.

11 **Mr. Chairman:** And you provided a statement to us dated the
12 28th of September of this year—last year, I should say, yes.
13 Thank you, as I say, for coming. I know it's not going to be
14 easy but if you would do your best, as I say, that statement that
15 you've provided, you have it in front of you, do you?

16 **Mrs. Manodath-Ali:** Yes I do.

17 **Mr. Chairman:** Yes. If you'd read it then for us? Thank you
18 very much.

19 **Mrs. Manodath-Ali:** Good afternoon. I, Jamie Manodath-Ali,
20 say as follows. I am 41 years old. I live—I'm a registered
21 nurse and I work mainly at the Eric Williams Medical Sciences
22 Complex paediatric ward as a certified paediatric nurse. I am
23 the wife of Kazim Jeremiah Ali Jr. who, on the 25th of
24 February, 2022, with four others, survived an accident on a
25 project at the berth 6 Pointe-a-Pierre only to be abandoned to
26 die with three others some 40 hours later in a pipeline in Paria
27 Fuel Trading Company Limited's Paria premises, on Paria's

1 instructions.

2 We have one infant child together, Aedamiur Maria Ali
3 born the 11th of December, 2018. Around 4.00 p.m. on Friday,
4 25th February, 2022 my father-in-law, Mr. Kazim Ali Sr., came
5 to my home and told me there had been an accident. When I
6 saw his face I knew it was serious. He said there was an
7 accident and that Kaz and four other workers were believed to
8 be in the pipeline. He told me the names of the other workers.
9 He told me that it was serious and there could be fatalities and
10 rescue efforts were being undertaken. I asked him whether they
11 had oxygen, how much they had and how long they would last
12 there for.

13 Right after hearing this I got my daughter and I prayed.
14 Within 5 minutes, my father-in-law got a call and told me that
15 one person was out. He told me it was Christopher Boodram
16 and he said that everyone was alive and there was hope. My
17 father-in-law told me that Christopher Boodram had emerged
18 unaided from the line to the top of the riser from where he was
19 assisted into a boat to go ashore. I knew the other divers and I
20 was also familiar with the LMCS team who were at the scene.
21 All of them were able-bodied men, including my husband. The
22 sea was his life. I felt that they were good at what they did and
23 they would find a way out.

24 At this time, I contacted a friend at the San Fernando
25 General Hospital accident and emergency department and was
26 assured that they were going to be on standby all night to attend
27 to Christopher Boodram and the others when they came out. I

1 also packed a hospital bag for my husband for when they came
2 out.

3 On the 25th of February, 2022 there was no
4 communication from Paria to me. All the communication that I
5 had was through my father-in-law and I also kept in touch with
6 LMCS employee, Rudolph Gonzales, also known as Matthew
7 who was at the scene. I called him about every hour. I was
8 informed by Kazim Ali Sr. that LMCS personnel were trying to
9 coordinate a rescue effort. He told me that there were a number
10 of divers on site and this information also came from my
11 husband's friend, Dave Ali, and some of my husband's friends
12 who also went out to the site to render assistance. I am aware
13 that Michael Kurban tried to dive but was stopped.

14 After this I was informed by Kazim Ali Sr. that LMCS
15 personnel and volunteers were not being permitted to conduct
16 any rescue operations and that such operations were being
17 handed over to the Trinidad and Tobago Coast Guard.
18 Throughout the night of the 25th February, 2022 on the
19 morning of Saturday, 26 February, 2022 I kept in contact with
20 Kazim Ali Sr. and Rudolph Gonzales who was on the barge at
21 berth 6. Both kept telling me that they were still waiting on
22 permits from either the Trinidad and Tobago Coast Guard or
23 Paria to conduct rescue operations. Mr. Kazim Ali Sr. said he
24 was urgently pushing for immediate rescue operations.

25 At around 4.00 p.m. on Saturday, 26th February, 2022 I
26 went to the main gate at Paria's head office and met with family
27 members of the other workers who were waiting on information

1 regarding rescue. I stayed for about half hour. I was looking
2 for relatives of the other workers in order to speak with them. I
3 only knew Vanessa, Rishi Nagassar's wife. She said they were
4 just waiting and no one else knew what was going on.
5 Everyone present was upset because of the lack of information
6 and because nothing was being done to rescue them, the men.

7 My father-in-law was in a meeting with personnel of
8 Paria at this time. He told me that personnel from Paria had to
9 meet with me, wanted to meet with me to provide an update and
10 would come to my home. I then headed home. Around 6.00
11 p.m., Paria's General Manager, Mr. Mushtaq Mohammed and
12 his party, his security, Nerissa Davis and another person, came
13 to my residence. This is the first time that anyone from Paria
14 made contact with me. A number of my husband's friends who
15 had been out at the site on Friday and all day on Saturday were
16 present for this meeting.

17 The General Manager informed me that they were
18 switching to recovery efforts and this was met with an almost
19 violent, meaning angry, reaction, because, as far as his friends
20 were concerned, they had witnessed no rescue attempts being
21 made nor was any effort made to determine whether my
22 husband and his co-workers were still alive. I thought that such
23 a decision to move to recovery without any determination of
24 survivors was premature and cruel.

25 He was saying—what he was saying was not what I
26 wanted to hear. It was noise to me. I only heard clearly—the
27 only thing I heard clearly was switching from rescue to

1 recovery. Paria's corporate communications officer, Nerissa
2 Davis, who was also present at my home, she promised to keep
3 me updated regularly, but this did not happen. I next heard
4 from her via WhatsApp when she sent me a press release on
5 Sunday, 27th February at 4.58 p.m.

6 I messaged her at 9.24 p.m. on Sunday. I ask her, "What
7 is the latest update? You promised updates throughout the
8 night. None was sent. It has been more than 24 hours since
9 you spoke to me and the situation remains the same." She
10 responded at 12.01 p.m. on Monday, 28th February, 2022 and
11 said, "Dear Jamie, this is Nerissa. If you are available I would
12 like to provide an update, please?" I think I may have missed a
13 call from her before she sent this message. I spoke to her
14 subsequently and she told me that Paria had started pumping
15 operations from berth 5.

16 I asked Mr. Kazim Ali Sr. to find out whether we could
17 go to the site when the recovery was being done as I was still
18 hoping my husband and his friends would emerge alive. He
19 informed me that no one was being allowed at the site and that
20 all phones and cameras were being taken from onsite personnel
21 by Paria and that the recovery area was screened off. No one
22 from LMCS was present at the recovery efforts. I was holding
23 out hope. We were considering going out with a friend's boat
24 to the site but Paria would not allow anyone there.

25 I can't recall who informed me of the recovery of the
26 bodies on Monday, 28th, 2022. I remember the Prime Minister
27 saying that four bodies had been recovered when only three had

1 been recovered. My mother, my mother-in-law, my sister-in-
2 law, my husband's sister, went to the Forensic Sciences Centre
3 to identify my husband's body. This was the first day my
4 daughter had ever been sick and I stayed home with her.

5 Having worked in a large hospital, I have heard of and
6 seen many people rescued from near impossible situations like
7 burning vehicles and buildings, road accidents. I find it a
8 callous disregard for human life to claim it was too dangerous
9 to rescue them, particularly as a bruised and injured Christopher
10 was able to make his way unaided from the air pocket to the
11 surface and is still alive.

12 **Mr. Chairman:** Yes. Well thank you very much indeed for
13 coming.

14 **Mrs. Manodath-Ali:** Thank you.

15 **Mr. Chairman:** I know it's not easy for you, so, thank you so
16 much. You're free to go and obviously you can sit at the back.
17 Thank you.

18 *[Mrs. Jamie Manodath-Ali leaves witness table]*

19 **Mr. Chairman:** Mr. Maharaj, is it Catherine Ali now? Thank
20 you. One five nine seven I think.

21 *[Mrs. Catherine Ali enters Enquiry area]*

22 **Mr. Chairman:** Hello.

23 *[Mrs. Catherine Ali sworn]*

24 **Mrs. C. Ali:** I, Catherine Ali, solemnly swear that the evidence
25 I shall give to this Commission in this case shall be the truth,
26 the whole truth and nothing but the truth.

27 **Mr. Chairman:** Thank you so much for coming, Mrs. Ali.

1 Mrs. Ali, you're the mother of Kazim?

2 **Mrs. C. Ali:** Yes.

3 **Mr. Chairman:** And obviously the wife of his dad, Kazim Ali
4 Sr.

5 **Mrs. C. Ali:** That's correct.

6 **Mr. Chairman:** I know it's not easy but we appreciate your
7 coming very much indeed so take your time. If you need a
8 break just ask, all right? I think you have a copy of your
9 statement—

10 **Mrs. C. Ali:** I do.

11 **Mr. Chairman:**—that you provided by us in front of you, yes?
12 Thank you. If you'd just tell us what you've put in that
13 statement please?

14 **Mrs. C. Ali:** Yes. I am the mother of Kazim Jeremiah Ali Jr..
15 On Friday, the 27th of February—25th of February, 2022 at
16 approximately 4.15 I learned about a serious accident in Pointe-
17 a-Pierre involving our son and four workers through a phone
18 call from my husband, Kazim Sr. He had trouble getting
19 through to me as I was on the road to Toco. I understood from
20 the phone call that there was a serious accident and that five
21 divers were missing, including Kazim. I understood that I
22 should come home immediately.

23 I had just arrived in Toco and returned immediately to
24 Marabella to the home of my son and his wife, Jamie, arriving
25 at about 7.00 p.m. I was brought up to date on what had
26 happened by my husband and I learned of the survivor,
27 Christopher Boodram, had brought himself, he had returned to

1 the surface unaided and of the interruption of the rescue plans
2 for bringing the other four men to the surface. I was informed
3 that Christopher Boodram brought himself unaided and was
4 assisted out of the pipe. He said that the other divers were all
5 alive in the pipeline and to go for them and he promised that he
6 would go back for them.

7 I was in regular contact with my husband and he
8 provided me with updates. LMCS personnel remained on site
9 Friday evening waiting for rescue dive permits, listening to the
10 missing divers communicating distress calls. Several dive
11 vessels and volunteer divers came to the berth No. 6 site to
12 render assistance to rescue the men from the pipe. Paria still
13 refused to allow rescue and, in desperation, LMCS workers on
14 the barge contacted the media to agitate and pressure Paria to
15 take or allow action.

16 On the 25th February, I was party to phone calls between
17 my husband, Kazim, and Paria fuel trading Company Limited
18 arguing for work minutes to allow a dive rescue by LMCS
19 divers and/or the many dive experts gathered at berth 6
20 volunteering their service and having all the resources on site. I
21 was in the same room as my husband while he was on those
22 phone calls and his telephone was on speaker. I don't recall
23 who he was talking to on the phone at Paria.

24 My understanding is that LMCS was seeking to perform
25 a rescue on Saturday, Sunday and Monday. Also, Paria seized
26 all documents on the LMCS barge which included certain
27 permits to work. Paria's multiple decisions to violate the rights

1 to human life and the right not to be subjected to cruel and
2 inhuman suffering, remain unconscionable. Paria made these
3 decisions as those inside the pipe continued tapping out distress
4 calls well into Saturday, demonstrating proof of life.

5 Paria instructed the Trinidad and Tobago Coast Guard to
6 enforce their decision not to rescue and armed members of the
7 coast guard boarded the LMCS barge and carried out Paria's
8 instructions. These were the updates which were given by
9 LMCS personnel who were out there on the site to my husband.
10 I heard a conversation between my husband and another person.
11 The person said they heard tapping, they heard SOS code. I
12 heard Kazim tell them to respond by tapping back so they
13 would know they were heard. He said tap louder and see if
14 they tap louder and then tap softer to see if they tap softer.
15 They subsequently informed Kazim that when they tapped
16 louder, a louder tap was returned and when they tapped softer, a
17 softer tap was returned. For me, interactive communication
18 was established conveying that the divers were alive. The
19 tapping transmitted meaning and the divers in the pipe were
20 making SOS sounds and wanted to live.

21 Throughout Saturday the 26th and Sunday the 27th, I
22 witnessed as LMCS (had) ongoing discussions between Kazim
23 Ali Sr., his brothers Imtiaz, and Haseeb Ali and former senior
24 Petrotrin staff. This team also attended meetings with Kazim to
25 convince Paria management to implement the rescue plan for
26 the four men. This team was trying to do everything they could
27 to address situation given the urgency of the situation. They

1 prepared for the meeting with Paria, returned from the meeting
2 with Paria in order to put things in place requested by Paria and
3 then returned again to Paria.

4 Three days of meetings, including in-person
5 commitments from experienced commercial volunteer rescue
6 divers failed to change Paria's resolve not to conduct any
7 rescue mission or to issue LMCS permits to resume the rescue
8 of our people. They lied in their communications, claiming
9 they were doing everything possible. Dismissed Christopher
10 Boodram's urgent request to go back for them who were
11 waiting to be rescued and did not respond to the continuous
12 tapping out of distress calls. In a deadly runaround, pretending
13 to be serious about rescue, yet having decided on recovery,
14 Paria caused severe suffering to those in the pipeline, those on
15 site and those ashore. The strain of holding tensions, bristling
16 to act urgently and outraged by deliberate delay, generated
17 friction, anguish and torture.

18 On Saturday morning we met with family and friends
19 who were locked outside Paria's gates, witnessed and objected
20 to police harassment to disperse us and sought information and
21 counselling for them. LMCS provided trauma support through
22 printed material, a hotline and introduction to a psychotherapist
23 and sessions with trauma team professionals of the Franciscan
24 Institute and Stress Relief Laser Therapies. Paria never
25 contacted me directly with respect to the incident.

26 I identified the body of our only son, Kazim, on Tuesday
27 the 1st of March at St. James. Kaz and his father were very

1 close and proudly ran LMCS together. It was wrong to bar a
2 father from saving his son and wrong to bar Michael Kurban
3 from saving his father. All four LMCS men have families and
4 friends who love them. Kaz and his wife, Jamie, are still in
5 love.

6 Paria's process lacked justice and integrity. There was
7 no leadership, preparedness or morality in Paria's decisions that
8 killed four LMCS men who waited excruciatingly in the pipe
9 until they could breathe no more.

10 **Mr. Chairman:** Thank you very much indeed for coming.
11 Your evidence is much appreciated. All right? You can stay or
12 go as you please obviously. Thank you once again.

13 *[Mrs. Catherine Ali leaves witness table]*

14 **Mr. Chairman:** We've reserved our position on two other
15 witnesses. I understand that there is evidence from a member
16 of the Kurban family and a statement has been provided to us.
17 Am I right that it is Celisha Kurban who's going to read that
18 statement? *[Crosstalk]* Is it Mr. Ramadhar who's going to read
19 it?

20 **Mr. Ramadhar:** Yes.

21 **Mr. Chairman:** Mr. Ramadhar.

22 **Mr. Ramadhar:** *[Inaudible]*

23 **Mr. Chairman:** I think it would be more convenient if you sat
24 down so we can all hear what you're saying.

25 **Mr. Ramadhar:** Thank you.

26 **Mr. Chairman:** And I'd be grateful if you would just read the
27 statement and no more.

1 **Mr. Ramadhar:** Thank you very much. Statement by the
2 Kurban family and certainly from Celisha Kurban, the wife of
3 the deceased Faizal Kurban.

4 On the 25th of February, 2022 Faizal Kurban left home
5 to go to work 8.00 a.m. in the morning. In the afternoon, his
6 wife, Celisha Kurban, got a call from his son, from her son,
7 Nicholas, saying that Faizal and his diving team were stuck in a
8 pipe at work but it hasn't been long and that not to worry, that,
9 quote "We will get them out. It was all okay, just a mishap at
10 work." Hours later, the family members gathered at a parking
11 lot in Paria's compound waiting on news of Faizal's
12 whereabouts.

13 Within two hours family members of the other divers
14 came to the parking lot awaiting news as well. They heard no
15 more news. However, all the family members knew that so
16 many people were on site, including Faizal's other son,
17 Michael, and Nicholas who are experienced in the diving field
18 among people who work with Faizal on a day-to-day basis, his
19 colleagues, his friends, so there was hope. There was hope for
20 hours. All the family members expected that the divers were
21 being helped and they would be rescued and everything would
22 be fine until around 8.00 p.m. when Michael called from on
23 site, saying that things weren't looking good.

24 Despite that call, Celisha had all hope that her husband
25 would be okay, utmost faith that he and his friends would come
26 out of the pipe alive, just that it would take a little more time.
27 She believed that all hands were on deck given the gravity of

1 the situation and that, because of that, there was no way the
2 divers wouldn't be rescued. All family members were awaiting
3 in the car park expecting to see the divers alive as soon as they
4 had been rescued. Faizal had gone to work on similar jobs over
5 the span of more than 30 years and had come back home safely
6 every time, so it was very easy to hold on to hope.

7 Most of the days on Saturday, Sunday and Monday were
8 spent at the Paria car park as well. The media was present
9 every day getting the story out to the public which we
10 appreciated. Many rights activists helped as well in getting the
11 story at there and it showed when members of the public and
12 friends brought food, drinks, shelter and lights and many
13 donations from various other local businesses offering
14 assistance in any way they can, whether that be anything they
15 needed, waiting in the car park or for reaching out for help for
16 the men stuck in any way they could.

17 This effort from friends, family members, bystanders and
18 members of the public continued until Monday evening. There
19 was a meeting with Paria on Saturday where they told us they
20 were trying their best. After that, Paria communicated
21 periodically with Faizal's family via WhatsApp but the
22 communication was sparse and vague and not very helpful. If it
23 weren't for personal communication with LMCS workers, they
24 would not have been privy to any updates. The only times they
25 heard from Paria after that were their official statements that
26 were issued for the public which was not enough. They
27 expected more communication and help from Paria but it was

1 not given.

2 After the news on the 28th, all came crashing down.
3 Their lives changed forever. We lost Faizal. All the good
4 times became just memories. He was a family man, his family
5 was the most important thing to him. Everything he did was for
6 his family and his family is who they are because of him. We
7 owe everything to him. He loved us and we continue to love
8 him. He always knew how to have a good time. He is missed
9 every day, especially during the recent Christmas season which
10 was without much joy or happiness but passed with an air of
11 sadness.

12 Many acts of kindness and donations were offered to us
13 during the season from members of the public and local
14 companies, however, it should be noted that Paria has made no
15 such effort. Just after the Christmas season came what would
16 have been Faizal's and Celisha's 34th wedding anniversary,
17 which was a day of heartache and grief for Celisha and later
18 this month would have been his birthday which will be a day
19 full of low spirits or his family. Without the tremendous
20 support from her family members, especially Celisha's brothers
21 and sisters from hours waiting in the car park to present day,
22 she would not have been able to cope as well as she has thus
23 far. His family will not rest until justice is served.

24 Thank you, Chairman.

25 **Mr. Chairman:** Thank you very much. Well that is all the
26 evidence from the victims that we will hear, the victims'
27 families, that we'll hear today and maybe at all, we'll see. In

1 the interim, we have evidence, I think, from Dr. Cheddie, yes,
2 thank you very much. Is he ready and available to give
3 evidence now?

4 **Mr. Maharaj SC:** Thank you, yes, his statement is at 3232. I
5 think given the shortness of time we'd not be able to do a full
6 summary of his evidence but we're going to, I think, is it you,
7 Mr. Bissessar?

8 **Mr. Bissessar:** [*Inaudible*]

9 **Mr. Chairman:** Right, thank you.

10 **Mr. Peterson SC:** Mr. Chairman, is he being allowed to give
11 evidence and return for cross-examination? Because, speaking
12 for myself, I have not been able to read his statement far more
13 to digest it.

14 **Mr. Chairman:** Well, I, um—just a moment, Mr. Cheddie.
15 Take a seat. I indicated this morning that we had received this
16 on Friday and I made clear that we were concerned about this
17 evidence being provided late. I did invite anyone to express
18 any objection to his evidence being given this afternoon which I
19 had indicated we were going to seek to do. I've had no
20 objection up until now, Mr. Peterson. I mean, we are struggling
21 under the same or labouring under the same time constraints as
22 have you and I do understand that it has been served extremely
23 late. Nonetheless, I took the view with the team that this was
24 important evidence that needed to be heard before this
25 Commission.

26 **Mr. Peterson SC:** Well, yes, Sir, I could not even make that
27 determination but what I thought why I did not object earlier is

1 that he would be called, so we use up some of the time this
2 afternoon instead of losing all of it, and we tag him on to In-
3 Corr-Tech tomorrow so we finish all the evidence tomorrow.
4 So I did not think it was prudent—

5 **Mr. Chairman:** Are you asking for time to the extent that you
6 would wish to reserve your position until tomorrow?

7 **Mr. Peterson SC:** Yes, Sir, but I'm not objecting—that's the
8 point I'm making.

9 **Mr. Chairman:** Right.

10 **Mr. Peterson SC:** I'm not objecting to him being called so we
11 could use up the time today.

12 **Mr. Chairman:** Let me ask, since he is here, if Mr. Cheddie
13 do you, forgive me Dr. Cheddie, are you available tomorrow
14 morning? [*Yes indicated*] You are. Well that, I think, will then
15 take care of your particular issue, Mr. Peterson. I understand it,
16 let me say straightaway, I'm just slightly disappointed that you
17 didn't express this earlier because we could have made separate
18 arrangements for that. Be that as it may I think it makes some
19 sense for you to be able to reserve your cross-examination, if
20 you have any, till tomorrow morning. Dr. Cheddie is available
21 tomorrow morning, so that's what we'll do. What I will ask,
22 though, I think we were scheduled tomorrow morning to start at
23 10.00, were we, or 10.30?

24 **Mr. Peterson SC:** Nine-thirty tomorrow and 11.00 on
25 Wednesday.

26 [*Mr. Chairman confers with Ms. Sinanan*]

27 **Mr. Chairman:** I think we were 10.00. I think we were 10.00

1 but we will be now 9.30 to give you that extra bit of time. Is
2 everybody else in a position to be able to ask Dr. Cheddie such
3 questions as they might feel is necessary today? Good. Well
4 that's what we will do then. You'll go last and you can go
5 tomorrow morning—

6 **Mr. Peterson SC:** Yes, Sir.

7 **Mr. Chairman:**—at 9.30. Dr. Cheddie, would you mind then
8 coming and taking the oath please?

9 *[Dr. Glenn Cheddie sworn]*

10 **Dr. Cheddie:** I, Glenn Cheddie, solemnly swear that the
11 evidence that I shall give to this Commission in this case shall
12 be the truth, the whole truth and nothing but the truth.

13 **Mr. Chairman:** Right, please take a seat. Perhaps a bottle of
14 water can be provided for—it is doctor, is it?

15 **Dr. Cheddie:** Yes.

16 **Examination By Mr. Chairman:**

17 Q. Well, Dr. Cheddie, thank you for coming. What's going to
18 happen next is Ms. Maharaj, who sits opposite you, is going to
19 not summarize your statement, because we've not had it long
20 enough to undertake that task, so what she's going to do is to
21 read what we regard as being the salient aspects of your
22 statement or the paragraphs that represent the salient aspects but
23 the whole of your statement is available for everybody. It has
24 already been made available for everybody so please listen to
25 those extracts that are read to us all and then, at the conclusion
26 of that, Mr. Maharaj, who sits next to her, will ask you a few
27 questions, all right, and we'll proceed in that way, reserving

1 your final part of your evidence till tomorrow morning at 9.30.
2 So thank you very much indeed.

3 **Mr. Chairman:** So, Ms. Maharaj if you'd just help us with
4 those extracts?

5 **Ms. Maharaj:** Thank you. Dr. Cheddie's witness statement is
6 dated the 6th of January, 2022 and it's at page three two three
7 two of the supplemental witness statement bundle. At
8 paragraph one he says:

9 I have over 30 years' experience as a dive professional
10 and have been involved in the diving industry in the Caribbean,
11 Canada, England and the United States of America. I am now a
12 retired commercial diving instructor and Association of Diving
13 Contractors Incorporated commercial diving supervisor. I have
14 over 100 logged hours of commercial diving and over 3,000
15 hours as a scuba diver. I have trained and certified hundreds of
16 persons in the areas of scuba diving, commercial diving and
17 underwater welding, and he sets out his certifications in that
18 paragraph.

19 At paragraph two he states that he is also the managing
20 director of Underwater Works Incorporated Limited. Between
21 the years 2009 to 2018, UWIL through me offered training to
22 persons who were desirous of becoming qualified commercial
23 divers. Upon the completion of the course of study and
24 required training at UWIL the said persons were certified as
25 commercial divers. At present, UWIL provides training and
26 certification for persons who wish to acquire Professional
27 Association of Diving Instructors (PADI) scuba diving

1 certifications and recreational diving.

2 At paragraphs five to 10 of his witness statement, Dr.
3 Cheddie sets out his involvement on the 25th of February, 2022
4 with respect to the incident and he states as follows. At around
5 2045 hours on the 25th February, I received a call from Mr.
6 Rolph Seales. Mr. Seales was one of my commercial diving
7 students and I knew that he worked for Heritage. He informed
8 me that four divers were sucked into a pipeline operated by
9 Paria. I asked who those divers were and heard two names I
10 was familiar with as being my former students. These persons
11 were Faizal Kurban and Rishi Nagassar. Both Mr. Kurban and
12 Mr. Nagassar were trained as commercial divers by UWIL.

13 I immediately enquired from Mr. Seales as to whether the
14 divers were on scuba equipment and he responded in the
15 affirmative. I told Mr. Seales that the divers ought not to have
16 used scuba equipment for commercial diving operations. I
17 asked Mr. Seales as to the nature of his call. Mr. Seales
18 informed me that he was contacting me with respect to my
19 ROV, remotely operated vehicle, with underwater camera
20 system and asked whether I could utilize same for the purposes
21 of finding the missing divers. I asked Mr. Seales what the
22 diameter of the pipeline was, and, upon learning same, I
23 advised Mr. Seales that my ROV was 36 inches wide with
24 cameras and other accessories and therefore would not fit into
25 the pipeline.

26 I further informed Mr. Seales that my ROV had only
27 arrived two days prior and was not yet completely assembled. I

1 further informed Mr. Seales that I remained available to help
2 and assist with respect to the rescue of the divers. Mr. Seales
3 responded stating that he would let me know. I then told Mr.
4 Seales that an air umbilical ought to be inserted into the
5 pipeline as soon as possible in order to assist the trapped divers
6 who may be able to reach same.

7 During the course of Mr. Seales' commercial diving
8 training at UWIL, he would receive training with respect to the
9 rescue of drivers in penetration diving. I'm unaware as to
10 whether such training was utilized with respect to this incident.
11 Further, as part of the commercial training received by Mr.
12 Kurban managed Nagassar at UWIL, they ought to have known
13 that the use of scuba equipment for commercial diving
14 operations is discouraged and inherently dangerous. We train
15 our divers not to use scuba for such operations.

16 At paragraphs 11 to 14 of his witness statement, Dr.
17 Cheddie sets out the responsibilities of the client and the
18 contractor with respect to the tendering and evaluation for
19 commercial diving operations. At paragraph 14 he says:

20 "A dive contractor must ensure the safety of its divers.
21 And it is the first responder in the event of an emergency
22 occurring during an operation. A dive contractor must
23 always be ready to implement its emergency response
24 plan. In such cases whether your divers are required the
25 dive contractor must be able to identify such personnel
26 and arrange for such personnel to attend on site as soon
27 as possible."

1 At paragraph 13 she states:

2 “The client is not expected to have the expertise to
3 execute the required job. In evaluating a tender, the
4 client is required to be assisted by technical personnel in
5 the area and an independent qualified dive superintendent
6 supervisor or, if available, a diving client representative.
7 No more than one diving superintendent is required for
8 the purposes of evaluating the risk assessments, job
9 safety analysis and emergency response plan submitted
10 by the contractor. A dive superintendent also verifies the
11 contractor divers’ tank qualifications, divers’ names,
12 divers’ oxygen current certification, divers’ logbooks and
13 the equipment that the contractor intends to use to
14 complete the job safely. The dive superintendent must
15 therefore have, one, have knowledge of the relevant
16 diving standards, planning and execution of surface
17 diving projects, including the responsibility for the safety
18 and health of the dive team. He/she should have a diving
19 supervisor qualification and be able to assist and advise
20 other diving supervisors. Two, have a thorough
21 knowledge of the system and relevant equipment
22 including related operational and emergency procedures,
23 and, three, have sound knowledge of the diving
24 management system and relevant manuals needed on the
25 job site specific for dive safety.”

26 At paragraph 14 he stated:

27 “The dive superintendent is required to attend the

1 finalization of risk assessments and job safety analysis
2 meetings of the contractor prior to the execution of the
3 job and must be present during the execution of the job.
4 The dive superintendent is specifically working on the
5 client's behalf to ensure the contractor is adhering strictly
6 to its duties.”

7 At paragraphs 15 to 30 of his witness statement, Dr.
8 Cheddie sets out in detail the reasons for his views that the job
9 on the 25th of February ought to have been done utilizing
10 commercial diving equipment and not scuba. At paragraph 15,
11 he says:

12 “The job on the 25th February involved commercial
13 diving with respect to repairs to oil pipeline. The job
14 required commercial divers utilizing commercial diving
15 equipment and not scuba equipment. The contractor for
16 this job was LMCS and the client was Paria.”

17 At paragraph 16 he stated:

18 “From my review of documents filed before this
19 commission Mr. Kurban and Mr. Nagassar were trained
20 as commercial divers by UWIL and acquired commercial
21 diver certification. At my request searches were made of
22 the membership register of the Professional Association
23 of Diving Instructors by my son, Nikolai Cheddie, who is
24 a PADI master instructor. From those searches he was
25 able to confirm that Mr. Christopher Boodram and Mr.
26 Kazim Ali Jr. were certified as scuba divers by PADI.
27 With respect to Yusuf Henry, Mr. Henry commenced

1 training for PADI scuba certification in August 2021 and
2 attended one session. He did not return thereafter and did
3 not complete the course of training. Mr. Henry is not
4 PADI certified and his name does not appear on the
5 PADI membership register.”

6 On the issue of rescue of other possible rescue operation,
7 Dr. Cheddie gives the following evidence from paragraph 35
8 onwards.

9 “When the divers became trapped inside the pipeline at
10 berth 6 the best time to attempt a rescue would have been
11 on 25th February with the use of commercial divers and
12 commercial diving equipment. From my reading of the
13 witness statements, a rescue operation was feasible and
14 could have been undertaken on the 25th February. There
15 were suitably qualified divers who could have served as
16 members of the dive team once they were willing to do
17 so, namely and in the following capacities, one, Conan
18 Beddoe, diver entering into the pipeline, two, Cory Mark
19 Crawford in-water tender and standby diver, three,
20 Conrad Beddoe topside standby diver, four, Ronald
21 Ramoutar topside diver tender and five, Michael Kurban
22 topside dive tender. Dive supervisors would have been
23 available from the two dive vessels, Gulf Stream Eagle
24 and Waterworld which were on site at the time. Mr.
25 Ramoutar could have served as an additional in-water
26 tender and standby diver and additional topside dive
27 tenders could have been found from those on the vessels,

1 on the dive vessels, namely Waterworld operated by
2 Subsea Global Solutions, LLC. These divers, even
3 though they could not enter the water, could have
4 assisted in the tendering of the divers and the setting up
5 of the surface supplied dive spread. There was also
6 suitable commercial diving equipment available. There
7 were two vessels with total surface supplied diving
8 equipment. I can attest that I have trained surface
9 supplied divers off the Gulf Stream Eagle, a vessel
10 operated by Offshore Technology Solutions Limited, and
11 that the said vessel was equipped with surface supplied
12 equipment. I've also been on Waterworks and I've seen
13 their surface supplied equipment which would have been
14 suitable. To the best of my knowledge, divers attached to
15 the Trinidad and Tobago Coast Guard would not have
16 been trained, qualified or able to conduct penetration
17 diving within a pipeline. Mr. Michael Kurban and Mr.
18 Andrew Farah, at least by the time of the arrival of the
19 other commercial divers, would not have been permitted
20 to act as divers or dive supervisors with respect to the
21 rescue operation. They would have been traumatized at
22 the time and penetration diving requires divers without
23 added stress. Preventing Mr. Michael Kurban from
24 entering the pipe using the dive hookah was correct. A
25 dive hookah was not made for penetration diving and the
26 condition of the hookah topside compressor, together
27 with its capacity to provide adequate air to specific

1 depths to the diver within the pipe was unknown at the
2 time. A penetration dive must be continuously risk
3 assessed. A risk assessment, including mitigation
4 measures, ought not to have taken longer than 30 minutes
5 and it would have been possible to generate a plan within
6 that time frame. The risk assessment through job safety
7 analysis is not meant to be overly detailed and should be
8 kept to short sentences. The risk assessment would have
9 included the personnel involved, the gas volume
10 requirement for the air to be supplied, the lengths of
11 continuous umbilical available, US Navy Dive Tables,
12 on-call hyperbaric facility, medical hyperbaric doctor on
13 call, potential hazards within the pipeline, failure of the
14 diving equipment, changes in water conditions within the
15 pipeline, matters which would lead to the abandonment
16 of the rescue. The plan to conduct a rescue in the event
17 that the rescue diver became tapped or otherwise failed to
18 keep continuous communication with the dive supervisor
19 and the entry, this will be feet first, the hindrance would
20 be that the surface supply diver will have to crawl
21 backwards until he reaches the first diver, however, this
22 helps as now he can grab the diver and attempt to get air
23 to him or have topside pull both up to the surface face
24 front.”

25 At paragraph 43 he states:

26 “It could have been deduced that there existed no
27 unmovable brokerages between the entrance of the

1 pipeline and the location of the divers within the pipeline
2 by the fact that Mr. Boodram was able to make his way
3 to the top of berth 6. Mr. Boodram did so
4 notwithstanding that he nursed injuries and a suitable
5 commercial diver would be certainly able to navigate the
6 conditions within the pipeline. Mr. Kurban was also able
7 to make his way a few feet past the elbow of the pipeline
8 and make his return to the top of berth 6.”

9 At paragraph 47 he stated:

10 “The final call to perform the penetration dive would
11 have been with the expert divers, and the call to abandon
12 the dive, once started, would be with the rescue diver or
13 the dive supervisor. Upon arriving at the location of each
14 trapped diver, the rescue diver would provide a breathing
15 apparatus in the form of an extra umbilical with mask
16 attached or a small bailout bottle with a mask and
17 regulator attached to the trapped diver and retrieve the
18 diver. The dive tenders would pull the rescue diver and
19 trapped diver out of the pipeline. This process would be
20 repeated until all divers were rescued. In the event that
21 the trapped divers were unresponsive the rescue diver has
22 the call to attempt to remove him or abandon the dive.
23 With respect to the possibility of a Delta P incident
24 during the rescue, the best conditions to effect a rescue
25 would have been on Friday or the early morning hours of
26 Saturday morning. In any event, commercial divers are
27 trained to deal with and mitigate against the possibility of

1 a Delta P incident.”

2 He then refers to section five one seven of the ADCI manual
3 which sets out—

4 **Mr. Chairman:** Before you move on, would you read
5 paragraph 46 please?

6 **Ms. Maharaj:** Yes.

7 “In light of the information provided by Mr. Boodram
8 and Mr. Kurban and the competency of the commercial
9 divers available awaiting the arrival of a camera,
10 borescope of ROV would have been wasting precious
11 time on conditions which were already permissible for a
12 rescue. The use of a ROV camera is a mitigating
13 measure but it is not compulsory. The rescue diver
14 would have been equipped with a camera in any event as
15 part of his umbilical and would have provided live video
16 feed to the dive supervisor.”

17 And then at paragraphs 50 to 53 Dr. Cheddie refers to the
18 code of practice for safety in commercial diving operations and
19 he states as follows.

20 “I was a member of the committee appointed to review
21 the code of practice for safety in commercial diving
22 operations. This standard is outdated, inadequate and not
23 in line with the international standard on commercial
24 diving. A new standard was drafted by the Trinidad and
25 Tobago—being the Trinidad and Tobago Standard
26 Commercial Diving Operations Requirements for Safety.
27 I believe that had the draft standard been mandatory, the

1 tragic deaths of Mr. Ali, Mr. Nagassar, Mr. Kurban and
2 Mr. Henry would not—could have been avoided. Clause
3 5.1.1.2 of the draft standard would have prohibited the
4 use of scuba for this operation and would have, in any
5 event, required the divers to be tethered. Clause 5.1.1.3
6 of the draft standard would have prohibited the use of
7 divers in commercial diving operations who were
8 certified by a recreational diving agency. The ADCI
9 manual recognizes PADI as one such recreational
10 agency.”

11 Dr. Cheddie, do you agree with the what I’ve just read
12 out as representing a true and correct—

13 **Dr. Cheddie:** Yes.

14 **Ms. Maharaj:** Thank you.

15 **Examination By Mr. Chairman:**

16 Q. It clearly isn’t everything obviously it’s selected paragraphs.

17 A. That’s so.

18 Q. But as I indicated earlier, the entirety of your statement has
19 been placed before everyone and they have had an opportunity
20 to consider it, so, if anybody wants to ask you anything about
21 any part of it, they’re being allowed to do just that. All right?
22 So, Mr. Maharaj, now, who is counsel representing the
23 Commission is going to ask you some questions.

24 **Examination By Mr. Maharaj SC:**

25 Q. Good afternoon, Dr. Cheddie.

26 A. Good afternoon.

27 Q. I just want to ask you a few questions. You mentioned at

1 paragraph 36 the name Conan Beddoe. Do you know Conan
2 Beddoe?

3 A. No I don't know him personally.

4 Q. But you know of him?

5 A. I know of him and of his diving capabilities.

6 Q. And how would you describe him? What are his, um, as far as
7 you're concerned his qualifications and experience?

8 A. Excellent. I have, um—he is a certified commercial diver and
9 from what I understand he did sat diving and I've known
10 about—heard about him in the industry itself.

11 Q. In the industry. Cory Mark Crawford is another name you
12 mentioned. Do you know that person or of that person?

13 A. Yeah. I trained Cory many years ago and he was very
14 comfortable as a diver during the training process and I know
15 he went abroad and did some diving, I think was in South
16 Africa somewhere and, yes, I know him as a competent diver as
17 well.

18 Q. And then the third name you mentioned was Conrad Beddoe.
19 What about him?

20 A. No, I don't know Conrad Beddoe. I just, again, heard about
21 him as well that he was an ADCI certified diver.

22 Q. ADCI. Ronald Ramoutar?

23 A. I trained Ronald and, um, again, same like Cory, very
24 competent divers. So I would recommend him to be there as
25 part of that.

26 Q. Michael Kurban?

27 A. Of course I trained Michael as well and he has always been a

1 strong diver well so, yes.

2 Q. So, from your witness statement, am I to take it that if Paria had
3 discussions with these persons who were on site or who were
4 available, a rescue plan could have been devised?

5 A. Well they would need also have to have a supervisor there, not
6 these guys alone, a diving supervisor. Certified diving
7 supervisor would have to have been present for a dive plan to
8 be completed.

9 Q. For a dive plan?

10 A. Yes, Sir.

11 Q. And a dive supervisor, do you know whether there was anyone,
12 any such person available—

13 A. Yes.

14 Q. —for the—

15 A. What I have there as well too, in the two diving vessels that
16 were present at the time, there were diving supervisors present
17 so they could have chatted with those guys there as well.

18 Q. Who were they?

19 A. Paria or whoever was trying to get the plan done.

20 Q. No, who were the two persons?

21 A. I don't know. I can't remember the name. I don't know if one
22 was Paul and I can't remember the other one's name but I know
23 that they had divers pre—supervisors present.

24 Q. Since you're coming back tomorrow, would you be able to look
25 at the records and see who—

26 A. I can, I can.

27 Q. —so you could help us who are those two names?

1 A. Yeah, I can find out those two names.

2 Q. Now, you have been, um—you said that, um—well let me put it
3 this way. You're available in Trinidad to be retained to get
4 advice in the diving industry in respect of diving?

5 A. Yeah. Other companies have also asked me for advice.

6 Q. For advice. Could you tell us some of the companies that have
7 sought your advice?

8 A. In Trinidad?

9 Q. Yeah.

10 A. I know that, um, Atlantic had called but that was in Trinidad at
11 one point. Paria never did. LMCS never did. Smaller
12 companies, one working for Heritage. The names I cannot
13 remember totally but they had called me for advice and that's
14 new companies after Petrotrin had closed down. And there was
15 another company working with Heritage as well. Most of these
16 companies know me because I have students, well, who trained
17 from me so they came to me.

18 Q. I'm asking you that because the question I want to ask you is
19 that if Paria had contacted you on the 25th of February when
20 this incident occurred, would you have been available to give
21 advice or to be retained by Paria to give advice?

22 A. I would have given them advice. Anyone who had called me
23 would always get advice.

24 Q. In your witness statement at paragraph 45, you mentioned that
25 Mr. Boodram further indicated that he felt two weld seams
26 within that pipeline while navigating his way through, and you
27 mentioned that this is a method of determining distance within

1 the pipeline. Could you help us explain that?

2 A. Yes and I continue there with ship husbandry. Ship husbandry
3 basically is working underneath ships where divers would clean
4 the bottom of ships that don't have access easily to the surface,
5 and I'm talking about huge ships. And, um, I have heard from
6 divers. I have never worked underneath one of these ships, but
7 speaking to a lot of these divers and during the draft standards,
8 we found out that divers who would lose their directions in
9 which direction they can get out from under the ship would
10 usually follow the seams and they would know the distance or
11 the direction in which to go. So when I heard about the seams
12 in the pipeline it was simple that you can work out, you know,
13 these divers are accustomed feeling these seams and they could
14 know the distance between, work it out and the direction in
15 which it goes.

16 Q. Okay. At paragraph one of your witness statement, you gave us
17 a list of companies or organizations which you are associated
18 with. Could you tell us whether the Canadian Association of
19 Diving Contractors, CADC, or any one of those associations
20 you were associated with?

21 A. The DCBC, I had, um, that's the Divers Certification Board of
22 Canada, I can't remember the exact year over here but that's
23 many years ago, I, when I was doing my dive supervisor course
24 in Canada, I visited working divers with Gord Hay, that's the
25 owner and he introduced me to the standards, the DCBC
26 standards, where I sat there on two occasions learning about
27 standards and also contributing. So at that point I had learned a

1 lot from the experts in the field as well.

2 Q. Right. Okay. So you're no longer associated with that
3 organization?

4 A. Or no, no, no.

5 Q. Right. At paragraph 49, in which you stated that, um, the po—
6 in which you dealt with the possibility of a Delta P incident, do
7 you—well, and you referred to certain literature on it. Could
8 you explain basically what that literature stated?

9 A. Right. What I quoted there was the ADCI manual.

10 Q. Uh-huh.

11 A. Now the—we were certifying in Trinidad under the ADCI,
12 that's the Association of Diving Contractors International. So
13 our school would follow of course that manual itself and we
14 trained everything according to the manual. Delta P was listed
15 as part of the manual and all our students were introduced to
16 this section and we'd read about it and study it as well to
17 understand what Delta P is.

18 Q. So when you said—

19 **Examination By Mr. Chairman:**

20 Q. I wonder if we could have the next page of his statement on the
21 screen, please, because I think there you quote paragraph 5.17 I
22 assume from the ADCI—

23 A. Yes, Sir.

24 Q. —manual to which you'd been referring and can we see there
25 it's set out what it is that you say it instructs?

26 A. That is the example of 5.17.2 examples of Delta P, that's what
27 you're looking at?

1 Q. No I was looking at 5.17 an explanation first—

2 A. Okay.

3 Q. —of what differential pressure is—

4 A. Uh-huh.

5 Q. —Delta P. It's written there Delta as opposed to using the
6 Greek symbol delta, but Delta P anyway.

7 “A significant number of fatalities in the diving industry
8 involve a differential pressure Delta P situation. Delta P
9 is a particular insidious hazard for several reasons”—and
10 sets out what they are.

11 Rather than you reading, let me:

12 “Delta P is invisible to a diver and strikes suddenly
13 without warning.”

14 A. Yes, Sir.

15 Q. You understand that?

16 A. Yes, Sir.

17 Q. “Once entrapped by Delta P there is almost no way to
18 escape.”

19 A. Correct.

20 Q. “If the velocity profile of a hazard is such that at the
21 periphery the diver may approach without any
22 perceptible increase in the water flow velocity, by the
23 time the diver can feel the water flow velocity it is
24 already at a dangerous level.”

25 A. Correct.

26 Q. In other words he may be sucked to it?

27 A. Yeah, quickly.

1 Q. Without being able to do anything about it?

2 A. Yeah.

3 Q. “Even small forces may be compounded by factors such
4 as the immobilization of limbs or the geometry of the
5 structure surrounding the Delta P hazard.”

6 A. Correct.

7 Q. And then this:

8 “The application of as little as 77 pounds of force on the
9 torso can impair respiration and disrupt blood flow. A
10 diver’s chest, back or abdomen trapped against a 9-inch
11 by 9-inch opening with a Delta P of only one PSI, that is
12 less than 2.5 feet of water head, would experience 81
13 pounds of force.”

14 A. That is true.

15 Q. Just so that we can picture that in our minds, a 9-inch opening,
16 let’s say a 9-inch pipe or about this, something like that, yes, a
17 circle, about 9 inches, that size opening with a Delta P of only
18 one PSI, one—

19 A. One PSI.

20 Q. —PSI pressure, what is the average tyre on a car pressure?

21 A. About 26, 26 and—

22 Q. That sort of—is that right, so which is one—

23 A. That example, if I may come to you, is like we use that in
24 [*Inaudible*] even swimming pools.

25 Q. Right.

26 A. Right. Um, where the intake is at the bottom of the pool, there
27 has been Del—that’s a Delta P situation right there that has

1 trapped divers or people cleaning the pool if the covering isn't
2 there, and, how it works if the pump cuts off, plus whatever is
3 happening with the pump, it sucks the person in. So that's only
4 that size and we're talking about a swimming pool.

5 Q. There people who have been known to die at bottom of a
6 swimming pool—

7 A. Correct.

8 Q. —cleaning, cleaning the, um—

9 A. Yeah.

10 Q. —the filter at the bottom of the pool.

11 A. That's simple intake.

12 Q. Right. And somebody with just a snorkel perhaps going down
13 10 feet—

14 A. Yeah.

15 Q. —just to clean the bottom of the pool, sucked to the surface,
16 stuck to it, stuck there and can't move.

17 A. Yes.

18 Q. A relatively small amount of pressure.

19 A. Correct.

20 Q. That's how powerful it is.

21 A. Powerful Delta P is.

22 Q. And so you explain that, do you, to your students?

23 A. Oh yeah, and I also show them the ADCI video, not only with
24 the one with the crab, I think which everyone is speaking about,
25 um, but there are number of videos that ADCI has on Delta P.

26 Q. We've seen.

27 A. And all my students run through that.

1 Q. We've seen.

2 A. Okay.

3 Q. All right. Lovely. Thank you.

4 **Mr. Chairman:** Thank you, Mr. Maharaj.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. And that explains, Dr. Cheddie, if you look under
7 "Recommendations" on 5.17.3—

8 A. Yes, Sir.

9 Q. —you see it says it is therefore important in your view where if
10 works have to be done, hazardous works, that steps are taken to
11 identify potential Delta P situations?

12 A. Of course, and it's not hard to identify that.

13 Q. And if you notice at "Recommendations" at 10, a pre-job
14 meeting to understand where the hazards may be. You see
15 that's one of the recommendations?

16 A. Yes, Sir.

17 Q. The third one, understand where the potential for Delta P may
18 exist. And then two points down, make sure the diver and
19 supervisor know how the piping and the value [sic] system
20 work together.

21 **Mr. Chairman:** Valve.

22 **Continued Examination By Mr. Maharaj SC:**

23 Q. Valve, sorry, yes, valve system work together.

24 **Examination By Mr. Chairman:**

25 Q. Yes, I mean, in that regard, the third head of that describes to
26 understand where potential for Delta P may exist, when dealing
27 with pipelines, is there always a danger for Delta P?

1 A. Yes, always, any time you're around pipelines.

2 Q. Let me—the little knowledge that I've gained in the time that
3 I've been involved in this, it seems to me that it is almost a red
4 flag for Delta P if there is pipes involved?

5 A. Correct.

6 Q. And even if you're able to dismiss the prospect of the particular
7 case you have to consider it as an issue before dismissing it, if
8 you see what I mean?

9 A. Yes.

10 Q. All right, thank you very much.

11 **Mr. Maharaj SC:** I have no further questions for the witness.

12 **Mr. Chairman:** I might have a couple myself.

13 **Examination By Mr. Chairman:**

14 Q. Yes, I wanted to ask you about something because it's not
15 really reared its head very much in these hearings, but it seems
16 to me something as a lay person that might have been
17 considered. Could you turn to your paragraph eight of your
18 statement please? You all right reading on the screen or do you
19 prefer to—

20 A. I continue that. It's comfortable.

21 Q. All right. You say this:

22 "I further informed Mr. Seales that I remained available
23 to help and assist with respect to the rescue of the divers.

24 Mr. Seales responded stating that he would let me know."

25 Pausing there for a moment, now, Mr. Seales knew you, you
26 knew him because you'd trained him?

27 A. Yes.

1 Q. Right. Were you called upon at any stage, by Mr. Seales or
2 anyone else, to lend assistance?

3 A. No.

4 Q. Right. You then went on to say this.

5 "I then told Mr. Seales that an air umbilical ought to be
6 inserted into the pipeline as soon as possible in order to
7 assist the trapped divers who may be able to reach same.

8 A. Yes.

9 Q. Right? Now, I'm envisaging your putting a piece of pipe down
10 there with a—

11 A. Hose.

12 Q. —a hose with—I mean, you don't literally mean just an empty
13 piece of hose do you?

14 A. No. One—

15 Q. You mean with breathing apparatus on the end?

16 A. No, no, no. What immediately I told him to do was send that
17 umbilical, which is the hose—

18 Q. Yeah.

19 A. —down into the pipe, just send it down, and you open the air.
20 It's something what we have in diving called a Nemo hose, a
21 Nemo Fathometer hose which shows the depth. It always has
22 air in it. Water would not get into it. So we can send that hose
23 down and send it.

24 Q. Is it pumping air out?

25 A. Yes.

26 Q. Right. So unlike on that tank that we have in front with the
27 mouthpiece, the regulator on the front, you see it on the floor—

1 A. Yes.

2 Q. —there in front of you, that's got a regulator on it, but you have
3 to put into your mouth and start breathing before it operates?

4 A. Yeah, but you have to hold that with your teeth.

5 Q. You have to put it in your mouth, hold it with your teeth and
6 start breathing?

7 A. Yeah, and pull.

8 Q. That's—no, I understand that, but what you're suggesting is
9 putting down a hose which has got air continuously flowing
10 out?

11 A. Yes.

12 Q. You don't have to breathe, you don't have to put it in your
13 mouth, you don't have to do anything?

14 A. Yeah. That's for the initial stage. Just send it down.

15 Q. Just send it down. Right. Did you have some—when you
16 made that suggestion to Mr. Seales, did you, first of all,
17 appreciate how far down the vertical it was before it went along
18 in the horizontal, or did you have any idea about it?

19 A. No, I just say send it down.

20 Q. Right. So your view at that stage, a very early stage—

21 A. Yes.

22 Q. —as ignorant perhaps of much of the facts, was, well, just send
23 some air down there.

24 A. Yeah, just send it down. If guys are trapped anywhere
25 underwater or anywhere, just send it down. One may hold it
26 and put it in his mouth.

27 Q. Somebody might—or if they were down there they might have

1 actually grabbed hold of it?

2 A. Yeah. And these are two guys who I knew were commercial
3 divers, so, of course they're going to see umbilical in their face,
4 you know.

5 Q. At the time when you were making that suggestion, were you
6 aware, for example, if there was any potential for air pockets in
7 the pipe itself?

8 A. No.

9 Q. So you had no idea whether they—there even—there was any
10 air, such air pockets in there or where they might be obviously?

11 A. No.

12 Q. But you thought that that might help at least?

13 A. If you're going to send it down there, one might, one might feel
14 it, may see it, may see air bubbles coming out, I don't know. I
15 just say—it was just a suggestion I made at that time in—

16 Q. No I follow, I follow. I mean, to the lay person it seems like a
17 sensible thing to do. I just wondered whether or not there was
18 any hazard involved in doing that.

19 A. I don't think there would have been a hazard.

20 Q. You didn't envisage it?

21 A. No.

22 Q. If somebody had suggested to you that there was a potential for
23 a latent Delta P to still exist in the pipeline, would sending a
24 piece of tube with air in it like that affect that?

25 A. No. It wouldn't affect it. The only way that would have had a
26 latent—a next—a second Delta P would occur is because it was
27 going to be done through the habitat. You remember the

1 habitat was now—um, it had air in the habitat again.

2 Q. Pushing air down to the pipe?

3 A. If that had cut off again, the water would have started for a
4 second time back into the type.

5 Q. So removing the habitat was not a good idea?

6 A. Removing the habitat, but having it flooded with water, it's a
7 whole lot of stuff that you had to take into consideration.
8 Removing the habitat was a good idea.

9 Q. More [*Inaudible*] yeah.

10 A. Just get rid of that habitat from there, because it would have—
11 the divers, from what I understood was, they would have had—
12 the guys who were diving to try to get back into the pipe after
13 Boodram came out, it had air in there. What—if that air, that
14 compressor had stopped again, the water would have rise again
15 add backed into the pipe again. You understand what I'm
16 saying?

17 Q. No I don't.

18 A. Okay.

19 Q. And let me see if I can understand the position. You know,
20 don't you, that what caused this was a Delta P?

21 A. Delta P.

22 Q. Right. What preceded the Delta P was the removal of plugs in
23 a pipeline?

24 A. Correct.

25 Q. The removal of the plugs in the pipeline were being removed in
26 circumstances where the habitat over the end of the pipeline
27 was applying a certain amount of pressure to that pipe?

1 A. Correct.

2 Q. Well not to move the contents of the pipe obviously, it was
3 applying that pressure within the habitat pushing the water
4 down?

5 A. The water down.

6 Q. Right.

7 A. Correct.

8 Q. Once the plugs had been removed or the first plug removed and
9 the other one sucked into the pipe and then stopped somewhere
10 in it, once that had happened, the pressure from the habitat
11 returned everything back to normal, even though there was no
12 longer a plug at the surface, it was down the pipe somewhere, it
13 created a sort of equilibrium, didn't it?

14 A. Yeah, but remove that air now? What was the job of the air?
15 The air's job—the air inside of the pipe was to keep the water
16 down.

17 Q. Yes.

18 A. Remove that for the second time on a second occasion—

19 Q. Yes.

20 A. —water would rise again—

21 Q. No, no. I'm following.

22 A. —with the second Delta P.

23 Q. I do follow that.

24 A. Okay.

25 Q. I do follow that

26 A. Okay.

27 Q. What I—what I'm try—and it's me I'm sure not understanding

1 your answer but, the position in the pipe, whether there was a
2 further chance of a second Delta P or not, was at least stable at
3 that moment in time?

4 A. Correct. It was stable at that time.

5 Q. It's stable, right?

6 A. Uh-huh

7 Q. And we've heard some evidence, and it seems to be the case,
8 that something would have to happen to trigger a second Delta
9 P even if that existed within the pipe, all right?

10 A. Yeah.

11 Q. Something would have to happen—

12 A. That's correct.

13 Q. —to affect that stable condition.

14 A. Correct.

15 Q. Right? What I'm asking you, I suppose, is this, is that at the
16 time when we have the stable condition, you've got whatever
17 PSI there is within this habitat pushing down on the pipe and
18 the contents of the pipe between where it's open and where the
19 plug has ended up, so whatever distance that is, the pressure is
20 pushing down on that end. Do you follow?

21 A. Yes.

22 Q. So if I stop that pressure all of a sudden, I take that pressure
23 away and open the pipe to just the atmosphere above, surely
24 that is a factor which might affect the equilibrium, the
25 stabilization of the pipe?

26 A. Correct. Yes, Sir.

27 Q. So removing the habitat and depressurizing the—that force,

1 downward force on the pipe, might have the effect of actually
2 creating a second Delta P—

3 A. That's correct.

4 Q. —if it existed?

5 A. Once you—yes.

6 Q. So it's not a good idea to remove the habitat then, is it?

7 A. No, it's not, it's not—it wasn't going to be a—to remove it, it
8 was already there, and looking at time it could have been to
9 work with the habitat while it was over the pipe. We're talking
10 about initial, before they removed the habitat.

11 Q. Yes I'm talking about—

12 A. Yeah. Uh-huh.

13 Q. I mean, we've heard some evidence about the removal of this
14 habitat and why it was thought appropriate to do so.

15 A. Uh-huh.

16 Q. The pump might break down or whatever it—

17 A. Correct. Same thing I—

18 Q. We get all of that.

19 A. Right, good.

20 Q. But, I'm simply asking the question, you as the expert in the
21 field can help me understand the removal of that habitat might
22 of itself have created that secondary Delta P if one existed
23 within the pipeline?

24 A. Yes.

25 Q. Because you're taking one of the forces—

26 A. Yes, it would.

27 Q. —that exists away—

1 A. Yes.

2 Q. —aren't you? There is, whatever the PSI is it doesn't matter
3 for our—purposes of our argument, but if there's a force, a
4 downward force on the open end of the pipe and you stop that,
5 that changes the dynamic, doesn't it, it must be?

6 A. Anything that would affect the dynamics, yeah—

7 Q. Yes.

8 A. —could cause—well, it would be a Delta P.

9 Q. So the best thing I can do, from what I can see at the moment, is
10 to keep it as it is?

11 A. Yes.

12 Q. Is that not right?

13 A. That's right, yeah we could—yeah.

14 Q. I looked at my colleague Mr. Wilson to disagree with me if I've
15 got it wrong but I think that's my way of thing thinking about
16 the matter.

17 A. Leave it there, yeah.

18 Q. All right. Equally, would you agree that because we know this
19 U bend at the other end at berth 5 had a cap, a sealed cap on it,
20 all right, sealing it off at that end, that also provided for a
21 degree of the stabilization, didn't it—

22 A. Yeah.

23 Q. —of the existing pipe?

24 A. Yes.

25 Q. So if I open that end, not such a good idea either, is it?

26 A. No, no, no. You see that had to stay on.

27 Q. So the net result is both things that were actually done might

1 have actually made it worse rather than better, because we
2 know that that cap was taken off eventually, but before that the
3 habitat was removed, a new piece of pipe put on.

4 A. Installed.

5 Q. So that it went above the waterline, that was fitted on, that was
6 what was originally going to be done had this not—this tragedy
7 not occurred. So they put this new pipe on and they took the
8 habitat away.

9 A. Yeah, and then the water would have equalized at that part, and
10 then any air pockets in the pipe would have—could have
11 been—could have moved.

12 Q. In other words, anybody who was breathing air in an air pocket
13 inside the pipe might have lost that air—

14 A. Correct. It would have—

15 Q. —and drowned?

16 A. Yeah. Once you shifted anything there.

17 Q. Well, I'll—all right, look, thank you very much for that. Let
18 me just check if there's anything else I wanted to ask you. Oh
19 yes.

20 Q. Paragraph 13 of your statement if we can pull that up, please?
21 Thank you. Yes. Here you're saying this.

22 "The client is not expected to have the expertise to
23 execute the required job."

24 Now the client here is Paria, isn't it? That's who you're talking
25 about?

26 A. Yes, Sir.

27 Q. Right. So they're not expected, as they've been at pains to

1 make clear during the course of this Enquiry, to be able to carry
2 out the work themselves or, or even have a deep understanding
3 of the work and they have—their case is really that, “Look, we
4 employed these experts, LMCS, to do the job because they’re
5 the ones who are expert in the field.” You follow?

6 A. Correct, correct.

7 Q. And you seem to agree with that?

8 A. Yeah, I agree with that.

9 Q. So I want to ask you a next bit.

10 “In evaluating a tender, the client is required to be
11 assisted by technical personnel in the area and an
12 independent qualified dive superintendent, or, if
13 available, a diving client representative.”

14 Now pausing there, is what you’re saying about that that given
15 that Paria don’t have the expertise themselves, that what they
16 would be doing—what they should do, or the prudent thing to
17 do would be to employ somebody independent to do that job for
18 them, the assessment? Is that what you’re saying?

19 A. I’m saying that, and that’s why, um, it’s not just about Paria.
20 It’s about all clients who get involved with diving, the diving
21 business, you know—

22 Q. No, no I follow that. But, I mean—

23 A. —must have a diving—

24 Q. —in this case, right?

25 A. Yes. In this case, yes, must and they should have had someone.

26 Q. Given, given that they are saying their case is, “This is expert
27 work which we do not know anything—that’s not what we do,

1 we know nothing about this, experts are employed to do the
2 job”?

3 A. Correct.

4 Q. And in effect they'd been saying that the expert must police
5 themselves, all right? That's what they're saying.

6 A. When you say police themselves?

7 Q. Well, in that they are, they are to make the risk assessments and
8 then judge whether that risk assessment is enough.

9 A. And be, and be on the site.

10 Q. [*Inaudible*] Paria didn't have the expertise to do it?

11 A. And be on the site 24 hours per se.

12 Q. Yeah. Supervise it all themselves, do it all themselves?

13 A. Correct.

14 Q. All right? But what I think you're saying here is that in
15 evaluating the tender the client, that is Paria, should actually get
16 somebody, because they can't do it, get somebody else to do it?

17 A. Correct.

18 Q. The assessing because you go on to say:

19 “No more than one diving superintendent is required for
20 the purpose of evaluating the risk assessment, job safety
21 analysis and emergency response plan.”

22 All right? Am I to understand that what you're saying is, look,
23 the prudent and sensible thing here is for Paria, given their
24 limited knowledge of this expert work, to have—employ
25 someone else to look at what LMCS were going to do and say,
26 “Well, yeah, your risk assessments work, your job safety
27 analysis is good and your emergency response plan is good.”

1 A. Correct.

2 Q. We're fine with that, or, to say no they're not, whatever it might
3 be.

4 A. And stop the job immediately.

5 Q. Yes, exactly. So they would look at those things, make an
6 assessment of—judge, value judge what they'd done, what
7 LMCS had done and then say, yes it's good or no it isn't, and
8 then be on site to be there, as it were, the eyes for the client?

9 A. Correct.

10 Q. Obviously that involves expense, doesn't it?

11 A. Well yes.

12 Q. All right. You finish that off in your paragraph 14. At the end
13 of paragraph 14 you say:

14 "The dive superintendent, this is this independent person,
15 is specifically working on the client's behalf, on Paria's
16 behalf, to ensure the contractor is adhering strictly to its
17 duties."

18 A. Correct.

19 Q. Got you.

20 A. All right.

21 Q. Would you be kind enough to put up, please, page 12 of the 26,
22 three two four three? Do you see there you've given some
23 illustration of the kind of headgear that the divers ought to have
24 been wearing, as I understand it, whilst working inside the
25 habitat?

26 A. Yes.

27 Q. And you give these examples, this is Figure 1, this is something

1 called a Kirby Morgan Surface Supplied MOD-1 Full Face
2 Diving Mask. Do you see that?

3 A. Yes, Sir.

4 Q. Looked like a spaceman or something?

5 A. Correct.

6 Q. That is a much lighter arrangement than the yellow one that my
7 learned—

8 A. And this is just about two pounds.

9 Q. Weighs two pounds?

10 A. Yeah, about that.

11 Q. So, it's something you can work in?

12 A. Yeah. This is what you need to use in the habitat.

13 Q. Right. Ought to have been used in the habitat?

14 A. Ought to have been used, yes.

15 Q. So anybody in that habitat carrying out this sort of work ought
16 to have been wearing something like that? I think there's
17 another one a little, a Kirby Morgan band mask.

18 A. The band mas, yeah, but that's a little heavier. That's about 12
19 pounds.

20 Q. That's quite a bit heavier, is it?

21 A. Yeah, but, for these guys working in there I don't think it
22 woulda been a problem for them, but those are about the
23 lightest ones and what it—

24 Q. Well, I'm just thinking about it, you know, I mean wearing 12
25 pounds on your head bending down looking into a pipe might
26 not be the most comfortable position to be in very long, is it?

27 A. That's why I recommended this.

1 Q. I mean, you might be able to do it for 10 minutes even half an
2 hour—

3 A. Quite true.

4 Q. —but, I mean, carrying 12 pound additional weight on your
5 head bending forward, is—

6 A. That's why I recommended this one and we have a lot of light
7 ones about three, four pounds as well, [*Inaudible*] band mask.

8 Q. Right.

9 A. It's not like you're just, you're limited to just one. There is a
10 white range of full face surface supply—

11 Q. I get it, it's just an example, all right, all right, but anyway, that
12 would provide some sort of protection?

13 A. Of course, yeah.

14 Q. Yeah. Next can I ask you is if you go to Figure 2, please, this is
15 some sort of a harness that can be worn ? I think—

16 A. This is a 6 point.

17 Q. This is a what?

18 A. A six-point harness.

19 Q. Right. I'm not going to try it on before anybody says anything,
20 all right? This is the sort of thing, is it? [*Demonstrating with*
21 *harness*]

22 A. Yes. Yes.

23 Q. No, no I understand yes.

24 Q. So you climb into it—

25 A. But, the, the thing that—

26 Q. Beside a side of you, [*Inaudible*] as it were—

27 A. Yeah, but, it's not just that alone. You have to have a place in

1 the back of it like this one. If you look at the picture you would
2 see that it's a bit—there's a hard piece in the back of it—

3 Q. Right.

4 A. —where the bailout bottle is attached to this. But the divers in
5 the habitat can use this and have a small bailout bottle with
6 them.

7 Q. So something like that—

8 A. That's fine.

9 Q. —if the divers were wearing something like that—

10 A. Clipped—

11 Q. —having it on—

12 A. Yes.

13 Q. Through the habitat?

14 A. Not the habitat. They will be clipped on to the surface. Their
15 umbilical would be running to their hip then to the hat, but the
16 other part of it will be attached to the surface.

17 Q. Right, so basically what they will be wearing a hat like we see
18 in what we've—

19 A. Right.

20 Q. —just been looking at.

21 A. And the deering [*Phonetic*] it to the side.

22 Q. Just a minute, just a minute. They'll be wearing a wet suit?

23 A. Yes, wet suit.

24 Q. A wet suit, then this over the top of the wet suit?

25 A. Correct.

26 Q. Arms through here?

27 A. Yes.

- 1 Q. Yes and then legs through that part?
- 2 A. Correct.
- 3 Q. Buckled up at the front?
- 4 A. Yes.
- 5 Q. With this?
- 6 A. Yes.
- 7 Q. And then there'd be some sort of tether, would there, on these?
- 8 A. On the sides, yeah.
- 9 Q. On these?
- 10 A. Yes.
- 11 Q. What, a kind of—just the umbilical or something separate?
- 12 A. No, well the entire umbilical will be hooked with a carabiner on
- 13 that.
- 14 Q. On here?
- 15 A. Yeah, on that.
- 16 Q. So it would go from here?
- 17 A. And then here would run on that.
- 18 Q. Round into the person's mouth?
- 19 A. Well, the, the hat.
- 20 Q. What, connected to the hat?
- 21 A. Yes.
- 22 Q. All right. And, um, and that would all be connected to a
- 23 surface?
- 24 A. Correct.
- 25 Q. So if there had been the kind of Delta P we're talking about,
- 26 yes, and they were sucked into the or attempted to be sucked
- 27 into the pipe, they would be connected to the surface by that?

1 A. Yeah. The umbilical, the umbilical would be comprising of a
2 strength member, not a piece of rope as such, but it's a strength
3 member and that is all wrapped around the umbilical like the
4 next photo you would see lower down, and, um, that strength
5 member—

6 Q. The next page please?

7 A. —ends here.

8 Q. Just scroll to the next page?

9 A. Yes. That's what we call an umbilical.

10 Q. That umbilical's coiled up, isn't it?

11 A. Yes. So that's a num—that's three or four umbilicals there.
12 One end is connected to the surface, to the air manifold system
13 which sends air to the diver. The strength member, which is
14 like a rope then, a thick, strong rope, is connected to the barge.

15 Q. Made of rope or metal?

16 A. Rope.

17 Q. Rope.

18 A. Everything is made out of—that is—that—everything there is
19 except the rope, right, and everything is hose and the
20 communication systems and all that and the video as well. The
21 strength member, which is a rope, which is also wrapped in
22 that, that strength member is attached to the barge or to the ship
23 or somewhere on to the boat itself, a very short, not all long but
24 just short, so if it's pulled the tender who is holding the other
25 end, if it slips out of his hands, like a Delta P it's going to slip
26 out of his hands.

27 Q. There's no way he's going to hold it, huh?

1 A. Right, the other end is attached to the boat. So that, they may
2 be sucked in, they may be banged up, but at least, you know,
3 we can find them.

4 Q. You mean even if it ripped itself off the cleat on the boat, it
5 would still have an umbilical that would go into the pipe
6 [*Inaudible*]?

7 A. Of course, yeah. Those umbilicals are pretty long, 300 feet,
8 maybe four, five, uh-huh.

9 Q. Right; 300, feet?

10 A. Yeah.

11 Q. All right. And your view is, is that when you're carrying out
12 that kind a work, that is how you should be tethered inside the,
13 um—

14 A. One important thing about the umbilical is that the umbilical
15 must never be joined.

16 Q. Never be joined?

17 A. Never be joined.

18 Q. What do you mean?

19 A. What I mean by joined is that people like to connect umbilicals.

20 Q. Yes.

21 A. On some of my, um, where I was asked to visit some of the
22 companies, I have seen they've joined umbilicals and that is
23 something that is frowned upon by standards. What happened,
24 two things happen is that on force that joining could pull—

25 Q. Yeah.

26 A. —so that's the air break right here and you would not get air.

27 Q. Okay.

1 A. The second one is that the gas volume that is coming from the
2 surface, there's a slight restriction at that point where it is
3 joined, so the amount of air that's going to the diver will be a
4 little less.

5 Q. Right. I mean obviously that would be in the sort of conditions
6 where you're carrying out the work. There might be
7 justification, can I suggest if it's right, that you could—you
8 might want to join them if you were trying to effect a rescue
9 that needed more than 300 feet?

10 A. Nah, I would find an umbilical.

11 Q. Sorry?

12 A. I'll, I'll, I will look for an umbilical that's longer than 300 feet.

13 Q. Yes.

14 A. I will not be comfortable—

15 Q. If it's been—

16 A. —with joining.

17 Q. If it's in Jamaica, that wouldn't be much use to you in an
18 emergency situation, would it?

19 A. In where, sorry?

20 Q. If the longer one was in Jamaica rather than nearby?

21 A. Oh no, um, there are companies here in Trinidad that have
22 longer ones as well.

23 Q. They do?

24 A. Yeah.

25 Q. All right, good. All right, thank you very much. I just make
26 sure I haven't got anything else to ask you. Paragraph 46
27 please? Yes. You address an issue that has been an issue

1 we've been concerned with in this Enquiry.

2 "In the light of the information provided by Mr. Boodram
3 and Mr. Michael Kurban, and the competency of the
4 commercial divers available, awaiting the arrival of a
5 camera, borescope or ROV would have been wasting
6 precious time on conditions which were already
7 permissible for a rescue."

8 Correct?

9 A. Yes, Sir.

10 Q. Do I take it from that, that what you are doing is to say we have
11 a timeline to save these people?

12 A. Correct.

13 Q. And every hour that passes, that timeline is more likely to
14 expire and therefore they will be dead?

15 A. Correct.

16 Q. And so, it was important, whilst it would be a really good idea
17 to have a camera look at the inside of the pipe, if that took long,
18 then you have to do away with that and make an assessment
19 without it?

20 A. Correct, because, as I said after that, the diver will have a
21 camera on his head.

22 Q. Indeed. And if he had met, as I think Mr. Ramadhar suggested,
23 a crocodile coming in the other direction, he would have been
24 able to see it? I know it's a facetious question, but since he
25 asked it in that way I put it in the same way, all right? I mean,
26 that—the reality is what I'm suggesting is that once you're
27 down in—the person who's got this on his head or wherever it

1 is he's looking he'll be able to see?

2 A. No, um, yes, but what is more important for that statement
3 would be the supervisor would see a lot better sometimes than
4 the diver himself. The camera is focused here on his head,
5 right? Some of them have it here but most of them have it here.

6 Q. Pointing in?

7 A. Right, so dir—in full direction of them and it would have light
8 and camera in one. The supervisors sitting there would be able
9 to see a lot, sometimes more than what the diver himself.

10 Q. Could see with his eyes—

11 A. Yeah.

12 Q. —the protective—all the other gear round him?

13 A. Correct.

14 Q. Right.

15 A. So that's basically there for the supervisor to see.

16 Q. And so the supervisor could be telling him there's a crocodile
17 coming, if you want—if that's what you want to say?

18 A. Or, or there's someone in front of you or—

19 Q. Right.

20 A. —if there's a something, yeah.

21 Q. Yes. Yeah. And they're in communication with each other?

22 A. All the time—

23 Q. Yes

24 A. —especially for a dive like this, yes.

25 Q. So if either vision or oral, um, auditory communication were
26 lost, you could have a plan for removing the diver immediately?

27 A. Yeah. All commercial divers follow a stan—meet within the

1 standard or the dive manual itself that talks about the US navy
2 signals where we pull, so, so we have one signal would mean
3 something, two and we just recap it before we dive so we have
4 the out of—loss of communication signals.

5 Q. Right. So if you lost vision and audio, you'd be able to say,
6 right, give him two pulls or one pull or whatever it is?

7 A. More than four pulls, you will be panicking so you're going to
8 pull a lot and that's enough to take you out.

9 Q. Get me out?

10 A. Yeah.

11 Q. Right. I think that's all I need to ask you, doctor—yes it is.
12 Thank you very much.

13 A. Thank you.

14 **Mr. Chairman:** Mr. Wilson, I think has a question.

15 **Examination By Commissioner Wilson:**

16 Q. Good afternoon, Mr. Cheddie. I just want to go back to Figure
17 3 where you were showing the different types of hats and I
18 want to ask you something for clarification.

19 **Mr. Chairman:** Figure 3?

20 **Commissioner Wilson:** Yeah, with the, um—

21 **Mr. Chairman:** The umbilicals.

22 **Commissioner Wilson:** That's umbilicals? Well just higher
23 up.

24 **Mr. Chairman:** Which one you—

25 **Commissioner Wilson:** With the, with the hats. With the—

26 **Mr. Chairman:** You're looking at the masks, are you?

27 **Commissioner Wilson:** This one.

1 **Mr. Chairman:** Yeah, this is—the two of those are
2 [*Inaudible*] Figure 1.

3 **Commissioner Wilson:** Just higher up, sorry. Figure, right—
4 go down.

5 **Mr. Chairman:** No, well, go the other way. The other way.
6 The other way. That's—

7 **Commissioner Wilson:** Up to the hats, the face, past that,
8 right straight to the top of the—that one.

9 **Examination By Commissioner Wilson:**

10 Q. I just heard you indicate that this is the type of mask, I
11 understand it's an example that you'll be expecting the divers to
12 work to in the habitat. Upon demonstrating the harness and
13 with your recommendation that this is supposed to be done with
14 surface supplied air, just for the clarification, my clarification,
15 once you dive in with hard hat and stuff, you get to the habitat,
16 if you could walk me through that—the process that a diver
17 would go from hard hat to this?

18 A. No, no hard hat. We don't use—I would never recommend that
19 heavy 35-pound hard hat to be used even from the surface to
20 the habitat.

21 Q. Okay. So—

22 A. That's—no.

23 Q. No problem.

24 A. You don't need to do that. This is the hat that you stay on at all
25 times.

26 Q. So you'd use this hat to dive—

27 A. From the—from—

1 Q. —straight to the habitat?

2 A. Yeah, from the entrance—

3 Q. Okay.

4 A. —to the water.

5 Q. That, that's the clarification I want.

6 A. Yeah, I wouldn't use that hard hat.

7 Q. So you would go—

8 A. You can't—no, there's no way to take off that hard hat by
9 yourself.

10 Q. That, well that's where I was going with.

11 A. That's, that's, that's, that's basically impossible to do.

12 Q. I understand.

13 A. We usually have tenders.

14 Q. Yeah.

15 A. So in the habitat there's no one to help you there.

16 Q. The reason why I was asking, and that's why I wanted the
17 clarification, we heard testimony earlier that surface supplied
18 diving to a known standard—no, not this hat really but—

19 A. Or, you have a hat here?

20 Q. Yeah. But not making reference to that.

21 A. Twenty-seven.

22 Q. Yeah, 27, an old 27, yeah. Earlier we heard that, you know,
23 because we're diving to a—well not we, um, there's a dive
24 executed to a standard, surface supplied, diver gets to the
25 habitat, derigs, and then you would use one of those hats, a
26 band mask to execute the job, so, um, why I wanted clarity for
27 that is, is with the Delta P incident if he derigged and that was

1 set up in the habitat for use of the diver once he gets into the
2 habitat, the probability that he might be attached to the surface,
3 he's not?

4 A. Yeah.

5 Q. Yeah. Okay.

6 A. We have never taught about any time to any of our students to
7 ever take off their equipment underwater.

8 Q. Right, yeah.

9 A. So that's why we use that hat. From the time you leave the
10 surface, you keep it on until the time you exit.

11 Q. Understood. Thank you for that clarification. Right. Good,
12 thanks.

13 A. Thank you.

14 **Mr. Chairman:** Thank you. Yeah, I mean it—I had real
15 trouble with the idea of somebody wearing this thing and
16 having to take it off inside that. Right, good. Well that's very
17 helpful. Thank you, Mr. Wilson. Right, questions from others
18 please? We will proceed until five o'clock and then we'll stop.
19 So, first of all, hands up those who want to ask a question.

20 [*Hands raised*] All right, good. I know Mr. Peterson does. All
21 right? So we'll start with Ms. Alfonso, please, from the union.

22 [*Crosstalk*]
23 **Ms. Alfonso:** Yes.

24 **Mr. Chairman:** You've arranged for this—

25 **Ms. Alfonso:** Yes.

26 **Mr. Chairman:**—witness to be called so—

27 **Ms. Alfonso:** Yes.

1 **Mr. Chairman:**—I mean all witnesses are our witnesses and
2 this is a witness tendered as an expert rather than anything else,
3 even though he had some minor connection on the day. We've
4 taken a position hitherto that those who are most closely
5 associated with the witness should have the opportunity to go
6 last, and that's the position I've adopted. So I'm perfectly
7 content for you to go now, but you're not going to get a second
8 bite of the cherry. So if you want to wait until after Mr.
9 Peterson has asked questions tomorrow, you're more than
10 welcome to wait until then.

11 **Ms. Alfonso:** I, I, um—I, I, I was so like Pavlov's dogs
12 anxious to put my hand up at a very early stage, but yes,
13 Chairman—

14 **Mr. Chairman:** Very wise, very wise.

15 **Ms. Alfonso:** I'm a well-trained Pavlov dog.

16 **Mr. Chairman:** You wish to go last?

17 **Ms. Alfonso:** I will go last, Mr. Chairman, but I say I was so
18 anxious to make sure I did not miss my turn.

19 **Mr. Chairman:** Then I will, then I will permit then. I
20 appreciate Mr. Peterson pointing it out to me, so yes you will
21 go last.

22 **Mr. Peterson SC:** I'm always here to help the Commission get
23 it right.

24 **Mr. Chairman:** I gathered that much and I'm grateful, thank
25 you, Mr. Peterson. So, Mr. Ramadhar, do I see you, Mr. Pegus,
26 also wanted to ask some questions?

27 **Mr. Pegus:** Well, not this afternoon, Mr. Chairman. My issue

1 is very simple and narrow. This witness has referenced certain
2 conversations with a witness that I placed before the
3 Commission in the person of Mr. Rolph Seales.

4 **Mr. Chairman:** Yes.

5 **Mr. Pegus:** Now I had no instructions from Mr. Rolph Seales
6 with respect to this witness' interaction with him. So I'm
7 simply asking for the opportunity to confirm that, um, and if
8 there is a need for me to put anything to him I would ask to do
9 so tomorrow morning.

10 **Mr. Chairman:** Right. Well, first of all, I understand your
11 position. I did, again, I reiterate point this out first thing this
12 morning, asking everybody to look at the statement during the
13 course of the day. And I do appreciate he mentions Mr. Seales
14 on a number of occasions. I'm not sure how vital it is but there
15 is that content there. I rather submit, suggest or I think the
16 likelihood is, is that we're unlikely to get to you before five
17 o'clock today in any event, so, Mr. Ramadhar, the floor is yours
18 please?

19 **Mr. Ramadhar:** Thank you very much, Chairman.

20 **Cross-Examination By Mr. Ramadhar:**

21 Q. And, um, Dr. Cheddie I understand you're also a lawyer?

22 A. Yes, Sir.

23 Q. Could you help us a little bit? From your understanding of the
24 circumstances from the accident at around three o'clock to a
25 survivor exiting the environment around 5.00, 5.30, what level
26 of anxiety would you have had to entertain a rescue plan?

27 A. Could you just say it again, sorry?

1 Q. Of course.

2 A. I just lost you there a second.

3 Q. Yes, yes. Knowing what you do today, that the incident
4 occurred around three o'clock and that there was a survivor
5 coming out of the pipe around 5.00, 5.30 thereabouts, what
6 level of anxiety or urgency would you have assumed would
7 have been required to entertain a rescue effort?

8 A. Very high anxiety.

9 Q. Yes. And anxiety transforms itself into time frames, isn't it?

10 A. In that case yes, Sir.

11 Q. Yes. You would not have considered, as a true professional,
12 hours, if it could be avoided and be done short—in a shorter
13 period of time, isn't it?

14 A. Once it could be done safely, yes Sir.

15 Q. Yes.

16 A. Shortly.

17 Q. And to ensure that you could expand the period of survivability,
18 you have told us here today that you had suggested that a hose,
19 and I use that term loosely, an umbilical, be placed into the pipe
20 for the purpose of admitting air so that if divers were closer by
21 they could benefit from that and extend their lives, isn't it?

22 A. Yes, Sir.

23 Q. Yes. Sitting as you are today, do you know whether any such
24 effort was made?

25 A. No, Sir, I don't know.

26 Q. Would it surprise you to learn, from all the evidence we've
27 heard so far, that no such effort was made?

1 A. It—I made a suggestion so I don't know.

2 Q. Yeah. But was it a loose suggestion but one for sustenance of
3 life?

4 A. Well as an instructor, when I hear something like that
5 immediately, I mean, there's a lot of textbooks in my head.

6 Q. Yeah.

7 A. I immediately would come up with a suggestion not knowing—

8 Q. Yes.

9 A. —full, full details. Send air to the person.

10 Q. Of course.

11 A. That's just natural.

12 Q. Well very early on in the Enquiry we actually had asked Mr.
13 Wei, one of the incident management team members, whether
14 they even considered that, and till this day we've heard no
15 witness say that they did entertain it, first of all and, two, act
16 upon it to put a sustenance—for sustenance in terms of air into
17 the pipe.

18 A. It's a simple thing.

19 Q. Simple thing. That's what I thought. Now, to be clear, you
20 may have it in your statement, but from my—for the benefit of
21 many others, are you being paid for the evidence you give
22 today?

23 A. No, Sir.

24 Q. Of course not. Do you expect to be retained by Paria into the
25 future?

26 A. No.

27 Q. No. Have you been retained by Paria in the past?

1 A. Sir, not a—no.

2 Q. No. So you consider your evidence today—no, no, this is no
3 trick I'm telling you.

4 A. Oh, okay, go ahead, no.

5 Q. Yeah, yeah, yeah. Right. You consider the evidence that
6 you've come to give today is that of a professional giving the
7 best he could in all of the circumstances that have been made
8 available to you?

9 A. Yeah; not only for the Paria incident for Trinidad and Tobago
10 as well.

11 Q. You see, we need more of that in this country, okay? So that
12 there—

13 **Mr. Chairman:** No speeches.

14 **Mr. Ramadhar:** Or, that's Wednesday, is it?

15 **Mr. Chairman:** Yes, it is. Don't forget. I might remove it on
16 the basis that you've already made it.

17 **Mr. Peterson SC:** [*Inaudible*]

18 **Continued Cross-Examination By Mr. Ramadhar:**

19 Q. So, let's see now. You have come as a patriot to give the best
20 evi—best information that you could share with us moving
21 forward to ensure that if something like this should recur what
22 is the best practice you should adopt?

23 A. Correct.

24 Q. Yes. Now, as you've told us already, the anxiety for the rescue,
25 in your mind, should have been quite high. Would you
26 sacrifice the need for a paper written risk assessment and for a
27 paper written or digitally prepared dive plan? Would you

1 sacrifice that?

2 A. As I wrote there, a digitally one, no. Paper, yes. But it
3 wouldn't take long to do.

4 Q. There you go. And if persons were offering information but on
5 the scene in the midst of all that anxiety, would it be reasonable
6 to expect in that light you're telling people things that you need
7 to do, get it done, and they're ignoring you and tell you put it in
8 writing? Would that be a reasonable position to take from
9 one—a position of authority, they say no, put it in writing or—

10 A. The only thing that would be done there in writing would have
11 been the dive plan which, as I said, or it could be done in less
12 than 30 minutes, and that's very quick to do. I mean,—

13 Q. There you go.

14 A. —you have the experts there already.

15 Q. There you go. Now, are you aware, as you are today, of the
16 equipment that was made available that evening by many others
17 like yourself who came there to help? Do you know the nature
18 and quality of the equipment that was brought to bear on a
19 possible rescue?

20 A. OTSL boat, um, I had worked on that boat before training
21 divers through that boat. They're full of equipment, everything
22 possible that they would have, even a chamber. I have been on,
23 um, well I'm going to say Miami Divers because that's what
24 I'm accustomed and to, and, um, they have equipment as well,
25 surface supplied equipment as well, full equipment, and a
26 rescue could have been used, so it could have been, um,
27 attempted as such using that equipment.

1 Q. And in terms of the—there was a little bit of a rush from my
2 friends when it was spoken about the length of the umbilical
3 and it was not advisable to join it. What was the length of the
4 umbilicals, as far as you're aware, that would have been
5 available that evening or into the night of the 25th of February?

6 A. I can't remember exactly now the, um, the length of umbilical
7 that would have been on the boats as such. Right? However,
8 what is important for the—it's not so much the length of the
9 umbilical. What was important was the US Navy Dive Manual
10 stated that you had to have time in which a diver has to go into
11 that pipe.

12 Q. Right.

13 A. And what I'm talking about here is decompression, non-
14 decompression time. So you're going down 60 feet. The US
15 Navy Dive Table is very clear that if you're at 60 feet you go to
16 the next one which is 70 feet in checking the time that you stay
17 underwater which allows you 48 minutes.

18 Q. Right.

19 A. So, a diver could only go down there up to 48 minutes, that's
20 returning, eh—

21 Q. Yes.

22 A. —right, staying down and coming back to the surface without
23 getting nitrogen, excess nitrogen in his system. So that gives
24 you 60 feet which is like about in this situation where he's
25 going feet first he's going to take about 5 minutes. By the time
26 he reaches the bend there then he has about another couple of
27 minutes or even longer at that point to turn. So that gives you

1 now, remember half the time we're dealing with, eh, because he
2 has to come back out.

3 Q. Of course, I get it.

4 A. He gets about 15 to 20 minutes into the pipe, now, to search for
5 anyone that's there.

6 Q. Beautiful.

7 A. So, again, so he has umbilicals. The umbilical is not the issue.

8 Q. I appreciate that.

9 A. Right.

10 Q. But the distance into the pipe is?

11 A. Yes.

12 Q. Right. So, in terms—knowing what you do that Christopher
13 Boodram had articulated that he had counted two weld seams,
14 and we've learned from many others that a length of pipe is
15 approximately 40 feet, yeah?

16 A. Yes, Sir.

17 Q. So we're looking at 80, 80 feet, 120 feet maximum. Is that an
18 insurmountable opposition to a rescue, having regard to the fact
19 that you have your umbilicals, you have divers and you have
20 other equipment that may be required?

21 A. It's, no, it's not a, um—insurmountable as such as you put it.
22 It's just the other factors that you would have, again, as I said,
23 the amount of air available.

24 Q. Correct.

25 A. The skill of the divers available, but attempts could have been
26 made at that point because all the guys are there.

27 Q. Yes.

1 A. So—and the umbilical was there. The supervisors were there to
2 give—to bring them back safely out of the pipe.

3 Q. Thank you. So we had personnel, adequate personnel, from
4 what you know?

5 A. Yes, Sir.

6 Q. Adequate equipment?

7 A. Yes, Sir.

8 Q. We had unlimited air in terms of the umbilicals?

9 A. Correct.

10 Q. And nobody called you back? Nobody called you? You said
11 Mr. Seales said he'll call you back?

12 A. Well I just told him I'm always available for anything which
13 I've—I mean, it's normal, I mean—

14 Q. And what did he respond to you?

15 A. I'll call you back or something like that.

16 Q. Yeah.

17 A. I'll get back to you.

18 Q. Yeah. Did anybody call you back, get back to you?

19 A. No, Sir.

20 Q. You appreciate that you had a viable position in terms of
21 endeavouring a rescue?

22 A. Yes. In fact, what I also added, if I may?

23 Q. Yes, of course.

24 A. Um, my son had visited Michael and—there at the scene
25 outside Paria.

26 Q. Oh.

27 A. And, um, my son is an instructor, master instructor scuba diver,

1 so he had visited them and chatted with them, and I told him
2 over the phone, I said, them if they need me at any point for
3 anything let me know, and I remember seeking to Michael very
4 quickly about a couple of things, but I knew that the situation
5 that they were in so I didn't want to, um, t take too long so I
6 told him, I say if you all need me for anything let me know.

7 Q. Yeah.

8 A. But I'm not coming by the gate there.

9 Q. No. And certainly this would have been sometime after—

10 A. That would have been on the, um—

11 Q. —on the Saturday?

12 A. —day—when they gathered by the gate. I can't remember.

13 Q. It wouldn't have been the same night.

14 A. No.

15 Q. No. Thank you very much. And do you know that there were
16 coastguardsmen armed there on site?

17 A. I don't know about the arm. I don't know anything about that.
18 Nobody told me about that. I know about it after.

19 **Mr. Ramadhar:** Mr. Chairman, I'm pleased to tell you it's not
20 yet 5.00 and I'm done. Thank you.

21 **Mr. Peterson SC:** Wonderful.

22 **Mr. Chairman:** Yes. You catch me out I'm afraid, Mr.
23 Ramadhar. All right. Are you in a position, Ms. Persaud
24 Maraj, to ask your questions now?

25 **Mrs. Persaud Maraj:** I am, please.

26 **Mr. Chairman:** Please do.

27 **Cross-Examination By Mrs. Persaud Maraj:**

1 Q. Good afternoon. The name is Kamini Persaud Maraj and I
2 represent LMCS Limited. I'd like to refer you to the Figure 1
3 which is on screen. Yes.

4 A. Yes, Ma'am.

5 Q. With the Kirby Morgan surface supply. My question to you is,
6 this is in relation, a PPE in relation to diving operation and
7 work conducted within the chamber. That's what your
8 evidence is?

9 A. Within the habitat, yes.

10 Q. All right. The question is, in respect of works that are to be
11 conducted within the chamber, they're to be hot works at some
12 point in time within the chamber, that's welding, yes?

13 A. Yes, Ma'am.

14 Q. Would there be need for additional apparels or segments of this,
15 um, this picture that we're looking at, this mask?

16 A. Yes, there would be.

17 Q. Yes.

18 A. Yeah.

19 Q. And that would necessarily add weight?

20 A. No.

21 Q. And bulk?

22 A. No.

23 Q. Well, could you explain?

24 A. Okay, let me explain.

25 Q. Yes.

26 A. Right, um, first of all, no underwater welding jobs or any kind
27 of burning, cutting or anything must be done with scuba.

1 Q. Right.

2 A. So it's going to be on surface supply with a mask like that, but
3 if you could—let me—I'll come back to this one but let me go
4 up to the other, if you don't mind. You got to the other figure.
5 Right. This one, there is a connection by Kirby Morgan and
6 I'm supposing it will fit the first one as well. but we have used
7 this mask where there's a connection, you see those holes on
8 top there along the band, the silver part, there are screws that
9 can go in there and we are—and onto the side where we
10 attached a welding mask to it, just a thin welding piece of
11 equipment which can raise to do the work and then back down
12 to weld and cut and I'm supposing that with Kirby Morgan they
13 would also have an attachment or you can make an attachment
14 for that one on top.

15 Q. And this is the mask that is 12 pounds?

16 A. This one is 12. The other one is only 2 pounds.

17 Q. And just to confirm the one that is just 2 pounds wouldn't be
18 the one that we can use for welding or any kind of—

19 A. Yes. What I'm saying is that you can attach the visors to that.
20 There, there is no big deal.

21 Q. To this, to this very one that is 2 pounds?

22 A. Yeah. We can make it work. We have done it before.

23 Q. And it would be a safe system of work for the person operating
24 hot works?

25 A. Yeah because they just raise it off.

26 Q. Yes. Well I'm looking at material and that kind of thing, so
27 that's what I'm asking you.

1 A. Or the material—

2 Q. In relation to what—

3 A. —meaning the rubber?

4 Q. Because what I'm thinking—

5 A. Uh-huh, uh-huh.

6 Q. —and I'm not a welder, I'm not a diver, but what I'm thinking
7 is that you would need an apparel or that protects you. That's
8 what a PPE is.

9 A. I understand what you're saying.

10 Q. Yes.

11 A. What you—you see with this one, it's, it's, it's fitted close to
12 you and if you know some welders, what they have is the
13 welding mask, the one that you put over your face, that could
14 have gone on that, over that, over your head, and that would
15 protect your entire face.

16 Q. Right. And so in any event, in addition to this there is
17 something additional that the workers would have had to have
18 in order to be safely performing their work within the chamber?

19 A. Welding work—

20 Q. Welding work—

21 A. —or cutting work, if not normal.

22 Q. Right. All right. In relation to diving qualifications—

23 A. Yes, Ma'am.

24 Q. —does a commercial diver necessarily have to be a PADI
25 certified diver first?

26 A. I—in my school what I do, I recommend that all persons who
27 come to us to do commercial diving should be scuba certified,

1 not PADI as such only but scuba.

2 Q. Scuba.

3 A. PADI is not the only—

4 Q. Right, scuba.

5 A. —but scuba certified, and the reason for that being is that it
6 gives them an opportunity to see if, hey, am I going to spend
7 this large amount of money for something I don't like? So I get
8 them involved in scuba, get them diving at 60, 70 feet of depth,
9 put them into night diving as well, all that sort of thing, and
10 then we move them on to commercial.

11 Q. All right. As for paragraph 13, if you can be taken to it, you
12 said that you verified in relation to Mr. Henry—

13 A. Yes, Ma'am.

14 Q. —that he had not been certified?

15 A. Yes.

16 Q. All right. So my instructions are that he was, in fact, PADI
17 certified and had—as you mentioned that he had one session of
18 training, yeah, but you—this—one session of training you're
19 referring to is in relation to scuba, not so?

20 A. Yeah, well since you—

21 Q. PADI?

22 A. —since you asked a question I was—I—if I may, I may tell you
23 this part. I don't know what your instructions are.

24 Q. Yeah.

25 A. But Mr. Kazim Ali called me sometime after the incident and
26 asked me for—if I had Yusuf's certification. I told him no,
27 Yusuf never trained with me. Right? So—and so then I called

1 my son because usually I'll call him for that, and he said he
2 remembered Yusuf and he came to the pool one time, just one
3 time. So I have him check PADI to see what certification, if he
4 went somewhere else. So I told him, before you check, check
5 and see if you see, um, Boodram. He found Boodram. I say
6 check and see if you see junior, Kazim Ali's son, he say yes he
7 saw that as well. Check on the same thing and see if you saw
8 Yusuf, and I gave him the full name. He said no, it is not there,
9 so I don't know.

10 Q. Right.

11 A. I could only say what PADI itself is showing on their website.

12 Q. All right, so my instructions are that he was being certified for
13 commercial diving and was already certified for PADI diving.

14 A. Where would he—I don't understand that. I really don't
15 understand what is your—what does that mean. I don't
16 understand what you're saying. Where would he get
17 commercial certification.

18 Q. No, he hadn't been commercially—

19 **Mr. Chairman:** Just a minute. We're not going to have a
20 debate about it. Either he is PADI certified or he's not. If he is,
21 let's have a certificate. All right?

22 **Mrs. Persaud Maraj:** We will get that, certainly.

23 **Mr. Chairman:** If he was going through a training process
24 thereafter and hadn't quite completed any commercial training,
25 you could let us have that as well.

26 **Mrs. Persaud Maraj:** Certainly please.

27 **Mr. Chairman:** All right? But there's little point in us going

1 back and forth, all right?

2 **Mrs. Persaud Maraj:** Certainly, certainly.

3 **Continued Cross-Examination By Mrs. Persaud Maraj:**

4 Q. In relation to the evidence that Mr. Chairman took you through
5 for the removal of the hyperbaric chamber, and there being a
6 possibility of an occurrence of a second Delta P or the
7 conditions changing within the pipeline, I would like to walk
8 you through the rationale that was provided by LMCS in
9 relation to the process there. I understand what your evidence
10 is but I would like to put you what it is that—

11 A. Sure right.

12 Q. Right. So as I understand it, the risers at the—the riser that was
13 now going to be—that had already been cut, the new section
14 was installed thereby taking it out of the water. Yes?

15 A. Yes.

16 Q. All right. And the proposal was to have that inserted, the
17 chamber removed and then the blank removed at berth No. 5.

18 A. Correct.

19 Q. Yes? You follow me?

20 A. Yes, I follow you.

21 **Mr. Chairman:** That wasn't the proposal.

22 **Mrs. Persaud Maraj:** Sorry?

23 **Mr. Chairman:** That is not the evidence. The evidence is first
24 of all an application was made by Mr. Ali to have, in
25 consultation with the IMT—

26 **Mrs. Persaud Maraj:** Yes.

27 **Mr. Chairman:**—to put the riser on—

1 **Mrs. Persaud Maraj:** Yes.

2 **Mr. Chairman:**—and thereby removing the habitat because
3 there was a concern that if the compressor that was providing
4 the air inside the habitat backed up, that the water would then
5 rush into the existing pipe.

6 **Mrs. Persaud Maraj:** That was—

7 **Mr. Chairman:** That was the application. There was a
8 completely separate application for removing the blank at berth
9 5, which was to do with whether or not they could hear
10 knocking at that—they're not connected.

11 **Mrs. Persaud Maraj:** Well, as I understand it, I stand
12 corrected but as I understand the evidence from Mr. Ali
13 himself, that was his proposal to the IMT to Mr. Piper I think it
14 was.

15 **Mr. Chairman:** I don't understand it that way. I'll be happy
16 to be corrected but I had understood they to be two separate
17 matters, and indeed the IMT went ahead with the first one, that
18 is to remove the habitat and put the extended pipe on—

19 **Mrs. Persaud Maraj:** Yes, it—

20 **Mr. Chairman:** And it was many hours before they—

21 **Mrs. Persaud Maraj:** That's correct.

22 **Mr. Chairman:**—could remove the blank.

23 **Mrs. Persaud Maraj:** So the actual execution of what that
24 proposal was wasn't what the actual proposal that Mr. Ali had
25 to the, er—

26 **Mr. Chairman:** Well either way it wasn't going to be
27 simultaneous, was it?

1 **Mrs. Persaud Maraj:** No. It wouldn't—

2 **Mr. Chairman:** Whichever way you put it, whether there was
3 hours in between the two or not, there had to come a point in
4 time where—

5 **Mrs. Persaud Maraj:** Certainly.

6 **Mr. Chairman:**—one was done and then the other.

7 **Mrs. Persaud Maraj:** Certainly, certainly.

8 **Mr. Chairman:** So why don't we address it that way and then
9 we could worry about the exact way in which Mr. Ali put it
10 later on.

11 **Mrs. Persaud Maraj:** Certainly.

12 **Continued Cross-Examination By Mrs. Persaud Maraj:**

13 Q. So, my question to you was that in relation to the risers, the
14 riser being out of the water both on both ends and it being
15 isolated from any other connection, whether or not the pressure
16 within, and I understand what you said earlier, but whether or
17 not the—there was a second violent Delta P possibility within
18 the pipeline?

19 **Mr. Chairman:** Well, I'm afraid I don't understand that.

20 **Dr. Cheddi:** I don't under—yes, yes.

21 **Mr. Chairman:** I mean, are you saying that all of a sudden
22 they just go like that, remove them in one instant or—

23 **Mrs. Persaud Maraj:** No.

24 **Mr. Chairman:** Because whichever way you do it, you're
25 going to have to do one then the other.

26 **Mrs. Persaud Maraj:** Certainly.

27 **Mr. Chairman:** Right? So, er, er—

1 **Mrs. Persaud Maraj:** So we, we—

2 **Mr. Chairman:**—which one do you want to take first?

3 **Mrs. Persaud Maraj:** We'll—inserting the riser at berth 6.

4 **Mr. Chairman:** Right.

5 **Mrs. Persaud Maraj:** Right.

6 **Continued Cross-Examination By Mrs. Persaud Maraj:**

7 Q. So we would have to insert the riser, which was done, on the
8 night of the 25th, yes?

9 A. Yes.

10 Q. Right. Now, within the pipeline there were air pockets, correct?

11 A. Yes, Ma'am.

12 Q. Right. The question is in relation to the movement or the
13 possibility of a second at that—this is the first point, right—a
14 second Delta P occurring at that point in time.

15 A. By putting the riser they may not even interfere with it, most
16 likely would not affect the air pockets or anything on that.

17 Q. It would not have?

18 A. I, I don't see that as being affecting anything because you're
19 just adding the riser.

20 Q. Right. And that would have been taking it out?

21 A. Yeah.

22 Q. When the riser is connected then and the compressor is shut
23 down at that point in time, because now it's one continuous air
24 line—

25 A. Correct.

26 Q. —would then that have any effect on that pipeline integrity
27 within—whatever that integrity within that pipeline?

1 A. I don't know how they did it, so I really can't give you an
2 answer for that. But what I'm understanding is that you have
3 this pipe out and then they remove the, um—they shut down the
4 water, the air, and remove the habitat. Is that what you're
5 saying?

6 Q. The habitat is moved.

7 **Examination By Mr. Chairman:**

8 Q. Yes. The evidence is this—

9 A. Yeah.

10 Q. —is that the, um, flange was fitted to the top of the riser.

11 A. Okay, now I understand.

12 Q. Then the extension pipe was brought in through what I
13 understand to be the stove or put in so that it goes up into the
14 stove, with the stove being above the water level, all right? But
15 it's all still within the chamber, all right? And so this had been
16 put in, bolted on to the flange, right, and then the hyperbaric
17 chamber is removed. So in other words, all the time that this is
18 being put on, again as I understand the evidence, the pressure
19 from the hyperbaric chamber remains.

20 A. Yes.

21 Q. It's only once the chamber is removed that you're taking the
22 downward pressure that existed on the pipe away.

23 A. Yes.

24 Q. So as I understand the question, which I think is the same as
25 what I was asking you before is, once you take away that PSI,
26 that's pressing down on the pipe—

27 **Continued Cross-Examination By Mrs. Persaud Maraj:**

1 Q. But at the point in time that you're connecting the riser, my
2 understanding, please Mr. Chair is at the point in time that the
3 riser has been connected, the old section of what was there to
4 the new section, right, whether or not the hyperbaric chamber
5 there is there and present with a downward pressure, that
6 pressure would no longer be applying to whatever is within that
7 pipeline. Is that correct?

8 A. Correct, yeah, but the question is how was the flange put on?
9 By bolts.

10 Q. Yes. It's bolted on.

11 A. Yeah. So it was just bolt—it was here, you bolt it on and then
12 you remove anything.

13 Q. Yes.

14 A. I don't see any effects of any further Delta P taking place. I'm
15 not seeing that. I don't know.

16 **Examination By Mr. Chairman:**

17 Q. Well, I'm afraid you've got me confused now because I thought
18 we'd already agreed. I don't know how else to describe it. The
19 position is simply—is, I thought relatively simple. Either I'm
20 right or I'm wrong about it. If the pipe is got a PSI, let's say for
21 the argument's sake 10 PSI pressing down on the inside of the
22 pipe, it's open, right? The pipe is open inside the hyperbaric
23 chamber. The hyperbaric chamber is pressurized to, let's say,
24 10 PSI. I don't think it's quite that much but let's say it is for
25 this argument's sake. That pushes all the water inside the
26 hyperbaric chamber below the sea level, correct.

27 A. Yes it would. It would.

1 Q. I mean, it seems to me pretty straightforward. Can I borrow
2 your glass for a minute, please, just to use this as an example?
3 That's the pipe coming up. It's open at the top, right? They put
4 a hyperbaric chamber on top of it like this.

5 A. Correct.

6 Q. Pressurize the inside of that hyperbaric chamber and what
7 happens is the water level, the sea level is here, it stays there on
8 the outside, but by pressurizing this you're pushing the sea level
9 on the inside down to here?

10 A. Correct.

11 Q. All right? The consequences of that are that you can then
12 operate inside a dry area.

13 A. Correct.

14 Q. Right? If this pipe is connected—is on the inside and you're
15 adding now a piece to this pipe, it makes no difference if you
16 add a piece to that pipe, it stays within the hyperbaric chamber?

17 A. Correct.

18 Q. Right? So long as it's above the waterline, once you then
19 remove the hyperbaric chamber, then if the sea level is below it
20 doesn't matter, does it? It's not going to—the water's not
21 going to go inside the pipe. Do you follow?

22 A. Right.

23 Q. You've got this on the top, the sea level's here, halfway down
24 this glass let's say, you put an extra piece of pipe on top of
25 there so that it's above the sea level, that way when you take
26 this off the water isn't going to go into the pipe?

27 A. I understand that, but—

1 Q. But you've got 10 PSI pushing down on the inside of the pipe
2 as well as on the inside of the hyperbaric chamber, haven't you?

3 A. Right.

4 Q. But whatever fluid is inside the pipe has pushing down on it 10
5 PSI or 7 or whatever it might be, I think it's 6, it's, I think,
6 about 7.

7 A. Six or seven.

8 Q. But anyway, the point is, it's pushing down on that, isn't it? If
9 you stop that force, downward force, on the inside of the pipe,
10 surely if there is a potential for Delta P on the inside, that event
11 stopping the downward force, could cause it to occur?

12 A. Right. It would occur. Okay.

13 Q. Yes. So the minute you'd either depressurized this or take it
14 off, the 7 PSI that you got pushing down on the fluid on the
15 inside of that pipe stops. What do you think is likely to
16 happen? You're pushing something down by 7 PSI, you take
17 your hands off it, it comes up doesn't it?

18 A. Correct. So what is the question? I still—

19 Q. So the question she was asking you is really whether or not,
20 whether or not this was—had the effect—she was trying to
21 suggest, as I understand it, correct me if I'm wrong, but once
22 you put this extra piece of pipe on and take the pipe off, it
23 should make no difference to the habitat?

24 A. Oh no, no, no, no, it—

25 Q. It does make a—

26 A. —it makes a difference.

27 Q. Of course it makes a difference.

1 A. No, I understand that. Yeah.

2 **Dr. Cheddie:** Is that what you're asking?

3 **Mrs. Persaud Maraj:** Not quite, please.

4 **Mr. Chairman:** Right. Well you put it the way you want to
5 put it, then. Well, I'm misrepresenting you, you'll get it—

6 **Continued Cross-Examination By Mrs. Persaud Maraj:**

7 Q. At the time of the installation of the riser, the new section to the
8 old section, what is essentially being created is one long pipe,
9 one continuous pipe. That's my understanding.

10 **Mr. Chairman:** Still under pressure?

11 **Mrs. Persaud Maraj:** Well, it can be under pressure or not but
12 it's a pressure that's outside of the pipe now, not—it's no
13 longer—the pressure is no longer going on to the open of the,
14 um, of the pipe.

15 **Mr. Chairman:** No, I don't know—

16 **Mrs. Persaud Maraj:** So when it would have been cut.

17 **Mr. Chairman:** I hadn't understood that they were sealing it
18 at all. In fact, the problem, as I understood it, is that the new
19 pipe that went on had a little bar across the top of it and that
20 was getting in the way of anybody getting in and out of the
21 pipe.

22 **Mrs. Persaud Maraj:** To the very top. That's to the very top.

23 **Mr. Chairman:** Look, in a way it doesn't really matter, does
24 it? And I don't need to debate this with everybody.

25 **Mrs. Persaud Maraj:** Certainly.

26 **Examination By Mr. Chairman:**

27 Q. I simply need to understand from the evidence from you, Sir,

1 whether—whichever way you do this, whether you take the
2 hyperbaric chamber off first, whether you put a piece of pipe on
3 first, I really don't care. I'm interested to know that once you
4 stop the downward pressure of 7 PSI on the inside of that pipe,
5 once you stop doing that, will it change the dynamic of the
6 inside of the pipe, the fluid that's in there? You're pressing
7 down inside the pipe—

8 A. And you remove that.

9 Q. —by 7 PSI.

10 A. Right.

11 Q. And then you stop pressing down by 7 PSI, what do you think
12 will happen to the fluid that's in the pipe?

13 A. It's going to move.

14 Q. It's going to move, isn't it? Yes.

15 A. Yes. And the air pocket—

16 Q. It might go gurgle, gurgle, gurgle—

17 A. Yes, yes.

18 Q. —whatever it does, you know, and then the air comes out the
19 fluid goes down—

20 A. Uh-huh.

21 Q. —any number of things could happen, couldn't it? But it's not
22 going to stay the same?

23 A. No.

24 Q. Thank you. That's what I thought we'd agreed earlier on.

25 A. Yeah, but I just didn't understand.

26 Q. No, no, well I, I—that's why I wanted to make sure I hadn't
27 misunderstood it either, because I don't want to go off on the

1 wrong tangent. But that, that is the case, isn't it? If you
2 remove that downward pressure on the inside of the pipe, it is
3 going to have an effect. Whether it's a bad one or whatever, I
4 don't know, but it's certainly going to have an effect, isn't it?

5 A. Yeah. I just didn't understand the—your question, a part where
6 the—if you move the whole top it will affect.

7 **Mrs. Persaud Maraj:** Understood and, um, I think that's the
8 end of my questioning.

9 **Mr. Chairman:** Excellent. We'll leave it there, then. I've
10 sorry to have to ask you to come back tomorrow morning, Dr.
11 Cheddie.

12 **Dr. Cheddie:** That's okay.

13 **Mr. Chairman:** Would you mind at 9.30, please?

14 **Dr. Cheddie:** That's fine. I'll be here.

15 **Mr. Chairman:** When we'll hear questions from Mr. Peterson
16 and then Ms. Nyree Alfonso, and then anything else that Mr.
17 Maharaj might want to ask, but I would expect I'll be done
18 within the hour.

19 **Mr. Pegus:** Mr. Chairman, may I please remind you—

20 **Mr. Chairman:** Oh, you did say you wanted to ask questions.

21 **Mr. Pegus:** Yes.

22 **Mr. Chairman:** You were going to find out from your client
23 whether you want to contradict anything he suggested.

24 **Mr. Pegus:** Yes, definitely and, um, if there is no need to put
25 any questions to this witness, rest assured I wouldn't be putting
26 any.

27 **Mr. Chairman:** No, I'm sure you won't. Well, I—lovely.

1 Thank you very much indeed, yes. [*Crosstalk*] Yes, you could
2 go, Sir. Thank you very much indeed.

3 **Dr. Cheddie:** Yes, Sir.

4 **Mr. Chairman:** Come back tomorrow, yes.

5 [*Mr. Chairman confers with Commissioner Wilson*]

6 **Mr. Chairman:** Mr. Peterson, there are a number of things
7 that I think last week we left open for potential witnesses to
8 obtain. You'll recall I asked Mr. Mushtaq Mohammed for a
9 schedule—

10 **Mr. Peterson SC:** I think we got all—I think we got all of
11 those, Sir. I think we got all of those. Possibly I just got a
12 message here. One may be outstanding which may come
13 within the hour, Sir.

14 **Mr. Chairman:** I need trouble you no further. I'll find out
15 what they—thank you very much. Thank you. Please feel free
16 to go. I've got to grab my own papers, so, thank you very
17 much.

18 **5.10 p.m.:** *Enquiry adjourned.*

1 **EVIDENTIARY HEARING DAY 15**

2 **9.29 a.m.: Enquiry Commenced.**

3 **Mr. Chairman:** Good morning, everyone. Just give me a
4 moment to organize my papers. Yesterday I said that I'll give
5 my ruling for the decision that we made about the admission of
6 the evidence that was objected to by Mr. Peterson on behalf of
7 Paria.

8 His objection was that all the statements made by the
9 family members of the deceased are irrelevant, and, therefore,
10 ought not to be considered by this Commission of Enquiry. He
11 suggested that they should be excluded in their entirety and
12 removed from the bundles as published on the website and are
13 part of the materials with which we are concerned in this
14 Enquiry. He suggested that they were outwith the Terms of
15 Reference for this Enquiry and that the prejudicial effect of
16 admitting the evidence would adversely impact upon his clients,
17 Paria. No other party supported that application.

18 Mr. Hosein-Shah for the unions argued that these
19 statements were admissible. He pointed to our rules. First of
20 all, I did find Rule 23. Rule 23 as published under Part 5 under
21 the subheading "Evidence", A. General:

22 "The Commission may receive evidence in such or any
23 form that it considers to be helpful in fulfilling the Terms
24 of Reference whether or not such evidence would be
25 admissible in a court of law."

26 He relied on the word "helpful" being in particular
27 reference to the helpfulness to this Enquiry and fulfilling our

1 Terms of Reference irrespective of whether such evidence
2 would be admissible in a court of law. Clearly, that is a much
3 wider reception of evidence that might ordinarily be the case.

4 He referred us, in addition, to Rule 43. Rule 43 under the
5 heading “Witnesses” states:

6 “The Commissioners shall consider any evidence
7 adduced that is relevant to the Enquiry and the Terms of
8 Reference. Where evidence is challenged or objected to
9 on any ground, the Commissioners shall give only such
10 weight to that evidence as they determine to be
11 appropriate, having regard to all the circumstances.”

12 It is immediately seen that this is a very widely drafted rule,
13 that is not by accident. We drafted the rules and it seems to us
14 that it was necessary for the purposes of this Enquiry to have
15 them drafted that widely.

16 He reminded us that the rule is really about the weight to
17 be given to the evidence that is adduced rather than its
18 admissibility, thus the combination of those rules permits us to
19 hear the evidence and to determine what, if any, weight to give
20 to it rather than to exclude it altogether. That, as you will
21 appreciate, is what we have done.

22 Having identified those rules he suggested that the
23 relevance was twofold. Firstly, how both LMCS and Paria
24 dealt with the families in communicating what was happening
25 at the time, and secondly, what support either company gave to
26 the victims whilst they waited in the carpark for news of their
27 loved ones. He went on to submit that it must be a core part of

1 an ICT or such other organization in an emergency to open
2 channels of communication and what financial support could,
3 would or should be given.

4 Mr. Ramadhar—I notice he has not yet arrived—he
5 referred us in his support for the submissions having been made
6 by Mr. Hosein-Shah to the Terms of Reference, in particular
7 Part 2 (vi), which states:

8 “To make such findings, observations, and
9 recommendations arising of its deliberations as may be
10 deemed appropriate in relation to:

11 vi. making any other recommendations that may
12 be deemed necessary in the circumstances.”

13 He went on to submit it is commonplace today to hear victim
14 impact statements and the like in cases, to put the effect in
15 perspective.

16 Mr. Maharaj for the Commission of Enquiry supported
17 those observations and submissions. And so, I considered all of
18 that in making my decision. Yesterday, as I say, I formed the
19 view that the following statements were admissible and,
20 therefore, I permitted them to be read. Ms. Vanessa Kussie, she
21 made her statement on the 28th September of last year. She is
22 the wife of Rishi Nagassar, and that evidence has been on the
23 website since that time. The same can be said of Jamie
24 Manodath-Ali who made her statement on the same day to the
25 Enquiry, and she’s the wife of Kazim Ali Jr. Thirdly, Catherine
26 Ali; she made her statement to the Commission on the 27th
27 September of last year and she is the mother of Kazim Ali Jr.

1 Fourthly, Celisha Kurban, who made her statement on the 8th
2 January of this year, and she was the fiancé and partner of Fyzal
3 Kurban.

4 The first three statements, as I say, were taken by the
5 lawyers for the Commission of Enquiry and had been on the
6 website since September without objection. I reserve judgment
7 on Aliyah Henry, the daughter of Yusuf Henry and Tia Gopaul,
8 the partner to Mr. Yusuf Henry at one time and mother to
9 Aliyah to which I shall return presently. I've also been
10 provided with two further statements, which I hope everyone
11 has now had an opportunity to see, which relate to Mr. Henry,
12 his mother, Nicole Greenidge and his sister, Afeisha Henry,
13 which I shall deal with also presently.

14 Follows are the reasons for my allowing the evidence
15 hitherto given, and a ruling on the remaining evidence in this
16 category. Our Terms of Reference are deliberately widely
17 drawn, and I do not believe that they were intended to confine
18 or constrain our Enquiry. But I do not have to determine that as
19 I am satisfied that they cover the evidence as given. I remind
20 ourselves of what those terms are.

21 Whereas, the Commissioners are appointed to enquire
22 into the following inter alia Terms of Reference being matters
23 set out hereunder and to make such findings, observations, and
24 recommendations arising out of its deliberations as may be
25 deemed appropriate. This:

26 "1 To enquire into:

27 xiii. And examine all other material circumstances

1 leading up to and surrounding the incidents which took
2 place on February 25...that led to the tragic deaths of the
3 four (4) LMCS divers and continuing up to the recovery
4 of their bodies.

5 2. To make such findings, observations, and
6 recommendations arising out of its deliberations as may
7 be deemed appropriate in relation to:

8 vi. making any other recommendations that may
9 be deemed necessary in the circumstances.”

10 The rules, as Mr. Hosein-Shah pointed out, are extremely
11 wide, as I have already said. We are not hidebound by the
12 normal admissibility rules in a court, leaving the weight to us to
13 determine what it should be, if any at all, on evidence that we
14 deem relevant at this stage.

15 The combination of these rules are intended to give us
16 the widest possible width and flexibility of approach that does
17 justice to the issues and those engaged in this process. Nothing
18 in Paria’s documentation, i.e., policy statements, emergency
19 response procedures, plans, Incident Command System, or any
20 other documents of that kind or LMCS’s HSE Manual or
21 anything else deals with communication by the employer or
22 contractor with the victims’ families in an emergency situation.
23 They should.

24 It is this feature that we’ve come to the view renders this
25 evidence relevant and admissible, and is likely to form part of
26 the recommendations as to the future in these situations, where
27 there are communications lacking. I leave aside whether it is

1 best practice on the international standards to have in place a
2 policy that deals with communications with family and
3 relatives, and the public. It is our view, that common decency
4 to keep the families informed and to provide proper facilities to
5 them was the prerequisite here.

6 The evidence we have heard deals with the following
7 matters. One, failures by Paria and to some extent LMCS, to
8 keep the families informed. Nearly 24 hours passed before
9 anyone from Paria spoke in a meeting to all of the families
10 waiting for news about what was happening. That, on any
11 view, must be unacceptable.

12 Two, families were left to camp in a carpark at the gates
13 of Paria's facility for days until some measure of assistance was
14 given to them driven largely by the public outcry and the
15 intervention of the union. That, on any view, must be
16 unacceptable.

17 Thirdly, rumour and misinformation as was clear from
18 some of the evidence read yesterday, and adduced yesterday,
19 becomes rife when there is no formal dissemination of the facts
20 told honestly and timely in a consistently updated manner by
21 those who were in authority and knew those facts.

22 At page 107E of the core bundle is a chart in a Paria
23 document showing the different responsibilities assigned under
24 an Incident Command System for emergency events. It
25 includes an information officer and a liaison officer, yet it says
26 absolutely nothing about what they are supposed to do.

27 As Mr. Ramadhar pointed out, it is common in modern

1 judicial and quasi-judicial contexts for victim impact statements
2 to be admissible to guide a court, judge, or factfinder of the
3 impact of potential wrongdoing if we so find. There is no
4 mechanism in this Commission of Enquiry to hear the impact of
5 decisions made during this incident at a later time. It is,
6 therefore, in our view, important to hear it now.

7 There is inevitably a degree of emotion involved in the
8 giving of that evidence, and that inevitably causes some
9 prejudice as there was, indeed, when Ms. Balkissoon gave her
10 evidence in a tearful manner on occasion, and when Mr. Piper
11 expressed his point of view in the most forceful and emotional
12 manner about his role in the ICT.

13 As factfinders, we are unable to set aside emotion from
14 the task that we have solemnly undertaken to perform. There
15 must be a humanitarian element to any future emergency
16 response plan that includes honest, regular communication with
17 the immediate families of those most affected by the emergency
18 unfolding.

19 It is our task to discover where things went wrong and/or
20 how actions could be improved. Flowing from that is the need
21 to identify and recommend action for the future. We have no
22 doubt at all that these witnesses can provide important evidence
23 that will shape the kind of recommendations that all
24 organizations are required to have an emergency response,
25 consider the way in which they communicate with, and treat the
26 potential victims of a disaster or tragedy.

27 As such, I will permit the evidence, partially edited, of

1 two statements that we've been provided with yesterday from
2 Nicole Greenidge; she is the mother of Mr. Henry, and Afeisha
3 Henry, who is the sister of the Yusuf Henry. They've been
4 edited a little and they will be permitted to give their evidence
5 later today. This leaves two other witnesses.

6 Aliyah Henry is an 11-year-old girl. She is the daughter
7 of Yusuf Henry. It is a short, heartfelt statement setting out her
8 loss. I am not going to exclude it. Her mother, Tia Maria
9 Gopaul, also makes a short statement, but it seems to me it adds
10 little to what we already have. We will hear all of this evidence
11 at the end of today. That is my ruling on the matter. Thank you
12 very much.

13 Can I turn to a couple of housekeeping matters? First of
14 all, I have got the chart, Mr. Peterson, that was promised to us a
15 few days ago. We've got that now and I've seen it, so thank
16 you very much for that.

17 Next is this, Mr. Osei Flemming who is from Heritage
18 said last week that the permit to work required that the removal
19 of a barrier required a separate permit to work. I hope I've got
20 that right. That was certainly my understanding of the upshot
21 of his evidence. Please correct me if I've got that wrong, but
22 my understanding of that was what he had said. And I asked
23 him if he could make some enquiry as to finding that permit to
24 work for the previous similar job that was done in 2020. I
25 should be grateful to receive such a document if it exists. Do
26 you know if enquiries have been made, Mr. Peterson?

27 **Mr. Peterson SC:** Enquiries have been made. It no longer

1 exists, because, on the permit to work itself, there is a
2 destruction clause on the procedure.

3 **Mr. Chairman:** Which is how long?

4 **Mr. Peterson SC:** Three months after the close off of the
5 works.

6 **Mr. Chairman:** Just a moment. All right. I've just been
7 handed a document which deals with that. Thank you very
8 much. All right, so—

9 **Mr. Peterson SC:** Clause 11.0, I think it is.

10 **Mr. Chairman:** All right. Well, I mean, if that's the position,
11 that's the position. So if it doesn't exist, fair enough.
12 Something else I do want your help with, and I don't ask you to
13 deal with it now, Mr. Peterson, but I want to raise it now
14 because in due course whether you or Mr. Mootoo makes
15 submissions to the Commission on Thursday, I would like you
16 to address your mind to this.

17 Can I ask you to have in the core bundle, page 1074
18 Volume III, please—perhaps we can put that on the screen.
19 This is the document we're very familiar with now—the work
20 permit for the works that took place on the 25th. In the
21 subsequent pages at page 1075, there is the work permit that is
22 dated for the 13th February relating to the same works that took
23 place. You can see that. So you can see there that it deals with
24 the works in their totality. I had to write it down the side
25 column, as we can see.

26 My concern is this, and what I want is someone to help
27 me with it in due course. It mentions, of course, the installation

1 of migration barrier and so on. If Mr. Osei Flemming is correct
2 and that it needed a separate work permit for the removal of
3 same, there clearly isn't one, so that is a flaw or feature of it,
4 but what I'm concerned about is this, is that, is it right that had
5 those works gone ahead as planned when this work permit was
6 issued, the one we are seeing on the screen, in other words, the
7 Dexter Guerra incident with the moving of the barge which
8 interrupted that with all works having to come to a standstill for
9 10 days or so, if that work permit had allowed all of the works
10 to take place, it included, did it not, the removal of the
11 hyperbaric chamber and all the things that are set out there—
12 and I needn't deal with them all now—and the subsequent work
13 permit, the one that—can we go back please to 1074 that we've
14 been spending a lot of time on—would simply never have
15 arisen, because all the work would have been done, it seems to
16 me, as I presently understand it, under that original work
17 permit? So it was only because of Dexter Guerra's error in
18 moving the barge before the permit had been issued, that this
19 new permit had to be created 10 days later in order for the
20 works to then continue.

21 So if someone could deal with that for me, I would be
22 grateful.

23 **Mr. Peterson SC:** I would, yes. I will seek to assist you
24 further, Sir, but I could immediately say that had Guerra not
25 done that that he ought not to have done, then that still doesn't
26 displace a separate permit to remove the barriers, because that
27 would have been the last act, so to speak. And that's why the

1 trend of the cross-examination was that the new riser had to be
2 installed and the longer T-tool to apply from the top to remove
3 the barriers as they did to put them in. But we'll deal with that
4 in the—we'll seek to assist you in—

5 **Mr. Chairman:** If you could, because I just want to get my
6 head around that particular aspect.

7 **Mr. Peterson SC:** I'm sure I'll be able to, Sir.

8 **Mr. Chairman:** I'll be grateful for that. Thank you.

9 Yes, and lastly, this, I had a letter, a moment ago—give
10 me a moment—from you, Ms. Persaud Maraj, in which you
11 make a number of observations. This is the letter dated the 7th
12 January headed “Camera Footage Information and Permit to
13 Work”. First of all, it seems to me that the vast bulk of that—I
14 take it this is on the website. The vast bulk of what you're
15 saying there seems to me to be partly submissions, and, you
16 know, obviously, you're entitled to make those submissions
17 during your address to the Commission.

18 The last thing you mentioned is a permit to work for the
19 15th February, 2022. Well, I think that's it, isn't it—the one
20 that we were looking at? My understanding is, a permit to work
21 lasts seven days, and, therefore, the permit to work that we're
22 looking at there—not that one, sorry; go back to page 1075—
23 yes, that one. Isn't that it?

24 **Mrs. Persaud Maraj:** That is correct, please, Mr. Chairman.
25 But in relation to the renewal of the permit—so it is issued and
26 it would be valid for seven days, we would have a daily work
27 suspension that would correlate to the days of work. So if we

1 go to page 1076 at daily work suspension, we will see the dates
2 or the times and shifts that the permit would have been
3 suspended and then, of course, when it would have been
4 reactivated, so as to say, within that time frame.

5 **Mr. Chairman:** Well, it can't be reactivated. It lapses after
6 seven days.

7 **Mrs. Persaud Maraj:** Within that time frame of seven days.
8 That's correct. Yes? So when we have gone through the
9 documents and we do know that we had—all the works that
10 would have been carried out were permitted works—there is no
11 activation for the 15th February, 2022. So we can also—

12 **Mr. Chairman:** You're saying it should appear on there?

13 **Mrs. Persaud Maraj:** It should appear there, that's correct.

14 **Mr. Chairman:** Well, it clearly doesn't.

15 **Mrs. Persaud Maraj:** Yes.

16 **Mr. Chairman:** So what are you asking for?

17 **Mrs. Persaud Maraj:** So we were asking for the actual
18 permit. We believe that there was a second permit.

19 **Mr. Chairman:** An intervening permit?

20 **Mrs. Persaud Maraj:** Yes, after this.

21 **Mr. Chairman:** But why would that be necessary? If you got
22 a permit to work as this document is setting out all the works
23 that are to be done, if it's not filled in appropriately on the back
24 of the form, then that's a point you could make, isn't it?

25 **Mrs. Persaud Maraj:** It is.

26 **Mr. Chairman:** But it seems to me that there is (a) no need for
27 a fresh permit. What there is a need for is to indicate that

1 you're lifting a suspension, if that's what you were doing.

2 **Mrs. Persaud Maraj:** Well, on that particular day was the day
3 that the hot works were done. So it was a crucial day of events
4 in the scheme of the works being performed.

5 **Mr. Chairman:** So what are you asking for?

6 **Mrs. Persaud Maraj:** So we're asking if it doesn't exist, it
7 does not exist. But we do know that they were permitted work,
8 and being that it doesn't appear on the permit, the date, that
9 material date the request is being made, for Paria to check its
10 records and, indeed, confirm same or not.

11 **Mr. Chairman:** Right. Well, the only hot works certificate
12 that I've been looking at is at 1077.

13 **Mrs. Persaud Maraj:** Yes. And that is valid for 30 days.
14 That's the certificate that goes along with the work to be done.

15 **Mr. Chairman:** Yes. And in the revalidation of conditions on
16 that document, it sets out that the work was suspended on the
17 17th February. Go to 1078.

18 **Mrs. Persaud Maraj:** And that would have been after the
19 incident with Dexter Guerra.

20 **Mr. Chairman:** Yes. Scroll 1078; scroll the other way,
21 please. Do you see there on the 17th February Mr. Marjadsingh
22 who is the applicant—

23 **Mrs. Persaud Maraj:** Work was suspended. And that would
24 have coincided with the incident with Mr. Guerra.

25 **Mr. Chairman:** Yeah.

26 **Mrs. Persaud Maraj:** Yeah. But the material time that we're
27 looking for is the 15th. It may have been—

1 **Mr. Chairman:** Right, okay. Help me, Mr. Peterson, if there
2 is a document for the 15th?

3 **Mr. Peterson SC:** 15th of?

4 **Mrs. Persaud Maraj:** Of February.

5 **Mr. Chairman:** Is there a separate work permit for the 15th
6 February?

7 **Mr. Peterson SC:** [*Inaudible*]

8 **Mr. Chairman:** I've certainly not come across one. I hadn't
9 appreciated it was necessary either.

10 **Mr. Peterson SC:** Well, I'll be surprised, because we have
11 been trying to scrub and supply everything that was relevant
12 around that time. But we will double-check. There's no harm
13 in double checking.

14 **Mr. Chairman:** If you'd do that. Thank you very much.
15 All right. I think that deals with all domestic chores that we
16 need to deal with this morning. And so, we come back to our
17 witness. Mr. Maharaj.

18 **Mr. Peterson SC:** Mr. Cheddie. Mr. Chairman, thanks for the
19 opportunity of perusing this evidence last night. I think it's
20 unfair for Mr. Cheddie to now place himself in this
21 Commission of Enquiry. I say that for this reason: The
22 Commission has been assisted by numerous divers and their
23 evidence. From reading Mr. Cheddie's statement, it seems that
24 he had the comfort of sitting, reading all the evidence online,
25 probably listening to a lot of it, and construct his statement in
26 some attempt to either answer some of the divers that came
27 before, or critique them as the case may be, without those

1 witnesses who sought to assist the Commission being given the
2 opportunity to critique his evidence. So his evidence is
3 standing pristine, unchallenged by their expertise.

4 I mean, the lawyers may now ask questions of him, but
5 we are not experts. So it would have been very helpful to this
6 Commission had we been able to match his evidence up against
7 that of his colleagues or experts in the field, so that at the end of
8 the day the Commission will have a distilled version of the
9 expert evidence that the tribunal could decide what weight to
10 attach to each, or none at all.

11 But Mr. Cheddie—and you had been—and we have been
12 taking, at times, some of the justifiable tap on the wrist and
13 sometimes clout behind the head for bringing evidence late, and
14 for dumping sometimes. But Mr. Cheddie dumped on us,
15 when, Friday, this statement, and I think it's unfair for him to
16 now be given a ride, so to speak, into the witness box and into
17 the Commission of Enquiry.

18 I read this last night. I say, well, why this—because
19 when you look at it—and I heard my friend for the union
20 dropped his name sometime last week. I didn't pay much
21 attention because I didn't know who he was. But I have been
22 advised by those who—

23 **Mr. Chairman:** I'm not clear on what your application is.

24 **Mr. Peterson SC:** I'm coming to that. I have been advised by
25 those who instruct me that Mr. Cheddie had been a feature in
26 the media on this topic since probably March—since last year,
27 and to wait until the closing hours of this Commission to now

1 come and bring this evidence, I would ask you—but I heard the
2 tenor of your ruling and interpretation of your proceedings, to
3 exclude his evidence. But if I'm overruled on that, then I ask
4 you the next best thing, apply no weight to it.

5 **Mr. Chairman:** Right. Well, can I say, first of all, I share
6 some of your concerns as I know does Mr. Wilson, that this
7 evidence is served extremely late; I can't put it any higher than
8 that; extremely late. It is why I was at pains to ensure that
9 everyone appreciated that it was in existence. I think everyone
10 was contacted—just a moment. What we were anxious to do is
11 to ensure that it went up on the website.

12 I have to say I've taken the view that being provided with
13 the statement, it was not incumbent—well, it was incumbent on
14 us to at least consider it, and the degree of weight we give to it
15 will, obviously, depend on a number of factors. I have been
16 partially troubled, I hope it's obvious, by the late service of it,
17 not least because after this witness gives his evidence we have
18 an expert giving evidence who, as far as I'm aware, has not had
19 an opportunity to even consider this either, neither has any
20 party had the opportunity to consider whether they have any
21 expert that they would wish to call that might counter what he
22 has put in his evidence.

23 There is no question that he provides some useful
24 evidence for the Commission of Enquiry, but that it is late is a
25 feature which we can't ignore. I am reluctant to exclude it,
26 tempting though that was, when I first received it so late,
27 because it does seem to me that if it can provide some

1 assistance to us overall, it's something we should consider. I'm
2 mindful, for example, Mr. Pegus yesterday made clear there are
3 things in it that affect his client, which he's had no opportunity
4 to consider and, indeed, I've no idea at this stage whether Mr.
5 Pegus will need to ask him any questions following
6 instructions. But it is unfortunate that that was not provided
7 before the witness, Mr. Seales, gave evidence, because it clearly
8 affects him.

9 So there are features about it which I don't seek to hide, I
10 am unhappy about. Our question, though, overall, is whether or
11 not the receipt of that evidence would assist the Commission
12 with all the caveats that must necessarily be applied to it given
13 the lack of time that anyone has had to consider it and the
14 lateness with which it was served. I don't know what the
15 answer to the lateness is. It sort of doesn't matter, really. So I
16 am concerned about it in the same way as you are, but I don't
17 believe it'd be appropriate for us to exclude it, although I do
18 accept that the weight to which we attach any of the things that
19 Dr. Cheddie has said, is something that will have to be
20 considered in the light of the fact that no one has had an
21 opportunity to consider it at any great length, or ought to have
22 any expert that might seek to countervail that which he is
23 saying.

24 So on the one hand, as I say, I'm not going to exclude it,
25 but I will hear submissions in due course as to the weight to be
26 attached to it and why that weight should be reduced, if
27 anything, I suspect you might say, to zero. But it seems to us

1 not right to exclude it given that it might provide some evidence
2 for us to consider. As I say, at this stage I'm just receiving the
3 evidence. I'm making no judgment about what value to give to
4 it. But I think that that's the best I can say at this stage. I'm not
5 going to exclude it. But I will hear your submissions. I will
6 hear your submissions in closing as to the weight to be attached
7 to it, if any. Mr. Pegus, can I ask you, are you proposing to ask
8 him any questions in relation to your client?

9 **Mr. Pegus:** Unfortunately, I would have to put some questions
10 to this witness, because what he included in his statement is at
11 variance with my instructions.

12 **Mr. Chairman:** Right. And had you have this in advance, you
13 would have wished to have put that to Mr. Seales when he was
14 here to give evidence?

15 **Mr. Pegus:** Definitely.

16 **Mr. Chairman:** Yes. Anybody else? I'll come to you in a
17 moment, Ms. Alfonso. I mean, I think that's the best—

18 **Mr. Peterson SC:** I have cross for him. I didn't go on to say,
19 but I have cross-examination for him.

20 **Mr. Chairman:** I imagine you would, yes; I imagine you
21 would.

22 **Mr. Peterson SC:** Yes.

23 **Mr. Chairman:** I think the best course to take is to wait until
24 after all the evidence has been dealt with, any cross-
25 examination has been concluded. And then, of course, later this
26 week you'll be able to make submissions specifically, unless
27 you wanted to make some—

1 **Mr. Peterson SC:** Yes. I wanted to state my position and not
2 wait to see if he's helpful to me. I'm taking in principle that his
3 evidence—yes.

4 **Mr. Chairman:** I appreciate that, Mr. Peterson, and I can see
5 why you would. It does not come to me as a surprise, save that
6 you're making it now rather than first thing yesterday. But I
7 understand your position and I'd take it into account in due
8 course.

9 Ms. Alfonso, you've heard what's been said and it's
10 clearly right, isn't it, that this has been served extraordinarily
11 late in the day for Counsel to have to deal with issues that it
12 raises?

13 **Ms. Alfonso:** Mr. Chairman, again, if a defence is required,
14 this was a witness that we, representing the union, would have
15 alerted the Commission to in the late part of November.

16 **Mr. Chairman:** Yes, but alerting us doesn't help us, does it? I
17 mean, what did that mean? What does that mean? Oh, we got
18 somebody who might give evidence. Well, so?

19 **Ms. Alfonso:** Okay. In the absence of a response that said,
20 well, okay, if you think that's a viable witness, then proceed to
21 prepare witness statement for him—we didn't get that kind of
22 response, so we felt that this would be somebody that the
23 Commission would, in fact, interview.

24 **Mr. Chairman:** No, no, forgive me, Ms. Alfonso. He had
25 almost nothing whatever to do with the events on the 25th.

26 **Ms. Alfonso:** Except for the short exchange that he describes,
27 no.

1 **Mr. Chairman:** Yeah. Well, I mean, with the greatest respect,
2 it doesn't really matter, does it, in the scheme of things. The
3 evidence that he gives now is as an expert giving general
4 evidence about what might or might not have taken place had
5 he been asked at the time. I understand you're submitting his
6 statement as drafted and, no doubt, put together by you and
7 him, as being in the form of an expert giving his best evidence
8 about what he thought could or could not be done on the day?

9 **Ms. Alfonso:** Indeed, that is correct.

10 **Mr. Chairman:** That's relying on expert testimony. We as a
11 Commission already had expert testimony, which is to be called
12 this afternoon or later on this morning. It was not necessary, as
13 I understand it, to go to the expense yet more expense, of
14 another expert. But if you wish to rely on one in the same way
15 as if, for example, Counsel for Paria or lawyers for LMCS
16 wanted to bring an expert forward to say it was either possible
17 or impossible to do certain things, they would have been
18 entitled to do so. But I wouldn't have expected them to have
19 handed it to us on the last days of the actual Enquiry. I mean,
20 Friday was literally the—to be served on a Friday before the
21 last two days of evidence to be heard is on any view not just
22 late but extremely late. I mean, I don't know when you decided
23 with him that you were going to be relying on his evidence. I
24 don't know what date his statement is, but I imagine it's Friday.

25 **Ms. Alfonso:** Indeed.

26 **Mr. Chairman:** I mean, look, we are where we are. My
27 castigating anybody for serving it late doesn't serve any

1 purpose at all. He has provided evidence. We took the view—I
2 took the view with our legal team and Mr. Wilson, that this was
3 evidence which we had to consider, given that it had been
4 served. As Mr. Peterson has pointed out, how much weight we
5 attach to it, given that it has been served so late, and it has been
6 such little opportunity for it to be properly tested, will depend
7 on the view we take of it, once all the cross-examination has
8 been concluded.

9 **Ms. Alfonso:** Well, Mr. Chairman, as I said, Mr. Peterson and
10 any other attorney present, and the Commission itself, can make
11 what they can from it. Certainly, Dr. Cheddie was somebody
12 who helped assist us in understanding the evidence that was
13 being led from various divers, which were either associated
14 with Paria or Heritage or called on the scene by somebody. So,
15 certainly, I say it was a resource that we used and we felt that it
16 was a resource that we should share with the Commission. I
17 said having put forward his name in November I said it—at that
18 time it did not occur to me that, okay, we should now proceed
19 to do a witness statement. That, I have to say—with subsequent
20 discussions with members of the Commission's legal team.

21 **Mr. Chairman:** Well, Ms. Alfonso, as I say, we are where we
22 are. Hundreds of names have been advanced to this
23 Commission as potential witnesses. There has to be a limit to
24 where we are drawing a line. This was a witness who said
25 virtually nothing, as I understand it, about the events itself on
26 the 25th, and was being proffered as expert. We had an expert;
27 didn't need anyone else.

1 **Ms. Alfonso:** Mr. Chairman, I said, really, we thought that we
2 were facilitating Dr. Cheddie in putting together, you know, a
3 witness statement in a viable form.

4 **Mr. Chairman:** Well, and that might be so; Ms. Alfonso, and
5 it may well be so, but, you know, serving it on Friday of last
6 week is on any view an extremely late—I mean, you don't need
7 me to tell you this. You'd been a lawyer long enough; you
8 know what the situation is. You would not have been happy if
9 representatives from Paria had dumped a statement on you of
10 this kind of detail days before the conclusion of the Enquiry.
11 You would not have been happy, and you would be
12 understandably unhappy. But that's where we are, isn't it? I
13 mean, unfortunately, that's what happened.

14 As I've said, I'm not going to exclude it for pretty much
15 the same reasons that I've identified in the admissibility of the
16 victims' families. We have a very broad remit. We're entitled
17 to take into account all the evidence. What we determine is the
18 weight to be attached to that evidence will come in due course
19 when we take our time to consider all of the evidence in the
20 round. And I will have to bear in mind that this is a witness
21 who was served so late that people have had very little
22 opportunity to digest it to be able to get any contrary evidence
23 from other expert testimony.

24 None of us are experts in this field. And so, we will have
25 to consider the extent to which anything he says is either
26 corroborated elsewhere and/or is capable of being accepted
27 because it's not contradicted or sought to be undermined. But

1 where it is, we would have to give it very careful consideration
2 as to whether we can accept it at all. That's where we are. All
3 right? But I will hear in the course of the next three days any
4 submissions that anyone wants to make about it.

5 **Ms. Alfonso:** And, certainly, we would try to address it as
6 well, Mr. Chairman, in my closing.

7 **Mr. Chairman:** All right.

8 **Ms. Alfonso:** Again, I want to assure the Commission we were
9 attempting to be helpful and to facilitate this witness.

10 **Mr. Chairman:** I'm sure, I'm sure you were. Let's, without
11 any further ado, get him in and conclude his evidence. Yes.
12 Can we have Dr. Cheddie, please? Mr. Peterson, do you want a
13 formal ruling on this?

14 **Mr. Peterson SC:** Yes, Sir. Well, I take what you said as a
15 ruling, Sir.

16 **Mr. Chairman:** It is. I mean, I can formalize it in a way if
17 you particularly wanted to. But, I mean, I make it clear that
18 what I've said to you in reply to your application for the
19 exclusion of it and in relation to its weight, will form the basis
20 of a judgment if you wanted. I take it that that is my judgment
21 on the matter.

22 **Mr. Peterson SC:** That's good enough, Sir. Once you put it in
23 that—I take that as your rationale—as an oral judgment.

24 **Mr. Chairman:** I'm grateful. That saves me an evening.
25 Thank you very much.

26 **Mr. Peterson SC:** If I knew that, Sir, then could I back—
27 [*Laughter*]

1 **Mr. Chairman:** Yes, thanks for that. Dr. Cheddie, please.
2 Doctor, you're still on oath, all right?

3 **Dr. Cheddie:** Yes, Sir.

4 **Mr. Chairman:** And we were about to hear cross-examination
5 from—I believe it was Mr. Pegus, yes. Mr. Pegus, I understand
6 you've taken some instructions and you do have questions for
7 this witness?

8 **Mr. Pegus:** Indeed, so, Mr. Chairman.

9 **Mr. Chairman:** Yes, all right. Well, go ahead. Just give me a
10 moment. I need to just find my copy of it. I'm sorry, Doctor. I
11 just can't find my copy of your statement at the moment. I
12 need my copy, because I've marked it quite considerably. I'm
13 not going to hold up proceedings any further. I'll have to look
14 at the screen and make my notes in due course.

15 Yes, Mr. Pegus, please proceed. I'm sorry about that.

16 **Cross-Examination By Mr. Pegus:**

17 Q. Good morning, Dr. Cheddie.

18 A. Good morning, Sir.

19 Q. My name is Chase Pegus, and I represent the interest of Kenson
20 and also Mr. Rolph Seales specifically.

21 A. Yes, Sir.

22 Q. Now, you filed before this Commission a statement dated the
23 6th January, 2023?

24 A. Correct.

25 Q. Good. Now, in preparing your statement, did you have any
26 contemporaneous notes relative to the day of the incident to
27 refer to?

1 A. Contemporaneous notes before the incident? Say it again;
2 before the incident?

3 Q. Okay. Let's start somewhere else. What day you started
4 preparing this statement?

5 A. The statement was prepared—well, I had it in scrap on notes
6 that I had made up from since this entire incident happened,
7 right, on the 25th in my brain as well as in writing stuff. So on
8 this particular statement when I was asked to make it, that's
9 when I did it. I'm trying to remember sometime—in November
10 around there I had contacted through the OWTU or something
11 and I always felt as though I would have a witness statement to
12 make. So I started preparing one.

13 Q. Okay. So it's fair to say that you started the construction of this
14 statement in November 2022. Yes?

15 A. Around November, sometime. Yes, Sir.

16 Q. Right. Now, when you started the preparation of this statement,
17 these proceedings, the Commission of Enquiry had already
18 begun. Yes?

19 A. Yes.

20 Q. Right. And, in fact, in your statement you made reference to
21 reviewing documents filed before this Commission?

22 A. Quite so.

23 Q. Right. So you made your statement with the benefit of having
24 reviewed evidence which was already before the Commission.
25 Yes?

26 A. Yes, Sir. Yes, Sir.

27 Q. Good. Now, you are aware that Mr. Seales gave evidence in

1 this matter last week—a day last week. Yes?

2 A. Yes, I heard that, yes.

3 Q. Good. And your statement was filed after Mr. Seales left the
4 witness box. Agreed?

5 A. Yeah, it was filed on Friday, correct, yes.

6 Q. Right. Now, you made reference to having the benefit of
7 contemporaneous notes in preparing your statement earlier.
8 Yes?

9 A. Yes, yes.

10 Q. Do you have those contemporaneous notes to place before the
11 Commission today?

12 A. Today? No.

13 Q. Good. Can you locate those notes?

14 A. I will be able to. It should be on my computer somewhere,
15 yeah, under the COE.

16 Q. Good. And, of course, you would have no difficulty forwarding
17 those contemporaneous notes to the Commission?

18 A. Yes.

19 Q. Good. Now, I want to focus specifically on paragraphs 5 to 9
20 of your witness statement, and I will take you through some of
21 what you said in turn. Yes?

22 A. Yes.

23 Q. Right. Now, before we proceed, Sir, I just want to make it
24 abundantly clear that this is the only part of your statement that
25 I intend to take issue with. Right?

26 A. Yes, Sir.

27 Q. Good. Now, at paragraph 5, I'm reading specifically—okay, so

1 from the first line you indicated:

2 “At or around 2045 hours on the 25th February, 2022, I
3 received a call from Rolph Seales.”

4 And you then go on to say:

5 “He informed me that four divers were sucked into a
6 pipeline operated by Paria Fuel Trading Company.”

7 Yes?

8 A. Yes.

9 Q. Good. Now, my instructions are that Mr. Seales never provided
10 you with that information.

11 A. Okay.

12 Q. What say you?

13 A. Okay. Well, Mr. Seales had called me, as I said, on the time
14 there, and I know exactly the time was around that time,
15 because I do not answer my phone at home, my personal phone,
16 any time after ten.

17 Q. Sir—okay.

18 A. So at 2045 I would have answered my phone because at that
19 time I’m around, and that’s my personal number.

20 Q. Okay, good.

21 A. So when I answered that number, well, of course, I don’t know
22 the number that was calling me. And on the phone was—he
23 said, “Aye, Glenn, it’s Rolph”. Then I say Rolph Seales? He
24 say, yeah. I said okay. Then he asked me if I have a ROV as
25 such; not the exact words, but do I have a ROV. I say, yeah, I
26 have a ROV. Where you heard about that? He say, “Well, you
27 know, I just heard that you have a ROV.” I say, okay; what do

1 you—you know, what's going on? Remember, this is a past
2 student of mine, so we will have a conversation.

3 Q. Mr. Cheddie, may I interrupt, please?

4 A. Yes, sure.

5 Q. Right. The time that you mentioned in your statement is very
6 specific. You agree?

7 A. It says at or around.

8 Q. Okay. But 2045 is a specific time?

9 A. Yeah, at or around.

10 Q. Good. Okay, at or around; let's have it your way. Did you
11 make any contemporaneous record of having received a call at
12 that time?

13 A. No.

14 Q. Good. When you had this conversation with Mr. Seales, you
15 had no idea that there were going to be four dead men?

16 A. Of course not.

17 Q. Good. You had no idea that there was going to be a subsequent
18 Commission of Enquiry?

19 A. Of course not.

20 Q. Good. And lastly, you had no idea that you would at some
21 point in the future, almost a year after, provide a witness
22 statement anywhere. Agreed?

23 A. Agreed.

24 Q. Right. Now, you go on to say in your—at the same paragraph
25 5:

26 “I asked who these divers were and heard two names I
27 was familiar with as being former students.”

1 You mentioned the names Kurban and Nagassar. Yes?

2 A. Yes.

3 Q. Is it your evidence that you received this information from Mr.
4 Seales at or around 2045?

5 A. Yes.

6 Q. Good. I'm suggesting to you, Sir—well, I'm putting to you that
7 Mr. Seales, at that time, was not in possession of that
8 information.

9 A. Okay. Well, he told me. I asked him because it's only a logical
10 question I would ask: "What do you want my ROV for?" And
11 he said it's for a pipeline, and I asked him why—

12 Q. Sir, we'll get to the ROV. Right? You mentioned the names of
13 two men?

14 A. He mentioned those two names to me.

15 Q. And I am putting it to you that at or around 2045 he was not in
16 possession of that information.

17 A. Okay.

18 Q. Now, at paragraph 6 of your witness statement, Sir, you further
19 stated:

20 "I immediately inquired from Mr. Seales as to whether
21 the divers were on scuba equipment and he responded in
22 the affirmative."

23 Yes?

24 A. Yes.

25 Q. Good. Are you aware that Mr. Seales did not work on the Paria
26 compound on the 25th February, 2022?

27 A. No.

1 Q. Good. Are you aware that Mr. Seales did not play an active
2 role in managing this incident when it was known that people
3 were sucked into the pipeline?

4 A. No. I just had a call.

5 Q. I am putting to you—

6 **Mr. Chairman:** What do you mean by active role?

7 **Mr. Pegus:** He was not part of—okay, I would put the
8 question specifically.

9 **Continued Cross-Examination By Mr. Pegus:**

10 Q. Mr. Seales was not part or the any Incident Command Team.

11 A. [*No response*]

12 Q. I'm putting that to you.

13 A. Okay. I don't even know what an Incident Command Team
14 was at the time. So, no.

15 Q. And let me put to you, Sir, that Mr. Seales back then was not in
16 a position to say to you that the men were using scuba
17 equipment.

18 A. I asked and he answered, and the reason I would ask because
19 that's my passion, I need to—I wanted always to know how
20 divers die in Trinidad, so I asked.

21 Q. Sir, at that time there wasn't any question about anybody dead.

22 A. Right. They were in a pipeline and I asked who was there,
23 right, who was there, and then he mentioned what went on;
24 because I had to know where my ROV was going to work. It
25 was only logical. I'm the pilot for the ROV.

26 Q. Okay. Now, Sir, you went on to say—I'm putting to you that
27 Mr. Seales was not in a position to give any indication as to

1 what equipment was being used. Right? Good. You went on
2 to say that you told Mr. Seales that divers ought not to have
3 used scuba equipment for commercial diving operations.

4 A. Yes.

5 Q. Is it your evidence that at that time you were aware that the
6 exercise that was undertaken by the LMCS divers required
7 commercial diving equipment?

8 A. No.

9 Q. Okay. Let's stop there for now. Mr. Seales—nowhere in your
10 narrative up to this point did Mr. Seales tell you anything about
11 the exercise that was being conducted on the day. It's not in
12 your statement.

13 A. No, he did not say the exercise.

14 Q. Good. Therefore, Sir, you would agree that there was no
15 basis—we're going based on your narrative. Right?

16 A. Good.

17 Q. Good. You would agree that there was no basis for you making
18 that statement relative to commercial diving operations.

19 A. Yes, I had a right to make that statement. Because as I said
20 before, divers in this country, right, divers in this country—a lot
21 of divers die in this country because of scuba. So when I heard
22 that people were sucked into a pipe I asked that question. It's
23 my passion. I needed to know that.

24 Q. Right. Now, Dr. Cheddie, what I'm suggesting to you, Sir, is
25 based on the narrative you provided in your statement. We're
26 only going with what is there.

27 A. Correct.

1 Q. We're not attacking your passion. Right?

2 A. Right.

3 Q. I appreciate that you're passionate about this. We're only going
4 based on the narrative that you placed before this Commission.
5 Agreed?

6 A. Yes.

7 Q. Right. Mr. Seales did not inform you or did not give you any
8 information relative to the task that was being undertaken.
9 Agreed?

10 A. Agreed.

11 Q. Good. Now, paragraph 7—okay, well, you might be happy to
12 know he accepts that he did enquire from you whether you had
13 an ROV.

14 A. Yeah.

15 Q. Good. Right. Your response to that enquiry, Sir, was that your
16 ROV was located in Guyana?

17 A. I told him I had two; one was going to Guyana and one in
18 Trinidad which was now going to be assembled.

19 Q. On the 25th February, 2022, you had any business in Guyana?

20 A. Yeah, we were starting a Guyana business under one of our
21 companies.

22 Q. You had any equipment in Guyana?

23 A. It was going to be sent.

24 Q. It was going to be sent?

25 A. Yeah.

26 Q. Right. Now, focusing on paragraph 8, Sir, you said in your
27 statement:

1 “I further informed Mr. Seales that I remain available to
2 help and assist with respect to the rescue of the divers.”

3 Now, I’m happy that that was your position. Let me put to you
4 that you did not say that to Mr. Seales. My instructions are that
5 you had no such conversation with him.

6 A. As an instructor, as a diver—

7 Q. Sir, no; is either yes or no.

8 A. I had—yes, I had it. Yes, I had that—

9 Q. Okay, well, right. So I’m just putting what my instructions are
10 and you respond.

11 A. Okay, well, yes, I had that in—

12 Q. And where you go on to say, Mr. Seales responded stating that
13 he would let me know.

14 A. Yeah.

15 Q. My instructions are that he said no such thing to you. That’s
16 my instructions.

17 A. Yeah, he said such.

18 Q. And focusing on the last line of paragraph 8:

19 “I then told Mr. Seales that an air umbilical ought to be
20 inserted into the pipeline as soon as possible in order to
21 assist the trapped divers who may be able to reach same.”

22 My instructions are, Sir, that you said no such thing to Mr.
23 Seales.

24 A. I said that to him.

25 Q. Good. Now, Sir, earlier you indicated—and we’re almost at an
26 end. Earlier you indicated that you would have reviewed
27 documentation which were previously filed before this

1 Commission. Yes?

2 A. I didn't review the documents. I just heard or read on the
3 papers, that's all. Not review as in—you mean, like, going and
4 looking at the documents themselves on the website as such?
5 No, I never did. I reviewed things like on the Guardian or
6 whatever on the papers, that sort of thing. That's what I meant.

7 Q. Okay. And what you said there is true. Yes?

8 A. Yes. I would have read about it.

9 Q. Good.

10 **Mr. Pegus:** Can the witness be taken to paragraph 16 of his
11 statement please?

12 [*Paragraph shown to Dr. Cheddie*]

13 **Continued Cross-Examination By Mr. Pegus:**

14 Q. Good. Now, read the first line of paragraph 16.

15 A. Yeah. Well, that's what I meant about the review file—

16 Q. No, no, no—

17 A. From my review of documents filed before this Commission—

18 Q. Okay, okay. Hear me out; hear me out.

19 A. Go ahead.

20 Q. Now, just less than one minute ago you indicated under oath to
21 the Chairman and his Co-Commissioner that you did not review
22 any documents filed before this Commission. Do you accept
23 you said that?

24 A. Yeah, I accept I said that.

25 Q. Good. Do you accept that what you're saying at the beginning
26 of paragraph 16 is, "From my review of documents filed before
27 this Commission", and then you continue?

1 A. Yes.

2 Q. Good. Now, you appreciate that on the one hand saying you
3 didn't review anything that was filed before the Commission, is
4 different from making a statement that you reviewed documents
5 filed before the Commission?

6 A. Correct, yes.

7 Q. Good. And if you appreciate that it's different, you agree that
8 both of them cannot be the truth?

9 A. Well, it's how you read it.

10 Q. No, Sir, no, Sir, no, Sir, no, Sir. Dr. Cheddie, please—

11 A. Because in my view—I know, but wait. Can I have a word?

12 Q. No. You answer my question as—

13 A. No, I understand what is there, you know, “From my review of
14 documents filed”—

15 Q. Dr. Cheddie, please, please. Right? I am only interested in the
16 answer to my question.

17 A. Okay.

18 Q. I know you are familiar with the proceedings. The learned
19 Chairman would give you the opportunity to say whatever it is
20 you want to say after.

21 A. Okay, go ahead.

22 Q. Good. Saying to the learned Chairman that—and didn't review
23 anything filed before this Commission is something totally
24 different from saying in your statement, “From my review of
25 documents filed before this Commission”. Yes?

26 A. Yes.

27 Q. Good. In the later statement what you are saying here is that I

1 did, in fact, review documents filed before this Commission?

2 A. Yes.

3 Q. Good. And you agree, lastly—I'm not going to ask you which
4 one is the truth or not—you agree both of them cannot be the
5 truth? You can't say on the one hand, "I didn't review
6 anything", under oath you said that from your chair there this
7 morning?

8 A. Which is quite true.

9 Q. Good, right. Both of them cannot be the truth. Yes?

10 A. Yes.

11 **Mr. Pegus:** Okay. Thank you very much. No further
12 questions for this witness.

13 **Mr. Chairman:** Before you leave, Mr. Pegus, do I understand
14 from the line of cross-examination that you've taken that the
15 only conversation had between Dr. Cheddie and your client,
16 Mr. Seales, was about the availability of an ROV?

17 **Mr. Pegus:** Yes, those are my instructions. Mr. Seales accepts
18 that he did call Dr. Cheddie. It was around nine o'clock in the
19 night in question. Sometime thereafter, he enquired whether he
20 had in his possession an ROV, and the answer that he was given
21 is that his ROV was in Guyana. They didn't have any
22 conversation about what took place simply because Mr. Seales
23 didn't have that information, and the learned Chairman would
24 be aware that Mr. Seales gave evidence before this Commission
25 and he did indicate such.

26 **Mr. Chairman:** And nothing else was discussed? Is that—

27 **Mr. Pegus:** Nothing else was discussed. My instructions

1 are—and I'm sorry to be doing it this way—when Dr. Cheddie
2 indicated that his ROV is in Guyana, that was the end of the
3 exchange that they had on the night in question.

4 **Mr. Chairman:** Right. Thank you very much.

5 **Mr. Pegus:** Much obliged. Thank you.

6 **Mr. Chairman:** I think then next—everybody else is content?
7 Yes. Right. Then it is you, Mr. Peterson.

8 **Mr. Peterson SC:** Thank you very much, Sir.

9 **Cross-Examination By Mr. Peterson SC:**

10 Q. Good morning, Mr. Cheddie.

11 A. Good morning.

12 Q. Dr. Cheddie. Sorry. When did you first learn of this incident
13 on the 25th February?

14 A. On the same night that—2045, when I got the call.

15 Q. Oh. So before Mr. Seales called you, you didn't hear about
16 this?

17 A. No.

18 Q. He called and told you about this incident?

19 A. Yes, about the ROV.

20 Q. And you said he informed you that four divers were sucked into
21 the pipe?

22 A. That's what he said.

23 Q. Right. He having informed you that four divers sucked into the
24 pipe, you with all your experience, urgency of rescue came to
25 mind?

26 A. Correct, yes.

27 Q. Time is of the essence?

1 A. Well, yes.

2 Q. Well, when you say, “Well, yes”, what you mean?

3 A. Well, I only heard about 2045 in the night.

4 Q. Right.

5 A. So I didn’t know exactly what time it happened and all those
6 things. That’s what I meant.

7 Q. Right, exactly. But time being of the essence would occupy
8 your mind because men sucked into a pipe, you being a diver?

9 A. Yes, Sir.

10 Q. The next logical question is, how long they in the pipe?

11 A. Yes, it is a logical question.

12 Q. But did you pose that logical question?

13 A. No.

14 Q. All right.

15 **Examination By Mr. Chairman:**

16 Q. Can I be clear, were you told it was four men sucked into the
17 pipe or five?

18 A. Yes, I asked—no, I just told four.

19 **Mr. Chairman:** Thank you.

20 **Continued Cross-Examination By Mr. Peterson SC:**

21 Q. Yes, because in your statement you said he informed me that
22 four divers were sucked into a pipe—a pipeline?

23 A. Correct.

24 Q. And he asked you for your ROV?

25 A. Yes, he did.

26 Q. Your next question was what size of pipe?

27 A. Yes, because of the size of the ROV.

1 Q. Right. And your ROV could not fit.

2 A. No, cannot.

3 Q. What you understood to be the purpose of employing that
4 ROV?

5 A. That's what I asked him, and he said it was to go into the pipe
6 to look for the divers. That's why I asked. It is only logic I ask
7 that question.

8 Q. Without asking that, you in your experience and owning two
9 ROVs didn't know the purpose of it?

10 A. For what? I'm sorry, I don't understand. I don't understand.
11 The purpose of the ROV?

12 Q. You didn't know the purpose of an ROV?

13 A. Yes, of course. You asked a different question just now?

14 Q. Which is?

15 A. You asked me what would the ROV be used for.

16 Q. Right.

17 A. Right, to go into the pipe to look for the divers. That's what he
18 said.

19 Q. Right. And you understood the wisdom of using an ROV at
20 that time to go into the pipe?

21 A. At that point in time, yes.

22 Q. Now, as you sit there, you are critical of that employment of the
23 ROV or attempt to employ the ROV?

24 A. Not totally critical of the—

25 Q. Some critical?

26 A. Some critical, yeah, part of using an ROV.

27 Q. And the extent of your criticism is what?

1 A. ROVs work by propellers like a drone, underwater drone. And
2 if there are sediments in the pipe or if there is oil in the pipe as
3 well or anything, it could affect the propeller, and the ROV
4 would not move again. It may just shut down.

5 Q. So you didn't advise him against using an ROV?

6 A. I didn't know about pipe—with oil, and all those things. I
7 didn't advise against it. I didn't have any information to not
8 advise.

9 Q. Right. And you enquired from him the identity of the four
10 divers?

11 A. Well, I asked him, yes.

12 Q. And according to your statement, you learnt it was Nagassar
13 and Kurban?

14 A. Yes.

15 Q. Two of your students?

16 A. That's when I heard the names, yeah, and that's why I won't
17 forget.

18 Q. Well, Mr. Pegus dealt with you and that. Two of your former
19 students?

20 A. Correct.

21 Q. You consider yourself to be a very effective instructor?

22 A. Yes, Sir.

23 Q. You realize from your statement your student seemed to
24 disregard what you taught them?

25 A. Yes, Sir.

26 Q. Not only one student?

27 A. But two.

1 Q. Two. What about the other two divers?

2 A. I now going to tell you. It's Michael, Andrew, Fyzie, and
3 Rishi.

4 Q. All were your students?

5 A. Four, yeah.

6 Q. And all of your students disregard your teaching?

7 A. Yes.

8 Q. As a teacher I would have had a problem.

9 A. Yeah, because I'm not with them anymore. I wasn't with them
10 at the time.

11 Q. Yeah. But you know there's a saying that nothing is taught
12 unless it's learned. You know that?

13 A. There are many—yes, I heard that saying, correct.

14 Q. Right. You taught them never to use scuba in that kind of
15 commercial exercise?

16 A. Correct.

17 Q. Not only one of them, four of them you taught that?

18 A. All of them.

19 Q. What you taught them should be used?

20 A. Surface supply in habitants.

21 Q. And you also taught them about Delta P in that situation?

22 A. Yes. They would have seen the videos on Delta P and they
23 would have gone through the manual.

24 Q. No, I ain't ask you what they see. What you taught them about
25 Delta P in that scenario?

26 A. Not in that scenario; not in a habitat scenario. It would have
27 been Delta P on the whole—general.

1 Q. Well, I heard you said something earlier to Mr. Pegus that many
2 divers die in this country using scuba?

3 A. Yes, Sir.

4 Q. Name me two divers who died in this country using scuba?

5 A. I couldn't remember the name, but I know the situations.

6 Q. Give me the situations?

7 A. In 2018, or around '18 or '19, there was a diver who was doing
8 ship husbandry, which is cleaning underneath those big tankers
9 and he was on scuba and he ran out of air and he died, and it's
10 for a company situated here in Trinidad. There was another
11 young boy who was using—he was a PADI certified, and they
12 were cleaning some chains for a barge or such at 60 feet, and he
13 had another helper with him. And they were using—one was
14 using the primary and one was using the octopus. One was
15 certified; the other one was not. The one who was not certified
16 rushed to the surface for whatever reason and he arrived at the
17 surface—that was a 60-foot depth—they found him frothing at
18 the mouth and he died shortly after.

19 Q. But did you not tell this Commission yesterday that it's
20 appropriate to use scuba to clean under vessels?

21 A. I wouldn't have said that. I would have said small vessels.
22 You can scuba to clean under small vessels.

23 Q. You didn't describe the vessel. You said to this Commission
24 yesterday—

25 A. I can't remember saying that, Sir. I really can't remember but I
26 would have said scuba—you have scuba commercial. You can
27 use scuba for certain jobs. Nothing is wrong with using scuba

1 for certain jobs. Our draft for standards has scuba commercial
2 in it.

3 Q. So when you decided in this narrative that scuba was wrongly
4 used at Paria on the 25th?

5 A. Once I heard scuba and I heard that Paria—because I asked him
6 Paria—all I coulda think was oil and gas. You don't ever use
7 scuba for any oil and gas jobs. That's all I heard, and that's
8 when I made that statement.

9 Q. But you didn't know the nature of the job?

10 A. No, I did not know the exact nature.

11 Q. You didn't know whether it was to clean barnacles off one of
12 their tugs?

13 A. No.

14 Q. But right away you say scuba shouldn't be used?

15 A. I just—yeah, it's just me and scuba.

16 Q. And nothing wrong using scuba to clean barnacles off the tugs
17 at Paria?

18 A. It depends on the tugs and it depends on the depth and the
19 visibility.

20 Q. What dependent on the tug you're talking about?

21 A. Right; the size of the tugs. The same thing with ship
22 husbandry; it's the size of the tugs.

23 Q. What's the average size of tugs in Trinidad? There's one
24 parked outside there.

25 A. I don't know. They have them from 50 feet to 100 feet. It's not
26 so much the length; it's the width.

27 Q. How wide are the tugs in Trinidad, Dr. Cheddie?

1 A. You might get them about 30 feet, 40 feet. The idea below a
2 tug, Sir, is that you must have access to the surface. The diver
3 must have access to the surface. And if he's cleaning
4 underneath a tug, be it small like about 20, 30 feet, it would
5 become dirty. It become like soup below there. The diver
6 wouldn't see where he's going.

7 Q. I'm talking about cleaning barnacles, you know?

8 A. Yeah, it's the same—that's what cause the mess underwater,
9 the dirtiness—the barnacles.

10 Q. All right. Let's move on. So to clean barnacles under a vessel
11 like a tug, you need commercial diving equipment, no scuba?

12 A. As I said, it depends on the width of the tug. But I would
13 always recommend surface supply; always.

14 Q. How long you got your certification in surface supply?

15 A. In 2010.

16 Q. Twenty-fifteen?

17 A. Somewhere around there, yeah.

18 Q. That's just the other day?

19 A. Yes, Sir.

20 Q. How many commercial dives have you supervised in this
21 country?

22 A. My students, maybe about 100, around there, supervised, yeah.
23 Mostly my students in school.

24 Q. No, no, I ain't talking about training. I'm talking about—

25 A. No; outside? No, no.

26 **Examination By Mr. Chairman:**

27 Q. That's not quite the same thing. I understand him to be asking

1 you how many supervised dives employing that equipment
2 have you been involved in?

3 A. No, none, except for school in Trinidad.

4 Q. Right. So all you've done is the training. You've never
5 actually done any practical?

6 A. No.

7 **Mr. Chairman:** Right. I thought that's what you were asking
8 him.

9 **Mr. Peterson SC:** Yes, Sir, yes, Sir. Thank you very much.

10 **Continued Cross-Examination By Mr. Peterson SC:**

11 Q. So you have done no company—you have not worked for any
12 of the companies in Trinidad—major diving, commercial
13 diving?

14 A. No.

15 Q. Because I observed in your purported expertise that you had 30
16 years' experience, and 100 hours booked?

17 A. Yeah; I dived before.

18 Q. No, just now. I don't know you before, Dr. Cheddie. I'm
19 going on what I'm reading here.

20 A. Yeah.

21 Q. A hundred hours?

22 A. Yes.

23 Q. Thirty years?

24 A. Yeah.

25 Q. That sound like three hours a year?

26 A. The 30 hours is with scuba as well as with commercial diving.
27 That 30 years incorporated both. The scuba was the main part

1 in the beginning. That's where all my 30 years came from;
2 mostly scuba.

3 Q. So that 100 hours is spread over what time?

4 A. Whatever you spread over from when I was in Canada doing
5 my training as well into Trinidad.

6 Q. You logging hours of training as years of experience? It's like
7 a lawyer being in law school for 10 years, and saying dey hah
8 10 years' practice?

9 A. We can log our dives—we have to log our dives to become
10 supervisors. Because to become a supervisor you have to have
11 logged dives. And every time you carry a student down under
12 water, you log that as well.

13 Q. So you have a 100 hours?

14 A. Yes, Sir, that's logging hours.

15 Q. Inclusive of your training to become a commercial diver?

16 A. No. To become a commercial diver you don't have to have 100
17 hours.

18 Q. No, I know. We're tabulating your 100. Your 100 is inclusive
19 of your training?

20 A. Yes, Sir.

21 Q. Not experience?

22 A. No. The experience, as far as what I'm understanding, the
23 experience would be while I am with the students. That is
24 experience. Logging our dives as well; not personal with the
25 hat and hose alone.

26 Q. So post qualification, how much experience you have post
27 qualification? How many hours?

1 A. Right. Post qualification, I would have had maybe about 20
2 hours; not much.

3 Q. That sound like a week of diving.

4 A. It's not a week of diving. You dive in an hour when you have a
5 time, a two hours, that sort of thing.

6 Q. We know. We get evidence in this Commission before, you
7 know. So you have about 20 hours' post qualification dive
8 experience—commercial dive experience?

9 A. Yes.

10 Q. And you think that that qualifies you to be critical of Paria and
11 other diving operations in this country?

12 A. No, wait. Maybe I am—maybe I misunderstood you about my
13 20 hours.

14 Q. No, you've been very clear.

15 A. I am critical when I'm—I'm also a supervisor, so I had to have
16 all those hours logged as a supervisor. I'm a diving supervisor.
17 I'm not just a diver.

18 Q. I asked you post qualification as a commercial diver, how many
19 hours' experience you have?

20 A. Oh, sorry, post. I thought I heard pre. Sorry, that's my fault.

21 Q. You're mixing up post and pre?

22 A. Well, I wasn't listening maybe that well. Post as a diver,
23 commercial diver you're talking about?

24 Q. Yeah.

25 A. I would have had close to maybe about 75, 80 logged dives,
26 around there; that would be supervising. Every student—

27 Q. No, no, no—

1 **Examination By Mr. Chairman:**

2 Q. Can I ask, do you have your logbook?

3 A. Yes, I have a logbook. I have to get it, yeah.

4 Q. Is that available?

5 A. Yes. I just have to find it.

6 Q. You just have to find it?

7 A. Because, I mean, I retired a long while now. It would have
8 been in the office somewhere.

9 Q. I mean, a logbook is quite important for a diver, isn't it, to log
10 your dives?

11 A. Yeah, but, I mean, I'm retired. So—

12 Q. I mean, the logbook shows where you dived, how deep you've
13 dived, how long you were diving for, the conditions you were
14 diving in, all of those things, isn't it?

15 A. Okay, yeah. Well, let me explain how this works with the
16 diving. How diving operates is that as a supervisor, every
17 student you send down, you're able to log it as dive time, not
18 just for students themselves alone, but for you as well as the
19 supervisor. That's how it is. The main thing I have is a diver's
20 supervisor's logbook with the hours in it.

21 **Examination By Commissioner Wilson:**

22 Q. Mr. Cheddie, excuse. Can you tell this Commission how many
23 hours are required to get a dive supervisor ticket?

24 A. Right. That's what the thing is. Um, this was a long time ago.
25 I think it's about, um—I can't remember exactly, and I don't
26 want to say the wrong thing. You had to have an unrestricted
27 or a card and to get that card you would have had to do about

1 10 to 20 dives, commercial diving, to become a commercial
2 diver first. And then after you become a commercial diver,
3 then you do supervisor exam as such, which I did, to become a
4 supervisor, right after you do your commercial diving.

5 Q. Did you go straight to supervisor or did you have to be
6 competency assessed from assistant dive supervisor before you
7 progressed on to dive supervisor?

8 A. Yes, yes; that's what I was doing in Canada.

9 Q. So, again, where are the hours?

10 A. When I went to Canada I was learning how to be a supervisor
11 while I was there.

12 Q. So was it the certification you were going for was Assistant
13 Dive Supervisor before you progressed?

14 A. No.

15 Q. It was straight to a dive—

16 A. Straight to supervisor.

17 Q. And, again, how many hours taking you from—

18 A. Assistant—

19 Q. Assistant. Oh, so you recognize that there is the assistant dive
20 supervisor before supervisor?

21 A. From the—yeah. But, you know, there's no assistant
22 supervisor card. There was just, like, you would do your
23 supervisor exam and get certified as a supervisor.

24 Q. And, again, how many hours before you prequalify to do that?

25 A. Once you have your unrestricted or your ADCI card, you can—
26 I can't remember exactly how many hours, but there is
27 something about hours, but I can't remember. I could always

1 check that.

2 Q. And which accrediting body is this? Because it's—

3 A. I did ADCI as a supervisor.

4 Q. ADCI?

5 A. Yeah. And I was trained under the DCBC, which is the Divers'
6 Certification Board of Canada first. And then when I applied
7 for my school to open, I had to have all those credentials for the
8 ADCI to see. They had to view all those things.

9 Q. Just your diving credentials?

10 A. Yes, Sir.

11 Q. Under the ADCI, was your training facility ever audited?

12 A. Yes, it had to be.

13 Q. Okay.

14 A. It failed the first audit and then I got it the second time.

15 Q. You got it the second time?

16 A. Uh-huh.

17 **Commissioner Wilson:** Thank you.

18 **Continued Cross-Examination By Mr. Peterson SC:**

19 Q. Dr. Cheddie, after you were certified as a commercial diver—

20 A. Yes, Sir.

21 Q. —before you became a supervisor—

22 A. Yes, Sir.

23 Q. —how many dives did you do—commercial dives?

24 A. I would have done enough. I think it was about 20—

25 Q. Enough?

26 A. I'm trying to remember. This is like in 2015, around there, and
27 I would have done before that. I'm trying to remember how

1 many dives I did. I can't remember exactly. I really can't
2 remember.

3 Q. Approximately?

4 A. Maybe about—before I did my supervisor you're asking,
5 correct?

6 Q. Yeah; qualification as a freshman, as a fresh minted commercial
7 diver before you get to supervisor, how many dives you did
8 between there?

9 A. I would have done about, I'm thinking about 30 dives.

10 Q. Name five companies you did that for in Trinidad?

11 A. No, no, wait, you mean like in Trinidad, five companies?

12 Q. Yeah. Name three. I will knock off two. Name three.

13 A. We did—not for companies, I didn't do it for companies. I did
14 it for like—

15 Q. So that's none? The answer is none. How many companies
16 you did commercial dives for? The answer is—

17 A. No, now you're asking me how many companies—

18 Q. No.

19 A. No, you asked me how many dives I had before.

20 Q. Please. How many companies. I say name five.

21 A. No. Before—sorry; before you asked me how many
22 companies, you asked me how many dives I had.

23 Q. Yes.

24 A. Right. Now, you ask me how many companies.

25 Q. I asked you that before.

26 A. You don't necessarily have to—I did not dive for companies as
27 such.

1 Q. Right.

2 A. We were doing our private jobs. We were doing private jobs
3 underwater—

4 Q. Name five private jobs you did—commercial diving jobs?

5 A. Right, commercial diving jobs. We did one on Gasparee Island,
6 a couple on Gasparee Island for a jetty there, to clear the jetties
7 and underwater works on the jetties; that's in Gasparee itself.
8 And then we did some for removing of small wrecks
9 underwater.

10 Q. Uh-huh.

11 A. Yeah, that's about it, really.

12 Q. That's about it?

13 A. Yeah, that's about it.

14 Q. That's two?

15 A. No, no, it's more than one job on the same jetty. It would be
16 long.

17 Q. So what, each pile of the jetty you count as a job?

18 A. No, the hours that you will go down, you can't stay long. So
19 we would have done like—

20 Q. I didn't ask you hours; number of dives?

21 A. Okay. Like in one day we may have done two dives or three
22 dives. And then the next day we would have done maybe two
23 again. That's how it's done for diving.

24 Q. So those numbers you gave me, you could have done all of that
25 in a week or two?

26 A. If the job was available, I suppose. If the jobs were available.

27 **Examination By Commissioner Wilson:**

1 Q. Mr. Cheddie, excuse, let me interrupt. What was the mode of
2 diving you used for those jobs you described?

3 A. We used surface supply with the—we had our own hose and
4 equipment set up. It wasn't like established like the big ones
5 like we have now.

6 Q. No problem. And as a practitioner in the industry and your
7 awareness of standards, you do have those dive logs?

8 A. Those dive logs for that time?

9 Q. For that job, yes, please?

10 A. Not for those. Those have been before. We only had to log
11 what we did for diving.

12 Q. Those would have been before what?

13 A. Before we went to school, like for the restricted or the
14 unrestricted.

15 Q. So that was before you even became qualified?

16 A. Yeah, yes.

17 Q. So you're not even diving to any standard?

18 A. No, I wasn't diving yet. That was before.

19 **Commissioner Wilson:** Okay, no problem. Thank you.

20 **Continued Cross-Examination By Mr. Peterson SC:**

21 Q. Yeah, but—no, Dr. Cheddie, help us here.

22 A. Yeah.

23 Q. You don't know anything about tendering for diving in the oil
24 and gas industry? You have no experience in that?

25 A. When you say I have no experience in tendering—

26 Q. Well, you said in your statement you attempted to convey
27 yourself or portray yourself as an expert to this Commission?

1 A. Correct.

2 Q. And you were giving an opinion in your statement about the
3 evaluating of tendering process in oil and gas industry. You
4 have any experience in that?

5 A. No, Sir.

6 Q. In March 2022 you were quite vocal in being critical of Paria of
7 the incident in February?

8 A. Uh-huh, yes.

9 Q. Isn't that true?

10 A. I think it's more LMCS, but I don't think about Paria.

11 Q. Both. Guardian newspaper.

12 A. Guardian newspapers, correct.

13 Q. March 2022, I think the 13th or somewhere there.

14 A. Yeah, around that.

15 Q. But you had no experience in the oil and gas industry and
16 commercial diving in the oil and gas industry?

17 A. It's not about experience—

18 Q. No, answer me. You had no experience?

19 A. No, I answered already. I said no; no experience. But I have—

20 Q. But you got out there and critical against Paria—LMCS will
21 deal with you on that.

22 A. Right.

23 Q. But I'm dealing with Paria?

24 A. Can I—

25 Q. No, not yet. That's true, isn't it?

26 A. Yes.

27 Q. That you were critical?

1 A. Yes.

2 Q. Do you realize that as an expert or putting yourself forward to a
3 Tribunal Commission Court as an expert, you have to declare
4 whether you are independent?

5 A. Well, I am independent.

6 Q. No. Let's deal with whether you're an expert first.

7 A. Right.

8 Q. Are you an expert?

9 A. I'm a professional, yes.

10 Q. No, expert?

11 A. I never considered myself an expert. I said professional.

12 Q. Right. So you don't—

13 A. I know about the job.

14 Q. Thank you for that confession. You don't consider yourself an
15 expert?

16 A. Professional.

17 Q. Right. So we have that. You consider yourself independent
18 before this Tribunal?

19 A. When you say independent, what you mean?

20 Q. Giving a view, an open, balanced view without having a
21 preconceived bias.

22 A. Okay. A preconceived bias against—I don't have a
23 preconceived bias against LMCS or Paria. I have a
24 preconceived bias when it comes to how diving is performed in
25 this country and how clients hire their contractors and how the
26 contractors perform in this country.

27 Q. But you have never been hired by any of the big commercial

1 outfits in this country?

2 A. No, Sir.

3 Q. That makes you happy?

4 A. I don't understand that. If that makes me happy?

5 Q. It makes you sad?

6 A. What would make me happy or sad?

7 Q. The fact that you were never considered to be hired in the oil
8 and gas industry in a commercial capacity?

9 A. I was always an instructor. I ran a school.

10 Q. I know.

11 A. That's more of my interest.

12 Q. So you don't hold yourself out as a consultant?

13 A. Yes.

14 Q. That's the point. And your services have never been accessed
15 by any of the big commercial operators in this country?

16 A. I have had four persons—

17 Q. Isn't that a fact? Answer my question first.

18 A. No, no, no, no, that's not a fact.

19 Q. What? You have been hired by the big commercial oil and gas
20 commercial outfits in this country?

21 A. When you say big, high end—when you say like, you're talking
22 about BP—

23 Q. Shell, BP—

24 A. Those names, no.

25 Q. Paria?

26 A. No.

27 Q. Heritage? Petrotrin?

1 A. No.

2 Q. You want me to continue?

3 A. No, no, no, those are the big names that you called, no. But I
4 did—

5 Q. I have some more, you know. Repsol? Petrocaribe?

6 A. I said no. What I'm saying—

7 Q. No, I was going down the list to see if you will say yes to any.

8 A. No, no. I have been called in on certain smaller jobs by certain
9 smaller companies. Right? There are smaller companies that
10 work in Heritage, and they ask me for simple advice, and they
11 brought their hats by me to check, and those things.

12 Q. Right. So I get back to my fundamental question. You have a
13 bias against Paria, Heritage, Petrotrin for the fact that you were
14 never hired by them. I'm putting that to you.

15 A. No. Why?

16 Q. That's my question; why?

17 A. Right. Because I never put myself out for jobs like with Paria
18 and Petrotrin and—we have spoken to a lot of these persons
19 who work for the companies in Paria but never put out
20 ourselves for that. We have a school. We were a school here
21 advising—

22 Q. Dr. Cheddie, let's cut through a lot of this. You said that you
23 hold yourself out as a consultant. That means you're available
24 to be retained?

25 A. Yes, I am.

26 Q. And you have never been?

27 A. Right. If someone wanted—I didn't go out there and ask

1 people for jobs.

2 Q. That's what you're doing today; you're putting yourself out in
3 this Commission at the close of the Commission to market
4 yourself. I regret I have to put that to you, but I'm putting that
5 to you. Isn't that true?

6 A. That is not true. That is definitely not true.

7 Q. You're here to help the Commission independently?

8 A. Correct.

9 Q. But you were critical of Paria back in March 2022 before you
10 knew the facts.

11 A. February, March—yes, I knew the facts that divers had died,
12 and where and how they died. Those were the simple facts; not
13 all the integrated facts about, um—I didn't know about, um,
14 what happened in the habitat and those things. It had nothing
15 like that.

16 Q. And as a professional, don't you think not having all the facts
17 as you just admit, you should not be out there criticizing an
18 entity? A professional not supposed to do that.

19 A. No, stop. My area of expertise or professionalism that I was
20 interested in is how the dives are done, right, how dives are
21 carried about by contractors and by clients. Now, I have taught
22 in my school many times that—

23 Q. Yeah, we got all of that already.

24 A. No, wait, no, no; wait.

25 Q. No, don't—yeah—

26 A. And, um, I have taught that scuba should not be used in the oil
27 and gas. I used all my textbooks; we use all the standards, and

1 all that. I have sat on the Bureau of Standards here in Trinidad,
2 and I've sang that for many years. So when I hear anytime
3 divers die, once divers die in this country, I am concerned, and
4 how they die and where they would have died, and all that.

5 Q. Yes, Dr. Cheddie, we got all of that.

6 A. No, I'm not finished. No, well, I'm going to go on. So that's
7 my passion.

8 Q. No, no, please, please; no, you have to answer my ques—

9 A. And that's what I wanted to find out.

10 Q. Dr. Cheddie, Dr. Cheddie, please.

11 **Mr. Chairman:** All right, all right. Just pause for a minute.
12 Dr. Cheddie, this is not an opportunity to make a speech. You
13 are required to answer the question. And as I have said to many
14 witnesses, the best way of doing that, where possible, is to say
15 yes or no to the question, and if you have a rider to that, a but, a
16 however, you'll be entitled, and I will permit you to make that.
17 But the best way of proceeding is to answer the question first.
18 All right? And try not to get behind why the person's asking
19 the question. Simply answer the question; answer it. All right?

20 **Dr. Cheddie:** Yes, Sir.

21 **Mr. Chairman:** And that way we will make progress.

22 **Dr. Cheddie:** Ask the question again.

23 **Mr. Chairman:** Can I ask you, Mr. Peterson, do you think you
24 would be a little while yet?

25 **Mr. Peterson SC:** About 10 minutes, Sir.

26 **Mr. Chairman:** Well, let's conclude your cross-examination
27 before we take—

1 **Continued Cross-Examination By Mr. Peterson SC:**

2 Q. Your PhD is not in diving, is it?

3 A. No, Sir.

4 Q. But I looked at your CV. When you were called to the Bar?
5 You said you were a lawyer yesterday.

6 A. No, no, no. That would have—

7 Q. Yesterday you said you're a lawyer.

8 A. I know, I know, I know.

9 Q. No, no, no, don't stop me. That's yes. Yesterday you said
10 you're a lawyer?

11 A. Yesterday. Yes, Sir.

12 Q. That is not true.

13 A. No. Well, not called to the Bar lawyer. This is what I was—
14 that is the mistake I made.

15 Q. In Trinidad we call that a bush lawyer.

16 A. Right. This is what the—that is what I made a mistake when—
17 you see when Prakash came up and he asked me that question,
18 it was all excited.

19 Q. You blaming Mr. Ramadhar?

20 A. No, no, no.

21 Q. You blaming counsel, Mr. Ramadhar?

22 A. I'm a sports consultant, right, a sports law consultant, and that's
23 because my LLM—

24 Q. Wait, wait, not so quickly, Dr. Cheddie, please. It's either
25 you're a lawyer or you're not.

26 A. I'm not an attorney.

27 Q. It's either you're a doctor or you're not.

1 A. Not, not.

2 Q. It's either you're a carpenter or you're not.

3 A. Right. I'm not a lawyer practising in Trinidad.

4 Q. Yesterday—until I just asked you that question—you conveyed
5 to the learned Chairman and Commissioner Wilson that you
6 were a member of my honourable profession.

7 A. No, I never said that.

8 Q. Yuh want us to pull the transcript?

9 A. No. When he said if you're a lawyer, I said yes.

10 Q. Well, that's the point. You're not a lawyer.

11 A. No.

12 Q. That's a lie. Sorry to put it to you that way. My grandmother
13 told me that if it's not true it's a lie.

14 A. Okay.

15 Q. Ah doh know if your people tell you otherwise. So that was a
16 lie?

17 A. It was a mis—it wasn't a lie.

18 Q. Wasn't a what?

19 A. It wasn't a lie. It came out wrongly in the excitement.

20 Q. Because I was about to ask you what is yuh Bar number.

21 A. Right. I know that.

22 Q. And do you know under the Legal Profession Act—you are
23 saying that you are a consultant. Do you know under the Legal
24 Profession Act to portray yourself in public or otherwise or
25 hold yourself out as being a lawyer is an offence?

26 A. Yeah, I know.

27 Q. You know that?

1 A. Yes, Sir.

2 Q. And you just did that on oath yesterday. You know that?

3 A. Yes.

4 Q. I hope the Law Association following this Commission.

5 A. Can I say something now?

6 Q. No, no, no, no, no.

7 **Examination By Mr. Chairman:**

8 Q. Yes, you can. You can seek to explain why you said yesterday
9 you were a lawyer and today you're saying you're not. You
10 can do that.

11 A. Right. Yesterday when Mr. Mara—when Prakash Ramadhar
12 asked me—

13 Q. We blame him for a lot in this building, but I'm not sure that's
14 his fault. [*Laughter*]

15 A. —asked me that, um, when he asked me that, I wasn't thinking
16 about lawyer, I thinking about diving, and he just said it, and I
17 said yes. And I realize that that was wrong.

18 Q. Why didn't you correct it?

19 A. I should have. I should have. Yeah, I should have.

20 Q. Just a minute. Just a minute. Dr. Cheddie, you see, we all say
21 things sometimes in the heat of the moment which we either
22 regret or realize it is perhaps not as accurate as we would want
23 it to be. But bearing in mind where you are, and that you are on
24 oath, do you not think that the prudent thing to have done
25 would have been to come in here today and say, "Look, I have
26 to tell you, Mr. Chairman, I reflected on what I was asked
27 yesterday by Mr. Ramadhar about whether I was a lawyer, and

1 I, in the heat of the moment, said yes. I'm not actually a fully
2 qualified lawyer. I have practised some areas of law", if you
3 like, and give whatever explanation you want to give. But that
4 would have been the prudent thing to do to correct the record,
5 wouldn't it?

6 A. Yeah.

7 Q. Rather than waiting just in case somebody found out and then
8 asked you, as Mr. Peterson has, about your qualifications or
9 your status.

10 A. Well, I realized that yesterday—

11 Q. But why didn't you tell us today.

12 A. —and I didn't know how to, um, how to approach it today. I
13 did not know. I was hoping that if Mr. Peterson or somebody
14 asked me, I would have explained my position.

15 Q. Do you appreciate that taking that course affects your
16 credibility?

17 A. Yeah, I realized that yesterday.

18 Q. What, and it's different today?

19 A. No, I realized that when I said it.

20 Q. Yes, but I'm saying why didn't you try and correct it? That's
21 what I want to know. You wanted to say something more. Mr.
22 Peterson was going to say you didn't have to say any more.
23 But I want to know why you didn't correct the error that you
24 appreciated you made yesterday?

25 A. I was hoping that today I would get the chance.

26 Q. Well, you just have, but it is not really the right circumstances
27 in which to get the chance.

1 A. Yeah, I realize that.

2 **Mr. Chairman:** All right. Is there really anything more?

3 **Mr. Peterson SC:** Two more questions, Sir. No, you mean on
4 that point? No, I would like to see what Dr. Cheddie puts on an
5 immigration form when he's coming through—yuh know the
6 form when they ask you occupation?

7 **Dr. Cheddie:** I put sports law consultant.

8 **Continued Cross-Examination By Mr. Peterson SC:**

9 Q. That's what yuh does put?

10 A. Yes.

11 Q. Ah never see one, eh. Ah doh even know if to take yuh word
12 for that. Now, you would accept that in a diving team, in
13 particular in a rescue, there must be an understanding between
14 the dive supervisor and the divers he sending in along, in this
15 case, a pipeline? You agree with that?

16 A. Yes, Sir.

17 Q. And what would be very helpful in such a risky enterprise is if
18 the team had been diving together previously as a team—like in
19 World Cup, nah, as opposed to a throw together team. You
20 agree with that?

21 A. No.

22 Q. You don't agree with that?

23 A. No.

24 Q. So let us take, for example, you send down a diver and he meet
25 an obstacle like a tank in a pipeline—

26 A. Yes, Sir.

27 Q. Should he bring it out and then go back in to continue his dive

1 or should he just push it aside and bypass it? Which one would
2 you advise?

3 A. It depends on the diver at that point and the supervisor.

4 Q. And it depends on the supervisor?

5 A. Yeah.

6 Q. So if the diver is to leave it and continue, the supervisor will
7 have to know the competencies of that diver, whether that's a
8 good call or whether he should back out and bring up the
9 obstacle and then continue?

10 A. No, he would—no, no; not the competencies. He would ask—
11 well, you remember all of these are qualified divers—

12 Q. Yeah.

13 A. So he would ask the diver, first of all, what do you think about
14 passing it, or if you could leave it; if it will snag yuh line on the
15 way back.

16 Q. Right.

17 A. And if you feel comfortable to leave it or remove it.

18 Q. And the supervisor has no input in that decision?

19 A. The supervisor has an input, because it depends on what the
20 diver is saying to him. Once the diver said to him it look as
21 though it will snag my line when I'm coming back I will—and
22 then the supervisor says take it out.

23 Q. Yeah. But if the diver forms a view, the supervisor goes along
24 with that without challenge? If the diver say, yeah, it fine, I
25 going ahead?

26 A. Yes.

27 Q. So what is the role of the supervisor in that scenario?

1 A. It's for the safety of the diver.

2 Q. Right. So he has an input to instruct the diver, no, I think you
3 should come back out.

4 A. No, no, no. He don't have—he has the option to say yes or no
5 as well, but he will leave it up to the diver who is in the water at
6 the time.

7 Q. But he's relying on the judgment of that diver.

8 A. Yes.

9 Q. So that's what I'm telling you. But the only way one can assess
10 the integrity of the judgment of that diver is an experience that
11 they had before; relationships. You understand what I'm
12 saying?

13 A. Yes, but it's not always like that in the diving industry.

14 Q. I know it's not always like that.

15 A. Yeah; it's not always like that.

16 Q. But that is the preferred standard.

17 A. It could be the preferred; not a standard but preferred.

18 Q. The preferred course?

19 A. Yes.

20 Q. So going into a rescue like in that 30-inch pipeline, a team
21 having a historical relationship would be important?

22 A. It would be an added asset.

23 Q. It would be an added asset. And the knowledge of the inside of
24 that pipe to undertake a dive, would be crucial information?

25 A. Yes.

26 Q. And how you go into that pipe head or foot first would also be
27 crucial?

1 A. Yes.

2 Q. A camera will give you that information as to the internal
3 conditions of that pipe, wouldn't it?

4 A. It will help.

5 Q. And a light on your head, as you described yesterday, going in
6 foot first would not assist you?

7 A. No, Sir.

8 Q. It's only if you go in headfirst?

9 A. Correct. But when I—well, no one asked me, but those lights
10 can come off, so you can hold it.

11 Q. Well, light could come off?

12 A. Yeah. So the supervisor and the diver will make that decision
13 at the JSA that he will hold it if he's going in feet first.

14 Q. Yes.

15 A. And we usually move it around, so he could hold it down.

16 Q. Right. But remember he holding other things too, eh.
17 Wouldn't he be holding a tank to assist the diver when he
18 reaches a diver?

19 A. No.

20 Q. Wouldn't he be holding a backup tank?

21 A. The backup tank would be hooked up to him.

22 Q. Where?

23 A. He won't be holding—in this scenario, most likely it will be
24 under the arm area over here, not on the back, because the tank
25 will be pene—the tank as well as the diver's size and 28
26 inches—

27 Q. You ever did any of this kinda thing before?

1 A. No.

2 Q. You ever analysed anything like this before?

3 A. Only in school.

4 Q. Before the Guardian in March?

5 A. Only in school.

6 Q. Only in school?

7 A. Yeah, when I teach it.

8 Q. So you teach rescue from confined spaces like a 30-inch
9 pipeline?

10 A. Not rescue, but penetration diving.

11 Q. Yeah. In a pipeline.

12 A. Well, penetration diving in pipelines. We teach that.

13 Q. You taught penetration diving in a pipeline?

14 A. It's part of our—it's part of the manual.

15 Q. What size of pipeline you taught it in?

16 A. We looked at different sizes but it had to be—

17 Q. 30-inch. You taught it in a 30-inch?

18 A. No, not exact 30 inches.

19 Q. No, well 32 inches.

20 A. We would have worked about pipelines that are a bit larger than
21 you are.

22 Q. What size pipeline you taught it in?

23 A. In the 30s; it would have been about thirty-something inches,
24 around there.

25 Q. And you taught that to Kurban and Nagassar and any of them
26 that disregarded your teaching?

27 A. It would have been in the textbook, yes.

1 Q. No. You taught it—I used to teach, eh, and you know how
2 much thing in the textbook that ah never taught?

3 A. No, no, no. This one was in the ADCI Manual, and we went
4 through everything in that manual.

5 Q. With the divers that died—the four divers?

6 A. Yes, Sir.

7 Q. And your lesson to them is never dive in that scenario with
8 scuba?

9 A. Yes.

10 Q. And they disregarded your training?

11 A. Yes, Sir.

12 **Mr. Chairman:** To be fair, Mr. Peterson, they didn't dive in
13 the pipe, they were sucked into it.

14 **Mr. Peterson SC:** That's true. No, but I mean the habi—

15 **Continued Cross-Examination By Mr. Peterson SC:**

16 Q. They didn't dive into—they were in the habitat using scuba,
17 which you say should never have been done.

18 A. No.

19 **Mr. Peterson SC:** Thank you, Mr. Chairman.

20 **Examination By Commissioner Wilson:**

21 Q. Mr. Cheddie, whilst we wait on Mr. Peterson, just let me
22 interject here. Again, conducting that type of training, where
23 are the pipelines located that you conducted penetration dives in
24 Trinidad?

25 A. No. These were never done on practicals; only theory.

26 Q. Only in theory?

27 A. Only in theory; never practicals. It was not what—

1 Q. So therefore it wouldn't have had a diameter pipeline you went
2 in? Because you just said you taught them on 30-inch
3 pipelines.

4 A. About 30, 32-inch. We will have it as part of the theory.

5 Q. On theory?

6 A. Yeah. Part of the theory.

7 Q. Thank you for that.

8 A. We not told to—we were never allowed to teach that like in ah
9 actual scenario as part of our training.

10 Q. Part of my training I did penetration dives, actual with in-water
11 tenders and everything.

12 A. No, we weren't—ADCI doesn't have that.

13 Q. And it was under the ADC College [*Inaudible*]

14 A. Well, under the ADCI standards we were not allowed to do
15 that.

16 Q. Okay, no problem; it's just in theory?

17 A. Yeah, just in theory.

18 **Mr. Peterson SC:** Mr. Chairman, I was finished, but that last
19 question excite me.

20 **Continued Cross-Examination By Mr. Peterson SC:**

21 Q. So this training and teaching in different sizes of pipe and thing,
22 thirty-something inches, is just book thing?

23 A. Yes, Sir.

24 Q. No, "Fellas, aye, tomorrow we going out in the sea and going to
25 put all yuh down in some pipeline leh we dive"?

26 A. No.

27 Q. That is like a doctor learning and never did a cut?

1 A. Well—

2 Q. A surgeon.

3 A. In the recent Sixth Edition of the Manual, we were not allowed
4 to do that sort of diving—training; diver training.

5 Q. So you have not taught actual practical diving?

6 A. In a pipeline.

7 **Mr. Chairman:** Penetration diving.

8 **Continued Cross-Examination By Mr. Peterson SC:**

9 Q. Penetration diving.

10 **Mr. Chairman:** Penetration. Be clear. He says he made
11 dives—

12 **Mr. Peterson SC:** Well, Sir, we got the 20 hours already.

13 **Continued Cross-Examination By Mr. Peterson SC:**

14 Q. The penetration diving—you never actually did the practical to
15 that?

16 A. No. We were not allowed to do that in school—to teach it in
17 school. We are you not allowed to do that.

18 Q. You realize the Commissioner just told you he did it, right?

19 A. We were not allowed to do it.

20 **Mr. Peterson SC:** That's the last—no more questions, Sir.
21 Wow.

22 **Mr. Chairman:** Is that your cross-examination?

23 **Mr. Peterson SC:** Yes, it is. I thought I said thank you, Sir.

24 **Mr. Chairman:** No, no. Ms. Persaud Maraj you have none?

25 **Mrs. Persaud Maraj:** No.

26 **Mr. Chairman:** That leaves you to ask any questions that you
27 might wish to, Ms. Alfonso. Yes. Can I ask you, before we

1 embark on that, do you think you'd be a little while?

2 **Ms. Alfonso:** Maybe 15, 20 minutes, Mr. Chairman.

3 **Mr. Chairman:** Let's have our break now.

4 **Ms. Alfonso:** Thank you, Chairman.

5 **Mr. Chairman:** Let's have our break now. So, doctor, we're
6 going to take a 15-minute break now. We'll resume at twenty-
7 five minutes to twelve, please. So take your break now and
8 we'll come back then. Thank you very much.

9 **11.20 a.m.:** *Enquiry suspended.*

10 **11.35 a.m.:** *Enquiry resumed.*

11 **Mr. Chairman:** Yes. Can we have the witness, please.

12 **Mr. Peterson SC:** Mr. Chairman, I was just thinking should
13 we just proceed to In-Corr-Tech, because this witness self-
14 confessed that he's not an expert and he's not a witness of fact.

15 **Mr. Chairman:** Just a minute. Can we have the witness wait
16 for a moment, please. Can the witness wait outside for a
17 minute, please. Thank you.

18 **Mr. Peterson SC:** I was thinking during the break that the
19 witness had to confess that he's not an expert, which we
20 thought that is what he would be of assistance, and he's not a
21 witness of any fact, so I don't think we should—my view and
22 respectful submission is that we shouldn't waste further time
23 with him and proceed to In-Corr-Tech who is of assistance to
24 us.

25 **Mr. Chairman:** I'm not going to take much persuading of that
26 course. Ms. Alfonso, this is a witness which you invited us to
27 consider calling as a witness of both truth and accuracy. Before

1 today's proceedings Mr. Peterson made a submission as to
2 whether or not he should be permitted, or whether we should
3 rely on his evidence at all given the lateness of it. I think we've
4 come to the point, have we not, where it would be very difficult
5 for this Commission to rely on what he has said given his
6 confession that he is (a) not an expert and (b) that he had
7 asserted he was a lawyer when he clearly is not.

8 Those facts alone call into question the extent to which
9 we will be able to rely on his evidence. That combined with the
10 cross-examination by Mr. Pegus in which he has suggested that
11 virtually everything that he asserted took place in the
12 conversation between him and Mr. Seales is challenged, given
13 that Mr. Seales has had no opportunity, unless I were to have
14 him recalled, to make that plain, I wonder what value there is in
15 calling him to conclude his evidence now by way of any
16 questions you might have.

17 I mean, realistically, I mean, there may be elements of
18 what he has said which is uncontradicted and which is
19 supported by other evidence which we can rely upon. But do
20 we really need to rely on that evidence if it is uncontradicted
21 evidence that exists elsewhere? I have to say for my part, I will
22 take some persuading as to the value that he brings to this
23 Enquiry. I don't want to press it any further than that. It's a
24 matter for you. If you would wish to have him recalled to deal
25 with further questions then by all means do.

26 **Ms. Alfonso:** Mr. Chairman, I don't think I could persuade
27 you to bring back this witness. I would like to, but I don't

1 think, in good conscience, I can try to persuade the Commission
2 of the value of bringing Dr. Cheddie back to complete his
3 evidence.

4 **Mr. Chairman:** If I may say so, that's a very sensible
5 approach, and I'm grateful for that indication. In the absence of
6 anybody else having anything to say, Mr. Maharaj—

7 **Ms. Alfonso:** Mr. Chairman, if I could just make one further
8 point? As I said, it's not in defence of the union or the interest
9 that I represent. Again, Dr. Cheddie was somebody that was
10 proffered up by a union who I do not represent, that's the
11 OWTU. In my estimation what he had to say seemed
12 worthwhile to put forward before the Commission. It has
13 turned out, on testing that information, not to be as useful as I
14 had thought it would be. So in attempting to facilitate Dr.
15 Cheddie to bring forth his evidence—

16 **Mr. Chairman:** Don't take the responsibility too heavily on
17 your own shoulders, Ms. Alfonso. That's not necessary. As I
18 explained to Mr. Peterson this morning when he made his
19 application, we too had some misgivings about the late service
20 of his evidence, but on the face of his statement we felt it would
21 be inappropriate to exclude it on that ground alone, and that's
22 why we permitted it. As you say, on testing it has proved to be
23 less as valuable as we might have hoped. There it is.

24 I think out of courtesy I will ask him to come back into
25 the room and tell him there are no questions for him. And that
26 will be the conclusion of his evidence.

27 **Ms. Alfonso:** I'll be grateful, Mr. Chairman.

1 **Mr. Chairman:** So I'll do that out of courtesy to him. So let's
2 have him back in, please.

3 *[Dr. Cheddie enters Enquiry room]*

4 Doctor, you needn't take your seat again, because there are, in
5 fact, no further questions for you. I wanted to thank you for
6 coming and to thank you for your evidence. Thank you very
7 much. All right.

8 So what we're going do, actually, in those circumstances
9 is this, we're going to rise for five minutes now because I
10 understand that the inflatable plug is here. It's going to be
11 displayed in its full glory in the centre of this court, so we'll get
12 that done, and I think there are one or two other props as well,
13 so let's get that all in place, and once that's done we'll then
14 resume with the evidence.

15 My anticipation is that we will as best we can, up until
16 about 1.30-ish, so that we get the bulk, if we can, of his
17 evidence out and then we can resume after, perhaps, a shorter
18 lunchtime to hear his evidence to conclude it today. There is,
19 after that—Mr. Ramadhar, you weren't here when I was giving
20 my judgment earlier on. I am content for you to read the very
21 short statement of Aliyah Henry who is the daughter, the 11-
22 year-old daughter. Please at the conclusion of today read that
23 statement.

24 I've said that I don't think that Tia Mary Gopaul adds
25 anything to what we already have, my having admitted Mr.
26 Yusuf Henry's mother and sister's evidence in addition. So I
27 think that whilst the statement has been served and it serves as

1 part of the material in the case, it's unnecessary to read it aloud,
2 but I am going to permit the 11-year-old daughter's statement
3 to be read by you, as I understand it. Is that right?

4 **Mr. Ramadhar:** I'm grateful to you, Mr. Chairman.

5 **Mr. Chairman:** Right. We'll do that at the end of today as
6 well. All right? So the programme then is we'll rise for five
7 minutes or ten whilst this is being done. We'll then have the
8 evidence of the witness. That will continue till about 1.30-ish.
9 We'll resume after a shorter lunch break, and then we'll have
10 the final parts of the evidence concluded today. So one way or
11 the other all of the evidence concluded today, whatever time
12 that is. Thank you very much. Let's rise for a few minutes.

13 **11.43 a.m.:** *Enquiry suspended.*

14 **11.52 a.m.:** *Enquiry resumed.*

15 **Mr. Chairman:** All right. So the next witness is Mr. Khan,
16 Mr. Zaid Khan.

17 **Mr. Maharaj SC:** From In-Corr-Tech. He is an expert.

18 *[Laughter]*

19 **Mr. Chairman:** Now, now. His statement and there are some
20 additions. Yes. Please, come in Mr. Khan. His statement and
21 the additions are in—

22 **Mr. Maharaj SC:** And the supplemental core bundle.

23 **Mr. Chairman:**—1389; and then in the back there are three
24 letters, and following. Got them all, lovely. Thank you very
25 much.

26 Yes. Thank you, Mr. Khan. Can you take the oath
27 please?

1 [Mr. Zaid Khan sworn]

2 **Mr. Khan:** I, Zaid Khan, solemnly swear that the evidence I
3 shall give to this Commission in this case shall be the truth, the
4 whole truth, and nothing but the truth.

5 **Mr. Chairman:** Yes, do take a seat. Mr. Khan, I know you've
6 been waiting and I'm grateful for your doing so. We have your
7 full report, some revisions to it, and a number of other
8 documents in relation to that which is going to be after we—

9 Now, who's going to do the—right. Now, Mr. Bissessar
10 who sits opposite you is going to summarize, and in part refer
11 to relevant parts of your evidence, and that will serve as your
12 evidence-in-chief, all right, so that everybody understands who
13 you are and what we're doing.

14 After that, then, Mr. Maharaj who sits with a little table
15 in front of him, is going to be asking you some questions, and
16 then a number of the Barristers and Lawyers here will also have
17 an opportunity to ask you questions. All right? And that's the
18 process.

19 We're going to go on till about half past one or so, so that
20 we get a good chunk of your evidence dealt with first before we
21 take our break for a bit of lunch and adjournment. All right?
22 But one way or the other, we will conclude your evidence
23 today. And so, with no more ado, I'll ask Mr. Bissessar to do
24 his thing. Thank you.

25 **Mr. Bissessar:** Thank you, Chairman.

26 Mr. Zaid Khan is an expert. He is the President and CEO
27 of In-Corr-Tech Limited, which is a company carrying out

1 inspection, methodological design, and quality control
2 engineering services at 15-17 Rodriguez Street, Victoria
3 Village, San Fernando.

4 Mr. Khan is a registered professional engineer and failure
5 analysis consultant. He has a Bachelor of Science degree in
6 Mechanical Engineering, and a Diploma in Microstructural
7 Analysis, and is certified as, firstly, an ASNT NDT Level 3;
8 secondly, as API 510 and 570 Certified Inspector; and thirdly,
9 as an AWS Certified Welding Inspector.

10 Mr. Khan is also a licensed competent person for hoists,
11 boilers, and pressure vessels under the Occupational Safety and
12 Health Authority.

13 In-Corr-Tech Limited was retained by OSHA to conduct
14 a relevant root cause failure analysis and causative factors in
15 relation to the accident which occurred on 25th February, 2022.
16 The company was also requested to review Paria's scope of
17 works and the methodology adopted by the LMCS.

18 I will now read selective excerpts from the report starting
19 with the Executive Summary at 2.0. I will then read the
20 report's Findings and Discussions at 3.0 and I will conclude
21 with the Recommendations at 5.0. I will then relate the
22 supplementals to the report.

23 So I'm starting with the Executive Summary, Chairman.
24 It's at 1394, and it reads as follows:

25 "The root cause of this accident was the failure by both
26 the client, Paria Fuel Trading Company Limited, Paria,
27 and the contractor, LMCS Limited, LMCS, to recognize

1 that a latent hazardous differential pressure condition,
2 Delta P, would have been created by the methodology
3 used in the execution of the works with particular
4 reference to the removal of fuel oil from Sealine SL36.
5 If this Delta P hazard was recognized, then simple
6 mitigation steps and/or changes in methodology could
7 have been instituted to eliminate this hazard.

8 LMCS's method statement 116 Attachment X pertaining
9 to installation of the SO flange on riser at No. 6 Berth
10 was based on partial removal of the line content using an
11 air driven pump as per their method statement submitted
12 with their proposal. See attachment 8.

13 This procedure was changed to air blowing and the
14 management of change was not adequately addressed
15 with respect to appropriate and timely issuance of JSA
16 and method statement. The reasons for this change were
17 not recorded in any subsequent analysis or discussion
18 from the data supplied to OSHA from Paria and LMCS.
19 The removal of fuel oil from line and the installation of a
20 migration barrier as stipulated in Paria's scope of works
21 section 2.1 and 3.1.12, respectively, created a large
22 gaseous void in Sealine SL36. This void served as a
23 prerequisite for the latent differential pressure hazard that
24 was created when the habitat was installed and
25 pressurized to facilitate work within the said habitat. The
26 hazards associated with this void were overlooked by
27 both Paria and LMCS. See drawing SK1 in attachment

1 for an illustration for this gaseous void.

2 LMCS Job Safety Analysis

3 Paria's permit to work No. 9320, LMCS's method
4 statement, risk assessment, LMCS's toolbox meeting,
5 LMCS's dive plan, and Paria's bid evaluation of LMCS's
6 proposal all failed to identify this potential differential
7 pressure, Delta P hazard, and hence, no steps to eliminate
8 the hazard were implemented.

9 This latent hazard existed at the onset of work within the
10 habitat and became active when the divers were
11 attempting to remove the primary seal which is the
12 inflatable plug from within the riser. See drawing SK1 in
13 attachment and section 3.1 for further details.

14 Not being aware of this latent differential pressure
15 condition incorporating a gaseous void, LMCS's divers
16 proceeded to deflate the plug after safe removal of the
17 mechanical seal. On reaching a deflated pressure of
18 approximately 11.4 psig, the resistive force of the plug
19 was then lower than the downward force, 4,031 pounds
20 force, on the plug. This force of 4,031 thrust the plug
21 down the oily riser into the large gaseous void previously
22 created by removal of the line contents. See also 2.2
23 above.

24 Simultaneously, the transient and sudden loss of habitat
25 pressure caused the seawater to rush up into the habitat
26 pouring into the 30-inch diameter riser at a rate of 540
27 gallons per second at a velocity of 14 feet per second

1 creating a free vortex entraining all personnel and loose
2 equipment into the riser. Gravity habitat supply air from
3 the compressor, large gaseous void, and an endless
4 supply of water perpetuated this vortex in the riser. The
5 diagrammatic illustration of the sequence of events and
6 section 3.1 for further details. A scale model at In-Corr-
7 Tech Limited fully demonstrated this scenario.

8 Appropriate JSA risk assessments were not seen for
9 several key activities in LMCS's proposal supplied to
10 OSHA from Paria with respect to safety issues. This
11 reflected the lack of thoroughness of the bid evaluation
12 by Paria. Paria had stipulated in their scope of work that
13 method statements and JSAs be supplied for all key
14 elements of the projects. See section 3.2.

15 LMCS's method statement 116 Attachment X items 56
16 and 57 pertaining to removal of migration barrier and
17 inflatable plug could only have been applied safely if a
18 Delta P condition was not present. This was also a grave
19 oversight by both Paria and LMCS during this evaluation
20 and subsequent discussions with LMCS.

21 As stated before, the method and extent of line content
22 removal resulted in a large gaseous void within the 30-
23 inch diameter sealine SL36. See drawing SK1 in
24 attachment.

25 In the 6 psig pressurized habitat, a downward force of
26 4,031 pounds force on the face of the inflatable plug was
27 counteracted by a resistive force of 5,292 pounds exerted

1 by the 48-inch long inflatable plug of the wall of the riser
2 based on a plug inflation pressure of 15 psig. This
3 provided the necessary seal during all hot works within
4 the habitat. The sequence of events leading up to this
5 accident are described verbally and illustrated via
6 appropriate drawings as shown in sketches SK1 to SK6
7 in the attachments.

8 The operational safety concerns observed during
9 inspection of the crane, example load slippage under
10 engine cut off, non-functional load cell, et cetera, did not
11 contribute to this accident. Inspection of the
12 compressors, hoses, air filter pots, scuba gear did not
13 reveal any issues that could have been contributory to
14 this accident. Test and inspection of the inflatable plug
15 confirmed that there were no issues with the plug that
16 contributed to the accident. It is to be noted that the
17 inflatable plug was intact and operational upon removal
18 of the mechanical seal as it was then exposed to the
19 habitat pressure of 6 psig equivalent to a downward force
20 of 4,031 pounds on the said plug.

21 Supply air problems, example, compressor failure, were
22 not experienced as corroborated by discussions held with
23 OSHA and barge topside personnel. It is to be noted that
24 supply air from the compressor into the habitat
25 accelerated the vortex formation and strengthened its
26 force and suction.

27 The hyperbaric chamber also referred to as the habitat

1 and the mechanical plug were not inspected as they were
2 not recovered from the seabed at the time of this report.
3 Possible malfunction of the habitat or air compressor was
4 not considered to be contributory to this accident as the
5 operation of the habitat and the compressor remained
6 intact during and after the accident facilitating the
7 recovery of one diver within the said pressurized habitat.
8 On his return up the riser, the lone survivor stated that he
9 was approximately five feet from the top of the riser and
10 within the habitat confirming that the compressor was in
11 operation and supplying air to the habitat. This confirms
12 that when the flow into the riser was stabilized, air
13 supplied by the compressor forced the water back down
14 in the habitat, again creating a dry workable
15 environment.”

16 I will now read out the findings and discussions. This is
17 at 1396.

18 “Firstly, Removal of Line Contents: The removal of
19 contents with respect to quantity and method in line SL36
20 between No. 5 and 6 Berths was the underlying factor
21 that led to this accident. This removal created a gaseous
22 void in the riser and sealine setting up a latent differential
23 pressure condition between the habitat and a large
24 gaseous void in the sealine when the mechanical seal and
25 inflatable plug were installed and the habitat pressurized.
26 See drawing SK1 in attachment.

27 With reference to fuel oil removal from Sealine 36,

1 LMCS's method statement under section A, Procedure
2 for Removal of Line Content between Berth 5 and Berth
3 6, cited two areas: (a) using air driven pump; pump out
4 approximately 300 barrels of line content; (b) once level
5 in the riser dropped to 35 feet below sea level, a line plug
6 will be installed. Reference page 6 of 22 of LMCS's
7 method statement.

8 (a) and (b) are contradictory as removal of line contents
9 to 35 feet below sea level in the riser would have been
10 equivalent to approximately 30 barrels of oil removal
11 with no gaseous void formation on installation of the
12 mechanical seal and the inflatable plug. On the other
13 hand, as stated by LMCS, (a) Pumping out 300 barrels
14 with an air pump does not equate to dropping level in the
15 riser to 35 feet below sea level. This discrepancy was not
16 addressed in Paria's bid evaluation. Further, LMCS's
17 project schedule calls for draining of line from day one of
18 job execution further adding conjecture to this exercise.

19 Paria's maintenance department as recorded by OSHA
20 stated that line contents were indeed removed by air
21 blowing from No. 5 Berth to No. 6 Berth. This
22 technique, although not stated in LMCS's method
23 statement or in Paria's SOW, scope of works, would have
24 definitely removed way in excess of the optimum
25 quantity of oil from the line, thus creating a significant
26 continuous gaseous void between Berths 5 and 6 together
27 with empty risers. This condition would have introduced

1 a very dangerous latent differential pressure condition as
2 soon as the inflatable plug and mechanical seal were
3 installed in the line and the habitat placed and
4 pressurized. This latent hazardous condition existed very
5 early in the job execution but was activated on the 25th
6 February, 2022, when five divers were in the process of
7 deflating the riser plug for its removal. See drawing SK3
8 in attachment for a pictorial illustration. See drawing
9 SK1 and SK4 in attachment.”

10 And he concludes changing the method of oil removal from the
11 line from using an air driven pump as per LMCS’s method
12 statement to force air blowing from Berth 5 resulted in a
13 dramatic increase in the risk profile of the job.

14 I turn to the recommendations as made at page 1403 and
15 5.0 and 5.1.

16 “Working in differential pressure environments
17 necessitate an engineering risk analysis by a competent
18 person. Differential pressure can be assumed to exist
19 when: i. water levels vary between adjoining areas; ii.
20 water is next to a gaseous void; iii. HP air is next to low
21 pressure air; iv. positive pressure, that is above
22 atmospheric, is next to atmospheric pressure (0 psig.)

23 The differential pressure condition in this accident was
24 not active but latent. The condition became active when
25 the plug or the barrier was being deflated by the divers.
26 The divers were most likely unaware that a large gaseous
27 void existed behind the inflatable plug due to excess line

1 contents removal and as such, the lack of knowledge and
2 communication on this issue could have contributed to
3 this accident.

4 5.2 All risk factors must be considered whilst working in
5 a positive pressure environment similar to a habitat.
6 Where possible, actions must be taken to avoid these
7 risks, example, some of these risks are as follows: 1. loss
8 of positive pressure; 2. possibility of establishing flow
9 conditions from area of high pressures to areas of low
10 pressures; 3. faulty operations of seals; 4. improper
11 installation and retrieval of seals; 5. creation of large
12 gaseous voids on the low pressure side of the seals or
13 plugs in a differential pressure condition.

14 5.3 Differential pressure problems can be adequately
15 minimized by the following: 1. back pressure or
16 equalizing the pressure on both sides of seal; 2.
17 maintaining a physical barrier; 3. avoidance of creating
18 flow conditions, be it liquid, vapour, or air; 4. avoidance
19 of creating empty spaces or gaseous voids on the low
20 pressure side of seals.

21 5.4 In high-risk jobs, always ensure that JSAs are not
22 generic. A JSA must address a particular task with in-
23 depth analysis of potential hazards and necessary
24 mitigation steps to be adopted. Work permits must also
25 reference the applicable JSA or JSAs.

26 5.5 All changes to original procedures as we experience
27 on this high-risk job should be carefully managed and

1 appropriate JSAs developed. Having executed a robust
2 management of change, MOC procedure is essential.

3 5.6 Have real time video and audio contact.

4 5.7 In risk assessment forms pertaining to diving work
5 operations, a section should be included titled
6 “Differential Pressure Conditions and Hazards”.

7 5.8 Suitable, qualified, and equipped rescue personnel
8 should be at hand at all times.

9 5.9 Inspect and certify the habitat before use. Nametag
10 with maximum internal pressure limits should be
11 installed.

12 5.10 Inspect and certify all seals before use.

13 5.11 Cleaning all mating surfaces between the seal
14 and substrate, be it a pipe, nozzle, or vessel.

15 5.12 Pressurization of seals are to be done in accordance
16 with the OEM specifications.”

17 I turn to the three letters that were written after the report.
18 The first is at the 6th December, 2022, which is at supplemental
19 core bundle 1533. It’s a letter dated 6th December, 2022, from
20 the expert to the secretary.

21 Dear Ms. Sinanan

22 In response to your request dated 30th November, 2022
23 for further advice, I wish to advise as follows on the five
24 matters.

25 1. The carber test specifically verifies the structural
26 integrity as well as the leak tightness of the weld and
27 adjacent parent material. Failure to conduct the carber

1 test had no bearing or influence on the existent latent
2 Delta P within the pipeline, nor would it have contributed
3 to any induced Delta P.

4 2. As a latent Delta P condition did indeed exist within
5 the system based on Paria's evidence, then Paria was
6 duty-bound to mitigate the risk and highlight it to all and
7 sundry. In fact, Paria's own HSE safety guidelines which
8 includes "hierarchy of risk control" clearly specifies
9 elimination as the most effective method of risk
10 mitigation.

11 3. On removal of the mechanical seal by LMCS's
12 personnel as seen on video footage, the inflatable plug
13 was subjected to the habitat pressure of 6 psig equivalent
14 to a downward axial force of 4,031 pounds and it held its
15 seal for an extended period. In no way did the alleged
16 out-of-roundness affect the inflatable plug grip on the
17 pipe ID and, thus, there was no need for a pressure test.
18 As stated in In-Corr-Tech Limited's report—"

19 And he specifies.

20 "On reaching a deflated pressure of approximately 11.4
21 psig, the resistive force of the plug was lower than the
22 downward force 4,031 pounds on the plug, thrust the
23 plug down the oily riser into a large gaseous void.

24 Furthermore, the alleged out-of-roundness of the pipe
25 had little or no effect on the inflatable plug's sealing
26 ability. The plug material, flexibility, and design would
27 have catered for differences in pipe ovality. It is the

1 opinion of the undersigned that the out-of-roundness, if
2 any, was negligible as there were no problems reported
3 during fit up of the new slip-on flange on the said riser.

4 Four and five.

5 4. Prior to Mr. Christopher Boodram's rescue, the entire
6 system stabilized and equalized itself at both ends of
7 SL36 and, thus, allowed Mr. Boodram to negotiate the
8 pipe without any disruptions as the system was static.
9 This condition was the best opportunity to attempt a
10 rescue as removing the blank at Berth 5 or shutting down
11 the compressor would have just released the stored
12 potential energy from the compressed air and, thus,
13 disturbed the equilibrium and thereby imperil any divers
14 in air pockets.”

15 Mr. Khan then says:

16 “If you require further information or clarification please
17 do not hesitate to contact the undersigned.”

18 And he concludes:

19 “Sourcing the entire video footage obtained from the
20 crawler borescope from Berth 5 conducted around 5.00
21 a.m. on Saturday 26th February may be worthwhile for
22 this investigation.”

23 Mr. Chairman, there was a further letter dated 28th
24 December, 2022, which is at page 1536 A, and I would just
25 read the contents. Again, addressed to Ms. Sinanan.

26 “Dear Ms. Sinanan

27 In light of the several references made by various legal

1 counsel to the above report, I wish to bring to the
2 attention of the Commission the following pointers.
3 These, in my opinion, will negate the possibilities of
4 misinformed deduction, skewed inferences, and
5 unnecessary conjecture in further deliberations:

6 1. An agreement dated March 2022 was signed between
7 In-Corr-Tech Limited and OSHA to conduct a root cause
8 analysis and causative factor investigation pertaining to
9 the tragic incident.

10 2. To satisfy the requirements of the said agreement, the
11 following was adopted as stated in my report under
12 section 1.6(a) inspection of associated equipment used,
13 firstly, positive pressure habitat hyperbaric chamber;
14 secondly compressors; thirdly, hoses; fourth, filter pots;
15 fifth, inflatable pipe plug; sixth, mechanical seal; seven,
16 scuba equipment; eight, crane used in the exercise being
17 a model LS218H.

18 (b) Review of Paria's scope of works.

19 (c) Review of contractor LMCS's method statements, job
20 safety analysis, and risk assessment.

21 (d) Review of relevant work permits, risk analysis dive
22 plan, and schedule notes."

23 And he notes that habitat was not sealed. In his further opinion
24 he says:

25 "3. During the investigation prior to the issuance of the
26 report, other information deemed relevant and necessary,
27 example, details surrounding the actual line content

1 removal and methodology were not received.

2 4. Owing to the delays experienced, the schedule time
3 for the submission of the report was not met.

4 5. The report was issued to OSHA on 19th July, 2022,
5 several weeks late, with the caveat: this report is based on
6 the information and available documents supplied by
7 OSHA as stated under paragraph 1.7 page 6 of my
8 report.”

9 And then it says:

10 “6. Based on reviews of additional pertinent information
11 seen after the issuance of my report, I wish to state that
12 my basic conclusions and recommendations remain.

13 7. Based on pertinent information supplied to me on 27th
14 July, 2022 by OSHA which I requested on 6th May,
15 2022, there may be need to revise some sketches in my
16 report to reflect a more realistic picture.”

17 And then it says in summary:

18 “1. The agreement between OSHA In-Corr-Tech
19 Limited was signed on 29th March, 2022.

20 2. Report issued to OSHA on 19th July, 2022.

21 3. Pertinent additional information requested by myself
22 during discussions with OSHA was supplied on 27th
23 July, 2022, seven days after issuance of the report.”

24 And he says:

25 “Any further clarification can be accommodated through
26 contact with the undersigned.”

27 His third letter dated 6th January, 2023, is at supplemental core

1 bundle 1536C. Again, to Ms. Sinanan. Sorry, 1356C.

2 "Dear Ms. Sinanan

3 In response to your request, I wish to reply as follows:

4 a. In view of the many variables in a project of this
5 nature and in consideration of the nature of the accident, I
6 thought it would have been prudent to build a model to
7 demonstrate several scenarios pertaining to this accident.

8 This decision was made whilst conducting the root cause
9 analysis as requested by OSHA through an agreement
10 between In-Corr-Tech Limited themselves. This was not
11 part of my remit from my agreement with OSHA.

12 However, in the interest of education and understanding
13 for all parties involved, I proceeded to build this model at
14 my expense. Subsequent availability of information
15 pertaining to this exercise of repairs to Sealine 36 at

16 Berth 6, Paria confirmed in my mind that I had the
17 correct inclination to construct this model. The
18 parameters considered were to simulate as close as
19 possible the various aspects of the job leading up to and

20 inclusive of the accident. Parameters included sea levels,
21 riser positions, subsea line, air supply and flange and
22 habitat installation. The components of this model were
23 made of transparent material for ease of understanding

24 and to afford some reality to what actually happened.
25 Owing to its many variables, a fixed scale ratio was
26 impossible. However, the main objective was to
27 demonstrate the physics and hydraulics involved for a

1 better understanding and indelible visual impact on the
2 minds of all.

3 The basic principles of flow dynamics, pressure
4 differentials, gravity, and compression were considered
5 as these very principles were common to the execution of
6 this job. There were no major differences in the
7 fundamental engineering principles of both the model
8 and actual site equipment and condition apart from scale
9 size and materials of construction.

10 I hope that the above shed some light on your request.”

11 He then prepared a table and I will just narrate as best as I can
12 what the table demonstrates. The heading is “Oil Quantities
13 Removed From Sealine 36 and Topside Piping Due to Phase 1
14 and Phase 2 Air Blowing.”

15 “Phase 1: 18th January, 2022, 798 barrels removed. On
16 20th January, 2022, unknown quantity of barrels
17 removed. On 21st January, 2022, 118 barrels removed.
18 Total phase one, at least 916 barrels. And then on 1st
19 February, 2022, there was a setup for phase two. And
20 phase two which was subsea, on 2nd February, 2022, 276
21 barrels were removed. On 3rd February, 2022, 60 barrels
22 were removed, which were in a barge; he said not 100.
23 On 4th February, 2022, an unknown quantity of barrels
24 were removed, so that the total for phase two was at least
25 336 barrels. He says the total of phase one and phase two
26 is at least 1252 barrels.”

27 The author makes two notes.

1 “Note No. 1: Out of the 960 barrels removed during
2 phase one, it is estimated that approximately 200 barrels
3 was drained from the topside piping leading to Sealine 66
4 so, therefore, 716 barrels was displaced from SL36 risers
5 and horizontal section. I estimated the topside piping to
6 have contained approximately 200 barrels of line
7 contents based on my recollection of its configuration.
8 The conclusions in my investigative report issued to
9 OSHA in July 2022 will remain unchanged even though
10 the estimated amount of 200 barrels from the topside
11 piping is not exact.”

12 And the second note:

13 “Phase two removal consisted of at least 336 barrels
14 subsea only.”

15 Mr. Chairman, what is now contemplated is that we will
16 now show the video which was prepared and presented by Mr.
17 Khan. The video is in four parts and each part will be paused
18 from time to time for Mr. Khan to give various explanations in
19 respect of what is shown. Afterwards, the video will be shown
20 again, this time uninterrupted. Thereafter, it is anticipated that
21 Mr. Maharaj may ask several questions of the expert.

22 **Mr. Chairman:** Thank you very much. Is it proposed that Mr.
23 Khan should, as it were, point to things that help us as we go
24 along?

25 **Mr. Maharaj SC:** Yes, yes.

26 **Mr. Chairman:** I wonder in that case if we can move that
27 screen around a little bit so that everyone can see what he’s

1 pointing at. And I think that there's a microphone as well that
2 he can have to assist us. But someone needs to turn that screen
3 a few degrees to the right, my right; its left. Very slightly back
4 again. No, that's too much. That's it, perfect. Great. Thank
5 you.

6 **Mr. Maharaj SC:** If I may first mention what the first video
7 is?

8 **Mr. Chairman:** Yes, please.

9 **Mr. Maharaj SC:** Mr. Khan, the first video gives a site
10 description, an introduction to the model, and Phase I air
11 blowing—and this is how the first video is labelled by Mr.
12 Khan. So what will happen, I will allow the operator to start
13 the video and then I would stop it at 44 seconds and give you,
14 Mr. Khan, an opportunity to explain it. Okay?

15 **Mr. Khan:** Okay.

16 *[Video played with narration as follows]*

17 This picture shows an overview of Berth 6 offshore where the
18 incident occurred. Depth in this area is approximately 60 feet
19 with riser pipes coming up from the seabed. Here we see the
20 actual configuration of the topside of the 30-inch diameter
21 Sealine No. 36 into which the gulfers were engulfed. We see
22 the top bolted flange of the riser mating with the long radius
23 elbow through which the product is pumped. The flange at the
24 top of the riser is approximately five feet above sea water. This
25 long radius elbow was—

26 **Examination By Mr. Maharaj SC:**

27 Q. Right. Mr. Khan, could you point out the top of riser at berth 6

1 for us, please?

2 A. The top of the riser is in this area here. Okay? And that's the
3 elbow that was removed to facilitate viewing and facilitate
4 work on this flange as they look down into the pipe.

5 Q. Okay. Now, if you stay there if you don't mind?

6 A. Pardon me?

7 Q. If you can remain right there if you do not mind?

8 A. Okay.

9 **Mr. Maharaj SC:** I'll have to play the video and stop at one
10 minute.

11 [*Video played*]

12 **Continued Examination By Mr. Maharaj SC:**

13 Q. Okay. Now, this is a tabletop model which you have prepared,
14 but the model is not to scale. Am I correct?

15 A. That's correct.

16 Q. Right. Can I ask you to point out and explain what you are
17 seeing here from the right of the screen to the left? I can assist
18 you; berth 5 from the right of the screen to the left?

19 A. This is berth 5 here.

20 Q. Okay. Then it's the 30-inch feet long pipe?

21 A. Pardon me? Repeat that?

22 Q. The 30-inch 12—

23 A. Hundred.

24 Q. Yes, the 30-inch 1200 feet long pipe?

25 A. That's No. 5 berth riser there and this represents the entire
26 length.

27 Q. Of the pipe?

1 A. Of the subsea line.

2 Q. Yes.

3 A. And you will see here, I just put some liquid in it to represent
4 the initial condition of that line that it was filled with liquid or
5 filled with fuel oil as said by Paria.

6 Q. Okay. And the stovepipe?

7 A. The stovepipe, this represents, as you all will realize, this entire
8 thing represents the ocean. And this is the stovepipe on top the
9 habitat where materials can be introduced into this or taken out.
10 This is a small aquarium pump here used to supply air to the
11 habitat and this represents a barge here where LMCS barge, you
12 know, was floating on the water next to the berth 6 riser.

13 Q. And what about the compressor?

14 A. The compressor was this aquarium pump.

15 Q. Okay.

16 A. All right. That represents the real compressor on site. But, you
17 know, the aquarium pump to supply air for the model.

18 Q. And the tank?

19 A. This tank here is a 50-gallon tank. That was used to
20 demonstrate the ocean at this particular area. This is No. 6
21 berth riser coming up here, and this represents the gooseneck as
22 you saw in the previous pictures.

23 Q. Right.

24 A. And this line represents a line going to offshore. This is a
25 mistake here. This supposed to be offshore instead of—it is
26 supposed to be onshore instead of offshore. Offshore means
27 it's out in the sea; onshore means on land. So this just shows

1 the demonstration where the system on the oil is being pumped
2 through Sealine 66 onto land to be stored in a tank.

3 Q. Right.

4 **Examination By Mr. Chairman:**

5 Q. What represents the habitat? Or is it not there yet?

6 A. The habitat?

7 Q. Yes.

8 A. This is the habitat here—this plastic bottle here.

9 Q. Right.

10 A. That's a plastic bottle that represents the habitat and that's—on
11 top the habitat is the stovepipe.

12 **Mr. Chairman:** Right.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. But would it be correct to say that the image on the model
15 reflects the position before the habitat was installed?

16 A. Yes, that's correct. The image on the model here represents the
17 habitat is waiting to be installed here. But, you know, you had
18 to drain the line first before we install the habitat.

19 Q. Right. We got you.

20 **Mr. Maharaj SC:** We'll now play the video and stop at 3.55
21 minutes.

22 *[Video played]*

23 **Continued Examination By Mr. Maharaj SC:**

24 Q. Right. Is this the document, the work instructions which is
25 attached to Paria work instruction at CB3, core bundle 3, page
26 1039?

27 A. Yes, it is. *[Document shown to Mr. Khan]* I don't see the

1 drawing here.

2 Q. On the right—can you explain to us what it shows?

3 A. Oh, this? This line diagram represents the relative positions of
4 No. 5 berth here and No. 6 berth here. And this is No. 36
5 Sealine progressing from No. 5 berth coming all the way subsea
6 up on No. 6 berth going through a gooseneck on to a manifold
7 on 6 berth, and that manifold is valved so that oil can go this
8 way through a header, a large header on top here, down through
9 this valve, on to Sealine 66 before going to shore. This Sealine
10 66—I don't know how long it is, but it's a 50-inch diameter
11 line. I think it's about two miles long they say. But that's what
12 this represents, to give you a pictorial view of the system as it
13 was designed.

14 Q. So on the right it shows berth 5 and it is from there where the
15 air blowing to clear the line was introduced. Correct?

16 A. Correct. The air was introduced via a compressor through this
17 valve here so that—and this line, this here was slip blanked. A
18 blank was put here and the valve was closed. So any
19 pressurized air coming in here will tend to push everything this
20 way, up this way, through the manifold, and down to Sealine 66
21 to onshore.

22 Q. Great. So it shows—then it goes down and then horizontally
23 and then vertically to berth 6 and then into Sealine?

24 A. Yeah, that's correct.

25 Q. And after that into the shore tank. Correct?

26 A. Yes. Yes, Sir.

27 **Mr. Maharaj SC:** Then we will play the next part of the video

1 up to 4.44.

2 [Video played]

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. And would this be the demonstration of the air blowing during
5 Phase I? Am I correct?

6 A. Yeah, you're correct on that.

7 Q. And, again, it shows that the air was introduced at berth 5,
8 pushed the line content through the horizontal section of the
9 pipeline to berth 6 and then through Sealine 66 to the onshore
10 tank?

11 A. Yeah, that's correct.

12 Q. Right. The onshore tank, Mr. Khan, is where the measurements
13 of the oil drained would have been taken. Am I correct?

14 A. Yeah, this is as recorded in Paria's method statement—one of
15 the method statements associated with this job, with this phase
16 of the job.

17 Q. Is it in the daily reports or the method statement?

18 A. I think it's in the daily report, you know; yeah. Daily report,
19 that was supplied by Paria.

20 Q. Yes.

21 A. Okay.

22 **Mr. Maharaj SC:** So let's play the video and we'll stop it at
23 4.59.

24 [Video played]

25 **Continued Examination By Mr. Maharaj SC:**

26 Q. Right. Could you explain what we are seeing here?

27 A. What is happening here, as I said, a point will be reached where

1 a lot of the stuff will be expunged from the Sealine 36. But
2 there will be a particular time where the quantity of oil that was
3 removed is such that air will be traversing through here and
4 bubbling up through that vertical riser. Right? The air is much
5 lighter with respect to the liquid, and the liquid due to gravity
6 will just keep coming down, okay, and the air will be just
7 bubbling through here. So it will give an indication that a lot of
8 line content was removed at that particular point. Because this
9 was being monitored somewhere, I think it was on the manifold
10 system on berth 6 by Operations Department. And when they
11 see this air coming on that, they would have, you know, say,
12 hey, a lot of liquid has been expunged from the line and there's
13 still more liquid in the line, so we'll have to do something else
14 to get the liquid out. Because I think the objective was to drain
15 the line as much as possible.

16 Q. So, in effect, what you are saying that a point would have
17 reached where more air than fuel would have been seen coming
18 from the control valves at berth 6 and onshore where the flow
19 was being monitored and measured?

20 A. Yes, yes. At berth 6 there is a bleed there or a vent, as the case
21 may be, and they would have probably open that to do a
22 verification check on the extent of the blowing with respect to
23 line content removal. That is the way that they could gauge
24 visibly on the berth 6, at least to see—have an idea what's
25 happening with respect to line removal. Whilst onshore, I don't
26 know what measuring technique they had, but they would also
27 measure that technique on there. And I think in the LMCS

1 method statement it was stated that they will be monitoring this
2 process by this technique here. They look and see what's
3 happening here with respect to the air, how much air is coming
4 out, and also Paria's operation personnel will be monitoring the
5 volume of barrels expunged from this particular exercise. That
6 is how I understood it.

7 Q. Good.

8 **Mr. Maharaj SC:** Now, the second video before you start, the
9 second video demonstrates Phase II air blowing and this is how
10 Mr. Khan has labelled the second video.

11 **Mr. Chairman:** I wonder if before we go to the second one,
12 could we watch the first one again from start to finish?
13 Perhaps, you'll take a seat for a moment. I mean, you're giving
14 us commentary on the video anyway but I'd like to see it from
15 start to finish, please.

16 *[Video 1 transcribed]*

17 This picture shows an overview of berth 6 offshore where the
18 incident occurred. Depth in this area is approximately 60 feet
19 with riser pipes coming up from the seabed. Here we see the
20 actual configuration of the topside of the 30-inch diameter
21 Sealine No. 36 into which the gulfers were engulfed. We see
22 the top bolted flange—

23 **Mr. Khan:** Mr. Chairman, can we stop there?

24 **Mr. Chairman:** Stop. Stop for a moment, please?

25 **Mr. Khan:** I just want to clarify this point here. This
26 particular picture was taken way before the time of the accident
27 and way before the contract was awarded because this picture

1 here represents the gooseneck on the line. So this picture—I
2 did not say that in my voice recording, that this section here,
3 this picture was taken way before. So this has to be understood.

4 **Mr. Chairman:** Okay.

5 **Mr. Khan:** Okay? And then this piece of line here was
6 removed to facilitate the—after the blowing exercise then this
7 line was removed. After the blowing exercise then this
8 gooseneck was removed. Everybody understands that?

9 **Mr. Chairman:** Thank you very much. Yes, I understand it.
10 But I'd like to start it from the beginning please and watch it
11 uninterrupted.

12 **Mr. Khan:** Yeah. That's the only stoppage I will have,
13 Chairman, on this.

14 **Mr. Chairman:** All right.

15 *[Video shown and narrated as follows]*

16 This picture shows an overview of berth 6 offshore where the
17 incident occurred. Depth in this area is approximately 60 feet
18 with riser pipes coming up from the seabed. Here we see the
19 actual configuration of the topside of the 30-inch diameter
20 Sealine No. 36 into which the gulfers were engulfed. We see
21 the top bolted flange of the riser mating with the long radius
22 elbow through which the product is pumped. The flange at the
23 top of the riser is approximately five feet above seawater. This
24 long radius elbow was removed to facilitate maintenance work
25 on the said sealine.

26 Here we see an overview of the model used to demonstrate the
27 various work activities associated with the repairs and

1 preparation of the line to facilitate such repairs. We see berth
2 No. 5 on the right-hand side; berth No. 6 on the left-hand side; a
3 distance of approximately 1200 feet between them.

4 The subsea line filled with fuel oil is seen terminated with risers
5 at Berth 6 and Berth 5. We also see the model habitat with the
6 compressor on a floating barge. A 50-gallon tank container
7 tank is also seen filled with water to simulate the actual ocean
8 and the riser at No. 6 berth into which the divers were engulfed.
9 We see also a manometer on the side of the tank used to
10 measure the pressure inside the habitat when installed.

11 This tabletop model represents part of the ocean with depths
12 varying from 50 feet to 60 feet at berth 6. Here we see the
13 offshore tank into which product from the sealine 36 was
14 pumped to facilitate clearing of the said line. This manometer
15 represents the pressure gauge used for monitoring the pressure
16 within the habitat where the divers would execute their work.
17 We also see a 5-inch diameter plastic bottle with a PVC pipe at
18 the top to represent the habitat and stovepipe through which
19 tools and materials can be fed and suspended. We also see an
20 aquarium pump used to represent the compressor for supplying
21 air to the habitat.

22 The 1200-foot long line filled with fuel can be seen with the
23 levels at berth 5 and berth 6. So what we have here is a huge
24 manometer between berth 5 and berth 6.

25 This product in the line as shown with the pointer has to be
26 removed to facilitate repairs. The 1200-line—long line—is
27 actually straight but is shown looped here for clarity. We also

1 see the compressor hooked up at the top of berth 5 to facilitate
2 the air required for pushing the product out.

3 A line was pulled between berth 5 and berth 6 to show the
4 levels in the risers. We also see an aquarium pump at the top
5 there on berth 5 to supply the air to facilitate the air blowing as
6 per Paria's work instruction.

7 This line diagram shows the piping configuration from berth 5
8 to berth 6 to facilitate air blowing using a compressor at berth 5
9 to displace the subsea line contents for the offshore tank, 111,
10 as shown in the line diagram; drawing one.

11 Compressed air was used from the compressor at berth 5 to
12 displace the fuel oil from the line. We see the fuel oil being
13 pushed forward along the subsea line into the riser at berth 6
14 through the gooseneck and on to through line 66 on to offshore
15 tankage. A point will be reached where more air than fuel was
16 seen coming from the control valves at berth 6 and onshore
17 where flow was monitored and measured.

18 **Mr. Chairman:** Right. Thank you for that.

19 **Examination By Mr. Chairman:**

20 Q. Can I ask just a couple things from that, please, before we move
21 on?

22 A. Sure.

23 Q. So we could see the red fluid—you don't need to hold the
24 microphone when you're sitting down. You got one in front of
25 you. That's fine. Thank you. The red fluid is in a clear tube,
26 isn't it, that represents the pipe?

27 A. That's correct.

1 Q. So we can see the fluid by looking at the red—the first thing I
2 want to ask you is this—

3 A. The red fluid represents the fuel oil in the line.

4 Q. Yes. So once the pump is turned on, it's pushing the fluid—

5 A. Once the compressor.

6 Q. Yes.

7 A. Yes.

8 Q. —is pushing the fluid along the line and out the other end.

9 What we can see is, is that the fluid itself—it's not as though all
10 of the fluid is being pushed in one motion. What happens is the
11 air gets into the pipe so that there is some fluid in the pipe and
12 some air above it so that it's only—and you say the point is
13 reached when there's more air coming out at the other end than
14 there is fluid, and I suspect that that's when the pipe is more
15 than half and half?

16 A. That's correct. Yes, that's a fair assumption.

17 Q. Right. So that you're left then, aren't you, with a pipe—if
18 you'd stopped at that point in time and sealed off either end,
19 you would have some fluid, say 50 per cent halfway up the
20 pipe?

21 A. Yes.

22 Q. And the rest of it would be some sort of air or gaseous air?

23 A. Correct. Mr. Chairman—

24 Q. Yes.

25 A. Sorry to interrupt you, but I'd like to go on the board here and
26 demonstrate why that happened.

27 Q. All right.

1 A. Is it okay?

2 Q. It is, indeed, it's okay.

3 A. This is an education exercise here for everybody.

4 Q. Well, I'm ready to be educated, so go ahead.

5 A. And the entire country. That is the objective as I said.

6 Q. If you'd be good enough to put your little stick down and pick
7 your microphone up, we'll all be able to hear what you have to
8 say.

9 A. Now, I'll do a cross-section of the pipe. And one has to assume
10 this is the pipe here; pressure is being applied here. Okay? But
11 what is happening here, the pressure is being applied at the start
12 on berth 5, and as a result, the air is pushing here but here has
13 more friction as a little piece on top, and the air pressure here
14 would push the top of the liquid first down the line and that is
15 why you see an air gap right down the line. And that will
16 happen in a line that is level. Once the line is sloped, this
17 system becomes a little more aggressive and more fluid will be
18 involved here because of the sloped condition. I'm going to
19 show you that now, because that drawing suggest that the line is
20 level, but in reality the line was sloped at point two of a degree,
21 .2 of a degree; that is very, very small.

22 Q. Just pause a little.

23 A. I did not go into details with that in my report, because I did not
24 have the information at that time.

25 Q. Just so that I understand, the line is sloped at .2 of a degree?

26 A. Point two of a degree.

27 Q. Right. In which direction? Where is it higher and where is it

1 lower?

2 A. It was higher at berth 5. I'm going to draw that here to show
3 the effect of a sloped line.

4 Q. I'm interested in this because the last time I stood up at the
5 front of this board that's what I was asking about.

6 A. Yes.

7 Q. So higher up berth 5, then at 6?

8 A. At 6.

9 Q. So if berth 5 is over here and berth 6 is over here, the line is
10 sloping down to 6?

11 A. The line is sloping down to 6.

12 Q. Right. Not much but it's sloping down?

13 A. Not much, yes. As a matter of fact, it is sloped a difference of
14 four feet because of the profile of the seabed in accordance with
15 the engineering design drawing.

16 Q. Right. So at one end, that is the berth 6 end, it is four feet lower
17 than it is at the berth 5 end?

18 A. That's correct.

19 Q. Thank you very much. Just a moment. I want to make a note
20 of it. So if you put a pebble, a marble in an empty pipe at berth
21 5, it would roll down to berth 6?

22 A. It would roll down to berth 6; that's correct.

23 Q. Yes, I got you. All right, thank you. Four feet difference.

24 A. Let me see if I get this thing correct. Berth 6, the depth is more
25 in the sea level, right.

26 Q. Is?

27 A. At berth 6 the depth is more.

1 Q. It's deeper?

2 A. Deeper, yes.

3 Q. Yes, by four feet.

4 A. Than berth 5. Right. So berth 5 is higher than berth 6.

5 Q. Got it.

6 A. And they are pumping from berth 5.

7 Q. Yes.

8 A. Good. And when you pump from berth 5, the pressure on the
9 inside of the pipe in that direction towards berth 6 will result in
10 a wider surface area being experienced on the cross-section of
11 the pipe with respect to pressure. As a result, more fluid will be
12 ejected per unit time. That's the physics and the hydraulics of
13 the slope.

14 Q. Right. That's all a little confusing now, I'm sure, to most
15 people.

16 A. Yeah, but, you know, I just wanted to see who would
17 understand that.

18 Q. Yeah. It's not a test.

19 A. Yes. What I'm trying to say here, if the line was sloped at the
20 initial stages of blowing will result in a lot of more liquid
21 flowing out from the line than if it was level.

22 Q. Can I just—I just need to understand that?

23 A. So—

24 *[Mr. Chairman draws on board to clarify demonstration]*

25 **Mr. Khan:** I think, Mr. Chairman, I think you, Mr. Chairman,
26 you have a good engineering concept. You may be better than
27 me.

1 **Examination By Mr. Chairman:**

2 Q. Does that mean I've passed your test? I just want to
3 understand—

4 A. What he drew here was probably what I wanted to draw in the
5 beginning. And when the pressure—this riser will be emptied
6 first. This riser here will be emptied first.

7 Q. I get it.

8 A. Everybody understands that? This riser will be emptied first
9 because you're pumping from this side.

10 Q. Yes. Yes.

11 A. And what happens, when the level gets here, pressure will be
12 exerted here all along in that empty space. So that pressure is
13 over a larger area, and it will push more liquid forward.

14 Q. And it changes once you go past the elbow?

15 A. Once you change here, once you pass this first elbow, the
16 pressure on the surface of the liquid will be larger—well, the
17 pressure is the same, but the surface area is more. So, therefore,
18 it's more liquid pushing this way. That's the hydraulics of that
19 kind of line. It will take me time to put up this model, but this
20 model will demonstrate that in no uncertain manner.

21 Q. All right. Well, we believe you. So just so that—I now
22 understood it, I think, that given the difference between the
23 depths—

24 A. The elevations.

25 Q. Yes, the elevations on either end, it means that if you were to
26 look inside, once you've done that in part—let's say you just
27 pumped out a few barrels till it went down to the elbow and you

1 looked in the riser No. 5, it would look as though it was clear.
2 If you put a dipstick in it, it would be clear as if it went right
3 down to the bottom. Whereas at riser 6, it would be four feet
4 up above the ocean bed into the riser, wouldn't it?

5 A. That's correct. Because what happens—let's assume that the
6 top of this riser here had a flange and the valve was here where
7 they were pumping; just assume that.

8 Q. Yes.

9 A. The valve; and when this compressor is shut down, air will be
10 locked inside here; that's number one. And that air—I wasn't
11 to get to this stage as yet, but it shows in my subsequent
12 video—and that pressurized air will suspend a volume of liquid
13 high up on that side.

14 Q. At the other end.

15 A. So who is ever monitoring on that side will say, 'hey, you ain't
16 move out enough stuff yet, boy. You got to take off a lot more
17 stuff, because my level is high on this side and the level on this
18 side is zero'.

19 **Mr. Chairman:** I got it. I absolutely understand it. Thank
20 you. Perhaps, we can move then to the next one. Thank you
21 very much.

22 **Mr. Khan:** I think the next video clarifies that particular
23 concept.

24 **Mr. Maharaj SC:** Okay.

25 **Continued Examination By Mr. Maharaj SC:**

26 Q. Mr. Khan, what we will do is that I will play and stop at .1
27 second and then ask. This is the document you would say that

1 was attached to Paria instructions work for the line clearing at
2 page 1040 of Volume III of the core bundle.

3 A. Yes.

4 Q. Could you explain to us what the document shows us?

5 A. Well, this is 5 berth here, this is 6 berth, all right. We are
6 pumping from here through here and up as everybody
7 understands, right. But when the monitoring took place on top
8 here and they realize that excess air was coming up, at that
9 particular point assume that it was decided that, hey, too much
10 air is coming out here. We have not emptied this line properly.

11 So to get at the point where this line is properly emptied,
12 Phase II was introduced, and Phase II was introduced by taking
13 out the gooseneck, taking out the elbow from here and
14 connecting a separate 6-inch line to feed the remnant stuff into
15 Sealine 66. Okay? And the only way to do that—you could
16 not have blown there and get the same result. You have to
17 blow from here and introduce a dip tube at the bottom here and
18 pressurize the entire line, and that pressure will force the
19 remnant liquid through the dip tube into this line to get the
20 remnant liquid out. It's a pressurized system, and I've
21 demonstrated that in one of the videos.

22 To do that, this has to be blanked, pressurized here, and
23 this has to be blanked here. So both ends of the pipe will be
24 blanked, but in that blind flange there is a dip tube coming
25 down inside there to reach the liquid. And when they
26 pressurize here, the liquid from here will be forced up that dip
27 tube through here and come up. When you see the video you

1 might be able to understand that.

2 **Examination By Mr. Chairman:**

3 Q. Sure, okay. It follows that the dip tube is smaller than the
4 circumference of the—the diameter of the pipe?

5 A. Yes, the dip tube is smaller.

6 Q. Do you know what size it is?

7 A. I think it was a 6-inch dip tube.

8 Q. Six-inch?

9 A. Yes.

10 Q. Right. So 6-inch pipe, something like this, is pushed right
11 down inside?

12 A. Right down inside to the elbow.

13 Q. And a seal created between that 6-inch pipe and the top flange
14 out of the 30-inch pipe that it's coming, a seal is created?

15 A. The system is pressurized internally.

16 Q. Internally, right.

17 A. So the only opening is through the 6-inch pipe.

18 Q. Got you.

19 A. There's another drawing here that was issued, which shows this
20 set up here. But it was issued, and it's somewhere in the
21 bundle; I don't know.

22 **Mr. Maharaj SC:** Okay. You could stay right there, Mr.
23 Khan.

24 **Mr. Khan:** Yeah, okay. Good.

25 **Mr. Maharaj SC:** I'll play it and stop at 16 seconds, please.

26 *[Video played]*

27 **Continued Examination By Mr. Maharaj SC:**

1 Q. Right. Could you explain?

2 A. Okay. This is the set up. This represents 36 Sealine No. 6
3 berth. You see the flange on top here, that is a blind flange, and
4 the blind flange had a dip tube going down inside here like this.
5 You see here, this represents the blind flange. The dip tube is
6 going down, right down to the bottom of the elbow. This is
7 closed and that is an inspection port where they would have
8 used to measure the ullage.

9 So as I said before, at the end of Phase I there was a
10 pressure at No. 5 berth locked in and that supported a column of
11 liquid inside there. And when whoever take a dip here would
12 say, "Hey, we still have material to move out", not realizing
13 that that section of the line is almost empty. But the pressure
14 inside here would have supported the column of liquid in here.
15 So to get out that now, he had to put this dip tube and drain out
16 into the slops barge, and that is what I think I saw in the method
17 statement.

18 Q. Yes. And for the records, that document is attached to LMCS
19 method statement for Phase II line clearing at page 1043 of
20 Volume III of the core bundle?

21 A. Yes.

22 **Mr. Maharaj SC:** Can I ask you now to play the video and
23 stop at 31 seconds?

24 *[Video played]*

25 **Mr. Khan:** Hold on. Could you reverse a bit? This here is the
26 expanded view of this. In engineering drawing terminology
27 people do that to show that, Aye, that is an expanded view of

1 this. Okay? So this here is the expanded view of this, so
2 you're showing a more detailed view of this set up here, which
3 is this. So you see the dip tube coming here to the bottom, and
4 the inspection port is there. And this tube comes up here and it
5 continues here and goes to shore. Everybody understand that?

6 **Mr. Maharaj SC:** Stop at 31 seconds.

7 *[Video continued being played]*

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Right. What we are seeing here? Could you explain it?

10 A. All right. At that particular point, as I said, the gooseneck on
11 the topside of berth 6 was removed, and this is the flange that I
12 was speaking of in the initial picture. This is the sea level here.
13 So this flange was above sea level at the time. Remember, they
14 have to do repairs below here. So they have to cut this line
15 below this level here, and to get at that they had to put the
16 habitat on. But anyway, we'll come to that after. So you will
17 see where the dip tube—I simulated a dip tube through a flange
18 here, and I held down this thing with some paperclips, some
19 bulldog clips, and this was a dip tube going down to touch the
20 remnant liquid in the pipe. And when this system was
21 pressurized both on that side through the system, it forced the
22 remnant liquid through here and it come through here. And you
23 will see that demonstrated.

24 Q. Right. So if I understand it, this is the modified flange with the
25 dip hose at berth 6. And could you point out to us the elbow at
26 berth 6, which has now been removed?

27 A. Well, we don't have it here.

1 Q. Oh, you don't have it here?

2 A. That's the one I showed you in the original picture.

3 Q. All right, okay.

4 A. That's the 36-inch elbow.

5 Q. And the dip hose has been inserted?

6 A. Yes. When you take off the elbow you expose this flange, and
7 they would have then put on the modified flange on that with
8 this dip tube inside here and another valve here with an
9 inspection port and they will pressurize the entire system from
10 No. 5 berth.

11 Q. And this was all part of Phase II of the line clearing process?

12 A. Yes, to ensure that at least you get off as much liquid as
13 possible.

14 **Mr. Maharaj SC:** Could you play the video and stop at 1.58
15 please?

16 *[Video played]*

17 **Examination By Mr. Chairman:**

18 Q. Right; pausing there. Just looking at that model that you
19 created, we can see that if that's the point at which it had
20 stopped, the pumping had stopped, there was fluid in parts and
21 there were air pockets in part, just looking at it as we can see it
22 there, because there remained this pressure at berth 5 at that
23 end, yes; so that the realities were that we can see the model as
24 it's been created by you that is the way in which the pipe would
25 have existed at the point in time when they took that plug out?

26 A. Nope, there is a little difference here. And let me just go
27 back—

1 Q. Well, you haven't got the habitat on yet?

2 A. No, we have not put the habitat on yet.

3 Q. Right, yes, of course, yes.

4 A. Right. So when you applied compress air there, there was a
5 point where they say close the valve on their method statement,
6 or shut down the compressor, one out of the two; and if you do
7 that you will still have a locked-in pressure on that No. 5 berth
8 and push the remnant liquid. By that time the gravity would
9 have caused the remnant liquid to remain here, and the pressure
10 would push this remnant liquid up to a point here, somewhere
11 here. Right? And when they inspected this—when they
12 removed the dip hose and they looked inside the pipe, they
13 would have seen liquid to a certain level.

14 Q. Giving them a false impression of where the ullage was?

15 A. False impression that the ullage—you have a lot of liquid inside
16 there still.

17 Q. Sure, yeah, yeah, yeah.

18 A. And they say, okay, we have our ullage. They remove—they
19 get the ullage up till here, but lo and behold, this ullage was a
20 false ullage.

21 Q. Leading to—

22 A. Leading to belief that this line still had a lot of stuff in it.

23 Q. But it was still flooded?

24 A. Flooded, yes, flooded, flooded; because nobody looked on that
25 side to see what was happening with it. But eventually, to
26 answer your question, Mr. Chairman, the blind flange on berth
27 No. 5 was taken out just before. But let me go back; let me get

1 this clear here. When this was achieved, right, when this was
2 achieved they then introduced the inflatable plug and the
3 mechanical seal on this side.

4 Q. At this point in time?

5 A. At this point in time when they saw the ullage to the point
6 where they want to reach, they say 35 foot ullage from this
7 place to this point—30 or 35 feet they were looking for—they
8 saw that. They say, okay, now it's time to introduce the both
9 plugs.

10 Q. I think it's about 17 feet of ullage they were looking for.

11 A. All right, yes.

12 Q. So 35—effectively, if you took both ends if it were equal?

13 A. Equal, equal, yeah. But I think LMCS statement say they were
14 looking for, I think, 30 or 35 feet ullage.

15 Q. Thirty-five?

16 A. Thirty or 35 feet, I think so.

17 Q. No, you're right. It is 35; 70 altogether. That's right, yes.

18 A. So they saw that and they introduced and put their inflatable
19 plugs in and that created another problem.

20 Q. Well, it locked the condition of the pipe?

21 A. It locked the condition of the pipe. But that was no problem at
22 that particular time. The system had stabilized and the plug
23 was installed here, both plugs. Remember, the riser is still up
24 here above sea level, and they inserted that plug inside there
25 with the long handle and make the seals. And then they had to
26 come now and cut off this old piece on top here. That is when
27 they introduced the habitat. But let's not get there as yet. The

1 important thing they introduced the both seals at this particular
2 point thinking that the ullage that they wanted, it has been
3 achieved and thinking that this entire line here has liquid filled
4 in it. And what happened when this was installed here, right
5 before the accident, they went to do the carber test on No. berth
6 5. And when they opened that flange the pressure was released
7 there and pulled down the liquid a little further and that created
8 a vacuum on this side, and that accelerated or made the system
9 more dangerous. Because if you have a pressure on top the
10 plug and a vacuum—

11 Q. Just pause for a moment. I need to make a note. Just one
12 moment. Thank you. I wonder if we could watch your video—
13 that video No. 2 from start to finish?

14 A. Okay. But I just want to complete one more thing, Chairman,
15 with your permission.

16 **Mr. Chairman:** Certainly, certainly.

17 **Mr. Maharaj SC:** If I can just ask him before we do that?

18 **Continued Examination By Mr. Maharaj SC:**

19 Q. You could point out where the gaseous void is?

20 A. Gaseous void was all the way long, all the way down through
21 the entire pipe, because at that particular time according to the
22 records, almost 80 per cent of the fuel oil in that line was
23 removed—according to the report. So if you remove 80 per
24 cent of the contents of a line, 80 per cent of the line is empty
25 and what I'm getting—so when they went there to do the carber
26 test they take off the flange and the air pressure on that side was
27 released and it became atmospheric pressure on that side now

1 instead of the locked in pressure, the remnant locked in pressure
2 from the compressor. And when there is atmospheric—
3 remember, here is plugged and sealed properly, and that will
4 cause the weight of the fluid to come back down here a little bit
5 and create a vacuum under the plug and that was a double
6 jeopardy. You have a pressure on top the plug and a vacuum
7 underneath.

8 Q. So the release of the pressure would have made the event more
9 aggressive?

10 A. More aggressive. And at that point, you know, one could
11 accurately assume that if the plug was not holding, the
12 additional vacuum under the plug would have dislodged the
13 plug. But the plug held its adhesion to the pipe—the inflatable
14 plug I mean.

15 Q. Is that the inflatable plug?

16 A. That is the inflatable plug.

17 **Mr. Khan:** As we're on that, could I go on that, Chairman?

18 **Mr. Chairman:** Just a moment. Let Mr. Maharaj ask you the
19 questions to help us.

20 **Mr. Maharaj SC:** Well, unless we—anything more on this I
21 could then play the whole video for this—

22 **Mr. Chairman:** Yes, I'd like to see the whole of this video
23 uninterrupted again, if I may, please.

24 **Mr. Maharaj SC:** If you could play back the video on the
25 second video.

26 *[Video 2 narrated as follows]*

27 Phase I air-blowing was not capable of displacing all the

1 product in the line. Phase II air-blowing using a 6-inch
2 diameter dip hose at berth 6 was done. Drawings showing the
3 line diagram with dip hose at berth 6 and an expanded view of
4 the modified blind flange at berth 6 to accommodate the dip
5 hose and inspection port can be seen.

6 A modified blind flange was used to accommodate 6-inch dip
7 hose at berth 6. A blue plastic hose is shown in the model to
8 represent the hose inserted into the berth 6 riser to the bottom of
9 the elbow to facilitate removal of the remaining fuel oil. The
10 sealed 30-inch Sealine being blind flange at berth 6 and at berth
11 5 was pressurized at berth 5. The pressure within the 30-inch
12 diameter subsea line then forced the remnant fuel into the 6-
13 inch dip hose to storage as seen. This continued until air with
14 little fuel oil was seen emanating at the collection area at which
15 time the dip hose was removed.

16 The air supply at berth 5 was subsequently closed and the
17 system stabilized. The remnant fuel oil was pushed up to a
18 certain height in berth 6 balanced by the locked in back
19 pressure at berth 5 giving a false impression of the subsea level
20 line being filled with oil still and not realizing that the line was
21 practically empty with the large gaseous void. A line level was
22 pulled between berth 6 and berth 5 to show this difference in
23 levels between berth 6 and berth 5 as was reported.

24 **Examination By Mr. Chairman:**

25 Q. All right. Thank you. There's one question I want to ask you,
26 please, about that. The purpose for putting a dip hose in at
27 berth 6, was to remove as much of the line content as possible?

1 A. That's correct. That's the only way you could have removed it.

2 Q. Certainly, I get that. If all you actually wanted to achieve was a
3 35-foot ullage, if that's what you actually wanted to achieve,
4 firstly, would you have been able to measure the volume
5 necessary to achieve a 35-foot ullage at either end? Assume
6 you have a full line of fuel, right, you open this end, No. 6, you
7 open this end, No. 5, you want 35 feet at that end, then you
8 might have something different at that end if it's not level, but,
9 I mean, the levels will be the same, right, down from the
10 surface; 35 feet down that side, 35 feet down that side. It is, of
11 course—must be—capable of measuring how many barrels of
12 oil that represents?

13 A. Of course.

14 Q. The equation is not a difficult one, elementary mathematics for
15 anyone to work out. How many barrels would need to be
16 removed in order to achieve a 35-foot ullage on either side?
17 My best calculation suggests something in the order of between
18 40 and—

19 A. And 60 barrels; 40 and 60.

20 Q. Between 40 and 60 barrels thereabouts?

21 A. Yeah.

22 Q. Per barrel being, I think, in the US is 42 gallons. Is that right?

23 A. That's correct, yes.

24 Q. Right. So that's the sort of volume that needed to be removed
25 in order to achieve that ullage whilst maintaining the fluid in
26 the rest of the pipe. That is, as I say, straightforward. Once
27 you start blowing, and pushing, and putting in pipes, this dip

1 hose, and so on, there's only one intention and that's to clear
2 the line completely?

3 A. That's correct. Can I say something, Mr. Chairman?

4 Q. Yes, I'm sorry. I was just thinking for a moment. So whoever
5 was doing this, LMCS and/or Paria, seeking to drain this line
6 completely, on the face of it, it must have been intentional,
7 because putting a dip hose in, there's no other purpose for
8 doing that. I mean, frankly, you could stick a bucket down each
9 side and start pulling the barrels out that way, well, couldn't
10 you, to get to your 35 feet of ullage?

11 A. Yes. This technique, Phase I and Phase II, clearly states that
12 the line was going to be emptied. There's no question about
13 that.

14 **Mr. Chairman:** Right. Thank you. I think that's a useful
15 point, if I may say so, which to take our break for the lunch.
16 All right? Can I ask for a shorter lunch? Would 45 minutes be
17 enough for everyone? Thank you. Yes, ten past 2.00 then,
18 please. Thank you.

19 **1.25 p.m.:** *Enquiry suspended.*

20 **2.14 p.m.:** *Enquiry resumed.*

21 **Mr. Chairman:** Thank you all. Good afternoon. Witness,
22 please? As I understand, you've been scratching up our screen
23 with your wand, so we got you an electronic one. [*Laughter*]
24 Good. Mr. Maharaj.

25 **Mr. Maharaj SC:** Thank you, Mr. Chairman. We now go to
26 the third video, and the third video shows the plug, installation,
27 the habitat, and the Delta P vortex. This is how Mr. Khan

1 describes the video, and you will stop at 38 seconds.

2 [Video played]

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. Right. Mr. Khan, can you point to the inflatable plug and
5 explain where it would have been installed?

6 A. That's the inflatable plug here and it's in an inflated condition.
7 Now, on top that plug they had put a mechanical seal, but I did
8 not simulate the mechanical seal, because it was kind of
9 difficult to put in that seal in there—it not small. Remember,
10 this tube is just about one inch diameter, and that indicates the
11 cut line. So the plug has to go under the cut line so they can cut
12 here and install the flange and then they will remove the top
13 section of the riser which was bad. Okay?

14 **Mr. Maharaj SC:** Okay.

15 **Examination By Mr. Chairman:**

16 Q. When the plug is put in at berth 6, is the flange already fitted at
17 5?

18 A. Yes, this is what I understand. The flange was at berth 5
19 installed.

20 Q. Right. But the CARBER testing hadn't taken place, or had it?

21 A. No, the carber testing did not take place as yet.

22 Q. Right. So at that stage, once you're putting in the plug at this
23 end with the flange sealed at berth 5, the effect of putting this
24 plug in at this stage is to freeze, effectively, the condition of the
25 pipe at that point time?

26 A. Yes.

27 Q. Right. So, and it remained in that state until either you opened

1 the flange at 5 or you removed the plug at 6?

2 A. That's correct.

3 Q. Right. So at that point in time it is frozen in time and it would
4 stay that way until you did one of those two things?

5 A. Yes, Sir.

6 Q. Thank you.

7 **Mr. Maharaj SC:** Right. Could we play and stop at 1.21?

8 *[Video played]*

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. Okay. So we are seeing here the plug, the habitat—you want to
11 point—yes; the plug?

12 A. Just now, hold on. What happened there? Okay. That's the
13 plug there.

14 Q. Yes; the habitat?

15 A. The habitat is here.

16 Q. Which is not yet pressurized?

17 A. Not yet pressurized because there is water filled up inside here.

18 Q. Right.

19 A. So that's the stovepipe. The manometer is being connected to
20 measure to ensure that at least there's the pressure—to verify
21 the pressure in the habitat, and that is the compressor here with
22 the aquarium pump, and that is the gooseneck that was
23 removed, right. And that is the compressor there and pushing
24 air to really go into the habitat. And when we start the
25 compressor here, the air will pressurize the habitat and push
26 down the water.

27 Q. Okay. Where is the sea level?

1 A. The sea level is at this point. You see here, this squiggly mark,
2 that's the sea level. So the sea level was below—the habitat
3 was obviously below the water level here, okay. So that's all
4 filled with water. That's the seabed here. Okay.

5 Q. Yes. Good.

6 **Mr. Maharaj SC:** Play now and stop at 2.16.

7 *[Video played]*

8 **Mr. Chairman:** Sorry, just go back a few seconds.

9 *[Video replayed]*

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. So we just saw the deflation of the plug and the formation of
12 the Delta P vortex. This was the vortex in which the men
13 would have been sucked into the pipeline. Am I correct, Mr.
14 Khan?

15 A. That's correct, yes.

16 Q. And is it possible for you to point to the vortex on the screen?

17 A. That's the vortex here. And that line you're seeing down
18 there—like, you know, sometimes you look up in the sky and
19 they talk about a tornado? That's the vortex and that's a
20 column of air being sucked in there.

21 **Examination By Mr. Chairman:**

22 Q. Does it swirl like it does if we see it on land?

23 A. Yes, it swirled around. You can see the swirling around there.
24 If you could have run the video slowly for that point then you
25 could see it better.

26 **Mr. Chairman:** Just go back again a few seconds, if you
27 would, please?

1 **Mr. Maharaj SC:** Just go back a way.

2 [Video played]

3 **Mr. Khan:** That's the installed flange. See the plug here. See
4 the plug here deflated very quickly.

5 **Examination By Mr. Chairman:**

6 Q. So the pressure on the inside of the pipe together—that had
7 been released by the removal of the plug, together with the
8 compressor pushing down and the vacuum that you told us
9 about earlier between the plug and the fluid, all of those things
10 came together in effect?

11 A. Together, yes, and propelled the plug inside.

12 Q. Yes.

13 A. Yes. You had a force on top of the plug and a vacuum
14 underneath.

15 Q. So you had a sucking and a pushing?

16 A. A sucking and a pushing.

17 Q. We know that these men and the things that were inside the
18 habitat seemed to disappear in a matter of seconds. Would that
19 accord with your understanding of what would have happened?

20 A. Of course. They disappeared in no time at all.

21 Q. No time at all.

22 A. Because the velocity created here was so much. Initially before
23 the vortex is formed, the velocity of the air is so much it will
24 just pull them inside, and the first man who goes inside there,
25 he will drop down inside there from gravity alone, and then the
26 water will come and take the others. That is how the sequence
27 is.

1 Q. So the first person in, would have been actually falling in the
2 pipe rather than being in water?

3 A. Falling, yes; that's correct.

4 Q. So he might have been more greatly injured in the fall itself?

5 A. Uh-huh.

6 **Mr. Chairman:** Wow. Thank you.

7 **Mr. Maharaj SC:** So this demon—

8 **Mr. Chairman:** I want to make a note.

9 **Mr. Maharaj SC:** Sorry.

10 **Mr. Khan:** This is the flange that was installed. See the slip-
11 on flange they speak about, that was it there. Remember, this is
12 below water now. All here is filled with water around.

13 **Mr. Chairman:** Yes, thank you.

14 **Continued Examination By Mr. Maharaj SC:**

15 Q. So this demonstrates that the system has stabilized, the
16 compressor has now pushed back the water out of the habitat,
17 and the last image we saw on the screen demonstrate that the
18 habitat is now dry and there is no water in the habitat. So I
19 want to ask you something. In your letter dated the 6th
20 December, 2022, to the Commission, supplemental core bundle
21 at 1534, you indicated that prior—at paragraph 4 and 5—you
22 indicated that prior to Christopher Boodram's rescue the entire
23 system stabilized and equalized itself at both ends of Sealine 36
24 and this condition was the best opportunity to attempt a rescue.
25 Correct?

26 A. That's correct.

27 Q. We heard from a witness yesterday, Mr. Donawa, who said that

1 even though this was stabilized, there was still a secondary risk
2 of a Delta P. What you have to say about that?

3 A. Mr. Chairman, before I answer that question, there are some
4 terminologies here I want to clarify.

5 **Mr. Chairman:** All right.

6 **Mr. Khan:** Those terminologies are used loosely in this
7 Commission, and I need to clarify that and you might rephrase
8 that question.

9 **Mr. Maharaj SC:** Okay.

10 **Examination By Mr. Chairman:**

11 Q. Are you about to tell me off?

12 A. Yes.

13 Q. Right, okay. [*Laughter*]

14 A. Now, the word “Delta” comes from a Greek word.

15 Q. It’s a Greek letter.

16 A. Greek letter, sorry, Greek letter. It’s the fourth letter of the
17 Greek alphabet. And Delta means a change in quantity or a
18 change. Don’t confuse Delta—Delta P is a differential
19 pressure. In engineering terms and in mathematics a Delta P is
20 a change or a differential pressure. So you can equate Delta P
21 with differential pressure. But a Delta P event is the result of a
22 disturbance in the differential pressure. So you don’t talk about
23 a Delta P. A Delta P is a condition. A Delta P is an event
24 arising from a differential pressure disturbance. So you
25 cannot—a Delta P, if you stand up outside your tank that
26 supplies propane gas to your stove, the tank and you outside,
27 there’s a differential pressure there.

1 Q. There's one here.

2 A. Right here.

3 Q. There's a tank there which has got air pressurized inside it.

4 A. Of course. There's a differential pressure there, but it's not a
5 Delta P event. If I puncture a hole in that tank then I will
6 activate a Delta P event. So Delta P cannot stand by itself
7 [*Inaudible*] your question. You have to state whether it's a
8 Delta P event that will occur inside there. Okay? So could you
9 repeat that question again?

10 **Mr. Chairman:** Suitably admonished.

11 **Mr. Khan:** Could you repeat that question, Sir?

12 **Continued Examination By Mr. Maharaj SC:**

13 Q. Yes, Mr. Khan. So, Mr. Khan, I think I'll have to rephrase the
14 question. So, Mr. Khan, the system becoming static, stabilized,
15 in order for the system to have a Delta P something has to
16 happen?

17 A. A Delta P event.

18 Q. Yes, for a Delta P event something has to happen?

19 A. That's correct. A Delta P is existing all over the place. When
20 you're in an aircraft you have a Delta P, because there's a
21 differential pressure inside of the aircraft to the outside. There
22 is a Delta P. But there isn't no Delta P event. Something has to
23 happen before—

24 Q. To activate?

25 A. Inside the plane or outside the plane. A terrorist could shoot at
26 the glass and cause a Delta P event—not a Delta P; the Delta P
27 is already there existing. So you could shoot the aircraft—or if

1 the aircraft has a fault in the doors, the door could blow off and
2 then it creates a Delta P event. So we have to distinguish a
3 Delta P, differential pressure, and a Delta P event. They're very
4 closely related.

5 Q. I think it is well explained. Thanks for the information.

6 A. Yes, Sir.

7 Q. So in relation to what Mr. Donawa said yesterday, the system
8 being stabilized, would you agree—well, would you say that
9 that would have been—you maintain saying that that would
10 have been the best time to effect a rescue of the men in the
11 pipeline?

12 A. That's correct. When the system has stabilized. There was a
13 differential pressure there, but there was no differential pressure
14 event; there was no Delta P event. Something has to take place
15 before a Delta P event is initiated.

16 Q. And you would have known that after Boodram came out of the
17 pipeline, Michael Kurban went into the pipeline to try to rescue.
18 You're aware of that?

19 A. Yes, I am aware of that.

20 Q. So someone going into the pipeline to effect a rescue would not
21 activate a Delta P event?

22 A. No.

23 **Examination By Mr. Chairman:**

24 Q. But if I opened the flange at berth 6—5, sorry, at berth 5, if I
25 opened the flange at berth 5, could that create the Delta P
26 event?

27 A. Within the pipe at that particular time?

1 Q. The position is stabilized, right? This event has just happened.

2 A. Yes; the men are inside.

3 Q. The men have been sucked into the pipe; they're in the pipe,
4 okay?

5 A. Yes.

6 Q. It is what it is now?

7 A. Uh-huh.

8 Q. It's returned to stabilization. If I opened the flange at berth 5,
9 would that create or could it create a Delta P event?

10 A. Definitely.

11 Q. There's no could about it?

12 A. No could about that.

13 Q. It would definitely do it?

14 A. Yeah, because—

15 Q. Pausing there for a minute, just so that I follow all of this. If
16 there are, therefore, air pockets within this pipe that these men
17 have been sucked into and the pipe is stabilized as it is at this
18 particular moment in time, I open that flange, what would
19 happen potentially to those air pockets?

20 A. The air pockets would just move around.

21 Q. They'd move?

22 A. They'll move.

23 Q. Right.

24 A. Right.

25 Q. So what air they might have had to breathe in might have been
26 lost to them?

27 A. Could have been lost, and could have remained, you know,

1 shifted a bit, but they could still have air.

2 Q. They might or they might not?

3 A. They may or may not. You know, it's according to the size of
4 the air pocket.

5 Q. Right. But the key here is, is that something needs to happen to
6 create the event?

7 A. Yes, yes.

8 Q. That's the point you've been belabouring about?

9 A. That's the point I'm saying.

10 Q. The existence of that Delta P and the event that triggers it. So
11 that even if there was a latent Delta P within the pipe after
12 stabilization, even if there were, something would have to
13 happen to trigger it. For example, removing the flange at berth
14 5?

15 A. Or shutting down the compressor.

16 Q. Well, I was going to come to that, because it's something I've
17 been—has [*Inaudible*] me before.

18 A. Sorry.

19 Q. The alternative is if you leave that end, leave 5 as it is, if you
20 decide that actually what we're going to do is to fit the riser
21 onto the rising pipe, fix the new piece of riser, take it above sea
22 level and then remove the hyperbaric chamber with all the
23 pressure that that brings to bear, that equally could be an event
24 that would cause Delta P if there was an existing latent Delta P?

25 A. That's correct, Sir.

26 Q. So the long and the short of that is this, is that whilst it
27 remained stable, Delta P or not, it was stable, with the pressure

1 being applied at one end by the habitat and the other end being
2 sealed by the flange, that was the time in which to effect a
3 rescue if there was to be one. Correct?

4 A. Yes, Sir.

5 Q. If you start messing with that, either end, you are likely to
6 jeopardize the lives of the people in that pipe?

7 A. That's correct.

8 Q. Thank you. It's correct and sad?

9 A. I would venture another point. When the plug was pulled, the
10 flange on No. 5 berth was installed. And when the water
11 rushed in there it compressed the air on that side.

12 Q. Right, creating an even greater pressure?

13 A. Yes. So it's compressed the air on that side. So that is why I
14 mentioned about compressed air. If you disturb the compressed
15 air on either side, you create an imbalance.

16 Q. Yes, and the imbalance might be either compressed air as is in
17 that tank at the moment, or a vacuum where there's a lack of
18 air?

19 A. Well, yeah, of course. But what I'm saying is the compressed
20 air on that side, right, the system is stabilized because
21 compressed air is on that side because of the blind flange, and
22 the air is being pushed on the—by No. 6 berth side with the
23 compressor. So the system is stabilized. The compressor is
24 working, pushing and clear the habitat, and also there's
25 potential energy stored on the berth 5 section due to
26 compressed air. And if you take out that flange there you will
27 release the compressed air and you push the water down this

1 way.

2 Q. I absolutely understand what you're saying.

3 A. Okay.

4 **Mr. Chairman:** I got it. Thank you very much. Thank you,
5 Mr. Maharaj.

6 **Mr. Maharaj SC:** All right. We now go to the fourth and last
7 video.

8 **Mr. Chairman:** What I've written is that the removal of the
9 flange at 5 or the compressor at 6 would destabilize the
10 pipeline.

11 **Mr. Khan:** That is correct.

12 **Mr. Chairman:** Thank you very much.

13 **Mr. Khan:** It wouldn't destabilize—the conditions in the
14 pipeline—not the pipeline. It would destabilize the conditions
15 in the pipe.

16 **Mr. Chairman:** That's my shorthand. The pipe is going to
17 stay as it is.

18 **Mr. Khan:** Yes.

19 **Mr. Chairman:** I get that.

20 **Mr. Maharaj SC:** Okay. The fourth video is a simulation
21 with the existing model to demonstrate the deflation of the plug
22 with a filled subsea line. The fourth video, Mr. Khan has
23 labelled this video as inflated plug with line filled. I will first
24 ask for the video to be played and to be stopped at 12 seconds.

25 **Mr. Chairman:** Just before you do that so that I understand.

26 **Examination By Mr. Chairman:**

27 Q. This is now the line completely filled with fluid, bar

1 some small—

2 A. Or beyond the elbow then; beyond elbows on both sides.

3 Q. Beyond the elbows on both sides?

4 A. Both sides.

5 Q. So the line at the bottom is completely filled?

6 A. Uh-huh.

7 Q. Which is how it should have been?

8 A. Well, I don't know, but anyway—

9 **Mr. Chairman:** Well, I do. Right, thank you. All right. Can
10 we have it please?

11 [*Video played*]

12 **Continued Examination By Mr. Maharaj SC:**

13 Q. Would you like to point out the dry habitat, and the filled line,
14 and the plug?

15 A. That's the dry habitat there, okay. And the men could be
16 working inside there at the moment, okay. And that's the water
17 level. The habitat is pressurized, okay, and the men could be
18 working inside there. That's the inflated plug; that little section
19 you see there, that's the inflated plug. And there is a gap here,
20 right, a gaseous gap.

21 **Examination By Mr. Chairman:**

22 Q. Below the plug?

23 A. Below that, yes. And also—you could have that, or you could
24 have the water level here; you could have the water level here.

25 Q. Anywhere?

26 A. You can't have it there.

27 Q. Right.

1 A. So, if the water level is here—if you take out the ullage and it
2 comes to this level, you still have a gap here; you still have a
3 gaseous gap, but the line is filled right through. And if you
4 deflate that plug the water will rise very quickly up to a certain
5 level here, but it will not rise to the section where you could
6 cause a problem with the people inside the habitat.

7 Q. Right. Show us the—

8 **Mr. Maharaj SC:** So would we play it up to 1.16?

9 *[Video played]*

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. Good. So it would be correct to say that with the filled line
12 there would have been no gaseous void or latent differential
13 pressure hazard?

14 A. No, there could be a gaseous void under the plug, but still, but
15 the size of the gaseous void would be small.

16 Q. Would be?

17 A. Small.

18 **Examination By Mr. Chairman:**

19 Q. Even if it was all the way down to the elbow?

20 A. Even if it's way down to the elbow, because that length could
21 be about 16 feet. The important thing is here, that even though
22 the plug is deflated, there will be no condition to establish a
23 flow.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. Because we did not see a vortex?

26 A. Yeah. There was no condition to establish a flow. And you
27 must have a flow for a vortex to perpetuate—to form and

1 perpetuate itself.

2 Q. Because it's the vortex which will cause the men to be sucked
3 in?

4 A. Yeah. It come like a tornado which is a reverse vortex.

5 Q. Yeah. Can you just for—so that we can be sure—can you point
6 out on this part of the video the deflated plug?

7 A. Look the deflated plug here; that blue little thing inside there.

8 Q. Oh, that's the deflated plug?

9 A. Yeah.

10 Q. And you also already point out where the men would have been
11 after the—

12 A. You see the little matchsticks inside here, those are the men. I
13 didn't want to represent actual man.

14 Q. I know. And the line being filled, could you just show us that?

15 A. The line here—well, you have to go back; this is the line here.
16 You have to go back a bit.

17 **Mr. Chairman:** Well, let's just watch the whole of that video
18 again.

19 **Mr. Maharaj SC:** I just want to ask him one question before
20 we—

21 **Continued Examination By Mr. Maharaj SC:**

22 Q. Do you agree whether it was 300 barrels of fuel oil from the
23 underwater piping was removed or over 1,000 barrels, 1,052
24 removed, there would have still been a latent Delta P hazard?

25 A. That's correct. Because I want to explain that a little more.

26 Q. Yeah.

27 A. When I did my report I knew nothing about the extent of

1 contents removed from the line. All I was going by is by the
2 method statements supplied by LMCS where it says 300 barrels
3 are to be removed. And if 300 barrels are removed, my
4 calculation show that there'll be a continuous air gap at the
5 bottom of the line. And if 300 barrels removed and you have—
6 my calculation show there was a gap of seven inches or eight
7 inches of airspace along the line, if you look at my drawings.
8 But if more was removed or more was actually removed, then
9 that gaseous void becomes larger.

10 **Examination By Mr. Chairman:**

11 Q. And makes it worse?

12 A. And makes is worse, yes.

13 Q. But on any view, 300 barrels was way too much?

14 A. Yes, it was way too much, because if you looked at it—I
15 always say there was an anomaly in the statement where he
16 says you want an ullage of 30 feet and 30 feet is equivalent to
17 about 20-something odd barrels.

18 Q. Yes.

19 A. You see. One foot of that 30-inch pipe is equivalent to .82 of a
20 barrel—one foot of that pipe.

21 Q. One foot equals how much?

22 A. Point eight, two of a barrel. But rule of thumb is, as Mr. Kazim
23 was saying, one foot is one barrel, you know, as a rule of
24 thumb, you know.

25 Q. Yes.

26 A. But when you do the actual calculation—

27 Q. It's about .82.

1 A. Yeah, .82, based on a thickness of the pipe of three-eighths of
2 an inch thick.

3 Q. Yes. I worked it out about 7.5 gallons per cubic foot of pipe,
4 then you multiply that up—

5 A. Yes.

6 Q. Thank you very much.

7 A. One foot of that pipe in terms of volume, I think it's about 4.6
8 cubic foot and one barrel is 5.62 cubic foot. So that's why the
9 .82 comes in. Somewhere around that figure.

10 Q. It's pi r squared (πr^2) for the—

11 A. Volume?

12 Q. In order to measure volume it's πr^2 multiplied by the height or
13 the length of the pipe.

14 A. Correct, yeah. Or diameter squared over four by length.

15 Q. Yeah, all right, the same formula.

16 A. Yeah, okay. High school students know that easily. So why
17 engineers couldn't calculate that, I don't know.

18 Q. Well, I agree. I mean, the calculation of how many feet of
19 ullage that you wanted, to work out how many barrels that
20 represented was a pretty straightforward calculation for any
21 engineer. A high school student, as you say, could have—

22 A. Form one student.

23 Q. Yes. Well, I was never that good at math, but it seemed to me
24 relatively straightforward. But the question I suppose that
25 arises from that is, is that for anyone to describe the need to
26 remove 300 barrels when all you want is 30-odd feet of ullage

1 on either side must have been on any view a miscalculation?

2 A. That's correct, or a miscalculation.

3 Q. Whatever it is. It begins to approach 10 times the amount you
4 want, doesn't it?

5 A. That's correct.

6 **Mr. Chairman:** All right. Thank you very.

7 **Mr. Maharaj SC:** What I wanted to do, Mr. Chairman, I
8 wanted to play over the fourth video and then play over the
9 entire one, if that is okay?

10 **Mr. Chairman:** I think that's a good idea.

11 **Mr. Maharaj SC:** Okay. So let's play over the fourth video.

12 *[Video played and narrated as follows]*

13 Assimilation was done with the existing model to demonstrate a
14 filled line with an inflatable plug and the effects of deflating the
15 plug at that particular time. Here we see the line filled with
16 liquid up to a certain point there. The compressor is installed
17 on the right to pressurize the habitat. The inflatable plug is
18 inflated and the men are inside the chamber in a dry
19 environment working.

20 The riser at berth 5 is closed at the moment and men are
21 in this chamber working with an inflated plug forming the seal.
22 We will inflate the plug—we will deflate the plug now and
23 once you deflate it you will see no effect of the pressurized
24 chamber. The men are still floating around with no vortex
25 being formed and the plug is deflated.

26 **Mr. Maharaj SC:** Mr. Khan, I'm going to play over the entire
27 four videos now so that we could see it sort of continuously. So

1 I'm just telling you what we are going to do so you could
2 probably look at it too because after you will be sort of
3 questioned on it.

4 [*Videos replayed*]

5 **2.55 p.m.:**

6 **Examination By Mr. Chairman:**

7 Q. Thank you very much indeed. I want to express my gratitude,
8 first of all, for the models that you produced so that we can
9 understand it much more clearly. I'm really grateful for that.
10 Whatever else may come in a moment by others, for my part it
11 has certainly assisted me in understanding the dynamics that
12 take place in a pipe. Couple of questions arise, please.

13 First of all, are you able to guess, which is what I suspect
14 it would be, how much water would have been sucked into the
15 pipe once that vortex were created?

16 A. I can venture a guess but I didn't do any calculation.

17 Q. No.

18 A. I calculated the kind a rate at which the volume will be sucked,
19 the rate of the contents will be sucked in. I think it's 514
20 gallons per second. Right? So you're talking about a lot of
21 gallons there.

22 Q. Per second?

23 A. I, I—

24 Q. Five hundred and forty gallons per second?

25 A. Yeah.

26 Q. But is that contingent—

27 A. That will start at that figure—

1 Q. Yeah.

2 A. —and then slowly decrease.

3 Q. Right.

4 A. So it goes to zero when the vortex stops.

5 Q. Of course.

6 A. I could not measure how long the vortex take to perpetuate and
7 to stop. The duration of the vortex one cannot—I could not
8 calculate that. I did it to the time and it wasn't timed. But I
9 know the system stabilized because you can see that.

10 Q. Yes, and quite quickly.

11 A. Quite quickly.

12 Q. Yes.

13 A. Everything happened in a flash, you know, because the guys on
14 the, um, on the monitoring camera say all of a sudden it's a
15 splash.

16 Q. Yeah.

17 A. And that was the end of it.

18 Q. Yeah. By the time they got back in the habitat it all stabilized.

19 A. And when he went, I think the—one of those guys dived back
20 to see and he reported, hey, nobody inside there. Place empty.

21 Q. Yeah. The other question that I have is this. Is, um—given that
22 the blowing or forcing of—the attempted forcing of this flood
23 out of the pipe in order to create the necessary ullages failed,
24 what would you say would be the best way of doing it in order
25 to create the necessary ullages?

26 A. Well, when I looked at—when I was given the job to do, they
27 told me they will allow me to review the scope of works, the

1 method statement at that—of the documents that were
2 submitted—

3 Q. Yes.

4 A. —at the tendering, at the tendering stage. And the documents
5 that were submitted by the contractor LMCS, those are the
6 documents I looked at and those are the documents that were
7 available to me from OSHA.

8 Q. No, I, I, I—that's clear in your report

9 A. Right, okay. And, er, what is—I lost the trend of thought here.

10 Q. Yes. The question is really, given the way in which it was done
11 created this latent Delta P condition—

12 A. Uh-huh.

13 Q. —in the pipe, how would you—let's say they got to do this
14 again next week—

15 A. Uh-huh.

16 Q. —how would you suggest they created the necessary ullage
17 either side without doing it that way?

18 A. It's simple. So I'll explain here now.

19 Q. Yes.

20 A. All you have to do, at least you take off the, the—you open the
21 flange at 5 berth or you take out the gooseneck on 5 berth and
22 you remove the gooseneck on 6 berth, after you drain the pipe
23 on the topside.

24 Q. Yeah.

25 A. Because I think the original proposal by, um, by I think with
26 Paria or LMCS, was to drain the top section of the piping and
27 then collect it.

1 Q. Yeah.

2 A. So the top section will be drained so then you could remove the
3 gooseneck, the elbow on top the No. 6 riser.

4 Q. Yes.

5 A. And then if you remove that you will see your liquid right on
6 top there.

7 Q. Yes.

8 A. So what you do as LMCS stated, they introduced an air pump.

9 Q. Sucking?

10 A. A sucking air pump. That operates like an ejector so you put
11 air on one side.

12 Q. Well, it's like sticking a straw in a bottle of coke and sucking it
13 out?

14 A. Yes, and you're pulling it out.

15 Q. Yes.

16 A. So you would see the level right there in front of you going
17 down. And you measure it till—

18 Q. Do the both ends or one end?

19 A. It will, it will, it will, um—

20 Q. Should equalize?

21 A. —decrease at both ends coming down, because as a manometer
22 you have—it balances itself. Once both sides of a manometer
23 is opened, it would balance itself. Can I show this?

24 Q. Yes please. I think you've been dying to do so.

25 A. Well I'll have to close it. It's taking a little time to open it.

26 Q. That's all right.

27 A. Just to show you here. The manometer is here. Once I take off

1 from here, all the same liquid will level.

2 Q. Yes.

3 A. If this was here this would have been here.

4 Q. There's a spirit level in it—

5 A. There's a spirit level.

6 Q. Exactly.

7 A. This is a basic manometer.

8 Q. Yeah, yeah.

9 A. It's like—

10 Q. You're building a brick—you're building a brick wall and you
11 want to know the height at that end and the height at that, it
12 could be 50 feet between the two?

13 A. And if I tilt this a bit, the level almost remains the same.

14 Q. Yes. Yes.

15 A. Water seeks its own level.

16 Q. So if I stick a straw down one end and start sucking some of
17 that fluid out—

18 A. Out—

19 Q. —it will—

20 A. —it would drop here and drop here at the same time.

21 Q. Which is what you were illustrating at the line on the—

22 A. Yes, yes, yes.

23 Q. —um, thing, yes. All right, so, so, the, the, the lesson to be
24 learned I suppose in short order is that if you want to create the
25 ullage, suck some of the fluid out rather than trying to pump air
26 in?

27 A. But, but I, I, um, I recollect when I reviewed LMCS' method

1 statement, he said using an air pump, suck out and get the
2 ullage. I don't know what he's—

3 Q. Yes. Well I'm very grateful to you.

4 **Mr. Maharaj SC:** Mr. Maharaj, is there anything else you
5 need to ask?

6 **Mr. Maharaj SC:** No, Mr. Chairman. I'm—

7 **Mr. Chairman:** Marvellous. Right. I'm going to have some
8 questions.

9 **Examination By Mr. Chairman:**

10 Q. All right, bearing in mind it's just a little past three o'clock.

11 A. Mr. Chairman—

12 Q. Yes.

13 A. —I need to mention two things need to be, um, corrected.

14 Q. Go ahead.

15 A. In my, in my thing statement, one, I just wanted to—as I said in
16 my previous letters, the amount of information flow after I did
17 my report, I will have to modify certain things and I said I'm
18 not do—I called OSHA and I say, hey, based on the
19 information I have to modify and they say is it a major
20 modification? I say no, it will not change anything but to—just
21 for the records.

22 Q. Hmm.

23 A. And they say no, don't bother with that. So I choose to modify
24 one sketch.

25 Q. All right, just pause for a minute. So you, you approached
26 OSHA who were the original—

27 A. Yeah, they were my client.

1 Q. —who originally instructed you?

2 A. Yes.

3 Q. Quite.

4 A. Yeah.

5 Q. Um, and, and you said that now that you're seized of different
6 information—

7 A. Yeah.

8 Q. —you would like to correct the record?

9 A. Correct, because they had already paid me.

10 Q. Right. Let me see if I get it right. Just a minute. Just a minute.
11 My turn to speak. I have the talking stick at the moment, all
12 right? So what you were saying is that you told them that there
13 were changes in the parameters and you would like to correct
14 the record, but that the final outcome or your final conclusions
15 about this would remain unchanged? As a consequence they
16 said to you, no, it's fine, don't do anything. Have I got that
17 right?

18 A. That's correct, yeah.

19 Q. Well if anybody asks you questions and that relates to the sort
20 of parameters you're talking about, you can point that out to
21 them that those are the issues that you would have raised had
22 OSHA permitted you to do so.

23 A. Uh-huh.

24 Q. So, I have that in mind. You said there was something else you
25 wanted to raise?

26 A. Another thing, it's one drawing I need to change for clarity and
27 that is, I think it's an SK—you could pull up that SK 5?

- 1 Q. Yes.
- 2 A. The one that I drew—
- 3 Q. SK 5, just a minute.
- 4 A. —with respect to, um—
- 5 Q. SK 2, SK 4, SG 5 yes.
- 6 A. Where it shows that the plug is deflated though.
- 7 Q. That's SK 5.
- 8 A. SK 4 probably, then.
- 9 Q. go back one. Yes.
- 10 A. Yeah, okay.
- 11 Q. Right.
- 12 A. This represents when the incident occurred.
- 13 Q. Pushing the plug down?
- 14 A. Pushing the plug down, and the plug was lying somewhere here
- 15 and the men were on this side.
- 16 Q. Yes.
- 17 A. Okay? The flange was installed so this would have been a little
- 18 compressed air, and I just wanted to drop that level to this point
- 19 for clarity, so this level and this level will not be the same.
- 20 Q. Right. So I can make my amendment.
- 21 A. Make your amendment.
- 22 Q. You don't need to redraw the thing.
- 23 A. That's one amendment, right? One thing again, in the—
- 24 Q. Just a minute, I'm making a note.
- 25 A. Uh-huh.
- 26 Q. The level would be lower?
- 27 A. Yes.

1 Q. On riser 5—on berth 5?

2 A. Because this would—

3 Q. Because the air pressure between the flange—

4 A. Yes.

5 Q. —and the fluid would be—the air would be compressed?

6 A. Compressed, yeah.

7 Q. And so it would be pushing the fluid down more—

8 A. Uh-huh.

9 Q. —trying to expand itself?

10 A. Uh-huh.

11 Q. Right, I get it. Yes, thank you.

12 A. And one of the videos, I think was the last one where I showed
13 the deflation of the plug—

14 Q. Yeah.

15 A. —with a fill line, I said the riser was plugged. I really meant
16 that the stovepipe was, um, plugged, yeah, the stovepipe.

17 Q. Sorry say that again? I haven't understood that. You said that
18 the riser was—

19 A. A riser was plugged and where I demonstrated the condition
20 where the line was filled—

21 Q. Right.

22 A. —and I deflated the plug—

23 Q. Yes.

24 A. —right during the conversation I said the riser—

25 Q. All right.

26 A. —was sealed but it's not the riser.

27 Q. No, it's the stovepipe—

- 1 A. At the top there. Yes.
- 2 Q. In order to create the—
- 3 A. Create the displacement so it could fill up.
- 4 Q. I got you. Yes.
- 5 A. Yeah.
- 6 Q. All right. Right. Just before anyone asks you questions, I just
7 want to take a look at this, um, the, er, plug itself. You can tell
8 me which way up it's supposed to go. Yes well you can help
9 me. Which way round does it go, first of all?
- 10 A. This, this area here, this section is the top of the plug.
- 11 Q. Right. So that's what you'd be looking at if you were looking
12 down the tube?
- 13 A. That's what I would be looking at, yes.
- 14 Q. Right.
- 15 A. And that's a relief valve there. Let me get mine. Yes.
- 16 Q. Right, everyone can see that now.
- 17 A. And you can see here the—
- 18 Q. Oh you've got your stick out again I see, yeah.
- 19 A. Twenty to 36 inches plug, so this plug can fit a pipe that is 20
20 inches up to 36 inches in diameter.
- 21 Q. So at the moment this is something less than 20 inches in
22 diameter?
- 23 A. Less than 20 inches. From here to here—
- 24 Q. Yes.
- 25 A. —I think it's about 18 to 19 inches, from here to here.
- 26 Q. And then you—
- 27 A. So you could shove it into a 20-inch pipe easily.

1 Q. And you inflate it how?

2 A. You inflate it by this—through this, this is an inflation port
3 here.

4 Q. Right.

5 A. That's supposed to have a nipple on top with some valves on
6 top here.

7 Q. Okay.

8 A. So they could connect a hose here and pressurized plug when
9 they insert the plug into the line. So this plug is inserted into
10 the line, deflated, and when they introduce pressure here like a
11 big balloon, it will swell up there.

12 Q. Yeah like a car tyre?

13 A. Yes, but more like a balloon.

14 Q. All right. I'm not going to contradict you, trust me. [*Laughter*]
15 All right, so, um—and this—was this how it came out of when
16 you—

17 A. This is how it came at for me, from here.

18 Q. So was the nipple ripped off?

19 A. Here?

20 Q. Yes.

21 A. That is what—oh, sorry, sorry, my mistake here. What was
22 here was a broken nipple.

23 Q. A broken nipple?

24 A. Yeah.

25 Q. Right, uh-huh. Okay. But that's where it's inflated?

26 A. That is where it's inflated.

27 Q. And to deflate it what do you do?

1 A. Well, deflate it, you would just open back the valve on top here.

2 Q. So the nipple was ripped—

3 A. The nipple was here—

4 Q. Yeah.

5 A. —and the valve was up here, you can open the valve and
6 deflate it slowly or you can deflate from this area too.

7 Q. Unbolt that in some way?

8 A. Yeah, unbolt that in some way.

9 Q. Yeah.

10 A. Or this one here too, you can deflate it from here also.

11 Q. Right.

12 A. You see it's marked here, you know. If you look closely it tell
13 you exactly what to do. This is a return line and you could
14 inflate here or inflate here.

15 Q. Yeah, inflation it says there, yes?

16 A. Yeah. These could inflate from here.

17 Q. All right.

18 A. So it's on—it is written—it is written here.

19 Q. And these cleats that are on the top?

20 A. These cleats here are for support, if you want to pull it back up.

21 Q. Right. Why is this one missing?

22 A. That was missing from day one. When the plug came out it
23 was missing.

24 Q. You mean to say it was ripped off?

25 A. No, it was not ripped off. It was—in my view and my
26 inspection, it tells me that they had only two here instead of
27 three.

1 Q. This was supposed to be brand new before they fitted it?

2 A. I, um, I, I don't know.

3 Q. Well, well, that's the evidence that this is a brand new plug—

4 A. Uh-huh.

5 Q. —at the point of being inserted.

6 A. Uh-huh.

7 Q. So what I'm interested in is, is—

8 A. This does not show evidence of ripping.

9 Q. No.

10 A. No.

11 Q. So maybe it just didn't use this—

12 A. Just these two here.

13 Q. Right.

14 A. And you see on this side they have—there are three eyes.

15 Q. Yeah, well that's what I rather thought there'd be three on the
16 top as well.

17 A. Yeah, three on the top. Here in the place they should have three
18 because you're—you're hooking it from here to lift it up.

19 Q. Yeah, get it out.

20 A. Yes.

21 Q. All right.

22 A. And when the crane lift this to insert it inside the riser, you
23 have to hook from here also.

24 Q. Yeah. All right, lovely. Thank you very much indeed. You
25 can take that as well. [*Mr. Chairman hands microphone to Mr.*
26 *Khan*] All right, thank you.

27 **Mr. Chairman:** So, who wants to ask some questions? Yes,

1 Mr. Ramadhar. Mr. Pegus, do you have any questions?

2 **Mr. Pegus:** No, Mr. Chairman.

3 **Mr. Chairman:** Right, so is, it's—is it Mr. Ramadhar, Ms.
4 Maharaj and you, Mr. Mootoo? All right. All right, well we'll
5 do it in that order, shall we? Yes.

6 **Mr. Ramadhar:** Thank you very much, Chairman.

7 **Cross-Examination By Mr. Ramadhar:**

8 Q. Good afternoon, Sir. Thank you so much for your highlighting
9 what is very important information for all of us. My name is
10 Prakash Ramadhar. I represent the interest of the Kurban
11 family and of course Aliyah, the daughter of Yusuf Henry. Do
12 you know when it was that the plug was actually installed?

13 A. Yes.

14 Q. Good. And do you know how long before—

15 A. You want a date?

16 Q. No, not yet, not yet. Do you know how long after the plug was
17 first installed that the Delta P event occurred?

18 A. The plug was installed—

19 Q. Yes.

20 A. —and when, when the habitat was installed and pressurized—

21 Q. Right. Yes. And do you know when the plug was first installed
22 and when, um, the oil and its—well, the fluids were and its—
23 and the contents of the pipe were actually pumped out?

24 A. Phrase that question again for me?

25 Q. Yes, certainly. You have told us of course about the pumping
26 out of the pipe.

27 A. You mean the removal of the contents?

1 Q. Yeah, the removal of the contents.

2 A. Yeah. That happened before the installation.

3 Q. Absolutely. And do you know the date that that occurred?

4 **Mr. Chairman:** It's on page 1536 D.

5 **Mr. Ramadhar:** Yeah.

6 **Mr. Khan:** I can't remember the date.

7 **Mr. Chairman:** There's a schedule showing several dates.

8 **Mr. Khan:** Yeah.

9 **Mr. Ramadhar:** Yes, thank you.

10 **Continued Cross-Examination By Mr. Ramadhar:**

11 Q. In terms of the—you've told us now at berth 5 there's a flange
12 that—a secure flange that was placed after the fluids were
13 pumped out.

14 A. No. On berth 5—

15 Q. Yes.

16 A. —the flange was installed to facilitate the air blowing.

17 Q. Thank you. And then sealed off of course?

18 A. Well a blind flange—

19 Q. Yes.

20 A. —is a seal.

21 Q. Right.

22 A. But on that blind flange you had a nipple—

23 Q. Yes.

24 A. —and a small valve through which compressed air was
25 introduced—

26 Q. Thank you so much.

27 A. —to pump the stuff out.

1 Q. Thank you very much.

2 A. To blow the stuff out.

3 Q. Yes. But would you tell us then—you told us about a
4 CARBER testing.

5 A. Huh.

6 Q. What is the—what is that and what was the consequence of
7 that?

8 **Mr. Chairman:** Really? Have we not established what a
9 CARBER test is now?

10 **Mr. Ramadhar:** Well, with all due respect, Chairman, when I
11 had first asked about whether there was a, um—for instance a
12 opening of a valve, or so I was told, that there was no such
13 removal of air pressure within at berth 5.

14 **Mr. Chairman:** Yes. CARBER test is just going to test the
15 integrity of the weld—

16 **Mr. Ramadhar:** Yes.

17 **Mr. Chairman:**—that has been put together.

18 **Mr. Ramadhar:** Yes.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 Q. Was there any removal of any air pressure during any event
21 before the incident on the 25th at berth 5?

22 A. As I recalled, um, I think they went to do the CARBER testing.

23 Q. Yes.

24 A. Look at the chronology.

25 Q. Yes.

26 A. Somebody had a chronology on this on site.

27 Q. Yes.

1 A. And the, um—

2 Q. There was a void there.

3 A. —they said that they attempted—they wanted to do the
4 CARBER test, which is a pressure test to test the integrity of
5 the weld, on berth 6.

6 Q. Yes.

7 A. And for some reason it wasn't done and they went across and
8 did it on berth 5.

9 Q. Thank you.

10 A. And to do that test you had to remove the flange.

11 Q. Thank you. So they—

12 A. So you, you, you, you, you de—you, um—

13 Q. Depressurized?

14 A. —you depressurized the system—

15 Q. Thank you.

16 A. —on that side because at that particular time there was a
17 locked-in pressure on it.

18 A. Yes.

19 Q. And because of the fluid as a result of the angle that you've
20 described to us, that would have created a suction below the
21 plug?

22 A. Not, not at the angle so much, but—

23 Q. Well—

24 A. —the pressure drop on berth 5—

25 Q. Yes.

26 Q. —would have caused the liquid on berth 6 to come down a
27 little.

1 Q. Yes.

2 A. And obviously that is sealed so you'll create a small vacuum
3 there.

4 Q. It would have created a vacuum. And as you've told Mr.
5 Maharaj, that would have ensured, to some level, that the Delta
6 P event would have been more aggressive? Is that accurate?

7 A. That is correct.

8 Q. Yes. And, in fact, not just more aggressive but more likely
9 because you've created now another force in addition to the air
10 pressure from the chamber itself?

11 A. Well it's not more likely but it will be more aggressive.

12 Q. More aggressive. Thank you so much. You appreciate that in
13 the oil industry the main part of its function really is about
14 pumping, and therefore the issue of Delta P is a most live one?
15 Isn't that correct? Differential pressures?

16 A. As I mentioned before—

17 Q. Yes.

18 A. —we have to be very careful with respect to use of the terms
19 Delta P, differential pressure—

20 Q. Yes.

21 A. —and a Delta P event.

22 Q. Yes.

23 A. Right? All systems that I—as the Chairman said, there's a
24 Delta P right there.

25 Q. Absolutely. So the point being this is—I want to be very clear
26 it's obvious to me and I'm sure obvious to many but maybe not
27 be obvious to others—

1 A. Yes.

2 Q. —that the—in terms of a refinery environment or, um, like, at
3 Paria, the essence of the science of their business is about
4 pumping?

5 A. It's a major part of a refinery business—

6 Q. Thank you.

7 A. —pumping and moving of fluids from A to B.

8 Q. And you would expect, of course, that the professionals there,
9 including management, should have had some idea about Delta
10 P as you have so easily explained to us today, that they should
11 have some of that knowledge at least?

12 A. Yeah, that's a, that's a common knowledge among—

13 Q. It should be.

14 A. —engineers in the refinery.

15 Q. It should be.

16 A. Differential pressure is always there.

17 Q. Absolutely. And of course you would appreciate a senior
18 person like Mr. Wei, not knowing about differential pressure, to
19 be a bit surprising, wouldn't it?

20 A. Yes.

21 Q. Thank you. And including the General Manager to not
22 understand or know about differential pressure to be a bit
23 surprising equally, yes?

24 A. Yes.

25 Q. Thank you so much. So, now that you've told us that the—

26 **Mr. Mootoo:** Sir, Mr. Chairman, Mr. Chairman—

27 **Mr. Chairman:** Yes.

1 **Mr. Mootoo:**—I'm sorry to intervene in my friend's cross-
2 examination but the questions he's putting to the witness are
3 premised on the fact that neither Mr. Wei nor Mr. Mohammed
4 had any knowledge of differential pressure—

5 **Mr. Chairman:** That's not the evidence.

6 **Mr. Mootoo:**—and that's not the evidence, so, I'm objecting to
7 the questions on that basis.

8 **Mr. Chairman:** Yes, that's not the evidence. The evidence is
9 that Mr. Wei said he did understand differential pressure.

10 **Mr. Ramadhar:** And that was after the event.

11 **Mr. Chairman:** Well, no, that's not quite how it works. I
12 think he recognized that he didn't appreciate that differential
13 pressure was an issue in relation to this particular job, but he
14 understood what differential pressure was.

15 **Mr. Ramadhar:** Thank you, thank you. I am grateful for
16 the—and thank you, Mr. Mootoo. Yes.

17 **Continued Cross-Examination By Mr. Ramadhar:**

18 Q. You would understand, Sir, Mr. Khan, that the very idea of
19 pumping out that pipe, the fluids from that pipe, would have
20 created that environment for a differential pressure and
21 certainly for a possible differential pressure, Delta P event?

22 A. Yes.

23 Q. Thank you. That's the point. Thank you so much, Mr.
24 Chairman and Mr. Mootoo. Now, in terms of the volume of air
25 and the volume of fluid that would have been in that pipe after
26 the event on the 25th or from that evening of the 25th, that
27 knowledge would be very helpful to have determined how

1 much air would have been in the pipe? Let me make it, let me
2 make it simpler.

3 A. Uh-huh.

4 Q. There was a moment when a decision had been taken and when
5 they actually pumped out the contents of the pipe to retrieve
6 bodies. As horrible as that is, that is what happened. Do you
7 not—tell us if it would have been helpful to know how much
8 fluid actually came out of that pipe during that operation so that
9 we could all know, now looking in hindsight, how much air
10 might have been available within the pipe? Because it's either
11 air or fluid, meaning liquid, in the pipe. Isn't that correct?

12 A. One can deduce that, yeah. One can deduce by if you're trying
13 to remove contents of a line, you know the volume of the line.

14 Q. Yeah.

15 A. And if you know the contents that are removed—

16 Q. Yes.

17 A. —whether it's oil or water or oil and water mix up, you will
18 have an idea.

19 Q. And from that, what is not oil and water would be air?

20 A. Yeah but I didn't—I'm not aware—I'm not privy to the method
21 they used—

22 Q. I see.

23 Q. —to pump the bodies out. I don't know.

24 Q. Okay. But the volume that comes out of the pipe—

25 A. Yeah.

26 Q. —would help us or would have been able to help us as to how
27 much air would have been in the pipe?

1 A. That depends upon the technique they used to exhume the
2 water.

3 Q. Forgive my lack of knowledge.

4 A. Uh-huh.

5 Q. What techniques would have been different or what techniques
6 were available?

7 A. Well, if you remove—if you use a pig for instance—

8 A. Yes.

9 Q. —to remove the water from the line, after the accident, then
10 you would say conclusively how much was removed—

11 Q. Thank you.

12 A. —how much liquid was removed.

13 Q. I, I, I—

14 A. I don't know if they used a pig—

15 Q. Yeah.

16 A. —or they used air or some other—or they pumped water behind
17 that, I don't know.

18 Q. Could you help us? So some of us who do know what a pig is
19 in relation to this event—

20 A. Yeah.

21 Q. —what is a pig?

22 A. A pig in simplified terms is like a plug that fits the inside of
23 the pipe and you push air or water behind that plug and dispel
24 exactly what is in front of the plug.

25 Q. Right.

26 A. So you can measure exactly what is in front the pig.

27 Q. Thank you. And of course what comes out the other end if

1 there is a measurement of that—

2 A. You can know exactly.

3 Q. —that is how you will know/

4 A. Yes.

5 Q. Thank you so much.

6 A. Yeah.

7 Q. Are you aware as to whether there was any effort to measure
8 how much fluid or whatever came out?

9 A. No, I—

10 Q. No.

11 A. That was not my remit as you know.

12 Q. Of course. So, the most interesting part of this for us who
13 represent the interest of the families is that when Christopher
14 came out of the pipe, by which time as you've told us and to be
15 quite clear, the pipe had stabilized?

16 A. Yes.

17 Q. All right. And as you've told the Chairman and Mr. Maraj, that
18 you needed an event to trigger something creating a Delta P
19 event, a trigger, correct? And you've already told us that like
20 for instance removing the flange at 5 could have caused that?

21 A. Uh-huh.

22 Q. Yes. A rescue with human beings going in, divers, would that
23 have likely created a trigger sufficient to create another Delta P
24 event?

25 A. Not in my opinion.

26 Q. Thank you.

27 A. I, I understand that one diver went in.

1 Q. Yes.

2 A. I don't know. Yeah.

3 Q. Yeah. And that certainly one would have thought that, as we
4 are building up now, that the knowledge base within an oil
5 company of many years' standing with all the professionals that
6 they pay should have known as basic a thing as that that once
7 the event has occurred, unless you do something to trigger, the
8 likelihood of another event happening were quite limited, isn't
9 it?

10 A. I would think that's a—

11 Q. Yes.

12 A. —a judgment.

13 **Mr. Chairman:** Sounds like a submission.

14 **Mr. Peterson SC:** Yes.

15 **Mr. Ramadhar:** Well I'm asking, and he has—

16 **Mr. Chairman:** No, sounds like a submission.

17 **Mr. Ramadhar:** Well I submit.

18 **Mr. Chairman:** To me, not to him.

19 **Mr. Ramadhar:** Or, I see. Well, I'll start it today then. Yeah.

20 **Continued Cross-Examination By Mr. Ramadhar:**

21 Q. And what we knew then, at the time when Christopher would
22 have come out, from all that you know, was that men were still
23 alive at that point in time within the pipe, from what he said?

24 A. Well what he—prior to his attempt to exit the pipe—

25 Q. Yes.

26 A. —the men were alive because the voice, the GoPro, you know,
27 was—is verification of that.

1 Q. The voices were vital if you've heard them?

2 A. Yes, yes.

3 Q. Much alive.

4 **Mr. Mootoo:** Sir, I'm objecting to this line of questioning on
5 the—

6 **Mr. Chairman:** Yes. Turn on the mike. Yes.

7 **Mr. Mootoo:** I'm objecting to this line of questioning. Mr.
8 Khan is an expert witness. What Mr. Ramadhar is doing is that
9 he's putting a summary or his interpretation of the evidence
10 before the witness—

11 **Mr. Chairman:** Uh-huh.

12 **Mr. Mootoo:**—and asking the witness what third parties would
13 be expected to have known or did, in fact, know?

14 **Mr. Chairman:** Uh-huh.

15 **Mr. Mootoo:** It's really in the domain of non-expert opinion
16 evidence and can be of no assistance to the Commission, in my
17 respectful submission, and ought not to be elicited as evidence.

18 **Mr. Chairman:** Well he's putting various propositions. Mr.
19 Ramadhar—

20 **Mr. Ramadhar:** I do not really wish to change the game at
21 this late stage but we have been doing that throughout this
22 Enquiry, putting things, and this—

23 **Mr. Chairman:** Well I think you have.

24 **Mr. Ramadhar:** Yeah.

25 **Mr. Chairman:** I, um—well, look, I've already made the
26 point that dressing up a question as a—dressing up, rather, a
27 submission as a question and trying to get a witness to agree to

1 it isn't the appropriate way of doing it and you know that, so
2 please, ask him questions, save your thunder until tomorrow
3 when you'll be addressing me on the submissions that you have
4 to make that can be drawn from the answers to the legitimate
5 questions that you asked today.

6 **Mr. Ramadhar:** To say that it's inappropriate, with all due
7 respect, um, you know, I do take some umbrage at that because
8 I am doing what has been accepted within the Commission to
9 put and indicate information and for him to give his opinion and
10 that, um, that's all I'm doing. So whether it is offensive I
11 apologize that it may sound like a submission. The only intent
12 here was, this is the person who I considered to be one of those
13 valuable witnesses and who possibly should have assisted us
14 even earlier so that a lot of the blank shots that would have been
15 fired would have been saved.

16 **Continued Cross-Examination By Mr. Ramadhar:**

17 Q. So, all I'm asking is simply this, that at the time when
18 Christopher came out, you said the pipeline had been stabilized
19 and that a venture of human beings, as you've indicated you
20 knew of a diver going in, could not, in your view, trigger a
21 second Delta P event because it did not, isn't that correct?

22 A. Yeah.

23 Q. The perfect proof is the, is the reality of what happened, isn't
24 it?

25 A. Yes, I would say so.

26 Q. Thank you. And that had a rescue been endeavoured at around
27 that time, the likelihood of saving those lives were real and

1 germane, isn't it?

2 A. You're asking my opinion—

3 Q. Yes, yes.

4 A. —as a professional?

5 Q. Yes.

6 **Mr. Chairman:** Well, I think realistically all he can say is that,
7 if men had gone into the pipe to effect a rescue, it was unlikely
8 that they were going to trigger any Delta P event.

9 **Mr. Ramadhar:** That's what—

10 **Mr. Chairman:** That's all he can say.

11 **Mr. Ramadhar:** Far superior to what I was attempting, so I
12 will adopt that.

13 **Continued Cross-Examination By Mr. Ramadhar:**

14 Q. Men attempting to rescue would very—would be very unlikely
15 to have triggered a Delta P event?

16 A. Very unlikely.

17 Q. I'm so—

18 A. Trigger an event, to trigger the Delta P.

19 Q. Thank you so much.

20 **Mr. Ramadhar:** Mr. Chairman, very grateful to you.

21 **Mr. Chairman:** Good. Yes, Ms. Maraj.

22 **Mrs. Persaud Maraj:** Thank you, Mr. Chair.

23 **Cross-Examination By Mrs. Persaud Maraj:**

24 Q. Good afternoon Mr. Khan.

25 A. Hi.

26 Q. My name is Kamini Persaud Maraj and I'm for LMCS Limited.
27 I just have a couple questions for you. I'd like to refer you to

1 paragraphs 2.6 and 2.7 of your report. This where, this is where
2 you have described the air pressure in relation to the Delta P
3 event, and I do have a question to ask you in relation to the plug
4 with respect to the measurements that you have placed here. So
5 what I would like, let me say what it is that my understanding is
6 and then I will ask you the question. So this plug, at the time
7 that it was being deflated, had not fully deflated. Would that be
8 correct?

9 A. That's correct.

10 Q. All right. And your measurements would give us an idea as to
11 how much was deflated. Is that correct?

12 A. Yes.

13 Q. All right. Would you be able to describe to us how much?
14 Because we know the capacity of the—the diameter of the
15 pipeline and we know what this can be inflated up to, which is
16 not greater than the space it's occupying, so, would you be able
17 to say how much in a visual manner, now that we have this in
18 front of us, how much would have been deflated if it's a
19 substantial amount or just a little bit.

20 A. Now I said approximately 11.4 PSI.

21 Q. Right.

22 A. See, when the plug is inflated—

23 Q. Right.

24 A. —there is something called reaction force. I don't know you—
25 because you want me get into that?

26 **Mr. Chairman:** No. [*Laughter*]

27 **Mr. Khan:** Huh?

1 **Mr. Chairman:** No.

2 **Mr. Khan:** Reaction force—

3 **Mr. Chairman:** Well, I don't think we need—

4 **Mr. Khan:**—is a coefficient of friction.

5 **Mr. Chairman:** Just, just pause for a minute. I, I don't, I
6 don't think that it's necessary to have an expurgation on
7 reactive force. What I think the question is after, is, are you
8 asking him to describe the size of the plug—

9 **Mrs. Persaud Maraj:** Precisely.

10 **Examination By Mr. Chairman:**

11 Q. And I think the effect of her question is this, if you can help us
12 please, Mr. Khan, once you start to deflate this plug, it having
13 been inflated so that it's hugging the insides of this pipe—

14 A. Uh-huh.

15 Q. —obviously as you start to deflate, it's started to shrink a little
16 and it gets to the point where, once it's shrunk enough with the
17 slippery sides of the inside of the pipe, it's going to start to
18 move—

19 A. Uh-huh.

20 Q. —because of the differential pressure that exists, all right? It
21 starts to move and so, in this case it moved almost
22 instantaneously once it got to a certain point, sucked and
23 pushed as we described. So what we're left with at that point is
24 the nipple and whatever it is that's deflating it is now separated
25 as it's moving down, isn't it? Whatever it was that was
26 deflating—

27 A. Uh-huh.

1 Q. —is now separated from the nipple. Does that close the valve
2 at that point on the plug? Do you follow what I mean?

3 A. No, it—

4 Q. Or is it continuing to deflate?

5 A. It will continue to deflate. Now, at 11 pounds pressure—

6 Q. Yes.

7 A. —the plug is still holding on to the tube side. That's what
8 you're getting at.

9 **Mrs. Persaud Maraj:** That's it.

10 A. It is still holding on to the tube side, but remember there's
11 4,000 pounds pushing down on the plug from the six PSI in the
12 hyperbaric chamber.

13 Q. Chamber.

14 A. So 4,000 pounds pushing down on that plug, plus whatever
15 vacuum they had beside underneath, the resistive force—

16 Q. Plus gravity.

17 A. —plus gravity yes, correct, because the weight is a hundred
18 pounds—

19 Q. Yes.

20 A. —the resistive force is the reaction force created by the
21 swelling of it onto the pipe, i.e., multiplied by the coefficient of
22 friction.

23 Q. Yeah, yeah, no, no. We're not going there.

24 A. You see—

25 **Mrs. Persaud Maraj:** Right. So now—

26 A. So that that would have to balance the 4,000 for it to stay put.

27 Q. We need it, we need it, we need it, Mr. Khan, in lay terms—

1 A. Yes.

2 Q. —so that we can all follow.

3 A. So that's a way I could explain that.

4 Q. No, I follow, but I think you are actually a rather better teacher
5 than you are giving yourself credit for because I've understood,
6 and I think we've all understood, very much the sort of
7 dynamics that existed in this pipe. What I think I would be
8 interested in knowing, and I think Ms. Persaud Maraj is also
9 keen on, is, once that plug is deflated, first of all, does it
10 continue to deflate until it gets to the size that it is, or does it
11 stop deflating, it's continuing to deflate or not?

12 A. It will continue to deflate.

13 Q. Right.

14 A. Because there is no, um, check valve with respect to—

15 Q. Right. This is important for a number of other reasons.

16 A. When they open the, um, the valve on the deflating side—

17 Q. Right.

18 A. —and the plug—and it was open, they were deflating—

19 Q. Right so—

20 A. —and the plug started to move, there's no control again.

21 Q. Right.

22 A. They can't close, they can't open more—

23 Q. Right.

24 A. —but it will continue to deflate.

25 Q. So as it's passing down into the tube, it continues to deflate. In
26 fact, it's actually got a force of pushing itself, isn't it?

27 A. Yes.

1 Q. Like a little—like a jet as it were, so there's an additional force,
2 I don't want to get into that, but, in any event it continues to
3 deflate? And this is important for a couple reasons, right? First
4 of all, as you've told us when I came up and had a look at that
5 plug, this plug works for different sizes of pipe, yes?

6 A. Yes, correct, 20 to 36.

7 Q. Between 20 and 36 inches. That is in its almost completely
8 deflated state—

9 A. Yes.

10 Q. As it is at the moment? Which means that it's even less than 20
11 inches, correct?

12 A. That's correct, yeah.

13 Q. Can I take it that when this plug was passing down through this
14 pipe, continuing to deflate, it would eventually get to the state
15 it's in now in the pipe?

16 A. Of course.

17 Q. Right. So, there comes a point when it is actually sitting or
18 floating in the pipe. It's not created a seal, is it?

19 A. It's not created a seal.

20 Q. Couldn't possibly?

21 A. Can't. And if you look at my report on photograph number
22 five, you will see that very plug.

23 Q. That diagram or the photographs?

24 A. Photograph number five.

25 Q. Yeah.

26 A. I don't have my report. Could you pull it up, please?

27 Q. It's on page 1466. No, 1408, 1408.

1 A. Um—

2 Q. Next one down. Move it down. Move it down.

3 A. Next picture.

4 Q. Keep going. That's it there.

5 A. Okay, hold it there. You see that photograph number five?

6 Q. Yes.

7 A. That's the size of the plug inside that exact pipe, 30-inch
8 diameter.

9 Q. All right.

10 *[Document handed to Mr. Khan]*

11 A. Yeah, you see that pipe there? That's it. That's a 30-inch
12 diameter pipe—

13 Q. Right.

14 A. —of the same size and schedule.

15 Q. Sure.

16 A. I made it my business to do that.

17 Q. No, I understand.

18 A. And that, that is the deflated plug waiting to be inflated—

19 Q. Yes.

20 A. —to test its, its, um, its integrity after the accident.

21 Q. And did you test its integrity after the accident?

22 A. Yeah, go up to—you see the other one?

23 Q. Yep.

24 A. I have other pictures showing you. That's just the—

25 Q. No, no, the other way.

26 A. No, no, go down again.

27 Q. That's correct, yeah.

1 A. There, you see that?

2 Q. Yeah.

3 A. That is where the plug is inflated to 20 PSI.

4 Q. Right.

5 A. And it held for—you see the, the—you see the, um, the
6 pressure gauge there?

7 Q. Yeah. It's 20 PSI.

8 Q. And it's now hugging the inside of that—

9 A. Hugging the—on the inside.

10 Q. —30-inch pipe?

11 A. Yes, 30-inch pipe.

12 Q. And, and, er, I, I—

13 A. And it's held—I just did that test because OSHA wanted me to
14 test it—

15 Q. No, I got it.

16 A. —to ensure the integrity of this plug is intact.

17 Q. It worked.

18 A. It was intact.

19 Q. Yes.

20 A. My report says there was no pressure loss.

21 Q. No. But, but when—what I'm after understanding is this, is
22 that once the, once the, er, Delta P event occurred, this plug
23 would have been continuing to deflate as it went into the pipe
24 until eventually, so scroll back again please to where we were
25 looking, to that picture on the right-hand side, it would have
26 been in a similar condition to the one on the picture on the
27 right-hand—

1 A. That's correct.

2 Q. —inside the pump?

3 A. Inside the pipe.

4 Q. Inside the pipe, sorry.

5 A. That's all right.

6 Q. And the consequences of that are that there is no way that that
7 plug could have created a seal of any kind inside the pipe?

8 A. There's no way.

9 Q. No way. Thank you very much.

10 **Mr. Chairman:** Is that what you were after?

11 **Mrs. Persaud Maraj:** Partially. There is a certain part—

12 **Mr. Chairman:** Partially, okay. All right, well you go for the
13 other part, all right?

14 **Continued Cross-Examination By Mrs. Persaud Maraj:**

15 Q. So, Mr. Khan, when that plug was being pulled in together with
16 whatever and all else, right, you mentioned just now to Mr.
17 Ramadhar something of a pig.

18 A. Pig.

19 Q. Would it have been operating in the same manner as a pig?

20 A. No, it can't, because it would have been deflated.

21 Q. No. At the time that it was coming—the deflation—so that's
22 why my first question was premised on the size of the—

23 A. Initially.

24 Q. Yes.

25 A. It would, it would—it will operate as a pig.

26 Q. Right.

27 A. Initially.

1 Q. Right.

2 A. But as it started to deflate it loses its, um—

3 Q. It's integrity?

4 A. —adherence to the side.

5 Q. Right.

6 A. And it gets smaller in effect then.

7 Q. Right. But we know, and you have said it yourself, that this
8 Delta P event which occurred was very quick, it was, it was—

9 A. Almost instantaneous.

10 Q. —almost instantly, so, we can accept from that that the
11 deflation would not have been substantive—

12 A. Yes.

13 Q. —in terms of the size to get it to this stage that we're looking at
14 on screen?

15 A. I'm not following you.

16 Q. You don't follow? So the plug was being deflated in the riser?

17 A. And it moved.

18 Q. And then it moved, right? At that point that it moved from the
19 top of the riser, not really the top but to the top of where the
20 men were working.

21 A. Yeah.

22 Q. And wherever it landed or wherever it stopped at, yeah, it
23 would not have deflated much more than what had—the men
24 had seen or observed at the time that they were deflating it?

25 A. No.

26 **Examination By Mr. Chairman:**

27 Q. Continues to deflate until it gets to the state that it's in now.

1 A. Yeah, continues.

2 **Mrs. Persaud Maraj:** At the initial stage?

3 **Mr. Chairman:** Well we're talking split seconds.

4 **Mrs. Persaud Maraj:** That's correct.

5 **Continued Cross-Examination By Mrs. Persaud Maraj:**

6 Q. So therefore—

7 A. At the initial stage it was hugging the pipe.

8 Q. Right. And at that stage—

9 A. It was sliding.

10 Q. And, and whilst it was sliding it was acting as a pig?

11 A. At the initial stage, yes.

12 Q. At the initial stage?

13 A. At the onset.

14 Q. So therefore, whatever may have been there, any big item,
15 would be carried to the back of that plug now?

16 **Mr. Chairman:** No. No.

17 **Continued Cross-Examination By Mrs. Persaud Maraj:**

18 A. Well I don't know what type of item you're talking about. I
19 don't, I don't expect the pipe to have any big items while in
20 service.

21 Q. Certainly, yes, certainly, certainly/

22 **Mr. Chairman:** Like what? What would have been on the
23 other side of the plug?

24 **Mrs. Persaud Maraj:** Nothing, and that's the point please,
25 that whatever was there would have been moved if ever there
26 was anything in that, in that line, please.

27 **Mr. Chairman:** Yeah. Well there was oil in it, a little bit.

1 **Continued Cross-Examination By Mrs. Persaud Maraj:**

2 Q. The third part of this question in relation to the Delta P event
3 occurring, was, we know that equipment or tools, persons, were
4 pulled in and apparels, diving apparels were pulled in. Is it
5 possible that air, because we know that there was air pressure
6 into the chamber, yes, is it possible that air was also sucked into
7 the pipe in this event?

8 A. That is what I said in a vortex. For a vortex to originate and the
9 vortex to perpetuate—

10 Q. Right.

11 A. —it needs air.

12 Q. Right.

13 A. Right? And that tube that coming down in the vortex is—that's
14 the air. That's the air—

15 Q. So that would have been—

16 A. —that is circulating inside there.

17 Q. That would have been breathable air?

18 A. Of course, because it's air from the compressor.

19 Q. Yeah.

20 A. It is air from the compressor, so that is breathable air that will
21 be sucked in with the vortex.

22 Q. Correct.

23 **Mr. Chairman:** With the water?

24 **Mr. Khan:** With the water.

25 **Mrs. Persaud Maraj:** And the water.

26 **Mr. Chairman:** And the people and all the tools—

27 **Mr. Khan:** Yeah, everybody inside there, all.

1 **Mr. Chairman:**—and everything else, sucked in everything,
2 air, water, people, everything, yes.

3 **Mr. Khan:** It even sucked in spanners too actually.

4 **Mr. Chairman:** Everything.

5 **Mrs. Persaud Maraj:** Yeah, everything.

6 **Mr. Khan:** So that was a tremendous force.

7 **Mrs. Persaud Maraj:** I believe those were all of the
8 clarifications that I needed from you, Mr. Khan.

9 **Mr. Chairman:** Thank you. Yes. Is it Mr. Mootoo you're
10 going to ask the questions, right? Can I ask you how long you
11 think you'll be?

12 **Mr. Mootoo:** Depends on the answers, but—

13 **Mr. Chairman:** Well, it always does, but, er—

14 **Mr. Mootoo:** Maybe about 20 to 25 minutes.

15 **Mr. Chairman:** Shall we take a 5-minute break?

16 **Mr. Mootoo:** If that's convenient.

17 **Mr. Chairman:** We'll take a 5-minute break.

18 **3.49 p.m.:** *Enquiry suspended.*

19 **3.55 p.m.:** *Enquiry resumed.*

20 **Mr. Chairman:** Yes, Mr. Mootoo.

21 **Mr. Mootoo:** Thank you, Chairman. May I begin?

22 **Mr. Chairman:** Yes.

23 **Cross-Examination By Mr. Mootoo:**

24 Q. Good afternoon, Mr. Khan. My name is Jason Mootoo and I
25 represent the interest of Paria. I have a few questions for you.
26 Just by way of preliminary inquiry, how long did it take you to
27 prepare this report?

1 A. I—[*Crosstalk*]—I, I started the report—I said in my statement
2 that—I give the dates when I was assigned the agreement with
3 OSHA.

4 Q. I'm just after approximate dates. I'm not going to hold you to
5 an exact date. Is it a week, two weeks, a month?

6 A. It took me about, um, maybe about three months.

7 Q. Okay.

8 A. Uh-huh. Um, three to four months, yes.

9 Q. And on my reading of the report the analysis is quite thorough.
10 So apart from the actual preparation of the report, the analysis
11 that you've done in the report, would it be fair to say that that
12 would have taken a substantial period of time as well, and, if so,
13 what that was?

14 A. Well, the entire report duration—

15 Q. Yeah.

16 A. —encompassed investigation, review of documents, talking to
17 OSHA, visiting the site—

18 Q. Yes.

19 A. —doing the calculations, and everything was jelled together
20 and issued the report.

21 Q. Okay. And in a best case scenario, if you had nothing else
22 occupying your time—

23 A. Uh-huh.

24 Q. —and you were to focus on the preparation of this report
25 exclusively, how long would it take you?

26 A. This would have been dependent upon the timely issuance of
27 information I requested from OSHA.

1 Q. Assuming you had all the information.

2 A. Yes.

3 Q. So you had all the information and OSHA came to you and
4 said, “Mr. Khan this is a complete package—

5 A. Uh-huh.

6 Q. —undertake an analysis for us and prepare this report.” Well
7 how long would you—

8 A. That’s a hypothetical question.

9 Q. Yeah, it is, but, how long would the analysis have taken?
10 Because it’s quite, at least to me—

11 A. When you say anal—analysis is different from discussions.

12 Q. Yes.

13 A. You’re talking about the entire report in its entirety?

14 Q. Yes. The analysis and the findings—

15 A. Findings and—

16 Q. Yes.

17 A. —review of all, all the—well, as I say, it depends upon how
18 much documentation were given to me, so I cannot quantify.

19 Q. Well as you say—

20 A. What I would say, maybe within the same period, I suppose.

21 Q. Okay, three months.

22 A. Yeah.

23 Q. Okay, fair enough. You are aware of the use of work permit
24 systems in the oil and gas industry in Trinidad and Tobago,
25 aren’t you?

26 A. Well, I have, I have an idea.

27 Q. Yes.

1 A. But I don't know it—different companies have different rules
2 and regulations with respect to permits. I don't know which
3 one you're talking about.

4 Q. Well, I'll come to that in a minute.

5 A. All right then.

6 Q. But you are aware that the use of work permits is a fairly
7 common feature in the oil and gas industry for the execution
8 of—

9 A. It's not fairly, it's common.

10 Q. Very good.

11 A. Yeah, yes.

12 Q. Thank you.

13 A. Yeah.

14 Q. It's common?

15 A. Yeah.

16 Q. And would you agree with me that despite the variations that
17 different companies may have in their work permit procedure,
18 that it's fairly standard industry practice, that, where a work
19 permit system exists, crucial aspects of work are not expected
20 to be undertaken or executed unless they are the subject of a
21 work permit?

22 A. I would—

23 **Mr. Chairman:** Can you really answer that?

24 **Mr. Khan:** I would think—

25 **Mr. Chairman:** Can you answer that question fairly.

26 **Mr. Khan:** Pardon me, Sir?

27 **Mr. Chairman:** Do you think you're able to answer that

1 question? Do you think you're—

2 **Mr. Khan:** I want you to—could you rephrase that question?

3 **Continued Cross-Examination By Mr. Mootoo:**

4 Q. We've already established that you are of the view that work—
5 the use of work minutes is fairly standard in the industry?

6 A. Uh-huh.

7 Q. And you've told me that the use of—that the procedure may
8 vary from company to company. What I'm asking you, is,
9 notwithstanding the variations in the procedure, and given your
10 industry knowledge about the use of work permits, would you
11 accept that where crucial aspects of work are to be undertaken,
12 those aspects of work are to be the subject of a work minute,
13 specified in a work permit?

14 A. For each individual one, you should have a work permit for
15 each individual major activity.

16 Q. Good. Okay. Good. Now, you have told us in your report at
17 paragraph 3.4.1—

18 A. Uh-huh.

19 Q. —that removal of the mechanical seal and the inflatable plug
20 were crucial aspects of the work. Yes?

21 A. That—in my opinion they were.

22 Q. Yes. And based on your industry knowledge and experience,
23 would you therefore agree with me that for a contractor, let's be
24 specific, in your experience, for LMCS to undertake or embark
25 upon the removal of the inflatable or mechanical plug on the
26 25th of February, a work permit would have been necessary in
27 respect of that item of work?

1 A. I would. I would, yeah.

2 **Mr. Maharaj SC:** Well, well I, I, I regret I have to—I think
3 this is an unfair question to the witness because—

4 **Mr. Mootoo:** He was about to say yes.

5 **Mr. Maharaj SC:** No, well it depends upon the rule. The
6 work permit there are rules, specific rules, express rules and I
7 think he came here as an expert in a certain field not an expert
8 in work permits.

9 **Mr. Mootoo:** Well—

10 **Mr. Maharaj SC:** And he came as an expert in a particular
11 field.

12 **Mr. Chairman:** I'm going to allow you to ask that question,
13 but I am concerned about where this is going. You've
14 already—we've already established through other evidence
15 what the work permit regime is. You've made it pretty clear
16 what your case is in relation to the work permits, that there
17 needed to be a work permit in relation to the removal of the
18 plug.

19 **Mr. Mootoo:** Well, Chairman, I understand that, but what this
20 witness has done in his report, and the Commission hasn't
21 confined him in his evidence, is that he's spoken directly to
22 work permits.

23 **Mr. Chairman:** Yes.

24 **Mr. Mootoo:** He's expressed his view as to those work
25 permits and what they should have—

26 **Mr. Chairman:** Where are you referring to?

27 **Mr. Mootoo:** He starts at 3.4, he deals with it at 3.4.1, 3.4.2.

1 He says the work permit focused on too many key activities.
2 So this is a witness who, based on his experience, knowledge
3 and skill clearly knows about a work permit system. He's told
4 us that today. And more than that he's considered Paria's work
5 permits, so I don't know that it lies in the mouth of Counsel to
6 the Commission, having been alive to this evidence adduced it
7 without culling it, to now stand and take an objection that
8 somehow this witness has trespassed out of his expertise and it
9 would be unfair.

10 **Mr. Chairman:** No, no, no. I'm not suggesting that. That's
11 why I've said to you I'm going to permit you to ask the
12 question. What I'm—I am concerned, though, where this is
13 going and to what extent you're proposing to mine this field.

14 **Mr. Mootoo:** Well, what we have here is a witness who, in my
15 understanding, he has come prime primarily to give evidence
16 with respect to Delta P and the factors—

17 **Mr. Chairman:** Yes.

18 **Mr. Mootoo:**—which gave rise to the event.

19 **Mr. Chairman:** Yes.

20 **Mr. Mootoo:** But what he's also done is that he has given
21 evidence about the work permits. He has attempted by his
22 report to attribute blame and I am entitled to interrogate that,
23 unless, of course, the Commission says insofar as his statements
24 are concerned in that regard they're going to disregard it.

25 **Mr. Chairman:** No, I'm not going to do that but I'm going to
26 take it into account with all the other evidence that we've
27 already heard about work permits, certainly, but, as I say, I'm

1 not stopping you at this stage. What I am going to do, though,
2 is to keep an eye on where we're going with it, all right?

3 **Mr. Mootoo:** Yes.

4 **Mr. Chairman:** So you ask what you need to ask and I'll stop
5 you if I think it goes too far.

6 **Mr. Mootoo:** I'm grateful.

7 **Continued Cross-Examination By Mr. Mootoo:**

8 Q. So I think, Mr. Khan, we were at the position where, um, you
9 had—we had established together that based on your
10 experience one would have expected a separate work permit, if
11 I hear you correctly, to be issued for the removal of the plugs,
12 yes?

13 A. A separate work permit for all the activity listed on that work
14 permit.

15 Q. Okay, good, but for the questions that I am—

16 A. All the activities, major activities.

17 Q. I hear you. But for the purpose of the questions I'm going to
18 ask you, I am just focusing on the removal of the plugs at this
19 moment. And you have seen the work permits in the—because
20 you've annexed them to your report. Am I right about that?

21 A. Yeah, yeah.

22 Q. Good. And would I be right in saying in your opinion, having
23 looked at the work permits, there was nothing on the work
24 permit that spoke, in your interpretation, to the removal of the
25 plugs? Would you like me to take you to the work permit to
26 refresh your memory?

27 A. Nothing was mentioned—

1 Q. Yes.

2 A. —in the work permit concerning plugs.

3 Q. Good.

4 A. That's a fact.

5 Q. Yes. Now, you've also said in your report, and I can take you
6 to it if we need to get to it, from the—you looked at a variety of
7 documents, the job hazard analysis, the toolbox meeting
8 documents and so on, and I think it's your conclusion, that,
9 having looked at those documents, the removal of the plugs on
10 the 25th of February was not a matter subject to discussion.
11 You've expressed a view on that, haven't you? You recall
12 expressing a view on that?

13 A. Could you make a reference to that?

14 Q. I will, but do you recall expressing a view on it?

15 A. A view on what aspect?

16 Q. That no discussion was held—on the documents you reviewed,
17 there was no discussion about the removal of the plugs on the
18 25th of February, 2021?

19 A. Yeah, and what I reviewed I couldn't see any discussion, well, I
20 reviewed.

21 Q. Okay, good.

22 A. Yeah.

23 Q. Would you like me to take you to that part of the report or
24 you—

25 A. You will need to—

26 **Mr. Chairman:** I would.

27 Q. Yes.

1 A. —rephrase your question.

2 Q. If I can take you to paragraph 3.4.4 which is on page 126, the
3 top of that page? Oh, it's page 12 in the top right-hand corner
4 of the report. Or the—

5 **Mr. Chairman:** Eleven, it's 11.

6 **Mr. Mootoo:** Well it starts on 11 but it goes over the page,
7 which is the conclusion.

8 [*Document handed to Mr. Khan*]

9 **Continued Cross-Examination By Mr. Mootoo:**

10 A. Which section you're referring to?

11 Q. I'm at the top of page 12 which is part of paragraph 3.4.4.

12 A. Yeah.

13 Q. Yes. I just wanted to bring it to your attention.

14 A. Uh-huh.

15 Q. I think the Chairman wanted it for clarity.

16 **Mr. Chairman:** Yes.

17 **Mr. Khan:** All right, go ahead.

18 **Mr. Chairman:** The passage you're concerned with, as I
19 understand it, Mr. Mootoo, is the final sentence of that
20 paragraph says, "No discussions were held on one of the key
21 activities, for example, removal of the mechanical seal or
22 removal of the inflatable plug", and then seeing reference to
23 toolbox meeting.

24 **Mr. Mootoo:** Yes.

25 **Mr. Chairman:** Yes. That's what's you're referring to, isn't
26 it?

27 **Mr. Mootoo:** Indeed, Sir, and part of the reason why I'm

1 undertaking this exercise, is, this report is not just a technical
2 report. It's an investigative report done for OSHA which on its
3 face straddles a number of issues.

4 **Continued Cross-Examination By Mr. Mootoo:**

5 Q. So, am I therefore correct to say—in other words, from what
6 you've seen, and the documents that you got, there was nothing
7 which said to you that LMCS intended to remove the plug on
8 the 25th of February, 2021?

9 A. That's correct, but so was no mention made of other key
10 activities.

11 Q. Yes.

12 A. No mention was made on things like cutting the line, cutting
13 this, taking out, you know. Those are key activities.

14 Q. I, I'm not—

15 A. So I just brought this one because this was important.

16 Q. I'm not disputing that.

17 A. Yes, so, the, the, the, the—no, I have to comment on that, well,
18 because, the topics were discussed were—had nothing to do
19 with the work, only the work environment, nothing to do with
20 the actual work.

21 Q. I'm not disputing that.

22 A. But I just want you to make sure that—

23 Q. Yes.

24 A. —you understand that.

25 Q. In fact—

26 A. And that was the point I was getting at.

27 Q. I'm not disputing that.

1 A. Okay.

2 Q. And thank you.

3 A. And I—you know.

4 A. So, if the work permit had said, “Hey, do this, do this, do this”,
5 and those are important items that are listed on the work permit,
6 but nothing was mentioned. That was a very strange thing. In
7 my opinion, you know, that is not a toolbox meeting.

8 Q. Yes.

9 A. Yeah.

10 Q. I agree. I agree.

11 A. Okay.

12 Q. In fact, in your opinion, unless a major activity is specified on a
13 work permit, the activity shouldn't take place, it shouldn't be
14 undertaken, isn't that right?

15 A. Well, that will go for cutting the pipe too then?

16 Q. I am not—

17 A. Whole job should be shut down?

18 **Examination By Mr. Chairman:**

19 Q. You need to be a bit careful because there's a difference
20 between the work permit, which does specify certain things to
21 be done, and the toolbox meeting the notes of which seemingly
22 do not touch upon any of the work being done at all. Is that not
23 right, Mr. Khan?

24 A. Pardon me?

25 Q. The paragraph you've been specifically referred to—

26 A. Yeah.

27 Q. —at 3.4.4—

1 A. Uh-huh.

2 Q. —deals primarily with the toolbox meeting?

3 A. Yeah.

4 Q. Your observation that in fact all that seems to have been
5 discussed was, as Mr. Mootoo has put it, I think it was him, are
6 the conditions rather than any of the actual work being done?

7 A. Yes.

8 Q. That's right, isn't it?

9 A. Yeah.

10 Q. And so his observation—

11 A. The toolbox.

12 Q. —his observation to you is, the toolbox meeting didn't actually,
13 on the face of it, appear to instruct on any of the work due to be
14 undertaken on that day, on the face of the document?

15 A. Yes.

16 Q. We've heard other evidence from Mr. Boodram and others—

17 A. Uh-huh.

18 Q. —but the fact is that that is what was being—that's what's
19 disclosed on the face of the documents, the contemporaneous
20 documents, at the time, I think is the point that Mr. Mootoo is
21 making?

22 A. That's correct but can I see—can I be refreshed of the actual
23 work permit?

24 Q. Yes. There's no reason why you can't see the work permit.
25 You'll find it in our core bundle three at page—

26 **Mr. Mootoo:** It's—Mr. Chairman it's actually—it's attached
27 to his report.

1 **Mr. Chairman:** It is, I think, yes, that's right. I've just got to
2 go through my original because it's the one I scribbled on.

3 **Mr. Mootoo:** And his report is at page one four—the work
4 permit in his report is at page one four nine seven of the
5 supplemental.

6 **Mr. Chairman:** So it's in that bundle.

7 **Mr. Mootoo:** I'm happy to take him to it, but I think he's
8 answered the limited question I have on it.

9 **Mr. Khan:** Yeah, okay.

10 **Mr. Chairman:** Well, let's let him look. Put it up on the
11 screen somebody, 1074 core bundle three. Yeah, it's there,
12 thank you.

13 **Mr. Khan:** I don't think it's in there. It's an attachment.

14 **Mr. Chairman:** It is an attachment to your report as well.

15 **Mr. Khan:** It's not the report, it's an attachment, but still in
16 the—it's not in the body of the report.

17 **Examination By Mr. Chairman:**

18 Q. No, no, no, no, the reference to what the jobs that were to be
19 done in that particular work permit is set out at the beginning.
20 Do you see it says, "Specific tasks: to remove and install a 50-
21 inch flange, remove and install a 30-inch riser pipe, remove a
22 30-inch solid flange." Do you see, et cetera, and there's
23 nothing in there about a plug.

24 A. That's correct. I said yes. I agree with you there.

25 Q. So the only reference to any kind of plug or barrier—

26 A. Uh-huh.

27 Q. —is if you scroll down a little further on the screen you'll see

1 there that it says under section B1, “Cleared of
2 process/hazardous materials. Yes. Migration barrier to be
3 used.” Do you see that?

4 A. Yes.

5 Q. That’s the only reference to a migration barrier, presumably this
6 plug. Yes?

7 A. Yes.

8 **Mr. Chairman:** All right, Mr. Mootoo.

9 **Mr. Mootoo:** I have no questions for you on that document
10 arising out of that.

11 **Continued Cross-Examination By Mr. Mootoo:**

12 Q. You say at the commencement of your report you looked at a
13 number of documents, Paria’s scope of works, a series of
14 documents. I believe they are 15 documents, yes?

15 A. That was the remit given to me OSHA, just for your
16 information. It’s kind of.

17 Q. I understand.

18 A. Yeah, okay.

19 Q. I understand. When you—having looked at those documents,
20 did you become aware that LMCS was responsible for draining
21 the line between berth 5 and berth 6? In other words, it was
22 their contractual responsibility to do so. Was that something—

23 A. You, you had—is there—I think I remembered in their
24 statement they say a controlled draining.

25 Q. But my question is a little bit more specific. Do you recall
26 seeing, anywhere in the documents, that it was LMCS’
27 responsibility to drain the line?

1 A. I have to, um—I don't know if you cite an area I would like to
2 see it.

3 Q. Perhaps I'll take you to—I don't know if you saw what is
4 Addendum I. May the witness be referred to page 598 of the
5 core bundle?

6 A. What was the date of that Addendum I?

7 Q. I'm going to get it for you now.

8 A. Yeah.

9 Q. In fact it's up on the screen. Right?

10 **Mr. Chairman:** Just a minute so I can get it.

11 **Mr. Mootoo:** Yeah.

12 **Continued Cross-Examination By Mr. Mootoo:**

13 Q. And I'd ask you to look at, um, question one, the query and the
14 response. The date should be at the end of the document, I
15 think.

16 **Mr. Chairman:** Five nine?

17 **Mr. Mootoo:** Five nine eight.

18 **Mr. Chairman:** Yes. Yes thank you.

19 **Mr. Mootoo:** Yes, thank you. It appears to be unsigned but
20 we do know, it's not controversial, that the Addendum was
21 issued before the works were executed and the contract
22 awarded, but just so you can follow, Mr. Khan, you see the
23 answer to query one?

24 **Mr. Chairman:** Well first of all I think we should ask him if
25 he's ever seen it before.

26 **Mr. Mootoo:** Yes.

27 **Continued Cross-Examination By Mr. Mootoo:**

1 Q. Have you ever seen this document before?

2 A. Not before I wrote the report.

3 Q. Okay, but have you seen it since writing the report?

4 A. I've seen it after.

5 Q. Okay. So before I asked you this question today, you had seen
6 this document?

7 A. Before today, yes.

8 Q. Yes, okay, good. And therefore—

9 A. That's why it doesn't form part of my report.

10 Q. That's all right.

11 A. If I can see it I could comment on it.

12 Q. That's all right.

13 A. Yes.

14 Q. But my question to you is very limited.

15 A. Uh-huh.

16 Q. All right? You therefore don't dispute, it's not an issue, is it,
17 from your perspective, that LMCS was responsible for draining
18 the line?

19 A. To, um—I'd seen a response to a query.

20 Q. Yes.

21 A. A query.

22 **Examination By Mr. Chairman:**

23 Q. Yes, yes, look, first of all that you under—you follow—

24 A. Who is responsible—

25 Q. —the query, the query comes from the contractor—

26 A. Yes.

27 Q. —LMCS.

1 A. Now, I am not sure whether that came from LMCS or not.

2 Q. Well I'm telling you that that's the evidence, all right? So that
3 you understand—

4 A. Yeah.

5 Q. —the question that Mr. Mootoo is asking. The query comes
6 from the contractor, that is LMCS, or a contractor, a contractor.

7 A. A contractor?

8 Q. Yes.

9 A. Because in a, in a, in a, in a, in a meeting with contractors
10 before the submission of the proposal, all contractors are asked
11 to submit.

12 Q. Yes, you're right, so this is from a contractor—

13 A. A contractor.

14 Q. —not necessarily LMCS.

15 A. Yeah. I think you want to be clear.

16 Q. Either way, it makes no difference because—

17 A. Yes, because the question is asked.

18 Q. —the, the, the question is asked, exactly.

19 A. Yeah.

20 Q. And the answer given by Paria is the contractor is responsible
21 for the safe removal of the hydrocarbon contents from the line
22 to ensure that the line is clear and dry.

23 A. But in my opinion, Sir, with all due respect, that query was not
24 answered properly.

25 **Continued Cross-Examination By Mr. Mootoo:**

26 Q. Okay.

27 A. All right.

1 Q. Mr. Khan, Mr. Khan—

2 A. To clear the lines with water.

3 Q. Mr. Khan—

4 A. Yes.

5 Q. —please? We're not getting into anything other than for the
6 purpose of my question—

7 A. Okay good.

8 Q. —as to where the responsibility lay—

9 A. No I'm not talking—

10 Q. —for the draining.

11 A. —about responsibility, Sir.

12 Q. Well that's what I'm talking about, so, if you answer me on that
13 we can move on to some other questions.

14 A. Yeah. But I have to say my say.

15 Q. So are we—

16 A. Let me finish my section, please?

17 Q. Mr. Khan, please?

18 A. I'll listen to you first.

19 Q. Okay, thank you.

20 **Mr. Chairman:** Now, Mr. Khan, the process is this, is that Mr.
21 Mootoo is entitled to ask you the questions he asks you. You
22 will confine yourself to answering that question, as I've said to
23 many, many witnesses in this hearing. You will answer the
24 question as best you're able, if it's at all possible, with a yes or
25 no answer. If you wish to add something after that, you'll be
26 permitted to do so, and I will ensure that you are all right.

27 **Mr. Khan:** Yeah.

1 **Mr. Chairman:** Sometimes it's straightforward and up and
2 you say yes or no—

3 **Mr. Khan:** Yes.

4 **Mr. Chairman:**—and it can end there. That way we progress
5 much speedier and we will get done today when I'm—because
6 the evidence will conclude today whatever time it is, all right?

7 **Mr. Khan:** Okay. Yes, Sir.

8 **Mr. Chairman:** Yes.

9 **Continued Cross-Examination By Mr. Mootoo:**

10 A. Sorry about that, Sir.

11 Q. That's okay. Just to be fair to you—

12 A. Yes.

13 Q. —so that we proceed from the same point, you accept that—
14 you now accept that LMCS was responsible for draining the
15 line, do you?

16 A. Yes, according to this response.

17 Q. Okay, thank you.

18 A. But I need to clarify that statement.

19 Q. Well, before you do—

20 **Examination By Mr. Chairman:**

21 Q. Well, do you, to what end? I mean you—

22 A. Well, you see the query was to clear the lines with water?

23 Q. Who says that?

24 A. The query. “Who is responsible for pumping back from the
25 berths to clear the lines with water?”

26 Q. Right.

27 A. And that is on a—I don't know. I don't understand.

1 **Continued Cross-Examination By Mr. Mootoo:**

2 Q. Okay Mr. Khan, let me see if I can help you.

3 A. Yes.

4 Q. Because this appears to be problematic for you. You remember
5 LMCS prepared a project work statement for this job?

6 A. A project work statement?

7 Q. A method statement.

8 A. A method statement, yes.

9 Q. Yes. They call it a project work statement.

10 A. A method statement.

11 Q. You have it annexed to your report. You remember looking at
12 it?

13 A. A method statement from LMCS, yes, correct.

14 Q. Yes. You remember looking at it?

15 A. Yes.

16 Q. Do you remember in that method statement that LMCS set out a
17 procedure for removal of line content between berth 5 and berth
18 6?

19 A. Yes.

20 Q. Right. We can go to the document if we have to—

21 A. Yes.

22 Q. —but I'm trying to save time. This is a small point but—and
23 therefore don't you accept that if they prepared a procedure for
24 the removal of line content, that it's their obligation?

25 A. To remove the line content, yes.

26 Q. Okay, good, thank you.

27 A. Yeah.

1 **Mr. Chairman:** I think Mr. Khan's concern was that the query
2 suggested the berth be clear with—the lines with water as
3 opposed to removing the oil from the line.

4 **Mr. Mootoo:** Sir, I understand that perfectly, but, as I
5 explained to him more than once, I wasn't concerned with how.

6 **Mr. Chairman:** Right or what.

7 **Mr. Mootoo:** I was concerned about where the responsibility
8 rested.

9 **Mr. Chairman:** Right. You're not concerned with how or
10 what.

11 **Mr. Mootoo:** No.

12 **Mr. Chairman:** Just where the responsibility lay?

13 **Mr. Mootoo:** Yes.

14 **Mr. Chairman:** And just for everyone's education on the
15 matter, you referred him to his method statement on the
16 question of the removal of the contents of Sealine 36 between 5
17 and 6 and that is at 1041? If anybody wants to look, that is the
18 work method statement relating specifically to the removal of
19 the material from the line.

20 **Mr. Mootoo:** Thank you, Mr. Chairman.

21 **Continued Cross-Examination By Mr. Mootoo:**

22 Q. Now, if I understood your expert evidence correctly, and please
23 correct me if I'm wrong, you spoke about a void created as a
24 result of air blowing. Am I right?

25 A. Yes I did.

26 Q. Good. And the air blowing on this job, from what you've
27 looked at, that air blowing was undertaken by LMCS.

1 A. That's correct.

2 Q. Good. So if LMCS was undertaking the air blowing, would
3 you not accept that they should have been aware of the
4 possibility of the creation of a void, as a contractor doing work
5 of this nature?

6 A. I'll answer that question before but I need to—I'll clarify my
7 statement.

8 Q. Yes.

9 A. Please repeat that question?

10 Q. Would you accept—

11 A. Yes.

12 Q. —that LMCS being the contractor responsible for you blowing,
13 ought to have been aware of the possibility of the creation of a
14 gaseous void as a result of the air blowing process?

15 A. Yes, but—

16 Q. Okay.

17 **Mr. Chairman:** Right, now you can add your but—

18 **Mr. Khan:** Okay, good. [*Laughter*]

19 **Continued Cross-Examination By Mr. Mootoo:**

20 A. Now, they were working on a procedure, a work instruction, as
21 far as I understand, from Paria. Right? Correct me if I'm
22 wrong. And I was looking at a statement, Mr.—Kurban, Mr.
23 Kurban, which he said he had no communication with respect
24 to how much liquid was being removed. They just were asked
25 to supply a compressor and pump out the line in accordance
26 with a procedure, a work instruction, issued by Paria. So that is
27 what I understand.

1 Q. So let me understand your evidence. You are saying that the
2 contractor who has primary responsible—not primary, the
3 responsibility for air blowing the line—

4 A. Uh-huh.

5 Q. —has no concurrent responsibility to be aware of the fact that
6 air blowing might have created a gaseous void?

7 A. I'm not saying that.

8 Q. Okay. Well would you accept that they should have such a
9 responsibility?

10 A. Truth and in fact, yes, I am answering you clearly—

11 Q. Thank you.

12 A. —supposed to have that.

13 Q. And, in fact, if the air blowing—if the clearing of the line was
14 the contractor's responsibility, the method for clearing is
15 normally that of the contractor? Would you not accept that as
16 well?

17 A. Yes, but—no, I mean to say, you asked me a question but I
18 have reservations about the question. I'm a professional, I
19 understand the exact method, but the contractor is operating on
20 instructions, a work instruction, issued by the client.

21 Q. What is the—

22 A. So he has to work in accordance with that. If he had, you
23 know—okay. I'll end there.

24 Q. No, no, well I'll—let me take you on that.

25 A. Uh-huh.

26 Q. Because I'm suggesting to you that the contractor is to fulfil a
27 scope of work and that the method by which that scope is

1 achieved is the responsibility of the contractor. In other words,
2 it is—would you accept that? He is given a scope. The method
3 by which he achieves that scope is his responsibility.

4 A. Not if it is clearly outlined in his scope. He'll be deviating
5 from his scope.

6 **Mr. Chairman:** I think we should have a look at this.

7 **Mr. Mootoo:** Well, I'm about to take you to that.

8 **Mr. Chairman:** Yes.

9 **Mr. Mootoo:** All right?

10 **Mr. Chairman:** Yes.

11 **Continued Cross-Examination By Mr. Mootoo:**

12 Q. You looked at the technical specifications for this job?

13 A. Yes.

14 Q. It's also attached to your report. Didn't you, scope of work, the
15 technical scope of work? It's at attachment seven.

16 **Mr. Chairman:** Page?

17 **Mr. Mootoo:** I am seeing at—Mr. Chairman, the difficulty I
18 have is I'm working off a document which has number one four
19 nine on the bottom but I'm not entirely sure it accords with
20 the—yes, it's attachment seven. Let me see if I can help. I
21 think it's at page—technical scope of work is at page five five
22 eight of the core bundle.

23 **Mr. Chairman:** Volume I. Yes, got it. Tab 19.

24 [*Commission orderly assists Mr. Khan*]

25 **Mr. Chairman:** Scope of work technical. Yes. Where should
26 we go?

27 **Mr. Mootoo:** If I can take the witness to item 2.1, which is on

1 page 561—

2 **Mr. Chairman:** Five six one. Yeah.

3 **Mr. Mootoo:**—elements of this project include—should be
4 include—but is not limited to removal of fuel oil from line with
5 zero spill. All right? So that's one of the items. But what I
6 understood Mr. Khan to be saying essentially is that the
7 methodology for the execution of the scope he agrees with me
8 that that is a matter for the contractor, subject to a limitation,
9 any limitation, imposed on the contractor. So, you see, he was
10 anxious to point that out so I'm inviting him now to point to the
11 scope and show me where Paria imposes such a limitation on
12 LMCS.

13 **Continued Cross-Examination By Mr. Mootoo:**

14 A. A limitation?

15 Q. A requirement that they engage in air blowing.

16 A. I ain't follow you.

17 Q. Okay, let me see if I can help you.

18 A. Yeah.

19 Q. You said to me that you would agree with me but there was a
20 but.

21 A. Uh-huh.

22 Q. And the but was, well, where the contractor is expressly
23 instructed to do something.

24 A. Yes.

25 Q. Yes?

26 A. Yes.

27 Q. So this is the scope?

1 A. Uh-huh.

2 Q. We agreed on that?

3 A. Correct. This is the scope that he worked with.

4 Q. Right. You didn't point out in your report, did you, any
5 exception that pointed to LMCS having to engage in air
6 blowing pursuant to instruction from Paria, did you?

7 A. No. I didn't point that out.

8 Q. Right. So this is the scope?

9 A. Right, but—okay, go ahead.

10 Q. This is the scope?

11 A. Uh-huh.

12 Q. Where, in the scope, is there this exception or is there no
13 exception, Mr. Khan?

14 A. I still don't understand it.

15 Q. All right, well maybe, maybe the error is mine.

16 **Mr. Chairman:** Somebody has to help me. There was a Paria
17 document which I thought that's what he was referring to,
18 which set out part of the work plan for the removal of fuel from
19 the line.

20 **Mr. Mootoo:** There was a Paria document but that Paria
21 document—

22 **Mr. Chairman:** Which I'm told was an internal—

23 **Mr. Mootoo:**—was an internal document—

24 **Mr. Chairman:** Yes.

25 **Mr. Mootoo:**—that wasn't issued to LMCS, it was for Paria's
26 operators.

27 **Mr. Chairman:** No I understand that.

1 **Mr. Mootoo:** Yes.

2 **Mr. Chairman:** But, in fact they had it, didn't they?

3 **Mr. Mootoo:** I'm—

4 **Mr. Chairman:** I thought that there was evidence—sorry?
5 [*Crosstalk*] Work instruction. That's what it was called, I
6 think, yes. Where do we find that, please? Because I'd
7 understood that the evidence was that it was intended to be an
8 internal document. It's obvious—

9 **Mr. Mootoo:** Sir, that's core bundle one zero three three,
10 right?

11 **Mr. Maharaj SC:** The evidence was that it was intended to
12 be—there was evidence that it was intended to be by, I think,
13 Mr. Piper, but there was other evidence that it was
14 communicated.

15 **Mr. Mootoo:** No, I—well, I'm not entirely sure that I, I agree
16 with that interpretation of Mr. Maharaj's summary of the
17 evidence, but, be that as it may, before we, before we actually
18 take the witness to it, I want to understand something, so may I
19 ask him this preliminary question?

20 **Mr. Chairman:** Please do.

21 **Continued Cross-Examination By Mr. Mootoo:**

22 Q. Are you saying that you have seen a document that Paria
23 required LMCS to engage in air blowing? Is that what you are
24 telling the Commission?

25 A. I saw that document subsequent to issuance of my report.

26 Q. Okay.

27 A. As a matter of fact—

1 **Mr. Khan:** Can I continue, Sir?

2 **Examination By Mr. Chairman:**

3 Q. But I just want to know which document we're talking about
4 before we go any further.

5 A. Work instruction QO something.

6 Q. Can you put up on the screen for the—yeah, it's on the screen
7 now. Is that, is that what you're talking about, 10.33.

8 A. POSW, work instruction, correct.

9 Q. You've seen this document?

10 A. January 5th, '22.

11 Q. You've seen this document before, have you?

12 A. I've seen it before but subsequent to these—

13 Q. After you've drafted your report?

14 A. After, well—after—

15 Q. You've been shown it since?

16 A. Pardon me?

17 Q. You've been shown this document since—

18 A. Yes.

19 Q. —drafting your report?

20 A. And I'll, I'll tell you why the circumstances I saw this
21 document.

22 Q. Right.

23 A. Can I say that?

24 Q. Well, yes, all right.

25 A. Now, prior to my issue of report, I was pestering the OSH
26 department to tell me how the line was drained.

27 Q. Right.

1 A. What method they used.

2 Q. Yes.

3 A. And how—no, how much liquid came from the line because
4 that was fundamental in my report.

5 Q. Right.

6 A. You need to find out, because a vortex was formed and the men
7 were sucked in. So I pestered OSHA to get this information for
8 me.

9 Q. Right.

10 A. And the day I issued my report was the 19th of July, and they
11 send this information to me on the 27th of July.

12 Q. Right. Okay. Well there, there you go.

13 A. It was given to OSHA.

14 Q. All right. Take, take, take your questioning from there, Mr.—

15 A. —and they sent it to me on the 27th of July.

16 **Mr. Chairman:** All right, I understand now.

17 **Mr. Mootoo:** Yeah. I think Mr. Khan is taking us slightly off
18 course so I'm going to try and—

19 **Mr. Chairman:** Bring him back.

20 **Mr. Mootoo:**—rephrase my question.

21 **Mr. Khan:** Okay.

22 **Continued Cross-Examination By Mr. Mootoo:**

23 Q. Right. You are familiar with work instructions in the context of
24 contracts of this nature?

25 A. Not necessarily, but a work instruction has many forms and
26 facets.

27 Q. Mr. Khan, can you answer—

1 A. Yeah, I'm not familiar with—

2 Q. You're not familiar with work instructions?

3 A. I'm not familiar with any particular one but I have an idea of a
4 work instruction.

5 Q. Okay. You've—

6 A. It could take many forms and fashions.

7 Q. You've seen many of them over the years?

8 A. Over the years, yeah.

9 Q. Yes. And, of course, an elementary component of a work
10 instructions is that it is addressed to the contractor. Isn't that
11 right?

12 A. Yes, a work instruction is addressed to the contractor.

13 Q. Yes. Can you show me where, on this work instruction, it is
14 addressed to LMCS?

15 A. I can't—I don't know. I haven't looked at that.

16 Q. Well you've looked at it, haven't you?

17 A. Pardon me?

18 Q. You've look at it, haven't you?

19 A. I've looked it, but I can't—

20 Q. Well I'm suggesting to you it's not addressed to LMCS.

21 A. But LMCS—

22 Q. I am suggesting to you—

23 A. Okay, all right, it's not addressed. I agree with you, Sir.

24 Q. Okay, good. Will you also not accept that a work instruction is
25 an important document?

26 A. It is an important document.

27 Q. And if it is an important document, if it is issued to a contractor,

1 a normal requirement is that if it is intended for him he is
2 required to sign it as having received it, isn't that so?

3 A. If it's, if it's required?

4 Q. Isn't that so? It is a normal requirement that if a work
5 instruction—

6 A. This could—

7 **Mr. Maharaj SC:** Mr. Chairman, I have to object on two main
8 grounds.

9 **Mr. Chairman:** Right.

10 **Mr. Maharaj SC:** Paria ought to know that these work
11 instructions were communicated to the contractor, and,
12 remember the cross-examination and there was an email from
13 Mr. Rampersadsingh to LMCS, and that is in Volume II of the
14 witness supplemental bundle at page nine one seven which
15 says:

16 “Dear, see attached signed draining procedure. Let us
17 meet tomorrow at 10.00 a.m. to discuss draining
18 schedules. I want to start as early as possible this week
19 bearing in mind the crude ship loading is on the 14th. I
20 will discuss the ops now to firm up with any other issue.”

21 But one of Paria's witness also expressly stated, Mr. Johnathan
22 Ramadan, in his witness statement, and he was cross-examined,
23 and he admitted and I read his cross-examination last night at
24 Volume IV of the witness supplemental bundle—at the witness
25 statement bundle page—yes, at page 1470 paragraphs eight and
26 nine.

27 “As part of the pre-work LMCS undertook to drain the

1 product from the pipeline at berth No. 5 and berth No. 6
2 in accordance with a Paria work instruction effective 5th
3 January, 2022 which was developed by the offshore
4 section of the terminal operations department”—and they
5 refer to it—“the process of draining the line began on or
6 around the 18th of January, 2022 and continued in two
7 phases over several non-consecutive days up until on or
8 around 3rd of February, 2022. LMCS undertook the
9 draining of works by air blowing the contents of the line
10 from berth No. 5 to berth No. 6 into a slops barge.”

11 So this was communicated, the witness said it was to be done in
12 accordance with the work instructions, and Paria accepted it.

13 **Mr. Chairman:** Yes, I think that Mr. Mootoo’s point is this,
14 that the document itself doesn’t show that it was actually given
15 to anybody at LMCS. This was an internal document. And the
16 point he was trying to elicit from the witness was that
17 ordinarily, if this document had been handed to LMCS, it
18 should have been signed for as having been handed to them.
19 Now, I think there was some evidence that it had been seen by
20 those who were carrying out the work at LMCS by LMCS. But
21 I think that the point is still nonetheless well made that they
22 didn’t sign for it, there wasn’t a formal handover of this
23 document, although they seemingly worked to it.

24 **Mr. Maharaj SC:** Yes, and the email was sent, the email was
25 sent—send it and in effect said it was the draining procedure.

26 **Mr. Chairman:** The email, did it contain this document as an
27 attachment? I think that was the evidence that it was attached

1 to the email, whether intentionally or not.

2 **Mr. Maharaj SC:** Yes. As a matter of fact it's attached at
3 page nine two eight and nine two nine. I can't see anything that
4 could be clearer than that.

5 **Mr. Chairman:** So, er, this document that we've been looking
6 at, and it's on the screen now, which has been—reference has
7 been made to, the evidence, the state of the evidence at the
8 moment is that the—this document was passed from Paria to
9 LMCS prior to the work taking place by way of an attachment
10 to an email, and that therefore they were in—they were seized
11 of it.

12 **Mr. Maharaj SC:** Yes.

13 **Mr. Mootoo:** Sir, with respect, that really doesn't address the
14 issue at all. The fact, and Mr. Maharaj has said a lot about it,
15 the fact that LMCS may have been made aware of an internal
16 instruction, one, doesn't make it an instruction. That's fairly
17 elementary. Secondly, they obviously needed to be aware of it
18 because the evidence, which has not been referred to before you
19 now, is that Paria had a certain schedule and the instruction had
20 to be prepared internally for that schedule to be accommodated,
21 because it had other activities, and in due course we can come
22 to what the contract requires for instructions to be issued under
23 Paria's general terms and conditions.

24 So there's a fundamental distinction to be made between
25 knowledge of a document, knowledge of an internal Paria
26 document, and whether a contractor has been instructed,
27 whether they're doing something in accordance with it is

1 another matter but the displacement of a contractual
2 responsibility is not achieved by knowledge of a document.
3 But anyway, and we can deal with that in the course of—

4 **Mr. Chairman:** I was going to say it sounds like a submission
5 as to how we should view this evidence rather than a question
6 for this particular witness. I think what you were after was
7 whether—as I hope I fairly characterized it in answer to Mr.
8 Maharaj, was whether or not it is his understanding that an
9 instruction would ordinarily, a work instruction, would
10 ordinarily require the signature of the recipient.

11 **Mr. Mootoo:** Yes, Sir.

12 **Mr. Chairman:** And we haven't got an answer to that yet.

13 **Mr. Mootoo:** Yes.

14 **Examination By Mr. Chairman:**

15 Q. Do you agree that ordinarily a work instruction would require a
16 signature by the recipient that he had received it and understood
17 it?

18 A. Certainly normal, yeah, well, I could say in some instances yes
19 in some instances no.

20 Q. Right.

21 A. A lot of ha—a lot a things happen in industry.

22 Q. I'm sure they do.

23 A. And it is—

24 Q. Er, and sadly, some undocumented. But, can I—can we be
25 clear, it would be, it would be prudent and sensible for it to
26 have been signed by the recipient if it was a legitimate work
27 instruction to the, to the contractor, wouldn't it? And you can

1 agree, I think, with Mr. Mootoo, that nowhere on this document
2 is it signed by the contractor?

3 A. Yes, I say that too.

4 Q. Right.

5 A. Is there a place for him to sign on it?

6 Q. Well there isn't apparently?

7 A. Okay.

8 **Mr. Mootoo:** Well that proves my point.

9 **Examination By Mr. Chairman:**

10 Q. Whether it is or not the fact of the matter is, it's unsigned by
11 him.

12 A. Yeah.

13 Q. And there is—and we can make the observation, there's not
14 even any point, place for him to do so.

15 A. Okay.

16 Q. But, and I have well in mind what we've been told by and
17 reminded of by Mr. Maharaj, that, that one way or another it
18 found its way into the hands of the contractor and I dare say the
19 contractor working for Paria might well have taken a view that
20 if this has come into my hands I ought to pay attention to it but
21 that's another matter?

22 A. That's another issue, Chairman.

23 **Mr. Chairman:** Yeah, indeed. Mr. Mootoo, yes.

24 **Continued Cross-Examination By Mr. Mootoo:**

25 Q. What all of this was leading up to is that in your report you say
26 that the LMCS divers were most likely unaware that a large
27 gaseous void existed behind the inflatable plug. Do you recall

1 saying that?

2 A. Yes, I did.

3 Q. Right. And what I'm suggesting to you is that if LMCS was
4 responsible for the air blowing, they therefore ought to have
5 been aware of the possibility of a large gaseous void having
6 existed, correct?

7 A. With a but, I will answer that question.

8 Q. Yes. We'll get to the but.

9 **Examination By Mr. Chairman:**

10 Q. Either you accept or you don't that the persons who were
11 responsible for pumping air into the pipe should have been
12 aware of the possibility of creating a large gaseous void. That I
13 think is fairly uncontroversial, isn't it.

14 A. Yes, yes, yes, I would answer you to that.

15 Q. Yes. That must be right, mustn't it?

16 **Continued Cross-Examination By Mr. Mootoo:**

17 Q. So when you say at paragraph 5.1 of your report that the—at
18 page 15 of that document, of the report itself—

19 **Mr. Chairman:** One four oh three.

20 **Mr. Mootoo:** Thank you.

21 **Continued Cross-Examination By Mr. Mootoo:**

22 Q. When you say, the last sentence:

23 "The divers were most likely unaware that a large
24 gaseous void existed behind the inflatable plug due to
25 excess line contents removal."

26 If they were most likely unaware, it would have been because
27 LMCS, the company, didn't tell them, isn't that right?

1 A. Chairman, before I answer that question, I have to make
2 some—I have to make a statement.

3 **Mr. Chairman:** Well, I'm afraid you're not permitted to make
4 statements.

5 **Mr. Khan:** Okay. But I have to clarify my answer.

6 **Mr. Chairman:** Well, if we're going to have a clarification
7 with every single question asked of you, we're going to be here
8 for a very, very long time. I would have thought it was pretty
9 uncontroversial that the diver—your observation the divers
10 were most likely unaware that a large, gaseous void existed
11 behind the inflatable plug was, was, was a fact. If they had
12 appreciated that they wouldn't have opened it.

13 **Mr. Khan:** That was a fact, yes.

14 **Continued Cross-Examination By Mr. Mootoo:**

15 Q. Yes but they were—would you not also accept that while they
16 may have been unaware, LMCS, the company ought to have
17 been aware?

18 A. I need to answer that—

19 Q. Given the nature—

20 A. Yes, Sir.

21 Q. Given the nature of the line blowing exercise which was
22 undertaken by LMCS?

23 A. I have—I will answer your question but I have to meet with a
24 but in it. There's a—

25 **Mr. Chairman:** Answer the question first and then we'll have
26 the but.

27 **Continued Cross-Examination By Mr. Mootoo:**

1 A. Yes.

2 Q. Yes.

3 **Mr. Chairman:** All right.

4 **Mr. Mootoo:** Thank you.

5 **Mr. Khan:** But, am I allowed?

6 **Mr. Chairman:** Yes, please, briefly though.

7 **Mr. Khan:** I heard Mr. Kazim's statement and he said nobody
8 told him how much product was moved from the line.
9 Although he—and I showed him my demonstration—the
10 method of that removal caused an apparent ullage which was
11 incorrect.

12 **Continued Cross-Examination By Mr. Mootoo:**

13 Q. When you say you read no one—that he said no one told him—

14 A. Yeah.

15 Q. Don't you think—

16 A. He said—

17 Q. Don't you think as the contractor—

18 A. Uh-huh.

19 Q. —he should have made it his business to know?

20 A. Well he had varied communication from a dip—

21 Q. But—

22 A. —on the ullage.

23 Q. Hold on, we'll get to that.

24 A. He was not—

25 Q. Don't you—

26 A. —measuring the contents on shore.

27 Q. Don't you think he should have made it his business to know?

1 A. To a certain extent, yes—

2 Q. Yes, and from the in—

3 A. —to answer your question directly.

4 Q. —from, from the expert evidence which you gave us here
5 today, you have sought to demonstrate that the ullage, the
6 ullage reading was, in fact, unreliable, isn't that so?

7 A. The ullage reading, yes.

8 Q. Was unreliable and it was unreliable because of the air blowing
9 exercise which LMCS, Kazim Ali's company, did?

10 A. Because of the methodology of the emptying.

11 Q. Yes. Now, do you know that LMCS insofar as their knowledge
12 is concerned, because you said you looked at certain contractual
13 documents, do you know that LMCS was treated or, in fact,
14 contractually agreed to be treated as having visited and
15 carefully examined the site of the work and the surroundings?
16 Did you, did you acquaint yourself as to that?

17 A. I can—I didn't—come with that question again please?

18 Q. Did you acquaint yourself that the contractual documents
19 between LMCS and Paria required, not in fact required,
20 stipulated that LMCS was deemed to have visited and carefully
21 examined the work and the surroundings and satisfied itself as
22 to the nature and conditions of the site?

23 A. That's part of a standard agreement, yeah, when you use, when
24 you use—when you're looking at a contract.

25 Q. Oh. So you are—were you aware of it?

26 A. Well I have—I can't remember. Can't remember if I'd seen
27 that in the documents.

1 Q. Okay.

2 A. Because that is a standard procedure when a contractor bids for
3 a job.

4 Q. Good.

5 **Mr. Chairman:** Would you have assumed it in any event?
6 Would you have assumed it in any event?

7 **Mr. Khan:** Yeah, I would have assumed that.

8 **Mr. Chairman:** Yes. Yes.

9 **Mr. Khan:** Yes.

10 **Mr. Chairman:** All right.

11 **Continued Cross-Examination By Mr. Mootoo:**

12 Q. Okay, good. Now we went through the permit and we've gone
13 through the existence of the gaseous void. Would you not
14 accept from me, given the evidence you've given us today
15 about the importance of a work permit, an individual work
16 permit, that LMCS should not have removed the plug on the
17 25th of February because there was no work permit identifying
18 the removal of the plug on that day?

19 A. But so too was the—

20 Q. I am not asking you that, Mr. Khan.

21 **Mr. Chairman:** Please answer the question, Mr. Khan? It's
22 easier that way.

23 **Continued Cross-Examination By Mr. Mootoo:**

24 A. Phrase the question again, please?

25 Q. That—let me put it even in a simpler way.

26 A. Yeah.

27 Q. That given the evidence you've given the Commission today

1 about the importance of the work permit, and the importance of
2 the issue of a work permit for each activity, that LMCS should
3 not have removed the mechanical and inflatable plugs on the
4 25th of February because there was no permit authorizing its
5 removal on that day?

6 A. [*Inaudible*] You want a question yes or no?

7 Q. Yes.

8 A. All right. Well yes.

9 Q. Good. And would you therefore say from the evidence you've
10 given that the removal of the plug at that time by LMCS was
11 therefore unauthorized?

12 A. I will not say that.

13 Q. Okay. Would you accept that the incident about which you've
14 given all of this evidence concerning Delta P, I think it's a
15 fairly elementary question but I'll ask it anyway, that incident
16 would not have occurred if LMCS personnel did not remove the
17 plug on the 25th?

18 A. The reverse is also true.

19 Q. I'm not asking you that, Mr. Khan. You're at pains to qualify
20 everything and extricate LMCS. Please answer my question?

21 A. I am not trying to do that.

22 **Mr. Chairman:** Well, that's not, that's not fair. No, that's not
23 [*Inaudible*]

24 **Mr. Khan:** I am not trying to do that. I am trying to, to, to
25 answer a question that makes a lot of sense without any caveat
26 in it.

27 **Mr. Chairman:** Mr. Khan, we've had the benefit of being here

1 for many, many weeks, all right? I've heard a large volume of
2 evidence and you can rest assured that your answers will have
3 to fit into that large body of evidence, so every caveat that you
4 seek to add, you can rely on the fact that we already have those
5 in mind, all right? If there's something specific you feel is
6 absolutely imperative that you add, by all means do so, but, it
7 seems to me that some of the questions that Mr. Mootoo is
8 asking are uncontroversial. They're not, they're not something
9 with which there can be much dispute. Where he goes too far,
10 as he just did a moment ago, in making a suggestion that you're
11 at pains to try and extricate LMCS, I will stop him and I have.
12 All right? So let's just—Mr. Mootoo will confine himself to
13 asking the questions without that kind of comment and you will
14 answer them, please, as best you're able, with the shortest and
15 simplest answer, all right?

16 **Mr. Khan:** Well, Mr. Chairman, with all due respect to the
17 learned counsel here, I take umbrage to him for him accusing
18 me of something like that.

19 **Mr. Chairman:** I've told him. I've told him he must not—

20 **Mr. Khan:** Okay, good.

21 **Mr. Chairman:**—do that.

22 **Mr. Khan:** Yeah.

23 **Mr. Chairman:** And I have made that clear.

24 **Mr. Khan:** Yeah.

25 **Mr. Mootoo:** Mr. Chairman, if it makes Mr. Khan any more
26 comfortable, first of all I apologize, and, secondly, I withdraw
27 the remark.

1 **Mr. Chairman:** Thank you very much. There you go.

2 **Continued Cross-Examination By Mr. Mootoo:**

3 Q. You were questioned today about the evidence which you gave
4 about the safest time for the rescue to be effected on the 25th of
5 February. You recall that?

6 A. Yes, yes, yes.

7 Q. And I think the Chairman made reference to the evidence of
8 Mr. Donawa yesterday, and, in the course of questioning one of
9 the issues arose was whether there was a risk of a further Delta
10 P event occurring on the evening into the night of the 25th of
11 February. You recall that?

12 A. Yes.

13 Q. Yes. And you've told us a number of things, and I just want to,
14 well, make sure that I understand your evidence first and then I
15 want to ask you a question about it. Am I correct in that you
16 said that the inflatable plug would have initially operated as a
17 pig?

18 A. Yes I said, yes.

19 Q. Yes. Okay. But you wouldn't have known the rate of deflation
20 of the plug?

21 A. I wouldn't know that.

22 Q. Right. Now, on the—we've established that your report would
23 have taken—and the analysis would have taken three months to
24 undertake, right? But I want to take us back to essentially what
25 has to be—what had to be happening on the night of the—the
26 evening into the night of the 25th of February.

27 A. Uh-huh.

1 Q. Now nobody could have undertaken that scientific analysis
2 which you have performed now in the course of that evening.
3 You agree? It would have been unreasonable to expect that to
4 have been undertaken at that time.

5 A. I don't think so.

6 Q. Okay. And—

7 A. There are several engineers employed there.

8 Q. Okay, well, hold on a minute I believe you told us earlier, and I
9 was at pains to ask you about it, that if you had nothing else to
10 do, it would have taken you three months to prepare—to do the
11 analysis?

12 A. To write the whole report, not the analysis.

13 Q. Well I asked you specifically about the analysis.

14 A. No, but I said the entire report in its entirety.

15 Q. Okay, so, all right. So am I to understand you to be saying that
16 you could have done the analysis in one evening but the writing
17 of the report is what took you 89 days?

18 A. I didn't say that.

19 Q. No, I know you didn't,

20 A. No I did not say that.

21 Q. Okay. So is it that your evidence now that all of this analysis
22 which you've done in your report could have been done on the
23 night of the 25th of February by an engineer?

24 A. Of course.

25 Q. Yes.

26 A. The analysis pertaining to what—there is no—

27 Q. Okay.

1 A. There's not much analysis in the report.

2 Q. Well, well—

3 A. The review—much reviewing the report.

4 Q. Well hold on, hold on. Do you accept that on the night of the
5 25th no one, in fact, not until several days later when the line
6 was cleared and the plug retrieved, no one actually knew the
7 state of the plug? Do you accept that?

8 A. That's correct, nobody knew.

9 Q. Right. Right. And therefore, if no one knew the state of the
10 plug, similarly, no one would have been able to definitively
11 form a view as to whether the plug itself was in such a
12 condition in the line to create the possibility of two areas of
13 differential pressure?

14 A. That's a lot a speculation.

15 Q. I know. That's exactly what they were—

16 A. Yes.

17 Q. —engaged in on the 25th is what I'm suggesting to you.

18 A. Well, there's a lot of speculation but the plug did move and
19 negotiated a radius.

20 Q. No, we know that now. Don't we know that now, but at the—

21 A. No, you, no, you—you could have known that then now—then.
22 When Mr. Boodram came out the line, just two hours after.

23 Q. So—

24 A. He didn't encounter any plug and the plug—he knew that the
25 plug passed the elbow.

26 Q. I understand that.

27 A. Uh-huh.

1 Q. But what Mr. Boodram did not do, unless you're suggesting
2 that you have different evidence, Mr. Boodram didn't give
3 anyone any information about the condition of the plug in the
4 line?

5 A. He didn't do that, yeah, he didn't do that—

6 Q. So—

7 A. —nor was he asked.

8 Q. So, no one knew, Mr. Khan?

9 A. All right, no one knew, I agree to that.

10 Q. Right. And as a scientist, are you asking us to believe that your
11 report now, which is based on a number of confirmed facts, that
12 same report, the analysis could have been done on the 25th of
13 February when those facts were not known? Are you asking us
14 to believe that, really, Mr. Khan?

15 A. Some judgment could have been made.

16 Q. What I'm suggesting, what I'm suggesting to you is perhaps the
17 answer you want to give is that some speculation could have
18 been made. Is that what you really want to say?

19 A. Some engineering input could have been made.

20 Q. But it would have been in the realm of speculation? Isn't
21 that—

22 A. I'm not an engineer. I don't speculate that much.

23 Q. So if you don't speculate that much, and you're suggesting at
24 the same time some speculation could have been made, what
25 are you really saying? Does it not amount to the fact that you
26 would lean against speculation? As a scientist, you would lean
27 against speculation? Is that a yes?

1 A. It depends upon the circumstances.

2 Q. So yes, depending on the circumstance. And as a scientist, you
3 have exposure to other scientists in your discipline, isn't that so,
4 some of whom are probably watching you now?

5 A. You have to define the word scientist. I'm not a scientist.

6 Q. Okay.

7 A. I'm a failure analysis consultant.

8 Q. Okay. Do you have professional qualifications?

9 A. Yes.

10 Q. Right. As an engineer—

11 **Mr. Chairman:** Could you, could you bring your microphone
12 a little closer to you, please? Move the papers out the way so
13 that you—yes.

14 **Mr. Khan:** Yes. Hearing me any better now?

15 **Continued Cross-Examination By Mr. Mootoo:**

16 Q. Your profession is based in large part on science, isn't it, on the
17 application of scientific principles?

18 A. Yes.

19 Q. Yes. And you wouldn't expect another professional in your
20 discipline to proffer an expert opinion predicated on
21 speculation, would you?

22 A. I would—

23 Q. Mr. Khan, a yes or no will suffice. Would you?

24 A. Speculation, okay, is—

25 Q. I know what speculation is, Mr. Khan.

26 A. [*Inaudible*]

27 Q. Yes.

1 A. Okay. And—

2 Q. When men's lives are hanging in the balance—

3 A. Uh-huh.

4 Q. —you're going to proffer an opinion based on speculation? Is
5 that what you're asking us to believe?

6 A. But the converse is also true.

7 Q. Mr. Khan, is that what you want—

8 **Mr. Chairman:** Give him a chance to answer it.

9 **Mr. Mootoo:** Well, well, Mr. Chairman, he's not answering
10 the question with a yes or no, and, and, and—

11 **Mr. Khan:** But some, some questions you cannot answer yes
12 or no.

13 **Examination By Mr. Chairman:**

14 Q. Let's be clear. You wouldn't wish to speculate on matters of
15 any importance when it comes to your professional analysis of
16 a particular issue that might arise? You wouldn't wish to
17 speculate, you'd want facts, correct?

18 A. I wouldn't wish to speculate.

19 Q. No. You would want the facts or as many of the facts as you
20 could garner—

21 A. Uh-huh.

22 Q. —in order to come to any kind of judgment?

23 A. Uh-huh. That's correct.

24 Q. Right. And to that end that is the reason, one of the reasons
25 why you asked OSHA to provide you with additional facts even
26 before you'd concluded your report, but you didn't get them so
27 you concluded your report as best you were able? That's the

1 position, isn't it?

2 A. Uh-huh, that's correct.

3 Q. And fresh facts have emerged which may or may not affect
4 your judgment in the report, correct? All right so really all that
5 Mr. Mootoo is saying is that nobody in your position as a
6 professional would want to speculate, any more than a lawyer
7 would wish to speculate about the outcome of a case without
8 knowing the facts? You follow? That must be so, mustn't it?
9 It's uncontroversial, Mr. Khan.

10 A. [*Inaudible*]

11 Q. You know? It really is. I know—you see, part of the problem
12 is witnesses often try to understand why the question is being
13 asked and what happens when that hap—when witnesses do
14 that, is, they try to tailor their answer to what they think the
15 question is about, when really all you need to do is to answer
16 the question as straightforwardly as you can, because you can
17 rely onto fact that I've been doing this for 40 years and I know
18 how it works, all right?

19 A. But, but Chairman, with all due respect, Sir—

20 Q. Yes.

21 A. —you know, the media will take it up and say something else,
22 all right? “Mr. Khan says this and that and the other.”

23 Q. Yes.

24 A. You know what I mean?

25 **Mr. Peterson SC:** Don't think about that either.

26 **Examination By Mr. Chairman:**

27 Q. But that, that is, that is precisely what I'm getting at.

1 A. And that affects my reputation, Sir.

2 Q. No, of course, you must protect your reputation.

3 A. Correct.

4 Q. There is no question—

5 A. So I have to answer appropriately to protect my reputation.

6 Q. But Mr. Khan, Mr. Khan—

7 A. Yes.

8 Q. —the easiest way to protect your reputation is to answer as
9 forthrightly as you possibly can.

10 A. Uh-huh.

11 Q. Because the last thing you would want to be accused of is being
12 evasive or trying to dodge the question in any way.

13 A. Uh-huh.

14 Q. Because that wouldn't do your reputation any good either.

15 A. That's correct.

16 Q. As far as I'm concerned, your reputation sits as high as it can
17 on my disk, all right, and you please will answer the questions
18 Mr. Mootoo has for you as straightforwardly as you can. You
19 can rely on the fact that if there's something that I feel needs to
20 be developed, I will ask you about it.

21 A. Yes.

22 Q. I have a couple of questions already, all right? So just help us
23 all by answering Mr. Mootoo's questions as straightforwardly
24 as possible as I say. If you feel you need to add a rider, say yes
25 or no first and then add the rider, all right?

26 A. Okay.

27 Q. Right.

1 **Continued Cross-Examination By Mr. Mootoo:**

2 Q. Yes, Mr. Khan, I don't have much left for you. I want to take
3 you to LMCS' method statement which is in the supplemental
4 core bundle and it's at page 1484 it starts. While that's being
5 brought up on the screen—

6 A. Yes.

7 Q. —all right, in this Enquiry, we've had some evidence about the
8 sequence of events in this method statement. Now, this is a
9 method statement that you're familiar with, am I right?

10 A. Yes.

11 Q. Yes?

12 A. Correct, yes.

13 Q. All right. Um, and—

14 A. That's an attachment to my report, is it?

15 Q. Yes it is.

16 A. Yes.

17 Q. It's attachment 10.

18 A. Uh-huh.

19 Q. And I just want to deal very briefly with the first page. In fact
20 we were right at the top under the heading. Do you have it in
21 front of you?

22 A. Well I can see it there.

23 Q. Yes?

24 A. I'm seeing it on the screen.

25 Q. Right. Good. And you will see there's a paragraph beginning:

26 "This phase commences on completion of, one, removal
27 of fuel oil from sealine 36 between berths 5 and 6."

1 You see that?

2 A. Yes.

3 Q. Okay, good. So, just to put this document in context, this
4 document comes on the heels of the contractor having removed
5 the fuel oil in accordance with whatever the contract required,
6 yes?

7 A. Yes.

8 Q. So it's a subsequent step. Now, having heard your evidence
9 today, I want to take you down to items 56 and 57 of that
10 method statement. And this deals with the removal of the
11 migration barrier from the line and the deflation of the plug.
12 Correct?

13 A. Yes, of course, of course.

14 Q. And then, following that is the installation of a blind flange and
15 then the chamber crew is to demobilize and return to the
16 exterior. Good?

17 A. Uh-huh.

18 Q. Now, if I understood your evidence correctly today, what you
19 said is that as an expert, and this is my conclusion, as an expert,
20 if the ullage had been taken down to 35 feet and was—and
21 genuinely read as 35 feet and was, in fact, 35 feet, there would
22 be nothing wrong with the sequence of events of removing the
23 plug at this time because no Delta P would have occurred. Am
24 I right about that?

25 A. Yes, but—

26 **Mr. Chairman:** There's no but. It must be right, mustn't it?

27 **Mr. Khan:** Yes, well, yes. Well answer as the Chairman

1 directs, yeah, to me to answer clearly.

2 **Continued Cross-Examination By Mr. Mootoo:**

3 Q. So, so therefore—

4 A. Yeah, uh-huh.

5 Q. —the criticism all of this is reduced to, not really the method
6 statement but the fact that LMCS got a false reading of the
7 ullage.

8 A. [*Nodding*]

9 Q. And that's really why this entire event occurred.

10 **Mr. Peterson SC:** That must be yes.

11 **Continued Cross-Examination By Mr. Mootoo:**

12 Q. Isn't that right?

13 A. I would disagree with that. That's not the reason why it
14 occurred.

15 Q. The false reading as to the ullage—

16 A. Uh-huh.

17 Q. —is not why this occurred?

18 A. No.

19 Q. The fal—

20 **Mr. Chairman:** I think you've got to put it in another way.

21 **Mr. Mootoo:** Yes, yes, yes, I will.

22 **Continued Cross-Examination By Mr. Mootoo:**

23 Q. The event occurred because of the differential pressure because
24 of the void in the line, yes?

25 **Mr. Chairman:** I'm not sure that that's right either. He was at
26 pains to explain the difference between Delta P and a Delta P
27 event.

1 **Mr. Mootoo:** A Delta P event.

2 **Mr. Chairman:** Right? I hope you were paying attention.

3 **Mr. Mootoo:** Yes I was. I was. Mr. Maharaj wasn't the only
4 one [*Inaudible*] at that time.

5 **Mr. Chairman:** And I think, you know, you need to address
6 those—that terminology—

7 **Mr. Mootoo:** Yes.

8 **Mr. Chairman:**—if you want Mr. Khan to agree with you.

9 **Mr. Mootoo:** Let me see if I can put the question slightly
10 differently.

11 **Continued Cross-Examination By Mr. Mootoo:**

12 Q. On your evidence, LMCS obtained a false reading as to the
13 ullage, correct?

14 A. The reading that they got was correct, because he say he got the
15 required ullage, 50 feet he measured or something like that.

16 Q. Thirty-five.

17 A. Thirty-five feet, yes, so that was correct.

18 Q. No, no—

19 A. According to him he said he measure with a tape.

20 Q. Okay.

21 A. Unless he used a wrong tape.

22 Q. No, I'm not suggesting for a moment that that's not the reading
23 that he got.

24 A. Yes.

25 Q. But the ullage reading was intended to measure the true level of
26 fluid in the line, correct?

27 A. Yes.

1 Q. All right. And on your evidence today, accepting that he got 35
2 feet, a 35-foot measurement, that really was not a true reading
3 as to the, as to the level of fuel oil in the line because the line
4 was populated with voids?

5 **Mr. Chairman:** Well, well it was a true reading—

6 **Mr. Khan:** It was a true reading.

7 **Mr. Chairman:**—at the ullage, isn't it?

8 **Mr. Khan:** It was a true reading.

9 **Mr. Chairman:** What you're saying is, is that the reading, be
10 it true, was only able to be read on that—in that way because
11 there was a Delta P within the pipe which was effectively
12 pushing that liquid upwards so as to give what was a reading
13 that belied the truth of what lay in the pipe.

14 **Mr. Khan:** That's correct, but the man—whoever took the
15 reading, they took the correct dimension because they're
16 looking at liquid and they put down their tape and say hey,
17 that's it. But that, that—the reading was correct.

18 **Continued Cross-Examination By Mr. Mootoo:**

19 Q. Well it was—

20 A. I can't say the reading was wrong.

21 Q. First of all, first of all, it was correct in the sense that that is
22 what the level of liquid in the line appeared, well, showed?

23 A. That's what, yeah, I agree with that.

24 Q. But, but, on your analysis, the line at that time had air in it,
25 correct?

26 A. Yes.

27 Q. Yes.

1 A. Pressured air.

2 Q. And that a person taking the reading at—or, would you not
3 agree with me that the purpose of that reading was intended to
4 show the true level of fuel oil in that line absent any air
5 pockets? That was the purpose of obtaining the reading? They
6 weren't taking the ullage, Mr. Khan, they weren't taking the
7 ullage to take into account—or when, when that reading was
8 taken it wasn't taken on the basis or the supposition that there
9 was air in the line, correct?

10 A. That's correct. The—

11 Q. And it wasn't intended to be taking on that basis?

12 A. No he could—took his level, he wasn't—

13 Q. It was not intended to be—I'm not asking you what he saw. It
14 wasn't intended to be taken on that basis, correct?

15 A. Well seeing something and intention of something is different.

16 Q. I'm not asking you that. I'm saying it wasn't intended to be
17 taken on that basis?

18 A. Well I cannot answer that question.

19 Q. So you don't know on what—you don't know what the
20 contractor's—objectively, you don't know what his intention
21 was when he was to take that ullage?

22 A. Yes. He had to measure and see that he got his correct
23 dimension from the top of the flange. That's what I
24 understand—

25 Q. So irrespective of, irrespective of what was happening
26 underneath, he didn't need to concern himself with that?

27 A. Well, he couldn't see under there.

1 Q. I'm not asking you whether he couldn't see.

2 A. Well that—I cannot, I cannot answer—

3 Q. He didn't need to concern himself—

4 A. —on, on, on, on su—on, um—

5 Q. On speculation?

6 A. I cannot answer that question on speculation.

7 **Mr. Mootoo:** I have no further question for this witness, Mr.
8 Chairman.

9 **Mr. Chairman:** Yes. Well, I do, so, um—

10 **Examination By Mr. Chairman:**

11 Q. The learning that you have—

12 A. Pardon me, Sir?

13 Q. The learning that you have on—

14 A. Yes.

15 Q. —on the subject, is one which has been described as scientific,
16 and obviously you rely on science in order—and maths in order
17 to arrive at the conclusions?

18 A. An engineer has to rely on science.

19 Q. Yes.

20 A. To some extent.

21 Q. Yes. And you were being asked as to the question of whether
22 or not you would wish to speculate, if you had been present on
23 the night, as to what the outcome might have been and whether
24 you would be able to prepare the kind of report that we've been
25 able to analyze in the process that we've been engaged in. But
26 what was known at the time, you would have been told of had
27 you been there, let us just consider that for a moment, you

1 would have known that these men had been working in a
2 pressurized habitat?

3 A. Yeah.

4 Q. You would have known that there was a pipe that they were
5 working on which was open at one end in that pressurized
6 habitat?

7 A. Yes, Sir.

8 Q. You would have known that the pipe had had removed from it a
9 substantial amount of oil and/or quantity of material from it,
10 even if you didn't know precisely how much, but a substantial
11 amount had been removed. You woulda known that, all right?

12 A. Let me—pardon me, Sir, could I interject?

13 Q. No, not for the moment. You can—I'm just setting up—

14 A. Yeah, yeah, set it up for me.

15 Q. —what you would have known because that was known to
16 Paria.

17 A. Well, look—yeah, okay.

18 Q. So I'm assuming for a moment, you see, that you'd been
19 engaged by Paria—

20 A. Paria, okay, that's why I was—

21 Q. —to help them on the night, to help them on the night, all right?
22 Let's suppose they'd given you a call and say, "Can you give us
23 a hand here, Mr. Khan? We've got a problem."

24 A. Yeah.

25 Q. Right? So they would have been able to tell you all about.
26 They'd have been able to tell you that there was a plug that was
27 in that pipe, two plugs., and that those plugs had been removed

1 and that when one of the plugs had been removed, it was seen
2 that these men just disappeared or that there is a splash and
3 within minutes of that splash the habitat was examined and
4 there was nobody there, no equipment, nothing at all, all right?

5 You would have known, certainly after Mr. Boodram
6 came out of the pipe, that one man, Mr. Boodram, had come out
7 of the pipe two and a half hours or so after the incident had
8 occurred, all right? You would have known that another man
9 went in the pipe and came out a little while later. You woulda
10 known that the habitat was still under pressure. You'd a known
11 that the flange at the other end was closed and a whole range of
12 other facts that were known. Would that have allowed you to
13 have come to any kind of conclusion at all as to what might
14 have happened, knowing all of those facts?

15 A. Yes of course.

16 Q. And what would that conclusion have been?

17 A. The men were sucked into the pipe because of a—

18 Q. As a result of?

19 A. Because of a?

20 Q. As a result of what?

21 A. As a result of a Delta P event.

22 Q. Right. Would you have been able to express a view as to
23 whether or not there remained a latent Delta P feature within
24 that pipe or may have done?

25 A. I would have been able to express a view, yes.

26 Q. Yes. And would you have been able to express a view as to the
27 stability of the pipe as it was in that condition before anything

1 was done, before the flange was removed at one end and the
2 hyperbaric chamber at the other?

3 A. Based on the information that they would have had, I would—I
4 would be able to do that.

5 Q. Yes. Not a perfect world obviously—

6 A. Yes.

7 Q. —in that scenario?

8 A. Uh-huh.

9 Q. But one in which, with your experience, you'd have been able
10 to express a view?

11 A. Yes, Sir.

12 Q. Yes, thank you. And the next thing I want to ask you is this.
13 Would you go, please, to our page 1033 which is the—

14 A. One?

15 Q. One zero three three. It's going to come up on the screen. It's
16 on the screen now. Just have a look if you would, please,
17 because it's point two that I want to draw your attention to. See
18 this is not—

19 A. What's that document Sir?

20 Q. This is the document that is described as the work instruction
21 that—

22 A. Okay.

23 Q. —shouldn't have gone—

24 A. Yes.

25 Q. —to LMCS.

26 A. Yes.

27 Q. The fact that they may have had it is neither here nor there for

1 these purposes. The scope of the work internally on the part of
2 Paria was what?

3 A. Clearing of sealine 36.

4 Q. Clearing of sealine, of sealine 36 section between berth—

5 A. Between berth 5 and berth 6.

6 Q. —five and berth 6.

7 A. Yeah.

8 Q. What do you understand to mean by the word clearing?

9 A. Getting rid of the contents of the line.

10 Q. Removal of just a bit of ullage or all of it?

11 A. Clearing mean complete removal.

12 Q. Right. To your knowledge—

13 A. They didn't say part—okay.

14 Q. To your knowledge—no, no that's all I want to ask you about
15 this, but, to your knowledge, who had the information as to the
16 number of barrels that were being removed through this
17 pumping operation? And we know that the pumping operation
18 was being done by LMCS on Paria's plant, all right? They
19 were engaged to do that job. No issue about that. But who
20 knew how much was being pumped out at the other end? Who
21 had that—

22 A. Operations department.

23 Q. Operations department of who?

24 A. Paria.

25 Q. Right. Now, given that their work instruction was to clear the
26 entirety of that pipe on its face, if that's the work instruction as
27 it seems to be, there would have been no reason for them to

1 have passed that information to anybody, would there, because
2 they thought that all we're doing is clearing the line?

3 A. There was no reason.

4 Q. No. Of course, if they had been told that actually the work
5 instruction should have been only clear as much as is necessary
6 to create a 35-foot or 36-foot ullage at either end, then the
7 number of barrels being spewed out at the other end would have
8 been a factor, wouldn't it?

9 A. Yes.

10 Q. Which you might have expected them to say, "Well hang on a
11 minute, you know, we're supposed to be clearing 36 feet or so
12 at either end of this pipe, why are we pumping hundreds and
13 hundreds of barrels out?" It may well be that it's perfectly
14 proper to say that LMCS should themselves have been asking,
15 well, how many barrels are being pumped out, so that they
16 would know what was being extracted from the line and it may
17 be that they themselves also were seeking to clear the line.
18 We've seen the Addendum to the work in the method statement
19 where a contractor was asking the question whose
20 responsibility is it to clear and they made clear that it was
21 theirs, but it's clearing the line, isn't it?

22 A. Uh-huh.

23 Q. On any view, that is at the kernel of the incident that took place,
24 had that line not been cleared and had been left full, we would
25 have ended up with the situation in your video number four,
26 wouldn't we?

27 A. Yes, Sir.

1 Q. Yes.

2 **Mr. Chairman:** All right, well I've asked a number of
3 questions that clearly touch upon—I don't know if Mr. Wilson
4 has any questions before I pass it back to counsel. Do you?

5 **Commissioner Wilson:** Yes.

6 **Mr. Chairman:** All right, well, let Mr. Wilson ask any
7 question, then, of course, anything that arises from what either I
8 or Mr. Wilson said can be explored. Yes.

9 **Examination By Commissioner Wilson:**

10 Q. Good afternoon, Mr. Khan.

11 A. Hi there.

12 Q. During the conversations this afternoon I became curious. I
13 have sat in—first of all I want to say I don't have any formal
14 training in root cause or failure analysis but I have sat in teams
15 and incident investigations and stuff so I'm going to start there,
16 which generated my curiosity. Is there a difference between
17 failure analysis and root cause analysis, the process?

18 **Mr. Chairman:** I'm sorry, I didn't quite catch the question.

19 **Examination By Commissioner Wilson:**

20 Q. Is there a failure—I mean is there a difference between failure
21 analysis and root cause analysis?

22 A. Root cause analysis is more specific.

23 Q. Okay.

24 A. Targets the root cause.

25 Q. Okay.

26 A. Not direct cause, the root cause. There's a difference between
27 direct cause and root cause.

1 Q. Thank you. So, your report, I think is titled a root cause
2 analysis as well?

3 A. Yeah, that is one of the remit that was given to me by OSHA to
4 find a root cause analysis and what caused it. That's why they
5 used the word causative action.

6 Q. Okay. So the methodology employed in your investigation, and
7 this is why I'm asking the question if there's a difference
8 between—because I didn't hear anything for failure analysis so
9 I understand the philosophy of root cause, um, so you employed
10 a known methodology for root cause?

11 A. Yes. Yeah. Nothing, nothing really failed. You understand?

12 Q. Yeah, I'm following you.

13 A. Nothing really failed in the true sense.

14 Q. Uh-huh.

15 A. Now, but an accident happened.

16 Q. Yes.

17 A. And every accident has its root cause.

18 Q. Okay.

19 A. Every accident has its root cause. There may be several
20 instances where it happened before but the root cause is
21 something. I might be driving and I make an accident.

22 Q. Uh-huh.

23 A. And the direct cause is I bounced another card.

24 Q. Uh-huh.

25 A. But what was the root cause?

26 Q. Maybe you brakes failed?

27 A. I broke the traffic light.

1 Q. Break the traffic light, a number of components?

2 A. Yeah, you see, so, you know, yeah. Every accident has to have
3 a root cause.

4 Q. Okay. So your report addressed direct cause or all the
5 components to be considered in the incident?

6 A. Yeah, the components that contribute to the root cause.

7 Q. Contributed to?

8 A. Because I was asked to determine the root cause.

9 Q. Okay.

10 A. I wasn't asked to determine the circumstances surrounding the
11 accident.

12 Q. Okay.

13 A. The OSH department was specific in their requirement.

14 Q. Uh-huh.

15 A. That is why I was specific in my delivery.

16 Q. Okay. So in your delivery or the report, sorry, I see you
17 mentioned other components like you, um, made some
18 assertions, as Mr. Mootoo indicated, on the permit to work. In
19 your deliberations, did you ever consider interrogating the ICT
20 philosophies or practices of Paria?

21 A. I could make a statement. Am I allowed to make a statement
22 on that?

23 **Mr. Chairman:** I'd rather you didn't. I'd rather you just
24 answer the question from Mr. Wilson.

25 **Examination By Commissioner Wilson:**

26 A. All right, phrase that question for me again please?

27 Q. The components you're taking into consideration for the

1 delivery of your report, did you ever consider interrogating the
2 ICT of Paria?

3 A. No.

4 Q. Okay. Thank you. I'll move on from there. I heard coming to
5 the conversa—

6 A. Er—

7 Q. Sorry, yes?

8 A. But I would like to say there was a—you see, this is one of the
9 reasons I did not go that way, interrogate them. Right? I don't
10 know if you want to hear the reason.

11 **Mr. Chairman:** No, I don't think it's necessary.

12 **Mr. Khan:** Okay.

13 **Mr. Chairman:** You didn't and that's fine.

14 **Mr. Khan:** That's fine.

15 **Mr. Chairman:** That's not what you were asked to do.

16 **Mr. Khan:** Yeah.

17 **Mr. Chairman:** You told us you were asked to make a root
18 cause analysis.

19 **Mr. Khan:** Uh-huh.

20 **Mr. Chairman:** That's what you've done.

21 **Mr. Khan:** Yeah.

22 **Mr. Chairman:** I think that's all we need. Thank you.

23 **Mr. Khan:** All right, good.

24 **Examination By Commissioner Wilson:**

25 Q. Yes, okay, so, I'm moving on from that. But, um, I heard in the
26 rum conversations took you to that night—

27 A. Pardon me?

1 Q. I heard in the room conversations—

2 A. In the room.

3 Q. This room.

4 A. Or yeah, this room.

5 Q. The Commission, yeah, that they took you to that night and
6 asked you—

7 A. They what?

8 Q. The Commission—

9 A. Yeah.

10 Q. —Enquiry that came out today, you're with me so far?

11 A. Yes, okay.

12 Q. Right—they asked you as an engineer if on that night you
13 would have been able to contribute. I'm not with the question
14 as yet. And why I brought up the ICT, it's a process that is a
15 component of what happened on Friday that would have gotten
16 to a probable or an attempted, sorry, er, um, rescue attempt. I
17 would like to know, and from my experiences with root cause
18 analysis, if at any time you would have considered the human
19 factor or behaviour of a dive supervisor and/or the divers as an
20 engineer?

21 **Mr. Chairman:** Can he really answer that?

22 **Commissioner Wilson:** Yes.

23 **Mr. Khan:** I don't have enough information to understand—

24 **Examination By Commissioner Wilson:**

25 Q. Well, where I'm going with it is, a diver or dive supervisor
26 without the benefit of an engineering degree or the competence
27 of a practising engineer, he would be guided by his trade, what

1 he understands. So, in the absence of someone like you or with
2 your competence, a diver hearing that there's a latent Delta P or
3 a possibility of a latent Delta P—

4 A. Event.

5 Q. Or, no, just possibility of it existing in the pipeline, and this is
6 why I'm asking you. I don't have your competence to make the
7 distinction and I appreciate it today so I've learned something.

8 A. Uh-huh.

9 Q. So again, this is why I'm diving you to a dive supervisor,
10 doesn't have the benefit a of an engineering degree—

11 **Mr. Chairman:** I'm sorry, I'm really struggling to understand
12 what you're asking him.

13 **Commissioner Wilson:** Well—

14 **Mr. Chairman:** I'm not sure he's competent to answer that,
15 though, is he?

16 **Commissioner Wilson:** Well, you see, if you're taking into
17 account the root cause analysis and you're looking at all the
18 components that existed that night, right, I mean by virtue of
19 you looked at the permit to work but didn't look at the incident
20 command system, there's a process that takes you up at quality
21 timeline into a probable attempt.

22 **Mr. Chairman:** Yeah, all right. I mean, he's an expert as an
23 engineer.

24 **Mr. Khan:** Yes I'm listening. I'm listening.

25 **Mr. Chairman:** Go on, go ahead. I'm not sure he can answer
26 but, you know—

27 **Examination By Commissioner Wilson:**

1 Q. All right, but; okay, well I'll change it around. In a root cause
2 analysis and/or investigation, um, investigation, incident
3 investigation, is it that a—is it not possible to take into account
4 the human element around decision-making processes?

5 A. Yes.

6 Q. Okay. Did your—and I'd end it here. Did you consider that in
7 terms of the remit given to you by OSHA?

8 A. I did not consider it because in my opinion there was a lot of
9 activities but no actual achievement.

10 Q. Understood. Very much. Thank you.

11 A. Okay.

12 **Mr. Chairman:** A lot of activity but no actual achievement.
13 All right, thank you. Yes, Mr. Mootoo, did you want to ask
14 anything arising from either questions by myself or Mr.
15 Wilson?

16 **Mr. Mootoo:** Yes, Chairman. I wanted to ask a few questions
17 arising out of the questions—

18 **Mr. Chairman:** Of course.

19 **Mr. Mootoo:**—you posed and the answers elicited.

20 **Continued Cross-Examination By Mr. Mootoo:**

21 Q. Mr. Khan, very briefly, the Chairman took you to item 2.0 of
22 the document on the screen.

23 A. Uh-huh. Two point zero?

24 Q. Two point zero.

25 A. Yeah.

26 Q. And I believe you told him you understood that to be clearing
27 the line completely. Yes?

1 A. Yes.

2 Q. You've already told us you are familiar with the evidence
3 which Mr. Kazim Ali has given and we have received evidence
4 in this Enquiry from him that he only cleared the, well, not that
5 he only cleared the line, that he took a ullage reading of 35 feet,
6 yes?

7 A. Yes.

8 Q. You would agree with me that therefore, um, given his
9 evidence, he could not have been of the view that he had
10 cleared the line? I need you to answer.

11 A. No, that's correct.

12 Q. Yes. And therefore, that he, either LMCS did not interpret that
13 as an instruction to clear the line or they didn't comply with it.

14 A. You say that—yeah, okay.

15 Q. Yes?

16 A. Well, to answer your question, yes.

17 Q. Yes. Okay. The Chairman asked you or he put to you certain
18 information you would have had on the night and asked you
19 whether you would have been able to come to a conclusion, and
20 I'm using my words here, whether there was a latent Delta P
21 event present, right?

22 A. No, a latent, a latent Delta P.

23 Q. Delta P?

24 A. Yeah, okay.

25 Q. Yes, sorry, remove the word "event"?

26 A. Event is something else.

27 Q. Yes, yes.

1 A. Yeah, okay, good.

2 Q. I stand corrected.

3 A. Uh-huh.

4 Q. What I struggle with, is, I think it's at—would you agree with
5 me that at that point in time on the night, you therefore would
6 not have known of the state of the plug, the true state of the
7 plug?

8 A. Yeah, I agree with you.

9 Q. Yes. And if you didn't know the true state of the plug, you
10 could not really eliminate the possibility of a latent Delta P in
11 the line?

12 A. Yeah, I could have eliminated that. I don't—

13 **Mr. Chairman:** You need to be by that microphone otherwise
14 you're just talking to Mr. Mootoo and none of us can hear you.

15 **Continued Cross-Examination By Mr. Mootoo:**

16 Q. I'll tell you why I put that to you. If the plug had been sucked
17 into the pipeline but it was only minimally deflated at that time,
18 just marginally, is it not possible that through the violent Delta
19 P the plug itself could have been lodged in that line in a fairly
20 disfigured condition but still reasonably inflated to have created
21 an area of differential pressure?

22 A. Not possible.

23 Q. Not possible.

24 A. [*Nodding*]

25 Q. When you gave your evidence earlier today and you inspected
26 the plug, and I think you also identified this in your report, you
27 acknowledge that—I think it's in photograph three to your

1 report, you acknowledge—

2 A. Photograph three?

3 Q. Yes, I think so. We have a notation it's photograph three. I'm
4 struggling to—yes.

5 **Mr. Chairman:** Page 1408.

6 **Mr. Mootoo:** Right, it's on page 20. Yeah.

7 **Continued Cross-Examination By Mr. Mootoo:**

8 Q. You note a broken inflation nipple.

9 A. Yes.

10 Q. Yes?

11 A. Uh-huh.

12 Q. Is it not, is it not possible that if that nipple is broken or
13 defective or in some way not functioning properly, that that—
14 that the inflatable plug on the night in question could have still
15 been in the pipe but inflated to a substantial degree?

16 A. At what point?

17 Q. In the night, on the 25th?

18 A. What time, after the—

19 Q. After the event.

20 A. After the event?

21 Q. Yes. So in other words the plug is removed—

22 A. The mechanical plug is removed?

23 Q. The mechanical plug is removed.

24 A. Uh-huh.

25 Q. We know that the inflatable plug has been sucked into the line.

26 A. Uh-huh.

27 Q. We—well, is it your evidence that once the mechanical plug

1 was removed, if the inflatable plug was entirely intact, it would
2 have been, it would have been sucked into the line?

3 A. No.

4 Q. Okay, good. I didn't think that was your evidence.

5 A. No.

6 Q. So, what I'm suggesting to you therefore is, is it not possible
7 that the inflatable plug on the night—remember we're on the
8 night in question. Nobody has seen the plug. Nobody's seen it.

9 A. After the incident?

10 Q. After the—

11 A. After the accident?

12 Q. The incident occurs—well, let me take you through it step by
13 step. What we do know is that the plug was sucked into the
14 line. Would you accept from me we don't know the condition
15 of the inflatable plug on the night of the 25th of February. We
16 just don't know the condition of it.

17 **Mr. Chairman:** When you say condition can you be a little
18 more precise?

19 **Mr. Mootoo:** Well, we don't know the physical condition of
20 the plug.

21 **Mr. Chairman:** What, inflated, partially inflated.

22 **Continued Cross-Examination By Mr. Mootoo:**

23 Q. As to the extent it has been deflated, we don't know it.

24 A. We don't know.

25 Q. Good. And therefore you accept it could have been minimally
26 deflated?

27 A. I wouldn't accept minimal.

1 Q. Okay.

2 A. It was deflated to an extent that it can negotiate around an
3 elbow.

4 Q. But didn't you tell us earlier on in your evidence—

5 A. Uh-huh.

6 Q. —that you actually did not—I want to be fair to you.

7 A. Yeah.

8 Q. That you wouldn't have known the rate of deflation?

9 A. Of course, I wouldn't have known the rate of deflation.

10 Q. And you didn't—my note is you didn't compute that.

11 A. Uh-huh.

12 Q. If you—

13 A. So you're right.

14 Q. If you didn't compute it and you wouldn't have known it, I'm
15 suggesting to you that you wouldn't have been in a position to
16 theorize properly about the state of deflation that the plug was
17 in on the night of the 25th of February and that to do so would
18 have been a matter of pure speculation.

19 A. I would have known for sure that the plug is deflated to an
20 extent that it can travel through the line and negotiate an elbow.

21 **Examination By Mr. Chairman:**

22 Q. Can I ask you when—you were given this plug, weren't you?

23 A. Yes.

24 Q. Have you ever traced where the nipple is?

25 A. I asked for the nipple.

26 Q. Yes.

27 A. But they say they couldn't find it.

1 Q. They couldn't find it, right.

2 A. Because I retrieved—I took that plug from the, from the, um—
3 from berth 6 platform itself.

4 Q. Right.

5 A. I looked at the plug then.

6 Q. Right. And was there a nipple then?

7 A. No.

8 Q. No. Where the nipple should go is a hole?

9 A. Is a threaded hole.

10 Q. Is a threaded hole where you screw the nipple in?

11 A. Uh-huh.

12 Q. Yes. If you stand on that plug now, the air that's in there will
13 actually come out of the hole, won't it?

14 A. That's correct.

15 Q. So it's completely open?

16 A. It's open.

17 Q. It's not like there's a valve still in place which may or may not
18 have been letting air in or out?

19 A. Not a one-way valve there.

20 Q. Like think—

21 A. There's no one—one-way valve.

22 Q. Thinking of a car tyre, if you take the valve right, or a bicycle
23 tyre, if you take the valve right out you're left with a hole and it
24 will deflate completely, right? If you leave the valve in and
25 there's a faulty valve or something, it might let some of the air
26 out and then close again. Is there any possibility that the nipple
27 was in place still in that barrier and in some way had closed

1 itself so that it retained some of the air inside?

2 A. Only a one-way valve will do that.

3 Q. Right. And that's not what this was?

4 A. It's not a possibility.

5 Q. Right. So is there any—what Mr. Mootoo is asking you, is
6 there any prospect at all of that being in such a state that it
7 could create a barrier between different pressures on either side
8 of it, any possibility?

9 A. I don't—as an engineer I would say no.

10 Q. No. And if you'd been asked that question?

11 A. I mean to say, the line remained static—

12 Q. Right.

13 A. —for two and a half hours, for whatever, when Mr. Boodram
14 exited the line.

15 Q. Right. But, if that—if you'd been asked that question on the
16 night by anybody from Paria or LMCS you'd have been able to
17 tell them what?

18 A. I would a say hey, the plug was sufficiently deflated—

19 Q. Right.

20 A. —to propel itself through the line and negotiate an elbow.

21 Q. Would it create a problem, as far as you were concerned, in
22 terms of anybody entering that pipe in order to effect a rescue?

23 A. Not if I weigh all the conditions there that existed at the
24 moment, no.

25 Q. Right.

26 A. I will say it wouldn't prevent anybody—

27 Q. I mean, obviously you can't get past it.

1 A. You can't get past it.

2 Q. No, but, given that it's in the line—

3 A. Yes.

4 Q. —clearly you couldn't get past it but would it create an issue, as
5 far as you're concerned, for anybody seeking to effect a rescue
6 in the line at that time?

7 A. I wouldn't say it created an issue.

8 **Mr. Chairman:** You can carry on, Mr. Mootoo.

9 **Continued Cross-Examination By Mr. Mootoo:**

10 Q. Just arising out of that, given the evidence that you've just
11 given, have you looked at the manufacturer's specifications in
12 relation to this plug for the purpose of preparing your report?

13 A. No but I got all the information that is written on that plug.
14 That was, um, sufficient for me to make a judgment on the
15 plug.

16 Q. Okay. So, so for your purposes what the manufacturer's
17 specifications are as to how the plug is to operate, how it's to be
18 inflated, what its properties are, all of those things were of no
19 importance to you for the purpose of making your assessment?

20 A. All those things are important but I said enough information
21 was written on that plug to give me enough guidance with
22 respect to the limitations of the plug, the size, the pressure,
23 everything, the back pressure, everything is on that plug.

24 Q. Right. One last group—well, one last group of questions
25 arising out of that. You told the Chairman when you were
26 conducting a physical inspection of the plug—

27 A. Today?

1 Q. Yes.

2 A. Yes.

3 Q. —that one of the rings, well I'm using the word rings, but one
4 of the rings on the top of the plug was missing. You recall that?

5 A. Yes.

6 Q. Right. Did you—and those rings are to be anchored to
7 something, isn't that right, for the purpose of stabilizing the
8 plug?

9 A. That's correct.

10 Q. Yes. And I think your evidence was, well it was—it's—well,
11 it's supposed to be anchored at three points, isn't that right?

12 A. Well there are—there, there, um, there are facilities there for
13 three points—

14 Q. Yes.

15 A. —of, um, of tethering yes.

16 Q. Yes. And you wouldn't use—

17 A. And those three points there—

18 Q. Right.

19 A. —from an engineering point of view—

20 Q. Uh-huh.

21 A. —is to ensure if you're letting down the plug down a line—

22 Q. Right.

23 A. —it will stay vertical.

24 Q. Right.

25 A. So you wouldn't have any problems when you're inserting the
26 plug into the line in a vertical position.

27 Q. Well, I hear what you say, but would it surprise you to know

1 that the manufacturer says that you are to use multiple points of
2 contact on the plug in order to spread the back pressure or to
3 test pressure forces? Would that surprise you?

4 A. No.

5 Q. So in other words, the manufacturer considers that those
6 anchors are important to deal with—

7 A. Back pressure.

8 Q. —back pressure?

9 A. Yep. Well, at the back of that plug had the three plugs—

10 Q. Right.

11 A. —had the three, um, attachments points. So as far as any
12 restraint on the back of the plug was okay.

13 Q. No, no I'm not talking about—there was no—we know there
14 was no restraint on the back of the plug, don't we?

15 A. That's correct.

16 Q. Right; and we know there was restraint on the top of the plug,
17 don't we?

18 A. Restraint on the top the plug?

19 Q. Yes, for removal purposes, well when you're removing it.

20 A. Yeah, when you're removing it—

21 Q. Yeah.

22 A. —there were, there were—there—

23 Q. Don't you attach it from the—you're supposed to attach it from
24 the three anchor points?

25 A. Well that is the way they recommend it.

26 Q. And that's the way you would recommend it, wouldn't it?

27 A. Yeah, of course, it is to make—

1 Q. Right.

2 A. —it an easier proposition you pull out because you wouldn't
3 have an imbalance in the vertical axis.

4 Q. Well, I'm dealing with the question of pressure at the moment.
5 Do you know what is the cable strength required to be applied
6 for the purpose of securing the plug for removal? You have
7 any information about that?

8 A. No, no.

9 Q. Did you consider it?

10 A. No, I didn't consider it.

11 Q. Do you think that with the appropriate cable strength or that in
12 principle you could have a cable secured at three points to that
13 plug to prevent the plug being pulled in in a Delta P event?

14 A. Well that, that, in that event—

15 Q. No, no, just—

16 A. Yeah.

17 Q. —just answer my question.

18 A. Uh-huh.

19 Q. Yes. Do you accept that?

20 A. Phrase that question again?

21 Q. That you could have utilized their cable at the three anchor
22 points to prevent the plug being pulled into the pipeline in the
23 event of a Delta P event?

24 A. Yes, but where would you attach the cable?

25 Q. Well that's a separate question.

26 A. Yeah.

27 Q. But you accept that? And you accept, and—well you just

1 accepted. I'm not going to go over it. You just accepted that,

2 um—

3 A. But there was no attachment point.

4 Q. For the purpose of removal?

5 A. Well, yeah.

6 Q. Well if there was no attachment point the res—

7 A. No attachment point to anchor.

8 Q. The responsibility—

9 A. Because on top of that plug was the mechanical plug.

10 Q. The re—

11 A. So you have to remove the mechanical plug so you break the
12 attachment.

13 Q. Okay, Mr. Khan, you remove the mechanical plug. You set it
14 aside. You now have the inflatable plug—

15 A. Uh-huh.

16 Q. —fully inflated. It is operational—

17 A. Yes.

18 Q. —at that time. There is no Delta P event at that time because
19 the inflatable plug is—

20 A. Holding.

21 Q. Right. But, in order to remove the inflatable plug, you need to
22 attach the anchors to remove it. We just went through that.

23 A. Yes, correct.

24 Q. So I'm taking you to a situation where the plug is being
25 removed. We've acc—you've accepted that the plug could be
26 appropriately secured so as not to go down in the pipeline but
27 you say there was no point to attach it. When you give that

1 evidence, you mean there was no point to attach it in the
2 chamber?

3 A. No. Where—you—there was no point to a—there was an
4 attachment point on the mechanical seal.

5 Q. No.

6 A. At least the manufacturer—

7 Q. Forget the mechanical seal.

8 A. You take out the mechanical seal—

9 Q. The top of the plug, the top of the plug is sitting exposed.

10 A. Yes.

11 Q. We have the three rings—

12 A. Yes.

13 Q. —that are there.

14 A. No, two.

15 Q. Okay two, but in—

16 A. Yeah, two.

17 Q. Right. In a, in a, in a proper plug—we've gone through this—
18 there would be three?

19 A. There would be three.

20 Q. Good. So if we're using a proper plug, the proper plug is to be
21 secured at those three points for removal?

22 A. Yes.

23 Q. Good. LMCS is to remove it, not Paria?

24 A. Uh-huh.

25 Q. You said to me that there's no proper point to, to anchor or
26 secure the cables.

27 A. On to the mechanical plug but—

1 Q. No, I—

2 A. —but prior to that—

3 Q. No, no.

4 A. —you could have attached the—you could have attached the
5 inflatable plug anywhere you want inside the chamber.

6 Q. Precisely.

7 A. Yes.

8 Q. So if LMCS—

9 A. Uh-huh.

10 Q. —you having accepted that the plug could be anchored at three
11 points and should be anchored at three points—

12 A. Yes.

13 Q. —and that it is being—it is capable of being securely anchored
14 using the appropriate cable—

15 A. Uh-huh.

16 Q. —to resist a Delta P event, it was therefore open to LMCS to
17 utilize the appropriate cables and anchor it in the chamber
18 without it being pulled into the pipe? Would you not accept
19 that?

20 A. Yes.

21 Q. Thank you. No further questions.

22 A. I can't doubt you on that.

23 **Mr. Chairman:** Right. Please?

24 **Further Cross-Examination By Mrs. Persaud Maraj:**

25 Q. Mr. Khan, we've heard evidence from you as to the violence of
26 the Delta P event. Would a restraint prevented—would a
27 restraint have prevented the plug from being pulled with that

1 level of violence?

2 A. It depends upon the strength of the restraint.

3 **Mr. Chairman:** Well, I mean it's obvious, isn't it? If it's a
4 piece of string it's not going to hold it. On the other hand, if
5 it's a steel cable it might, or it might pull the cleats out of
6 whatever it was attached to.

7 **Mr. Khan:** Yeah.

8 **Mr. Chairman:** Who knows? Fact is, it wasn't anchored, it
9 went down.

10 **Mr. Khan:** Yeah.

11 **Mr. Chairman:** All right, thank you very much. Can I express
12 our gratitude for the way in which you've put together your
13 evidence so that we can understand the whole scientific
14 concept? As I expressed earlier, it certainly helped me and I
15 know it would have helped us all understand the dynamics and
16 the mechanics of what happened, so, I want to express my
17 gratitude for you doing that. I think this particular plug is in
18 your possession, is it not?

19 **Mr. Khan:** Yes.

20 **Mr. Chairman:** You can take it with you if you like, and, er,
21 and, um, if you could pick it up.

22 **Mr. Khan:** I am the custodian of the plug right now.

23 **Mr. Chairman:** Right. All right, well I—

24 **Mr. Khan:** So the plug has to be taken downstairs and put in
25 my trolley.

26 **Mr. Chairman:** Well, I was just suggesting that [*Inaudible*].
27 I'm not suggesting—

1 **Mr. Khan:** No, no, no I understand.

2 **Mr. Chairman:**—take it under your arm now. So leave it there
3 now.

4 **Mr. Khan:** Yeah.

5 **Mr. Chairman:** We'll make arrangements for it to be returned
6 to you. Thank you very much indeed. So you're free to go
7 now and with our thanks. Please, yes, go now.

8 What happens next, gentlemen and ladies, is the reading of two
9 statements by the witnesses themselves and a statement which
10 is to be read by Mr. Ramoutar from—

11 **Mr. Khan:** Can I just leave, now?

12 **Mr. Chairman:** Please, please just leave. Yes, that's fine if
13 you go out that way. Take your things with you. Make sure
14 you take your bits with you. [*Crosstalk*] Have you got all your
15 things? Shall we just take two minutes while this is all done?
16 You needn't get up. I'm not going to.

17 [*Mr. Khan leaves Enquiry room*]

18 **5.56 p.m.:** *Enquiry suspended.*

19 **5.57 p.m.:** *Enquiry resumed.*

20 **Mr. Chairman:** Yes, can we resume then, please? So there
21 are two statements which have been edited. I don't know
22 where Mr. Ramadhar has gone now. Shall we have the
23 witnesses then, please? Let's have Afeisha Henry first, please?

24 [*Ms. Afeisha Henry enters Enquiry area and is sworn*]

25 **Ms. Henry:** I, Afeisha Henry, solemnly swear that the
26 evidence I shall give to this Commission in this case shall be
27 the truth, the whole truth and nothing but the truth.

1 **Mr. Chairman:** Now, please take a seat. Make yourself
2 comfortable. Bring that microphone a little towards you.
3 That's it. And first of all let me say thank you for coming.

4 **Ms. Henry:** Sure.

5 **Mr. Chairman:** I know this is not easy for anybody. Take
6 your time. If you need to take a break you just pause. All
7 right? No one will mind. All right? You take a pause. If you
8 need to stop for any reason, you stop, take stock and then carry
9 on. All right?

10 **Ms. Henry:** Sure.

11 **Mr. Chairman:** I've received yesterday your handwritten
12 statement, it's quite long, and I have taken the liberty to remove
13 those parts which are not either admissible or are repetitive. All
14 right?

15 **Ms. Henry:** Okay.

16 **Mr. Chairman:** But I think you've got a copy that has that
17 redaction from it already?

18 **Ms. Henry:** Sure.

19 **Mr. Chairman:** All right, good. Well you take your time, as I
20 say, and you tell us what you have to say. All right?

21 **Ms. Henry:** Okay.

22 My name is Afeisha Henry and I'm the sister of Yusuf
23 Henry. On the 25th of February, 2022 I remember receiving a
24 phone call around 4.45 p.m. from my brother's friend that she
25 called Yusuf's phone and someone by the name of Dexter
26 answered. He immediately said that Yusuf and four other
27 divers were working underwater since about 2.45 p.m. and have

1 not yet surfaced and they seem to be stuck under there.

2 I then took it upon myself and mustered every bit of
3 courage to personally call Yusuf's phone to now get first-hand
4 information from Dexter. I spoke with Mr. Dexter which he did
5 confirm that the information I received were, in fact, truth. I
6 kept asking him how. He really didn't have any additional
7 information or explanation for me. He just kept saying
8 something happened and they believe the guys are stuck in a
9 pipeline.

10 I wasted no time at all gathering my parents to get to that
11 location. Mr. Dexter then gave me a contact number to call for
12 directions to Paria's car park. I was given Mr. Monroe's
13 number. He was said to be the captain of the boat. Mr. Monroe
14 didn't—I also asked Mr.—well, I did get information from Mr.
15 Monroe, but instead offered words of encouragement and he
16 also gave directions to Paria's compound. I remember asking
17 him if he think those guys air supply would last this long. He
18 replied, "I can't be certain. It all depends on the diver's
19 ability." Also he kept repeating, look, deep down in my heart I
20 don't think those boys are stuck in that pipe, you know. God
21 isn't a wicked God. I have a feeling that they all were washed
22 away in the open sea. Then I mentioned if so, that can be good
23 news because in 2018 Yusuf along with couple others were
24 heading to Grenada on a vessel when it turned over and Yusuf
25 was the diver that saved himself and couple others. So if that's
26 the case, chances they can be okay. He then said, "Sister just
27 keep praying."

1 At this point I couldn't remain focused at all so I was on
2 and off calls with Mr. Monroe following directions to get to
3 Paria's compound. We were all coming from the far east,
4 Sangre Grande, which took us up to about three hours after
5 being lost and redirected by police officers that were
6 conducting a road exercise.

7 At around 8.10 p.m. we arrived at Paria's compound. I
8 didn't notice anyone present there but very little movement of
9 vehicles going in and out the car park. I approached the guard
10 booths and spoke with a female security officer. I shared with
11 her the information I learned and then I asked her if she knew
12 anything additional. She said yes, I know about the incident
13 that happened earlier but nothing beyond what you mentioned.

14 I then asked permission to enter beyond the main
15 entrance to gather information but my request was denied by
16 her. She stated that beyond here is unauthorized to anyone that
17 doesn't obtain an identification from their respective
18 companies. Also, "You must be escorted in from this point so
19 no, I can't permit you to enter." My family and I were left in
20 the car park unattended, but instead informed by another
21 security officer that we can stay but please do not leave our
22 vehicles unattended because they won't be responsible if
23 anything happens.

24 We then agreed to remain in the car park and await any
25 information at all. It was now around 11.30 p.m. where I
26 personally called both Dexter and Mr. Monroe for any updates,
27 but nothing changed. Around midnight, Mr. Monroe called me

1 now saying that Paria sent in something called a robot which
2 has a camera attached to it to give them video footage from
3 inside the pipeline. Shortly after another call they both told me
4 that that was a fail and it didn't work.

5 We were still there waiting. Multiple hours has gone and
6 still no one with clarification as to what's going on. Ever so
7 often my mother would cry so hysterically loud I'm certain
8 persons a mile away could have heard her. My mom, my dad
9 and my stepdad, also Yusuf's friend and I all shared a wooden
10 bench and the one vehicle we came with in the car park so we
11 don't miss the opportunity to speak with someone with
12 information or at least victorious news.

13 It's now around 2.00 a.m. and the rain just kept getting
14 heavier. So we are now sitting in the car on sleeping shifts.
15 Still no movement of persons or vehicles at all to assist us. At
16 around 3.09 a.m. or so I saw a vehicle entering the car park. I
17 immediately approached it. Two men introduced themselves as
18 LMCS workers. Minutes after, another vehicle entered the
19 compound and the guy introduced himself as Nicholas Kurban.
20 Nicholas then informed us that he was on the site and the guys
21 are really in fact in the pipeline and still have not been rescued.

22 He also said that he was the one that called for back-up
23 help from his brother, Michael Kurban and up to now they
24 won't let anyone rescue the men. They are purposely taking
25 their time like they want the men to die in there. I asked who.
26 He said Paria officials won't issue a permit to allow the divers
27 or LMCS to go in to do a rescue for the men. He emotionally

1 expressed that his brother is one of the best divers that night on
2 the site and have been begging to gear up and go in and been
3 constantly turned down by a very unpleasant woman on site. I
4 then asked who is her? He said a Paria official. Then asked but
5 why? He kept repeating, they insist they stand down and await
6 further instructions and a permit before any dive rescue starts.

7 This took us up to 4.30 a.m. where the traffic of vehicles
8 started to increase. Three ladies started walking towards me.
9 Then I introduced myself and they told me they are family of
10 Fyzie. I remember a pleasant lady speaking, before I learned
11 she was the wife of Faizal Kurban. She spoke so highly
12 confident of Faizal. She kept saying, "My husband is very,
13 very good diver", and she believed he would do anything he
14 can to save his colleagues and himself. I remained very close to
15 them in order to grasp any information they kept receiving.

16 As the sky started to clear up, more and more persons
17 started gathering in the car park. I even noticed media persons
18 started rushing in and that's where I really believed it all. The
19 adrenalin massively increased. By now media persons are
20 rushing towards us for interviews and pictures and the car park
21 became filled, loud, busy and crazy. Information about a
22 rescued diver now being circulated by them, but the name
23 wasn't certain.

24 Around 9.00 a.m. my family and I was introduced to Mr.
25 Kazim Ali Sr. and his wife, Catherine Ali. This is where the
26 rumour of a rescued diver was confirmed to us but
27 unfortunately the other four as still stuck in the pipe. Learning

1 that Yusuf were one of the men stuck sent my parents into a
2 further state of emotion. Mr. Kazim informed us that he been
3 and still trying to convince Paria officials to allow him a chance
4 to have his diving team perform a rescue but are being told no
5 each time. He expressed it's been hours he begging Paria
6 officials to accept his request because his only son too is also
7 one of the men in the pipe.

8 Mr. Kazim reassured us he is not giving up. He will
9 continue to exhaust and explore every attempt to convince Paria
10 his team can perform this rescue. He asked us all to bear with
11 him but made it absolutely clear he has enough men, equipment
12 and perfect and a perfect plan. Paria is the keep back, before
13 his visit came to an end.

14 I can vividly remember the OWTU members coming out
15 in their numbers and wasted no time sharing food, water,
16 encouragement and prayers with us all. They even began
17 protesting at the main gate still begging the security guards to
18 allow the other LMCS workers or additional divers to enter the
19 compound and proceed to the site.

20 It's about lunchtime and still no one from Paria came to
21 update us all. Information kept circulating about knocking on
22 the pipe from the inside which really lifted us all that there was
23 proof of life. More friendly civilians kept bringing additional
24 chairs, tables and even portable toilets for us at the car park.
25 Small businesses even rendered support of food and drinks.

26 Shortly after lunch we were greeted by a security guard
27 wearing a different uniform saying they were instructed by

1 Paria officials to escort the family of the divers to join in at a
2 secured location that they would be conducting a meeting.
3 Based on how they delivered that message, everyone were
4 annoyed and very reluctant. They spent about 10 minutes
5 trying to convince us to attend the meeting. My cousin, Leah
6 Spann, then announced that it's wise we attend the meeting to
7 at least hear what they have to share and if it somewhat doesn't
8 bring us any comfort we should all ask to be dismissed.

9 On arriving there I saw Minister Stuart Young, Michael
10 Wei, Mushtaq Mohammed, Narissa and many others. There
11 were a ton of armed plainclothes police officers too. They
12 prepared a seating room for the families. Mr. Young took
13 control of that meeting. After introducing himself, he allowed
14 the others to speak. They all were very brief with the same
15 thing to share, that at this time no one was permitted to enter
16 because they must be very certain of the conditions in the pipe
17 before sending another person to be possibly trapped too.

18 I do have recordings of that meeting because we were
19 told then that we are not allowed to go live on Facebook or
20 anything like that so we were just allowed to do audio
21 recording. After learning about this air pocket, et cetera, I
22 personally raised my hand asking Mr. Wei, who was introduced
23 as the engineer and shared some knowledge about it. He
24 looked so confused and couldn't answer the question. I
25 remember shouting at him. "You ain't know anything about
26 this pipeline, et cetera?" Everyone was so outraged that, they
27 called us here. It seems to be nothing but Paria buying

1 themselves some time. It felt like a total distraction.

2 During the meeting a clipboard was passed around to
3 provide them with a contact for each family member to be
4 provided with additional information. Mr. Mushtaq just kept
5 smiling. He then gave his speech that a rescue plan is being
6 prepared at this time and there are men working very hard to
7 leave no stone unturned. There he captured my attention that
8 there is a rescue around the corner. My mom showed him and
9 everyone else a picture on her cell phone. "This is a picture of
10 my two sons that I recently buried. The first one died on 13th
11 December, 2021 and the second on the 29th of December,
12 2021. Please I beg of you I can't afford to bury a third." Mr.
13 Mushtaq reassured her that the guys would be rescued because
14 they have, they have and still requesting some of the best
15 technology to assist a rescue.

16 Mr. Young then expressed that he just got off a very
17 lengthy flight and not even Paria officials knew he was about to
18 attend this meeting, so he advised us that the guys at Paria are
19 working, to please be patient. Narissa announced that Paria is
20 offering counselling for those interested and she promised to
21 create a group chat on WhatsApp for updates with respect to the
22 rescue.

23 In conclusion, Mr. Mushtaq did urge us to be patient.
24 They are working around the clock but it must be done in
25 stages. Tons of questions came from family members and Mr.
26 Mushtaq just kept smiling. Mr. Wei weren't very vocal in my
27 opinion. Guilt was written all over his face, but of course

1 everyone left there even more annoyed than we arrived due to
2 the fact that Paria officials called us here to give us what, a little
3 bit of AC and a room temperature bottled water? Because little
4 to no information was shared. I felt like they could have sent
5 that message with a security guard. So we left their conference
6 room and my mom held on to that promise from Mr. Mushtaq
7 that they would get the men out.

8 On returning to the car park, I shared my contact with
9 Celisha Kurban and few others because my family and I wanted
10 to return home to shower, et cetera. I kept asking if anything
11 changed and still nothing. About 8.00 p.m., Paria official
12 Narissa added me to a WhatsApp group stating that they have
13 started the rescue mission and it would be conducted and
14 carried out in three stages. Stage one has just commenced and
15 they will update us here as the information reach her. I waited
16 all night but not another message was sent from Narissa.

17 Around 8.10 a.m. Sunday morning, that's the 27th of
18 February, that stage one has failed and they were unable to
19 move on to stage two. A machinery part broke causing them to
20 abort the mission. She then asked us for our email address to
21 send additional information there. I became absolutely annoyed
22 and responded with a very ugly message that email and
23 WhatsApp ain't very different. Why can't you just send the
24 stuff here, which Narissa never responded to.

25 Narissa discontinued all communication in the WhatsApp
26 group. At this point everyone became loud, angry and very
27 emotional. More media and plenty movements in the car park.

1 I remember sitting next to a group of persons, one being Mr.
2 Phillip Alexander and an ageable man being called Mr. Ali.
3 They were on numerous calls even with Mr. Kazim Ali that this
4 guy is prepared to assist with a rescue if possible. If possible
5 Mr. Kazim can convince a Paria official for his judgments or
6 inputs. Mr. Kazim kept saying, “Paria is tying my hands and
7 won’t allow an opportunity.”

8 Shortly after media persons there are informing us that
9 Paria has now shift rescue to recovery and just extend
10 condolences to the family of the divers. Everyone was in total
11 shock because they lied to us all. It was the greatest amount of
12 deceit we endured. It’s about 5.30 p.m. when Mr. Phillip
13 Alexander, Mr. Abdulah prepared an area in the car park
14 inviting media persons with adequate camera footage to join in,
15 he’s about to go live.

16 Michael Kurban joined in as he informed the public and
17 everyone in the car park who made the shift from rescue to
18 recovery. He expressed that it was Mr. Piper that stopped all
19 diving since Friday and never signed a permit to allow LMCS
20 or any other company to perform a rescue or even try. Mr.
21 Piper even demand they close the opening of the pipe. Mr.
22 Kurban said it was murder to even do such. He was deeply hurt
23 and emotional. We even made mention of the misleading info
24 Narissa shared with us on WhatsApp.

25 After that heartfelt gathering, my family and I left and
26 returned home to Sangre Grande. On Monday, 28th February,
27 2022 we arrived at a car park around 6.30 a.m. Still no one

1 there from Paria. The entire day passed by and everyone still
2 gathered in the car park. I remember behaving very emotional
3 and loud because I have not yet accept the fact that all my
4 siblings are gone and I'm here in a car park annoyed, angry and
5 torn to pieces, that a big, established company like this made
6 such a bad choice and little to no effort to save my brother and
7 these men.

8 It was about 7.00 p.m. ambulance and DMO are seen
9 entering the main entrance. A OWTU member came
10 announcing that Paria will soon be asking for a representative
11 from each family to visit the site to identify their loved one's
12 body. I made it absolutely clear that no one from the Henry
13 family will be going there because since Friday we made—
14 we've been begging to go there and were being denied. Why
15 now it's now safe to go?

16 My family and I left Paria's car park torn to a million
17 little pieces, really emotional and cold. Very early Tuesday
18 morning Mr. Kazim Ali Sr. called me that they were able to
19 recover only three bodies so one family will be disappointed
20 this morning at forensic facility. On our arrival there, my mom
21 asked her sister, Wendy Phillip, to accompany my dad to now
22 identify Yusuf's body.

23 They both confirmed Yusuf's body was the first in line
24 by his tattoos on his chest and arm. They described the state of
25 the body and features to be a totally different person. If wasn't
26 for his known tattoos they could not recognize him. My dad
27 said all the guys' face, mouth, eyes look at same so he can tell

1 that they died the same way.

2 I've never imagined at such an early stage in my life I'll
3 lose all my siblings. I can't even grieve in peace but instead
4 wait for closure and clarity, justice for one. This pain won't
5 leave me. I live day by day turning, trying to open the next
6 chapter of my life without my riders, that's my brothers. It's
7 one of the hardest things I've ever been faced with. I've sat
8 here at this Enquiry for a number of hearings and witnessed
9 persons laughing while sitting here, telling obvious lies and I
10 can't express how much this has add to my depression.

11 **Mr. Chairman:** Ms. Henry, thank you very much.

12 **Ms. Henry:** No problem.

13 **Mr. Chairman:** I know that was not easy, so thank you for
14 coming and your evidence—

15 **Ms. Henry:** Sure.

16 **Mr. Chairman:**—will be taken into account. Thank you very
17 much. You can go this way. You can stay or go as you please
18 obviously, and take that with you.

19 *[Ms. Afeisha Henry leaves Enquiry room]*

20 **Mr. Chairman:** Mr. Maharaj, I believe the next witness is Ms.
21 Nicole Greenidge, is that right?

22 **Mr. Chairman:** Come this way, Ms. Greenidge. Be careful.

23 *[Ms. Nicole Greenidge enters Enquiry room and is sworn]*

24 **Ms. Greenidge:** I, I Nicole Greenidge, do solemnly swear that
25 the evidence I shall give to this Commission in this case shall
26 be the truth, the whole truth and nothing but the truth.

27 **Mr. Chairman:** It's Nicole Greenidge, is that right?

1 **Ms. Greenidge:** Yes.

2 **Mr. Chairman:** Yes, take a seat. Make yourself comfortable.
3 I know this is not going to be easy but I'm very grateful for
4 your coming. All right? I think it was your daughter who's just
5 given evidence, is that right? All right. Well, um, you just—
6 you've got your statement in front of you. It has been a little
7 edited but if you'll just read it to us now, thank you very much.

8 **Ms. Greenidge:** My name is Nicole Greenidge. I am the
9 mother of the late Yusuf Henry. Yusuf was a dedicated and
10 hardworking father of four, Aliyah, Isaiah, Tamayah and Tariq
11 Henry. Yusuf was a diver and became employed by LMCS
12 from the latter part of 2018 to the 25th of February, 2022.
13 Yusuf was vibrant, determined funny and had a passion for the
14 sea. He was whom one would describe as the life of the party.
15 On Friday, 25th February, 2022 I was at my daughter's Afeisha
16 home, residence, located at Ramnath Terrace, Sangre Grande.
17 At around 4.30 to 4.45 p.m. Afeisha received a call on her
18 mobile phone. She answered and all I heard her said in a loud
19 tone was, "What?" I looked in her direction and noticed a
20 change of facial expression as she sat on a nearby chair. I
21 quickly walked up to Afeisha and asked what was happening
22 while she was still having a conversation with the caller.
23 Afeisha showed me a sign to wait as I stood in front of her.
24 Afeisha then told the caller that she would call back in a bit and
25 in a very low tone said to me, "Ma sit." I asked what was
26 happening and my daughter repeated, "Sit down, Ma." By this
27 time, before actually hearing anything from Afeisha, my eyes

1 were already welled with tears. Afeisha then told me that the
2 caller was a female friend who she said called Yusuf's cell
3 phone and someone by the name of Dexter answered, told the
4 young lady that Yusuf and four other divers were conducting
5 underwater works at around 2.30 to 2.45 p.m. and had not
6 resurfaced to the platform since and they are missing.

7 I kept staring at my daughter in disbelief as the tears flowed
8 down my cheeks. I said to Afeisha, "What are you telling me
9 girl? That man sure about what she said?" The young lady told
10 Afeisha that she had asked Dexter for his contact but he gave
11 her the contact for one Mr. Monroe and said you can call this
12 person. Afeisha asked the young lady for the number she
13 received and quickly got off the phone with her to call Mr.
14 Monroe.

15 The first and second call I believe went unanswered and in her
16 third attempt Mr. Monroe answered. Afeisha introduced herself
17 and Mr. Monroe told her that he was a captain. Afeisha asked
18 Mr. Monroe what was taking place at the moment and he said
19 that there isn't much information he can give her but he heard
20 that Yusuf and other divers were sucked into a pipeline while
21 executing works. Mr. Monroe said that he will keep us
22 informed as soon as he learns more and hang up.

23 Afeisha called her father, Joseph Henry, to inform him of what
24 we were told and I called my common-law husband to do the
25 same. When my husband answered his phone, I hysterically
26 asked him where he was. He said that he was on his way home.
27 I urged him to hurry and that something had happened to Yusuf

1 and four other divers and I need to get to Paria's compound as
2 soon as possible. My husband and my children father, Joseph
3 Henry, arrived at almost the same time at around 5.45 p.m.

4 Eventually we found our way and arrived in front Paria's
5 compound at around 8.10 p.m. Afeisha again called Mr.
6 Monroe informing him that we had arrived and he told her that
7 we can park our vehicle in the car park and he will meet with us
8 there. The security allowed us entry into the car park where we
9 noticed Yusuf's vehicle., along with a few other vehicles. My
10 husband parked his vehicle a little way in front of Yusuf's
11 vehicle.

12 We all got out of the vehicle and started walking around the car
13 park. I walked across to the security booth and asked the
14 officers if they had any information on what had occurred and
15 they said that they did not know much. Afeisha called Mr.
16 Monroe's phone again asking him if any new updates. He told
17 her no but said to her that one of the divers were rescued at
18 around 6.00 p.m. I believe and that he was taken away by an
19 ambulance to the San Fernando Hospital. He did not give a
20 name and we did not ask. We later learned that the rescued
21 diver's name is Christopher Boodram. My family and I kept
22 the faith that the other divers will soon be rescued as well.

23 After waiting in the car park for about two hours I told Afeisha
24 that she should pray. She quickly alerted her father and I
25 alerted my husband. We all got into the vehicle, held hands and
26 individually said a prayer for Yusuf and the other three divers'
27 safe return. As I started praying, the tears kept rolling down my

1 cheeks. I begged God, please, not another one, Lord? Please
2 not Yusuf? Please not Yusuf too, God. We already lost two in
3 December, 16 days apart, God. No, no, no Lord not another
4 one. I felt so scared and confused.

5 **Mr. Chairman:** Would you like some water?

6 **Ms. Greenidge:** [*Nodding*]

7 **Mr. Chairman:** Yes, can we have a bottle, yes? All right.
8 You all right?

9 **Ms. Greenidge:** [*Nodding*] At about 3.55 a.m. to 9.00 a.m. on
10 Saturday, 28th of February, 28th of February—

11 **Mr. Chairman:** I think that's from 4.00.

12 **Ms. Greenidge:** On 26th of February.

13 **Mr. Chairman:** That's from 3.35 to 4.00 on Saturday.

14 **Ms. Greenidge:** Yes.

15 **Mr. Chairman:** Yes.

16 **Ms. Greenidge:** I noticed vehicles entering the car park one by
17 one with some of the vehicles leaving in less than a minute and
18 a few parking available spaces. Around 4.15 on Saturday
19 morning I noticed people walking in the car park. I then
20 noticed my daughter talking to three females if I'm
21 remembering correctly. I remember walking over to where
22 they were and soon learned that one of the women were the
23 wife of Faizal Kurban. We introduced ourselves, shook hands
24 and Celisha Kurban, the wife of Faizal Kurban started
25 interacting with us. She referred to her husband as Fyzie.

26 More hours had passed and by this time more people had
27 entered the car park. Everyone interacted with each other

1 speculating and hoping for the best. We all were devastated
2 and awaiting some kind of information or approach from
3 someone in authority at Paria. I noticed some guys wearing
4 coveralls similar to the ones Yusuf wore. I was approached by
5 a young man who introduced himself as Dave. He asked me if
6 I was Yusuf's mom and I said yes. He looked at me in almost
7 teary eyes and said, "Oh gosh, mom. Oh gosh. Yusuf is a good
8 one. He is we real boy."

9 Dave indicated to me that Yusuf recently returned to work and
10 that the crew knew of the family's bereavement. Dave hugged
11 me and said, "Moms don't worry too much. Yusuf is a fighter
12 and anybody to come out that pipeline next will be Yusuf." He
13 then walked away. Moments after, I was introduced to Michael
14 and Nicholas Kurban, the sons of Faizal Kurban. I understand
15 that they were awaiting permits to enter into Paria's compound
16 to render any assistance necessary. As far as I knew, they never
17 got those permits.

18 Not too long after I met with Vanessa Kussie, the wife of Rishi
19 Nagassar. She came up to where I was standing, asked who we
20 concerned. We introduced ourselves and hugged tightly as if
21 we knew each other. Vanessa also met with Afeisha, Joseph
22 and my husband.

23 Frustration started mounting. Members of the Oilfields
24 Workers' Trade Union arrived, media personnel and other
25 caring citizens. People brought in foodstuff and water for the
26 families. The families expressed gratitude for breakfast and
27 water to drink as we were in the car park for quite some time

1 with no water, no food, no toilet facilities and no information
2 on what was happening that Saturday morning.

3 I met with Mr. Kazim Ali Sr. in the car park at approximately
4 10.00 to 10.30 on Saturday. He informed me that his son,
5 Kazim Jr., was also in the pipeline and that he was trying all he
6 can to get some assistance but authorized personnel were not
7 too cooperative in speedy action that was desperately needed.
8 He apologized and then proceeded as it was a busy morning for
9 him.

10 It could have been around 12.30 p.m. at the time when the
11 families of the divers were approached by a security officer
12 who gave his name as Colin Rodney, I believe. Mr. Rodney
13 informed us the families that officials at Paria wanted to meet
14 with us at the golf course to have a meeting to inform us on
15 what was taking place and, if agreed, we will be escorted to the
16 venue. We all told Mr. Rodney that if we were to attend we
17 will, in fact, record everything being said at that meeting. Mr.
18 Rodney told us that recording was prohibited and we all
19 declined from having a meeting. Mr. Rodney then made a
20 phone call and told us that recording will be allowed but no live
21 streaming. We accepted and were escorted to the venue by
22 security.

23 At Paria's golf course we were directed to a room where we
24 met with Minister Stuart Young, Mr. Mushtaq Mohammed, Mr.
25 Michael Wei and I believed a young lady by the name of
26 Narissa, who was the communications officer. There were a
27 few other people in the room but I paid no attention to them.

1 Minister Young welcomed the families and expressed his
2 regrets for what had occurred with the divers. He then started
3 talking about his travel patterns and arrival into the country but
4 was quickly stopped by Celisha Kurban who indicated to him
5 that no one was interested in his travels. We were all there for
6 information on our loved ones. Another person blurted out,
7 “Yes, give us something to work with, man. Time running
8 out.” Mr. Young shortly turned the floor to Mr. Mohammed.

9 In Mr. Mohammed’s speech he mentioned that it was risky to
10 send someone into the pipeline but they were exhausting all
11 other alternatives and that they received equipment to help in
12 the search and rescue for our loved ones. Family members
13 began asking Mr. Mohammed questions of concern. I raised
14 my hand and was given the opportunity to voice my concern.

15 I introduced myself and deliberately asked Mr. Mushtaq
16 Mohammed how is it that a company of this nature existing for
17 such a long time, how come there is no emergency plan put in
18 place for when or if an accident should occur? We are all
19 aware that jobs conducted here are high-risk so how it is things
20 are taken so lightly with regards to the risk attached to jobs?

21 I also asked Mr. Mohammed, Sir, as we speak, are operations
22 taking place to rescue our loved ones? Mr. Mohammed said
23 yes. I asked again, as we speak, operations are being carried
24 out? And was given the same answer, yes. Someone asked a
25 question and Mr. Mushtaq Mohammed laughed and someone
26 from the Kurban family said to him, “What is the big joke?
27 People here under seriousness and you laughing?” Someone

1 else said, "At least you can laugh." I believe Vanessa Kussie
2 also commented on the laughter by Mr. Mohammed telling him
3 she has a three-year old son home waiting to see his father. I
4 said to Mr. Mushtaq, "Sir, I recently lost two sons in December,
5 16 days apart, and cannot afford to lose another."

6 Mr. Michael Wei then came on to speak but he too did not
7 make sense at all. He stood there lamenting about engineering
8 like if he was giving a quick course. Joseph Henry, I believe,
9 told Mr. Wei that we wanted action, not talk. My husband then
10 said to Mr. Mohammed and Mr. Wei, "With all respect due,
11 what families are being told here and nothing is the same. It is
12 in my view all yuh wasting our time so it's best to end the
13 meeting." Other family members agreed and proceeded to exit
14 the room.

15 Narissa quickly came forward with a notepad, I believe, and
16 asked for a contact number from one member of each family.
17 She said that this request were to create a WhatsApp group chat
18 to keep the families abreast of what was happening. The next
19 thing I was told was that Paria was now asking for an email
20 from the families. This was after we had returned to the car
21 park from this so-called meeting.

22 I remember hearing Afeisha saying in a loud tone, "What is
23 this, boy? So if someone don't have an email address then we
24 won't be able to receive information. Like Paria trying to trip
25 off somebody here or what?" Other families also expressed
26 their disapproval.

27 At around 3.30 to 4.00 p.m. my family and I left the car park

1 and headed to Sangre Grande. At around 7.50 to 8.00 p.m. on
2 Saturday night my daughter received text message from Narissa
3 I think telling her about what was happening around that time.
4 Afeisha asked Narissa how long they got with the rescue and if
5 any other diver were rescued and Narissa said to Afeisha
6 nothing yet. The rescue team is awaiting a permit to commence
7 a rescue and that the procedure will be done in three parts. I
8 blurted out profanities and said but that is not what we were
9 told in the meeting by Mushtaq.

10 Caring citizens continued to provide food and drinks for the
11 families. Later on in the evening on Sunday 27th I heard
12 people talking in the car park that the rescue plan was turned to
13 a recovery.

14 **Mr. Chairman:** I think you may have missed a page. That's
15 all right. Just take your time, all right? So—

16 **Ms. Greenidge:** Okay.

17 **Mr. Chairman:**—it finished on the previous page—

18 **Ms. Greenidge:** What—yeah.

19 **Mr. Chairman:**—when you told us that, um—

20 **Ms. Greenidge:** So that we were told in the meeting by Mr.
21 Mushtaq.

22 **Mr. Chairman:** Yes. Not what they—

23 **Ms. Greenidge:** So Paria taking us for clowns, then? As far as
24 I was aware is that we were fed lies. I broke down in tears
25 saying well those divers' chance of survival now gone to a next
26 level.

27 On Sunday, 27 February my family and I arrived at Paria's car

1 park at around 7.45 a.m. As I got out of the vehicle I heard a
2 voice said, “Look the lady reach”, and was quickly approached
3 by Mr. Ian Alleyne. Mr. Alleyne said, “Good morning,
4 Ma’am” and I answered. He went on to say, “Come with me
5 quickly, Miss”, and alerted the man holding a camera to come
6 along.

7 Mr. Alleyne said to me, “Ma’am, I just want to ask you a
8 couple questions.” He first asked me to introduce myself and
9 state the name of my family that was in the pipeline and his
10 relation to me. I did so. Mr. Alleyne then asked, “Ma’am, is it
11 too that you recently lost two sons?” My eyes immediately
12 weld with tears and I shook my head in a motion to indicate
13 yes. Mr. Alleyne then turned to the cameraman and said,
14 “Trinidad and Tobago, we are here live at Paria car park and
15 this mother recently lost two sons in December and by the look
16 of things possibly a third.” I could not contain my tears at that
17 point and broke down once more.

18 As I walked away I noticed portable toilets were placed in the
19 car park. Caring citizens continued to provide food and drinks
20 for the families. Later in the evening on Sunday 27th, I heard
21 people talking in the car park that the rescue plan was turned to
22 a recovery plan by Paria. Voices became loud and it was
23 difficult to hear properly what one was saying. Everyone were
24 voicing their opinion all at once. I walked over to the vehicle,
25 opened the door and sat in the front passenger seat leaving the
26 door open. Again I broke down in tears.

27 I then felt a little hand on me and realized that it was my

1 granddaughter, Aliyah Henry. Aliyah said to me, “Nana, doh
2 cry nah? My Daddy real strong and he will come out just now.
3 Wait and you will see.” She sounded so sure and hopeful. I
4 just shook my head and hugged her. A short while after, my
5 daughter told me that she had received a call from Narissa
6 inviting us to a room in the golf course area with seating and
7 air-condition. Afeisha said she asked Narissa, “To me you all
8 created a group chat. How come this is an individual call?”
9 And Narissa said to her that she had called the other families
10 and offered the same.

11 Afeisha then said to Narissa, “Well, I think we should have
12 been contacted all at once in the group chat. Afeisha said she
13 also told Narissa that she will have to decline because she’s not
14 making any decisions without her parents, and also, there are a
15 lot of families who came in support and she’s not about to just
16 move away from them. Afeisha also made sure to remind
17 Narissa that since Friday 25th families were left in the car park
18 with no source of comfort and got by. Narissa said to Afeisha
19 that she understood and hang up.

20 My family and I left Paria’s car park around 10.30 on Sunday
21 night. On Monday 28th we returned to the car park around
22 10.00 a.m. By this time my family never received a direct
23 phone call nor in the group chat that Paria had now changed the
24 rescue to a recovery. I found it a bit disrespectful to the
25 families as it was in my opinion a wrong sided decision to have
26 media release before contacting the family, however, we just
27 waited again in the car park.

1 Sometime later on that Monday afternoon I noticed a group of
2 people rushing to one area in the car park. I was unsure of what
3 was taking place and I then learned that it was Vanessa Kussie,
4 the wife of Rishi Nagassar, that fainted. I later learned that she
5 had received a phone call informing her that her husband body
6 was removed—was recovered. I held on to my stomach and
7 immediately felt sick. Moments later, my sister came to me and
8 said that she got a phone call from a close friend who were
9 present for the retrieval of the divers' body that they had just
10 pulled up the body of my son, Yusuf Henry. My sister hugged
11 me and we both started crying.

12 My family and I left the car park around 9.45 p.m. on Monday
13 night. On Tuesday, which would be the 1st of March, 2022 my
14 family and I went to the Forensic Science Centre in St. James to
15 identify Yusuf's body. My sister volunteered to go along
16 Joseph Henry to do the identification as Afeisha and myself
17 were not prepared to do so. I was told by my sister and Joseph
18 that Yusuf's body was the first to be shown to them and they
19 easily identified him by a tattoo on his right arm.

20 Joseph walked out in the yard of the Forensic Centre and started
21 to jump and shake his head while tears streamed down his face.
22 On seeing his reactions, I immediate broke town into tears
23 myself. Joseph was interviewed by a media personnel and a
24 short while after we headed to Sangre Grande. On Wednesday
25 afternoon I believe I heard on the news that the last body was
26 retrieved.

27 **Mr. Chairman:** Yes. Well look, thank you very much indeed

1 for coming. I know that that was not easy for you but I
2 appreciate what you've done and you can be assured that we
3 will take it into account. All right? So please feel free to go
4 and take a seat. The final piece of evidence—

5 *[Ms. Nicole Greenidge leaves Enquiry room]*

6 **Mr. Chairman:**—at this Enquiry will be the reading of the
7 statement of Aliyah Henry. She is the daughter of Yusuf
8 Henry, and it was received by this Commission of Enquiry on
9 the 5th of January of this year. She is 11 years old and I have
10 permitted her statement to be read by Mr. Ramadhar. Would
11 you do that now, please?

12 **Mr. Ramadhar:** Thank you very much, Sir. On behalf of
13 Aliyah Henry:

14 “I am 11 years old. I was born on the 28th of July, 2011.
15 My mother's name is Tia Gopaul and my father's name
16 is Yusuf Henry. I have known my father, Yusuf Henry,
17 all of my life. He was a great dad to me and loved me
18 unconditionally. He all supported me in everything
19 together with my mom Tia Gopaul. I remember him
20 singing happy birthday for my tenth birthday and I can't
21 stop watching the video just to see my dad's face and his
22 smile. He stood with me when my grandmother, Mary,
23 died in 2021. Also during Christmastime he bought gifts
24 for me. He always was in contact with me giving me all
25 the courage and strength and support I needed.

26 When I got word of my father stuck in a pipe at Paria on
27 the 25th February, 2022 I froze to know that, but I prayed

1 and prayed that my father and his friends will be safe. I
2 went down to Paria with my mother and other family
3 members praying for a miracle for my father and his
4 friends. However, same didn't happen. I later received
5 news that my father, Yusuf Henry, died in the pipeline. I
6 will never get over this horrific death of my father. He
7 didn't deserve that death. Every day I wake up is like
8 I'm living a nightmare that my father is no longer with
9 me and I love him so much and every single day that
10 passes I miss him. I remember all the nice times we
11 shared.

12 I write SEA this year and I don't know how I'm going to
13 do it without my dad's support. I will never ever forget
14 him and most of all I will always remember how tragic
15 his death was. Daddy, I miss you dearly and I know one
16 day we will be united again. You will always be my
17 hero. Justice will be served by the Commission."

18 Thank you very much.

19 **Mr. Chairman:** Yes. Thank you. That brings the evidence at
20 this Enquiry to an end with the one caveat that in due course we
21 will be inspecting the hyperbaric chamber that was used as the
22 habitat to effect these works. So the evidence is at an end now.
23 There are one or two documents I think we still asked for which
24 may yet arrive. If that happens then all well and good, we'll
25 take it into account, otherwise, that's it. Tomorrow we'll sit at
26 eleven o'clock with the first address to this Commission from
27 Mr. Ramadhar. Two others—yes.

1 **Mr. Ramadhar:** Out of an abundance of caution, there's an
2 unavoidable issue I have to deal with, a personal matter, in the
3 morning. I expect to be here by 11.00 but I've taken the liberty
4 and I bring it to your attention and permission, in the event that
5 something goes wrong and I'm a bit late, my friend, Ms.
6 Alfonso, would be ready and available to go first but I intend to
7 be here, but I just wanted to put that on caution.

8 **Mr. Chairman:** Well that's all right as far as I'm concerned—

9 **Mr. Ramadhar:** Thank you.

10 **Mr. Chairman:**—provided Ms. Nyree Alfonso is content with
11 that course. Could you make sure you alert somebody here so
12 that I know that before we start?

13 **Mr. Ramadhar:** Absolutely, Sir.

14 **Mr. Chairman:** Yes.

15 **Mr. Ramadhar:** My colleagues will be here. Thank you so
16 much.

17 **Mr. Chairman:** All right, thank you very much. All right,
18 that's how we'll commence tomorrow. I say it's an
19 administrative matter that I have to deal with up until eleven
20 o'clock, so, we're adjourned now and we will hear addresses
21 tomorrow. Thank you very much. You can grab your papers.
22 I'll get up in a moment. I'll just grab all my papers.

23 **6.50 p.m.:** *Enquiry adjourned.*

24

25

26

27

1 **EVIDENTIARY HEARING DAY 16**

2 **10.59 a.m.: Enquiry Commenced.**

3 **Mr. Chairman:** Good morning, everybody. I am very pleased
4 to see you've been able to make it, Mr. Ramadhar.

5 **Mr. Ramadhar:** I'm so grateful to be here before you at the
6 relevant time, Sir. The stars aligned for me this morning.
7 Thank you.

8 **Mr. Maharaj SC:** Mr. Chairman, I do apologize for Mr.
9 Bissessar for a few more minutes. He will join us in a short
10 while.

11 **Mr. Chairman:** No, that's fine. That's fine. Thank you.

12 **Mr. Peterson SC:** Mr. Chairman, I also apologize for being
13 alone. I just sent for one of my juniors to join me, but, um, I
14 left them with a task to pull some stuff together.

15 **Mr. Chairman:** You look completely deserted, actually, this
16 morning.

17 **Mr. Peterson SC:** I'm feeling completely in that status.

18 **Mr. Chairman:** May I enquire, Mr. Peterson, if, in fact, it's
19 going to be you who addresses the Commission?

20 **Mr. Peterson SC:** At this stage, yes, Sir. If what I left to be
21 done has been put together, then, yes, it would be me. If not,
22 then Mr. Mootoo will do it. But I suspect it will be me.

23 **Mr. Chairman:** All right.

24 **Mr. Peterson SC:** And I will be within the time assigned, Sir.

25 **Mr. Chairman:** Marvellous. All right. Well, then, we'll hear
26 from Mr. Ramadhar, first of all.

27 **Mr. Ramadhar:** Good morning, Chairman, good morning

1 Commissioner Wilson, morning to all. The only bright moment
2 I have had since I became aware of this terrible tragedy came
3 yesterday evening. On the way home I received a call from Tia
4 Gopaul, the mother of Aliyah, and she asked for me to convey
5 to the Commission, to Mr. Maharaj, and all of my colleagues,
6 the gratitude that she feels. And for the first time that Aliyah
7 had any moment of brightness since her father's parting was to
8 have heard her words read so that the public would know that
9 her father meant more than just a number; not just a name, but
10 he was a truly loved person. And I want to personally thank the
11 Commission for taking the robust position that what matters
12 most in this Commission, notwithstanding the
13 recommendations we will make that will affect the way we
14 move forward in things, is the human value it has put on those
15 who have gone and more importantly now, the human value of
16 those who are left with the burden of their loss.

17 To have heard Vanessa Kussie, Catherine Ali, Jaimie Ali,
18 Afeisha Henry, Nicole Greenidge come with the courage that it
19 must have taken to sit and to speak words that emanated the
20 grief that they would have felt, it is really a translation into
21 words of something so horrific, and it's only but a small
22 percentage of what they would truly have felt on the inside.
23 But to have given them that opportunity, it is like a pressure
24 cooker; a release of some stress and burden from their shoulders
25 and from their hearts that was permitted here under your
26 chairmanship, Sir. And that must go completely noted as to
27 how we conduct ourselves; that a Commission is more than just

1 a documentary position. It is about humanity—and I shall say
2 this at the beginning: This is a Commission like no other this
3 country has ever seen.

4 I have had the good fortune of being present at other
5 commissions, and this one, Sir—and I will start where I had
6 intended to end; that wherever I have been in this country—and
7 I have been a lot of places—Trinidadians and Tobagonians
8 come forward and say thank you for what you do, but tell the
9 Commission and the Chairman we are grateful to have had him;
10 to tell Mr. Maharaj that all the years of your experience and
11 expertise you have brought to bear—and you, Sir, you know
12 you are my beloved senior, and I'm so honoured to be in your
13 presence in such a Commission.

14 Mr. Chairman, grief is underrated in this world. And I
15 say this because when one looks at the law in terms of personal
16 injuries or the compensation that one would get—the family
17 that is, for those who have passed—it is almost embarrassing in
18 Trinidad and Tobago in particular, where an arm or a leg will
19 be worth less than a hundred thousand in a judgment; a life will
20 be worth even less sometimes. And I ask: Is this where we
21 are? Is this who we have become?

22 Trinidad and Tobago, Chairman—I know you've been
23 here for a short period of time—to me and to many others, is
24 the most beautiful place on the planet. From the very first
25 breath I took, having been birthed here, and the very first sip of
26 water came from the air of Trinidad and Tobago and the water
27 of this land; every bit of sustenance came from this beautiful

1 spot on the earth called Trinidad and Tobago.

2 I say these things to explain why what is at stake here is
3 not just about apportioning responsibility, but really it's about
4 dealing with the soul of this nation. I grew up in a nation where
5 almost all of us knew the Golden Rule, which is to "Do unto
6 others as you would have them do unto you"; and the biblical
7 edict to "love thy neighbour as thyself".

8 And that is why when I became aware of what had
9 happened that fateful horrific evening of the 25th February—
10 my good friend Phillip Alexander had gone there in aid, like the
11 OWTU, to make known to the public that a tragedy had
12 occurred, but an even greater tragedy was on the horizon,
13 because there was little to no action. And I'm grateful to them
14 both—the OWTU and Phillip Alexander—because he sent me
15 the clip of the interview he did with the son of Fyzie Kurban—
16 Michael Kurban. And when I heard that this young man was
17 prevented from rescuing or endeavouring anything to save his
18 father, I could not believe that that was true. But I had the
19 opportunity to speak with him after, and then, of course, we've
20 seen repeatedly from independent sources that that was, in fact,
21 so.

22 It rings in my ear, and it pains in the heart when you,
23 Chairman, put the question, a most relevant question: If it was
24 your father what would you do? When many may take
25 objection to that, I think that was the heart and the kernel of
26 what we are about. Because here we are, persons with
27 authority, never took responsibility—and we see that way too

1 much in this nation and in many other parts of this world; but if
2 you are given authority it means something. It is not just a title.
3 It is not just a right to earn a higher salary and to have perks.
4 You are expected the higher you go, the greater the
5 responsibility, and that expects of you a different make up of
6 your being. If you weren't with it before, as you elevate
7 yourself, so must you in terms of your learning, in terms of
8 your capacity, in terms of your understanding, and in terms of
9 your philosophy. We have seen a dismal failure in relation to
10 that.

11 In fact, just the opposite. What we have seen in this
12 country, apart from the criminality where life has almost no
13 value on the streets, there is almost a formality, almost an
14 encouragement to treat life as if it is less than what it was,
15 supposed, and intended to be.

16 If I may submit that the greatest value one has is one's
17 life. And then the other greatest value that one has in his life or
18 her life would be the relationships that one has. And this is
19 where we are looking and focusing so that we could learn from
20 this and redirect ourselves if we have already taken a path that
21 we ought not to.

22 Chairman, Commissioner Wilson, what do we have here?
23 An accident occurred. This is not a perfect world. It is the real
24 world. Accidents do happen. But there is a root cause, and we
25 have found, through the help of many, to ascertain as best as we
26 can, maybe not 100 per cent, but with the certainty beyond a
27 reasonable doubt as to what the cause of the accident was. And

1 having learnt from that, we, I expect, put things into place to
2 ensure there is no recurrence. But we also have to put into
3 place something to relegate this culture of uncaring and
4 callousness, where human life is measured in what might be
5 termed monetary views.

6 Yesterday I had a conversation with one dearest to me—
7 my wife, and I had to tell her, you know, colleagues tell me—
8 and I'm seeing it more and more—that in a very clinical way in
9 terms of compensation, and so, it is cheaper for your victim to
10 die than to live, Mr. Maharaj, and that compensation for the
11 long-term care and wellbeing is so great, that it is cheaper if
12 they die and you pay if there is proper proof of the negligence.

13 I am not for a moment suggesting that that occupied the
14 minds of those who had the authority, but did not take
15 responsibility. What we do know is this accident occurred
16 around 3.00 p.m., and in the confusion, clearly, and the
17 uncertainty, zero was done. But I ask you to note that the
18 common sense approach, as we've heard from Mr. Khan
19 yesterday—and anybody—you don't need any specialized
20 knowledge—but if you saw a splash in the chamber and that the
21 men went missing and there is a hole called the pipe that ought
22 to have been plugged, the natural inference would be—because
23 if you're not seeing them in the chamber or in the immediate
24 waters around, that they are more likely than not would be in
25 the pipe. Deathly silence as to where we were between three
26 and later in the evening when Christopher came out.

27 When Christopher came out at around 5.30, already on

1 the white board at the Paria Command Centre was the
2 likelihood of survival was minimal. There was a mind-set. The
3 guys gone. And, therefore, I want to suggest—and it's a known
4 psychological fact and truth, there is a confirmation bias. And
5 one of the witnesses, Mr. Mushtaq, said he knew about it,
6 where you propose in your mind a belief and that you do
7 everything to confirm that belief, notwithstanding there may be
8 other bits of information to undermine the structure of your
9 belief.

10 That was at around 4.30. I put it in general terms. But
11 around 5.30, when Christopher came out it changed the
12 paradigm, because if you did not know before you certainly
13 would have known then. And what did he say to be repeated?
14 Go back; get your father. He's right behind me. His brothers
15 were right there. Go back and save them. What did Paria do—
16 those who had responsibility—absolutely nothing that mattered
17 most: that is the rescue. Because we admit; accident already
18 occurred.

19 The next stage must be if we are to value human life,
20 rescue. And before that even, sustenance. What is the natural
21 consequence of men being in a pipe, possibly with little to no
22 air? They would require the first thing, as air.

23 We've heard that a hose or—somebody—a simple man
24 told me, he say, "Listen, man, join up as many PVC pipes as
25 you could and push it in and pump air in. They will hear
26 bubbles if it doesn't reach them, and they will come towards it."
27 Simple. All of the technology, all of the expertise, all of the

1 high-level ranking jobs didn't consider any of that, but we had
2 an Incident Command Team with a Commander.

3 What a fantastic, resounding name. Commander. One
4 would think immediately to straighten one's spine and resolve
5 that you should salute such a person. But I say, no, I do not
6 salute such a person. Because we heard the evidence of those
7 who peopled the Incident Command Team. You heard
8 Catherine Balkissoon who, on a simple straightforward
9 question: if it were your father what would you do? Burst into
10 tears. And my friends, of course—in Trinidad we have a term
11 “rose”, like if yuh hit a Guêpe nest; everyone in condemnation
12 for the most germane, relevant question. Because that is what
13 would occupy you.

14 You are on site. This is not an artificial, um, thing you
15 looking at TV on. Human beings are around you. The man's
16 son is complaining: “I want to go. I need to go. I could do
17 this.” By which time, of course—and I know all the details will
18 be more than adequately considered by the cumulative efforts
19 of my colleagues, and certainly Mr. Maharaj's team—no
20 permission.

21 Not just no permission; coast guard is called in and an
22 order was made that no one is to go in the pipe. It is resounding
23 in my heart and ringing in my ear—and I shan't say where it
24 came from, but it came in this room—that you would have had
25 to shoot me to stop me. I do hold that view. But it is not you,
26 Chairman; it is not I. We are from a profession that we are
27 trained to be independent; to be strong in the face of adversity,

1 that when you're told no, you must ask why, and show me why
2 it is I cannot do these things.

3 But young Michael is a trained diver and I'm sure
4 Commissioner Wilson will attest that the profession of diving
5 requires serious discipline. And he had been trained by his
6 father to be disciplined; take instructions. And the mindset that
7 you need work permits, and you must take instruction from
8 those who have the authority, and out of fear—and he was
9 honest enough to say that the coast guard did not point guns
10 directly at him. And we would hear from the coast guard
11 themselves—none of them would admit that they were
12 enforcing that instruction to not endeavour a rescue.

13 Of course, because we are looking at this in a rear-view
14 mirror, and they cannot justify their actions that night—cannot,
15 because four men died—so therefore in trying to justify, we
16 come to the position of excuses, or I can't remember, or not
17 knowing. I wouldn't insult the intelligence of all of us to go
18 through the details of the coast guard evidence, where one goes
19 to pick up another, the other senior man doesn't ask a single
20 question en route as to what he's going into. No effort.

21 They quickly said, and rightly so, if it is that they didn't
22 have the capacity to endeavour a dive into the pipe, not trained,
23 not equipped, to say we can't do it. But why do we take the
24 official word of the coast guard as if that was God's given word
25 that it couldn't be done, when there were those who would have
26 come—and I shall get to that in a moment, but they stand
27 around and they wait, and there was a nebulous uncertainty as

1 to what their purpose was.

2 The coast guard wants to tell us that they were there just
3 to offer assistance for dive. But what did Mushtaq say? The
4 General Manager. They were there to protect Paria and
5 Heritage personnel. How does one do that? By exercising, of
6 course, superior force. Armed. What is the message sent. It is
7 a notorious fact in this country—and, Chairman, you may not
8 know, but early last year the coast guard opened fire on a
9 pirogue loaded with human beings—loaded with human
10 beings—and killed an 18-month-old baby. Not just that. There
11 was a ship from Grenada, where it is—it was all over the
12 news—I have some intimate knowledge in that matter—where
13 the coast guard is alleged to have so beaten crew members that
14 a young crew member from that boat had to be hospitalized,
15 passing blood when he should be passing urine.

16 I just give these examples. We've had other situations
17 where the character and notoriety of the coast guard—I'm not
18 condemning all of them; we are grateful for the efforts of the
19 good, but we must certainly recognize the actions of the bad—
20 where one was actually charged for murder shooting a young
21 boy, again, many years ago. I had stood in protest on that,
22 where he died from a coast guard bullet. And people in the
23 waters know that out there one doesn't only expect pirates, but
24 you expect other things.

25 So there we are. The enforcers, I put it in this
26 Commission; they were like laying back; bouncers; just being
27 there and ready. But Catherine, the eyes and ears of the

1 Incident Command Team, says that basically that they were
2 speaking in hostility, and so. One could imagine—and you saw
3 the attitude; you saw the personality: “Don’t talk to me. You
4 can’t talk to me like that.” In fact, to the extent that she to
5 convey—and when I say garbage in, garbage out, it was not
6 intended as an insult, but those whose gardens are prepared to
7 receive the truth will understand that it will bear fruit.

8 So when I said garbage in garbage out, Mr. Piper full
9 well knew that he was—and I’m being generous to him—that
10 he wasn’t given the sort of information that was required to
11 make proper decisions. I give him that as a benefit. But then
12 you have Mushtaq, who with arrogance characterized efforts,
13 and those who were making efforts instead of paper, but in
14 reality, willing to put literally their lives on a line, as mutterings
15 and disregarded.

16 We have put procedure and paper before reality and
17 people. And there we have the character of those who have
18 authority. And there is much more. It has been all over. Mr.
19 Wei when being cross-examined, asked the simply question:
20 four men having died, you being a member of the accident
21 management team, how do you rate your actions? He took a sip
22 of his water, laid back and reflected, and in a very determined
23 way indicated, excellent.

24 Picture this. Incident Command Team; four men having
25 died under your watch, under your authority, under your
26 responsibility, and a year after, almost, ten months after, you
27 have the gall to sit in the face of this nation and this

1 Commission and indicate that your actions were excellent.

2 I gave him a moment of lapse, that that maybe he felt he
3 had to answer. But what's the background to this? He is still
4 on the job. Not just he; Catherine is still on this job. Piper—
5 Mr. Piper is still on the job as Incident Commander, and these
6 are still members of the team. The gall to have heard that they
7 have people doing dangerous work on a daily basis. In fact,
8 that morning that Mr. Mushtaq told us about, he had people
9 dealing with high tension electricity, and so. One shudders to
10 imagine what will happen if an accident was to recur, because
11 the characters have not changed, and they think that what they
12 have done is excellent.

13 I put the name forward here in cross-examination that he
14 knew. Young man, Shaquile Douglas, 29 years old, fell ill
15 while working at Paria. Paria's ambulance came on the scene.
16 I don't want to speculate, but I was told this: That they had no
17 authority to take him to a public institution, but they had to
18 go—they had to take, if at all, to a private one, and therefore
19 there were financial consequences, and therefore they called in
20 the fire ambulance, who came sometime after, did what they
21 could have, and then, of course, waited four hours after his fall
22 to have him pronounced dead by a DMO. That is the culture
23 and the excellence for which we have to condemn and to fix.

24 But it extends beyond Paria. Some matters I was
25 personally involved in, not professionally. My former secretary
26 had to call me in horror that her brother had died. He had gone
27 to work at TCL, and an accident occurred around 3.00 a.m. She

1 arrived on the scene at 6.00. This young man in his 30s with
2 several children, his arm had gone into one of those crushers
3 and he passed. But whilst there, hearing mutterings from
4 foremen, and so, that when they got there he was groaning, and
5 so. No effort was made to save him, because, of course, what
6 we have now is a certification issue. Reports have to be taken
7 and be made, so the priority is not to save lives anymore, but to
8 ensure you dot all the Is and cross the Ts in those moments of
9 anguish. And one could only imagine the pain one would feel
10 waiting and expecting somebody to come and help you, but you
11 bleed out. Sir—and I shall come to my recommendations, but
12 put an asterisk on that.

13 I had to sit—in fact, no, I was cross-examining Mr. Piper
14 when he sought to have a level of compassion. And, of course,
15 I have compassion for everyone. But he says it wasn't easy for
16 me on that evening. I understand it couldn't have been. Put
17 yourself in my position, he says. And I said, of course. You're
18 the boss. You have the power. You have the authority. And I
19 put myself in his position. And if—it is not up to me, but every
20 human being who loves this country will know that you cannot
21 love the land, the water, the air, without loving its people. And
22 if you love people just for a moment, then what would you
23 instinctively—and I'm coming to that—this thing about
24 instinctive and emotional as if it's a negative thing. He says,
25 put yourself in his position.

26 Did he, for a moment, put himself in the position of those
27 who went in the pipe? Understand what had happened. They

1 went in there battered and bruised, I imagine, but still vital,
2 because when I heard the audio like we all did—I heard it on
3 the radio—the power in the voices, they were very much alive;
4 not broken and diminished; not near to death’s door, but vital
5 and alive, and young Christopher—thank God for him—
6 promised them, “I will return or at least I shall send help.”
7 There was great hope and expectation in their heart, and they
8 waited, and they waited. Seconds turned into minutes; minutes
9 turned into hours. I do not know the exact moment of their
10 passing, each and every one of them individually or
11 collectively. What we do know is that zero effort was made by
12 those who had the authority and responsibility to rescue.

13 So we need to consider, is that the sort of personality we
14 wish literally to be in the chair of authority? That you put
15 yourself in your position, and you don’t think about the others?
16 Every single day men and women arise in this nation and head
17 to their jobs. Their mothers, their fathers, their sisters, their
18 brothers, their wives, their children expect to see them return
19 home. There’s an inbuilt expectation that wherever you go to
20 work there’s an environment that I produce the labour, you
21 produce the salary. But there is much more.

22 There is an expectation that if anything should go wrong
23 that somebody is looking out for me. We have laws for that if
24 you didn’t want to do it personally, to ensure safe working
25 environment; to ensure that my life is valued to the point that
26 you must take action. And that was betrayed. So as I stand
27 here today—this is not just about Paria. This is not about

1 Paria's workers alone, whether they be contracted through
2 Kenson or directly or some subcontractor. This is about every
3 single Trinidadian and Tobagonian who works, whether in low
4 office or high; whether in the streets or in skyscrapers; whether
5 we still sit in ivory towers and make decisions. Even they are
6 expected and are entitled to some level of comfort that they will
7 be protected in their environment and the work that they do.
8 Betrayed completely. But yet we continue.

9 These persons use the law; they use the rules and
10 regulations that were designed to protect human life as a
11 shackle, as a stranglehold, to suffocate the very efforts that
12 those laws were prepared and intended to effect. Instead of
13 using the rules and regulations and laws as a tool, in this case it
14 became a weapon. Because all you hear is the procedures that
15 they have created for a risk assessment first and then a plan.
16 But not from mutterings; not from the word of mouth that is
17 required in moments of anguish and anxiety, and certainly of
18 urgency.

19 We talk about even at the quickest to do these things may
20 take half hour. That's in the best of times. But men are on a
21 boat; they're on a barge, and those who are willing and able,
22 capable, competent and equipped are there. But you consider
23 what they suggest as mutterings.

24 Mr. Khan—I don't know if anybody could undermine
25 what he has said; that at the moment when Christopher came
26 out it meant that the entire environment had stabilized, and that
27 was the best time or shortly thereafter, certainly, for any rescue

1 to be done. And that was when all of the things, the stars
2 aligned in terms of human capacity, equipment, will, courage,
3 to go and do the thing that could have saved these lives, but
4 they were not permitted; absolutely, positively stopped.

5 So, Mr. Chairman, there we are. This is the context in
6 which I rose today to speak; that by what we do and the
7 decisions we make, the recommendations that will emanate,
8 must attend to these things. It must mean that the people's
9 resources having been adequately provided with help from the
10 urgings of the Commissioners to get it done was, as I said, like
11 a commission like no other. There must be direct, immediate
12 consequences to this.

13 Let me just say, I am grateful to the Minister of Energy,
14 who I am fortunate and privileged to consider as a friend,
15 because on the Monday night he and I had many conversations.
16 At that time, of course, we knew that rescue was out of the
17 question. But he had given instructions so that family members
18 be permitted to go into Paria so that when bodies were retrieved
19 that families could at least have some level of closure in that
20 moment. Notwithstanding that something somewhere, some
21 authority within did not allow that to have occurred.

22 I also want to thank the Prime Minister and the Cabinet
23 for having the—what shall I say—the willingness to allow a
24 Commission. I know many did not expect for the Commission
25 to go the way it has, in terms of the courage, the forthrightness,
26 the clarity of purpose, and certainly the personalities that
27 populate it. So I thank them. And, Mr. Chairman, there is so

1 much more I can say, but I will be as conservative with the time
2 as I possibly can.

3 I want to make some recommendations to this
4 Commission. And as I enter into the recommendations, I want
5 to make an observation. You might recall with stark clarity the
6 evidence from both Mr. Piper and Mushtaq Mohammed, the
7 General Manager, that whatever happens on Paria's compound
8 or on its property is the responsibility of Paria. But you know
9 the other side of this? It was because they were of the view that
10 this accident occurred on their property they took the godlike
11 authority to prevent a rescue. I do not know where that came
12 from, whether it's private property or public property, but they
13 took that decision, and because of their locus standi in society,
14 Paria's management, a State-owned agency, the resources of the
15 State were used under their authority to prevent the rescue,
16 through the coast guard.

17 We heard that they called in the fire, but they didn't call
18 in the police. Very interesting. Because I asked and I proposed
19 this question, Mr. Maharaj: if such an accident—not certainly
20 one going into the pipe, but a terrible accident where lives were
21 at stake on a private property, meaning one's home as the
22 clearest example, could the owner of that home say no to a
23 rescue? I pause. There is serious gravity in that question.

24 If at your home there is a horrible accident of even a
25 contractor having come, for instance, to put up windows, and
26 the contractor falls, the windows fall, and he's cut and bleeding
27 out; his assistant who was supposed to be there is also cut and

1 bleeding out on the ground, but your place is so fenced and well
2 protected that you say, nobody coming into my property; no
3 rescue; what would that amount to? And I say this for a reason.
4 Because I'm going to make recommendation that is not my
5 inner nature. I've never prosecuted in my entire life. I took a
6 decision to not do that, but I have had to search deep within my
7 conscience. I had to speak to so many, and yesterday morning I
8 made a decision and I confirmed it last night in further
9 deliberation.

10 Yesterday I met two young, beautiful lawyers and I asked
11 them, should I recommend—because they had been following
12 this matter—should I recommend criminal prosecution? The
13 answer, without a blink, was yes, I should. And then I thought,
14 why do I take the position to not ever prosecute, and certainly
15 in this case, why I resisted recommendations for criminal
16 prosecution?

17 And Mr. Peterson knows well, because he prosecutes a
18 lot; that there are times when a statement has to be made that
19 you are not just to hide behind corporate veil and corporate
20 responsibility; that you are not personally accountable except,
21 maybe, you get a Commission and you have to answer
22 questions here, or in a court of law and you answer, and
23 whatever the result is in a civil courtroom, you are not affected.
24 Your salary continues but your entity pays or the State pays. So
25 I am moved against my inner instincts, Sir, that there should be
26 criminal prosecution recommended in this matter.

27 You see, when persons take the view, like Mr. Holder,

1 that we are to interpret rules and regulations to get one hundred
2 per cent safety, and you were so generous to have allowed him
3 to reflect upon it and dig it out of him, that he couldn't be right,
4 that he changed it—but that was the mentality and remains the
5 mentality in the face of the enormity of four deaths: I am
6 waiting for one hundred per cent safety before I will send
7 anybody in.

8 Nobody asked you to send, you know. People were
9 willing to go on their own accord, and we know full well there
10 are devices to protect you if you are concerned about liability.
11 And I put directly to Mr. Piper: were you interested in lives or
12 liability? And it's obvious; it was about liability. Because
13 whose lives was he concerned about? You talk about rescuers
14 could die, and all the coulda, shoulda, woulda.

15 What we do know is that because of time and the running
16 down of that clock, that every minute passed the likelihood of
17 death increased, and they allowed the seconds, the minutes the
18 hours to have passed knowing full well, by their own account
19 that within four to six hours, men most likely will die. And
20 they did nothing. We wait for a camera so that we could get a
21 view, so that we could assess, risk assess and do up the plans,
22 knowing full well that that camera would arrive long after the
23 men are dead or most likely would be dead. How do I
24 characterize that decision? How do I? How do we? How do I
25 tell the families? And they've heard it; they've seen it—this
26 nation—that you will know the countdown is on and you, you
27 dither.

1 You squander away their lives in the moments waiting
2 for more and better information. You know young Boodan here
3 without, I'm sure, thinking it through, asked me when the
4 matter was in progress—and forgive me; I'm going to disclose
5 this—if Mr. Peterson is in a burning house would you go and
6 save him? I say, of course; without a thought. I love Mr.
7 Peterson.

8 **Mr. Peterson SC:** Leave my name out of this.

9 **Mr. Ramadhar:** I am not leaving your name out of it, because
10 it is real. Let us be in the real world. I will go in. I told her
11 without—isn't it true—without a moment reflection I will go.
12 She said, but what if you—you could get killed, or you would
13 be scarred for life. I paused, because instinctively and
14 emotionally he's my brother. I will do it. But I paused. I said,
15 well, I will take—and in response to the question; I will take
16 precautions.

17 I will look and see what I could do so I could better
18 ensure my own safety to ensure that I could get my brother out
19 of the burning building. I'm not a—I mean, I may not be the
20 most intelligent, but I am not stupid. And we assumed that
21 those divers who turned up are not stupid. These are trained
22 professionals, and, therefore, will not risk their lives in a whim
23 or in a fancy, but will take calculated risk, and as they proceed,
24 assess the dangers. And when I spoke about whether they
25 would see an alligator, I did that for the very reason to show the
26 inanity of the proposition, that there were unknown dangers.

27 We knew what was in that pipe. If there was a barrier,

1 the tank, it could be pushed aside. Right? It may not have been
2 easy. Nobody suggests that. And in the moment of the gravest
3 danger, if I should go into that building and realize, wait a
4 minute, I cannot rescue my friend, I shall retreat. But I will do
5 all I could to save his life, even at the peril of my own death, of
6 course, and if it becomes so that I cannot help him, I will not be
7 able to and I won't. But if it should be that I shall be scarred
8 for life, I shall wear that as a badge of honour in the effort if I
9 shall save my friend's life. And that is the way I grew up. This
10 is the way I know my beloved country to be; not the other way
11 around.

12 So having said that, that is why I was moved to make a
13 recommendation for criminal prosecution. And the authorities
14 will, of course, determine whether they should or should not.
15 That is a matter entirely for them. But in good conscience I
16 must, so that a message will be sent, that you cannot repose
17 confidence in—

18 **Mr. Chairman:** Can I ask you this?

19 **Mr. Ramadhar:** Certainly.

20 **Mr. Chairman:** In your making this recommendation, is it a
21 criminal offence to fail to rescue someone?

22 **Mr. Ramadhar:** Yes, it is. When you have a responsibility,
23 you have the capacity to do so.

24 **Mr. Chairman:** Is it?

25 **Mr. Ramadhar:** Well, we shall endeavour—there is an
26 opening of the law on this area. And, in fact, I'm happy you
27 raised that issue, because it's being tested in Florida, where Mr.

1 Peter—no relative, of course to my friend.

2 **Mr. Peterson SC:** You know all my family?

3 **Mr. Ramadhar:** No, you're right. And having regard to your
4 statement, you may very well be related. Scott Peterson, a
5 police officer who actually was on duty at that horrific—I think
6 it was Valentine's Day in 2018 at the Parkland shooting right
7 off Fort Lauderdale, where students were under his
8 responsibility to protect, and instead of going towards where
9 the gunfire came, he retreated or did not do. So, there is—I'm
10 not up to date on it. I tried finding out more, but I know that
11 there was an effort to prosecute there.

12 So that I'm saying that the law is expanding in that way.
13 And if it needs amendment to put it there, so too would be a
14 recommendation, if it is uncertain. Because I know everybody
15 is afraid of our DPP, and rightly so, because, you know, junior
16 to Mr. Maharaj, and a very robust Director of Public
17 Prosecutions, and he will not wither away from his
18 responsibility, nor shall he take public condemnation if he does
19 not. It is for him to look at the facts, all of them, and determine
20 whether a prosecution is [*Inaudible*].

21 So, it is not in my hand or in the Commission's hand, but
22 it's a recommendation I am propelled, because of the numbers
23 of persons who have expressed the need for us to set an
24 example; to set a new standard in this society. If we do not,
25 then it is likely to recur.

26 **Mr. Chairman:** Might it be considered grossly negligent on
27 the part of somebody risking sending a diver into the pipe and

1 therefore make himself liable to prosecution for manslaughter
2 or some other offence, where he has taken an unreasonable risk
3 with the rescuer?

4 **Mr. Ramadhar:** Yeah. Well, and you said it—the words—
5 and I listened to your words, Sir. Not only are you highly
6 favoured in this nation, but you're deeply respected, and it
7 comes from me. The level of respect I have for you, Sir, I will
8 not attempt to tell you here, but you said send. That is the
9 operative word. We are not instructing anybody to go and do.
10 Persons were volunteering. They do it on their own ground,
11 and they stand the consequences of their actions. But they were
12 prevented. And if you were concerned about liability, civil or
13 otherwise—of course, I'm not suggesting for a moment you
14 could write away criminal liability, but I'm saying none shall
15 attend this where this person is not sent, but voluntarily go.

16 **Mr. Chairman:** Is there a realistic difference between send
17 and permit?

18 **Mr. Ramadhar:** Very much so. Because that person is
19 exercising an independent thought. And, therefore, your
20 actions—I am saying, look—for instance we go back to the
21 issue of the home where the accident has occurred, and persons
22 are willing to go through the broken glass and rescue them,
23 because they're bleeding out. How could I be held accountable
24 if I told that person, "Listen, it's very dangerous, please don't
25 go", and they do it against my instruction.

26 So it is not a, what shall I say, robust, clearly defined
27 circumstance. But that is the job of the Director of Public

1 Prosecutions to look, balance, weigh all of the nuances and
2 make a determination. But the very least is that it must be
3 considered. That is all. And if in his robust examination finds
4 that there is a case made out—but not every prosecution leads
5 to conviction; we know this. But if you don't prosecute, well,
6 that's another issue. There's always, of course, the civil court.
7 And we, I could tell you upfront, have already issued pre-action
8 protocols to Paria and others.

9 And, of course, Paria has taken a hands-off approach.
10 They have no liability here, notwithstanding. But we are on the
11 issue of the criminal liability. Is there a distinction between
12 send and allowing? Of course, there is. Or not standing in the
13 way of. And when Mr. Mushtaq Mohammed speaks about
14 ethics, it caused a knot in my stomach to use the words ethics
15 when he proposes—because he's the landlord, he had a superior
16 right to determine life? It couldn't be further from the truth.
17 And, of course, there are legal devices if he was concerned.
18 We've explored that with him. So—disclaimers and so. And
19 they were used. They had lawyers on hand that very night to
20 advise.

21 But that is just one. And I would tell you, Mr. Chairman,
22 this is not something I'm comfortable—this recommendation
23 making, but I feel compelled under my duty to this Commission
24 and to the people of Trinidad and Tobago to make.

25 May I move to another recommendation? Headless
26 chickens. Not knowing who, where, what to do, and doing
27 nothing as a result. I would suggest, whatever name you wish

1 to call it, and I shall just, for the sake of convenience and a
2 hook to hang it on, Emergency Command Centre; a National
3 Emergency Command Centre. This National Emergency
4 Command Centre should be peopled by personalities of an
5 almost military disposition, who are accustomed with the most
6 awful of environments, where lives, either sent into battle—I'm
7 just giving that example—where lives could be lost and
8 determination is made by those with authority to say go. So
9 that there will be no flinching, no fear, and there should be
10 courage attendant to all those who populate that august body,
11 that hard decisions would be made in a very limited period of
12 time. And not just that.

13 This command centre should have access to the resources
14 of all resources of the State and internationally, so that
15 information, which is the lifeline of a future, is available in a
16 moment, and not to wait months after to hear Mr. Khan say that
17 place stable; go—if he had the authority; if he was in a position
18 within Paria to say, “That place is stabilized, go”, those men
19 would more likely than not be alive today.

20 So, this Emergency Command Centre will have access to
21 all of these things, locally and internationally; a register of
22 experts. So you have a certain type of incident, they know who
23 you're going to call; response time. And before that even a
24 plan, not just OSHA neutered, but a plan for all these
25 emergencies. And it's shameful to have heard in an
26 environment of refinery and pumping, and so, that men at the
27 height didn't understand at what stage that evening, before or

1 after, about Delta P.

2 The whole point in Point-à-Pierre is about Delta P,
3 pumping, differential pressure. So it was a stunning example of
4 ineptitude in those in management. Of course, I know I may be
5 condemned by my statements, that some of them knew, but,
6 you know, they didn't know the exact circum—so be it. But
7 they didn't understand it to the sufficiency that once it's over,
8 the likelihood of it recurring is there, but the great likelihood of
9 it recurring will be minimized for a certain period of time, and
10 you have to act. And it's not speculative alone. We'd make an
11 educated guess—and I put it as loosely as that—every single
12 day in our lives to do the necessary things.

13 And let me at this juncture just return to the two terms
14 that have been given a pejorative interpretation: instinctive and
15 emotional. I spoke about my friend, Mr. Peterson. And before
16 I miss the point, what happened in this Commission, it being
17 live and so well followed by our brothers and sisters throughout
18 the length and breadth of Trinidad and Tobago and
19 internationally, to know, this is an example, that you could be
20 opponents but you do not have to be enemies. A noble
21 profession to which you belong, Sir.

22 And we heard, of course, someone who professed to have
23 been part of it, and who certainly was not. We have too many
24 pretenders. But the true nobility of our profession, among other
25 things, is this: that we could fight like—in Trinidad we say—
26 cat and dog, but at the end of it we remain colleagues, and in
27 our case, friends. That is a wider societal message. Because

1 we see so many lives taken for the most trivial of reasons. So
2 you can be opponents. You may have different points of view.
3 You can fight hard for a cause or for a belief, but you do not
4 have to become enemies and seek vengeance on anyone.

5 I was on the point of the Emergency Command Centre
6 where the authority is vested with all these things. OSHA. I
7 think we need to have a retraining for all those who call
8 themselves health and safety experts—I don't know all the
9 terms that they call themselves—to appreciate that this is a
10 guideline and a mere basic foundation within which you operate
11 to ensure a safe working environment, but not as a result of that
12 to believe that where there is an accident that has occurred, like
13 in this case, that you are regimented to a point where you'll
14 need and seek perfection before you act. Cannot be.

15 Because, as I make the point, sometimes you have to act
16 instinctively. You have to act with some level of emotion,
17 because if you remove emotion from anything, then what is the
18 value of you doing anything? If you don't care, you don't care.
19 I don't give a damn. You die, you bleed out. I leave you there.
20 It has no effect on me.

21 The emotion we speak to is not one of a sobbing,
22 faltering, crumpled individual, but an emotion is really about
23 care. And if you're too emotional that it affects your ability to
24 be rational, to be scientific, to be logical, that you cannot then
25 assess that there's too grave a danger, of course. There are
26 degrees in everything. Overly emotional. That's what we're
27 talking about. But don't say these two words as if they are

1 negatives.

2 Instinctive. A mother sees a child about to fall off a
3 counter, I know they will jump and fall and hurt their knees.
4 One of my colleagues, his wife fell to her knees on a rough, and
5 damaged her knees permanently to save her child. That is the
6 instinct. But had she not done that, what would have been the
7 child's circumstance? So let us recalibrate ourselves to the
8 meaning of these words.

9 And I remember—and if you permit me this, an example,
10 13th November, Black Friday, 1981, I was in Barbados, I was
11 on the way home in Grazettes, Mr. Peterson, around 3.00
12 o'clock. I'm alone on this very developed area, and a guy
13 rushes past me, and about 30 feet thereafter, another guy, but he
14 has a knife in his hand. I had never seen violence in my life. I
15 was a mere, I think, 18, whatever it was, having come from a
16 very protective home, and I was on the streets alone, and this
17 guy is running and the guy behind him with the knife, and the
18 guy with the knife comes upon him, throws the other guy on the
19 ground, sits on his chest and starts to stab him.

20 The guy on the ground holds on to the hand with the
21 knife and then the guy takes up a stone and he's attempting to
22 hit him on the head with it. And I'm alone. I walk in without a
23 thought. I held on to both hands from behind and I just said,
24 stop it. I shook him and the knife fell, the stone fell, he got up,
25 he walked away. The guy got stabbed on the face, he was all
26 cut up, he got up and walked away. I dare not tell my parents.
27 It took 25 years before I said a word to any member of my

1 family.

2 I'm not saying that for any other reason than to
3 demonstrate that in a moment of emergency and urgency you
4 will do what you instinctively must do to save life. Of course, I
5 put my life on the line. I could have been the victim. But in
6 that moment, I was not. I have a memory and I have a story to
7 tell. So we mustn't diminish humanity because that is what
8 operates. That is what gives us who we are, what we are and
9 what we shall become. And the moment we remove that we
10 become robots, robotic and we talk about artificial intelligence.
11 All we have is the artificiality without intelligence here.
12 Because the law has now been neutered, made artificial, and
13 therefore dehumanized.

14 So I speak to the retraining, recalibration, of OSHA to
15 explain to those who have the authority and responsibility to
16 apply it with the objective that it was intended for, which is to
17 ensure a safe working environment, but not to be used, as I
18 repeat, as a weapon and not as a tool when things go wrong to
19 prevent rescue.

20 You may not know, Mr. Chairman, but my beloved
21 senior, Mr. Maharaj—and please don't be embarrassed when I
22 say these things—has been the greatest Attorney General this
23 country has ever seen. He brought into our law—

24 **Mr. Peterson SC:** I thought Faris—

25 **Mr. Ramadhar:** Faris is my friend, but he's still junior and
26 nowhere near in terms of the time given to achieve what Mr.
27 Maharaj has achieved in practice and then as Attorney General.

1 I wouldn't even bother much to speak about—thank God for
2 him that we have judicial review as our law in this country.
3 Freedom of information. Mr. Maharaj—his stewardship. And
4 there are so many other things. But you know what also he has
5 under—well, that he should stand proudly upon, was he
6 introduced the criminal injuries compensation law, so that
7 victims and their families who shall suffer the fate of
8 criminality could have a place to go for suckle and support
9 while the wheels slowly turn in terms of justice in the courts, so
10 that their day-to-day lives could continue.

11 I wanted to make a recommendation that our State
12 through this Government put in train through our present
13 Attorney General—and I'm sure Mr. Peterson will take it back
14 if they are not listening today, and if they—because I want this
15 to happen even before, possibly, your report comes to the
16 public domain—to begin the foundations of such a fund, not
17 just for criminal injuries, but for workplace injuries. And I
18 know I'll be met with levels of criticism that we already have
19 workmen's compensation.

20 Without saying more, I could tell you we have written for
21 that in relation to the families for whom we represent. And
22 with disdain, I will tell you, there's been yet no response to that.
23 I had the pain, and I'm sure many others would have seen, that
24 Ms. Kussie who came here with such courage and was able to
25 articulate her pain, had to throw the barbecue before Christmas
26 for funds to sustain her family. I just put that in.

27 I want to also recommend coming off the OSHA

1 retraining that those who are given the authority and
2 responsibility must be of the mettle that is required to show
3 courage, to show strength, and therefore, if they should suppose
4 themselves to present themselves to hold that all empowered
5 position of Incident Management Team and Commander that
6 they must be adequately fortified to do so; not on a question to
7 start shedding tears, crocodile as they may be in the eyes of
8 some, but be hardy and strong. I apologize. I withdraw.

9 **Mr. Chairman:** Not at all. Are you suggesting that members
10 of OSHA, the investigative arm of OSHA should be on an
11 IMT?

12 **Mr. Ramadhar:** I'm saying that they must be that—you
13 know, they must form part of the emergency.

14 **Mr. Chairman:** They weren't, in this case.

15 **Mr. Ramadhar:** No, and this is the point.

16 **Mr. Chairman:** Are you suggesting that they should?

17 **Mr. Ramadhar:** Yes.

18 **Mr. Chairman:** All right.

19 **Mr. Ramadhar:** Thank you. So if there is a need for
20 interpretation and for guidance—don't be afraid of the law; the
21 law is supposed to be a protector; must be a shield and not a
22 weapon only. A weapon for those who wish to deliberately
23 break it, of course, but as a shield to those who seek the
24 protection of the law. And that is why the Emergency
25 Command Centre, whatever name we want to call it, must
26 include all of these agencies and the expertise that reside
27 within, and not ex post facto, as we say.

1 What is the term? I think it was a blood—well, I call it
2 tombstone regulations; tombstone learning. But somebody
3 used a very graphic term the other day. “Safety written in
4 blood”. Should we not have safety written on paper and in the
5 hearts and scribed there? Not in blood. Not after the fact. Not
6 ex post facto, but preventative. So all of these resources should
7 be available through that.

8 And I’m making the point that in that effort—not just
9 those who will populate the Emergency Command Centre—
10 must have some psychiatric, psychological testing to show that
11 they are the mettle, because at the end of the day it’s not your
12 physicality that makes you human; it is your inner being, your
13 emotions, your strength, your courage. In the face of fear—and
14 we do this all the while. I mean, there are fearsome people that
15 we have to deal with, but we deal with them, and adequately so
16 sometimes. And we must not shun away because of our own
17 personal fear.

18 And I made the statement early in this Commission that
19 when I stand I am not Prakash Ramadhar. I represent those
20 who I represent—the families. And therefore I have to reflect
21 their hurt, their feelings, their expectations. And I may make
22 enemies in that process. I don’t want to be enemies. I may be
23 an opponent, but I don’t want to be an enemy. But I know
24 people take the view that if I disagree with you and you
25 disagree with me I shall have vengeance waiting for you. So—
26 **Mr. Chairman:** Mr. Ramadhar, I don’t think you can ever be
27 accused of being anything other than Mr. Ramadhar.

1 **Mr. Ramadhar:** I will have to interpret that. But you are very
2 generous, Sir; very, very generous. And I think we all have to
3 be who we are. But when we take positions—I will never
4 propose myself—which was my first passion actually—to be a
5 neurosurgeon, but I did not have, what shall I say, the dexterity
6 I knew that I would have required, and therefore I went to an
7 even more noble profession, the law. And I will always hope
8 that I can succeed there, the point being I will not propose
9 myself to a position I know I could never fulfil. And if you
10 believe that you, in the face of enormity of consequences of an
11 action or an inaction as a result of your fear, then I shan't put
12 myself there. And that those who put themselves forward
13 should be tested to see whether they have the capacity so to do.

14 I keep going back to Mr. Maharaj. The battles he has
15 fought over the years, he may have been bruised but he's never
16 been beaten. And you know why? He has that inner strength to
17 go forward. In the face of all the adversity when the world
18 would be against him, he knew he was right and he went
19 forward on that.

20 Mr. Peterson, a man who I deeply admire and respect, he
21 too has that. But we are in a profession. None of us will say
22 that we gonna try to operate a nuclear reactor or be a surgeon.
23 You must be fit for purpose, and not just purpose yourself,
24 because you in the system, and you know somebody, and right,
25 you get ah extra. I do not know if they get extra pay for these
26 things. I doh want to cheapen the entire episode on that basis.
27 But don't call yuhself Incident Commander and you command

1 nothing. Don't consider yourself member of a team when your
2 team is only shoo-shooing in your ivory tower, men are dying
3 down there, you send your eyes and ears who really disregard
4 the reality, and therefore you are not properly informed.

5 As my friend Gerard Small, I quoted him before when he
6 said you could delegate but you can't abdicate, and I shall quote
7 him today. He told me many years ago that you could fake
8 your care but you cannot fake being there. Of course they will
9 say that that was part of the procedure to stay away so they'll
10 have a more clinical overview.

11 But if your eyes are blind and your ears are deaf or it
12 gives you, what shall I say, distorted view of what is happening
13 there, how could you make good decision? Garbage in, garbage
14 out. Or no garbage at all. Nothing. Because they knew full
15 well all they needed to have known when Christopher came out,
16 men are alive. Once you hear that, the game changes. Wipe off
17 your white board. But they kept on this thing—the likelihood
18 of success. He was an inconvenient truth. It was easier then to
19 suggest that they were all dead and let's move and flush it out
20 and Paria continues its work.

21 But that is why where I began I return. What are the—
22 and I'm not surprised; and I'm sure Mr. Peterson did not, on his
23 own volition, suggest that the families not be given a voice. I
24 know him for too long; lovely man with his family. He got
25 instructions. And they knew full well to hear the truth, the
26 consequences of one's action which is a part of our lives, that if
27 there are no consequences to your actions, you learn nothing.

1 To have heard it, the pain, each and every one of them—and
2 that is multiplied many times. There are so many other
3 relatives who cannot speak; who will not speak, but who are
4 pained to the end of their lives. Because this is not an accident
5 where everyone died in the moment. This is an accident where
6 there was a clear and present availability—ability to save lives
7 and no one did it.

8 One can only imagine the psychological trauma—and I
9 have permission to speak about Michael and his brother
10 Nicholas. They were there. They are divers. We could do this
11 thing. Conan. Thank God we have men like Conan who came,
12 unconnected, a brother in danger he came, he say, “I’m ready to
13 go. We have the equipment. I have the ability. I have the
14 will.” Mutterings. No, come with your paper. Mutterings.
15 This is what it was described as, therefore disregarded.

16 Wow. So psychological testing and probably—I don’t
17 know if it could be trained in too, but certainly, we must make
18 that effort. Where I began I shall end. Basic common human
19 decency would require in a moment where an accident occurs
20 or shortly thereafter—and this is not a place without resources.
21 They had departments, public relations and communications.
22 These people came, that is the wives and the children and the
23 families of these men not knowing if, first of all, it is true that
24 there was an accident. Can you imagine the anguish?

25 Afeisha and her mom had to leave Grande and come
26 down in all that traffic, wondering, “Is this thing true? I hope it
27 not true. When I get there leh meh hope that dey lie.” They

1 came and they got there. They still don't know whether it true
2 or is a lie. Mrs. Kurban came, her daughter Britney in Canada.
3 And I shan't speak about her, where she's at university; the
4 apple of her father's eye; all the money they earn—I shouldn't
5 say all, but much of it, resource to pay her fees on—you can
6 only imagine. I don't want to say how much it is. That
7 breadwinner taken from them. But we on the point where they
8 converge.

9 Mrs. Kussie and all the other family members—and
10 forgive me if I don't call all of your names. Nobody there to
11 greet you; say, "Listen, we've had an incident. We're very
12 sorry about it, but as far as we know this is what we know. We
13 do not know these things. We are making effort to find out."
14 Keep them in part and parcel—who is more invested than they?
15 Paria? Your father? Your son? Your husband? Who could be
16 more invested than they? And you keep them outside like old
17 dog. Sorry, I should not have said that—but outside the gates
18 for information, speaking to security who I'm sure would have
19 tried their best, but they too don't know. Ambulance in,
20 ambulance out; nobody telling them anything.

21 We've been through this, but it's important for me to
22 highlight it again. And that is why if I had to be pushed at all
23 into criminal prosecution, it is not because of that, but it tells
24 you a mindset that needs to be shattered—needs to be shattered
25 and repaired so that Trinidad and Tobago will restore itself to a
26 country that we had known for love and care.

27 Anyhow, they are waiting out there, day turns into night,

1 night turns into morning and no word. And then an insulting
2 meeting with Mr. Mohammed. I'm not on his case. I don't
3 know the man, but I know what he said and how he acted. And
4 one of the witnesses told us that during that meeting with him at
5 the golf course somewhere at the golf course. The people don't
6 want to go golf course, you know, they want to go on the scene,
7 go out near the water, be as close to their loved one as possible,
8 but they want meeting.

9 I will not criticize that much. Maybe they had reason to
10 go up in the golf course, and they had their meeting there. But
11 Mushtaq, in that meeting, laughs. Now, for a moment I want to
12 say it might be a nervous laughter. It happens. You don't
13 know how to respond. I give you that. But you are the General
14 Manager, and you must know that your body language—what
15 you say do, and your body language is critically important; it
16 will be read, because these people are hungry, thirsting for any
17 bit of information, an insight as to what is happening; what is
18 your intent? What you intend to do?

19 So I give him the benefit that it might have been nervous
20 laughter. But if it was nervous laughter, what did you do?
21 Don't just assume that it's funny. I don't want to believe so—
22 or that you helpless. What did you do? Nothing. Waited more
23 and more. By which time, of course, cameras would have gone
24 in; couldn't go much further. Time ticking, according to them,
25 they had six hours after the accident; they even make it to 12.
26 What did you do? To the end of it there was zero effort for a
27 rescue.

1 I know as I take my seat there are many things I would
2 regret not having said, but I am so confident that my colleagues,
3 all of us contributing to the Commission, the Commission's
4 fantastic team and the Commissioners themselves, Chairman
5 and Mr. Wilson, there is so much more that you would put light
6 on, and insights that we may not have even observed.

7 And as we proceed we know we live in the real world
8 where we require common decency, and know full well that this
9 world was never intended to be a hundred per cent safe, but we
10 must do all we can to make it safe for all of us, and not allow
11 ourselves to be ruled by fear but we'll be ruled by love and by
12 courage that is the price of love. Courage is the price of love,
13 because if you don't love, there is no need for courage. If you
14 don't care there is no need for courage. But if you love and you
15 care then courage is overcoming fear, and the fear of the
16 unknown is what all of humanity has progressed itself on
17 overcoming that fear.

18 By the very essence of this modern time, if we are to
19 return to a position—if we are to stay in a position where we
20 believe that we shall not endeavour into the unknown, then
21 Columbus would have remained in Spain. Whether he should
22 have or should not have, Mr. Peterson would not be my friend
23 today, standing and sitting with each other in Trinidad and
24 Tobago. NASA would not have endeavoured men to the moon.
25 But it's not just these grand things. It's about crossing the road.

26 The gall of Mr. Holder to suggest that he only goes
27 where there are road crossings and lights. I don't know which

1 part of Trinidad he lives. There are places that have them, but I
2 will not travel to Port of Spain to use a crossover when I living
3 Charleville. I'm just giving you an example. So we have to
4 take a real-world approach to all that we do. And as I never
5 imagined to be this long, but I am still within the hour or
6 thereabouts.

7 Let me just say before I take my seat, thank you, Mr.
8 Chairman. Commissioner Wilson, your incisive questions your
9 insights into the very technical areas, I want to assure you have
10 not gone unnoticed in this country. To my beloved Senior,
11 thank you very much. The cross-examination that we continue
12 to learn from like a surgeon's knife, not being a surgeon,
13 without being carried away by the inanity that some of the
14 responses you got clinically dissecting the lies and the frauds
15 that were put before you and passed as sworn truths, thank you.

16 To my noble friend, Mr. Peterson, who does his job as a
17 true warrior, standing where he belongs on the side of his
18 client; whether he holds personal views is irrelevant. This is
19 the nobility of our practice. I say congratulations and thank
20 you, my brother.

21 To my friends who represent LMCS; admirable efforts
22 on your side. Mr. Kangaloo and his team, a name that resonates
23 in the legacy of Trinidad and Tobago; I had the good fortune of
24 knowing his father; bastion of the old values and a man who
25 stood for discipline, and the name resonates in our Court of
26 Appeal, Justice Wendell Kangaloo, one of the foremost
27 brightest contributions that one could have made to our judicial

1 stock.

2 **Mr. Chairman:** This is all very interesting.

3 **Mr. Ramadhar:** I'm about to close. I'm about to close. Once
4 again a junior of Mr. Ramesh Lawrence Maharaj. To young
5 Chase Pegus who I have grown to be very fond of, who I have
6 told that he has a long way to go in terms of his courtroom
7 presence. Young Sebastian, the best outcome of both Mr. and
8 Mrs. Peterson that one could have hoped for. The other best is,
9 of course, his daughter, who I have not had the privilege of
10 being here with us.

11 **Mr. Chairman:** She's the lawyer too, is she?

12 **Mr. Ramadhar:** Oh, yes, but I have not had the privilege of
13 being in the same space with her.

14 **Mr. Chairman:** You think that might be deliberate?

15 **Mr. Ramadhar:** Yes [*Laughter*]. And knowing my friend,
16 it's more than deliberate; it's spiteful. And, of course, Ms.
17 Alfonso who has been a friend for almost 30 or more years, and
18 I am proud to say was the provider of my paper; diligent as
19 usual. And the young Hosein-Shah, who has, I think,
20 impressed all of us with the quickness and responsiveness of his
21 assistance to the Commission on legal issues.

22 So before I take my seat your Secretary, Ms. Sinanan. I
23 have been in government, so if you did not first know I was a
24 minister of government. I have acted as Prime Minister in this
25 country on several occasions. And notwithstanding the word in
26 the wider community about public servants, I could tell you my
27 experience has been that there are persons who carry the burden

1 of the State on their shoulders without any acclamation and
2 acknowledgment, and Ms. Sinanan has been one of those. And
3 I want to say your work is deeply—we are very deeply grateful
4 for it. So Mr. Chairman, Mr. Commissioner Wilson, to all.
5 God bless, and I thank you for having been given the
6 opportunity to be here and to be in your presence. Thank you.

7 **Mr. Chairman:** Thank you very much, Mr. Ramadhar.

8 We're going to take a short break in a moment. Ms.
9 Alfonso, I understand that you are, um—I hope I don't say
10 indelicately—uncomfortable with a particular injury or ailing
11 on the body. Are you all right to proceed today?

12 **Ms. Alfonso:** Yes, Mr. Chairman. I may take the opportunity
13 to stand, although I'm—I'm not actually sure which one will
14 work, but whichever one works I will endeavour to use that
15 one.

16 **Mr. Chairman:** Can I say, first of all, I would appreciate it if
17 you came forward to the place where Mr. Ramadhar is and,
18 perhaps, with his consent, he will allow you to use the lectern
19 that he has, which might assist you to stance upright, as it were,
20 rather than having to stoop over, because if it's a back injury, as
21 I understand it might be, it would be helpful to do that. And
22 whilst you're making your submissions, if you feel the need to
23 sit down, just do. Don't worry about it. Just sit down and then
24 stand up again if you feel. Whatever is comfortable for you,
25 just find the appropriate way to address us from where Mr.
26 Ramadhar is at the moment, and don't be embarrassed about
27 standing up or sitting down during the course of your address.

1 Just do whatever makes you feel comfortable.

2 **Ms. Alfonso:** I'm grateful, Mr. Chairman.

3 **Mr. Chairman:** All right. We'll take a 15-minute break now,
4 so we'll resume at 25 to 1.00. Do you think you'll be finished
5 within the hour as designated?

6 **Ms. Alfonso:** Yes, indeed, Mr. Chairman, I will.

7 **Mr. Chairman:** Good, good. Well, I have something to attend
8 to at five past 2.00. It should only take 10 minutes or so but I
9 need to make sure that I'm there to do that, so that will
10 naturally fall into the hour lunch that we take after you. All
11 right. Thank you very much. So fifteen minutes, please;
12 twenty five minutes to one o'clock.

13 **Ms. Alfonso:** Thank you.

14 **12.19 p.m.:** *Enquiry suspended.*

15 **12.35 p.m.:** *Enquiry resumed.*

16 **Mr. Chairman:** Sorry. I forgot my notepad, and it is just
17 being fetched for me. Ms. Alfonso, as this progresses, we're
18 going to go two more days, but do not feel the need to stand or
19 sit depending on what makes you most comfortable during the
20 course of the next two days, notwithstanding that she might say
21 all rise. If it's more comfortable for you to stay seated, you stay
22 seated. All right. I shan't take it as an offence.

23 **Ms. Alfonso:** Okay, grateful again, Mr. Chairman; very
24 grateful.

25 **Mr. Chairman:** If you just give me one moment, I want to get
26 my notebook which I have left on the desk, so just one moment,
27 please. [*Pause*] Well, the notebook hasn't arrived yet. I'm

1 sure it will, though. I have got a page at the moment to be
2 making some notes, so you make your start and no doubt it will
3 arrive in due course. Thank you very much.

4 **Ms. Alfonso:** I'm again grateful, Mr. Chairman.

5 These closing statements are presented on behalf of the
6 Seamen and Waterfront Trade Union, the SWWTU, which was
7 granted standing in these proceedings on the 14th September,
8 2022. The SWWTU's request to participate in the hearings
9 before the Commission, was firmly supported by the Industrial
10 Transport Workers' Federation [*sic*], which is called the ITF, an
11 international seafarers union with its headquarters in London
12 England. The ITF is the largest global, independent
13 international union of transport workers in all sectors in the
14 world, and operates through nearly 700 affiliate trade unions,
15 and operates in 150 countries, and, of course, the local affiliate
16 is the SWWTU.

17 The ITF connects over 20 million workers and is allied to
18 an even larger union called the International Trade Union
19 Confederation, the ITUC, which represents over 200 million
20 workers. The primary missions of both the ITF and the ITUC
21 are the promotion and defence of workers' rights and interests,
22 including advocating for safe working environment and
23 systems.

24 Our client, the SWWTU, membership includes seafarers'
25 interests, offshore workers and other marine professionals who
26 undertake commercial operations in many capacities and
27 circumstances in both the private and public sectors in Trinidad

1 and Tobago. The union has collaborated with the ILO or the
2 International Maritime Organization, the IMO, and the ILO
3 which is International Labour Organization. These global
4 organizations named have expressed their collective concerns
5 with respect to the tragic circumstances in which Mr. Kazim Ali
6 Jr., Mr. Yusuf Henry, Mr. Fyzal Kurban and Mr. Rishi
7 Nagassar met their tragic and untimely deaths.

8 I have taken the time to state firmly the interest which
9 myself and Mr. Hosein-Shah represents so that our involvement
10 in the Commission's hearings can be fully contextualized. We
11 had no interest to serve, no client to defend or represent beyond
12 the advancement of safety for workers. Rather, we sought to
13 assist in having fully ventilated pre-work—having fully
14 ventilated the pre-work processes engaged and the actual
15 execution of the work for which LMCS had been engaged to
16 undertake.

17 We attempted also to highlight the work experience
18 and/or competencies of the various witnesses who came before
19 the Commission, again, with a view to placing into focus the
20 personnel which each of the main parties to the Enquiry placed
21 the planning and execution of the pre-works, the contracted
22 repairs to the riser at berth 6 of Sealine 36, and the rescue of the
23 stricken divers who ultimately became entrapped in Sealine 36,
24 and met their deaths in circumstances which the nation and
25 beyond have come to know all too well.

26 To the families who lost their sons, fathers and brothers,
27 and to the deceased men's friends and loved ones, we extend

1 our deepest condolences. It is our clients' and their legal teams
2 most fervent wish that the proceedings before the Commission
3 and its eventual findings will bring some closure and sense of
4 justice. Other legal teams will, no doubt, engage in other
5 processes in due course which will have the effect of further
6 ventilating and resolving the facts and evidence which were
7 elicited during the honourable Commission's proceedings.

8 The honourable Commission has been tasked, inter alia,
9 with making such recommendations which address the
10 shortcomings—which will have the effect of addressing the
11 shortcomings of the work processes of the two main parties
12 before the Commission. No doubt the roles of other parties
13 such as the Trinidad and Tobago Coast Guard (TTCG) may be
14 examined. Similarly, our client has committed to use its role in
15 such organizations as the ILO and the IMO to bring about
16 improvements in the work standards touching and concerning
17 in particular the diving industry in Trinidad and Tobago. No
18 doubt the findings and the ultimate report of the honourable
19 Commission will be the foundation of these objectives.

20 As we learned from the witness statement submitted by
21 the Trinidad and Tobago Bureau of Standards, only a voluntary
22 standard for commercial diving exists in Trinidad and Tobago,
23 which can be used by choice by the stakeholders in the
24 industry, and I quote, at their own discretion to guide their
25 operating practices. Despite the fact that Trinidad and Tobago
26 boasts a mature oil and gas sector as well as a shipping
27 industry, the powers that be have taken no step to regulate the

1 diving industry which plays an integral and supportive role in
2 these industries which employ thousands of men and women.

3 By any objective standard, this is simply an unacceptable
4 state of affairs. Our client's respectful recommendation is that
5 a regulatory framework be put in place for commercial diving
6 operations in Trinidad and Tobago. This would include
7 prescribing minimum certification for persons undertaking
8 commercial diving works, audit, and certification of schools,
9 providing instructions to such persons, inspection and audit of
10 diving equipment. We would expect that the said regulatory
11 framework would include robust powers of oversight,
12 enforcement, and prosecution of employers who depart from
13 what would now be a mandatory regulatory framework.

14 The interests we represent are of the considered view that
15 if such standards, even on all fours with the 2010 voluntary
16 standards annexed to the witness statement of Ms. Ramachala
17 of the TTBS, had been implemented, then the tragedy which
18 occurred on the 25th February, 2022, may very well not have
19 occurred, and in the event that a Delta P incident occurred, the
20 divers could and would have been retrieved through topside
21 tendering.

22 I will not seek in a detailed way to critique the actions or
23 inactions—Mr. Ramadhar has done that so much better than
24 me—of the main protagonist in respect of the circumstances
25 which led to this unfortunate tragedy. This task will also fall to
26 the learned Counsel to the Commission. I will, however, in a
27 very brief way, touch on certain evidence which has emerged in

1 respect of the work processes engaged by both Paria and
2 LMCS.

3 LMCS: it is clear from the testimony led before the
4 Commission that LMCS is a contractor with a considerable
5 track record in Petrotrin's and now Paria Trading Company's
6 operations. Indeed, in the year 2020, LMCS had undertaken
7 closely similar works to the riser situate at berth 5. LMCS
8 chose, as we heard, to execute the diving component of the
9 repair works to the riser at berth 6 using scuba equipment. This
10 methodology was clearly outlined by LMCS in its tender and
11 had been previously accepted by Paria during the then and
12 current works as well as previous works.

13 LMCS broke no regulatory provisions by using scuba
14 equipment to gain access to the habitat, which had been placed
15 over the work site, which was at berth 6 riser at Sealine 36,
16 because there was then, and still no regulatory provisions which
17 require the use of commercial diving equipment, which would
18 have involved surface supplied air and that the divers be
19 harnessed and tendered from the surface.

20 LMCS diving supervisors admitted that had the divers at
21 minimum been harnessed by ropes which could have been
22 attached to their respective hips, then when the Delta P event
23 occurred, they could have been retrieved immediately, and we
24 would not be here today, and the family members from whom
25 we have heard would not have experienced the heart-wrenching
26 hurt that must have been attendant not only with the accident
27 but with the management of same after the fact.

1 I share the Commission's sentiments that much more was
2 required to keep the families physically accommodated and
3 informed of the status of your loved ones, and the efforts, if
4 any, to rescue them.

5 We have heard and read much about the emergency
6 response plans of both Paria and LMCS, but it is now
7 unarguable that both these plans and the purported
8 implementation of same fell woefully short. By way of
9 example only, at core bundle page 883, the list of standby
10 divers who presumably would be available in the event of an
11 emergency included LMCS' dive supervisor, Andrew Farah,
12 who was not geared up to enter the water as required by
13 industry norms, as well as Rishi Nagassar and Fyzal Kurban
14 who were actually in the habitat and presumably involved in the
15 execution of the works.

16 In addition, LMCS did not appear to have put in place
17 hyperbaric chambers in the event that the divers were retrieved
18 after prolonged entrapment in the pipe. Christopher Boodram
19 was literally left to fight for a chamber, which he ultimately was
20 not afforded due to a false Covid-19 finding.

21 There is no evidence that specialized medical
22 practitioners or EMTs were put on standby or were, in fact, in
23 place either before the accident or after. It appears that there
24 were other divers such as Conan Beddoe, who we heard from,
25 were on a very loose standby arrangement, and could be called
26 out in the event of emergency, but such divers were not on site
27 or even in close proximity to Paria's operations. It is

1 noteworthy that LMCS' tender documents cited a number of
2 commercial divers who would be utilized in the contracted
3 works, but who did not appear to play any part in those works.

4 Whatever information was received from the GoPro
5 footage does not appear to have been shared with Paria's
6 personnel, and, in general, it appears that both Paria and LMCS
7 were operating in silos, and not in tandem to achieve the only
8 objective, which was to rescue the stricken divers.

9 There was no evidence that LMCS contemplated the risk
10 attendant to a Delta P event occurring, nor put in place any
11 contingencies to mitigate or manage that risk, or indeed to
12 respond to the outcome of same. To the contrary, by removing
13 an unquantified amount of line contents in Sealine 36 and
14 introducing air into the line, LMCS created the environment for
15 differential pressures to exist, which ultimately led to the Delta
16 P event, which caused the five divers to be sucked into the
17 pipeline. Even though LMCS was a well-experienced
18 contractor, they failed to recognize the inherent risk to their
19 divers in removing the habitat and the decommissioning of the
20 air compressor which was pumping oxygen into same, and for
21 that matter, removing the flange at berth 5.

22 Paria. Senior and more junior officers of Paria gave
23 evidence before the Commission. On the round, these
24 employees of Paria and/or Kenson were content to advance that
25 the contract put out to tender, and eventually awarded to
26 LMCS, was a turnkey one, and a specialist job for which a
27 competent specialist contractor had been sought. This position

1 was oft repeated starting with Mr. Hassan Mohammed.

2 It is pellucid that Paria relies on outsourced employees
3 and outsourced contractors to undertake not only its day-to-day
4 operations but also its technical work, such as repairs to
5 pipelines. From various testimonies given and tested, it
6 emerged that Paria does not have the technical expertise in-
7 house or through Kenson to evaluate technical tenders, and
8 more so to supervise or to monitor the resulting execution of
9 technical work.

10 Paria could only review or evaluate risk factors—this is
11 their evidence—which have been drawn to their attention—
12 which would have been drawn to their attention by LMCS.
13 Paria was not aware of the exact amount of the contents of
14 Sealine 36, and took measurement of what was removed either
15 into their slop barges or their tanks on shore.

16 There was a lack of clarity on the documentation as to
17 whether Sealine 36 was required to be fully drained or only
18 partially, so as to create such ullage to install the migration
19 barriers. The most telling evidence that Paria did not have the
20 technical know-how to manage the situation which evolved on
21 February 25, 2022, is its decision to operate in silos from the
22 specialist contractor, and indeed also from available personnel
23 with diving experience at Heritage Petroleum, its own sister
24 company.

25 Paria or its affiliate company, Heritage, called out several
26 diving experts: OTSL, Mitchell's Professional Diving, Hull
27 Support Services, and the TTCG, but aside from instructing

1 TTCG to stop divers from entering the pipeline to effect a
2 rescue of the four men, the aid and assistance of these specialist
3 diving companies was not put in train.

4 We know now that the TTCG divers were not trained nor
5 did they have the equipment to enter the pipeline. We know
6 that Mitchell's divers indicated they were too big to enter the
7 pipeline, and we know now that OTSL and Subsea Global
8 Solutions' vessels, equipment, divers and the supervisors on
9 these vessels, were told to stand by for instructions, which
10 ultimately did not come, and therefore they departed Paria—
11 their Paria berths early on Saturday, 26th February, 2022.

12 We know now that the reason that a rescue of the men
13 was not attempted was due to Paria's lack of knowledge of the
14 conditions in the pipeline and what obstructions were in same.
15 Ultimately it appears that the only identifiable obstruction was a
16 partially buoyant and therefore partially or fully empty dive
17 tank which Christopher Boodram was able to swim past, and a
18 crawler impaired by a slippery environment within the pipe,
19 was able to push some 19 feet.

20 Paria pursued ascertaining the line condition as a pre-
21 condition to an attempted rescue, but seemingly bypassed the
22 narrative of Christopher Boodram who had actually emerged
23 from the same pipe and therefore would have been the best
24 source of information which they so ardently pursued.

25 More than one Paria representative had close contact
26 and/or was in close proximity to Christopher Boodram but no
27 effort was made to speak to him to ascertain the location of the

1 divers and their physical condition, and the conditions in the
2 line. And one would presume that these were critical bits of
3 information which could be utilized to effect a rescue or to plan
4 a rescue.

5 In fact, it is only at almost 10.00 p.m. that Friday night
6 that a brief telephone communication was established between
7 Christopher Boodram and the ICT team. Accepting that
8 Boodram relayed that night—accepting what Christopher
9 Boodram relayed that night, the four remaining divers could
10 have been two seam lengths away from the end of the
11 horizontal of the pipe, even using Mr. Piper's estimation, which
12 was 120 feet away from the elbow, or in my calculation, which
13 is likely to be flawed, one-tenth of the length of horizontal pipe.

14 Even when it became clear that a borescope, an ROV and
15 a crawler could not successfully manoeuvre the pipeline, Paria
16 did not allow willing, able and available divers to attempt a
17 rescue, even though that by at least somewhere between 7.00
18 p.m. and 8.00 p.m. there was optimal equipment and
19 sufficiently trained and experienced commercial divers on site,
20 Paria has been pertinacious in its stance that they had to protect
21 the would-be rescuers who were trained and experienced divers
22 who could, with experienced and qualified dive supervisors,
23 device a safe entry and exit methodology. Instead, Paria called
24 Emergency Response Services, who are confined space
25 technicians, trained in rescues in dry environments and who had
26 no diving expertise.

27 Mr. Johnson's evidence, was, however, important, in that

1 he was able to explain that his company was not called until
2 almost midnight on Friday 25th, and he was not told that the
3 intended rescue would be a subsea one into a water-filled pipe.
4 Mr. Johnson's evidence was also important in that it explained
5 that a quick, dynamic assessment could be undertaken and a
6 rescue plan devised therefrom. Such a plan would not involve a
7 detailed written job safety analysis, a method statement and
8 other such documentation, which apparently Paria required in
9 order to permit the rescue of the men.

10 Mr. Donawa—Mr. Antonio Donawa and Mr. Krishna
11 Fuentes were ad idem that a rescue should be done as quickly
12 as possible. And it is also noteworthy that by the time that Mr.
13 Johnson arrives he's already told that he and his team should
14 expect a recovery effort and not a rescue effort.

15 We have heard from various Paria senior officials, one of
16 whom was brought to tears, and one of whom the Commission
17 allowed to vent his very pent-up angst. I and those whom I
18 represent do not believe that Paria was placed in an easy
19 position on the night of Friday, 25th February, but Paria must
20 accept that they made very wrong decisions on that night and
21 the day following, which ultimately cost these men their lives.

22 While Paria's officials were happy to distance themselves
23 from LMCS' work plan, because it was a turnkey contract,
24 where the company could rely on a specialist contractor, Paria
25 ultimately did not allow the same specialist contractor to
26 undertake or to coordinate a well-planned and well-equipped
27 rescue attempt.

1 Paria was not even prepared to rely on the diving
2 expertise residing with its sister company, Heritage. We heard
3 from Mr. Piper that an air hose—in his witness statement—that
4 an air hose should be sent down to the men in order to provide
5 air to them. We hear nothing further of that, other than that one
6 line in his witness statement. And ultimately, no such air hose
7 was sent to the men, whether through PVC or any other
8 mechanisms as Mr. Ramadhar has said.

9 In this Enquiry there were many villains, and I know
10 counsel here today will vilify and exculpate the protagonist in
11 equal turn. However, it would be remiss of me not to point out
12 the heroes. These were the voluntary rescue divers, who were
13 willing to risk life and limb to save their brother divers, and
14 asked for no reward to do so. These are the heroes.

15 On a final note, I wish to thank the many persons some of
16 them retirees of Petrotrin and Trinmar, who reached out to both
17 Mr. Hosein-Shah and myself to provide valuable information. I
18 particularly want to thank the honourable Commissioners, the
19 Chairman and Mr. Commissioner Wilson for their indulgences,
20 their graciousness, and their patience, both with Mr. Hosein-
21 Shah and myself. And I reiterate once again that the findings of
22 the Commission will find its way in the international fora that I
23 have described with the hopes that we can apply some degree of
24 pressure for the diving standards, at least, to be more robustly
25 put into a regulatory framework and robustly policed.

26 And I have one correction to make, so I don't want to fall
27 into unfortunate errors as another witness, that it was my error

1 when I indicated that Dr. Cheddie had been introduced to me by
2 the OWTU or some of their membership. That was entirely
3 correct. It's a separate person. I have spoken to a lot of people
4 in the last couple of months, so that was my error, and I
5 apologize if anybody was offended by that or took issue with
6 that.

7 And I would also say, judging from the front of one of
8 the daily newspapers—and I only caught the front page—he
9 was also not recommended by my own client, which is the
10 SWWTU. And as I said, the Chairman is quite correct. I have
11 been in practice long enough to see many a witness fall apart,
12 not, perhaps, in such a spectacular fashion, but certainly in
13 other ways. And I do thank my honourable friends—I can't say
14 at the Bar table—at the various tables to the side of me and to
15 the back of me and the honourable Commission's attorneys for
16 also their indulgences and kindnesses, and also for Ms. Sinanan
17 who I have harassed by email and otherwise for some time.
18 Thank you very much.

19 **Mr. Chairman:** Thank you very much. So what we will do
20 now—it's just five minutes past 1.00. As I said, I have a short
21 administrative matter to deal with this afternoon at five minutes
22 past 2.00, so we will resume at quarter past, please—quarter
23 past 2.00 for Mr. Pegus to address us. And you indicated that
24 you would be less than an hour in any event.

25 **Mr. Pegus:** Yes, Mr. Chairman.

26 **Mr. Chairman:** All right. Good. Well, that's where we'll
27 break off then, and I'll see everybody at quarter past 2.00.

1 Thank you.

2 **1.05 p.m.:** *Enquiry* suspended.

3 **2.15 p.m.:** *Enquiry* resumed.

4 **Mr. Chairman:** Good afternoon. Yes, Mr. Pegus.

5 **Mr. Pegus:** Good afternoon, Mr. Chairman.

6 Mr. Chairman, Mr. Wilson, I have some brief
7 submissions to make on behalf of my respective clients, Kenson
8 Operational Services Limited, Kenson Production Services
9 Limited and the individuals, Mr. Houston Marjadsingh, Andrew
10 Dobson, Kirt Scott and Rolph Seales.

11 I could not make these submissions without first
12 expressing my client's deep regret and sincere condolences to
13 the families who lost their loved ones as a result of this
14 incident. Secondly, Mr. Chairman, we wish to express our
15 gratitude to the Commission of Enquiry and its counsel who
16 have provided stalwart service to the nation. I now turn to the
17 submissions.

18 Mr. Houston Marjadsingh, Andrew Dobson, and Kirt
19 Scott are employees of Kenson Operational Services Limited.
20 Mr. Rolph Seales is an employee of Kenson Production
21 Services Limited. The evidence before this Commission shows
22 that Mr. Marjadsingh, Mr. Dobson and Mr. Scott were involved
23 in the ongoing works on the 25th February, 2022 at berth 6
24 Paria. These individuals who were connected to Kenson were
25 under the direction of Paria.

26 The fact that the work and the method of work which
27 they were doing was under the direction of Paria is not

1 challenged. And this fact was contained in my client's
2 respective witness statements. For instance, at paragraph two
3 of the witness statement of Andrew Dobson, which could be
4 found at page 3020 of the supplemental witness statement
5 bundle, he spoke of being under the direct supervision of Mr.
6 Paul Yearwood, the HSE Coordinator—Paria's HSE
7 Coordinator. He further indicated that he would usually take all
8 instructions from the said Mr. Yearwood. This fact was not
9 challenged by Paria.

10 Mr. Marjadsingh at paragraph two of his witness
11 statement which could be found at paragraph 3049,
12 supplemental witness statement bundle, spoke of being under
13 the direction of Paria's Maintenance Planner, one Mr. Terrence
14 Rampersadsingh. At paragraph nine of his witness statement,
15 page 3050 and 3051 of the supplemental witness statement
16 bundle, he outlined instructions he received from Mr.
17 Rampersadsingh on a daily basis.

18 The fact that Mr. Rampersadsingh—sorry. The fact that
19 Mr. Marjadsingh was Mr. Rampersadsingh's subordinate and
20 took instructions and directions from him, that is Mr.
21 Rampersadsingh, was confirmed by Mr. Rampersadsingh at
22 page 28, line 17 to 22 of his interview notes. So not only does
23 Mr. Marjadsingh say in his statement he was under the direction
24 of Mr. Rampersadsingh, Mr. Rampersadsingh did confirm that
25 in his interview with counsel for the Commission. And again,
26 this is something that was not challenged by Paria.

27 At lines 23 to 26 in specific reference to, again, Mr.

1 Marjadsingh, Mr. Rampersadsingh confirmed, even though
2 Marjadsingh was employed by Kenson, he worked out of
3 Paria's maintenance department. It follows that Kenson does
4 not fall within your Terms of Reference, and there is no basis
5 upon which your report would be required to deal with them.

6 This is consistent, Mr. Chairman, with the fact that the
7 Commission of Enquiry has not, at any time, identified Kenson
8 as a subject of this Enquiry under the Act. In this connection I
9 ask that you be aware that Kenson, my client, the Kenson
10 group, have a reputational interest that you are obligated to
11 protect. This is an interest that they take very seriously.

12 As to the individuals—and again I would list their names:
13 Marjadsingh, Dobson and Scott—all were under the direction
14 of Paria, and there was no suggestion that any of them was on a
15 frolic of their own on the 25th February, 2022, at the time that
16 this incident took place. Therefore, no question as to their
17 individual culpability arises with the exception, arguably, of
18 Houston Marjadsingh, which we address separately.

19 As far as your Terms of Reference go, these individuals
20 and Paria are effectively indistinguishable. No individual
21 responsibility can rest on them. I make the point again. In any
22 event, Mr. Chairman, their roles, again, with the exception of
23 Mr. Marjadsingh, were extremely limited. Mr. Marjadsingh,
24 Mr. Dobson and Mr. Scott, all outlined their roles on the day in
25 question in their respective witness statements, as per directions
26 given to them by Paria. And again it is to be noted that Paria
27 did not challenge this in these proceedings.

1 I first turn to Mr. Dobson. Mr. Dobson had a limited
2 function to perform on the day in question. At page 3 of his
3 witness statement, which could be found at page 3020 to 3021
4 of the supplemental witness statement bundle, he outlined his
5 duties on the day in question, as per instructions he received
6 from Mr. Yearwood. His role on the day in question did not
7 extend to supervising LMCS or the execution of the ongoing
8 work at Berth 6.

9 Kirt Scott was merely an offshore operator. He had
10 specific duties as outlined at paragraph two, page 3028 of the
11 supplemental witness statement bundle. Again, his role on the
12 day in question did not extend to supervising LMCS or the
13 execution of the ongoing work at berth 6. Even though there is
14 evidence before this Commission which shows that Mr. Scott,
15 this is, observed the splash on the monitor and alerted the dive
16 supervisor, Mr. Farah, that something went wrong, it was not
17 part of his duty to be stationed at the monitor. Let me repeat
18 that again. Mr. Scott—there is evidence before this
19 Commission that Mr. Scott was the one that observed the splash
20 on the monitor, and he alerted Mr. Farah that something was
21 wrong. Free-standing from that, Mr. Chairman, I ask you to
22 consider that it was not his duty to be stationed at the monitor.

23 In this regard we ask the Commission to note the
24 evidence of Mr. Archbald under cross-examination which can
25 be found at transcript dated 5th January, 2023, page 280, lines 7
26 to 15. There you would find a series of questions, Mr.
27 Chairman, which I put to Mr. Archbald, and he accepted that it

1 was not Mr. Scott's function to be stationed by that monitor.

2 Rolph Seales had nothing to do with the work at berth 6
3 on the day in question. He was called upon after the accident to
4 lend support, and had very limited involvement in this matter as
5 outlined in his witness statement, which could be found at page
6 3130 of the supplemental witness statement bundle. That is all
7 I would say on Mr. Rolph Seales. He effectively had nothing to
8 do with the incident on the day in question.

9 I now turn to Houston Marjadsingh. Houston
10 Marjadsingh's involvement was as an employee of Paria
11 working under the direction and reporting to Mr. Terrence
12 Rampersadsingh, which Mr. Rampersadsingh himself
13 confirmed. He came into focus because he was the applicant
14 under the permit to work procedure on the said 25th February,
15 2022. It is our respectful submission, Mr. Chairman, that this
16 focus was unwarranted.

17 The permit to work procedure was used in these
18 proceedings repeatedly as if it embodied Houston
19 Marjadsingh's obligations in connection with the works. We
20 respectfully disagree that the permit to work procedure can be
21 used in this manner. There was no evidence as to how the
22 permit to work procedure was supposed to work when a
23 contract for specific works was in existence, as was the case
24 here. I ask you to consider that.

25 There was no evidence that the permit to work procedure
26 was a contractually binding document at all. That is our
27 respectful submission. There was evidence, however, adduced

1 under cross-examination, from Mr. Mushtaq Mohammed and
2 Mr. Randolph Archbald as to the status of the permit to work
3 procedure, but no evidence was produced by the Commission
4 of Enquiry itself.

5 Mr. Mohammed stated under cross-examination that the
6 obligations under the permit to work procedure were general
7 guidelines only. He stated this. So that different people with
8 different roles would have an idea, or they would have
9 guidelines around what their roles were in the execution of the
10 works. This could be found at transcript dated 4th January,
11 page 2023. Sorry, 4th January, 2023, page 254, line 24, to page
12 255 line 2. Archbald stated under cross-examination that there
13 are rules and responsibilities that must be followed. This was
14 stated on the 5th February. It can be found in transcript, page
15 258 line 27, to page 259 line 1.

16 It is to be noted, however, that under cross-examination
17 Mr. Mohammed also stated that there is nothing the
18 Commission could refer to to determine what was the intention
19 behind the permit to work procedure. That is in evidence, and
20 it could be found on page 259, transcript dated 4th January,
21 2023.

22 We respectfully—

23 **Mr. Chairman:** Sorry, just a moment. What do you say that it
24 is, then? What is the permit to work? What is its purpose?

25 **Mr. Pegus:** Well, the permit to work procedure, respectfully,
26 Mr. Chairman, sets out its purpose on the beginning of the
27 document which could be found on page 24 of the core bundle.

1 It has what its purpose is. Our respectful submission is that
2 there was no evidence to suggest that this was incorporated into
3 the contract that existed between LMCS and Paria.

4 **Mr. Chairman:** But how can you carry out a contract if you
5 don't get a permit to work?

6 **Mr. Pegus:** Can you repeat the question, please?

7 **Mr. Chairman:** Yes. How can you carry out the contract if
8 you do not obtain a permit to work.

9 **Mr. Pegus:** How can you carry out the contract if you do not
10 obtain the permit to work?

11 **Mr. Chairman:** Yes. You need the permit to work in order to
12 meet the terms of the contract.

13 **Mr. Pegus:** Yes, but there is no provision in the contract, Mr.
14 Chairman, which incorporates the permit to work procedure. I
15 have looked at the contract.

16 **Mr. Chairman:** I know. I can assure you. My concern is that
17 if you were seeking to separate completely the permit to work
18 from the contract, I'm not clear what you are saying the status
19 of the permit to work is.

20 **Mr. Pegus:** Well, Mr. Chairman, respectfully, there are some
21 questions that I am about to outline, which we say must be
22 answered, because this was a problem in these proceedings—
23 what the status of the permit to work is in the face of a contract
24 between the two parties. It is something that the Commission
25 would have to consider.

26 **Mr. Chairman:** I appreciate that you were at pains to make
27 that point during some of the cross-examination. I am slightly

1 concerned about the approach to be taken, because you
2 suggested, and it was a draft, that the permit to work procedure
3 was a guideline. It is not a guideline. It is something that must
4 be adhered to. It follows from that, that you must obtain a
5 permit to work. In order to carry out the contract that's been
6 entered into between the parties, you have to obtain the permit
7 to work. There's no other way of doing the work or meeting
8 the contract without—

9 **Mr. Pegus:** Does the contract say that?

10 **Mr. Chairman:** If it's not explicit, it is certainly implicit.

11 **Mr. Pegus:** Well, I mean, it's open for you to make that
12 finding, Mr. Chairman, but our submission is that it was not
13 incorporated into the contract.

14 **Mr. Chairman:** No, no. Well, formally, maybe not. How is it
15 that you are to perform if you do not obtain a permit to work?
16 How do you perform the contract?

17 **Mr. Pegus:** Well, you see—and that is one of the issues that
18 we have with the permit to work. There was no evidence led
19 before this Commission which would basically inform us as to
20 what was the status of the permit to work procedure, having
21 regard to the existence of a contract between the parties.

22 **Mr. Chairman:** Separate for a moment the procedure from the
23 actual permit to work. There is a procedure to obtain a permit
24 to work, and then you have the permit to work.

25 **Mr. Pegus:** Yes.

26 **Mr. Chairman:** Do you accept that you must obtain a permit
27 to work before the work can be carried out?

1 **Mr. Pegus:** I do accept that.

2 **Mr. Chairman:** All right. And in order to obtain that permit
3 to work, you have to follow the procedure laid out by Paria?

4 **Mr. Pegus:** It was the contractor's obligation to follow that
5 procedure. I have not seen a specific provision—

6 **Mr. Chairman:** I follow, I follow that it is the contractor's
7 obligation to follow the procedure. The procedure is Paria's.

8 **Mr. Pegus:** Yes.

9 **Mr. Chairman:** Right. So Paria has the procedure to obtain a
10 permit to work.

11 **Mr. Pegus:** Yes.

12 **Mr. Chairman:** None of that is effective unless you have a
13 contract with them. I can't just go and apply for a permit to
14 work over at Paria. You have to have a contract in the first
15 instance, don't you?

16 **Mr. Pegus:** Well, in this case, yes.

17 **Mr. Chairman:** Right. Let's deal with this case. All right?

18 **Mr. Pegus:** Yes.

19 **Mr. Chairman:** If you have a contract to work between
20 LMCS and Paria, the only way LMCS can meet that contract is
21 to turn to Paria's procedure for the permit to work, observe that
22 procedure, and then apply for the permit to work.

23 **Mr. Pegus:** Yes, they were—

24 **Mr. Chairman:** Then you get the permit to work and then you
25 can carry it out.

26 **Mr. Pegus:** Yes. And they were obligated to do that under the
27 contract.

1 **Mr. Chairman:** Right. So I don't really understand what your
2 point is.

3 **Mr. Pegus:** With respect to what, Mr. Chairman?

4 **Mr. Chairman:** You are saying that there is nothing to show
5 that the permit to work is part of the contract.

6 **Mr. Pegus:** That is our respectful submission.

7 **Mr. Chairman:** Yes.

8 **Mr. Pegus:** I have not seen a specific—

9 **Mr. Chairman:** How does that impact on the decisions that
10 have to be made here? How does it help us determine the
11 responsibilities or whether they were followed or not? LMCS'
12 duty, once they had obtained this contract, was to go to Paria's
13 permit to work procedure, observe it, and obtain the permit.
14 Their case is well you might have obtained the permit, but the
15 permit doesn't permit you to do what you did. That is their
16 position.

17 **Mr. Pegus:** Yes.

18 **Mr. Chairman:** That is a position I readily understand.

19 **Mr. Pegus:** Yes.

20 **Mr. Chairman:** What I don't understand is the way in which
21 you are putting it. It's as though—what am I supposed to do
22 with the permit to work, then, in respect of your client?

23 **Mr. Pegus:** Well—and what we are saying is that there is no
24 evidence before this Commission which would inform the
25 Commission how to treat with the permit to work procedure.

26 **Mr. Chairman:** Right.

27 **Mr. Pegus:** That is our respectful submission.

1 **Mr. Chairman:** There's no evidence before us as to how to
2 treat the permit to work procedure?

3 **Mr. Pegus:** Yes. And I mean it's apparent from the confusion
4 by Paria's own witness. The general manager has a different
5 interpretation as to the status of the permit to work procedure
6 than the man who drafted the permit to work procedure himself.

7 **Mr. Chairman:** That is has not passed us by, that there is
8 some confusion as to how it's to be applied. There is some
9 confusion about who the applicant is; what his role is. That I
10 entirely understand.

11 **Mr. Pegus:** Yes.

12 **Mr. Chairman:** And some focus has been played upon it by
13 many of the parties.

14 **Mr. Pegus:** Yes.

15 **Mr. Chairman:** Including ourselves. I don't see how that—
16 what I don't understand, and what I'm not following from you
17 is how does it make the slightest bit of difference to make the
18 assertion that you do, that the permit to work is not part of the
19 contract? How does that help you?

20 **Mr. Pegus:** How does it?

21 **Mr. Chairman:** Help you on behalf of your client?

22 **Mr. Pegus:** Well—

23 **Mr. Chairman:** Suppose I was to accept, all right, it's not part
24 of the contract? So what?

25 **Mr. Pegus:** This is my understanding, and I could be wrong.
26 In these proceedings the permit to work procedures—I'm
27 focusing specifically on clause 5.1 of the permit to work

1 procedures—it was used to suggest that the applicant on the day
2 in question, Mr. Marjadsingh, who I represent, had some
3 supervisory role to perform. Because that is in effect what 5.1
4 says.

5 **Mr. Chairman:** Yes.

6 **Mr. Pegus:** That is in effect what 5.1 says; right?

7 **Mr. Chairman:** I agree.

8 **Mr. Pegus:** Good. Our issue with that is that there was a
9 contract between the parties for the execution of the works and
10 in that contract, LMCS had an obligation to provide full time
11 supervision. I have not seen an express provision in the
12 contract which incorporated the permit to work procedure.
13 What I have seen is separate provisions which says that the
14 contractor, LMCS, supposed to abide by the permit to work
15 procedure. I believe it's specifically stated at clause 8, which is
16 something I would get to.

17 **Mr. Chairman:** It's certainly in there. I agree.

18 **Mr. Pegus:** Right.

19 **Mr. Chairman:** Precisely where, I am not—

20 **Mr. Pegus:** Right; good. There is confusion—and you are
21 asking—

22 **Mr. Chairman:** Are you saying your client is confused?

23 **Mr. Pegus:** No.

24 **Mr. Chairman:** Is that your submission; that he was confused
25 about his role?

26 **Mr. Pegus:** No. I'm not saying that my client was confused
27 about his role. What I'm saying is that there is confusion with

1 respect to how the permit to work procedure is treated in the
2 face of a contract.

3 **Mr. Chairman:** You're pushing at an open door. I agree with
4 that entirely. I simply don't get the point you're making about
5 it not being included in the contract. So what difference does it
6 make on the basis—without having to decide whether it is or is
7 not part of the contract?

8 **Mr. Pegus:** Right. The difference is—

9 **Mr. Chairman:** We understand that in order to get to do the
10 work you have to follow the procedure and get a permit.

11 **Mr. Pegus:** Yes.

12 **Mr. Chairman:** Both of those things apparently were done.

13 **Mr. Pegus:** Yes.

14 **Mr. Chairman:** The extent to which people understood
15 precisely what it was and what it means is an issue in this
16 matter.

17 **Mr. Pegus:** Yes.

18 **Mr. Chairman:** And one which we are obviously engaged in
19 considering.

20 **Mr. Pegus:** Yes.

21 **Mr. Chairman:** To that extent you are pushing an open door.
22 I agree with you. But I don't understand the point about it not
23 being—

24 **Mr. Pegus:** So the difference it makes, Mr. Chairman,
25 respectfully, is this. If the Commission accepts that the permit
26 to work procedure was not incorporated into the contract, then
27 there would be no basis, Mr. Chairman, for an advancement to

1 be made that Paria was obligated to supervise the execution of
2 the works.

3 **Mr. Chairman:** I want to get this down. No basis for an
4 advancement to be made that Paria—

5 **Mr. Pegus:**—had an obligation to supervise the execution of
6 the works.

7 **Mr. Chairman:**—had an obligation to supervise the works. So
8 if we are to conclude that—your point then is that if we are to
9 conclude that the work permit system incorporating the
10 procedure and the permit itself, that work permit system is not
11 part of the contract, there is no basis for an advancement to be
12 made that Paria had an obligation to supervise the works?
13 That's your point, is it?

14 **Mr. Pegus:** Yes. Yes.

15 **Mr. Chairman:** Right.

16 **Mr. Pegus:** Now, I know our back and forth may have covered
17 some of the rhetorical questions that I had posed in my
18 document, but I will still—

19 **Mr. Chairman:** I'm sorry if I've knocked you off your stride.
20 Feel free to proceed on the basis that you were planning to
21 proceed.

22 **Mr. Pegus:** Now, on what basis is the permit to work
23 procedure being used as the document which contained the
24 standard of conduct required to be achieved by the participants
25 and not the contract? On what basis will you not find that the
26 permit to work procedure was displaced by the contract as
27 regards Paria? These are some questions that I posed.

1 Now, under clause 8 of the contract, between LMCS and
2 Paria it states: Contractors and contracted personnel are
3 required to follow the permit to work procedure and standard
4 work instructions at all times. Contractors shall ensure that all
5 relevant employees receive the permit to work training—

6 **Mr. Chairman:** That's paragraph which?

7 **Mr. Pegus:** Okay. This could be found in the scope of works
8 which outline the contract between LMCS and Paria, and I'm
9 reading specifically clause 8.0.

10 **Mr. Chairman:** Eight point zero.

11 **Mr. Pegus:** Eight point zero. And if the chairman permits me,
12 I will get the actual page number. A moment please, Mr.
13 Chairman. *[Pause]* I am looking at page 579 of the witness
14 statement bundle. The contract again was attached to the
15 statement of Mr. Kazim Ali Sr.

16 **Mr. Chairman:** Okay, yes. It's in another place.

17 **Mr. Pegus:** Yes, it is also in the—now clause 9—may I
18 proceed, please?

19 **Mr. Chairman:** Yes, please do.

20 **Mr. Pegus:** Clause 9 is one of several clauses in the contract
21 which provides for contractor supervision. It reads:

22 "The contractor shall provide competent supervision at
23 all times during the execution of the job. Contractor
24 supervision must ensure that all employees on the job are
25 aware of the hazards related to the job and the relevant
26 control measures."

27 As to the contract, Mr. Chairman, it is plain that LMCS

1 was obligated to provide full time supervision. It is our
2 submission that that makes commercial and common sense as
3 they were the experts. We ask the Commission to note that
4 both Paria and LMCS knew at all times the works would be
5 subsea, and that Paria were not experts in this particular type of
6 work.

7 Now, upon a perfunctory comparison of the permit to
8 work procedure and the contract, there is overlap as to
9 supervision. And as we established earlier, this has led to much
10 confusion in these proceedings. We submit it makes no
11 commercial sense to have two sets of supervisors with the same
12 sphere of oversight for one set of work, especially specialist
13 works as was the case here. This would lead to inefficiency and
14 confusion in the event of a disagreement as to how the works
15 were to be performed, and makes no commercial sense. I want
16 to pause here for a moment. I see—

17 **Mr. Chairman:** I think that that's a point well made. What I
18 am concerned to know is whether or not you take the view that
19 there might have been oversight at an earlier stage when the
20 initial scope of works and the tender was being made, so as to
21 include an independent assessor of the work that was to be
22 done; the emergency response plan; the various other
23 documents that were necessary in order to win the contract;
24 whether an independent person might have been employed to
25 have tested that.

26 **Mr. Pegus:** I totally agree. I totally agree. Because—

27 **Mr. Chairman:** Whilst I accept, you know, that it might not

1 be necessary for that person to then—I mean, it would depend
2 on each individual firm, I suppose, but it might not be necessary
3 for that person to then carry out the supervision of the job work
4 itself—

5 **Mr. Pegus:** Correct.

6 **Mr. Chairman:**—that it may not be necessary if that expert,
7 for want of a better expression, had considered all the papers as
8 advanced by LMCS, and agreed that they accurately
9 represented both in terms of the work to be done and the order
10 in which it should be done, the work that needed to be
11 undertaken, and if that had been done, then perhaps we
12 wouldn't have been in the situation that we are in.

13 **Mr. Pegus:** This is a point that you, Mr. Chairman, made
14 during these proceedings, and I totally agree.

15 **Mr. Chairman:** Right. So you wouldn't be opposed,
16 representing your clients as you do, to the idea that whatever
17 level of supervision any Kenson employee might have been
18 expected to have applied, be it intermittent, every four hours, or
19 whatever it was, whatever level of or oversight, call it what you
20 will, whatever that was, all of that would have been made much
21 simpler had there been some independent review of the
22 application in the first place.

23 **Mr. Pegus:** Yes. And as we are on the point of standard
24 supervision, I would just like to make one point, which I don't
25 have included here. Even if this Commission is to take the
26 view that Paria, under the permit to work procedure, had some
27 supervisory role to play as regards the works that were going on

1 at Berth 6, it is clear from the evidence that that standard of
2 supervision was lower than that which LMCS was to perform.

3 **Mr. Chairman:** Yes.

4 **Mr. Pegus:** Right. And that was driven home for me from the
5 cross-examination of Mr. Randolph Archbald, when I said that
6 Mr. Marjadsingh was only obligated to supervise what it is he
7 could see, or as much as he can see.

8 **Mr. Chairman:** I mean, I think that that's a matter for
9 consideration by us. Also the suggestion that perhaps, every
10 four-hours was sufficient. Those sorts of things we will
11 obviously review. But you are pushing again at an open door
12 that LMCS clearly had an obligation to review the work
13 continuously and whatever level of monitoring, oversight,
14 supervision might be laid at the door of Paria, the fact remains
15 that it was going to be, on the face of it, it would be your case,
16 less than LMCS'.

17 **Mr. Pegus:** Yes, Mr. Chairman.

18 **Mr. Chairman:** I understand.

19 **Mr. Pegus:** Yes. Now, we submit—I believe I made that point
20 before. Yes. Now, I do here have, Mr. Chairman, some
21 questions that I posed, which I would want to read into the
22 record. It may be that expert evidence as to the industry
23 practice would have assisted the Commission if it was intended
24 to suggest or enquire into the possibility that the permit to work
25 procedure placed a fulltime supervisory role on Paria, but no
26 such evidence was led by this Enquiry.

27 What is the practice in the industry? The risk is always

1 on the specialist contractor as we say should be obvious and
2 make sense, or is this risk shared? Do the prices under the
3 contract vary according to the allocation of that risk? Was the
4 cost here commensurate with the risk being shared? Does the
5 fact that the works were subsea and could not be seen properly
6 by Paria not negate any obligation to supervise? That is a fact
7 that was known by all; the ability to see exactly what was going
8 on in the chamber subsea.

9 **Mr. Chairman:** Well, there was a camera.

10 **Mr. Pegus:** Yes. And even with that camera there wasn't a
11 full view, as the evidence came out. The permit to work
12 procedure—this is our respectful submission, and ultimately,
13 we know, it's for the Commission to decide.

14 The permit to work procedure cannot have placed a
15 contractual obligation on Paria because that is not what the
16 contract says. If the permit to work procedure was binding
17 notwithstanding the existence of a contract, then evidence to
18 that effect was required. In the absence of evidence of that
19 nature, we respectfully suggest that you ought not to find that
20 the permit to work procedure was more than a guideline.

21 Now, I know earlier we had a back and forth over this
22 permit to work procedure.

23 **Mr. Chairman:** I'm not going to do that again. I mean, I have
24 serious reservations about that submission. That is your
25 submission.

26 **Mr. Pegus:** Yes. Right. Now, in terms of recommendations—
27 and I want to be careful with respect to how I craft this.

1 Ultimately, one of the things I see the Commission would have
2 to make a recommendation on is how to improve the execution
3 of works of this nature. And this would have to be done in the
4 absence of evidence as to how works of this nature are
5 ordinarily contracted for and performed. This is just something
6 I put out for consideration.

7 **Mr. Chairman:** Say that again.

8 **Mr. Pegus:** In terms of recommendations, as I see it, one of
9 the recommendations that the Commission would have to make
10 is how to improve the execution of works of this nature on any
11 view, whether we like it or not. There was a problem with the
12 way it was done. And what I'm saying, Mr. Chairman, is that
13 the Commission would have to make this recommendation in
14 the absence of evidence as to how works of this nature are
15 ordinarily contracted for and performed.

16 **Mr. Chairman:** There are international standards we can look
17 to.

18 **Mr. Pegus:** Okay. Well, yes, I agree with that. But I—

19 **Mr. Chairman:** Don't need the evidence for that. I mean, I've
20 got it.

21 **Mr. Pegus:** I'm just putting it out there. It would be
22 something for this Commission's consideration.

23 Now, before I close, on behalf of my clients, I would just
24 like to express gratitude again to the Commission for
25 accommodating us and giving us the opportunity to participate
26 in these proceedings, and unless I can assist you further, these
27 are the respectful submissions I wish to make on behalf of my

1 clients.

2 **Mr. Chairman:** Not at all. Thank you very much indeed for
3 your submissions. I appreciate it.

4 **Mr. Pegus:** Much obliged.

5 **Mr. Chairman:** Right. Well, that takes us for a change to a
6 very early end to the day. I think we are entitled to a few of
7 these on the basis we've had some very, very late days. So we
8 will adjourn now and—I'm sorry.

9 **Mr. Peterson SC:** I was looking at my watch to see if it was
10 defective. [*Laughter*]

11 **Mr. Chairman:** So we will adjourn now, and then we will
12 hear tomorrow from the—first of all from counsel for LMCS,
13 and then we'll hear from counsel from Paria. Have you made
14 up your mind yet as to who is going to be doing or are you
15 going to do a tandem act?

16 **Mr. Peterson SC:** If we will do what, Sir?

17 **Mr. Chairman:** A tandem act.

18 **Mr. Peterson SC:** Are we allowed to? If we do, it would
19 make life easier for both myself and Mr. Mootoo.

20 **Mr. Chairman:** I'm not going to stop you. If you think that
21 we would be greater assisted by one of you concentrating on
22 one aspect of the evidence and somebody else on some other
23 aspect, and that would allow you to be able to address us in a
24 more efficient way, then I'm not going to stop you from doing
25 that.

26 **Mr. Peterson SC:** Whichever mode we adopt, we give the
27 undertaking we will stay within the given—the suggested time

1 frames.

2 **Mr. Chairman:** Well, that's really principally what I'm
3 concerned with, that we (a) hear your submissions in the best
4 possible light, and, (b), that it's constrained in the two hours
5 that you have allotted.

6 **Mr. Peterson SC:** Thank you, Sir.

7 **Mr. Chairman:** All right. Well, thank you very much indeed.
8 See everybody tomorrow morning at ten o'clock, I think I said;
9 yes, ten o'clock.

10 **2.52 p.m.:** *Enquiry adjourned.*

1 **EVIDENTIARY HEARING DAY 17**

2 **10.00 a.m.:** *Enquiry commenced.*

3 **Mr. Chairman:** Good morning. Can I deal first of all, please,
4 with the timetable? Because—just give me one moment—I
5 think I said two days in March, we changed it to two days in
6 March, which was the, er—for viewing of the habitat and
7 should it be necessary to hear any further evidence, which I
8 fervently hope is not necessary, but I think I identified the 14th
9 and 15th of March. Is that correct? I discovered that my flight
10 from Doha on the 13th does not get me in in time in Miami to
11 be able to get here until the next day. So I'm going to ask that
12 it's the 15th and 16th, if that is a hopefully not insurmountable
13 difficulty for anyone. Is that all right? All right, lovely, thank
14 you.

15 So it's going to be 15th to view the habitat, Mr. Peterson,
16 if that's possible. You can tell your clients that that's what
17 we'd like to do, and then the 16th as a backup day should it be
18 necessary. As I say, I firmly hope that it's not. But that's
19 where we are at the moment so that we can make it to the 15th
20 to view the habitat, and then, Sarah you'll be able to advise
21 everybody else that that is the date for the view.

22 **Mr. Peterson SC:** I'll arrange it [*Inaudible*]

23 **Mr. Chairman:** Lovely. Thank you very much indeed. Right.
24 Can I ask you what is your anticipated length of your address?
25 I'm not holding you to it but give me some sort of idea.

26 **Mrs. Persaud Maraj:** I believe it may be within the two hours
27 or at least the two hours.

1 **Mr. Chairman:** Right.

2 **Mrs. Persaud Maraj:** I tried to—

3 **Mr. Chairman:** No, that's fine. But if you want to take a
4 short break in the middle of that, and it may be if I don't my
5 colleague might, so pick a moment, just a—we could just take 5
6 minutes if necessary, but, whatever it is, you know, going for
7 two hours without stopping is quite a long time to be on your
8 feet, so, feel free to pick a moment and we'll just take a short
9 break. All right?

10 **Mrs. Persaud Maraj:** Certainly.

11 **Mr. Chairman:** Lovely. Thank you very much indeed. Yes.

12 **Mrs. Persaud Maraj:** Good morning, Mr. Commissioners.
13 One must take care not to cause injury to others but there is no
14 general duty for the benefit of others. The rule is that I must
15 not harm my neighbour misfeasance, not that I am required to
16 save him, nonfeasance. The very parable of The Good
17 Samaritan which was invoked by Lord Atkins in *Donoghue v*
18 *Stevenson* illustrates in the conduct of the priests and the Levite
19 who passed by the other side an omission which as likely to
20 have caused, as its reasonable and probable consequence,
21 damage to the health of the victim of the thieves, but for which
22 the priest and the Levite would have incurred no civil liability
23 in English law. That's an excerpt taken from Winfield and
24 Jolowicz on TUCS, 13th Edition at page 92.

25 It seems that this legal provision is the guiding light
26 which pervades Paria's stance taken from the onset of their
27 position on the scope of works to the decision not to permit a

1 viable or a rescue plan from being mounted in order to save the
2 men trapped in a 30-inch pipeline at Sealine 36 on the night of
3 February 25th, 2022.

4 Scope of works:

5 Contrary to reasonable commercial considerations, industry
6 standards and specifically stated conditions as expressed in the
7 scope of works provided by Paria, Paria Fuel Trading Company
8 Limited seems to be saying to this Commission that the contract
9 itself between itself and LMCS was on a turnkey contract basis.
10 I've extrapolated from various sources the very basic feature of
11 what a turnkey contract is and those things are the design,
12 sourcing of materials, control or substantial control of site and
13 completion time, entirely on the contractor.

14 The turnkey concept of contract envisions that the
15 contractor takes charge of the project. It is not subjected to a
16 system requiring approvals and permits and vesting in the asset
17 owner a stop policy. That is directly contradicted to that
18 concept. In fact, in Paria's investigation report, they
19 themselves were not convinced that the contract was a turnkey
20 project. At page twelve hundred of the core bundle at clause
21 1.9, it states:

22 "Paria contracted LMCS Limited to execute a turnkey
23 type contract entitled miscellaneous repairs and
24 refurbishment works at number 5 and number 6 berths."

25 This report was subsequent to the incident, just to be clear.
26 This scope of work was, according to Paria's code system,
27 under code 8107, for installation and maintenance work which

1 is a category designated by them as high-risk works. And I
2 refer to page 7701 of the bundle of submissions. This particular
3 code is instrumental in deciphering, one would expect, the
4 contract and commercial considerations for the job to be
5 tendered. The inherent high-risk component of the contracted
6 works therefore placed its execution to be subject to permit to
7 work/standard work instruction/safety rules requirement. And I
8 take that specifically from the scope of works at paragraph 8.2
9 provided by Paria.

10 There is no inference of the fact of this condition. It is
11 expressed. It follows, in the context of industry standards, Paria
12 did not attempt at this initial stage of its contract to extricate
13 itself from this duty and the standard contained in their permit
14 to work, standard work instructions and safety rules. Paria's
15 position advanced after the 25th of February is, however,
16 different. I have read and flicked and read and perused the
17 scope of works from which Paria's conditions of work were
18 expressed and I'm still to find one clause which expresses that
19 any of the contracted bidding for this scope of work was to
20 provide expertise, that is to say, advice on the job.

21 We can accept that the contract is for specialist services
22 and equipment but this is very different from the argument
23 being mounted by Paria, or what seems to be mounted by Paria,
24 that they required expert advice and the expertise. At the very
25 introduction, and we have gone through this during the course
26 of cross-examinations of the witnesses, at 1.0 of the scope of
27 work at Paria's page 560 of the core bundle, it says:

1 “Paria Fuel Company Limited is seeking to engage the
2 services of an experienced and qualified construction and
3 fabrication contractors for the execution of miscellaneous
4 works detailed below.”

5 This scope of works is the basis of what Paria required. It is a
6 document being communicated to a number of contractors that
7 are registered under the service code 8107 which, according to
8 the statement from Paria’s Mr. Rajendra Mahase, has some 259
9 recommended applicants. I’m not sure what amount of
10 applicants were approved but at least those were the
11 recommended applicants for the purpose of those kinds of work
12 that LMCS had performed.

13 **Mr. Chairman:** The work extended beyond just the Sealine
14 though, didn’t it? It included, did it not, work on the handrails
15 and various other aspects of the overall bid?

16 **Mrs. Persaud Maraj:** Yes. Yes. There were three
17 components to this particular contract.

18 **Mr. Chairman:** Yes.

19 **Mrs. Persaud Maraj:** So it’s—

20 **Mr. Chairman:** Not all of which would have required the kind
21 of expert or specialist services, whichever way one wants to put
22 it, not all of which would have required that—

23 **Mrs. Persaud Maraj:** Not that degree, please, I agree.

24 **Mr. Chairman:** Right, all right.

25 **Mrs. Persaud Maraj:** I invite you, Mr. Chairman and Mr.
26 Commissioner, to look at this scope of works and come to the
27 very quick conclusion that Paria is peddling a narrative of

1 turnkey and specialized contractor and expert in attempting to
2 do nothing more than to shift the duty of care to ensure a safe
3 system of work from itself to squarely land on the shoulders of
4 LMCS Limited. Paria has a clear appreciation of the difference
5 between service contract and advice contract. They must have.

6 I pause to bring to the attention of the Commission, I
7 heard my learned friend for Kenson's submissions yesterday. I
8 know that I wasn't present personally. But it seems to me that
9 Kenson's position is now or is being advocated to be different
10 from the treatment of which the workers of Paria had been
11 treated with in this Commission and indeed by LMCS. Let me
12 explain just a little bit.

13 For all intents and purposes, work conducted in the, in
14 the premises of Paria Fuel Trading Company Limited, which
15 are to be monitored or whatever other duties devolve to Paria's
16 personnel, whether they be Paria in employment or Kenson in
17 employment, were always and at all material times treated as
18 Paria. In other words, there was an agency understanding. The
19 fact that this may be an issue that has peeked its head, I know
20 that the contract between Paria and Kenson has been deemed
21 privileged.

22 It is my humble submission that, having regard to that
23 argument, if indeed I have my friend's argument correct, would
24 necessarily break that shield of privilege that was awarded to
25 Paria and Kenson in relation to that contract because then the
26 obligations, as I understand it the obligations which devolve to
27 Kenson and Paria's personnel, if it is indeed that they're saying

1 that Kenson's personnel did not have the same or equal
2 requirements and duties as a Paria employed personnel, then the
3 contract arrangement will have to be investigated.

4 **Mr. Chairman:** Are you making such a formal application?

5 **Mrs. Persaud Maraj:** It's, it's not an application, please, but,
6 should it become an issue that this honourable Chairman as a
7 fact-finding Commission sees as an issue, it has not been an
8 issue throughout the course of these proceedings.

9 **Mr. Chairman:** No.

10 **Mrs. Persaud Maraj:** But if it—

11 **Mr. Chairman:** Well, can I reassure you of this much, that if
12 we deem that it is crucial to our decision-making process, that
13 we require sight of the contract or the contractual relationship
14 between Paria and Kenson, then we will convene a hearing for
15 you to argue why we should have it, and for us to consider why
16 it might be necessary and for Paria to be able to respond to that.
17 At the moment, I don't see the need for that at all. All right?
18 So that you can be reassured that if we found that it was
19 necessary or thought that it might be necessary or that it might
20 disclose some additional feature that we hitherto don't have,
21 then certainly that's something I will bring to the parties'
22 attention, and, if necessary, we'll have an argument about it but
23 at the moment I don't see that that's necessary.

24 **Mrs. Persaud Maraj:** I'm grateful. The confirmation that
25 LMCS understood that it was a job for the provision of services
26 and equipment are contained in LMCS' proposal contained in
27 the core bundle at page 654 where LMCS confirms that the

1 work entails the provision of labour, equipment, material as
2 specified and supervision for the civil works required. At core
3 bundle page 658 the work-plan would be carried out as follows.
4 LMCS will work with Paria Fuel Trading Company Limited to
5 confirm all engineering requirements for the contract prior to
6 the placement of purchase orders for equipment and material,
7 Paria Fuel Trading Company Limited and LMCS will conduct
8 job hazard analysis, JHAs, and risk assessments as required for
9 all activities associated with the project.

10 And at core bundle page 656 which says: project control,
11 progress measurements and reporting frequencies and formats
12 will be determined by LMCS and Paria Fuel Trading Company
13 Limited project teams. Paria's reliance on LMCS' expert
14 advice in whichever incarnation of the term is plainly
15 unsupported and ought to be rejected by this Commission as a
16 matter of fact.

17 Expert:

18 The value of having an expert contractually called a
19 project consultant or a project engineer I submit is the
20 fundamental basis upon which Delta P event leading to the
21 death of the four LMCS workers rests for several reasons. The
22 first place, the development of the scope of works lacks crucial
23 information on the layout of Sealine 36. A schematic was
24 presented. There may be no fault on the face of this drawing
25 but it is clearly misleading. To date—

26 **Mr. Chairman:** Which drawing you're talking about?

27 **Mrs. Persaud Maraj:** The schematics that is contained in the

1 tender.

2 **Mr. Chairman:** In the tender itself?

3 **Mrs. Persaud Maraj:** In the scope of works, in the scope of
4 work. There's that line drawing. To date, we still don't know
5 the exact bottom profile of Sealine 36. The system, it seems
6 from the evidence, is of some vintage. The contract carried out
7 by LMCS I am sure will not be the last of contracts to be
8 performed on the system. Paria had and continues to have a
9 duty to contractors to provide services—who are contracted to
10 provide services on its system to have a comprehensive
11 inspection report. This seems to be, at the very least, common
12 sense.

13 The second aspect of the scope of work deficiency is the
14 glaring lack of the expertise to evaluate the intricacies which
15 this job required. Paria's tender note at page 928 of the core
16 bundle raised:

17 "LMCS has demonstrated that in their prior performance
18 that they have the required management and resource
19 competencies to satisfy the contract requirements."

20 And at page 931 under the rubric "Technical Evaluation" the
21 note simply states:

22 "A technical evaluation of five bids submitted was
23 conducted by technical and maintenance department and
24 only one bid submission was found to be technically
25 compliant with the requirements of the scope."

26 We know from the evidence that there is question as to
27 the qualifications and the experience or the expertise that was

1 brought to this evaluation process. From this evidence, Paria is
2 suggesting that LMCS—but Paria is still suggesting that LMCS
3 possessed the expertise. Essentially, it seems to me it's an
4 argument saying that LMCS is hiring itself. Doing this clearly
5 placed LMCS and its employees at an even higher level of risk
6 in the performance of their work as is evident by this tragic
7 incident.

8 Paria has admitted to knowing of its option of hiring a
9 project engineer and consultant who would have been qualified
10 or have the requisite expertise to advise on the contract, on the
11 execution of the contract. In fact, this was done for the 2020
12 contract similar to the part of the contract to be performed at the
13 subsea at Sealine 36. Saving the dollar at the cost of saving the
14 lives or at least safety. This is what this decision comes down
15 to.

16 Execution of works.

17 **Mr. Chairman:** Do you not think it a fair point to make that,
18 “We used LMCS in 2020, we had a project manager then, they
19 did the job without hitch, without complaint, all seemed to go
20 very well, they obviously know what they're doing. Why don't
21 we just use them again?” What is wrong with taking the
22 position that, “We have a perfectly good contractor who's done
23 the same job before?”

24 **Mrs. Persaud Maraj:** It's a high-risk job.

25 **Mr. Chairman:** Yes.

26 **Mrs. Persaud Maraj:** It is classified high risk for that reason.

27 We should not—no one should be taking the risk, the reason—

1 there's no reasonable approach, if I may say that, in saying that,
2 well, because you have done it before you may be able to do it
3 perfectly on this occasion as well. The reason, there must be a
4 rationale for the classification of the works to be done and it
5 was high risk. The purpose and the benefit of having a system
6 in place, of having an expert hired, is to prevent an accident.
7 We can never tell when an accident will happen.

8 **Mr. Chairman:** No, of course, but irrespec—are you saying
9 that irrespective of how many times LMCS might perform this
10 task on behalf of Paria, they would still need to be separately
11 assessed?

12 **Mrs. Persaud Maraj:** At the very least if they don't possess
13 that expertise within their own structure.

14 **Mr. Chairman:** Paria not—

15 **Mrs. Persaud Maraj:** Paria, that is, yes. Perhaps if it
16 becomes a routine, for example, a routine high-risk
17 manoeuvring where all parties involved have the, the—because
18 of its frequency, they have the understanding of the
19 manoeuvring of the contract and what the job entails and they
20 have in-house, that is Paria would have its in-house expertise
21 and LMCS or any other contractor have their in-house, then
22 there may be no—I'm not submitting that there shouldn't be
23 any at all but there may be no great need to have that
24 independent expertise on the job hired by Paria.

25 **Mr. Chairman:** You mean assessment but not oversight?

26 **Mrs. Persaud Maraj:** Assessment, correct.

27 **Mr. Chairman:** How many times? How many times do they

1 have to do it before you agree that assessment without oversight
2 would be okay?

3 **Mrs. Persaud Maraj:** Well, that would, that would—

4 **Mr. Chairman:** Two, three, four?

5 **Mrs. Persaud Maraj:** No. The frequency would, in terms of a
6 high-risk manoeuvre can't be two—I humbly submit it certainly
7 can't be one. It must be something—frequency, the word
8 frequency, it is happening on a regular basis. If there is a job,
9 the contract had that the job performance was to be within 20
10 days' period. So let's say all things are equal and the jobs are
11 carried out within a 20-day window, then every month there can
12 be a job description, as similar to this, and on that basis on
13 every month 12 times per year certainly, that is frequent
14 enough, but one time, two years or at least a year prior? No. I
15 humbly submit that that would be wholly insufficient.

16 **Mr. Chairman:** Wouldn't it also depend, though, on the
17 people who are carrying out the job? It's all very well saying
18 LMCS but if LMCS used different personnel, wouldn't you
19 want to have oversight over those different personnel? They
20 might do something different.

21 **Mrs. Persaud Maraj:** Certainly. As conditions change you
22 have to reassess, certainly.

23 **Mr. Chairman:** Hmm.

24 **Mrs. Persaud Maraj:** Your personnel is different then—

25 **Mr. Chairman:** All right, thank you.

26 **Mrs. Persaud Maraj:** The works were executed presumably
27 under a safe work system which is Paria's permit to work

1 system, work instruction and safety system. On the instructions
2 issued by Paria for line clearing, I will submit that this is not a
3 mere internal document. The fact of its incorporation in the
4 scope of works at paragraph 8.0 is telling. The monitoring
5 system for the line content removal rests squarely with Paria.

6 It is Kazim Ali's evidence that the measurement of the
7 line content received was negligible and LMCS' aim was to
8 ensure an ullage. What is clear is that between the contractor
9 and Paria there seemed to be a variance as to the amount of the
10 line content to be removed and that's in—

11 **Mr. Chairman:** Can you, can help me with something that
12 concerns me a little? Is, am I right in understanding that
13 originally the line content was to be sucked out of the pipe,
14 pumped out?

15 **Mrs. Persaud Maraj:** That was never—that particular
16 question was placed to Mr. Ali and that was never his
17 understanding.

18 **Mr. Chairman:** He always understood it to be blowing?

19 **Mrs. Persaud Maraj:** Pardon?

20 **Mr. Chairman:** He always understood it to be blowing?

21 **Mrs. Persaud Maraj:** Oh the method of—

22 **Mr. Chairman:** Yes, the method.

23 **Mrs. Persaud Maraj:** Yes, yes.

24 **Mr. Chairman:** I'd understood that there was—that the
25 original plan was to suck—I mean I'm not using a very
26 technical word but—

27 **Mrs. Persaud Maraj:** Yes.

1 **Mr. Chairman:**—to pump out of the line the fluid that they
2 wished to remove to acquire the necessary ullage.

3 **Mrs. Persaud Maraj:** Yes.

4 **Mr. Chairman:** That changed for some reason, which I'm not
5 entirely clear about, as yet, to blowing. So rather, to use the
6 non-technical expressions, sucking out the oil or blowing out
7 the oil, and if you just think of having a straw in a glass you can
8 suck out what you want and put it where—and swallow it or put
9 it elsewhere or you can blow down into the glass and that
10 pushes the fluid out.

11 **Mrs. Persaud Maraj:** My understanding is that it was always
12 regulated by Paria that it should be by air blowing, not air
13 sucking, but at the point where there was no or insufficient
14 content being received by Paria, because there was a limit on
15 the air pressure to be applied, I think it was 40 PSI, and at that
16 rate only a certain amount could have reached on to the tank.

17 **Mr. Chairman:** Yes, I'm not sure that the precise figures of
18 how much pressure was used in order to blow particularly
19 helps. We saw the demonstration from Mr. Khan by—about
20 putting a tube down the pipe to take out any additional material,
21 but I had understood that there was evidence to suggest that at
22 least originally it was to be sucking not blowing. So in other
23 words—

24 **Mrs. Persaud Maraj:** Introducing—

25 **Mr. Chairman:**—pumping it out—

26 **Mrs. Persaud Maraj:**—pumping.

27 **Mr. Chairman:**—by—

1 **Mrs. Persaud Maraj:**—blowing.

2 **Mr. Chairman:**—no, by sucking, pumping, pumping
3 something out of the pipe and that that changed, for reasons as I
4 say I'm not entirely clear about as yet, to blowing, in other
5 words, introducing air into the pipe as opposed to drawing fluid
6 out of the pipe. Those it seemed to me are very different
7 scenarios which may have and probably did have very different
8 consequences to the conditions in the pipe once the task had
9 been performed.

10 **Mrs. Persaud Maraj:** I, I understand your enquiry, Chairman,
11 but, for my understanding I did not appreciate that. I
12 understood it to be that the methodology of getting the content
13 out was shifted based on the location of where the content had
14 to have been placed.

15 **Mr. Chairman:** All right. Well I'm—

16 **Mrs. Persaud Maraj:** As opposed to pushing it—

17 **Mr. Chairman:**—I'm not going to interrupt your flow at the
18 moment.

19 **Mrs. Persaud Maraj:**—pushing it to—

20 **Mr. Chairman:** I shall have a look at the material myself
21 before—

22 **Mrs. Persaud Maraj:** Yeah, but—

23 **Mr. Chairman:**—before you sit down and then you can
24 address me on it. If I've got this wrong, then, so be it but I
25 don't think I have.

26 **Mrs. Persaud Maraj:** Certainly.

27 **Mr. Chairman:** All right.

1 **Mrs. Persaud Maraj:** But I do know that the rationale behind
2 the change of the—of, of pumping the contents to the tank farm
3 and putting it into the slop barge was because of the amount not
4 being—

5 **Mr. Chairman:** No that's a different—

6 **Mrs. Persaud Maraj:** Yeah.

7 **Mr. Chairman:**—that's a different point though, is it? That's
8 about the collection of the material. That's not what I'm
9 talking about.

10 **Mrs. Persaud Maraj:** I, I understand.

11 **Mr. Chairman:** Yes.

12 **Mrs. Persaud Maraj:** What is clear is that between the
13 contractor and Paria there seems to be a variance on the amount
14 of line content to be removed, a clear indication that a single
15 appointed project manager engineer from Paria would have
16 eliminated these misunderstandings. If LMCS knew the
17 amount of content being removed, then it would have been
18 clear that it wasn't—there wasn't a solid leg of liquid under the
19 plug on which its methodology was premised.

20 I'd invite the Commission to look at the evidence of the
21 investigation into the incident with Mr. Dexter Guerra in which
22 Mr. Guerra had indicated to Mr. Archbald that there was
23 concerns for pollution. It's my submission that that concern
24 could have only been present because of LMCS' understanding
25 that there was line content or there was fluid, liquid, within that
26 system and this this incident as we know happened prior to the
27 25th of February.

1 **Mr. Chairman:** Did LMC—am I not right that LMCS
2 identified the number of barrels that they thought was necessary
3 to be removed?

4 **Mrs. Persaud Maraj:** It was an estimate indeed.

5 **Mr. Chairman:** Yes, all right.

6 **Mrs. Persaud Maraj:** It was an estimate.

7 **Mr. Chairman:** I follow that it was an estimate, but they did
8 give a figure, I thought was 70, or 60, I'm told 60, it's there or
9 thereabouts anyway, but they gave in the documentation an
10 estimate of the number of barrels to be removed.

11 **Mrs. Persaud Maraj:** Which was submitted. This is the
12 document submitted at the tender.

13 **Mr. Chairman:** Yes.

14 **Mrs. Persaud Maraj:** Yes they did, in that scope of work, yes.

15 **Mr. Chairman:** Right.

16 **Mrs. Persaud Maraj:** There was a—

17 **Mr. Chairman:** Is it your case, then, that that being the figure,
18 that they would have ascertained whether that had been
19 achieved?

20 **Mrs. Persaud Maraj:** No. It, it, it really was an estimate that
21 would have been presented.

22 **Mr. Chairman:** Yes. Whether it's 60 or 70 barrels I'm not
23 going to quibble about that. I don't think that that would have
24 caused a huge difference to the outcome. It's quite a big
25 difference between that and hundreds, isn't it?

26 **Mrs. Persaud Maraj:** Oh certainly.

27 **Mr. Chairman:** Right.

1 **Mrs. Persaud Maraj:** Certainly.

2 **Mr. Chairman:** So, do you think, first of all, is it your case,
3 rather, that they established or sought to establish the number of
4 barrels being removed from the line?

5 **Mrs. Persaud Maraj:** Their main concern was to achieve the
6 ullage, and—

7 **Mr. Chairman:** And I follow that, but there's a way—in order
8 to achieve the ullage, they're two ways you can do it and it
9 seems to me, first of all, you look at how much you need to
10 remove from a full line which should achieve that ullage.
11 Secondly, you can have a look inside the pipe and see where it
12 is. Which is the more reliable, do you think?

13 **Mrs. Persaud Maraj:** Well, in this case it seems as though the
14 more reliable would have been to ascertain the amount that
15 would have been—

16 **Mr. Chairman:** Did they do that?

17 **Mrs. Persaud Maraj:** No, no.

18 **Mr. Chairman:** Why not?

19 **Mrs. Persaud Maraj:** The measurement of what was being
20 taken out or removed from the Sealine 36 was not within the
21 ambit or remit of LMCS.

22 **Mr. Chairman:** Nothing wrong with asking, is there? They're
23 doing the job.

24 **Mrs. Persaud Maraj:** And there was no way that—

25 **Mr. Chairman:** You're working—and just a minute, you're
26 working with Paria, right?

27 **Mrs. Persaud Maraj:** Yes.

1 **Mr. Chairman:** These are clients of yours that you've had for
2 a long time and one might have thought, say, well, "Where are
3 we now?" How much—particularly as the days go by. This
4 wasn't done in one day. This was done over many days.

5 **Mrs. Persaud Maraj:** Yes.

6 **Mr. Chairman:** What was wrong with somebody from Paria,
7 necessary Mr. Kazim Ali or his son, saying to Paria, "Look,
8 how far have we got? How much has been taken out?"

9 **Mrs. Persaud Maraj:** Well, from my understanding, the
10 LMCS would have—not would have, LMCS did enquire from
11 Paria as to what was being removed and the answer was
12 negligible. That's not an amount. That's not an ascertained
13 amount.

14 **Mr. Chairman:** Where do I find that evidence?

15 **Mrs. Persaud Maraj:** It's in—I think this line of cross-
16 examination was put to Mr. Kazim Ali.

17 **Mr. Chairman:** Kazim Ali's evidence, all right.

18 **Mrs. Persaud Maraj:** So it's, I—I believe it's Day Four of the
19 transcripts.

20 **Mr. Chairman:** All right. So, um, do you accept that it is—it
21 was incumbent on LMCS to have enquired how much material
22 had been removed from the line?

23 **Mrs. Persaud Maraj:** I do. And we did.

24 **Mr. Chairman:** You agree with that. You say it happened.
25 And having been told how much had been removed from the
26 line you say I think you used the word negligible.

27 **Mrs. Persaud Maraj:** Negligible.

1 **Mr. Chairman:** That wasn't—acting upon that information
2 they continued to blow into the pipe?

3 **Mrs. Persaud Maraj:** Yes.

4 **Mr. Chairman:** Just pause there for a minute. What do you
5 say about the insertion of the smaller pipe, a six-inch pipe or
6 whatever it was, down inside the riser at berth 6 in order to
7 remove what appeared to be the remainder of the oil in the, um,
8 subsea line, in the horizontal?

9 **Mrs. Persaud Maraj:** It, it—again, it came back to the
10 methodology of trying to get the ullage achieved. So, it was
11 done just to be able to achieve what they were, they were trying
12 to achieve, the ullage.

13 **Mr. Chairman:** Was there any point in time—do you say was
14 there any point in time when LMCS were operating on the
15 premise that they were to clear the line?

16 **Mrs. Persaud Maraj:** No. That was never their understanding
17 of how the work was to be done.

18 **Mr. Chairman:** It always—your position is, it has always
19 been their position that they should only remove that which was
20 necessary to achieve the ullage—

21 **Mrs. Persaud Maraj:** Yes.

22 **Mr. Chairman:**—of 30 feet or whatever it was on either side,
23 yes?

24 **Mrs. Persaud Maraj:** That's correct.

25 **Mr. Chairman:** Right. And is it your case that they were
26 never told that hundreds of barrels had been removed from the
27 line?

1 **Mrs. Persaud Maraj:** They weren't. They weren't.

2 **Mr. Chairman:** Thank you.

3 **Mrs. Persaud Maraj:** The permit to work system incorporates
4 three categories of approved documents, method statement,
5 JHAs and certificates. LMCS produced method statement and
6 job hazard analysis to Paria for review and approval. These
7 were provided by way of emails, the purpose being to execute
8 the works safely. This review and approval process must be
9 predicated on Paria's competence and expertise to effectively
10 evaluate and scrutinize the contractor's proposed work method.
11 This is a burden that Paria carries.

12 Save for one clarification how the plugs, all was accepted
13 and approved. That specific clarification direct with the plugs
14 where Paria was informed that the methodology to be employed
15 will be to remove them manually and to reinstall them to the
16 top. There is no more clarity to this.

17 And this brings me to the issue of the permit to work,
18 9320, which states, which stated, "Barriers to be used".
19 Barriers to be used cannot and should not be equated to "Barrier
20 to remain" or "Barrier not to be removed." This is a convenient
21 argument indeed, as the removal of the barrier was the Delta P
22 event. In a safe system of work, however—

23 **Mr. Chairman:** Pausing there, what do you say to the
24 assertion that there should have been a separate permit to work
25 for the removal of the barriers?

26 **Mrs. Persaud Maraj:** That was not the, the modus operandi
27 that Paria had in terms of—of removal of the barriers?

1 **Mr. Chairman:** Yes.

2 **Mrs. Persaud Maraj:** Yes, no, that was never the modus
3 operandi that Paria had. In fact, the record will show that the
4 permit to work that they have issued contains a number of
5 various steps that has to be, to be carried out. It's not—

6 **Mr. Chairman:** To—your—so just so that I have it in my
7 head—

8 **Mrs. Persaud Maraj:** Yes.

9 **Mr. Chairman:**—your case is that no separate permit to work
10 was required for the removal of the barriers?

11 **Mrs. Persaud Maraj:** No.

12 **Mr. Chairman:** They're two work permits?

13 **Mrs. Persaud Maraj:** Yes.

14 **Mr. Chairman:** The one from the 13th of—

15 **Mrs. Persaud Maraj:** February.

16 **Mr. Chairman:**—February and the one on the 25th. Had the
17 work not been interrupted by Mr. Guerra's untimely movement
18 of the barge, would the works have been carried out under the
19 original permit dated the 13th?

20 **Mrs. Persaud Maraj:** It would have been completed in the
21 same manner.

22 **Mr. Chairman:** Sorry?

23 **Mrs. Persaud Maraj:** It would have been completed in the
24 same manner.

25 **Mr. Chairman:** Yes. But there would have been—

26 **Mrs. Persaud Maraj:** And the barrier—

27 **Mr. Chairman:**—no need for the permit that we have now

1 been inspecting ad nauseam for the 25th?

2 **Mrs. Persaud Maraj:** No. No.

3 **Mr. Chairman:** It simply wouldn't have arisen?

4 **Mrs. Persaud Maraj:** It would not have arisen.

5 **Mr. Chairman:** Is it your case that it's still the position that
6 they would not have required, after the 13th of February's work
7 permit, that they would not have required a further work permit
8 to remove the barriers?

9 **Mrs. Persaud Maraj:** No, they would not have. That
10 permit—

11 **Mr. Chairman:** That's your position?

12 **Mrs. Persaud Maraj:**—would cover the entirety of that.

13 **Mr. Chairman:** Thank you.

14 **Mrs. Persaud Maraj:** In this safe system of work, however,
15 there are checks and balances in place. Therein lies the
16 importance of the toolbox meeting. What we have on this issue
17 is Christopher Boodram's evidence that the removal of plugs
18 was discussed and this is corroborated by the actions of the
19 workers in the chamber. Missing as a check was Mr.
20 Majardsingh from this toolbox meeting who, as it were, was the
21 applicant for the works in relation to Sealine 36 on the 25th of
22 February, 2022 claiming that monitoring of LMCS or any other
23 contractor performing high-risk work periodically around four
24 times per day is wholly unacceptable in the scheme of a safe
25 work system. This is a system failure.

26 Further, communication within the chamber while the
27 men worked was established both by the camera and radio. A

1 simple request to perhaps adjust the view could have been
2 made. It seems ludicrous that Paria can have paid—and, what's
3 more it seems ludicrous that Paria can have paid personnel on
4 site who was actually monitoring the works in the chamber out
5 of curiosity but couldn't do so as a matter of duty. This is a
6 system failure of Paria.

7 **Mr. Chairman:** Can I ask you about the toolbox meeting
8 please? Do you accept that the toolbox meeting, the note
9 relating to that, falls woefully short of what it should have
10 contained?

11 **Mrs. Persaud Maraj:** In relation to what was discussed?

12 **Mr. Chairman:** Well it deals only with health and safety
13 issues, COVID—

14 **Mrs. Persaud Maraj:** Yes.

15 **Mr. Chairman:**—bad weather, you know, rising sea levels,
16 things like that. It doesn't deal with the actual work that's to be
17 undertaken at all.

18 **Mrs. Persaud Maraj:** Yes.

19 **Mr. Chairman:** It says nothing about it at all.

20 **Mrs. Persaud Maraj:** It does because—

21 **Mr. Chairman:** It does or it doesn't?

22 **Mrs. Persaud Maraj:** It does and—

23 **Mr. Chairman:** What do you mean? It says what about the
24 work?

25 **Mrs. Persaud Maraj:** It does fall short of the—

26 **Mr. Chairman:** All right, stop there. We're at cross-purposes.

27 **Mrs. Persaud Maraj:** Sure.

1 **Mr. Chairman:** I thought you were trying to contradict what I
2 was saying.

3 **Mrs. Persaud Maraj:** Yes.

4 **Mr. Chairman:** You're not doing that. You're saying it does
5 fall woefully short of what it should have contained?

6 **Mrs. Persaud Maraj:** Oh, of course, it does. We
7 acknowledge that. Unfortunately, and I have to stand here and
8 say to you, that the only reason for that was that the late Kazim
9 Ali Jr., who would have been the person discussing the method
10 statement and the work to be done within the chamber and for
11 that, um, on that day—

12 **Mr. Chairman:** That was his job to—

13 **Mrs. Persaud Maraj:**—that was his job.

14 **Mr. Chairman:** Right. He should have not only told them
15 what the works, the nature of the work was, what the individual
16 tasks to be completed was, but he should have recorded that on
17 the toolbox meeting.

18 **Mrs. Persaud Maraj:** Yes.

19 **Mr. Chairman:** And he failed to do that?

20 **Mrs. Persaud Maraj:** He failed to do that. I—the evidence
21 from I think Mr. Victor Dhillpaul is that he, he was supposed to
22 do that, er, he was going to do that but he had not—

23 **Mr. Chairman:** Yes. No, I appreciate that there's been
24 evidence to suggest that that did take place.

25 **Mrs. Persaud Maraj:** Yes.

26 **Mr. Chairman:** But that the it—the failing is simply a failing
27 to record it on the document.

1 **Mrs. Persaud Maraj:** Yes.

2 **Mr. Chairman:** Whereas of course Paria's position is, is that it
3 never took place at all.

4 **Mrs. Persaud Maraj:** Yes.

5 **Mr. Chairman:** And of course they're supported in that
6 submission by saying well the contemporaneous material that
7 was available doesn't show that it was mentioned at all.

8 **Mrs. Persaud Maraj:** Well, in relation to there not being a
9 contemporaneous documentation of what took place.

10 **Mr. Chairman:** Uh-huh.

11 **Mrs. Persaud Maraj:** But what we have is Mr. Boodram's
12 evidence as to his undeniable acceptance that that is—

13 **Mr. Chairman:** No, no of course we will have to assess
14 whether we accept that or not.

15 **Mrs. Persaud Maraj:** Yes.

16 **Mr. Chairman:** My concern is simply that the evidence
17 without—the documentary evidence without that line evidence,
18 as it were, would lend support to what Paria is saying that there
19 was no discussion at all about the works that were due to be
20 carried out. In the absence of having Mr. Boodram's evidence
21 about that, we would be completely in the dark, wouldn't we?

22 **Mrs. Persaud Maraj:** Yes, yes we would have been. That is
23 certainly true.

24 **Mr. Chairman:** Yes. And given that you have made it a part
25 of your case, such as it is, to emphasize the importance of the
26 dangerousness of this work, that is something which is, on any
27 view, a significant shortcoming, isn't it?

1 **Mrs. Persaud Maraj:** It is.

2 **Mr. Chairman:** All right. Thank you.

3 **Mrs. Persaud Maraj:** Mr. Chairman, I'm not sure if you'd
4 like to have a short break now. I'm going on to the Delta P and
5 I—and I don't know if this is—

6 **Mr. Chairman:** I'll leave it in your hands. I mean, if you
7 think you're about halfway through, then, by all means we
8 could take 5 minutes. If you think you've got—you're not
9 quite there yet, let's go for a little bit longer, shall we?

10 **Mrs. Persaud Maraj:** We're about halfway through.

11 **Mr. Chairman:** We are?

12 **Mrs. Persaud Maraj:** We are about.

13 **Mr. Chairman:** If you want to take 5 minutes then we will
14 take 5 minutes.

15 **Mrs. Persaud Maraj:** Yes.

16 **Mr. Chairman:** Thank you.

17 **Mrs. Persaud Maraj:** Or no, I don't, I don't please. I don't
18 please. I, I will continue. I just wanted to know if there was
19 any need for a break by—

20 **Mr. Chairman:** No, we'll, we'll take a 5-minute break now
21 and come back, um, what shall we say, well let's come back at
22 ten to 11.00, shall we? Ten to 11.00. Let's take a few minutes.

23 **10.45 a.m.:** *Enquiry suspended.*

24 **10.52 a.m.:** *Enquiry resumed.*

25 **Mr. Chairman:** Yes.

26 **Mrs. Persaud Maraj:** Thank you, Mr. Chair.

27 **Mr. Chairman:** Before you move on, can I just ask you about

1 the document which is in our core bundle Volume III? Just
2 give me a second, please? At page 1033, this is the, um—I
3 don't know if it can be put up on the screen—but this is the
4 document that is said to be the internal document that Paria
5 produced for themselves—

6 **Mrs. Persaud Maraj:** Yes.

7 **Mr. Chairman:**—as a sort of work instruction within the, er—
8 within their ambit which, as we know, and I don't need to refer
9 to it now, but it was referred—it was passed on to LMCS by
10 way of an email.

11 **Mrs. Persaud Maraj:** Yes.

12 **Mr. Chairman:** It doesn't appear to have been inadvertent,
13 rather more—

14 **Mrs. Persaud Maraj:** It was sent.

15 **Mr. Chairman:**—deliberate. Whatever the position might be,
16 it doesn't seem to have been, as it were, part of an email chain
17 and happened to have been attached, do you see what I mean?
18 I'm not—I don't think that that's—they're suggesting that for a
19 minute. But, in any event, what is clear is that, and their case is
20 that this is an internal document for them to be used by their
21 people, yes? This finds itself in your hands.

22 **Mrs. Persaud Maraj:** Indeed.

23 **Mr. Chairman:** What do you say about the receipt of this
24 document and how that may or may not have affected the works
25 for the removal of the material from the line?

26 **Mrs. Persaud Maraj:** In the work instructions, LMCS is
27 required to follow the steps that would have been placed there,

1 whatever the—for the operational aspect of the line contents
2 removal. So, in receiving that document, the process is, within
3 the LMCS side, is that the persons operating from Sealine 36
4 would confer with Paria's personnel on the line contents
5 removal. I'm not sure if that answers your question.

6 **Mr. Chairman:** Well I'm just looking at the wording of the
7 actual section—of the document itself. I don't know why it's
8 not on the screen, but, anyway, the responsibilities, it says the
9 Terminal Operations Manager, that's Mr. Piper, has the overall
10 responsibility for ensuring that this procedure is established by
11 reviewing and approving this work instruction and ensuring the
12 offshore team lead understand the requirements of this work
13 instruction. Pausing there for a moment, the scope of the work
14 is described as clearing of the line between five and six.

15 **Mrs. Persaud Maraj:** Yes.

16 **Mr. Chairman:** Well, that is, to use one of my favourite
17 expressions in this hearing, ambiguous, isn't it?

18 **Mrs. Persaud Maraj:** It is.

19 **Mr. Chairman:** You see, if the line is to be cleared according
20 to—if somebody reading that understood it to mean clearing it
21 completely, that would lend support for why the volume of
22 barrels were removed from the line?

23 **Mrs. Persaud Maraj:** And that, that certainly is a perspective
24 as an attorney that I have taken. In my, in my quest to
25 investigate that with my client, his understanding of that
26 instruction was that it's cleared only to the extent—

27 **Mr. Chairman:** Right.

1 **Mrs. Persaud Maraj:**—of the ullage to be.

2 **Mr. Chairman:** So, in a sense, if there is ambiguity, the fact
3 that your client had this document would have been apparent to
4 him that it wasn't clearing of the line completely. Do you
5 follow what I mean? If this document had remained just in the
6 hands of Paria—

7 **Mrs. Persaud Maraj:** Paria, yeah.

8 **Mr. Chairman:**—Paria might have been able to properly
9 assert—well, whoever was reading it might have been able to
10 properly assert, I thought that was the removal of the line
11 completely say, "I thought that was the removal of the line
12 completely." All right? Because of the ambiguity in the way in
13 which that's expressed, so, that person might have just
14 understood it in that way, but it wasn't just in their hands, it had
15 come to you.

16 **Mrs. Persaud Maraj:** Yes.

17 **Mr. Chairman:** And you knew that you weren't seeking to
18 clear the line entirely. You were only looking for an ullage.

19 **Mrs. Persaud Maraj:** That's correct, but you would—

20 **Mr. Chairman:** So any—surely, any ambiguity in that could
21 have been easily set to one side by the knowledge that you say
22 your clients had, which was that it was only to clear the
23 necessary ullage.

24 **Mrs. Persaud Maraj:** That's correct. That is, that is the
25 operating factor that LMCS took in—

26 **Mr. Chairman:** Yes, so in one sense, having this in your
27 hands doesn't help you at all? Do you see what I mean?

1 **Mrs. Persaud Maraj:** Yes.

2 **Mr. Chairman:** It does the exact reverse because if there is
3 ambiguity in that you were in the best place given it was your
4 job to do them, to remove the material from the line you were
5 best placed to clear up such an ambiguity, weren't you?

6 **Mrs. Persaud Maraj:** Well, it's an instruction that was issued
7 to LMCS, so, so—

8 **Mr. Chairman:** No, no, no, no, no, no. It's not an instruction
9 that was issued to LMCS.

10 **Mrs. Persaud Maraj:** Sorry it's an instruction, sorry. It's an
11 instruction that was issued by Paria.

12 **Mr. Chairman:** It's an instruction issued by Paria to its people
13 to which you were privy.

14 **Mrs. Persaud Maraj:** To, correct.

15 **Mr. Chairman:** That is a different thing, isn't it?

16 **Mrs. Persaud Maraj:** Correct, correct.

17 **Mr. Chairman:** Yeah; to which you were privy. Now I don't
18 have any difficulty with you being privy to it.

19 **Mrs. Persaud Maraj:** Right.

20 **Mr. Chairman:** It seems to me a very sensible idea that, well
21 look—

22 **Mrs. Persaud Maraj:** Correct.

23 **Mr. Chairman:**—this is what we even told our people. This is
24 what is in the document. But if their—if the purpose of that at
25 all is to just make sure that you understand what Paria are
26 telling their own people, then if there is ambiguity in it you
27 were best placed to put paid to that, weren't you?

1 **Mrs. Persaud Maraj:** I would, I would accept that. I would
2 accept that that that would have been—

3 **Mr. Chairman:** Yeah.

4 **Mrs. Persaud Maraj:** The crew that—

5 **Mr. Chairman:** Whereas, if you'd never seen it, if it had never
6 come into your hands at all then you wouldn't have known that
7 that's what is said. You wouldn't have known that there was
8 any such ambiguity, would you?

9 **Mrs. Persaud Maraj:** No.

10 **Mr. Chairman:** Right. But the fact is you did.

11 **Mrs. Persaud Maraj:** Well, in the minds of the operators from
12 LMCS there was no ambiguity in what was required.

13 **Mr. Chairman:** Hmm.

14 **Mrs. Persaud Maraj:** And that's, that's—it's only in
15 hindsight then we can appreciate the ambiguity that comes with
16 it. But to the operators at the material time, no. It was not
17 ambiguous at that point in time. Of course, it becomes the issue
18 now, having regard to the fact of the Delta P.

19 **Mr. Chairman:** You see, some people might argue that it's
20 not even ambiguous, that it's quite clear. Clearing of number
21 36 Sealine section between berth 5 and berth 6. To the ordinary
22 mortal, one might think that that meant empty it.

23 **Mrs. Persaud Maraj:** Yes. No, that was never the
24 understanding by—

25 **Mr. Chairman:** No, I understand it's not the understanding.
26 I'm talking about reading the document.

27 **Mrs. Persaud Maraj:** Yes.

1 **Mr. Chairman:** And what I'm saying or what I'm asking you
2 really is what your position is on that because it does seem to us
3 that be it clear or ambiguous, you were in the best place to
4 make it clear that that is not what was being sought to be
5 achieved.

6 **Mrs. Persaud Maraj:** I accept that, please, Mr.
7 Commissioner.

8 **Mr. Chairman:** All right. Yeah, well thank you.

9 **Mrs. Persaud Maraj:** Operating in—Delta P event.
10 Operating in an environment of consistent systematic failure
11 allowed for the Delta P event to have taken place. LMCS, in
12 proceeding with the methodology to establish the desired ullage
13 from which it is assumed that there was a solid—when it was
14 assumed that there was a solid leg of liquid or fluid behind the
15 plug, however, Mr. Zaid Khan opined that the pressure at No. 5
16 was locked in until 25th of February, 2022 and only released
17 when the riser was opened to conduct the CARBER test. I will
18 invite the Commission to consider that this opinion of the
19 additional danger is not based on what actually occurred.

20 Mr. Ali stated in his examination, cross-examination, that
21 the pressure was released from both ends of the pipe via the
22 risers prior to the ullage measurements between—and that
23 would be found between pages 53 to 61 of the transcripts for
24 Day—

25 **Mr. Chairman:** Just a second.

26 **Mrs. Persaud Maraj:** Sorry.

27 **Mr. Chairman:** [*Writing*] Kazim Ali says what?

1 **Mrs. Persaud Maraj:** That the pressure was released—the
2 term he used was bleed out—from both ends of the pipe.

3 **Mr. Chairman:** On which day?

4 **Mrs. Persaud Maraj:** That would have been on the—I'll take
5 you through it, please, Mr. Commissioner. At Paria's daily
6 report sheet page 7288 line one it shows that the line content
7 removal was completed on the 5th of February, 2022 and
8 thereafter the daily report sheets at page 7291 and 7292 of the
9 bundle of submissions show that for the 10th and the 11th of
10 February the piping at the top of the riser was removed at berth
11 5 and the line plugs were installed and a new flange weld and a
12 riser was constructed at berth No. 5. The line plugs were then
13 removed and the blind flange replaced on a newly installed
14 flange. Paria's reports showed that the line plugs were then
15 installed on the 13th of February at berth No. 6.

16 So the impression created by the expert or the impression
17 that the expert had that the plugs were installed almost
18 instantaneously on achieving the ullage, and thereby stopping
19 or pressurizing the line at berth 5 with the blanking at the riser
20 would not, um, would not be true.

21 **Mr. Chairman:** Well they were blowing fuel out of the pipe
22 over a number of days. Which days were they?

23 **Mrs. Persaud Maraj:** That started I believe it was from the
24 4th or 5th of January, sometime in January.

25 **Mr. Chairman:** Uh-huh.

26 **Mrs. Persaud Maraj:** And it was completed on the 5th of
27 February, of 2022.

1 **Mr. Chairman:** Right. And was it left—are you saying it was
2 left open?

3 **Mrs. Persaud Maraj:** It was—so, and then works were then
4 done at the berth No. 5 on the riser at the top of berth No. 5.
5 So, the statement that the, or the opinion, sorry, that by
6 blanking the—the removal of the blank on the 25th was the first
7 time that the pressurized—pressurization of that pipe was
8 released or, or removed is incorrect, when the CARBER test
9 was being done on the day of the 25th of February.

10 **Mr. Chairman:** Well, whatever days it was—

11 **Mrs. Persaud Maraj:** Yes.

12 **Mr. Chairman:**—that the pumping of the material from the
13 pipeline were done, whatever days it was, we know as a matter
14 of fact that the, um—there was a CARBER test—

15 **Mrs. Persaud Maraj:** Yes.

16 **Mr. Chairman:**—carried out at berth 5—

17 **Mrs. Persaud Maraj:** That's correct.

18 **Mr. Chairman:**—on the 25th.

19 **Mrs. Persaud Maraj:** That's correct.

20 **Mr. Chairman:** And in order to carry out that CARBER test
21 you're saying the evidence is that the blind flange is removed?

22 **Mrs. Persaud Maraj:** Yes, it was removed on that day.

23 **Mr. Chairman:** Right. So the blind flange at—

24 **Mrs. Persaud Maraj:** At berth 5.

25 **Mr. Chairman:**—at 5 is removed, therefore, any differential in
26 pressure that might have existed in the line at that stage would
27 have been equalized? Is that your submission?

1 **Mrs. Persaud Maraj:** No, no not at all. I'm just correcting for
2 the purposes of the credibility of Mr. Kazim Ali in relation to
3 what he said before the Commission. His evidence was that the
4 line was bled out and what we do—and the opinion given by
5 the by Mr. Khan gives the impression that his evidence is
6 incorrect or false or misleading, which lends to the issue of his
7 credibility, no doubt, but that, that's not true. It seems to be
8 that that opinion was based on an assumption and not in fact
9 what happened and that is why I take the Commission through
10 the actual—

11 **Mr. Chairman:** Sequence of events.

12 **Mrs. Persaud Maraj:**—series of events.

13 **Mr. Chairman:** Yeah. So the blind flange at 5 is removed
14 indoor to perform the CARBER test?

15 **Mrs. Persaud Maraj:** Yes, it was.

16 **Mr. Chairman:** Uh-huh.

17 **Mrs. Persaud Maraj:** Yes.

18 **Mr. Chairman:** And then refitted after the CARBER test had
19 been completed?

20 **Mrs. Persaud Maraj:** Yes. Yes, it was.

21 **Mr. Chairman:** Before they come over to No. 6?

22 **Mrs. Persaud Maraj:** Number 6, that's correct.

23 **Mr. Chairman:** So whilst the work was being carried out at
24 No. 6, No. 5 is open?

25 **Mrs. Persaud Maraj:** No. The CARBER test was done at
26 berth No. 5—

27 **Mr. Chairman:** Yes.

1 **Mrs. Persaud Maraj:**—before it reached to berth No. 6.

2 **Mr. Chairman:** I follow that, but they're working in the
3 morning—

4 **Mrs. Persaud Maraj:** Yes.

5 **Mr. Chairman:**—of the 25th at berth 6.

6 **Mrs. Persaud Maraj:** Yes.

7 **Mr. Chairman:** And whilst that is happening, the lid, as I've
8 called it before—

9 **Mrs. Persaud Maraj:** Sorry, sorry, they're working on what at
10 berth 6?

11 **Mr. Chairman:** They were working during the course of the
12 morning at berth 6. That's the evidence.

13 **Mrs. Persaud Maraj:** That is the evidence.

14 **Mr. Chairman:** Yes.

15 **Mrs. Persaud Maraj:** There was the exchange of the topside
16 riser, I think, er—

17 **Mr. Chairman:** They were working there. I don't really care
18 what they were—

19 **Mrs. Persaud Maraj:** Yes.

20 **Mr. Chairman:**—particularly doing. I mean, all I'm
21 concerned about is the removal of the blank but they were
22 working for some hours at berth 6.

23 **Mrs. Persaud Maraj:** That's correct.

24 **Mr. Chairman:** Is it what you're saying to me is that at berth
25 5, whilst they were doing that work at berth 6, at berth 5 they
26 removed the flange—

27 **Mrs. Persaud Maraj:** Yes.

1 **Mr. Chairman:**—the lid as I call it, right?

2 **Mrs. Persaud Maraj:** The lid, that's it.

3 **Mr. Chairman:** Remove the lid at the pop of the pipe so the
4 pipe comes up at 6, there's a lid on top which is sealed, they
5 then remove that in order to conduct the CARBER test—

6 **Mrs. Persaud Maraj:** Conduct the CARBER test.

7 **Mr. Chairman:**—on the inside, is that what you're saying?

8 **Mrs. Persaud Maraj:** That's, that's correct.

9 **Mr. Chairman:** Right. And then they put the lid back on
10 again.

11 **Mrs. Persaud Maraj:** And then put the lid back on.

12 **Mr. Chairman:** And then they went over to No. 6?

13 **Mrs. Persaud Maraj:** And then they—yes.

14 **Mr. Chairman:** Right, okay. And the point that is—

15 **Mrs. Persaud Maraj:** Well, it wasn't on the day in question
16 that I'm talking about but prior to the day in question. It seems
17 as though from the expert evidence or his opinion, sorry, about
18 the pressurization of the, of the line, that the removal of the
19 flange on the 25th was the first time it was being removed after
20 the insertion of the plugs at 6 on the 13th or 14th thereabout.

21 **Mr. Chairman:** Yes.

22 **Mrs. Persaud Maraj:** At least that's my impression of the
23 evidence that was—the opinion that was being given.

24 **Mr. Chairman:** All right, so—

25 **Mrs. Persaud Maraj:** So I take the opportunity to correct the
26 record in relation to that.

27 **Mr. Chairman:** All right. I'm not entirely sure what the

1 consequence of that is.

2 **Mrs. Persaud Maraj:** Well the evidence of Mr. Kazim Ali is
3 corroborated by that fact, by, by the fact of, of what I have just
4 laid out to you.

5 **Mr. Chairman:** The sequence of events.

6 **Mrs. Persaud Maraj:** The sequence of events.

7 **Mr. Chairman:** All right. So it's only really to—

8 **Mrs. Persaud Maraj:** To point that out.

9 **Mr. Chairman:**—point out that Mr. Kazim Ali is correct in
10 what he says?

11 **Mrs. Persaud Maraj:** As to how it occurred.

12 **Mr. Chairman:** Right.

13 **Mrs. Persaud Maraj:** Yes. Rescue.

14 [*Commissioners confer*]

15 **Mr. Chairman:** All right, yes, thank you.

16 **Mrs. Persaud Maraj:** It is accepted that attempting to remove
17 the inflatable plug created the Delta P event causing the men,
18 tools and breathing air to be sucked into the pipeline. Once the
19 disturbed waters around the chamber settled and the chamber
20 returned to normal function, Andrew Farah in two separate
21 incursions determined, one, that the men were no longer in the
22 chamber nor were the tools, bolts and diving gear. Two the
23 riser was full of water and, three, there was no sign of content
24 of the chamber in the immediate vicinity of the riser and seabed
25 or floating around the surface surrounding the berth. This led
26 to the conclusion that the men were in the pipe.

27 After discussion with site personnel, Kazim Ali, Andrew

1 Farah and Dexter Guerra decided that they had, at the least,
2 minimum resources to do an incursion into the pipe. In
3 addition to this on site plan, Farah called out Conrad and Conan
4 Beddoe for additional divers and equipment. Sometime within
5 this time frame, Kazim Ali spoke with Collin Piper and was
6 told of—who was told of his deduction.

7 There was no indication of an ICT being activated. In
8 fact, up until these hearings, LMCS never understood that Paria
9 had activated an ICT. This only highlights further a systematic
10 failure within Paria.

11 **Mr. Chairman:** You're saying you did not—they did not
12 appreciate that an ICT was even in existence?

13 **Mrs. Persaud Maraj:** They did not, not in the structure of
14 what the ICT should be.

15 **Mr. Chairman:** Right. Until?

16 **Mrs. Persaud Maraj:** Until these proceedings, please.

17 **Mr. Chairman:** And you're specifically referring to Mr.
18 Kazim Ali, are you?

19 **Mrs. Persaud Maraj:** Mr. Kazim Ali, Mr. Ahmad Ali, Mr.
20 Dexter Guerra, LMCS.

21 **Mr. Chairman:** Just a minute. Whose fault do you say that is?

22 **Mrs. Persaud Maraj:** The communication of the ICT
23 commander.

24 **Mr. Chairman:** Yeah, right. You say he just never made that
25 clear?

26 **Mrs. Persaud Maraj:** No.

27 **Mr. Chairman:** Mr. Piper?

1 **Mrs. Persaud Maraj:** Mr. Piper. Or any of his—

2 **Mr. Chairman:** Did you put that to him?

3 **Mrs. Persaud Maraj:**—delegates. Pardon?

4 **Mr. Chairman:** Did you put that to Mr. Piper? I don't recall
5 you—

6 **Mrs. Persaud Maraj:** I did, I did—

7 **Mr. Chairman:** I don't recall you—I do not recall you putting
8 to Mr. Piper that he had never made it clear to Kazim Ali that
9 there was an ICT—

10 **Mrs. Persaud Maraj:** That's correct.

11 **Mr. Chairman:**—of which he was the head.

12 **Mrs. Persaud Maraj:** That's correct. I have never put.

13 **Mr. Chairman:** You should have. It's a quite serious
14 suggestion, isn't it, that—it's part of your submissions now that
15 the existence of the ICT was never made clear to Kazim Ali and
16 you never put that to Mr. Piper—

17 **Mrs. Persaud Maraj:** Yeah.

18 **Mr. Chairman:**—when he gave his evidence.

19 **Mrs. Persaud Maraj:** Yeah. That's correct.

20 **Mr. Chairman:** Sometimes, it is said that the reason why
21 counsel don't do that is because they never had instructions
22 prior to that point in time but those instructions came later.
23 Other times it's the fault of counsel for overlooking a fact
24 which they ought to have put.

25 **Mrs. Persaud Maraj:** Yes.

26 **Mr. Chairman:** Which is it in this case?

27 **Mrs. Persaud Maraj:** It's the latter, please.

1 **Mr. Chairman:** It's your fault?

2 **Mrs. Persaud Maraj:** Yes.

3 **Mr. Chairman:** So I shouldn't hold it against Mr. Kazim Ali?

4 **Mrs. Persaud Maraj:** No, please.

5 **Mr. Chairman:** I should hold it against you?

6 **Mrs. Persaud Maraj:** Yes.

7 **Mr. Chairman:** Right. I will. Thank you.

8 **Mrs. Persaud Maraj:** The evidence elicited has shown that
9 Paria prevented LMCS Limited from executing rescue plans
10 that were continuously modified as more resources and
11 information came to hand. The first denial to mount rescue
12 attempts came around 3.30 p.m. when the permit to work was
13 pulled and the countervailing instruction to cease—with the
14 countervailing instructions to cease all diving, close out work
15 permit.

16 Paria made the rescuers believe that the TTCG will be
17 conducting a rescue when, in fact, there was no such
18 determination until around 9.00 p.m. Paria had no plans or
19 attempt at any rescue over the 25th, 26th, 27th of February.
20 Paria was informed of proof of life within the pipeline by the
21 very fact of Christopher's survival and also by distress signals
22 continuing up to and beyond 2.30 a.m. on Saturday the 26th of
23 February. Instead of acting on—

24 **Mr. Chairman:** Do you accept that that is uncorroborated by
25 anyone from Paria?

26 **Mrs. Persaud Maraj:** Yes.

27 **Mr. Chairman:** Right. Okay.

1 **Mrs. Persaud Maraj:** And, instead of acting on proof of life,
2 Paria chose to discredit the knocking heard emanating from the
3 pipe at No. 5, saying it was noise from the equipment running
4 at berth 6, a distance of a quarter of a mile away.

5 After Christopher's lifesaving heroics, Paria also chose to
6 create the denial of the existence of the air pockets saying that
7 they were not seen on camera footage even though Christopher
8 Boodram and four men survived for three hours with five tanks,
9 which would have given them an hour to live if they each had
10 the use of one. Mr. Piper claimed that he wanted more
11 information from camera footage before considering any dive
12 rescue but his repeated requests up to 9.00 p.m. on Friday to the
13 coast guard to do a dive does not support this claim.

14 From the statement of Mr. Seales, it can be seen that the
15 TTCG was requested again to consider a dive at 12.15 a.m. on
16 the 26th of February. After the footage was received at
17 midnight, Mr. Piper again asked the coast guard to dive and
18 remove obstacles in the line, even though they had already told
19 him that there were, they were not trained for that and
20 commercial divers would be more suitable.

21 Mr. Piper ought to have known, through Catherine
22 Balkissoon, that LMCS had experienced commercial divers on
23 site, some related and some not related, who were prepared to
24 dive, yet, they were not asked. Collin Piper, Mushtaq
25 Mohammed, Michael Wei and Randy Archbold all say that they
26 got expert advice that they should not allow diving into the
27 pipe. The experts listed were OSH, TTCG, OTSL, Hull,

1 HHSL, ERS, Eastern Diving Services, Mitchell Professional
2 Diving Services. From this list the evidence shows that the
3 TTCG, ERS and Mitchell Professional Diving Services were
4 only asked if they would conduct a rescue. They said
5 themselves—they said they themselves would not perform a
6 rescue but they never advised that a rescue should not be
7 performed. Mr. Seales denies any involvement as an ICT
8 member or advisor to Paria.

9 Mr. Piper advised all that Christopher Boodram said the
10 men did not make it. Then the other misleading information
11 given was that there were dive bottles lodged in the line. The
12 distance of that blockage location kept increasing in what seems
13 to be an attempt to solicit a particular advice from the experts or
14 at least to deter a rescue plan being conducted or to justify not
15 taking any action.

16 Consider the evidence of Mr. Piper where he explained
17 the spooling of the ROV and the tether. We ask that the length
18 of the tether top of the riser and the slack of the tether must be
19 considered in respect of the actual distance of where the
20 location of that bottle was. There is a difference, it must be
21 appreciated, between I am not prepared to send my men down
22 the pipeline as it is too dangerous for them and it is too risky to
23 send divers into pipeline to rescue the men.

24 The willingness of competent divers trained to undertake
25 these risks with equipment and support for the execution of the
26 plan was all that was needed. The first position seems to sit
27 with all of the experts that Paria placed reliance on, while the

1 latter seems to be the position that Paria has taken.

2 **Mr. Chairman:** I's the difference between send and allow?

3 **Mrs. Persaud Maraj:** That's correct.

4 **Mr. Chairman:** Right.

5 **Mrs. Persaud Maraj:** It is of note that there is no evidence of
6 the expert being asked to show experience or CV or any of any
7 sort to Paria engaging them. In fact, it seems from the evidence
8 that the experts weren't experts at all. In fact, diving into the
9 pipeline is not a thing, yet, there is evidence of Andrew Farah,
10 Kazim Ali, Christopher Boodram and Michael Kurban diving
11 into a pipeline.

12 One point of agreement from both Mr. Donawa, Mr.
13 Seales and Mr. Fuentes seems to be that the very best way to
14 advise on a rescue plan was to undertake a site visit or soliciting
15 information from site personnel. In his witness statement, Mr.
16 Piper made no mention of his fears of confined space rescuers
17 dying whilst attempting to rescue people. Paria has its own
18 confined space rescue protocol that could easily have been
19 employed to formulate a rescue plan from the men in the pipe—
20 for the men in the pipe if they were serious.

21 Mr. Piper's reference spoke mainly of would-be rescuers
22 rushing in to remove a victim without preparation, without
23 breathing air, communication and light. This incident happened
24 at berth No. 6 underwater and would negate any possibility of
25 any rescuer impulsively rushing in without his own breathing
26 gear, scuba or surface supply.

27 All plans considered by LMCS involved divers with air

1 supply and underwater lighting, and initially rope for tethering
2 and signalling and later umbilical in addition to rope that
3 included camera, lights and voice communications. This issue
4 could have been easily dispelled with the hands-on approach
5 with the divers on site or at the very least through Catherine
6 Balkissoon.

7 Head first, feet first.

8 **Mr. Chairman:** Sorry?

9 **Mrs. Persaud Maraj:** Head first, feet first.

10 **Mr. Chairman:** Right.

11 **Mrs. Persaud Maraj:** LMCS always considered a feet first
12 entry for rescue. This was what was discussed with Paria site
13 personnel on Friday the 25th and was the method actually
14 executed by Michael Kurban. If Paria had any degree of
15 interest in the rescue then the derisking of this methodology
16 laid out by LMCS could have been explored with all on site
17 through Catherine or through a simple conferencing via her
18 telephone to the ICT, or those in charge.

19 Time was passing along while workers reported hearing
20 knocking noise. This was determined by varying knocking
21 intensity and frequency. This was heard by LMCS people
22 around 6.15, from about 6.15 and I'd refer to the evidence of
23 Ms. Beverly Howe at page 465 paragraph 36, and that's in the
24 bundles of, of—

25 **Mr. Chairman:** I don't need an awful lot of persuading about
26 there being a genuine knocking.

27 **Mrs. Persaud Maraj:** Yes.

1 **Mr. Chairman:** If you're in that pipe looking for rescue and
2 you are one of those persons, it's the most obvious thing to do
3 assuming you have something with which to knock. It may be
4 that an argument from there, "Well nobody had anything that
5 would resonate along a metal pipe" but, er—

6 **Mrs. Persaud Maraj:** We do know that—

7 **Mr. Chairman:**—we know that there were tanks and we know
8 there were tools and various other things in there. It seems
9 likely that if you were looking for rescue, the one of the few
10 things that you could do would be to knock on the pipe.

11 **Mrs. Persaud Maraj:** Yes.

12 **Mr. Chairman:** All right.

13 **Mrs. Persaud Maraj:** Paria, from their evidence does not
14 share this view, as I have said earlier. Their evidence is that
15 they verified no knocking noises, but, from the autopsy report
16 we know that there was life within the pipeline and at the time
17 that the knocking noises were being heard.

18 Paria continued to prevent a rescue dive plan from berth
19 No. 6. LMCS' main goal on saving these men turned to the
20 entry point at berth No. 5 where the knocking noises were being
21 heard. On being informed of the knocking noise and
22 confirming same with their personnel, LMCS requested from
23 Mr. Piper that the riser at berth No. 6 be installed, for the
24 removal of the blind flange at the top of the riser at berth No. 5
25 and to remove the chamber over the berth No. 6. This would
26 have allowed, at the very least, for an investigation of the
27 system and at best allow easier access into the riser for the

1 purposes of rescue.

2 Compressor failure was not the reason for the request of
3 the riser installation. Mr. Piper himself confirms that LMCS
4 possessed a backup compressor. The compressor in operation
5 was functioning. LMCS, on being presented in real time,
6 revisited rescues and alternative to rescue. In this regard, the
7 suggestion to remove the blank from berth No. 5 was made, to
8 hopefully save the men from that end. However, to do so, the
9 belief was that the riser being extended to atmospheric height
10 would not interfere with the construct within the pipe thereby
11 allowing the blank to be removed from berth No. 5 to conduct,
12 as I said, at very least an investigation as to—and at best to
13 rescue the men.

14 Eventually, Paria authorized the addition of the riser
15 extension and the removal of the blank. However, the
16 permission to remove the blank was withdrawn and not
17 authorized until 5.00 a.m. on the 26th of February. Therefore,
18 from 10.00 p.m. to 5.00 a.m. on Saturday there was no point of
19 entry into Sealine 36. This secured only one thing, prevention
20 of any diver from accessing the pipeline. Removal of the
21 chamber did not come until 9.00 p.m. on the 26th of February
22 and eventually it was removed over the top of the—

23 **Mr. Chairman:** I can't hear you. You're letting—

24 **Mrs. Persaud Maraj:** Sorry.

25 **Mr. Chairman:**—your voice drop and I can't hear you.

26 **Mrs. Persaud Maraj:** To drop? Sorry. My apologies. The
27 removal of the chamber did not come until 9.00 p.m. on the

1 26th of February and eventually it was removed from over riser
2 top. Of course, installation of the riser only meant completion
3 of the subsea works at riser 6.

4 The issue of policing on site to control LMCS workers is
5 a diversion of all efforts on the front for rescue. It takes away
6 Paria from attending to whatever they were attending and to the
7 creation of distrust with LMCS. Had Catherine Balkissoon
8 genuinely felt threatened by the workers' behaviour would she
9 have continued to be in their presence on their barge?

10 Mr. Ali's meeting to plead for rescue on Saturday was
11 not treated with any seriousness or thought. Then the meetings
12 on the 27th of February, 2022 were clearly not for the benefit
13 of—were clearly only for the benefit of indulging LMCS as the
14 decision to move from recovery was already made since
15 Saturday night between Mr. Piper and Mr. Mohammed. In
16 common parlance, it was a pappy show.

17 LMCS' participation in this Enquiry has been channelled
18 to—

19 **Mr. Chairman:** Sorry to interrupt you there. Just before you
20 move on to the next point, do you accept that Mr. Kazim Ali
21 might have made greater effort to communicate a plan to rescue
22 these men on the night of the 25th?

23 **Mrs. Persaud Maraj:** That he could have?

24 **Mr. Chairman:** That he—do you believe that he could have
25 made a greater effort to communicate a dive plan to the—to Mr.
26 Piper, even if he didn't believe that there was an IMT or ICT, to
27 Mr. Piper, knowing that piper had blocked diving? Do you

1 believe he might have communicated a—might have made a
2 better effort to communicate a dive plan to rescue these men on
3 the night of the 25th?

4 **Mrs. Persaud Maraj:** I am thinking about the communication,
5 as I understand it, between him and Mr. Piper.

6 **Mr. Chairman:** Yes.

7 **Mrs. Persaud Maraj:** And I'm taking it within the context of
8 LMCS also being on site—

9 **Mr. Chairman:** Yes.

10 **Mrs. Persaud Maraj:**—with the dive supervisor and divers
11 present there and the train of thought that LMCS possessed in
12 relation to the site being the best place for the formulation of
13 those plans, and my answer to that would be that it could have
14 been done, but the best place to have done it was on the site to
15 Catherine Balkissoon who was, in any event, part and parcel of
16 the team of persons who were deciding.

17 **Mr. Chairman:** And is it your position that he did? Is it your
18 position that he did communicate a dive plan to Catherine
19 Balkissoon?

20 **Mrs. Persaud Maraj:** Yes. Not Mr. Ali—yes, he did. There
21 was a conversation with Kazim Ali over the phone. I believe
22 there's evidence to that.

23 **Mr. Chairman:** Yes. But, I mean, it is rather limited, isn't it?

24 **Mrs. Persaud Maraj:** Well, and that's, that is the
25 interrogation that should have occurred on site at the very least,
26 where you have persons presenting to you that, "We are
27 willing. We have this plan to go down and dive. You may not

1 like—you may think that it's mutterings, you—but—you may
2 not like it, but it was prudent for you at that moment to
3 investigate it because this is a rescue mission and if not for
4 anything, every possible and conceivable option should be
5 exhausted.

6 **Mr. Chairman:** And whose fault was not—was it for not
7 doing that?

8 **Mrs. Persaud Maraj:** For not interrogating it?

9 **Mr. Chairman:** For not looking at each or exhausting every
10 possibility?

11 **Mrs. Persaud Maraj:** It would have been Paria's position,
12 Paria's default in that.

13 **Mr. Chairman:** All right.

14 **Mrs. Persaud Maraj:** They, they had the option of
15 investigating, interrogating what was on site.

16 **Mr. Chairman:** All right, well Kazim Ali wasn't on the site
17 the whole time, was he?

18 **Mrs. Persaud Maraj:** No he was not.

19 **Mr. Chairman:** Right. So he was at a place where, even if it
20 were thought to be unreasonable to ask for a dive plan, even if
21 it were thought to be unreasonable to ask for an emergency
22 response, some sort of job analysis—

23 **Mrs. Persaud Maraj:** Something, right.

24 **Mr. Chairman:**—even if he thought all of that was
25 unreasonable, he was, was he not, in a position, because he
26 wasn't on site, to have typed up his best plan that he could
27 come up with—

1 **Mrs. Persaud Maraj:** Right.

2 **Mr. Chairman:**—and give it to them, couldn't he?

3 **Mrs. Persaud Maraj:** Well, I, I—

4 **Mr. Chairman:** Albeit in very truncated form, bullet points if
5 you like rather than a detailed narrative?

6 **Mrs. Persaud Maraj:** Certainly, if he had known that that was
7 a requirement, he could have produced that. I'm sure he would
8 have had that done.

9 **Mr. Chairman:** You're saying he didn't know?

10 **Mrs. Persaud Maraj:** He didn't know that that was what they
11 were requiring. That was never communicated to LMCS. The
12 only time that a request was made for plan in writing was after
13 the meeting on Sun—the morning of Sunday, 27th of February.

14 **Mr. Chairman:** You remember the evidence of Mr. Piper that
15 he made a number of attempts to speak to Mr. Kazim Ali,
16 and—

17 **Mrs. Persaud Maraj:** During the course.

18 **Mr. Chairman:**—during the course of the enquiring, not
19 always answering, for no doubt good reasons, but, Mr. Kazim
20 Ali understood that there was a bar on diving being—having
21 been placed there by Mr. Piper.

22 **Mrs. Persaud Maraj:** Yes.

23 **Mr. Chairman:** In order to effect a rescue, if he was to effect a
24 rescue, would it not have been prudent at the very least for him
25 to have spoken to Mr. Piper to say, “Look, this is the plan that
26 have to rescue these men. Lift the bar”?

27 **Mrs. Persaud Maraj:** Analyzing what has occurred, or what

1 we know to have occurred, it is the most prudent thing that
2 ought to have been done. The issue is the conversation between
3 Mr. Piper and Mr. Ali and what they had actually, in fact,
4 discussed—

5 **Mr. Chairman:** Hmm.

6 **Mrs. Persaud Maraj:**—and how they discussed, because the—

7 **Mr. Chairman:** And all we've got is what they each say about
8 it?

9 **Mrs. Persaud Maraj:** Yes.

10 **Mr. Chairman:** All right. Yes, I'm reminded that they knew
11 each other quite well personally.

12 **Mrs. Persaud Maraj:** Yes. They did.

13 **Mr. Chairman:** So it's not as though you're dealing with
14 some corporate faceless individual. These were two men who
15 knew each other in the industry over many years.

16 **Mrs. Persaud Maraj:** Certainly.

17 **Mr. Chairman:** Makes it—it should have made it easier,
18 shouldn't it?

19 **Mrs. Persaud Maraj:** It should have, but, from Mr. Piper's
20 evidence itself, he—his disposition had always been that LMCS
21 were too emotional and the question now becomes whether or
22 not there was anything that was being said by Kazim Ali that
23 was taken into account. Because all of Saturday morning, this
24 is going into the next day, Mr. Ali sat trying to explain and to
25 get corporation in the—

26 **Mr. Chairman:** I'm much more interested, if I may say so—

27 **Mrs. Persaud Maraj:**—on this night—

1 **Mr. Chairman:**—on the Friday night because, it won't come
2 as any surprise to you that I take the view at the moment that it
3 was highly unlikely that there was anybody going to be alive on
4 the Saturday and that the action needed to take place on the
5 Friday night, not Saturday.

6 **Mrs. Persaud Maraj:** Yes, certainly, certainly, but what I'm
7 drawing to you, Mr. Chairman, is the attitude with which Mr.
8 Ali was treated by Paria, by the personnel. They—their
9 disposition was that he was an emotional person and they did
10 not pay heed to him. That much is clear. They did not pay
11 heed to him—

12 **Mr. Chairman:** Well his son was in the pipe. Of course he
13 was emotional.

14 **Mrs. Persaud Maraj:** They did not pay heed to him after the
15 25th and one can only extrapolate that they did not pay any
16 heed to him on the night of the 25th.

17 **Mr. Chairman:** Okay. All right. That's your submission
18 anyway. Yeah.

19 **Mrs. Persaud Maraj:** Yes. LMCS' participation in this
20 Enquiry has been channelled to ensure that it delivers all that it
21 knows. However, LMCS itself possessed no strategy of
22 conjuring or redesigning what actually took place, however,
23 what has become clear from the live evidence elicited in these
24 proceedings, there are three categories, distinct categories of
25 information to be considered, what was, what could have been
26 and what should have been.

27 These are not proceedings confined to pleadings, and as

1 this Commission will retire to deliberate on the evidence from
2 the various documents, statements and viva voce evidence, I
3 wish to volunteer to the Commission that should there be the
4 need to seek any clarification on any aspect for which LMCS
5 may be able to assist, we stand ready.

6 I know that—Mr. Commissioner, this brings me to the
7 end of my closing. I know that, Mr. Commissioner, you've
8 asked us to consider whether there be any recommendations
9 that we wish to put forward. From the evidence that has been
10 or is before this Commission, what is clear is that from the
11 design of the scope of works to the ineptitude of the emergency
12 response and the lack of consideration of the families by Paria,
13 there is a systematic failure within that institution.

14 Of course, whilst I have not been able to coach a
15 recommendation in the parameters of a term, I would like to
16 commend to you, Mr. Chairman and to Mr. Commissioner the
17 need to recommend or the need to consider some form of an
18 internal audit system that could or ought to address the
19 coordinated functions within Paria. It seems to be that that
20 system is in a dire wont of coordination add that's a danger, not
21 just as we've seen here to LMCS, but it's a danger to all
22 contractors working in Paria and who continue to provide
23 services that may be high risk.

24 I have been asked for the Commission to consider
25 standards for dive that can be implemented in a manner that
26 bridges not just the institution and the performance of work but
27 the training, the requisite standards of the training facilities that

1 are present in Trinidad.

2 **Mr. Chairman:** Training facilities in what area?

3 **Mrs. Persaud Maraj:** In, in—for diving on the general—it
4 seems from the evidence or from what we've observed in this—
5 at this hearing, that there is need to standardize or to at least
6 have proper accreditations, et cetera, to what training there is to
7 divers in this jurisdiction.

8 **Mr. Chairman:** Mr. Cheddi was offering some training.

9 **Mr. Peterson SC:** [*Inaudible*]

10 **Mr. Chairman:** All right. Anything else?

11 **Mrs. Persaud Maraj:** Unless I may be of any further
12 assistance?

13 **Mr. Chairman:** No, I was—well yes, to this extent please?
14 Having heard the evidence as you have, you've been here every
15 day, in the course of this Enquiry, do you believe or is it your
16 submission, I should say, that scuba should not have been used
17 for this hazardous work?

18 **Mrs. Persaud Maraj:** No.

19 **Mr. Chairman:** It's not your submission or it should not have
20 been used?

21 **Mrs. Persaud Maraj:** No, that's not my submission—

22 **Mr. Chairman:** Right.

23 **Mrs. Persaud Maraj:**—that it should not have been used.
24 From my understanding of the evidence and what we have, the
25 scuba should have been used. It, it was merely to access the
26 chamber.

27 **Mr. Chairman:** All right.

1 **Mrs. Persaud Maraj:** It would have been safer, I believe,
2 from what I have heard, and been able to assess, that had they
3 have those—that helmet that was brought to this Commission,
4 the dangers and the risks associated with that is just adding and
5 mounting to what already exists.

6 **Mr. Chairman:** I don't think anyone's suggesting that the
7 helmet that Mr. Wilson brought along would have been ideal
8 for the works that needed to be done.

9 **Mrs. Persaud Maraj:** Yes.

10 **Mr. Chairman:** I shudder to think of the strength of Mr.
11 Wilson's neck in order to hold such a helmet, but, um, we've
12 heard a good deal of evidence about the desirability of using
13 scuba equipment in an environment such as this particular one,
14 given the hazardous nature of the work and so on, and I haven't
15 concluded a view yet but it does seem to me that having an
16 umbilical attached to you whilst you carry out that work, being
17 tethered whilst you carry out that work has some merit.

18 **Mrs. Persaud Maraj:** It does. I, I, I agree.

19 **Mr. Chairman:** And perhaps, had that happened, perhaps,
20 they might not have died. I'm not saying I have formed a view
21 about it because I do accept that really all you were doing was
22 to get into the habitat and that a tether might have been
23 provided within the habitat in any event, whether you were
24 using scuba equipment or not, but, um, anyway, your position is
25 that scuba equipment in order to carry out those works was
26 perfectly acceptable.

27 **Mrs. Persaud Maraj:** I believe so.

1 **Mr. Chairman:** That's what you're saying?

2 **Mrs. Persaud Maraj:** I believe so.

3 **Mr. Chairman:** All right. Thank you, that's all I need to ask
4 you.

5 **Mrs. Persaud Maraj:** Mr. Chairman before I finish if I may
6 have just a moment, I follow in my friends from yesterday
7 footsteps of thanking the Commission and thanking all of my
8 colleagues present here, but, as a remit from LMCS as well,
9 being that these are public hearings, I would like to say in a
10 public forum, at this forum, sorry, that LMCS wishes to thank
11 all of the volunteers who would have presented themselves in
12 order to lend the necessary help and assistance as they could
13 have on that night and continuing.

14 **Mr. Chairman:** Yes.

15 **Mrs. Persaud Maraj:** Yes.

16 **Mr. Chairman:** Yes, well thank you very much on that. All
17 right. We're going to take our break now, a little bit earlier
18 than we had planned, but can I suggest then, that we're quarter
19 to 12.00 now, Mr. Peterson, what is the plan from your team?

20 **Mr. Peterson SC:** We were anticipating that you take a short
21 break now, we start at 12.00, possibly break at 1.00 for lunch
22 and then resume and do the next hour.

23 **Mr. Chairman:** Well I'm content with that course. If that
24 suits you.

25 **Mr. Peterson SC:** Yes, that suits us.

26 **Mr. Chairman:** Let us have 15 minutes now.

27 **Mr. Peterson SC:** Yes.

1 **Mrs. Persaud Maraj:** We'll start at twelve o'clock. Who's
2 going to address me?

3 **Mr. Peterson SC:** I am going to, Sir. Sorry to—

4 **Mr. Chairman:** Right.

5 **Mr. Peterson SC:** Sorry to foist that on you. Yes, Sir.

6 **Mr. Chairman:** Right. For the whole two hours?

7 **Mr. Peterson SC:** You sound like you would like to hear Mr.
8 Mootoo also, Sir.

9 **Mr. Chairman:** No. I was rather looking forward to Mr.
10 Mootoo, but then, never mind. So, you'll address us for an
11 hour now or shortly and then we'll have our lunch break and
12 then we'll come back and that will conclude the presentations
13 today?

14 **Mr. Peterson SC:** Yes, Sir.

15 **Mr. Chairman:** Lovely. Thank you very much indeed. We
16 will do that, we'll resume at twelve o'clock, please.

17 **11.45 a.m.:** *Enquiry suspended.*

18 **12.00 noon:** *Enquiry resumed.*

19 **Mr. Chairman:** Yes, Mr. Peterson.

20 **Mr. Peterson SC:** Thank you Mr. Chairman and fellow
21 Commissioner. These submissions, Mr. Chairman, are made by
22 Paria Fuel Trading Company, Paria, and Heritage Petroleum
23 Company Limited, Heritage, in these circumstances where they
24 have not been called upon to answer any specific or general
25 allegation of wrongdoing against them in relation to the events
26 of this Enquiry but we recognize that the Commission has
27 indicated that the well-known procedure in relation to the

1 issuance of Salmon letters, should that become necessary, will
2 be forwarded in due course before the delivery of your final
3 report. Accordingly, Sir, the submissions which follow are
4 necessarily to be treated as provisional in the nature and subject
5 to amplification should the need arise after receipt of the letters.
6 So Paria and Heritage, Sir, wish to reserve the rights to add to
7 or modify these statements and submissions if necessary.

8 **Mr. Chairman:** You have my absolute assurance that that will
9 be the position.

10 **Mr. Peterson SC:** Thank you, Sir.

11 **Mr. Chairman:** If Salmon letters are issued I will expect
12 obviously—

13 **Mr. Peterson SC:** Yes, Sir.

14 **Mr. Chairman:**—comprehensive responses.

15 **Mr. Peterson SC:** Yes, Sir. As mentioned in the opening, in
16 our opening statement at this Enquiry, this Enquiry is largely
17 concerned with an examination into the circumstances which
18 led to the loss and unfortunate event of the death of four
19 employees of LMCS Limited. Those persons are Kazim Ali,
20 Jr., Rishi Nagassar, Yusuf Henry and Faizal Kurban. The loss
21 is not measurable to these families, it's significant and we
22 recognize that, Sir. It would be less human of us not to do so.

23 But the events of the 25th of February, 2022, while these
24 men were in the process of undertaking work as employees of
25 LMCS on the Sealine riser at Paria led to their death. There is
26 no truly compensatory measure that could be done to these
27 families. The loss of their loved one is irreplaceable. Paria and

1 Heritage appreciate that to assist in bringing closure to these
2 persons in an effort to avoid the recurrence of this event of the
3 25th that they fully participated and they did not hold back,
4 with the greatest of respect, in any way in assisting this
5 Commission because they recognized that this event should not
6 re occur.

7 To this end, Paria and Heritage have voluntarily made
8 available to the Commission all such persons in their respective
9 employ that they considered to be relevant and helpful to this
10 Commission. Even as a continuing obligation which resulted in
11 what Chairman described as a dumping of material, our advice
12 was, we need to dump it, we can't hold it back, once we
13 discover it or once it's requested. So we apologize for the
14 inconvenience caused but we were grateful for the day off on
15 that occasion. [*Interruption*] Siri heard me, Sir. She likes my
16 voice.

17 **Mr. Chairman:** One of your fan club?

18 **Mr. Peterson SC:** No, Siri, my phone, Sir. Whilst some may
19 take the view that Paria should have handled matters differently
20 and although there may well be room for some divergence of
21 views on that as Paria should or should not have done in
22 relation to LMCS, as retaining LMCS to carry out the work, the
23 execution of the works up to and including the 25th of
24 February, 2022 and the rescue and recovery efforts at the end of
25 the day taken by Paria were entirely reasonable in light of a
26 range of options that were open to it.

27 For the reasons which follow, we respectfully submit that

1 there is no or no reasonable basis for Paria to be faulted or to
2 bear any liability in relation to, one, its selection of LMCS as a
3 contractor and to undertake the works, the role played by and
4 during the execution of the works having regard to other things
5 such as the fact that it did not—that Paria did not possess the
6 capabilities to execute such works.

7 Also, the fact that it took reasonable steps to satisfy itself
8 that the independent contractor it ultimately hired for the works,
9 namely LMCS, was a competent and well-established specialist
10 contractor operating in the oil and gas sector with the requisite
11 knowledge, skill and experience in successfully executing
12 works of a similar nature.

13 I could not help but observe counsel for LMCS this
14 morning seek to paint LMCS as not being a specialist
15 contractor. I don't think that that could be sustained. The
16 contractual arrangements ultimately entered into between Paria
17 and LMCS followed a competitive tendering process. The
18 information and the specialist advice provided to it by LMCS
19 prior to and during the course of executing of the works and its
20 decision and the actions of touching and concerning the rescue
21 and recovery efforts took place between February 25th and
22 March 4th, 2022. Paria was assessed and accepted to be
23 competent to do the work—um, LMCS.

24 I now turn to the works. In summary, the works for
25 which LMCS was contractually engaged by Paria following the
26 competitive process of tendering, three separate categories of
27 works were identified to be executed. LMCS was required to

1 change—first, LMCS was required to change out a section of
2 subsea riser and tie in piping on Sealine No. 36 at berth 5 and
3 berth 6. Second, LMCS was required to remove, service and
4 repair and reinstall marker buoys and storm mooring buoys
5 located at the Pointe-a-Pierre harbour. The third category of
6 work is that LMCS was required to fabricate and replace 300
7 feet of main walkway on Paria's main viaduct at Pointe-a-Pierre
8 harbour.

9 The matters which occupied this Enquiry pertain to the
10 first set of works with respect to the changeout of the section of
11 the subsea riser between berth 5 and berth 6. The tender
12 process, in an effort to attract suitably qualified contractors,
13 went out and 27 contractors who were pre-qualified in relation
14 to marine installation maintenance responded to that invitation.
15 Paragraph seven to paragraph 18 of the witness statement of
16 Rajendra Mejias has set out the procedure for the
17 prequalification of contractors and I just flag that for your
18 consideration, Commissioners.

19 **Mr. Chairman:** Do you have a page number for that?

20 **Mr. Peterson SC:** No. Paragraphs seven to 18 of Mr. Mejias'
21 statement dated the 12th of September, 2022.

22 **Mr. Chairman:** All right.

23 **Mr. Peterson SC:** And also you could find paragraph 26 of the
24 statement of Manmohan Balkaran. His statement is dated the
25 30th of September, 2022.

26 The tender process was engaged by Paria for a period of
27 approximately one month from the 29th of April to the 28th of

1 May, 202021. On the 4th of May, 2021, a mandatory virtual
2 site visit for bidders was attended by 16 vendors and then there
3 was a scheduled in-person visit but that had to be aborted due to
4 the advent of COVID-19. Five bids were received during the
5 period prescribed for the submission of bids. LMCS was the
6 only bidder that provided all documents required by Paria's
7 scope of works and therefore the only bidder which provided
8 the valid, what we can describe as a valid technical bid, and this
9 can be seen at paragraphs 26 to 29 of the witness statement of
10 Mr. Manmohan Balkaran.

11 The technical specifications for the works with which
12 bidders were required to comply provided, among other things,
13 the following, that the bidders were required to demonstrate
14 that they possessed the experience and resources, both
15 equipment and personnel, and also technical capability, to
16 successfully complete the works. Bids would only be
17 considered if they were validly submitted. Among other things,
18 they were to be STOW certified or there should be STOW
19 certification of the entity, an audited HSE management system
20 for high-risk offshore services, inclusive of drilling services,
21 diving services, lifting services, piling works, pipeline
22 construction and repairs an HSE plan, a quality assurance plan,
23 method statement and overarching risk assessment and dive
24 plan. They also needed to provide résumés of key personnel
25 and their experience in similar projects.

26 **Mr. Chairman:** Can I ask you about that? Given that Paria
27 are a national company dealing with the distribution of oil and

1 other hydrocarbons, put out a tender for this kind of work,
2 which is not an insignificant amount of work to be done, at no
3 doubt considerable cost, does it come to you as a surprise that
4 there was only one bidder who was compliant in the whole of
5 this country?

6 **Mr. Peterson SC:** No, Sir, not really. Because of the nature of
7 the work, it narrows down the persons available to do that
8 work.

9 **Mr. Chairman:** Yes.

10 **Mr. Peterson SC:** Because of the specialized nature of the
11 work, again, a narrowing factor, so the pool will then get very
12 small, and the fact that we also have COVID with respect to
13 persons being available and a lot of companies may not be
14 operational or fully operational at the time and may not—
15 because you hear the—you may recall the evidence of Mr.
16 Donawa that—I think it may be in his statement I don't know if
17 he said it live—that due to COVID they had at one point a
18 hundred and something staff and I think they shrunk down to a
19 certain number.

20 **Mr. Chairman:** Yes.

21 **Mr. Peterson SC:** So that may have accounted for—

22 **Mr. Chairman:** Well, I'm sure that's affected a lot of people
23 and a lot of business, so you think probably—

24 **Mr. Peterson SC:** That may have accounted for it.

25 **Mr. Chairman:**—more to do with the COVID outbreak than
26 anything else?

27 **Mr. Peterson SC:** Yes, Sir. That may have accounted for the,

1 um—

2 **Mr. Chairman:** Yes, all right, thank you.

3 **Mr. Peterson SC:**—small number of responders.

4 Paria, in the course of assessing the bids, checked
5 LMCS' references by calling persons, entities' names to verify
6 the materials and services that were successfully provided—and
7 references that were successfully provided by LMCS to Paria.
8 Further, the Petrotrin database disclosed that during the period
9 2015 to 2018 LMCS carried out 124 jobs for Petrotrin and
10 obtained a rating of acceptable for each job with the only other
11 available rating as unacceptable. So it was either acceptable or
12 unacceptable and they did 124 and they got acceptable ratings.

13 Previous jobs undertaken by LMCS for Petrotrin
14 included but were not limited to rerouting of Sealine risers,
15 structural repairs to berths, renewal of piping and renewal of
16 risers. I cite paragraph 12 to paragraph 17 of the witness
17 statement of Mr. Rajendra Mejias dated September 12, 2022.
18 In addition to that, Sir, in the year 2020 LMCS successfully
19 completed subsea maintenance works at berth No. 5 of almost
20 identical nature to those in respect of which Paria had invited
21 them to tender.

22 And this could be supported also from the statement of
23 Mr. Kazim Ali Sr. at paragraphs 16 and 17 of the supplemental
24 statement bundle where Mr. Ali detailed in that statement that
25 the job was so similar that inflatable plugs was also used and I
26 think he used the phrase same techniques were used. So
27 paragraphs 16 and 17 of Mr. Kazim Ali Sr's. statement.

1 I am reminded that their performance on that job was
2 rated as excellent. Indeed those 2020 works involved the
3 replacement of an old riser with a new riser with the aid of a
4 hyperbaric chamber and required the installation of migration
5 barriers at a subsea level.

6 **Mr. Chairman:** Do we know if there was any fluid in the line
7 before the works were carried out?

8 **Mr. Peterson SC:** I don't, Sir, and that's why we were trying
9 to track the, the, the documents but—

10 **Mr. Chairman:** Yes.

11 **Mr. Peterson SC:**—as we said—as the documents contained in
12 themselves, they have a destruction clause that allows them to
13 be destroyed within three months of completion of the works
14 unless they are outstanding issues.

15 **Mr. Chairman:** I just wondered if there was any actual
16 evidence from somebody about whether or not there was
17 anything in the line.

18 [*Commissioners confer*]

19 **Mr. Peterson SC:** [*Mr. Peterson SC confers with Mr. Mootoo*]
20 He said he might have seen something that would help us.

21 **Mr. Chairman:** Yeah. All right, well, of course I'd be—

22 **Mr. Peterson SC:** That would be helpful too, Sir if it's—

23 **Mr. Chairman:** Yeah.

24 **Mr. Peterson SC:**—because it's a similarity or lack thereof as
25 the case may be.

26 **Mr. Chairman:** Yeah. I was particularly interested in whether
27 they were sucking or blowing in order to get the—

1 **Mr. Peterson SC:** Whether it was air blowing? Sir that, yeah,
2 that's—I heard the question you posed to counsel for LMCS
3 and that is the different something that accounted because that,
4 I will be very candid, that's a point that Mr. Mootoo and I had
5 been debating about. When did that shift take place from
6 pumping to air blowing?

7 **Mr. Chairman:** Yes.

8 **Mr. Peterson SC:** Because that seems to have, based on all the
9 evidence, including the experts, to have had some impact or
10 some contributory impact to the events of that day.

11 **Mr. Chairman:** Indeed.

12 **Mr. Peterson SC:** And we found something that may point us
13 in the direction as to when that change would have, um—that
14 shift would have taken place.

15 **Mr. Chairman:** Yes. I think we've got something on that as
16 well—but, yeah.

17 **Mr. Peterson SC:** You all got some—yes.

18 **Mr. Chairman:** Yes.

19 **Mr. Peterson SC:** Ys. Accordingly, Sir, it cannot be doubted
20 that at the time of tender LMCS objectively presented as a
21 specialist contractor that was well qualified and experienced to
22 execute the works in question. I don't think—well I can't recall
23 any evidence in this Enquiry challenging the ability to execute
24 the works of this nature.

25 Paria notes that during the course of this Enquiry
26 suggestions have been made to the effect that this ought to have
27 had adequate—that it ought to have had adequate internal

1 resources with the relevant skill and experience to rigorously
2 evaluate all of the technical aspects of the bids received,
3 inclusive of the method statement, the risk assessment and the
4 emergency response plan, or, that it should have retained an
5 external consultant capable of so doing. While these are not
6 unreasonable views, the reality is that the law did not impose
7 such a requirement on Paria, legally speaking. All that Paria
8 was required to do was to take reasonable steps to satisfy itself
9 that the independent contractor returned retained by it to carry
10 out the works had the requisite level of competence.

11 Applying this legal standard, it could hardly be suggested
12 that Paria was negligent in the selection of LMCS as a
13 contractor, given LMCS' knowledge, extensive experience,
14 STOW certification and track record in executing works of a
15 similar nature to—of those—similar to those that Paria was
16 seeking to invite the bids. In any event, there is nothing
17 contained in LMCS' method statement that accompanied its bid
18 which, if adhered to, would have given rise to the Delta P event
19 or to the risk of such an event reasonably occurring. In this
20 connection, the following evidence is of critical importance.

21 Mr. Chairman, before I go on to the evidence that
22 showed—that I'm about to deal with, with respect to the Delta
23 P event with respect to LMCS, I want to go back to answering
24 the question you asked, Mr. Chairman, as to whether in the
25 previous job there was any indication as to whether the line had
26 contents.

27 **Mr. Chairman:** Yes.

1 **Mr. Peterson SC:** The same paragraph 16 of the statement of
2 Kazim Ali Sr. of the supplemental bundle, the statement dated
3 the 22nd of November, no, the 8th of November, 2022,
4 paragraphs 16 and 17.

5 **Mr. Chairman:** Yes.

6 **Mr. Peterson SC:** When you read the two statements—the
7 two paragraphs together, Sir, it catered for—it catered for the
8 utilization of the plugs, the barriers, to stop hydrocarbon
9 vapours and the fact that he said that the techniques that were
10 employed is similar to the techniques to be employed in 2022, I
11 think one can read and infer to that it's the same steps, the
12 clearing of the line, the insertion of the plugs, the removing of
13 the riser—

14 **Mr. Chairman:** Well, I'm not sure about that. I mean, it does
15 seem to me of some importance and we're not—we don't have
16 the documents because they've been destroyed, but it does
17 seem to me to be of some importance to know whether the line
18 was cleared firstly by them, secondly by pumping or blowing.

19 **Mr. Peterson SC:** Or blowing.

20 **Mr. Chairman:** And thirdly, what quantity might have been
21 taken out of the pipeline at the time, things of that kind, a direct
22 comparison could have been made. And I think you're right,
23 we can infer that it was a similar job. Exactly what happened,
24 though, couldn't have been the same otherwise they wouldn't
25 have been here to have done the second job.

26 **Mr. Peterson SC:** It doesn't condescend to particular thing.

27 **Mr. Chairman:** To that detail?

1 **Mr. Peterson SC:** Yes.

2 **Mr. Chairman:** No, quite. All right, well thank you for that
3 anyway.

4 **Mr. Peterson SC:** Yes. The evidence I say, Sir, that would
5 have removed the risk of a Delta P is as follows. A, LMCS'
6 method statement at tender expressly provided that the liquid
7 content from Sealine 36 was to be removed to a level sufficient
8 to allow the replacement of the corroded section and once the
9 level in the riser had dropped to 35 feet below sea level, a line
10 plug would be installed. So it recognized a clearing of the line
11 to the point of 35 feet below, and that could be found at page
12 659 of the core bundle of documents.

13 Secondly, LMCS' HSE manager, Mr. Ahmad Ali,
14 testified that its method statement required that LMCS only
15 remove enough line content sufficient to give it room to install
16 the plug, the plugs, while leaving the rest of the contents in the
17 line and that such removal would not have created a void in the
18 line providing enough space for something to suck anyone in.
19 See paragraph 13 of the supplemental statement of Mr. Ahmad
20 Ali dated the 31st of October, 2022.

21 Third, LMCS' Managing Director, Mr. Kazim Ali Sr.,
22 testified that LMCS did not propose the removal of the entire
23 line contents between berth five and six. He said that is so
24 because it wanted to see, it wanted to set the plug on a solid leg
25 of liquid and that LMCS did not mention Delta P in its
26 discussions in the method statement or risk assessment because
27 Delta P was to be taken care of by ensuring that there would

1 be—there would have been no pressure difference across the
2 plugs. See paragraph 26 of the supplemental witness statement
3 of Mr. Ali dated the 22nd of November, 2022.

4 The fourth piece of evidence, Sir, is that LMCS'
5 Managing Director, Mr. Kazim Ali Sr., also testified that he
6 was of the impression that Paria understood that the method for
7 the removal of liquid only required the creation of a 35-foot
8 space to set the plug and that he did not think that Paria wanted
9 LMCS to clear the entire line. See paragraphs 33 and 36 of the
10 supplemental witness statement of Mr. Ali.

11 Both LMCS and Paria interpreted and subsequently
12 treated both LMCS' method statement insofar as it pertains to
13 the removal of the liquid of the, liquid content of the line, and
14 Paria's response to the query, one, in the Addendum I—
15 Addendum I is at page 598 of the core bundle, which referred to
16 the ensuring that the line is clear and dry. That phrase that had
17 consumed a considerable time of this Commission, Sir, as to
18 what is meant by the term clear and dry.

19 Both LMCS and Paria understood what that meant. Mr.
20 Chairman, at several points in the, in this Enquiry, Mr.
21 Chairman made the point, and Commissioner Wilson, that it's
22 vague or it could—it's vague when one reads it because it does
23 not say that all the content was not to be removed and they put
24 it to several witnesses what they understood by clear and dry.
25 My respectful view, Sir, is that that phrase has to be taken in the
26 context of the contract, it has to be taken in the context of the
27 industry and it has to be taken in the context because since we

1 are enquiring in to the vents of the 25th it has to be taken
2 against the backdrop of what the contracting acting parties
3 understood by that phrase. And my respectful submission is,
4 neither Paria nor LMCS accepted that phrase as clearing the
5 line completely of all contents. They understood—

6 **Mr. Chairman:** Do you agree, though, that, to us—

7 **Mr. Peterson SC:** Yes.

8 **Mr. Chairman:**—looking at it with the benefit of hindsight
9 obviously just reading the documentation the combination of
10 that addendum in which the response from Paria is the
11 contractor is responsible for the safe removal of hydrocarbon
12 contents from the line and to ensure that the line is clear and
13 dry.

14 **Mr. Peterson SC:** Yes.

15 **Mr. Chairman:** That, combined with the internal instruction at
16 Paria, that the clearing of Sealine 36 section between berth 5
17 and 6, that the clearing of that line and the clear and dry
18 suggests to us that that would have been emptying the line.

19 **Mr. Peterson SC:** Yes, Sir. To, to, I don't want to say the
20 uninitiated, but—

21 **Mr. Chairman:** Well we are uninitiated, aren't we? Yes.

22 **Mr. Peterson SC:**—we would read it literally as meaning clear
23 and dry, clean it out, dry it out.

24 **Mr. Chairman:** Yes.

25 **Mr. Peterson SC:** But I think it was the evidence of Mr.
26 Michael Wei and also from Kazim Ali that they understood,
27 well I think Mr. Wei said he understood it to mean the area to

1 be worked on is to be clear and dry in order to effect the works.

2 **Mr. Chairman:** Right.

3 **Mr. Peterson SC:** But Sir, when you look at it, with respect, it
4 boils down to no troubling moment in that even the evidence of
5 Mr. Zaid Khan, once the ullage was checked and whether it was
6 30 feet, 35 feet, there was ullage, inherent in that is that there
7 was content in the line. So once it was understood that the aim
8 of the exercise or the mission was to achieve an ullage of 30, 35
9 feet and everyone was moving towards achieving that, whether
10 they had got it false reading and all of that later on is a different
11 issue, but once the mission was always to achieve an ullage of
12 35 feet, inherent in that is the presence of content.

13 **Mr. Chairman:** Yes.

14 **Mr. Peterson SC:** So no one understood this phrase,
15 notwithstanding how clear it is linguistically—

16 **Mr. Chairman:** Yes.

17 **Mr. Peterson SC:**—no one read it and applied it to mean clear
18 and dry as we, as we accept, the uninitiated, would have
19 thought it was.

20 **Mr. Chairman:** Yes. But do you accept that it was only Paria
21 who had the information as to actually how much was removed
22 from the line?

23 **Mr. Peterson SC:** Well, yes, Sir, that is—well, because it
24 went into Paria's tanks and facilities.

25 **Mr. Chairman:** Yes.

26 **Mr. Peterson SC:** But of course that has its own, um,
27 challenges if we were to rely on that because, as Mr. Kazim Ali

1 admitted, there was commingling of product because it joins
2 other lines, one, and also, I don't think if parties, and I was
3 discussing that with Mr. Mootoo this morning, if parties were at
4 idem with respect to seeking an ullage of 35 feet, I don't think
5 it mattered and I don't think anybody would really be
6 monitoring quantum, because it's not like if they are selling it
7 to a third party—

8 **Mr. Chairman:** No, no, it's self-evident they could not have
9 been monitoring, I mean the people who were actually
10 concerned with getting the line to where it should be, they
11 could not have been concerned with quantum because, had they
12 been, they would have realized that there's far too much being
13 taken out of the line.

14 **Mr. Peterson SC:** Exactly, Sir.

15 **Mr. Chairman:** There's no question about that. But what I'm
16 concerned about is that firstly the only people who knew how
17 much was being taken out of the line within certain limitations
18 because there are whole days where nothing was recorded even
19 though there was blowing taking place, and so there was an
20 unknown quantity removed from the line, but, leaving aside that
21 for the moment, on any view, hundreds of barrels of oil were
22 removed from the line. We know that to be a fact because this
23 would not have happened without it, right.

24 **Mr. Peterson SC:** Yes, that's a fact, Sir.

25 **Mr. Chairman:** So, what I want to try and understand is that it
26 is only Paria's knowledge, it was only within Paria's
27 knowledge as to how many barrels were removed, wasn't it?

1 **Mr. Peterson SC:** Well, it could—well, it was available to
2 Paria if one was focusing on that. So, to answer your question,
3 it was going into Paria's onshore facility—

4 **Mr. Chairman:** Yes.

5 **Mr. Peterson SC:**—and if one was required to monitor that or
6 to focus on it, they would have picked that up. But I think, Sir,
7 in trying to determine at this Commission what happened on
8 that day, I think we have to look at things in the context. What
9 was the focus point of that—of those works? The focus point,
10 the mission we're on is to get ullage down to 30 or 35 feet.

11 **Mr. Chairman:** Sure. I mean, I don't mean think there's any
12 doubt about that.

13 **Mr. Peterson SC:** If there was a corresponding default check
14 and persons were put to monitor that then one coulda pick up,
15 based on the quantity here, something is wrong there.

16 **Mr. Chairman:** Uh-huh.

17 **Mr. Peterson SC:** But to be fair to all parties on that day, if
18 even they checked there and they see a certain quantity and they
19 may be alarmed, when they check the ullage, not knowing then
20 what we know now, and they see 35 feet I could see one just
21 dismissing that because it's not been sold to a third party, it's
22 not being dumped in the sea, it's in our tank but we got the
23 main mission we're seeking, 35 feet ullage, we got it here, let's
24 insert the plugs and get on with the job.

25 **Mr. Chairman:** But is that really a tenable argument, Mr.
26 Peterson, if somebody had looked at the amount that was being
27 pumped out of that line? We're not talking about some modest

1 discrepancy in the terms of the number of barrels that was
2 necessary to achieve that ullage. We're not talking about that,
3 but potentially by a thousand per cent. I mean—

4 **Mr. Peterson SC:** Sir, I hear that and I understand that.

5 **Mr. Chairman:**—hundreds and hundreds of barrels were
6 removed from the line. I find it difficult to believe that people
7 working in the industry, for years the people that Paria
8 employed, experienced in that industry, people LMCS
9 employed and their experience in the industry, that they would
10 not have been alarmed at the sheer volume of material that was
11 removed from that line in order to seek to achieve an ullage of
12 just 35 per cent.

13 **Mr. Peterson SC:** That's what I'm saying, Sir.

14 **Mr. Chairman:** The fact that they didn't do it is something we
15 have to consider in due course as to a double-check if you like,
16 for the future, that if you're seeking to establish an ullage on
17 either side in order to remove a piece of pipeline, that you're in
18 a position to be able to, on the one hand have a dip down your
19 pipe to see where the fluid ends and then corroborate that so as
20 to avoid this situation developing by looking at actually what
21 was removed from the line.

22 **Mr. Peterson SC:** Yes, Sir.

23 **Mr. Chairman:** As I put it rather blithely on a number of
24 occasions—

25 **Mr. Peterson SC:** I under—

26 **Mr. Chairman:**—you could have stuck a bucket down there
27 and removed enough to get 35 feet.

1 **Mr. Peterson SC:** I understand, I understand the concern you
2 have, Sir, but that presupposes a correlation between the
3 clearing of the line, the operations clearing the lines, and people
4 back at storage that may possibly, I want to say, to use the term,
5 lend their tanks, their storage, so they there managing storage,
6 they have the tanks, the—lending the storage, let's say, but they
7 are not part of that repair and operation.

8 **Mr. Chairman:** No, clearly not.

9 **Mr. Peterson SC:** Had there been a correlation between that—

10 **Mr. Chairman:** Yes.

11 **Mr. Peterson SC:**—that [*Inaudible*], then one would have said,
12 “But look how many barrels we're getting here. LMCS you're
13 telling me 35 feet ullage but look 500 barrels or whatever.”

14 **Mr. Chairman:** What's the position about this internal
15 document that is essentially for Paria's own staff, all right, in
16 order to carry out this clearing of the line?

17 **Mr. Peterson SC:** Beg your pardon, Sir?

18 **Mr. Chairman:** The document that we had at one zero—

19 **Mr. Peterson SC:** Yes.

20 **Mr. Chairman:**—three three, this is the clearing of section of
21 the line, the work instruction which was the internal document,
22 yes?

23 **Mr. Peterson SC:** Yes.

24 **Mr. Chairman:**—if that is an internal document, would that
25 not have gone also to the people who are monitoring the tanks?

26 **Mr. Peterson SC:** No, Sir. I understand this to be an internal
27 document for the operations at line 36, Sir.

1 **Mr. Chairman:** Yes.

2 **Mr. Peterson SC:** So to say—and that is how—and I could
3 see although it was not intended for LMCS, but I could see—it
4 getting into their hands, I could see no harm by that, but what it
5 was setting out is a step by step procedure as to what was
6 happening with the procedure.

7 **Mr. Chairman:** Yes.

8 **Mr. Peterson SC:** They're following the steps for the clearing
9 of the line. Now if there was a correlation between all the
10 parties—

11 **Mr. Chairman:** Well just pause for a minute. And have you
12 got the document in front of you?

13 **Mr. Peterson SC:** Yes, Sir.

14 **Mr. Chairman:** Well would you look to page one zero three
15 four, please? One zero three four, I don't know if it's possible
16 to bring it up on the screen. It's page 2 of the document.

17 **Mr. Peterson SC:** Page 2, right.

18 **Mr. Chairman:** Do you have that?

19 **Mr. Peterson SC:** Yes, Sir.

20 **Mr. Chairman:** Do you see it says—I mean this is under the
21 subheading "Preparation for Installation of slip blank."

22 **Mr. Peterson SC:** For installation of slip blank, yes.

23 **Mr. Chairman:** Right. And then it gives as a prerequisite this
24 is the step by step guide to what should happen, isn't it?

25 **Mr. Peterson SC:** Yes, Sir.

26 **Mr. Chairman:** And just taking by way of example the
27 thirteenth step in that is monitor tank 111 levels and gauge

1 pressure. What's tank 111?

2 **Mr. Peterson SC:** I understand that to be an onshore tank.

3 **Mr. Chairman:** Right, where the fluid is coming into it?

4 **Mr. Peterson SC:** Yes, Sir.

5 **Mr. Chairman:** Right? So in monitoring that tank, its levels
6 and the gauge pressure—and gauge the pressure, all right?
7 Now, forgive me, if that is meant to be one of the steps—

8 **Mr. Peterson SC:** Sir, I understand—

9 **Mr. Chairman:**—somebody must be looking at that and there
10 has to be a purpose for doing that.

11 **Mr. Peterson SC:** Yes, Sir.

12 **Mr. Chairman:** And that purpose must relate surely to the
13 amount of material that's taken out of the line.

14 **Mr. Peterson SC:** Sir, I saw this and I did not read it that way.
15 It will give an indication as what is taken out of the line.

16 **Mr. Chairman:** Yes.

17 **Mr. Peterson SC:** But remember, the person who may be
18 monitoring the tank is monitoring the tank in the event of
19 overflow to switch it to possibly tank 112 or 113.

20 **Mr. Chairman:** Right. You mean just the few barrels that was
21 necessary to be removed from this line, he might have to switch
22 between these enormous tanks for those few barrels to be—so
23 that it doesn't overflow?

24 **Mr. Peterson SC:** Sir you hit the nail on the head, but that is
25 the problem—no, that's the problem with the issue, Sir, when
26 one's seeking to use the actual amount that came out against
27 Paria, because there's no—

1 **Mr. Chairman:** You mean against [*Inaudible*]. I just want—I
2 mean, it just seems to me a failure all round that nobody
3 seemed to understand what I would have regarded as basic
4 mathematics in order to achieve the ullage that you're looking
5 for you need this number of barrels removed. If you take
6 hundreds and hundreds more than that, something has gone
7 wrong. Anyway—

8 **Mr. Peterson SC:** Yes, Sir, and—but the point is, Sir, that
9 the—remember that—the one one—that is presupposing, Sir,
10 that 111, tank 111 is dedicated solely for that purpose and that's
11 the point I'm making.

12 **Mr. Chairman:** No.

13 **Mr. Peterson SC:** There was no connection between the
14 works going on at 36 and the utilization of the storage on—it
15 was almost like if the project is borrowing storage in the
16 meantime because they have to repump. You have to put back
17 fuel when they finish.

18 **Mr. Chairman:** Yes.

19 **Mr. Peterson SC:** And because there was no obligation at the
20 clearing on Paria to monitor the, the amount of fuel being taken
21 out and that is probably what led to the, um, to the excess if
22 not—

23 **Mr. Chairman:** All right. Well, cutting through all of that, do
24 you agree that had someone been monitoring that, the alarm
25 bells might have been rung?

26 **Mr. Peterson SC:** Alarm bells might have been rung but I
27 factor into that that there was comin—I call it commingling,

1 but, as Mr. Ali also agreed with the term, because tank could be
2 fed from different sources.

3 **Mr. Chairman:** Yes, but, is it really to be suggested that as the
4 same time as they were pumping oil from Sealine 36 into tank
5 number 111 and monitoring the levels that there might have
6 been fuel coming from some other source at the same time?

7 **Mr. Peterson SC:** I'm subject to correction, but I think the—
8 they're all inter—they're all—the pipe—the lines are
9 interconnected. That's the term.

10 **Mr. Chairman:** No, no I follow they're all interconnected but
11 I'm assuming, perhaps wrongly, because I don't know anything
12 about this, that they would close off valves leading into that line
13 that would take it into tank 111 and just measure what was
14 actually being taken out of Sealine 36. And Mr. Wilson
15 suggests that there will be a manifold to do so.

16 **Mr. Peterson SC:** I was just reminded of some of the evidence
17 that when—I was just reminded that when you blow at 36 it
18 moves into 66 and it moves the product in 66 further ahead. So
19 that's what I was saying, Sir, unless there was a dedicated
20 assignment of monitoring, it may have raised an alarm bell as
21 well as it may not have.

22 **Mr. Chairman:** But isn't that what this is? This is your
23 document. This is the internal document for Paria to—for the
24 works to be, as it were, monitored all right? This is what you
25 describe, your document describes, clearing of Sealine 36
26 between berths 4—between 5 and 6, and it's described as the
27 work instruction from the terminal operations to offshore and

1 one of the—as it says—procedure, the following are the steps
2 that should be followed for the clearing of the Sealine between
3 5 and 6. Step number 13 or rather step number 12, “Open tank
4 111 valve to receive line content of 66.”

5 **Mr. Peterson SC:** Of 666 Sealine, yes.

6 **Mr. Chairman:** Yes. And then it says, “Monitor tank 111
7 levels and gauge pressure.” But surely the, the, the, the purpose
8 for doing that is so that you know how much has come out of
9 66.

10 **Mr. Peterson SC:** I don’t think so, Sir.

11 **Mr. Chairman:** You don’t?

12 **Mr. Peterson SC:** No.

13 **Mr. Chairman:** Right. So what is the purpose of having that
14 there? What is the purpose of opening the valve and
15 monitoring the contents?

16 **Mr. Peterson SC:** To receive whatever is coming.

17 **Mr. Chairman:** Yes.

18 **Mr. Peterson SC:** But there is no requirement at that stage for
19 dedicated assignment of monitoring, because they don’t need to
20 monitor what’s coming. It’s their product, their tanks—

21 **Mr. Chairman:** But it says so.

22 **Mr. Peterson SC:** Right.

23 **Mr. Chairman:** Monitor tank levels and—

24 **Mr. Peterson SC:** Sir, that’s what I’m telling you. That
25 monitoring is not to determine—it’s not like if they’re buying
26 product and they say, well, I’m buying a thousand barrels. Let
27 me see how much I actually receive into this tank before I pay

1 you.

2 **Mr. Chairman:** Right. Well, that's why I referred you to the
3 previous paragraph, number 12: "Open the tank valve to receive
4 line content of 66."

5 **Mr. Peterson SC:** Because line content is coming to occupy
6 the storage for a while before the—when the work is finished to
7 pump back, because the scope of works required pumping back
8 some product back into the line.

9 **Mr. Chairman:** Okay. But—

10 **Mr. Peterson SC:** So they, at that point—Sir, I understand
11 what you're saying, you know. What I'm saying to you, Sir,
12 had there been the system where, X, you pump; A, you go and
13 check that, we want to pump out a certain amount, we're
14 looking for a—to ullage of 35 feet, look and see what's coming
15 at you there. Everyone say, "Well we expect about—to pump
16 out about 100 barrels, 60 barrels, 0 barrels. If that assignment
17 is set up or that work schedule is set up, I agree you, Sir that the
18 person at the tank will say, "But you tell me a hundred man. I
19 cross 200. What going on here?"

20 **Mr. Chairman:** Yes.

21 **Mr. Peterson SC:** But what is happening here, from I
22 understand this document, is that, "Tank farm, we want to
23 borrow some storage. Open up—we using 111."

24 **Mr. Chairman:** Right.

25 **Mr. Peterson SC:** "We going and pump. Check and make
26 sure—

27 **Mr. Chairman:** And the man at the other end says, "Well how

1 much you're going to be pumping in before I decide which tank
2 to let you use?"

3 **Mr. Peterson SC:** Well if he—that's why he—

4 **Mr. Chairman:** Am I [*Inaudible*] this?

5 **Mr. Peterson SC:** That's why he—well, that's it. No, well,
6 he—they're using 111 because that that is available, but they
7 tell him to monitor it to make sure that it, that every—all goes
8 well. That's a standard step—

9 **Mr. Chairman:** Yeah, but—

10 **Mr. Peterson SC:**—to monitor the gauge and the pressure.

11 **Mr. Chairman:** All right. I mean, I hear what you're saying.

12 **Mr. Peterson SC:** So I don't think I could—

13 **Mr. Chairman:**—and I will give it further thought—

14 **Mr. Peterson SC:** Yes, Sir.

15 **Mr. Chairman:**—in the light of what you've been saying to
16 me, but, I have to say I was struggling a little to understand
17 anything other than that the—Paria had the information as to
18 the barrel quantity and I will be the first to accept that it will be
19 necessarily an imprecise number, but we're not dealing with
20 some minor discrepancy between what might have come out of
21 the line and the amount that was actually required to come out
22 of the line. We're dealing with hundreds and hundreds, if not a
23 thousand barrels more than should have been necessary, and
24 that should have set off an alarm.

25 Now, irrespective, it seems to me, of what was or was not
26 done and we know it couldn't have been done on the day, for
27 the future, and for our purposes in making recommendations so

1 as to avoid this ever happening again, it's clear, isn't it, that it is
2 A, capable of being measured, the amount that is taken out of
3 any line, B, capable of identifying the sort of quantity that is
4 necessary to achieve the purpose being sought, and, three, that
5 there should, once you made that measurement, for somebody
6 to be standing by that and saying to the people who are doing
7 the blowing or pumping, "You're done. We've got enough,
8 thank you very much", and if it's not showing it at the right, at
9 their end, that that would cause an alarm to be rung as to what
10 the position might be.

11 **Mr. Peterson SC:** Exactly, Sir. And let me see if I could
12 assist you. That, Sir, is a correct procedure and the alarm bell
13 would be rung—

14 **Mr. Chairman:** Yes.

15 **Mr. Peterson SC:**—and people down at 36 they will say
16 what's going on? Look at what we're getting.

17 **Mr. Chairman:** Right.

18 **Mr. Peterson SC:** But that—that's what I'm saying, Sir. That,
19 you see that, that is perfect recommendation going forward, but
20 when we're Looking at the event, we're looking back at what
21 happened on the 25th.

22 **Mr. Chairman:** No, no, I agree.

23 **Mr. Peterson SC:** Had there been that correlation and the
24 dedication at both point, I could see anybody at the other point
25 raising an alarm, but that seems not to have been the
26 arrangement.

27 **Mr. Chairman:** No.

1 **Mr. Peterson SC:** But going forward I think it's a perfect
2 recommendation, Sir.

3 **Mr. Chairman:** Right. Well, I'm grateful for that, um, but the
4 only point I suppose I'm making is, is that it wasn't beyond the
5 wit of man to have thought of that then. I appreciate they
6 didn't, but it seems a pretty straightforward thing to have done.
7 "How much are we taking out of this line?"

8 **Mr. Peterson SC:** Sir, I think what—the flipside of that I think
9 is the aim was really 35 feet, and everybody know once you get
10 to 35 feet you're monitoring that, they couldn't take out that
11 much.

12 **Mr. Chairman:** All right.

13 **Mr. Peterson SC:** So there was no—nothing would alert them
14 to put a second monitoring on that side. Now we know. Now
15 we know, but when—if they were dipping and they saw an
16 empty line, then they would know, well look, where all of this
17 oil gone? But when there dipping and they get, as Mr. Khan
18 point out, wrong—a wrong measurement but they're getting to
19 30, 35, they say, right, and that is—well we all know from—
20 what flowed from that.

21 **Mr. Chairman:** Yes. All right, thank you.

22 **Mr. Peterson SC:** And the last piece of evidence on that point,
23 Sir, is—came from Mr. Khan.

24 **Mr. Chairman:** Sorry, yes, you'd said four point points and
25 this—

26 **Mr. Peterson SC:** Yes.

27 **Mr. Chairman:**—is your fifth, yes.

1 **Mr. Peterson SC:** Yes.

2 **Mr. Chairman:** Thank you.

3 **Mr. Peterson SC:** The evidence from Mr. Khan that, as an
4 expert witness he gave oral evidence to the effect that the divers
5 would not have been sucked into the pipeline if LMCS had
6 effectively only removed the contents of the line to a depth of
7 35 feet or ullage of 35 feet it's because, as we accept now and
8 from his assistance, there would have been no Delta P, well I
9 don't know if to say Delta P event or—I kind of scared to label
10 it now, is it event or—Delta P event.

11 **Mr. Chairman:** Yes, you—I'm in the same situation. I'm
12 slightly scared about using the expression but—

13 **Mr. Peterson SC:** Yes.

14 **Mr. Chairman:**—I think he means—

15 **Mr. Peterson SC:** There would have been no Delta P event.

16 **Mr. Chairman:**—there would have been no Delta P event.

17 **Mr. Peterson SC:** Yes. So that's correct, no Delta P event.
18 Accordingly, given the contents of the LMCS tender package
19 and the documents produced before the award of the contract,
20 the retention of an independent professional with sufficient
21 knowledge, skill and experience to evaluate the technical
22 aspects of the bid received could not have reasonably resulted
23 in LMCS' bid being deficient or rejected, because, when one
24 looks at LMCS, the removal of the 35 feet, that was perfect and
25 that was reasonable.

26 And the reason the bid would not have been rejected as
27 being deficient is that, looking at that bid, no one would have

1 also seen the issue of Delta P arising because getting an ullage
2 of 35 feet would not have bring a Delta P event into play and
3 that is why in my opening, Sir, to this Commission, I said I'd
4 searched all the documents and I could not find in the bid and
5 tender documents any expression of Delta P.

6 **Mr. Chairman:** Yeah, I—and, and you, you know, you're
7 pushing an open door there. I think we're all agreed about that,
8 but I suppose my concern about it is this, is that if the purpose
9 of taking an ullage of 35 feet on either side was so as to ensure
10 that the line remained full, so as to ensure that there was no
11 Delta P event, why wasn't that ever expressed by anybody?

12 **Mr. Peterson SC:** The, the word Delta P?

13 **Mr. Chairman:** Well—

14 **Mr. Peterson:** Yeah.

15 **Mr. Chairman:**—that's just what I've said.

16 **Mr. Peterson SC:** Yes.

17 **Mr. Chairman:** That we only want to take a 35-foot ullage at
18 either side because we're going to put in the plug, we need to
19 retain the fluid in the pipe so as to ensure that no Delta P event
20 or Delta P, latent Delta P would exist and therefore not trigger
21 any event when removing the plug.

22 **Mr. Peterson SC:** Yes. Mr. Ali's answer to that is, well he
23 factored it in by putting it on a solid liquid leg, putting the plugs
24 on to that so he knew that by that Delta P wouldn't feature.

25 **Mr. Chairman:** Are we agreed that when working on pipes
26 this way, that there should be a heading somewhere, in either
27 the method statement, in the bid, in the work permit, I don't

1 really mind particularly where it appears, but it should appear
2 somewhere, that Delta P has been considered?

3 **Mr. Peterson SC:** You just took my second recommendation I
4 was hoping to make to you.

5 **Mr. Chairman:** Have I—I've just eliminated your second
6 one?

7 **Mr. Peterson SC:** Yes.

8 **Mr. Chairman:** All right, okay. I'm sorry about that.

9 **Mr. Peterson SC:** That is some—it's like we do in judicial
10 review.

11 **Mr. Chairman:** Yes.

12 **Mr. Peterson SC:** You state that there is no other refer
13 remedy.

14 **Mr. Chairman:** Yes.

15 **Mr. Peterson SC:** You have to, you have to say that.

16 **Mr. Chairman:** Yes.

17 **Mr. Peterson SC:** You tend to say that.

18 **Mr. Chairman:** Quite.

19 **Mr. Peterson SC:** So it's like one of those. You put Delta P
20 and you say, well, it does not arise. I eliminate the—

21 **Mr. Chairman:** Because X, Y—

22 **Mr. Peterson SC:** Well this is how I—

23 **Mr. Chairman:** We've done this. Yes.

24 **Mr. Peterson SC:** This is how I eliminate it.

25 **Mr. Chairman:** Yes.

26 **Mr. Peterson SC:** But going forward, that's the a good
27 recommendation, Sir.

1 **Mr. Chairman:** Right. All right, thank you very much.

2 **Mr. Peterson SC:** So in the circumstances, Mr. Chairman, it
3 cannot be reasonably, it cannot be reasonably argued that any
4 causative link exists between Paria's acts or omission in
5 connection with the tender process and the Delta P event which
6 occurred on the 25th. Indeed, given LMCS' stated method of
7 work as identified at the tender stage, the possibility of a Delta
8 P event occurring could not have been reasonably foreseeable.
9 I take your point, Sir, with respect to avoiding that, you state in
10 future, you put it under a heading, you put it under a rubric and
11 you keep it—

12 **Mr. Chairman:** I know, but, you know, you and I have come
13 to this, relatively recently I suspect, in dealing with pipes and
14 the like. But, those who've been involved as part of their entire
15 careers in the operations of hydrocarbons and pipes and the
16 kind of environment which we all visited, I don't know you did
17 but we visited recently at Paria, surely must recognize that there
18 exists at least the potential for a Delta P event when there are
19 likely to be differential pressures on either side of valves and
20 pipes that are being opened and closed on a regular basis. Just,
21 just taking fuel out of a tank there must be an opening
22 somewhere on the tank to allow the air to fill up the void
23 otherwise you're going to create a vacuum, and all these sorts
24 of thing must be surely at the forefront of the minds of those
25 who are working in the industry?

26 **Mr. Peterson SC:** That is, in fact, so, Sir, but I am attracted
27 and reminded to bring to mind the evidence of Ms. Catherine

1 Balkissoon. She said what she would do as an engineer is
2 engineer it out.

3 **Mr. Chairman:** Right.

4 **Mr. Peterson SC:** So I think that that's what Mr. Ali and they
5 may have done in their bid. They recognize we're dealing with
6 pipelines, we're dealing with clearing. How do we—although
7 again, it didn't find expression in those words in the bid—

8 **Mr. Chairman:** No.

9 **Mr. Peterson SC:**—but he probably say, “Well, if I keep the
10 content in the line, go down 35 feet, put my plug on a solid
11 liquid, Delta P does not arise. I don't need to cater for that.”

12 **Mr. Chairman:** Never arises? Yeah.

13 **Mr. Peterson SC:** Yes.

14 **Mr. Chairman:** No, and, and, and, and whether that's a true
15 expression of what they were thinking at the time or whether
16 that's a post-event analysis, I'm not sure, but I take the point.
17 But, it is, it is surprising is that nobody anywhere in the
18 thousands of pages that we've got dealing with experts from all
19 over this field, anybody mentioned it at all. All right, thank
20 you.

21 **Mr. Peterson SC:** So taking the fact that the bid—when one
22 assessed the bid in that way, Sir, it really removes, um, had it
23 been executed in the manner intended, the hazardous nature of
24 those works.

25 I now want to move on to the contract itself, Sir. The
26 contract was awarded on June 1st, 2021. Paria awarded that
27 contract for the works to LMCS. Apart from the contractual

1 terms and conditions contained in the invitation to bid
2 document, which comprised, among other things, the technical
3 scope of works, the commercial proposal and the accompanying
4 drawings, LMCS was also bound by Paria's general conditions
5 of contract. Those general conditions of contract, Sir, could be
6 found at page 973 of the core bundle and at paragraph 34 of the
7 statement of Mr. Michael Wei of the 16th of August, 2022. The
8 contract imposed the following material and extensive
9 contractual obligations on LMCS.

10 **Mr. Chairman:** The contract or the conditions—Paria's
11 conditions of contract?

12 **Mr. Peterson SC:** The technical scope of works, Sir.

13 **Mr. Chairman:** Technical, thank you.

14 **Mr. Peterson SC:** And outlined in the technical scope of
15 works. And some of them I wish to highlight as follows.
16 LMCS had the obligation under item 3.1.4 to verify all
17 measurements, information, on site prior to fabrication and
18 removal of the riser in that section of the pipe. Item 3.1.5,
19 LMCS was required to perform the following activities.
20 Isolation, deisolation, depressurization, pressurization and
21 draining and filling of product from Sealine 36 at berth 6 and
22 berth 5.

23 Under 5.1, LMCS was required to supply adequate,
24 competent and certified licensed labour for the specific job
25 functions and provide full-time supervision, also tools and
26 equipment for the timely completion of the scope of works. At
27 item 5.1.2, LMCS became familiar with the—and conform to

1 Paria's permit to work procedure.

2 **Mr. Chairman:** You mean 5.12?

3 **Mr. Peterson SC:** Yes, five—it will be—yeah, I think it's
4 5.12.

5 **Mr. Chairman:** Yes, it's 5.12.

6 **Mr. Peterson SC:** 5.12.

7 **Mr. Chairman:** "The contractor shall become familiar with
8 and conform to Paria's permit to work procedure—

9 **Mr. Peterson SC:** And maintain permits to execute the—

10 **Mr. Chairman:**—and at his own expense and limitations—

11 **Mr. Peterson SC:** Yes.

12 **Mr. Chairman:**—provisions are required pertaining to the
13 permit—

14 **Mr. Peterson SC:** It had a full stop where it wasn't to be.

15 **Mr. Chairman:** Yes.

16 **Mr. Peterson SC:** Yes. Because at 5.16, LMCS was required
17 to prepare a job hazard analysis and risk assessment for review
18 by Paria.

19 **Mr. Chairman:** Yes.

20 **Mr. Peterson SC:** At item 5.18, LMCS was to follow all
21 guidelines within Paria's health and safety requirements for
22 contractors.

23 **Mr. Chairman:** Yep.

24 **Mr. Peterson SC:** Under item 6.1.1, LMCS was required to
25 instruct its personnel on the safety regulations, safe working
26 practices and conditions that are required for an industrial
27 marine environment.

1 I wish to draw the Commission's attention to item 6.1.2
2 that LMCS was to provide and maintain all safety equipment
3 and requirements necessary for its personnel and for execution
4 of work and that LMCS was required to instruct its personnel
5 on their proper use and maintenance.

6 At item 8.9 subparagraph four, LMCS was required to
7 conduct suitable and sufficient risk assessment or job hazard
8 analysis for all activities and all the work permits and that it
9 developed and implement the appropriate control to ensure that
10 the risk is as low as reasonably practicable.

11 **Mr. Chairman:** This is 8.9?

12 **Mr. Peterson SC:** Yes, Sir, 8.9 sub four zero.

13 **Mr. Chairman:** Ah right, sorry, yes. Risk assessment JHA
14 and job safety method statement, yes.

15 **Mr. Peterson SC:** Yes.

16 **Mr. Chairman:** Thank you.

17 **Mr. Peterson SC:** At item 8.9, subparagraph 5.2, LMCS was
18 to ensure that its personnel have the required training and
19 certification to carry out their duties in a safe manner.

20 **Mr. Chairman:** Just a minute. Eight point nine, five—I've
21 only got a 5. I don't have a 5.2.

22 **Mr. Peterson SC:** Sir, this might have been—

23 **Mr. Chairman:** Eight point nine is the subheading "HSE
24 Requirements for Contractors" and you're directing me to, I've
25 got a 5 which says, "Awareness Training and certification". Is
26 that what you're referring to?

27 **Mr. Peterson SC:** Sir it may be—I would try to get the hard

1 copy because we're typing through the night, so, just, um—
2 when I get some sleep I'll be able to tell whether it's right.

3 **Mr. Chairman:** All right, well, come back to it by all means.
4 I just want to make sure that I make a note of everything that
5 you're saying.

6 **Mr. Peterson SC:** Yes. At item 8.9 subparagraph 8.0, LMCS
7 personnel are required to follow Paria's permit to work
8 procedure—

9 **Mr. Chairman:** Yep.

10 **Mr. Peterson SC:**—at all times. I wish to bold that and
11 underline it, Sir, at all times.

12 **Mr. Chairman:** Underline what?

13 **Mr. Peterson SC:** At all times. And item 8.9 subparagraph
14 9.2, LMCS was to provide competent—

15 **Mr. Chairman:** Again I don't have a 9.2?

16 **Mr. Peterson SC:** Nine point oh, 9.0.

17 **Mr. Chairman:** A 9, "Supervision"? That's it.

18 **Mr. Peterson SC:** Yeah, 9.0, Sir.

19 **Mr. Chairman:** I'm looking at page 593, which is the, um—

20 **Mr. Peterson SC:** And to backup, Sir we just found it. It's 5.0
21 and not 5.2 on the earlier one. So it's item 8.9—

22 **Mr. Chairman:** Yes.

23 **Mr. Peterson SC:**—subparagraph 5.0—

24 **Mr. Chairman:** Yes.

25 **Mr. Peterson SC:**—the last three lines of that paragraph.

26 **Mr. Chairman:** Okay. "The contractor shall ensure that all
27 personnel have the required training and certification to carry

1 out their duties in a safe manner”, et cetera, yes?

2 **Mr. Peterson SC:** Yes, Sir.

3 **Mr. Chairman:** Okay.

4 **Mr. Peterson SC:** And the last one I wish—no the second to
5 last one I wish to refer you to, Sir, is, item 8.9. You have me
6 conscious now. I checking all—

7 **Mr. Chairman:** There’s no 8.9. There’s an eight and there’s a
8 nine.

9 **Mr. Peterson SC:** There’s an 8.9 subparagraph—yeah, there’s
10 a 8.

11 **Mr. Chairman:** The whole thing is under subparagraph 8.9.

12 **Mr. Peterson SC:** Eight point.

13 **Mr. Chairman:** Then it’s divided and it’s slightly confusing
14 me into 1, 2, 3, 4, 5, 6, 7, 8, 9—

15 **Mr. Peterson SC:** Yes.

16 **Mr. Chairman:** And it’s not the easiest document to follow,
17 which is why I’ve got to make sure I’ve got a note of what
18 you’re saying.

19 **Mr. Peterson SC:** [*Mr. Peterson SC confers with Mr. Mootoo*]
20 All right, 8.9 subparagraph 8.0.

21 **Mr. Chairman:** Right.

22 **Mr. Peterson SC:** [*Mr. Peterson SC confers with Mr. Mootoo*]
23 And this one is—

24 **Mr. Chairman:** This is the one you said “at all times” I should
25 underline which I have.

26 **Mr. Peterson SC:** Both have “at all times”.

27 **Mr. Peterson SC:** Nine is supervision, which is what I

1 anticipate you're going to next?

2 **Mr. Peterson SC:** Yes, Sir.

3 **Mr. Chairman:** "Contractor shall provide competent—

4 **Mr. Peterson SC:** Provide competent supervision—

5 **Mr. Chairman:**—supervision—

6 **Mr. Peterson SC:**—at all times.

7 **Mr. Chairman:**—at all times.

8 **Mr. Peterson SC:** That's another "at all times" to be
9 underlined and—

10 **Mr. Chairman:** Yes.

11 **Mr. Peterson SC:**—highlighted, Sir. On the other hand, Sir,
12 Paria's contractual obligations were extremely limited in nature
13 under the contractual terms.

14 **Mr. Chairman:** Well I think Paria's responsibilities in a
15 document that ranges over a total of, er, 20—ranges over 20
16 pages or so, in quite fine print with many paragraphs and
17 subparagraphs, the obligations that Paria takes upon itself
18 manages to cover, I think. eight lines.

19 **Mr. Peterson SC:** Yes, Sir?

20 **Mr. Chairman:** You're not exactly taking a great deal upon
21 your own shoulders, are you?

22 **Mr. Peterson SC:** That's why we hired an independent
23 contractor, Sir.

24 **Mr. Chairman:** That's why you hired an independent
25 contractor. All right, fine, thank you.

26 **Mr. Peterson:** Sir and this is a convenient time to take the
27 break—

1 **Mr. Chairman:** It sounds like a very sensible time to take
2 lunch, yes.

3 **Mr. Peterson SC:** Yes, Sir.

4 **Mr. Chairman:** Yes, thank you very much. We will resume at
5 two o'clock please. Two o'clock.

6 **1.07 p.m.:** *Enquiry suspended.*

7 **1.58 p.m.:** *Enquiry resumed.*

8 **Mr. Chairman:** Yes, good afternoon.

9 **Mr. Peterson SC:** Thank you, Mr. Chairman. When we took
10 the lunch break, Mr. Chairman, we were dealing with—I was
11 about to deal with the retained responsibility that Paria retained
12 under the contract. I did observe, as you did, Sir, I agreed with
13 your observation, that Paria did not retain much, and, of course
14 that will—freedom of contract, parties could agree their terms.
15 Paria did not retain much but they had to pay for what they
16 contracted for LMCS to provide, and I'm sure they did so
17 handsomely.

18 So, Paria's retained contractual obligations are really
19 embodied and encapsulated in item four of technical
20 specifications. And those are really to supply personnel for
21 organizing work permits and certificates, monitor the
22 contractor's performance and work standards, and carry out
23 quality assurance audits. This, in my respectful view, is normal
24 in even one's domestic arrangements. If you hire a painter and
25 he tells you today, "When you go to work I painting bedroom
26 number one." When you come home you'll expect you see
27 bedroom number one painted but you're not expected to see

1 how he mix the paint, what thinners he put in the paint and all
2 of that.

3 **Mr. Chairman:** Can I ask you about that in this respect,
4 because it just takes back on what we were dealing with before
5 lunch? That at 4.3 it says, “Provide a slop barge capacity 40
6 barrels to assist in the removal of the line content”, and bearing
7 in mind that this is a document which was prepared before any
8 works were carried out—

9 **Mr. Chairman:** Yes, Sir.

10 **Mr. Chairman:**—for people to understand what it was that
11 they were bidding for, it does seem to me that at that point in
12 time Paria had at least estimated what they thought was likely
13 to be necessary for removal of the content from the line for the
14 purposes of carrying out the works—

15 **Mr. Peterson SC:** Yes, Sir.

16 **Mr. Chairman:**—and had estimated it at about 40 barrels—

17 **Mr. Peterson SC:** Yes, Sir.

18 **Mr. Chairman:**—and a slop barge in order to remove that?

19 **Mr. Peterson SC:** Yes, Sir because I could see Paria retaining
20 that responsibility because, of course, Paria has a responsi—
21 although the contract provided for a no spill operation, Paria
22 would be the one practically in that context to have the barge
23 available and they retained the contractual obligations to supply
24 that, but that still doesn't cast on Paria a monitoring
25 responsibility as to the quantity taken out of the line. It just
26 provide the vessel to pour it into, basically, and that comes
27 down to also one of the obligations, the retain obligations, with

1 respect to the draining and filling of the line. Paria is to deal
2 with the method and to keep an eye on the method as opposed
3 to the quantum.

4 **Mr. Chairman:** Yeah. I think what I meant by that more than
5 anything else was the fact that at the time of the drafting of this
6 in order to be sent out for the bidders to consider bidding for the
7 work, they must have appreciated, since they were only going
8 to provide a slop barge which had a capacity of 40 barrels, 42
9 gallons per barrel, it's not a very large barge, okay? So they
10 could not have anticipated that there would have been much to
11 be removed from the line.

12 **Mr. Peterson SC:** No, Sir. What I remembered from the
13 evidence, there are two sets of removal and I think I had to
14 take—I'll take you to something my friend dealt with this
15 morning with respect to when she said enquired—as LMCS had
16 enquired as to the amount and they said it was negligible. I'll
17 deal with that in one second.

18 **Mr. Chairman:** All right, yes.

19 **Mr. Peterson SC:** But I understand the barge was at a
20 different stage, because they were to take topside or to drain
21 entire topside and then they were to drain 36, because when
22 they removed the elbow that connects 36 to the rest of the
23 infrastructure, then there will be a lot of oil, because they had
24 66, which is a 50-inch line prime—

25 **Mr. Chairman:** No, I follow that, and I do understand it. It
26 may be that the barge might have had to make three trips or
27 something—

1 **Mr. Peterson SC:** Yes.

2 **Mr. Chairman:**—like that, but, what we're talking about is a
3 barge that had a capacity of 40 barrels, not a thousand or more.
4 What I'm saying is, if they had anticipated that hundreds if not
5 a thousand plus barrels had to be removed, topside and/or
6 bottom line, you wouldn't have provided a barge which could
7 only hold 40 barrels, would you? It would take forever.

8 **Mr. Peterson SC:** Sir, I don't understand—I don't understand
9 the evidence to be that the barge was solely for the removal of
10 the—all the material to be removed, all the contents, you know,
11 because that's why they were pouring some back into 111—

12 **Mr. Chairman:** What they're saying is they're providing—
13 this, this bidding document identifies what they regarded as
14 their responsibility. They're not talking about using a line to
15 remove the material at all, are they? They're talking about the
16 material being pumped or blown, whichever it is, into a barge
17 which only had a capacity of 40 barrels.

18 **Mr. Peterson SC:** Not all the materials, Sir. That's why it's
19 connected to line 66. The barge was for a part of the process.
20 Okay, if they need to—for example, if they just need to take out
21 a 10-barrel, for example, they need to put it somewhere.

22 **Mr. Chairman:** Yeah.

23 **Mr. Peterson SC:** Because Paria is concerned about spillage
24 and—

25 **Mr. Chairman:** Yes.

26 **Mr. Peterson SC:**—pollution.

27 **Mr. Chairman:** Yeah.

1 **Mr. Peterson SC:** So the obligation is really to assist in
2 removal, but I did not understand the evidence and all the
3 documentation that all the product to be removed to get the
4 certified ullage was to be put into that barge. I didn't
5 understand it at all because then, Sir, it's inconsistent with even
6 the connecting of the evidence from Ali Sr.

7 **Mr. Chairman:** But, if that's right—I'm sorry to interrupt
8 you, Mr. Peterson, but if that's right why wasn't it listed under
9 Paria's responsibility to provide the sealine to take whatever
10 was to be removed onshore and placed in a tank?

11 **Mr. Peterson SC:** Sir, I could see that not being here because
12 it can't go anywhere else, because it's in Paria's compound,
13 Paria's infrastructure, 36 is connected by an elbow to 66 and
14 other lines, so I don't think I need to specify that you would
15 provide lines because the lines are there. So the barge that—

16 **Mr. Chairman:** So why do you need to provide a barge?

17 **Mr. Peterson SC:** Because I understand that the barge is to
18 assist. For example, when they could not pump, if they needed
19 to take a line to take out 20 barrels, you can't put it back into
20 the line, into 66, they will then put it in the barge. So the barge,
21 the barge may not, at the end of the day, have been used. It was
22 used but it doesn't have to be used. That's how I understand
23 this contact to have operated.

24 **Mr. Chairman:** All right.

25 **Mr. Peterson SC:** The barge was not intended to be the sole
26 vehicle to remove the contents of the line.

27 **Mr. Chairman:** But in such a comprehensive document I'm

1 surprised they wouldn't have said something about it's to be—
2 you know, lines otherwise to be used and stored in one of our
3 tanks. You see?

4 **Mr. Peterson SC:** Because, Sir, the—well then, Sir, to take
5 your point to its conclusion, then the provision of the—um, this,
6 the work instruction is inconsistent with the provision of a
7 barge if the barge is intended to be the sole source of
8 transportation of the fuel. Then one, one—tank 111 here would
9 have had no relevance if the source of removing the oil from 36
10 is meant to be exclusively the use of the slop barge.

11 **Mr. Chairman:** Yeah, I mean, the difference being there's an
12 eight-month gap between the two documents. The first
13 document is dated April of '21 when they were looking for the
14 bid. This one no doubt once they perfected many of the issues
15 that arise from that is dated the 5th of January, '22. Eight
16 months later they're now using a tank rather than a barge.
17 Anyway, I just—

18 **Mr. Peterson SC:** I think, Sir, that is—

19 **Mr. Chairman:**—I just point it out.

20 **Mr. Peterson SC:**—also—that is also employed, you know,
21 Sir.

22 **Mr. Chairman:** Yeah. And I note that actually that document
23 does deal with a barge, at 6.4, removal of elbow on the SL riser
24 at berth 6 where it actually points out that they are to position
25 slops barge with catchment and drain hose, drain the upper
26 section of the 36 riser to the slops barge, open the valve in the
27 stub-in section location below flags, they're talking gibberish to

1 me, but, in any event what it amounts to, as I understand it, is
2 that the slops barge is to be used for the purposes of draining
3 material from the—above water line.

4 **Mr. Peterson SC:** Yes, Sir.

5 **Mr. Chairman:** So—

6 **Mr. Peterson SC:** And that brings me perfectly to—

7 **Mr. Chairman:** So you're saying that that's why this
8 document doesn't refer to the pipeline being used to drain the
9 material from the subsea line?

10 **Mr. Peterson SC:** Exactly, Sir.

11 **Mr. Chairman:** All right.

12 **Mr. Peterson SC:** And that bring me perfectly to the point that
13 my learned friend was being dealt with this morning for LMCS.
14 I think my friend misinterpreted the evidence when she said
15 that they were checking with Paria and Paria keep saying the
16 amounts coming on the other end was negligible. Under the
17 cross-examination by Mr. Maharaj, my learned friend, at Day 4
18 of the transcript, page 36 and 37, Mr. Maharaj was cross-
19 examining and got from Mr. Ali Sr. about negligible being the
20 answer and Mr. Maharaj said, but that is with respect the
21 topside, correct? And Mr. Ali said yes. So that negligible
22 indication from Paria to LMCS was with reference only to the
23 topside removal, not the rest of the 36 line, just the topside
24 removal.

25 **Mr. Chairman:** So the negligible amount was in relation to
26 what was removed topside?

27 **Mr. Peterson SC:** Topside.

1 **Mr. Chairman:** Only?

2 **Mr. Peterson SC:** And that's from—at page 36 and 37 of Day
3 4 of the evidence, of the transcript.

4 **Mr. Chairman:** Who as it—

5 **Mr. Peterson SC:** Cross-examination by Mr. Maharaj. It's
6 under the rubric—

7 **Mr. Chairman:** Of?

8 **Mr. Peterson SC:** Kazim Ali.

9 **Mr. Chairman:** Kazim, right, okay.

10 **Mr. Peterson SC:** Yes. Under the rubric “Cross-Examination
11 By Mr. Maharaj SC”.

12 **Mr. Chairman:** Thank you. Thank you for that.

13 **Mr. Peterson SC:** During the course of the evidential hearings
14 here Sir, Paria witnesses have cross-examined extensively with
15 a view to establish that Paria, through its agent, Kenson, in
16 particular Houston Marjadsingh, was bound by extensive
17 obligations ordinarily imposed to an applicant under the permit
18 to work system. You may remember that cross-examination,
19 Sir, where they went to the—where the witnesses, the—Paria's
20 witnesses were taken to the rubric of “Applicant” under the
21 permit to work system and by that means sought to impose on
22 the Paria employee/Kenson certain obligations beyond what
23 was retained in the contract.

24 Our respectful submission on that, Mr. Chairman, is
25 those work permit systems or the work permit form for the
26 applicant in the context of this contract is not applicable to
27 employees of Paria and employees of Kenson because the

1 principle there is, Sir, that it's inconsistent. If the permit to
2 work is applied to those employees in would be inconsistent
3 with terms of the contact, the obligations contractually retained
4 by Paria. Because the question would then be whether the
5 permit to work could expand the contractual terms. And our
6 respectful submission is that it cannot and there's legal
7 authority for that, Sir, that the permit to work has to be
8 submissive to the host contract, so where a contract seeks to
9 incorporate another document that may be inconsistent with
10 some of its terms, in this case the retained obligations by—
11 contractual obligations by Paria, the permit to work is to be
12 read against the background of the host contract and the host—
13 the terms of the contract will take precedence over the
14 incorporated document.

15 **Mr. Chairman:** Yes.

16 **Mr. Peterson SC:** We have authorities for that, Sir. And as
17 I'm on that, I was speaking with my team during the break and
18 we have a comprehensive speaking note, and, with your
19 approval, Sir, we could file it because I realize that I
20 underestimate. Two hours would not be enough, so, if we get
21 your leave, it can save me some time, I will stay within my two
22 hours but we seek your leave to file what would commonly call
23 a speaking note.

24 **Mr. Chairman:** No, I do the same myself, have a speaking
25 note when I'm addressing the court and I'm perfectly happy for
26 you to supply—

27 **Mr. Peterson SC:** Well we have the cases. We hear cases

1 here to support proposition.

2 **Mr. Chairman:** Well, then, that would be useful if I may say
3 so. I'm perfectly happy with that. I'm not sure it's particularly
4 controversial to suggest that obligations that might arise in
5 another context must necessarily be subservient to the primary
6 contract.

7 **Mr. Peterson SC:** If they're inconsistent, Sir, yes.

8 **Mr. Chairman:** Even where there is an inconsistency between
9 the two. It rather presupposes that one has to find that there is
10 any inconsistency in the first place.

11 **Mr. Peterson SC:** Yes, Sir.

12 **Mr. Chairman:** But yes, I take your point.

13 **Mr. Peterson SC:** Thank you, Sir. So I can move on. So, to
14 the terms of the contract between LMCS and Paria are
15 contained in the walls of the technical scope of works and
16 Paria's general conditions of contract. Paria permit to work
17 procedure is a document incorporated into the technical scope
18 of works by reference. See paragraph 5.1.2, I hope I have those
19 numbers correct now, and 8.9 subparagraph 8.0—

20 **Mr. Chairman:** Just a minute. [*Perusing document*] What
21 project are we dealing with? Are we still on the scope of
22 works?

23 **Mr. Peterson SC:** Technical scope of works.

24 **Mr. Chairman:** Technical scope of works.

25 **Mr. Peterson SC:** Yes, Sir.

26 **Mr. Chairman:** Yes and you're referring me to paragraph—

27 **Mr. Peterson SC:** Five point one point two.

1 **Mr. Chairman:** —5.2? Right.

2 **Mr. Peterson SC:** And—

3 **Mr. Chairman:** Of the contractor's responsibility?

4 **Mr. Peterson SC:** Yes, Sir, and 8.9.

5 **Mr. Chairman:** Right, just a minute. Yes.

6 **Mr. Peterson SC:** Subparagraph 8.0.

7 **Mr. Chairman:** Eight point oh.

8 **Mr. Peterson SC:** Sir, I seem to have the numbers wrong
9 again.

10 **Mr. Chairman:** Eight point nine, subparagraph?

11 **Mr. Peterson SC:** [*Mr. Peterson SC confers with Mr. Mootoo*]
12 Or yes, Sir, and the first one I said 5.1.2, that's the same error
13 from earlier, Sir. It's 5.12.

14 **Mr. Chairman:** Five point 12, right, good—

15 **Mr. Peterson SC:** Five point 12, and—

16 **Mr. Chairman:**—because I didn't quite get what you were
17 saying. Yes, all right. Hang on a second.

18 **Mr. Peterson SC:** I didn't give the further correction from
19 earlier on, and 8.9, subparagraph 8.0. And our respectful
20 submission there is that that incorporates the permit to work
21 procedure—

22 **Mr. Chairman:** Yes.

23 **Mr. Peterson SC:**—by reference to those two paragraphs.

24 **Mr. Chairman:** “To maintain permits to execute the entire job
25 the contractor shall become familiar with and conform to
26 Paria's permit to work procedure at his own expense and
27 limitations, provisions or requirements in or pertaining to the

1 permits”, so it incorporates the permit to work procedure—

2 **Mr. Peterson SC:** Yes, Sir.

3 **Mr. Chairman:**—within the contract?

4 **Mr. Peterson SC:** Yes, Sir.

5 **Mr. Chairman:** But what you’re saying is that if there’s
6 something inconsistent in that permit to work procedure with
7 the primary contract—

8 **Mr. Peterson SC:** You go back to the host contract.

9 **Mr. Chairman:**—you have to go to the primary contract?

10 **Mr. Peterson SC:** The host primary contract.

11 **Mr. Chairman:** And so you’ve referred me to that paragraph
12 in 8.9 was it, 8.9 what?

13 **Mr. Peterson SC:** Eight point nine sub 8.0, subparagraph 8.0.

14 **Mr. Chairman:** Got you, yes. Got you.

15 **Mr. Peterson SC:** The technical scope, Sir, also places the
16 following express contractual obligations on LMCS. One, to
17 execute the works to provide full-time supervision. Two, full-
18 time supervision for the works, and I wish to ask
19 Commissioners to underline “full-time supervision”. Three, to
20 implement an appropriate HSC management system for its
21 employees. Four, to prepare a job hazard analysis and risk
22 assessment in relation to the works.

23 Five, to ensure that its employees are aware of the
24 hazards related to the job. Six, to have an appropriate medical
25 emergency response plan for its employees for injuries or
26 illness. Seven, Mr. Chairman, to provide its employees with
27 required PPE. You don’t need to spend time on that. Eight,

1 instruct its personnel on the safety regulations, safe working
2 practices and conditions that are required for an industrial
3 marine environment. And, nine, to provide all safety devices,
4 emergency response equipment and other equipment for the job
5 as required for the task of the risk assessment and the job
6 hazard analysis.

7 These expressed contractual obligations make it clear that
8 LMCS not Paria is to be knowledgeable of the hazards
9 associated with the works, the necessary controls for these
10 hazards and the safety of all its employees engaged in executing
11 those works. Given that these express contractual obligations
12 are imposed on LMCS, then to require Paria, members of the
13 Commission to require Paria to be responsible for the same
14 obligations under any or by virtue of the permit to work
15 procedure would conflict with what the parties had agreed in
16 the provisions of the written contract, again freedom of parties
17 to contract, and it would be contrary to good business common
18 sense, I don't need to pound this point much, I believe Mr.
19 Pegus—he's not here—but Mr. Pegus made that point I think
20 very, very powerfully, an obligation with which the parties had
21 expressly contracted that LMCS will bear that responsibility
22 and it had always been a standing principle of contracts that
23 parties are free to contract as they see fit.

24 In the circumstances, Mr. Chairman and member Wilson,
25 it would plainly be wrong if this Commission, and I say it with
26 respect, is to view Paria's actions in relation to the events under
27 inquiry as though it carried the obligations of an applicant

1 under the permit to work system. That permit to work system,
2 in the context of this contract, doesn't bear that responsibility
3 on the shoulders of Paria or Kenson.

4 The foregoing contractual analysis is of course not to be
5 taken to mean that Paria's entire work permit system is
6 rendered inoperable. That system remains contractually intact
7 and alive save that the obligation imposed upon the applicant
8 thereunder, the obligations do not bite where Paria or Kenson
9 employee is the functioning applicant. In this regard, there is
10 no question that that part of clause 5.0 of the permit to work
11 procedure that provides so—that provides that work cannot
12 start until the work permit is properly authorized and issued still
13 stands.

14 I now wish to move to the execution of the works. My
15 co-counsel is telling me that—my co-counsel is telling me to
16 repeat the point. I don't think a point gets more profound with
17 repetition but I think Mr. Pegus made that point yesterday and I
18 made it earlier that it would not make business sense if both
19 parties were to retain the same obligations.

20 **Mr. Chairman:** I do have that point very firmly in mind, yes, I
21 do. I mean, he's, he's, he's—he made much of it both in his
22 address and earlier.

23 **Mr. Peterson SC:** Yes. It's clear. The execution of the
24 works—line clearing and installation of the plug. Under the
25 contract, one of the first activities to be undertaken by LMCS
26 was the removal of sufficient fuel oil from the line so as to
27 facilitate the installation of migration barriers in order for the

1 replacement of the Sealine riser to be undertaken. It is
2 undisputed that LMCS conducted this activity prior to the 13th
3 of February, 2022, using an air blowing method. See
4 paragraphs 42, 43 and 47 of the supplemental witness statement
5 of Kazim Ali Sr. dated the 22nd of November, 2022. It is also
6 undisputed on the evidence before this Commission that after
7 the process of air blowing had been completed by LMCS, an
8 ullage of 35 feet was measured in the riser. That is not in
9 dispute. See paragraphs 32, 37 to 40 of the supplemental
10 statement of Mr. Ali.

11 On the 13th of February, 2022 LMCS installed a
12 migration barrier in the riser to Sealine 36 at berth 6. On that
13 date, it also installed a hyperbaric chamber to the said Sealine at
14 the same location. These activities were expressly made the
15 subject of Paria's permit to work number four eight three two
16 and that permit could be found at page 1075 of the core bundle
17 of documents—1075 of the core bundle.

18 Thereafter, on the 15th of February, 2022 LMCS
19 engaged in a range of activities outlined at paragraph 18 of the
20 amplified statement of Mr. Kazim Ali Sr. No work was
21 undertaken by LMCS on the site during the periods of the 16th
22 of February to the 24th of February, 2022. The events of the
23 25th of February, 2022.

24 **Mr. Chairman:** Do you agree with me that had there not been
25 the intervention of Mr. Guerra's, um—

26 **Mr. Peterson SC:** Disobedience.

27 **Mr. Chairman:** Sorry?

1 **Mr. Peterson SC:** Disobedience.

2 **Mr. Chairman:** Yes, disobedience, certainly his precipitous
3 movement of the barge, the works would ordinarily have been
4 completed under the work permit 4832?

5 **Mr. Peterson SC:** No, Sir. I thought it—no, Sir, I don't agree
6 with that. I thought where you were taking me is if there had
7 not been the suspension of the works during that period—

8 **Mr. Chairman:** Yes.

9 **Mr. Peterson SC:**—that they might have completed it on the
10 13th 14th and then all of—some of the events may or may not
11 have happened.

12 **Mr. Chairman:** Well, yes. Well, no, what I was going to—
13 what I am asking, perhaps badly, is that the work permit that is
14 4832 does its best, on the face of it, to include the works that
15 needed to be done, so much so that they actually start to
16 scribble down the side of the page, and, um, it's dated the 13th
17 of February.

18 **Mr. Peterson SC:** Yes, Sir.

19 **Mr. Chairman:** It would have lasted a week.

20 **Mr. Peterson SC:** Yes, Sir.

21 **Mr. Chairman:** Taking us to the 20th of February.

22 **Mr. Peterson SC:** Yes, yes, Sir.

23 **Mr. Chairman:** What I'm asking you really is whether, had it
24 not been for Dexter Guerra's behaviour, suspending all works,
25 would the works not have been done under that to work permit?

26 **Mr. Peterson SC:** When you say the works, Sir, all the works?

27 **Mr. Chairman:** Well, all the works that are set out there,

1 which includes removing the hyperbaric chamber.

2 **Mr. Peterson SC:** No, Sir, it couldn't be under that because
3 that's a point of contention, and you may remember very early
4 in this Commission my cross-examination of LMCS personnel
5 and they tried to resile, in my respectful view, from it
6 unsuccessfully. The barrier was to be removed, in my review
7 and on the evidence, the way it was installed. They, on the
8 25th, removed the barrier in the chamber, and that is what
9 caused the, um, delta—the latent delta to become active and
10 become an event.

11 The plugs were installed from on top. I don't have all the
12 identification of the evidence now but you may recall, Sir, that I
13 was asking, I think it is Mr. Guerra from LMCS, whether the
14 new riser was dressed or undressed and whether you needed to
15 cut it and do hot works with respect to fitting it back to fall
16 back into the elbow at topside.

17 That is why those barriers were to stay in place, because
18 they used a long tool to install it and they still—shoulda used a
19 long tool, after bringing in the new riser, to remove them. So in
20 the event they had to cut and adjust the top, the barriers would
21 have been in place to protect the lines from tools falling into it
22 and prevent hot works from going into the, um—the
23 hydrocarbons to cause an ignition. So that, notwithstanding
24 4832, the removal of those barriers was never to be done under
25 that.

26 **Mr. Chairman:** All right, so there—

27 **Mr. Peterson SC:** If even they were to remove the hyperbaric

1 chamber, the barriers were to stay in place and the barriers were
2 to be removed from a—with a T-tool from on top.

3 **Mr. Chairman:** So a new work permit would have inevitably
4 had to have been raised in order to do those works?

5 **Mr. Peterson SC:** Yes, Sir. And that's I think the core
6 evidence—

7 **Mr. Chairman:** Even if it was within the time period of this
8 work permit?

9 **Mr. Peterson SC:** Yes. And I think that came over from Mr.
10 Osei Flemming-Holder and somebody else, Mr. Khan, Mr. Zaid
11 Khan.

12 **Mr. Chairman:** Okay, thank you. Thank you.

13 **Mr. Peterson SC:** And I'm urged to make a point that we did
14 discuss that the installation of the plug, one may say well
15 whatever the installation, the installation of the plug is different
16 from the removal of the plug. The installation of the plug is to
17 create the protection. The removal of the plug exposes one to
18 danger and that is why that has to be a focused permit to work
19 and deliberate act of removing those. So the removal and the
20 installation are no to be equated, with respect, at all—I know
21 the Commission not dong that but I'm just saying that.

22 **Mr. Chairman:** Yes. But all of the—all of the things, though,
23 set out in the specific tasks listed in that work permit obviously
24 were intended to be carried out under that work permit?

25 **Mr. Peterson SC:** Could be carried out, yes, Sir.

26 The events of the 25th of February, 2022. On the
27 morning of the 25th of February, 2022, Paria issued permit to

1 work 9320 and this could be—well, I don't need to refer to this
2 to the point of finding—we dealt with this so many times—
3 page 1074 of the core bundle.

4 **Mr. Chairman:** Indelibly imprinted on my head, yes.

5 **Mr. Peterson SC:** Yes, Sir, by which LMCS was authorized to
6 execute the works mentioned therein. The permit made no
7 provision, no provision, for the removal of the inflatable plug or
8 the mechanical plug. On the contrary, it specifically provided
9 that the barriers were to be used, so it presupposes the
10 continuation of the barrier, and that is my respectful submission
11 that I ask the Commission to note, Commissioner to take on
12 board, that migration—there was reference several times to this
13 phrase “migration barrier to be used”. What that tells me, it
14 tells me nothing about removal. It tells me about something
15 that is static and in place, that migration barriers are to be there.

16 The permit was signed by Mr. Rudolph Gonzales, an
17 LMCS employee. The said permit was issued and signed in
18 circumstances where, A, Paria's permit to work procedure
19 provides that work cannot start unless a work permit in respect
20 of such work is properly authorized and issued. Two, the
21 unshaken evidence, and in my view the unshakable evidence
22 from Paria's witnesses, is that in the absence of a permit
23 authorizing the removal of the migration barriers, LMCS was
24 prohibited from doing so. LMCS was not authorized to do so.
25 Any removal of those barriers, when they did, was, as Mr.
26 Guerra did, in disobedience.

27 The use of work permits, is common in the oil industry

1 and in the gas industry and that where crucial aspects of work
2 are to be undertaken, there should be a separate work permit for
3 every major activity, in this case the removal of the barrier.
4 That is the evidence of Mr. Zaid Khan of In-Corr-Tech Limited,
5 an independent—

6 **Mr. Chairman:** Can you, can you help me about this? If the
7 work permit is to last a week and it was anticipated that the
8 conclusion of these works would take place from the 25th
9 onwards, why did the work permit 9320 not include those
10 features? Why would it not include them?

11 **Mr. Peterson SC:** The removal of the plug, Sir?

12 **Mr. Chairman:** Yes. I mean, what it says is the works that
13 they describe being done are to remove and install a 50-inch
14 flange, to remove and install a 30-inch riser pipe and then to
15 remove the 30-inch solid blank. This is, I anticipate, at 6, sorry,
16 at 5, conduct the pressure test on the flange weld.

17 **Mr. Peterson SC:** Yes.

18 **Mr. Chairman:** Right? So, that's the CARBER test, and then
19 to remove the chamber, that's the hyperbaric chamber, and
20 blank the top of the new riser. So I'm assuming, although it
21 doesn't actually specifically say so, to fit the new riser.

22 **Mr. Peterson SC:** The blank, yeah—well, yes, Sir, but
23 remember from the cross-examination there's still works to be
24 done or possible works to be done on the installation of the
25 riser. It may line up. You may be doing the elbow a bit higher,
26 it may not mesh and it may not mate I think is the—

27 **Mr. Chairman:** What I'm asking you I suppose is this. Is if

1 the specific tasks listed there were to be performed on the 25th
2 going forwards, either on that day or the subsequent days
3 because it lasts seven days, doesn't it, why doesn't it say to,
4 um—well, after the conducting of a pressure test on the flange
5 weld and then remove the chamber and then a blank—blank the
6 top of the new riser, nowhere does it seem to seemingly—I see.
7 No, I've just got—I've got to go back a bit. I understand.
8 Please.

9 **Mr. Peterson SC:** I think the answer to that question, Sir,
10 came I think from—it's either Mr. Osei Holder, Flemming-
11 Holder or Mr. Zaid Khan. Pipes are never left open.

12 **Mr. Chairman:** No, that makes sense. I get that.

13 **Mr. Peterson SC:** So the point is that when they put that
14 flange, I understand it to be like a temporary cover and when
15 they're ready to do all the connection to the elbow, they remove
16 that, they use the T-tool, remove the barriers for which there
17 will then be a dedicated independent permit to work to remove
18 those barriers, and then they do the connection if they need to.

19 **Mr. Chairman:** Yes.

20 **Mr. Peterson SC:** So they didn't need to put that in this
21 permit, but they put into this permit up to the point of tapping
22 off the top of the riser pending the removal of the—

23 **Mr. Chairman:** I suppose part of my difficulty is that the
24 specific tasks that are set out in the work permit give you just
25 three lines, right? And to fit everything into three lines, as
26 we've seen from the previous work permit, is not always
27 possible. Do you see what I mean? Because they've had to

1 start writing down the side of the page, and all I'm trying to
2 understand from you is this, is that whatever the position might
3 be, ultimately, the plugs were to be removed. Correct?

4 **Mr. Peterson SC:** Yes, eventually, yes.

5 **Mr. Chairman:** Exactly. And the new piece connecting it
6 altogether fitted.

7 **Mr. Peterson SC:** [*Inaudible*], Sir.

8 **Mr. Chairman:** The riser comes up—

9 **Mr. Peterson SC:** Yeah.

10 **Mr. Chairman:** It's got a flat—they're going to take that off
11 and put the new piece on, we're now above the waterline.

12 **Mr. Peterson SC:** Yes, Sir.

13 **Mr. Chairman:** It's all been put back together with a nice new
14 piece of riser.

15 **Mr. Peterson SC:** Yes.

16 **Mr. Chairman:** That's the whole point of it, isn't it? What
17 I'm not really understanding is, first of all, why this doesn't
18 include the removal of the plug even if that is to be done.

19 **Mr. Peterson SC:** Removal of the blank?

20 **Mr. Chairman:** Yes.

21 **Mr. Peterson SC:** Well no, that's it, Sir, because it's supposed
22 to cover—the placing of the blank, the cover, when the permit
23 to remove the, the barriers, I could see that permit saying to
24 remove the, um—I don't even think the permit need to say that
25 because how it getting to the—if it says remove the plugs, you
26 have to remove that to get to the plugs.

27 **Mr. Chairman:** Yes.

1 **Mr. Peterson SC:** So I could see the permit either being silent
2 and say, obvious, you have to do that, or say that and also then
3 provide for the deliberate removal of the plugs. But if they had
4 put it in this permit, it coulda cause confusion.

5 **Mr. Chairman:** You mean it's deliberately not put into this
6 permit to avoid confusion?

7 **Mr. Peterson SC:** I could see why it would be deliberately not
8 put in the permit.

9 **Mr. Chairman:** All right.

10 **Mr. Peterson SC:** So that's why you didn't find it there, Sir,
11 because the removal of the plugs would have been independent
12 in a permit and therefore they could have possibly put the
13 removal of the flange because it's a step immediately prior, it's
14 the pre step to removing the barriers. So they did not need to
15 put it on this, which is the closing off of that work.

16 **Mr. Chairman:** Okay. All right. Um, I heard how you put it,
17 yeah.

18 **Mr. Peterson SC:** Section 8, Sir, could be one of the
19 recommendations from the Commission with respect to, um,
20 adjusting of this form.

21 **Mr. Chairman:** Well, I mean, I think there's little doubt that
22 the giving just three lines under the specific tasks required is
23 clearly not sufficient and it clearly leaves it open for some
24 doubt about what might or might not be done on any one day
25 and/or the sequence in which it might be done, given the
26 importance of the work being done in a particular sequence.

27 **Mr. Peterson SC:** Yes, Sir.

1 **Mr. Chairman:** All right, thank you.

2 **Mr. Maharaj SC:** Just for completeness, the evidence of Osei
3 Flemming-Holder could be found at transcript of the 6th of
4 January at page 299. The removal of the mechanical plug and
5 the inflatable plug were crucial aspects of the work that the
6 LMCS had to undertake or embark upon such removal, they
7 required a specific work permit for that purpose.

8 **Mr. Chairman:** Uh-huh.

9 **Mr. Peterson SC:** There was nothing mentioned in the work
10 permit concerning the removal of the plugs, nothing. LMCS
11 and its personnel were trained by Paria with respect to its
12 permits to work system. They were fully conscious of that
13 requirement. At all material times, LMCS was well aware that
14 the permit served as the most powerful control document.

15 I don't have the time, Sir, but I just wish to remind the
16 Commission of that email following the step that was take—the
17 unauthorized step that was taken by Mr. Guerra where Mr.
18 Ahmad Ali of LMCS using the email address of Mr. Kazim Ali
19 had sent an email, and I commend that email—

20 **Mr. Chairman:** This one does all the replies—

21 **Mr. Peterson SC:** That does all the replies.

22 **Mr. Chairman:**—to the queries that are raised by Paria, yes.

23 **Mr. Peterson SC:** Yes, Sir, and in particular question 2 and 3
24 where Mr. Ali assured Paria—assured Mr. Archbald that they
25 recognize the paramountcy of the permit to work system and
26 that they will honour it going forward.

27 **Mr. Chairman:** Yes.

1 **Mr. Peterson SC:** LMCS and its personnel were trained by
2 Paria to observe that system. At all material times LMCS was
3 well aware that the permit served as the most powerful
4 document. The language also of the LMCS method statement,
5 and I wish to commend that to commissioners, the method
6 statement dated the 4th of January, 2022 provides at the top of
7 that method statement in bold and in italics that all steps
8 identified in the method statement, all steps are only to be
9 carried out in full compliance with Paria's permit to work
10 system.

11 So whatever is set out and in whatever order it is set out
12 in the method statement, it is always trumped by the permit to
13 work system. LMCS recognized that in the email I referred to.
14 Notwithstanding—

15 **Mr. Chairman:** I'm aware of that, but, I mean, this document
16 is actually appended to the work permit, isn't it?

17 **Mr. Peterson SC:** Yes, Sir.

18 **Mr. Chairman:** And appears to set out the steps sequentially.

19 **Mr. Peterson:** Right.

20 **Mr. Chairman:** Does it not?

21 **Mr. Peterson SC:** Yes, Sir. I know that question would have
22 been posed.

23 **Mr. Chairman:** Did you?

24 **Mr. Peterson SC:** The permit to work—

25 **Mr. Chairman:** I take it you have an answer to it, then?

26 **Mr. Peterson SC:** Sir, I hope to have an answer for
27 everything. The permits to work has that attached to it and it

1 has a certain sequence.

2 **Mr. Chairman:** Yes.

3 **Mr. Peterson SC:** But, notwithstanding howsoever it is set out
4 in the method statement, it is always [*Inaudible*] back to the
5 permit to work—

6 **Mr. Chairman:** I now, I do follow that, yeah.

7 **Mr. Peterson SC:**—especially the removal of—

8 **Mr. Chairman:** I mean, you just pointed out that paragraph—

9 **Mr. Peterson SC:** Yeah.

10 **Mr. Chairman:**—or that sentence—

11 **Mr. Peterson SC:** Yes that sentence?

12 **Mr. Chairman:**—at the top of the method statement. But, I
13 mean, it does seem on the face of it a kind of obvious question.
14 Well, if anybody who knows what they're doing looked at this
15 method statement, surely they would realize, well, what's set
16 out at 56 and 57 simply cannot be appropriate in the place in
17 which it's put.

18 **Mr. Peterson SC:** One can come to that conclusion, Sir, but,
19 in the context of this project, if—once the ullage was correct,
20 that method statement could have been reversed in any order it
21 wanted and no event would have occurred. I make the point—

22 **Mr. Chairman:** Well, I mean, had they done what they should
23 have done and only removed the amount of material from the
24 line that they should have done, it wouldn't have happened.
25 There might have been a little bit of gas coming into the
26 chamber, they might have dropped a tool down inside the pipe,
27 everybody would have been unhappy about it, I dare say, but

1 nobody would have died. That's beyond all doubt. All I'm
2 saying is that Paria's concerns were those two things. They
3 weren't in the least bit concerned with Delta P because no one
4 considered Delta P. So their position was this, as I understand
5 it, "Do not remove those barriers because if you do it might let
6 gas into the Chamber or allow something to fall into the pipe.
7 These are two things we do not want to happen", and, therefore,
8 when they looked at the method statement, and what appears to
9 be a sequential programme of work, nobody said, "This is
10 wrong." Do you agree?

11 **Mr. Peterson SC:** Nobody said that, Sir. That is—

12 **Mr. Chairman:** Nobody said it was wrong.

13 **Mr. Peterson SC:** That is the beautiful thing about the permit
14 to work system. It's a failsafe system.

15 **Mr. Chairman:** Well it isn't, though, is it? I mean, it clearly
16 didn't.

17 **Mr. Peterson SC:** Well, it is if people obey it, and that is why
18 Paria make sure that they're trained in the permit to work
19 system so they were supposed to know, regardless of what that
20 method statement says, and that is—that could inform why
21 LMCS inserted that on top of there—

22 **Mr. Chairman:** No, no, no, no let's assume LMCS have got
23 this wrong, I mean I'll go with that, right? They've got this—
24 the method statement that they've set out, the document that we
25 are looking at, that paragraphs 56 and 57 which for those who
26 were watching includes the removal of migration barrier and to
27 deflate the plug—

1 **Mr. Peterson SC:** Yes.

2 **Mr. Chairman:**—those two things are itemized at number 57
3 and 56 in a long list of things that go to nearly a hundred, right?
4 What I'm saying is that anybody at your end, that is to say
5 Paria's end, that looked at the method statement, which they are
6 required to produce by Paria, aren't they?

7 **Mr. Peterson SC:** Yes, Sir.

8 **Mr. Chairman:** Yes. So Paria require you to produce a
9 method statement of how you're going to do these works, here
10 it is, Paria. Now, leave aside Delta P. It's irrelevant for these
11 purposes because no one recognized Delta P. Somebody at
12 Paria presumably read this, somebody must have read the
13 method statement and if they read the method statement and
14 come to paragraphs 56 and 57, for the reasons I've just
15 identified, nothing whatever to do with Delta P, would have
16 been saying to whoever submitted this document, "Look, I see
17 what you say there are the steps to be done. This is wrong. Do
18 not remove those plugs until we tell you, and it's certainly not
19 at paragraph 56 or 57 because we don't want any of your men
20 to be gassed, we don't want to lose any of your tools down our
21 tube."

22 **Mr. Peterson SC:** Right. That's one option, Sir, and it's an
23 option that could have been exercised, but that's what I'm
24 saying. So that was missed, or did not—was not flagged. But
25 Paria had a permit to work system which I said is a failsafe
26 system, so when that is missed, LMCS also telling its people, "I
27 have this here, I think I have it right, but, you see Paria permit

1 to work system that I trained all yuh in, that is what you abide
2 by, but this I have it right”, but of course you have it wrong.
3 Somebody in Paria may have missed it but that is why I said the
4 permit to work system is a good default system by Paria.

5 **Mr. Chairman:** Because if it’s not stated in the permit to work
6 you shouldn’t do it?

7 **Mr. Peterson SC:** Right.

8 **Mr. Chairman:** That’s what you’re saying?

9 **Mr. Peterson SC:** No, it’s not only the permit to work that
10 should do it.

11 **Mr. Chairman:** It has to be in there before you can do it?

12 **Mr. Peterson SC:** Yes, before you could do it.

13 **Mr. Chairman:** But, I, I—and I mean, I do understand that.

14 **Mr. Peterson SC:** But it’s the perfect—it’s perfect that if it
15 could have been picked up back there, then—

16 **Mr. Chairman:** Perfectly—

17 **Mr. Peterson SC:** Yeah.

18 **Mr. Chairman:**—reasonable point to make if I may say so, but
19 my slight concern with that is, is that this is specifically
20 appended to a document that when it says in that document as a
21 permit to work specific tasks gives you three lines, this is six
22 pages long sequentially, and all I’m saying is that, and maybe
23 I’ve got this wrong, but, if I were working and I were being
24 given this task, I would go to the method statement and I would
25 look at the sequence. I think one of the witnesses said he didn’t
26 even do that. But, be that as it may, it is perhaps a, I don’t want
27 to characterize it wrongly, I mean, it’s a great shame that

1 somebody at Paria didn't pick that up, even for the reasons that
2 they wanted the barriers in place, because, had they picked it
3 up, then this wouldn't have happened, would it?

4 **Mr. Peterson SC:** Well, no, I don't think so, Sir. I think had
5 they picked it up, it would have been corrected, but if LMCS
6 people still want to disregard the permit to work system or
7 where they ought to have a permit to work to remove it,
8 whether that was corrected would not have prevented the event
9 because they would have been disobeying the proce—permit to
10 work—

11 **Mr. Chairman:** The work, permit to work in any—

12 **Mr. Peterson SC:** That would have been corrected and in
13 another event, another project, that is a great thing that they
14 should try to be closer and make sure they pick up errors like
15 that, and that is why I say the permit to work system is a great
16 default—

17 **Mr. Chairman:** Right.

18 **Mr. Peterson SC:**—because when you miss it there—

19 **Mr. Chairman:** I follow you. I follow you.

20 **Mr. Peterson SC:**—you can't move forward.

21 **Mr. Chairman:** But it is something that Paria could have
22 done. I mean, this is not so technical that they were—or
23 specialist that they would be unable to recognize that as a
24 problem.

25 **Mr. Peterson SC:** That is why artificial intelligence is taking
26 and replacing us as human beings, Sir.

27 **Mr. Chairman:** Not in my lifetime, hopefully, or yours I

1 suspect, but it may affect our children. All right.

2 **Mr. Peterson SC:** Because we, as humans, we miss things.

3 **Mr. Chairman:** Yes.

4 **Mr. Peterson SC:** One minute please? I think I've covered
5 some of—by answering the questions. [*Perusing documents*] I
6 just want to wrap up that point by saying, Sir, that Paria we
7 respectfully submit that even on the most generous
8 interpretation of the language on that permit, it could not lead
9 or properly lead to a reasonable construct that it was
10 authorizing the removal of the migration barriers on the 25th. It
11 is simply not ambiguous because it does not deal with removal
12 at all.

13 LMCS, in this Enquiry, also sought in its evidence to
14 contend that removal of the migration barrier was discussed at
15 the toolbox meeting. I wish to deal with the toolbox meeting.
16 They had two meetings that morning at 9.15 a.m. and at 9.30
17 a.m. on the 25th of February. LMCS seemed to be suggesting
18 that the discussion of the barriers had been—the removal of the
19 barriers had been discussed. This position is untenable as a
20 matter of fact.

21 In this regard, Paria respectfully submits, Sir, that the
22 removal of the plugs was plainly not discussed at the toolbox
23 meeting on February 25th. This is supported by the
24 contemporaneous document, namely the toolbox form
25 themselves that had nothing to do with removal of barriers. As
26 Mr. Khan pointed out, Mr. Zaid Khan in his evidence he said it
27 makes no reference to the removal of the plugs.

1 **Mr. Chairman:** It makes no reference to any work at all.

2 **Mr. Peterson SC:** Yes, in particular no removal of the plugs.
3 And then Sir, LMCS cannot escape the evidence of Andrew
4 Dotting relatively contemp—um, Dopson, Andrew Dopson, his
5 contemporaneous note written on that same day as to what
6 transpired at the toolbox meeting that morning, and this is
7 significant, Sir. And those notes could be found at page 1022
8 of the core bundle.

9 In assessing evidence, Sir, and believability and
10 credibility of evidence, a good tool that all Tribunals would
11 apply in assessing evidence is whether there was a motive to
12 concoct, fabricate or alter one's evidence. Significantly, this
13 evidence by Mr. Dopson was prepared by him at a time when
14 neither the Commission of Enquiry was set up nor any legal
15 proceedings were contemplated. Accordingly, there was no
16 motivation for the document to be manipulated, and in this
17 Enquiry no one suggested to him that his notes at that time were
18 fabricated.

19 **Mr. Chairman:** No, I don't think anyone has suggested the
20 notes were fabricated. I thought it was more to do with whether
21 he was actually at the meeting. There were two meetings
22 weren't there? There was one—sorry? Yeah, there was one at
23 9.15 and one at 9.30. The one at 9.15 took place at berth 6 and
24 the one at 9.30 took place at berth 5.

25 **Mr. Peterson SC:** Five.

26 **Mr. Chairman:** And there was a question about whether he
27 could have been at both as I recall it, bearing in mind you've

1 got to get from one to the other. And the one that we're
2 concerned with was at 9.15. He would have had to have
3 delivered the toolbox meeting and then get back onto his boat,
4 whatever boat it was, and then get himself over to berth 6 in
5 order to bear the toolbox meeting at berth 6.

6 **Mr. Peterson SC:** Sir, he was at the one at—he was at berth 6.
7 In fact, he signed the form at number 39. It's the other way
8 around.

9 **Mr. Chairman:** Yes, I thought—that's right. Didn't he sign
10 the one that he wasn't at and didn't sign the one that he was at?
11 I can't remember exactly what his evidence now. It's a little
12 while ago, but I—

13 **Mr. Peterson SC:** Well, he only signed—

14 **Mr. Chairman:** He only signed one and he told, I think me,
15 that he wasn't there at that one.

16 **Mr. Peterson SC:** We are trying to pull up his evidence, Sir.
17 It's at page—no, that's the document.

18 **Mr. Chairman:** Well perhaps somebody can look at it while
19 you carry on addressing me and identify what he did say about
20 it because I do recall there was an issue about whether he could
21 possibly be at both and he made clear that he wasn't. I thought
22 he made it clear that he wasn't at both. Have I got that right?
23 [*Crosstalk*] Marjadsingh? Ah, right, that was Marjadsingh.
24 Sorry, it might be my fault. It may be it was Marjadsingh who
25 was saying that rather than Dopson. Never mind. Sorry, I may
26 have misled you. It may be it's Majardsingh, I think, who was
27 telling us that he couldn't have been at both, correct.

1 **Mr. Peterson SC:** Majardsingh signed the—

2 **Mr. Chairman:** So forgive me for that.

3 **Mr. Peterson SC:** I'm asking the Commission to place
4 substantial weight on the evidence of Mr. Dopson.

5 **Mr. Chairman:** On what he says and on his contemporaneous
6 note?

7 **Mr. Peterson SC:** Yes, because his note chronicles what he
8 witnessed and it doesn't in any way deal with the removal of
9 the plugs, so I commend his evidence for serious weight and
10 consideration.

11 **Mr. Chairman:** All right.

12 **Mr. Peterson SC:** Although contrary to evidence that was led
13 by the Commission, led before the Commission by LMCS
14 employee in the person of Mr. Andrew Farah, and also
15 employee Mr. Dhillpaul, we respectfully submit that the
16 Commission ought to reject their evidence for this reason. As
17 for Mr. Dhillpaul, it is significant to note that in his witness
18 statement of November 10th, 2022, his evidence was this, and
19 I'm at paragraph 24 of his statement. He said:

20 "I discussed general safety as I'm accustomed to doing
21 and identified the general hazards around the work area.
22 I can't recall exactly what I discussed."

23 See paragraph 21. And Mr. Kazim Ali Jr., whom my friend this
24 morning said would have been the one discussing this, Kazim
25 Ali Jr. also spoke about the job to be done. I can't remember or
26 recall what he said about the job in particular. He gave no
27 evidence whatsoever in this—in that statement, that the removal

1 of the plug was discussed. Kazim Ali's statement could be
2 found at, I mean, um, Dhillpaul's statement could be found at
3 paragraph 24.

4 It is my respectful submission that something as removal
5 of the plug, one remembers discussing safety, one remember
6 discussing the general hazards. I commend that had something
7 as significant as removal of the plugs been discussed, that that
8 would have find expression in their memory.

9 Further, in Dhillpaul's statement given to OSHA, which
10 is dated, and this is important, Sir, with respect to the dates, this
11 event occurred on the 25th of February, 2022. Mr. Dhillpaul
12 gave a statement to OSH, to OSHA, dated March 14th, a mere
13 three weeks after this incident, and he was speaking specifically
14 to an agency that is drilling into the events of the 25th. So
15 there's focussed attention on the events of the 25th, and in
16 particular the toolbox meeting of that day.

17 He specifically addressed the toolbox meeting with the
18 their agency as to what was discussed, but he did not identify
19 any discussion took place concerning the removal of the plugs.
20 So even if we come here 10 or 12 months later, when he was
21 three weeks after the event one could forgive him if one is
22 reasonably generous, one could forgive him for not
23 remembering, but three weeks after in the fresh stress of the
24 event he did not recall to tell the OSHA authority, which should
25 have been focusing on that event, as to whether the plugs was
26 discussed?

27 Further, although under cross-examination Mr. Dhillpaul

1 sought for the first time to suggest that removal of the migration
2 barrier was discussed, he did that here for the first time, it does
3 not accord with his earlier detailed evidence as to the toolbox
4 meeting.

5 Finally, Sir, Mr. Dhillpaul did not present as a witness of
6 truth. My respectful view is that he was evasive under cross-
7 examination and effectively asked the Commission to believe—
8 he's asking you to believe that his memory got better with time
9 because in March he did not recall but when he came here in
10 November he wanted to recall and accept his testimony that the
11 removal of the barriers had been discussed. It's only one liquid
12 I know that gets better with time, Sir. I think it's wine. This is
13 not credible testimony.

14 **Mr. Chairman:** Whisky works too.

15 **Mr. Peterson SC:** I must try that.

16 **Mr. Chairman:** Don't believe—

17 **Mr. Peterson SC:** This is not credible evidence or credible
18 testimony by Mr. Dhillpaul because his memory back in
19 2014—on the 14th of March, 2022 to the authority did not
20 speak to that event.

21 As to the evidence of Mr. Andrew Farah, although he did
22 testify that the job scope for the day, which included the
23 removal of the plug was discussed at the toolbox meeting, that
24 evidence is not supported by the toolbox forms nor the
25 contemporaneous note of Mr. Andrew Dopson, and that is why
26 I would ask the Commission to attach significant weight to Mr.
27 Dopson's evidence because it shows that Mr. Farah could not

1 be accurate. I want to put it neutral.

2 **Mr. Chairman:** On any view the failure to record it in the
3 document—

4 **Mr. Peterson SC:** Yes.

5 **Mr. Chairman:**—would have—is a significant, as I think has
6 been conceded, a significant flaw?

7 **Mr. Peterson SC:** Yes. And Mr. Farah also did not produce
8 any contemporaneous notes but he relied on his memory again
9 of nine months prior. We therefore submit on behalf of Paria
10 and Heritage, Sir, that the Commission ought to find as a fact
11 that there was no discussion in relation to the removal of those
12 plugs at that toolbox meeting on the 25th of February, 2022. In
13 any event, in any event we respectfully submit that even if the
14 removal of the plug was discussed at the toolbox meeting,
15 which we deny, such discussion was not capable of overriding
16 the express requirements imposed on LMCS and its personnel
17 to fully comply with the clear requirements of the Paria permit
18 to work system.

19 In all the circumstances, the deliberate removal of those
20 barriers, by LMCS on February 25th, caused the delta event to
21 become active and I hope I correct—put the terms correctly.
22 Because it was wholly unauthorized and in disobedience to
23 Paria's permit to work system and it wholly disregarded the
24 well-established standards of practice in the industry.

25 Paria wishes to make one further point, Sir, in relation to
26 the events of the 25th of February, 2022 and that additional
27 point is this. If this learned Commission rejects Paria's

1 submissions as set out above to the effect that the obligation
2 imposed upon the applicant under its permit to work system,
3 that did not as a matter of construction did not apply to Paria's
4 employees or those of Kenson and the facts before this
5 Commission, Paria cannot, and I say this with respect, cannot
6 be found to have been in breach of the applicant's duty, the
7 applicant's duty under that system, to continually monitor the
8 job in accordance with clause 5.1 of the permit to work
9 procedure.

10 The reasons for this are relatively straightforward. The
11 duty to continually monitor in the context of the permit to work
12 system can only be construed as a duty to monitor works which
13 are the subject of the daily issued permit to work. The removal
14 of the migration barriers was not subject to any permit to work
15 and accordingly no duty to monitor arose at that point.

16 Second, a duty to monitor can only properly arise at a
17 time when works are scheduled to be executed. Indeed, if the
18 works were wrongly executed by LMCS outside scheduled
19 working hours, it could hardly be said that Paria was in breach
20 of any duty to monitor, so too in the case of works executed at
21 lunchtime. This—in this connection it is significant to note that
22 on the evidence the activities relative to the removal of the
23 migration barriers stopped at 1.45 p.m., 1345, and occurred
24 during the luncheon interval on the 25th when—which resulted
25 in the splash being seen on the screen at around 2.45 at berth 6.
26 This much is confirmed by the combined evidence of Andrew
27 Dopson, which could be found at paragraphs 12 and 13 of his

1 statement, and also of the combined evidence of his—

2 **Mr. Chairman:** Is it your case that 2.45 is lunchtime?

3 **Mr. Peterson SC:** No. They took lunch. That's when they
4 took lunch. In this Commission lunchtime is two o'clock.

5 **Mr. Chairman:** Not always.

6 **Mr. Peterson SC:** That's when they took lunch, because
7 remember the evidence of Dopson.

8 **Mr. Chairman:** I do.

9 **Mr. Peterson SC:** Yes.

10 **Mr. Chairman:** Well, you've you make your point about it.

11 **Mr. Peterson SC:** Yes.

12 **Mr. Chairman:** I have certain reservations about that but the,
13 the, the—it, it—

14 **Mr. Peterson SC:** I could help you with—

15 **Mr. Chairman:**—it doesn't, it doesn't really—does it really lie
16 in anyone's mouth to be able to say that because the work
17 permit didn't permit the removal of the plugs there was no duty
18 to monitor the removal of the plugs when there is a stop system
19 in existence that allows the lowest paid member of staff to be
20 able to say, "You're doing something you shouldn't be doing.
21 Stop"?

22 **Mr. Peterson SC:** No, so if I'm to go with that for the time
23 being, the lowest person could have stopped if works were
24 scheduled to go on. So that provision that anyone can—

25 **Mr. Chairman:** Well we know that there was somebody who
26 did actually see what was going on.

27 **Mr. Peterson SC:** Yes Kirt Scott, I think Mr. Kirt Scott.

1 **Mr. Chairman:** Yes.

2 **Mr. Peterson SC:** I think he was passing and he saw this
3 splash on the screen, but the point is that if—to answer your
4 point as to whether there is a duty on anybody to ring the bell,
5 so to speak, but that is where work was in progress, but the
6 work had stopped, they were on lunch, and that is the
7 unauthorized, well, resuming of the work. So when one is
8 considering any obligation to monitor, one has to take into
9 context the time at which the wrongful removal, apart from
10 wrongful removing of the barriers—

11 **Mr. Chairman:** You're saying that it happened all during
12 lunchtime, so even if there was some monitoring supposed to
13 take place—

14 **Mr. Peterson SC:** Nobody could—

15 **Mr. Chairman:**—no—there was no monitor there to observe
16 the work.

17 **Mr. Peterson SC:** That's the point.

18 **Mr. Chairman:** Got you.

19 **Mr. Peterson SC:** Mr. Chairman, I am told that I didn't say
20 that there was no duty to monitor when the works were not in
21 progress. I said that. I said—

22 **Mr. Chairman:** You did.

23 **Mr. Peterson SC:**—if even there—even if one had an
24 obligation to monitor, one could not monitor work that was to
25 resume out of schedule.

26 **Mr. Chairman:** Sure. I understand that's what you're saying.

27 **Mr. Peterson SC:** Yes.

1 **Mr. Chairman:** That there's—first of all there's no duty to
2 monitor at all—

3 **Mr. Peterson SC:** Yes.

4 **Mr. Chairman:**—at the level that's been suggested by LMCS.
5 If there is a duty to monitor at all, it must at least take place
6 when work is actually supposed to—

7 **Mr. Peterson SC:** Is scheduled to—

8 **Mr. Chairman:**—scheduled to take place. And if something
9 took place during a lunch break, then there would not
10 necessarily have been anyone to monitor it and neither would
11 there have been an obligation—

12 **Mr. Peterson SC:** Well, two things are unauthorized here.

13 **Mr. Chairman:**—to do so.

14 **Mr. Peterson SC:** Two things unauthorized. Removal of the
15 plug is unauthorized and the resumption of the work during the
16 lunchtime is unauthorized, so there's no obligation could have
17 been to monitor coulda ever been complied with—

18 **Mr. Chairman:** Doesn't arise.

19 **Mr. Peterson SC:**—if one had that obligation.

20 **Mr. Chairman:** I got you. It doesn't arise at all. Right.

21 **Mr. Peterson SC:** Finally, Sir, I wish to move to the events,
22 the rescue and recovery.

23 **Mr. Chairman:** How much longer do you think you're likely
24 to be, given that you're over your allotted time? I'm not going
25 to stop you, but—

26 **Mr. Peterson SC:** Twenty, Sir.

27 **Mr. Chairman:** Twenty minutes? You all right? Do you

1 want to take a break?

2 **Mr. Peterson SC:** All right, 5 minutes, Sir.

3 **Mr. Chairman:** Five-minute break?

4 **Mr. Peterson SC:** Yes, Sir.

5 **Mr. Chairman:** Let's do that. Let's take a 5-minute break and
6 then we can conclude.

7 **3.12 p.m.:** *Enquiry suspended.*

8 **3.19 p.m.:** *Enquiry resumed.*

9 **Mr. Chairman:** Yes.

10 **Mr. Peterson SC:** Thank you, Mr. Chairman. Before I move
11 to the rescue, Mr. Chairman and Commissioner Wilson, I was
12 reminded to draw the—to remind the Tribunal, the
13 Commission, of the evidence of Mr. Khan, Mr. Zaid Khan, with
14 respect to the plug when he demonstrated that there were
15 systems for attaching the inflatable plug to the chamber and I
16 think the Chairman had asked had that been rigged above
17 whether it could have prevented it disappearing into the pipe,
18 and I commend that evidence for your consideration, not only
19 that the plug would not have disappeared into the pipe, I think
20 most likely the men would not have either.

21 So the manufacturers of that plug had certain
22 specifications as to how to operate that plug. So I ask you to
23 take that into account that there was—there had not been
24 compliance with the manufacturer's specification in employing
25 that plug, and, as Mr. Zaid Khan said that it was possible to
26 attach cables to the plug and affix it to the chamber which could
27 have, had the events on the 25th still occurred, we may have

1 had a different result.

2 **Mr. Chairman:** Yeah, I mean, we don't know what breaking
3 strength any cable might have had. I don't imagine they were
4 using, you know, anchor chain or something like that, but—

5 **Mr. Peterson SC:** Well, I—

6 **Mr. Chairman:**—so it would depend on the strain and what
7 force was on that plug.

8 **Mr. Peterson SC:** Yes. So I'm hoping that some of that may
9 be revealed when the Chamber is, is um—

10 **Mr. Chairman:** Well, it's one of the things I would love to
11 have a look at and one of the reasons why I'm particularly
12 anxious to see—

13 **Mr. Peterson SC:** Yes.

14 **Mr. Chairman:**—to see the, um—

15 **Mr. Peterson SC:** I think that may shed some light on that.

16 **Mr. Chairman:** Yes. All right, thank you.

17 **Mr. Peterson SC:** The rescue and recovery efforts. In the
18 course of this Enquiry, Paria has been the subject of a number
19 of criticisms in relation to its conduct concerning rescue of the
20 divers from that pipeline. On a proper review of the factual and
21 expert evidence adduced before this Commission, these
22 criticisms to a great extent cannot be supported. As will be
23 explained below, Paria's action in relation to the rescue efforts
24 were wholly reasonable given the conditions under which it was
25 operating on the evening of the 25th of February, 2022, not
26 today.

27 The resources available and the need to take into account

1 the safety potential for the proposed rescuer would have been a
2 live issue for the decision-makers at Paria. In examining the
3 reasonableness of Paria's conduct, I ask this Commission and I
4 invite this Commission to consider 11 factors and bear them in
5 mind when assessing and judging Paria.

6 First, in the context of the contractual arrangements
7 between Paria and LMCS, the obligation to formulate, to
8 formulate and action an emergency rescue plan in respect of
9 LMCS employees rested on the shoulders of LMCS, not Paria.
10 Paria was not obligated to play anything other than a supportive
11 role to those efforts and plans.

12 Second, between—

13 **Mr. Chairman:** I'm on it. I've taken note of each of these
14 points, 11 points that you've got. Before you move on, do you
15 say that in relation to your first point that Paria had no duty to
16 effect a rescue at all? I mean duty in a legal sense.

17 **Mr. Peterson SC:** That's correct.

18 **Mr. Chairman:** Right. Thank you.

19 **Mr. Peterson SC:** Second, between 2.45 p.m. and 5.30 p.m.
20 thereabouts, Paria was unaware that the divers were in the pipe
21 and I don't think that could be challenged and I think it's
22 accepted in this Commission that it's when Mr. Boodram
23 emerged from that pipe was the first time persons were aware
24 that the men were in the pipe because they were searching at
25 sea.

26 Third, LMCS personnel were generally uncooperative
27 and/or hostile to Paria's representatives on the 25th of

1 February, 2022. And I pause there to make the point, Mr.
2 Chairman I think you asked my friend this morning and I did
3 not remember that, that Mr. Kazim Ali Sr. and Mr. Collin Piper
4 knew each other well. In fact, Mr. Piper's evidence is that he
5 knew Kazim Jr. as a lad, he often called him the young lad.

6 I don't subscribe to getting personally involved in a
7 matter but Mr. Kazim Ali had not testified here that, "I went to
8 Collin", because they know each other, "my son is in the pipe, I
9 want to dive. This is my plan", and that is missing from this
10 Commission of Enquiry. There is no evidence that LMCS had
11 a plan. All we keep hearing LMCS wants to dive and Piper
12 stop them. They wanted to dive and Piper stop them.

13 But nobody said LMCS had a plan A, B, C, D that they
14 communicated to Paria or to Mushtaq that this is the plan and
15 they refused it, apart from whether it should be lighting and
16 derisk and all of that, that's another issue, but even the
17 existence, the fact of the existence of a plan, no one has said
18 that, that "I had that plan and I told Mr. Piper this." All I
19 hearing is, "We had plan and we said—we told them we had
20 plan."

21 Nobody said, "This was the plan and I communicated to
22 Mr. Piper at so-and-so time and tell him to consider this and he
23 told me, "No", he didn't like that or he didn't like that. At least
24 for the Friday evening. That's what we're dealing with, Sir.

25 **Mr. Chairman:** But if your first point is that there is no
26 obligation on the part of Paria to effect a rescue, no legal
27 obligation, I leave aside the morality at the moment, no legal

1 obligation on them to effect a rescue, and LMCS appreciated
2 that, was it necessary for them to communicate such a plan to
3 the IMT?

4 **Mr. Peterson SC:** The reason it's necessary, Sir, is—

5 **Mr. Chairman:** And second to that is, the submission that has
6 been made is that Mr. Kazim Ali was wholly unaware of the
7 existence of this IMT.

8 **Mr. Peterson SC:** Well, Sir, I heard, I heard my friend say
9 that. I, I can't remember that being the evidence, but I'm
10 subject to be corrected, but that would be very, very spectacular
11 that Mr. Kazim Ali who boast of being in the industry for all
12 those years is not aware that an event like this will trigger the
13 formation of an ICT.

14 **Mr. Chairman:** Right.

15 **Mr. Peterson SC:** That would be a spectacular development.

16 **Mr. Chairman:** And, and presumably concomitant to that
17 would be obliged to have disclosed to Mr. Piper or the IMT,
18 "Here's my plan"?

19 **Mr. Peterson SC:** Yes, Sir.

20 **Mr. Chairman:** Okay.

21 **Mr. Peterson SC:** Third, LMCS personnel were generally
22 un—well I got that.

23 Fourth, owing to LMCS' rescue plan and its inability to
24 provide adequate resources for the purpose of attempting a
25 rescue, Paria engaged multiple specialist services or service
26 providers. So in assessing Paria's response that evening, Sir,
27 notwithstanding their lack of a legal obligation to do so, they

1 engaged Mitchell, they engaged Eastern Divers, they engaged
2 HSSL, they engaged Subsea Global and Offshore—OTSL and
3 also Hull Support Services. They relied on the connections of
4 their sister company, Heritage, to activate a lot of these
5 resources, including equipment and also personnel. And also
6 they had the assistance of Mr. Rolph Seales and Heritage
7 Operations HSSE Manager, Flemming-Holder. Paria also
8 contacted the coast guard which would always be an obvious
9 first port of call once you're dealing with a diving issue.

10 Fifth, the information which Paria had concerning the
11 conditions within the pipeline was inadequate in material
12 respects, that is to say, Paria did not know the condition nor the
13 location of the inflatable plug within the pipe. Paria also did
14 not know where the divers were located within the pipe or their
15 physical condition.

16 Sixth, the information Paria had about the conditions
17 which obtained in the pipe indicated that hazards existed
18 therein. Paria was for some time understandably operating
19 under the assumption that significant quantities of fuel oil were
20 present in the line. And I think Mr. Chairman—

21 **Mr. Chairman:** They were best placed to know what was in
22 the line.

23 **Mr. Peterson SC:** Not, well—

24 **Mr. Chairman:** They were best placed to know what was in
25 the line. Whether they did or not is another matter, but during
26 the course of the evidence that we've heard, I asked I think a
27 number of people about that and, well Mr. Maharaj did, but the

1 fact is nobody ever enquired of their own records what had
2 actually been pumped out of the line, even though this had now
3 happened.

4 **Mr. Peterson SC:** I think one that could be explained for all
5 parties, Sir, all—everyone on that evening was operating under
6 the LMCS method statement that a 35 ullage was achieved so
7 therefore the line has substantial hydrocarbon. We know from
8 this Enquiry factually that that turned out to be inaccurate, but
9 on the evening, and that's why I keep saying when Paria's
10 conduct is being examined it should be examined at Paria
11 compound Friday evening.

12 Everyone operating, yes that work was going on, yes
13 there were plugs, there was 35 ullage, the plugs were put in and
14 this event happened. Boodram emerged from the pipe. He
15 came out covered in oil, so all everyone operating on the
16 statement of LMCS that that 35 ullage was achieved so
17 therefore the rest of the line had hydrocarbons, oil. But we
18 discovered from Mr. Khan's analysis that that was inaccurate,
19 but, on the Friday evening that is what persons were operating
20 under.

21 **Mr. Chairman:** Well, they also had the evidence or would
22 have had the evidence of Mr. Kurban going into the pipe.

23 **Mr. Peterson SC:** I coming to that, Sir.

24 **Mr. Chairman:** Good.

25 **Mr. Peterson SC:** The emergence of Christopher Boodram
26 from the line at approximately 5.30 p.m. completely covered in
27 oil supported the assumption that the line had substantial

1 hydrocarbons.

2 **Mr. Chairman:** This is number seven, is it?

3 **Mr. Peterson SC:** No, I just finishing six, Sir.

4 **Mr. Chairman:** Six.

5 **Mr. Peterson SC:** Further—

6 **Mr. Chairman:** Sorry, yes.

7 **Mr. Peterson SC:** Further, as the evening progressed, Paria
8 deduced that the inflatable plug was in the line thereby giving
9 rise to the possibility of a further Delta P event within the line,
10 and that is a debatable point. The Commission will decide on
11 that but I don't think it can be dismissed as a far-fetched
12 possibility at that Friday evening. Further still, into the night
13 Paria became aware, through the use of cameras, that there was
14 also oxygen tanks lodged—an oxygen tank lodged within the
15 line.

16 **Mr. Chairman:** Lodged?

17 **Mr. Peterson SC:** Lodged in the line.

18 **Mr. Chairman:** It's not what the video shows.

19 **Mr. Peterson SC:** I didn't say wedged, you know. I didn't say
20 wedged.

21 **Mr. Chairman:** That's not really what the video shows,
22 though.

23 **Mr. Peterson SC:** I didn't say wedged, Sir. I say lodged.

24 **Mr. Chairman:** Yeah. What's the difference?

25 **Mr. Peterson SC:** Continuous and continuously.

26 **Mr. Chairman:** What's the difference?

27 **Mr. Peterson SC:** One is that it's present and one is that—one

1 is that it's merely in there and one is that it's wedged in there.

2 **Mr. Chairman:** Right. You're not suggesting wedged?

3 **Mr. Peterson SC:** No, I'll—no, that it was in the line.

4 Seventh, Mr. Collin Piper, Paria's incident commander,
5 was at the time well aware of the incident locally and abroad
6 where rescuers had perished in the course of effecting a rescue.
7 See paragraph 102 of Mr. Collin Piper's statement dated the 1st
8 of September, 2022. I think Mr. Piper drew some criticism
9 from, I cannot remember if it was Mr. Ramadhar, most likely it
10 was, for that knowledge but the fact is that if that is the man's
11 knowledge, you have to—all decisions of every human being,
12 every individual, every entity, is made on the basis and
13 factoring in their knowledge at the material time of making a
14 decision. So Mr. Piper included in his statement that he was
15 aware of that on that evening.

16 **Mr. Chairman:** One of the things that I've struggled with, as
17 you'll appreciate during the course of this evidence, is that
18 nobody seems to have been working to any timeline, including
19 Mr. Piper, who was ultimately in charge of the IMT. I mean, I
20 have to say I do find that an extraordinary feature that any IMT
21 would be operating with a view to trying to effect a rescue
22 without having very clearly in mind, and every decision being
23 made, against the background of a timeline. And nobody
24 seemed to me to have addressed that issue at all.

25 Seems as if the first time it was ever mentioned was
26 when I raised it or Mr. Maharaj raised it during the course of
27 questions of any of the witnesses and then they were being

1 asked to put timelines on it, we've had various different hours
2 being placed on it. But it seems to me that even given the heat
3 of the moment that that was almost certainly the first thing that
4 should have gone up on that whiteboard, hour 1, 2, 3, 4, 5, et
5 cetera and that all decisions should have been made against the
6 background of what was expected to be the life expectancy of
7 the people in the pipe. Do you agree with that?

8 **Mr. Peterson SC:** That's a reasonable observation, Sir. That's
9 a reasonable observation.

10 **Mr. Chairman:** Thank you.

11 **Mr. Peterson SC:** Eight, none of the entities or persons
12 contacted by Paria were prepared to undertake entry into that
13 pipeline. The coast guard advised that their personnel were
14 neither trained nor did they possess the specialist equipment to
15 undertake a rescue from within the pipeline. Mr. Johnson from
16 Eastern Emergency Response Limited advised that their
17 confined space technicians did not have the expertise to do an
18 underwater rescue. Mr. Fitzroy King, dive supervisor from
19 Mitchell Professional Diving Services Company Limited
20 advised that the risk of diving into the pipe was too high and he
21 could not send his divers into the pipeline.

22 **Mr. Chairman:** I'm happy to accept that none of the people
23 that your clients spoke to about this were—that they had
24 engaged were prepared to enter into the pipeline.

25 **Mr. Peterson SC:** Thank you, Sir. So I can move on, Sir.

26 **Mr. Chairman:** Yes.

27 **Mr. Peterson SC:** Ninth, several of the diving experts who

1 have given evidence have advised that in circumstances it
2 would have been unsafe to enter into the pipeline to undertake a
3 rescue of the divers. That came from Mr. Krishna Fuentes. I
4 think he put it graphically, you don't dive into pipe. Mr. Rolph
5 Seales and Mr. Antonio Donawa.

6 **Mr. Chairman:** Well I think they all postulated the prospect
7 that it was possible providing the right equipment and features
8 were in place. They didn't rule it out.

9 **Mr. Peterson SC:** No, we will—

10 **Mr. Chairman:** None of them ruled it out.

11 **Mr. Peterson SC:** I'm coming to that, Sir.

12 **Mr. Chairman:** Right.

13 **Mr. Peterson SC:** Ten, The evidence of Mr. Seales and Mr.
14 Fuentes is that a rescue operation to be safely undertaken into
15 the pipe would require, I counted it I hope I got it right, about
16 seven commercial divers, each with their own umbilical
17 attachment and he gave a description as to different points
18 along the way where each person had to be put.

19 **Mr. Chairman:** Well I'm not sure that's entirely correct. I
20 think partially is I don't think each were required to have their
21 own umbilicals because some of them would have been
22 onshore.

23 **Mr. Peterson SC:** No, one was in the habitat.

24 **Mr. Chairman:** Seven divers, as I understand it, you need first
25 of all a supervisor.

26 **Mr. Peterson SC:** Yes.

27 **Mr. Chairman:** Now he would have been onshore, and there

1 would have been tenders for the umbilicals.

2 **Mr. Peterson SC:** Upstairs, that's two.

3 **Mr. Chairman:** Well, whether that's right or not, there'd have
4 been at each point in which it might get snagged there would
5 have to be a tender. So, the person at the entrance to the
6 chamber would have had to have been there tending that. As it
7 goes into the pipe there'd be another one on the inside of the
8 chamber in dry conditions tendering the umbilical there.

9 **Mr. Peterson SC:** I count that as four.

10 **Mr. Chairman:** Then there was another one at the elbow
11 inside the pipe itself.

12 **Mr. Peterson SC:** That's five.

13 **Mr. Chairman:** And then there's one along the pipe who's
14 affecting the rescue.

15 **Mr. Peterson SC:** That's six.

16 **Mr. Chairman:** That's six. I took it to be six or seven.

17 **Mr. Peterson SC:** I said seven.

18 **Mr. Chairman:** And it may be there were others but they
19 wouldn't all need to have their own umbilicals. Clearly the
20 ones in the pipeline would have to have their own umbilical.

21 **Mr. Peterson SC:** And I think the one in the—the seventh I
22 got was the stand—there was a standby diver.

23 **Mr. Chairman:** And a standby. You're quite right.

24 **Mr. Peterson SC:** That is the seventh.

25 **Mr. Chairman:** There was a standby as well, um, yes, so
26 perhaps that's right, but not all requiring their own—

27 **Mr. Peterson SC:** Not all requiring, no. The standby needs to

1 have, I think the man in the chamber but those on top don't
2 need to have.

3 **Mr. Chairman:** All right, thank you. Anyway, that—they
4 were identifying the sort of number of people that were
5 necessary, yes, in their view.

6 **Mr. Peterson SC:** That brings me to the eleventh point.

7 **Mr. Chairman:** The eleventh, yes.

8 **Mr. Peterson SC:** Mr. Kurban went in the, and when we heard
9 10, 12 feet past the elbow and came back out.

10 **Mr. Chairman:** Yes.

11 **Mr. Peterson SC:** Then we heard that Mr. Beddoe and his
12 brother were prepared to go, but even though—if you factor in
13 Mr. Kurban, Mr. Beddoe and his brother, that's three. So if we
14 are to accept the evidence of the experts that we need at least,
15 let's say six, we're still short of—we only have part of the team
16 of Mr. Kurban, Mr. Beddoe and Mr. Guerra I think and Mr.
17 Farah as the supervisor. So we're still short of persons,
18 according to the expert evidence, to effect a safe rescue into the
19 pipe and also another factor, a variable we have not factored
20 in—

21 **Mr. Chairman:** So your point is not enough men were
22 available even if they had gone in? Yes.

23 **Mr. Peterson SC:** Exactly. Yes, Sir. And another factor, I
24 think Mr. Fuentes alluded to it, is—well, there are two other
25 factors. I didn't put them here but I now remember them.
26 There are two other factors, that, when a diver goes in, he may
27 experience difficulty because he may have to come back out

1 and he replaced. He said that. That he make to a certain point
2 in the line and he may have to come back out. If he comes back
3 out, you cannot use him immediately, so you have to rest him.

4 **Mr. Chairman:** Well, depends how long he's been in.

5 **Mr. Peterson SC:** Yes, that's it. So it depends—you may—
6 you have to rest—

7 **Mr. Chairman:** Yeah, but he might have only been in 15
8 minutes.

9 **Mr. Peterson SC:** And if he didn't then you have to—so, in
10 planning and that's why planning is important.

11 **Mr. Chairman:** Yes.

12 **Mr. Peterson SC:** So in planning a dive you have to factor in
13 that factor, and that is the point I wish to leave it, because—

14 **Mr. Chairman:** Well, I know. But, I mean, the point here is
15 the attempt at rescue. Any attempt at rescue doesn't mean it's
16 going to succeed.

17 **Mr. Peterson SC:** No, no, no.

18 **Mr. Chairman:** And the criticism, such as it is, is that there
19 was no attempt to rescue. Now, if somebody had gone in the
20 pipe and for whatever reason had to come out and then there
21 wasn't another dive available to swap with him, well, then
22 you'd at least have attempted. You've done something.

23 **Mr. Peterson SC:** Yes, Sir.

24 **Mr. Chairman:** It can't work because this is what happened,
25 but—

26 **Mr. Peterson SC:** And that is the difficulty in this matter.
27 We're moving to the point of, "You did not attempt a rescue",

1 but we have to put—we're dealing with the decision to even
2 attempt. That's where we're at, Sir.

3 **Mr. Chairman:** Yes.

4 **Mr. Peterson SC:** We [*Inaudible*] even the decision to even
5 attempt and that is where we are to act, and we hear from
6 LMCS namely that, I think Mr. Ramadhar called it a order, not
7 to dive, not to dive into the pipe, but the evidence is that diving
8 continued even after Mr. Piper said that and—

9 **Mr. Chairman:** Well, yes, diving into the habitat certainly
10 continued.

11 **Mr. Peterson SC:** It continued.

12 **Mr. Chairman:** It seems clear to—

13 **Mr. Peterson SC:** And no one said that they were restricted
14 physically, although we hear about guns and all of that, from
15 diving and even after Mr. Piper suggested that, apart from
16 Kurban going in and coming back out, Beddoe's evidence, Mr.
17 Beddoe's evidence is that he went into the habitat in order to go
18 into the pipe along with young Kurban but then he recognized
19 that, and reasonably so, that Kurban could not have assisted
20 him because of obvious circumstances.

21 So, even when one is trying to blame Mr. Piper for
22 saying no diving into the pipe, after that, attempts were made to
23 go into the pipe and when Mr. Beddoe got there he realized that
24 Mr. Kurban could not assist him and he came out. But then
25 when you marry that against the expert advice, because that is
26 taken into account, Mr. Fuentes and—well, I don't have any
27 discipline in diving but Mr. Fuentes and they evidence I don't

1 think could be challenged, and Mr. Beddoe would have the
2 same kind of knowledge and expertise as them, so we have to
3 take—

4 **Mr. Chairman:** Well I know. But, I mean, what's clear to me
5 from the various people who have given evidence and talked
6 about the prospect of carrying out a dive in those
7 circumstances, each seems to have had a slightly different
8 approach. One would say, "I need this", another one would
9 say, "I need that" and so on and I suppose it must inevitably be
10 up to the individual diving supervisor to make a determination
11 of what he regarded as being important before he would effect
12 such a search, and it seems to me that there are different views
13 about that and each individual supervisor might have had a
14 different view.

15 **Mr. Peterson SC:** A point—

16 **Mr. Chairman:** And it must bring me to the point, sorry, just
17 while I have it in my mind, it does bring me to the point which
18 has been explored with a number of people, is, is there a
19 difference between permitting and inviting or asking,
20 permitting someone to dive into the pipe and/or asking people
21 to dive in the pipe? Do you see a distinction between those
22 two?

23 **Mr. Peterson SC:** There is a distinction, Sir. There is a
24 distinction, and I hear Mr. Ramadhar talk about sleeping home
25 and he go run in building for me and thing. I would be
26 appreciative if he save me and thing, but, I could understand if
27 he didn't but—I ain't go be around, but—the point is, there's a

1 difference, Sir. Paria is a plant, a gas and oil installation. It is
2 not a situation where one is on a beach and see someone in
3 difficulty and they could decide, “I go try to save him, you
4 know. I could swim well”, or, “I not good enough. I not taking
5 that risk.”

6 **Mr. Chairman:** Yes.

7 **Mr. Peterson SC:** If Mr. Piper had made that decision and
8 send in someone in that pipe and they succumbed, I could see a
9 Commission of Enquiry and I could hear Mr. Ramadhar and
10 others, “Did you know the condition inside that pipe when you
11 authorized the men to go in there?” “So you send men in, you
12 know men missing., men could have been dead and you
13 sending other people?” And then I hear about exoneration and
14 indemnity. Mr. Piper and Paria have been criticized for asking
15 for a plan, but, against that I hearing that he should have did—
16 get somebody to sign an indemnity to exonerate Paria to go into
17 the pipe. No one could exonerate and give persons indemnity
18 against criminal Prosecution.

19 **Mr. Chairman:** I agree, and I doubt how effective that would
20 have been.

21 **Mr. Peterson SC:** I was—well, I’m always a student, but I
22 was willing to learn if it’s something I missed in law school
23 because some classes I didn’t go to, but, I was wondering if
24 there was something I missed. So no one—so when they’re
25 throwing that at Paria and Mr. Piper that he could have—you
26 couldn’t do that and one may say whether persons voluntarily
27 going or you’re permitting or you’re allowing, there’s nice

1 words but the point is, anyone who had gone into that pipe that
2 evening would have been going in there under the auspices of
3 Paria and the management of Paria.

4 **Mr. Chairman:** But is that entirely correct? I mean, I
5 appreciate it's their plant, all right, they're responsible for their
6 own land, their own plant, but is there a distinction to be drawn
7 between somebody who says, not to put too fine a point on this,
8 just being quite crude about it for the moment, just to illustrate
9 the point I'm making, if the criteria for effecting a rescue is a
10 better than 50 per cent chance, let's say, and somebody says,
11 "Well there isn't a better than 50 per cent chance and therefore
12 I'm not going into the pipe to effect a rescue, that's on the one
13 hand, one could understand that.

14 So, Mr. Piper saying you—one of your—the teams that
15 he's employed, is there a better than 50 per cent chance of
16 effecting a rescue, they say no, and so he says, "Well I'm not
17 going to ask you to go into the pipe, all right, on that basis."
18 Somebody else says, "I accept that it's not a better than 50 per
19 cent chance, there's only a 30 per cent chance of it being
20 successful, but I am willing to take that chance", should Mr.
21 Piper in those circumstances prevent him from taking that
22 chance?

23 **Mr. Peterson SC:** The difficulty Mr. Piper would have had at
24 that point, Sir, is that he had experts and I only factored in not
25 knowing the conditions within the pipe, if he were to be—if he
26 were to attract criminal liability to himself, but you just made
27 appoint again, against him making that decision, because

1 there's a, I coulda hear lawyers asking him in a Commission,
2 "Mitchell tell you them ain't sending in their people, this one
3 tell you they're not sending in their people, OSTL—and you
4 know they're commercial divers you know they have
5 equipment and they say they're not sending in people but you—

6 **Mr. Chairman:** You don't have to pretend to be Mr.
7 Ramadhar.

8 [*Laughter*]

9 **Mr. Peterson SC:** Well that's the only way I coulda make the
10 point effectively, Sir.

11 **Mr. Chairman:** I get the point. Yes.

12 **Mr. Peterson SC:** Yes.

13 **Mr. Chairman:** But, you know, Mr. Piper might have said, for
14 example, "Look, I am, I am not going to stop you, physically
15 stop you. I'm telling you don't go in the pipe. I'm saying it is
16 unsafe in the pipe. All the advice we've had suggest that it is
17 completely wrong for anyone to entertain such a risk and that is
18 the position that we adopt. Do not go in that pipe but I'm not,
19 and I make clear, I'm not going to physically prevent you from
20 doing it. If that's what you want to do, that's on your head."

21 **Mr. Peterson SC:** Well, Sir, that is exactly the point too.
22 There is no evidence of anybody physically preventing anybody
23 from going into that pipe.

24 **Mr. Chairman:** Right.

25 **Mr. Peterson SC:** The evidence is—

26 **Mr. Chairman:** But do you agree with me that he could have
27 taken that—if that had arisen, could have taken that—there is a

1 difference between asking people to effect a rescue and
2 effectively allowing those who, in defiance of your best advice,
3 seek nonetheless to try and rescue?

4 **Mr. Peterson SC:** One could have done that but that is—will
5 be totally a personal decision, because if you had done that and
6 the person perished, I could see Mr. Piper for the rest of his
7 days saying, “But why I didn’t stand firm and tell this man he
8 can’t go in the pipe?”

9 **Mr. Chairman:** Yeah, well, I’m assuming—

10 **Mr. Peterson SC:** So, it is not that—

11 **Mr. Chairman:** I’m assuming he would have done that, would
12 have said no. Given his evidence—

13 **Mr. Peterson SC:** Yes.

14 **Mr. Chairman:**—and the approach he’s taken during the
15 course of the IMT, his position was, “I never had sufficient
16 information to be able to justify anyone going in that pipe.

17 **Mr. Peterson SC:** And—yes, Sir, and the point I wish to make
18 there’s no evidence of anybody physically restraining anybody
19 from going into that pipe but what we hear here is that, “Well, I
20 was—

21 **Mr. Chairman:** Well, there’s a little bit. But, I—

22 **Mr. Peterson SC:** No, what we have here, Sir, is that, “I was
23 there. I saw coastguardsmen”—in fact, at one point somebody
24 started to allude to, but I think they back off from the evidence,
25 that there was coast guard—a huge cost guard vessel off the
26 berth, um off the jetty and they were prevented—they had guns.
27 I mean, there’s no evidence to bring that to the shore.

1 **Mr. Chairman:** You don't have to persuade me.

2 **Mr. Peterson SC:** But—but yeah, but there's no evidence, Sir,
3 that anybody was physically restrained from disregarding Mr.
4 Piper and going into the pipe, but now, when we're in these
5 nice surroundings, people are saying, "Well, I would have gone
6 if"—maybe. But then the point too that Mr. Piper—and Mr.
7 Piper made a point in his evidence that I didn't think of, I think
8 in answer to the Commission, or maybe Mr. Maharaj, he said,
9 "You know, it would have been easier for me to just make—the
10 easiest decision to make was to tell people go?"

11 **Mr. Chairman:** Yes, I'm—

12 **Mr. Peterson SC:** "The hard decision was really to tell people,
13 in the face of the unknowns, not to go."

14 **Mr. Chairman:** Certainly that's what he said, yes. How are
15 we doing?

16 **Mr. Peterson SC:** Two more minutes, Sir.

17 **Mr. Chairman:** Well we got to point 11 so I'm assuming there
18 aren't any more points on that issue.

19 **Mr. Peterson SC:** I see I had 12, Sir. I know I said 11 but I
20 always couldn't count.

21 **Mr. Chairman:** You've got a number 12?

22 **Mr. Peterson SC:** None of the divers or diving professionals
23 had a workable or credible res—well, I think I made that point
24 already.

25 The last point for completeness, Sir, it is necessary to
26 address one final allegation which has been levelled against
27 Paria in connection with this issue that afternoon and rescue

1 efforts, namely, that Paria stopped LMCS and others from
2 carrying out any rescue attempt that night, that's the allegation,
3 or during the 26th of February, 2022. We respectfully submit,
4 Sir, that this allegation cannot be supported out of a proper
5 analysis of the facts. While it is not disputed that Paria told
6 persons not to dive into the pipe because it is too dangerous, the
7 reality is that persons were not prevented from doing so
8 because the evidence shows that persons continued to dive
9 thereafter into the night.

10 **Mr. Chairman:** Now, well I mean you've made that point but,
11 I mean, I think there's a distinction between those who were
12 diving into, for example, the habitat for the purposes of no
13 doubt ensuring that if anybody was trying to come out that they
14 would have been able to be pulled out, because we knew that
15 Mr. Boodram was unable to get out of the pipe himself having
16 got to the surface level of fluid in the pipe. So it doesn't
17 surprise me that people, whilst there was a habitat in place,
18 diving into the habitat to ensure that if anybody else managed to
19 crawl their way through this pipe that they would have been
20 able to be taken from there, but I think apart from Mr. Kurban,
21 nobody else went into the pipe. Certainly there's no evidence
22 of that.

23 **Mr. Peterson SC:** Yes, Sir, and that's the point. Persons who
24 allowed—

25 **Mr. Chairman:** The point you're making is—

26 **Mr. Peterson:**—people were not be—

27 **Mr. Chairman:**—they could have done if they wanted to.

1 **Mr. Peterson SC:** People were not prevented from going into
2 the habitat. You get into the habitat, you could get into the
3 pipe. So the fact that they weren't prevented from going into
4 the habitat, once they get into the habitat, the habitat is
5 underwater.

6 **Mr. Chairman:** Yeah. Well, there would have had to have
7 been quite a lot of more activity, I mean, they were—to fit the,
8 um, all the appropriate equipment would have taken some
9 effort. I don't know what would have happened. Anyway, I've
10 got your point.

11 **Mr. Peterson SC:** But I want to suggest, Sir, in closing that
12 the—I wish Mr. Ramadhar was here because I wanted to
13 describe his invitation to the Commission for criminal
14 proceedings against Paria or its personnel as outrageous on the
15 evidence. It would grab a good headline, it will grab newspaper
16 headline and front page, but, on the evidence it cannot be
17 supported. There is no evidence here of anything close to
18 criminal conduct. There would have been something close to
19 criminal conduct—

20 **Mr. Chairman:** Well it would have to be—we'd have to find
21 that there was gross negligence with—

22 **Mr. Peterson SC:** To have that?

23 **Mr. Chairman:** Yes.

24 **Mr. Peterson SC:** Yes, Sir. And that is why I was a bit taken
25 aback at the invitation, but I know that the Commission would
26 not fall prey easily to such temptation.

27 But I have two recommendations I've been able to put

1 together so far, Sir, and one is this. That you may want to
2 recommend, Sir, guidelines for scuba and it seems from the
3 experts that scuba is not to be used in commercial work like
4 this. So that is one recommendation that I would respectfully
5 put forward for your consideration.

6 **Mr. Chairman:** Well, guidelines in relation to, um—

7 **Mr. Peterson SC:** The use of diving and—

8 **Mr. Chairman:** Commercial diving?

9 **Mr. Peterson SC:** Yes, and the type of diving for commercial.

10 **Mr. Chairman:** Yes.

11 **Mr. Peterson SC:** Secondly Sir, that we heard the evidence
12 here that there has not been any—we heard about persons being
13 qualified in saturation dive. Commissioner Wilson, I may be
14 encroaching on his area here but we heard people talking about
15 saturation dive and confined space diving. There may be some
16 recommendation around that with respect to fine-tuning that
17 confined space to include things like maybe pipeline 50 inches,
18 30 inches as the case may be, since Trinidad and Tobago is an
19 oil and gas industry and have several industrial plants.

20 So apart from just general confined space, I don't know if
21 there could—I don't know the discipline whether it could be
22 further tweaked and be more specific to deal with the more
23 likely risk that would arise in the oil and gas industry.

24 **Mr. Chairman:** What, that there should be some training for
25 people to dive into a pipeline?

26 **Mr. Peterson SC:** I don't know if that's physically. It may be,
27 it may be.

1 **Mr. Chairman:** Why don't we get rid of 30-inch pipelines,
2 have them either smaller or bigger? If they're smaller you can't
3 get sucked in and if they're bigger you could turn around.

4 **Mr. Peterson SC:** [*Inaudible*] Well, well I would—Mr. Farah
5 say he could turn around in—anyway. I have this
6 recommendation, Sir, that there be a national registry through
7 resources to respond to emergencies, because, if you realize in
8 the evidence, Sir, that there was a lot of calling around. “Do
9 you have a ROV, do you have this, do you have that aspect?”
10 If we have—and they could model it from—there's some
11 legislation in Trinidad for procurement, for example, where
12 they have a registry of skills and that kind of thing, if there's a
13 national registry.

14 So if I example, get a certificate in some specialized area
15 of diving, not from a witness that was here, but if I get a
16 certificate from in some area, I may go and register and
17 voluntarily put myself on the register in the event that there's an
18 emergency that I could be contacted. So if you have a—
19 develop a national registry for assets and personnel and their
20 specialized area of training so that when there's an event, you
21 call the emergency registry and you know that there is A, B, C,
22 they could be contacted at these numbers, these assets, so you
23 don't have to be calling around and say, “I wonder if so-and-so
24 has this equipment. I wonder if so and so has this equipment.”
25 You could go there and at the first call to see what is available
26 to respond to an emergency or a crisis.

27 **Mr. Chairman:** Well, I mean, I see some value in that. There

1 is an argument, isn't there, for any plant of the kind that we're
2 dealing with here to have certain equipment available to them
3 all the time. I mean, leave aside the question of people being
4 sucked into a pipe, there may be any number of other reasons
5 why you would want to put a camera inside a pipe, for example,
6 that tools, things get caught up in there, there are gurglings,
7 whatever it might be, within a pipe that might justify putting a
8 camera in there and one might have thought that some—a
9 company as big as Paria might have had some sort of
10 mechanism on site for achieving the same. That's certainly
11 something I would consider with Mr. Wilson as to whether or
12 not such a recommendation should be made.

13 **Mr. Peterson SC:** Yes, Sir.

14 **Mr. Chairman:** But I think as to a national registry, whilst, I
15 mean I'm attracted to it to this extent.

16 **Mr. Peterson SC:** Yes—or, sorry.

17 **Mr. Chairman:** It seems to us that there are emergencies
18 which take place which could not be predicted. This one, as a
19 matter of happening, might have been predicted but it wasn't,
20 all right? So it falls into the category of emergency that might
21 take place that is not predicted. So this country doesn't
22 experience hurricanes, so not much is being done to deal with
23 hurricanes. Similarly, supposing on that day a ship had come
24 along and had rammed straight into the berth out of control.
25 Now, that couldn't be predicted, but they would have to kick in,
26 wouldn't they, some sort of emergency procedure to try and
27 help the people that might be in the ship, it's gone down, the

1 half that's now underwater, any number of possible scenarios
2 that could emerge in an emergency situation where you haven't
3 predicted what might happen.

4 And certainly it seems to me at the moment, and I think
5 that Mr. Wilson is not unpersuaded, that there may be some sort
6 of general emergency plan that people ought to have that can
7 kick in in that situation, and the sort of register you're talking
8 about might assist in that. It would necessarily bring together
9 certain skills that might be outside of the interested parties—

10 **Mr. Peterson SC:** Right.

11 **Mr. Chairman:**—which might have its own attraction. But,
12 I—and—so certainly yes, I think that there are—

13 **Mr. Peterson SC:** Because I was going to say, Sir, this
14 recommendation is wider than Paria.

15 **Mr. Chairman:** Yes.

16 **Mr. Peterson SC:** I use Paria as the example but there may be
17 smaller companies that will have similar emergencies but don't
18 have the resources or have the equipment so they can go to this
19 registry and right away they know where they could locate,
20 instead of asking around and getting, now fishing around to see
21 who may have—like Mr. Fuentes talked but a hazmat, a hazmat
22 suit? For example, if someone has a hazmat suite, instead of
23 having it thrown in their warehouse somewhere, they'll go and
24 register, "I have a hazmat suit", so if you're looking for hazmat
25 suit you don't have to be calling around—

26 **Mr. Chairman:** In what, three different sizes or—you know, I
27 mean—

1 **Mr. Peterson SC:** Well, Sir, I told Paria with their PPE to—
2 they have to get bigger sizes, Sir, after this Commission. But
3 that's what I was thinking about.

4 **Mr. Chairman:** You're pointing at me when you say that? All
5 right, I mean, yes, are there any other recommendations?

6 **Mr. Peterson SC:** No, Sir, I want to rest it there for the time.
7 Or, yes, um—

8 **Mr. Chairman:** Do you think that Paria might have carried
9 out some sort of testing of their system since this event, that is
10 to say, they have—this has happened, it happened back in
11 nearly a year ago now, and the same people are in place.
12 Whatever the level of confidence in those people might be, do
13 you not think that they ought to have carried at a drill, a system
14 of—yes what's called a tabletop exercise of the issues involved
15 here to see what might have gone wrong, what forms might be
16 changed, what things might have been done to correct, albeit
17 they don't accept any responsibility but correct the potential
18 flaws or ambiguities that we've identified in the course of this
19 Enquiry?

20 I mean, a number of your witnesses and others have
21 accepted ambiguities at best and misleading statements at worst
22 contained in documents and so on, and I'm slightly
23 disappointed that a company the size of Paria, unlike Heritage
24 which seems to do regular testing, that they've done nothing
25 apparently since this has happened, beyond what looks to be a
26 relatively cursory examination with two very small
27 recommendations that no drill or tabletop excise has been done.

1 **Mr. Peterson SC:** I'm sure that would be undertaken, Sir, if
2 not I'll pass on your recommendation, but, your suggestion I'm
3 sure has not been lost.

4 **Mr. Chairman:** Well, you know, we're going to write our
5 report. I've made it pretty clear that we will have it ready by
6 April. I'm not in control of if—whether it is published or not.
7 That is in the hands of others, but to say you're going to wait
8 till the outcome of this Enquiry before carrying out anything, as
9 I think Mr. Mohammed said, is perhaps a little disappointing.

10 **Mr. Peterson SC:** Your sentiments would be, would be
11 factored in, Sir.

12 **Mr. Chairman:** All right, thank you.

13 **Mr. Peterson SC:** It is left for me to thank you, Mr. Chairman,
14 and fellow Commissioner Wilson and Counsel for the
15 Commission and my colleagues for tolerating me.

16 **Mr. Chairman:** Now, I thank you very much for your
17 submissions.

18 **Mr. Peterson SC:** And I have one complaint, Sir, and a
19 compliment. I have a compliment for Ms. Sinanan behind you
20 for her competencies, efficiencies.

21 **Mr. Chairman:** Yes.

22 **Mr. Peterson SC:** But, I don't understand how people be
23 sending email two o'clock in the morning and three o'clock. I
24 thought she used to sleep, Sir.

25 **Mr. Chairman:** Yes, well, I mean, believe me, I've had
26 messages all kinds of hours of the night from her.

27 **Mr. Peterson SC:** Thank you, Sir.

1 **Mr. Chairman:** All right, lovely. Thank you very much
2 indeed. Right, so that is it for today. Would it be inconvenient
3 to sit at 9.30 tomorrow? Anybody have a problem with that? I
4 think the sooner we finish the sooner we can stop and have
5 some refreshments and close this Enquiry or the evidential
6 stages of this Enquiry. Thank you very much indeed.

7 **Mr. Peterson SC:** Mr. Mootoo asked to be excused in the
8 morning. He's in Court of Appeal but I'll be here at 9.30, Sir
9 and he will join us later.

10 **Mr. Chairman:** Of course, of course; no problem at all. All
11 right, well I will see you all tomorrow 9.30. We have a target
12 time of middayish I think is where we're aiming for one way or
13 the other to close these proceedings. All right, thank you very
14 much indeed. Please gather your papers. I'll be doing the
15 same.

16 **4.05 p.m.:** *Enquiry adjourned.*

1 **EVIDENTIARY HEARING DAY 18**

2 **9.26 a.m.:** *Enquiry commenced.*

3 **Mr. Chairman:** Yes, good morning. On our final day. I see
4 you've repositioned yourself, Mr. Maharaj. I've seen the
5 speaking notes that you've prepared and I'm grateful for that. I
6 understand it may be that you will last, potentially, up to three
7 hours or so?

8 **Mr. Maharaj SC:** Yes.

9 **Mr. Chairman:** That's fine. I say to you as I did to others,
10 take a break when you feel you need one. If you need two
11 breaks in that period of time, you won't have any complaint
12 from me. So pick your moment, we'll take a break, and then
13 proceed again after a short 10 minutes or so.

14 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

15 **Mr. Chairman:** Thank you. Yes.

16 **Mr. Maharaj SC:** I can start, Mr. Chairman?

17 **Mr. Chairman:** Yes, please do.

18 **Mr. Maharaj SC:** Good morning, Mr. Chairman. Chairman
19 Jerome Lynch KC and Commissioner Gregory Wilson, as
20 Counsel to the Commission and on behalf of my team, Mr.
21 Ronnie Bissessar and Ms. Vijaya Maharaj, I wish to thank both
22 of you for so expertly managing the procedural and now this
23 evidentiary hearing and for your helpful and instructive
24 directions so that the public has complete access to all the
25 evidence and documents which are before the Commission. I
26 would like to give special thanks to you, Mr. Chairman, for the
27 leadership you have provided to this Commission in ensuring

1 that the commitment that you gave to the public, that the
2 Enquiry would be completed expeditiously, has been kept.

3 This Commission is historically significant because it's
4 the first, as far as I'm aware, locally, that has uploaded all of the
5 documents, correspondence, orders, and directions online,
6 consistent with the access to justice principle. Further, all of
7 the proceedings have been broadcasted live on national TV and
8 streamed, and the public has, by their social media comments,
9 followed the proceedings with great interest.

10 This is one of the most important public Commissions of
11 Enquiry held in Trinidad and Tobago. The Cabinet of Trinidad
12 and Tobago recognize that these facts demanded a public
13 Enquiry, and wide section of members of the public have
14 participated in the hearings before this Commission, and have
15 followed the events at the Commission of Enquiry. I am sure
16 that the public is anxiously awaiting the report of this
17 Commission of Enquiry and that the Government would lay
18 that report in the Parliament of Trinidad and Tobago.

19 This Commission has advised that a final report is likely
20 to be presented to the President by the 30th April, 2023. This
21 has suggested a nine-month gestation period from your
22 appointment as Chairman, which is, as far as I'm aware, one of
23 the quickest, if not the quickest turnaround in the history of the
24 Commonwealth.

25 The Commission's work was greatly assisted by the
26 secretary, Ms. Sarah Sinanan, and the Commission's staff, and,
27 on behalf of the legal team assisting the Commission, I wish to

1 express our gratitude for her and her team's support, diligence,
2 and enthusiasm.

3 The Commission's deliberations were also assisted by the
4 various counsel for the parties given standing and others who
5 attended on behalf of witnesses, and the legal team is also
6 grateful for their respective contributions.

7 I also wish to thank the members of my legal team, Mr.
8 Ronnie Bissessar and Ms. Vijaya Maharaj, for their complete
9 devotion and assistance to me in performing my functions as
10 Counsel to the Commission.

11 Finally, I also wish to thank the persons behind the scene
12 who, through their individual initiative and diligence, have
13 helped to prepare the venue and have taken us to this point
14 where the evidentiary hearing is likely to be closed today or
15 would be closed today, if I may say so.

16 The structure of my submissions is as follows.
17 Submissions have been made on how the contract and permit to
18 work procedure ought to be interpreted, and whether the permit
19 to work procedure is part of the contractual obligations of the
20 parties. I would first respond to those issues in order to show
21 that the permit to work procedure imposes contractual
22 obligations on the parties.

23 I would then deal with non-delegable common law duty
24 by care by Paria to ensure that measures were put in place for
25 the works to have been done safely having regard to the
26 inherently dangerous nature of the works. These established
27 principles of the common law were recently applied by the

1 High Court of Trinidad and Tobago in a reported judgment.

2 I would then refer to the works on the 25th February,
3 2022, to show that there were serious breaches of the contract
4 and the permit to work procedure by both LMCS and Paria,
5 then I would deal with the LMCS documents which include the
6 method statement, risk assessments, job safety analysis, and the
7 emergency response plans, which were submitted to Paria and
8 which Paria reviewed and accepted, and in which both Paria
9 and LMCS did not identify that a Delta P hazard could have
10 occurred in the method of the execution of the works.

11 Those documents were reviewed by Paria; accepted by
12 Paria. Paria in its evidence before this Commission, however,
13 admitted that it did not have the competence and expertise to do
14 so. Notwithstanding that, Paria did not appoint an expert client
15 representative to assist it in that review, and accepted those
16 documents without doing so. The failure of both Paria and
17 LMCS to identify the risk of a Delta P event in the execution of
18 the works was the root cause of the accident.

19 I will then deal with the line clearing. The underlying
20 factor which led to this accident was the removal of the line
21 contents of Sealine 36, both in terms of quantity and the method
22 used. This caused the gaseous void in the pipeline which
23 created a latent Delta P hazard when the habitat was installed.
24 That latent Delta P hazard was activated when the inflatable
25 plug was removed which caused the seawater to flood the
26 habitat and the vortex to be created which sucked the five
27 divers into the 30-inch diameter pipeline.

1 I would then deal with the post-accident response by
2 Paria and LMCS. There was no emergency response plan in
3 place because the emergency response plan which was
4 submitted by LMCS to Paria and which was reviewed and
5 accepted by Paria as a suitable emergency response plan, did
6 not identify a Delta P hazard. Consequently, there was no plan
7 in place on the 25th February, 2022, when the latent Delta P
8 hazard in respect of the works was activated and caused the
9 accident.

10 I would summarize the evidence of the efforts made by
11 both LMCS and Paria to show the efforts made by both of them
12 to rescue the divers from the pipeline in the context of the
13 limited time which they had to rescue the divers alive from the
14 pipeline. I would then address the evidence of the treatment of
15 the relatives following this tragic accident and I would then
16 address the Commission on the proposed recommendation.

17 **Mr. Chairman:** Thank you. That sounds good.

18 **Mr. Maharaj SC:** First, I would just say some of the
19 principles of law which govern the assessment of the evidence
20 in this matter. And I may say this, Mr. Chairman, I would not
21 refer to cases or references. I would just make the submissions.
22 It would be online afterwards with my submissions, and I
23 suppose all can see the references.

24 **Mr. Chairman:** Yes.

25 **Mr. Maharaj SC:** Where a tribunal has to determine questions
26 of fact where there are disputed facts, the courts have held that
27 in determining the credibility of witnesses it is essential that the

1 tribunal weigh their credibility against the important
2 contemporaneous documents. In other words, the credibility of
3 a witness must be put correctly into the scales of the important
4 contemporaneous documents and weigh the evidence against
5 those documents.

6 It is a well-established principle of law that where a
7 party, without reason, fails to call a witness or witnesses that
8 would be expected to be called, if that party's evidence would
9 be favourable to that party, it would be open to the court or
10 tribunal to infer that that person's evidence would not have
11 helped that party's case. The same principle applies to the
12 failure of a party to produce documents when it might
13 reasonably be expected the party ought to have produced those
14 documents.

15 Any inconsistency between a witness' evidence and an
16 earlier statement goes to credibility. Where a witness gives
17 evidence which is inconsistent with previous evidence given on
18 oath or a previous statement, a tribunal can regard the evidence
19 of that witness as unreliable, unless the witness gives a
20 reasonable explanation for the inconsistency.

21 I would first deal with the scope of works in the context
22 that it has been stated a lot in this case, that this contract
23 resembled the 2020 contract between Paria and LMCS. The
24 scope of works developed by Paria for the contract works is at
25 CB2, page 564. It was prepared based on the scope of works
26 which had been done for a 2020 project completed by LMCS,
27 berth 5. Both the 2020 and the 2021 projects involved the

1 change out of subsea piping. The main difference between the
2 2020 and the 2021 projects was that the 2021 project involved
3 additional works above the sea, and further, the leak in the
4 subsea line was about five or 10 feet deeper.

5 In dealing with the scope of works for the 2020 project
6 which is contended to be similar to these works, Paria
7 employed a project engineer who developed the scope of works
8 and oversaw the execution of the whole project. The scope of
9 works for this project, CB2564 refers to an estimated volume of
10 product between isolation points between 2000 barrels. Paria's
11 evidence is that this represented an estimate of the volume of
12 the product into subsea line between berths 5 and 6. The
13 evidence of Paria was that neither the scope of works nor the
14 method statements required the underwater pipeline between
15 berths 5 and 6 to be completely drained.

16 Paria's Addendum 1, to the scope of works at core
17 bundle 598, query one states who is responsible for pumping
18 back from the berth to clear the lines with water; and the
19 response is the contractor is responsible for the safe removal of
20 hydrocarbon contents from the line and to ensure that the line is
21 clear and dry. Paria's evidence, however, was that this meant
22 that only part of the line where the works were to be carried out
23 would be clear and dry.

24 We shall demonstrate, however, when addressing the
25 issue of line clearing later in our submissions how the evidence
26 of Paria's witnesses that the pipeline was not meant to be
27 completely drained is inconsistent with the contemporaneous

1 documentary evidence in respect of the line draining. The
2 scope of work also sets out the contractual responsibilities of
3 the parties. The contractor is required to provide competent
4 supervision at all times during the execution of the job. They
5 are also required by section 5.4 to provide live video feed
6 stream during the subsea works. At paragraphs 3.1.11 and
7 3.1.12, reference is also made to the provision of a video stream
8 being provided topside during work activity for Paria
9 representatives.

10 Paria's responsibilities are at section 4 and include,
11 among other things, supplying all work permits certificates
12 thereby recognizing that permits to work are to be issued before
13 works; monitoring contractor's performance and work
14 standards; approving work to be done by the contractor and
15 carrying out quality assurance audits; provide slop barges to
16 assist in the removal of line content; provide personnel to
17 oversee isolation, de-isolation, depressurization, pressurization,
18 draining filling product from lines at berths 5 and 6.

19 Response to submissions of Paria and Kenson in respect of the
20 contract. In response to their submissions that there was no
21 evidence that the permit to work procedure was a contractual
22 obligation on the contract, we submit as follows:

23 Firstly, section 2 of the permit to work procedure under
24 the headings "Scope" states this permit to work procedure
25 applies to contractor maintenance, civil inspection, and
26 turnaround related activities.

27 Secondly, it is clear from section 8 of the scope of works

1 that contractors are contracted personnel and contracted
2 personnel are required to follow the permit to work procedure
3 and standard work instructions at all times. There was,
4 therefore, a contractual obligation that the permit to work
5 procedure would apply to the contract.

6 Thirdly, according to the evidence of Mr. Randy
7 Archbald of Paria, it is clear that the permit to work procedure
8 did apply to the contract. At paragraph 11 of his witness
9 statement he stated that the permit to work procedure applies to
10 contractor maintenance, civil inspection, and turnaround related
11 activities. And at paragraph 12 he stated that during the
12 execution of the contract, several permits to work were issued
13 to LMCS by Paria.

14 Fourthly, it is clear that the permit to work procedure sets
15 out the roles and responsibilities of a contractor official. At
16 section 5.6 we address this next when dealing with the permit to
17 work procedure in more detail.

18 Paria had a common law non-delegable duty of care and
19 the permit to work system was, therefore, designed to ensure
20 that that duty was carried out regardless whether or not an
21 independent contractor was retained. In these circumstances,
22 both Paria and LMCS had a joint and concurrent duty of care to
23 ensure that the works which were inherently dangerous were
24 carried out safely. We will also address this later in these
25 submissions.

26 Sixthly, this is not a civil case in which there are
27 pleadings. It is an Enquiry governed by a Terms of Reference.

1 If Kenson's position is that evidence ought to have been led to
2 show that the permit to work procedure is not incorporated as
3 part of the contractual terms, Kenson had a duty or Paria had a
4 duty to lead that evidence or cause it to be led in relation to that
5 issue.

6 Permit to work Procedures. Paria has a control of work
7 system which controls the works to be done and how they are to
8 be done. The system includes the permit to work procedure.
9 According to Terrence Rampersadsingh, the control of work
10 system not only includes the permit to work procedure, but
11 everything from the Operations Department notifying the
12 Maintenance Department of the need for the job to the signing
13 of the contract. He stated that all of this is part of the control of
14 work system, meaning that if work is not supposed to be done,
15 it isn't done. Mr. Randy Archbald in his witness statement at
16 paragraphs 10 to 11 states:

17 "The permit to work procedure was developed to provide
18 a formal documented process for controlling risk
19 associated with certain work activities such as contractors
20 and maintenance work. Without a permit to work being
21 generated, no work can be undertaken by a contractor.

22 The procedure intended to, among other things:

- 23 1. Establish the requirements for identifying critical
24 information on jobs such as the nature and extent
25 of the work to be done; the exact location of the
26 job; the equipment to be used; the hazards
27 involved; and the precautions to be taken;

- 1 2. Prevent incompatible work from taking place
- 2 simultaneously;
- 3 3. Clearly identify who makes the application to do
- 4 the job, who authorizes the job, who develops the
- 5 necessary precautions, and who gives approval for
- 6 work to commence;
- 7 4. Ensure that work is not carried out unless there is
- 8 proper authorization;
- 9 5. Clearly identify high-hazard work and the
- 10 requirements precautions to be followed; and
- 11 6. Establish monitoring and auditing requirements for
- 12 permits jobs.”

13 The following is established in the permit to work procedure:
14 Wherever work is to be done within Paria, the Operations
15 Department makes a request to the Technical and Maintenance
16 Department for the specific work to be executed. The
17 Technical and Maintenance Department then plans the works in
18 conjunction with the Operations Department. Before the work
19 can be started, all of the requirements of the permit to work
20 system must be followed. This includes that work does not
21 start until the work permit is properly issued and authorized.
22 All persons on the job must receive a briefing from the
23 appropriate supervision on the works to be done and all persons
24 on the job must understand the precautions to be taken before
25 they start to work.

26 Section 5 including section 5.1 and 6 deals with the roles
27 and responsibilities of key personnel under Paria’s permit to

1 work procedure. And they include the following:

2 The applicant is described in section 5.1 as the person
3 who initiates the job by completing section A of the permit to
4 work. He must have the necessary competence to execute the
5 job or to supervise the execution of the job, and he shall be
6 knowledgeable of the hazards associated with the job and for
7 the safety of the people who work on the job.

8 His functions include, among other things, one, to
9 continually monitor the job to ensure that it is performed in a
10 safe manner and within the conditions prescribed in the work
11 permit certificates and JHA risk assessment; to stop the work if
12 there are changes in the site condition that increase the risk, or
13 if new hazards are identified, and promptly notify the site
14 authority of these changes.

15 It has been submitted on behalf of Paria that since the
16 applicant was a Kenson employee that Paria was not the
17 applicant to the permit to work. This submission is wrong for
18 the following reasons:

19 The evidence shows that although Kenson persons were
20 employed with Kenson, they worked at Paria; they had their
21 offices at Paria; they took instructions and directions from Paria
22 personnel and was subordinates of Paria officials.

23 Marjadsingh admitted in cross-examination that he was
24 representing Paria to ensure there was a compliance with the
25 works being done by LMCS and had a duty to stop the works if
26 the works were not being done in accordance with the work
27 permit. Marjadsingh also admitted that he took instructions

1 from Paria. He works at Paria and Paria tells him what to do
2 and how to do it.

3 Terrence Rampersadsingh, Paria's then Maintenance
4 Planner, stated that Mr. Marjadsingh was a subordinate, that he
5 took instructions and directions from him and that even though
6 he was employed by Kenson, he worked at the Maintenance
7 Department of Paria. Also the submissions on behalf of
8 Kenson to the Commission in this Enquiry agreed with this
9 position; that is, the submission made by Mr. Pegus agreed with
10 that position. In any event, any issue concerning the
11 relationship between Kenson and Paria is an issue between
12 them, and it's not a matter for this Commission of Enquiry.

13 A competent person is described in the permit to work
14 rules at section 5.2. The site authority is described in section
15 5.3, which includes that—it ensures that a suitable and
16 sufficient JHA has been prepared for the job. It specifies on the
17 permit any precautions to be taken during the work;
18 periodically monitor ongoing work either in person or through
19 his team to determine whether site conditions and precautions
20 have been maintained; suspends the job if unsafe conditions
21 have developed or likely to develop. The Area Authority is
22 described in section 5.4 of the procedure and his duties are
23 stated therein. The Senior Authority is described at 5.6 and the
24 contractor official is described at section 5.8.

25 It is clear that the permit to work procedure is part of the
26 contractual terms and obligations of the parties and are binding
27 on them. The permit to work rules are also consistent with

1 Paria's obligations at common law, having regard to an
2 inherently dangerous nature of certain type of works undertaken
3 at Paria's site.

4 Non-delegable Duty in Common Law. The general
5 principle is that an employee, being Paria in this instance, is not
6 generally liable for torts committed by his independent
7 contractor, being LMCS in this instance. However, that
8 ordinary principle is displaced where the law imposes an
9 employer, Paria, a non-delegable duty, not merely to take care,
10 but to ensure that care is taken.

11 In one of the cases referred to, decided by the Supreme
12 Court under non-delegable duties of care stated: The
13 expression non-delegable duties of care is commonly used to
14 refer to duties, not merely to take personal care in performing a
15 given function, but to ensure that care is taken. The expression
16 does refer to a higher standard of care than the ordinary duty of
17 care.

18 Duties involving this higher standard of care are
19 described as non-delegable, because they cannot be discharged
20 merely by the exercise of reasonable care in the selection of a
21 third party to whom the function in question is delegated. Such
22 a non-delegable duty arises where the employer, Paria, employs
23 an independent contractor to execute inherently dangerous work
24 from which in the natural course of things, injurious
25 consequences and others must be expected to arise, unless
26 measures are adopted to prevent such consequences.

27 In such consequences, the employer, Paria, cannot relieve

1 itself of its responsibility by proving that he had delegated the
2 performance of his duty to a contractor, LMCS, employed to do
3 the work, however competent the contractor may be, or even if
4 the employer regards the contractor as a specialist contractor.
5 Where the work which the independent contractor is employed
6 to do is of a character that is inherently dangerous unless done
7 with proper precautions, the employer is responsible to anyone
8 who sustains injury in consequence of the manner in which the
9 work is done.

10 It is to be noted that under section 5.1 of the permit to
11 work procedure it is stated that the applicant shall be
12 responsible for the job and the safety of the person who work
13 on the job. Not only—and it's my comment—not only persons
14 who are employed with Paria. And I put the authorities there,
15 and I have quoted a few authorities there, Mr. Chairman, which
16 I would not refer to. It would be on the record, and it spans a
17 few pages. And then I submitted and I showed that at
18 paragraph 45 onwards that there could have been a bargain with
19 the contractor that he shall perform the duty and stipulate for an
20 indemnity, et cetera.

21 I should mention that at the end of paragraph 45, these
22 cases were all referred to in a local High Court case in CV2015-
23 03381 *Ray Cheddie and Another v National Infrastructure*
24 *Development Company Limited* at paragraphs 100 to 107.

25 **Mr. Chairman:** Yes, I've seen that case. That's the one where
26 the road building affected somebody's property.

27 **Mr. Maharaj SC:** Yes.

1 **Mr. Chairman:** I note that it took them eight years to secure
2 any compensation.

3 **Mr. Maharaj SC:** Yes, My Lord. It is submitted that on the
4 evidence, it is clear that the scope of works which LMCS was
5 required to perform was inherently dangerous and could have
6 resulted in injurious consequences unless appropriate measures
7 were taken to avoid the differential pressure hazard. Based on
8 these governing principles of law it is clear that Paria, in the
9 circumstances, had a common law duty of care to ensure that
10 those precautions were taken.

11 Having regard to the extent of the duty of care imposed
12 on an employer who employs an independent contractor to do
13 inherently dangerous works, the employer has a duty to employ
14 competent experts to ensure it discharges that duty. So—

15 **Mr. Chairman:** Can I ask you, is that submission that the
16 employer has the duty to employ competent experts in addition
17 to the contractor?

18 **Mr. Maharaj SC:** Yes.

19 **Mr. Chairman:** Yes. So they employ a specialist contractor.
20 Your submission is that the employer had a duty, nonetheless,
21 to employ some independent contractor who could assess that
22 work?

23 **Mr. Maharaj SC:** Because the employer has to protect his
24 obligation also with duty of care.

25 **Mr. Chairman:** And that arises quite independently of—

26 **Mr. Maharaj SC:** Independently of the permit to work
27 system.

1 **Mr. Chairman:** Of the permit to work system.

2 **Mr. Maharaj SC:** Yes. I was about to say that.

3 **Mr. Chairman:** Right. Thank you.

4 **Mr. Maharaj SC:** I now go to works on the 25th February
5 2022. LMCS contends that the removal of the plugs form part
6 of the work plan for the 25th February, 2022, and relied on the
7 method statement attached to the permit to work whilst Paria
8 contends it was not part of the work plan, and relies on the fact
9 that the permit to work does not list the removal of the plugs as
10 a task to be done and stipulates that the migration barrier was to
11 be used.

12 Johnathan Ramdhan was the site authority and person to
13 the permit to work procedure and the person who issued the
14 work permit. Mr. Ramdhan in his witness statement stated that
15 he was not trained nor did he possess the expertise to assess the
16 suitability or sufficiency of the JHA, JSA even though this is
17 one of the duties of the site authority.

18 Mr. Ramdhan had a duty as site authority to periodically
19 monitor ongoing work either in person or through his team to
20 determine whether site conditions and precaution were being
21 maintained. He also had the duty to suspend the job if
22 conditions were unsafe. Mr. Ramdhan, in cross-examination,
23 confirmed that he has no qualifications or experience in subsea
24 work. He fulfilled his responsibility by posting Mr. Kirt Scott
25 at berth 6 on the 25th February, 2022.

26 In cross-examination by the Commission Counsel, Mr.
27 Ramdhan stated that Mr. Kirt Scott was posted at the site to

1 periodically monitor to determine whether the site conditions
2 and precautions to ensure operational safety were being
3 maintained. He stated that the migration barrier was a
4 precaution, but there was no way to monitor the barrier because
5 in order to monitor it, you would have to dive and go into the
6 chamber.

7 It is clear, however, from the evidence of Kirt Scott that
8 he saw topside live footage of when the mechanical plug was
9 being removed, but did not have the knowledge or experience
10 to identify that this was part of the migration barrier which was
11 stated by Mr. Ramdhan on the permit to work as a precaution
12 which was to be used. So if he had that training and knowledge
13 he would have known then that it was not being used.

14 **Mr. Chairman:** Their case, though, is that that wasn't his job
15 at all.

16 **Mr. Maharaj SC:** At all. But according to the permit to work
17 system, it was.

18 **Mr. Chairman:** His job or Mr. Ramdhan's job?

19 **Mr. Maharaj SC:** Well, Mr. Ramdhan delegated that job to
20 him, and he was also employed by Paria. So Mr. Ramdhan and
21 Paria cannot say it is not responsible by delegating the job to a
22 further incompetent person.

23 **Mr. Chairman:** Yes. I mean, he didn't even know what the
24 scope of works were, really.

25 **Mr. Maharaj SC:** Yes.

26 **Mr. Chairman:** In fairness to him.

27 **Mr. Maharaj SC:** At day five, page 228, lines 19 to 25 on the

1 6th December, his evidence was as follows:

2 "Q. Did you see them on the screen? Well, you saw
3 the pipe they were working on?

4 A. Yes.

5 Q. Taking out something from the pipe?

6 A. Yes.

7 Q. What you saw they were taking out?

8 A. First, I saw they were working, moving some bolts
9 from on the blank, right, and during another time,
10 another period—because every time I pass I would
11 take a look—I saw personnel operating a chain
12 blow and turning something.

13 Q. Turning something? I wonder if the witness can
14 see the mechanical plug on the screen. I want to
15 show you on the screen something and you will
16 tell me if you recognize it.

17 A. Yes.

18 Q. Was it something like that you saw them working
19 on?

20 A. Something like that. I saw them take out the pipe."

21 The mechanical plug was removed before lunch on the
22 25th February, 2022. And I put the—that is from the evidence
23 of Mr. Boodram. And according to Mr. Boodram it involved
24 the use of a spanner to remove 22 bolts, and took over 30
25 minutes to remove.

26 It is clear, therefore, if Mr. Kirt Scott had the necessary
27 competence and experience to monitor the works on behalf of

1 Mr. Ramdhan as site authority, he would have been able to stop
2 the works when the mechanical plug was being removed.

3 **Mr. Chairman:** But isn't the evidence that even if he wasn't
4 site authority, anybody, the teaboy could stop the works if he
5 had appreciated something was being done that shouldn't be
6 done?

7 **Mr. Maharaj SC:** Correct.

8 **Mr. Chairman:** So if he had appreciated—your submission, as
9 I understand it, is that if he had appreciated that this first barrier
10 had been removed before lunch, it's something that he could
11 have stopped the works?

12 **Mr. Maharaj SC:** He could have communicated it to
13 whoever.

14 **Mr. Chairman:** Irrespective of any role as to site authority?

15 **Mr. Maharaj SC:** Yes, yes.

16 **Mr. Chairman:** All right.

17 **Mr. Maharaj SC:** Houston Marjadsingh was the applicant on
18 the permit to work. He was a Kenson employee working at
19 Paria, and he admitted in cross-examination that he was
20 representing Paria. Mr. Marjadsingh's evidence was that he did
21 not have any specialist knowledge about the job LMCS was
22 doing. He filled out section A of the permit to work based on
23 information which he was given by Mr. Rampersadsingh. He
24 stated that his function was to ensure that the form was
25 completed and any documents to be attached were attached.

26 In cross-examination—and I've placed a reference—Mr.
27 Marjadsingh's evidence included that:

- 1 1. He had no experience in subsea maintenance
- 2 works.
- 3 2. He first arrived at berth 6 at about 2.00 p.m. on the
- 4 25th February.
- 5 3. He did not monitor in the morning period as the
- 6 first time he arrived was at 2.00 p.m.
- 7 4. He was not present at the toolbox meeting and
- 8 signed the toolbox form when he arrived at berth 6.

9 It is clear, therefore, that Mr. Marjadsingh did not have the
10 necessary experience or competence to supervise the execution
11 of job by LMCS as required by Paria's permit to work
12 procedure.

13 **Mr. Chairman:** Well, he didn't supervise it all in the morning.

14 **Mr. Maharaj SC:** At all.

15 **Mr. Chairman:** And certainly, until he got there at two
16 o'clock, there couldn't have been any supervising by him,
17 because he wasn't there.

18 **Mr. Maharaj SC:** So, in effect, Paria's obligations to
19 supervision was not fulfilled.

20 **Mr. Chairman:** I mean, whatever the period of that
21 supervision, whether it's every 20 minutes, every hour, or as
22 one witness put it, every four hours, the truth of the matter is he
23 wasn't there at all in the whole of that morning and the first
24 time he arrived was at two o'clock.

25 **Mr. Maharaj SC:** Yes, Mr. Chairman.

26 **Mr. Chairman:** The only person who was there was Paul or
27 Kirt Scott.

1 **Mr. Maharaj SC:** Kirt Scott.

2 **Mr. Chairman:** Yeah. All right, thank you.

3 **Mr. Maharaj SC:** So we have submitted he also failed in his
4 duty as stated in the permit to work procedure at pages 28 and
5 29 to ensure that pre-start meeting were conducted with the
6 crew to discuss the job and to ensure that all personnel read and
7 understood the JHA and assessment.

8 Mr. Boodram's evidence was that the work plan was
9 discussed at the toolbox meeting and that it included the
10 removal of the plugs. If this is correct, had Mr. Marjadsingh
11 been present at the toolbox meeting, he would have been able to
12 assert Paria's position, which is that the removal of the plug
13 was not part of the work plan for that day, and the plugs were
14 required to be in place during the execution of the works.

15 Further, he also failed in his duty to continually or
16 periodically monitor the works. In fact, he did not monitor the
17 works at all. He only arrived at the site at 2.00 p.m. The
18 mechanical plug had been removed prior to the lunchtime.

19 The applicant, which in this case is Paria, must have,
20 according to the permit to work rules, the necessary competence
21 to execute the job or to supervise the execution of the job. So if
22 Paria is putting someone else, well, someone to do it on its
23 behalf, the person must have the competence; shall be
24 knowledgeable of the hazards associated with the job, and the
25 necessary controls for these hazards. He shall be responsible
26 for the job and the safety of the people who work for the job. It
27 also required Paria to continually monitor the job to ensure that

1 it is performed in a safe manner as prescribed in the certificates
2 and JHA assessments and to stop the work if there are changes,
3 et cetera.

4 LMCS Documents.

5 **Mr. Chairman:** Just before you move on, one of the
6 witnesses, I can't remember exactly who it was now, had
7 suggested that it was wrong for them to have identified the
8 applicant as being someone that they employed; Mushtaq
9 Mohammed, yes, thank you. When I think either myself or you
10 were asking questions, he conceded that on reflection it would
11 have been sensible for the applicant to have been LMCS rather
12 than somebody that they themselves employed, which seemed,
13 on the face of it, to illustrate a lack of understanding, perhaps,
14 of the role of the applicant. Be that as it may, would you say it
15 was open to Paria to have contracted out of that particular
16 element of the permit to work procedure?

17 **Mr. Maharaj SC:** No, Mr. Chairman. It would seem to me
18 that from the permit to work rules, there must be a permit to
19 work in respect of works, especially works which are of a
20 certain kind. And the applicant—we got in evidence when
21 evidence was being given, that Paria is normally the applicant.

22 **Mr. Chairman:** Yes.

23 **Mr. Maharaj SC:** And we have no evidence in this case, no
24 evidence from Paria, that the contractor ought to have been the
25 applicant. And it would seem to me that when you look at the
26 contents of the role and the procedures in the permit to work
27 procedure, Paria could not contract out of that. But if Kenson

1 employed by Paria, working at Paria, is, for all practical
2 purposes, representing Paria, that is no defence to the fact that it
3 was Paria's—

4 **Mr. Chairman:** No, no, I wasn't stressing that. What I was
5 wondering in the light of what Mushtaq Mohammed had said
6 was whether or not it was impossible for LMCS to have been
7 the applicant. You say no?

8 **Mr. Maharaj SC:** No.

9 **Mr. Chairman:** Right. Secondly, then, it would have been
10 possible for them to have employed someone else. As it
11 happens on this occasion, they were employing someone from
12 Kenson, but they could have employed someone—

13 **Mr. Maharaj SC:** An expert.

14 **Mr. Chairman:**—who did have those skills. There may have
15 been someone at Kenson for all I know who has those skills.
16 But the fact is, the person that they did use didn't have the skills
17 that you say they should have had.

18 **Mr. Maharaj SC:** Yes.

19 **Mr. Chairman:** Right. So—and it would have been open to
20 Paria to have employed somebody else in that role?

21 **Mr. Maharaj SC:** Oh, yes; oh, yes; someone with the
22 necessary skills in order to perform the functions of
23 supervision.

24 **Mr. Chairman:** Yes.

25 **Mr. Maharaj SC:** And, Mr. Chairman, remember, Paria being
26 the applicant is consistent with the common law non-delegable
27 duty I talked about.

1 **Mr. Chairman:** Yes. All right.

2 **Mr. Maharaj SC:** The next area that I—as part of my
3 submission, is to consider—under the heading “LMCS
4 Documents”.

5 **Mr. Chairman:** Right.

6 **Mr. Maharaj SC:** It is undisputed that the method statements,
7 risk assessment, job hazard analysis, and emergency response
8 plan for these works which were submitted by LMCS to Paria,
9 Paria reviewed them and accepted them and acted upon them.
10 And I have given the references of the documents, and I would
11 not take up time with that, because I think we all know what the
12 documents are.

13 **Mr. Chairman:** Well, I think it’s worth saying, isn’t it, it
14 includes the method statement, the risk assessments themselves,
15 the emergency response plans, and further risk assessment in
16 relation to the line clearing.

17 **Mr. Maharaj SC:** The JHA for Phase I, air blowing, the
18 method statement in Phase II, the JHA for Phase II, line
19 clearing, the method statement to install the subsea flange, and
20 the JHA to install the subsea flange.

21 **Mr. Chairman:** Yes. A significant number of documents,
22 anyway, submitted by LMCS for review by Paria.

23 **Mr. Maharaj SC:** And Paria accepted it. I mean, and there’s
24 no defence for Paria to say we didn’t have the competence to do
25 it. If they didn’t have the competence to do it, Paria had a duty
26 both under the rules and under the common law duty to get an
27 expert.

1 It is not disputed that a potential Delta P hazard was not
2 identified in any of the documents submitted by LMCS to Paria,
3 and which were accepted by Paria. The LMCS documents were
4 reviewed and accepted by Paria's multi-departmental team
5 comprising personnel from the HSE, Maintenance, and
6 Operations Department. Paria's evidence is that the purpose of
7 the review was to ensure that LMCS understood what it was
8 contracted to do; that it identified the safety risks associated
9 with the job, and that it had developed a plan to manage those
10 risks.

11 I must confess, this has always concerned me. If a
12 company does not have the competence to do the works or to
13 assess the works, how could you accept these documents
14 without getting an expert to review them on your behalf?

15 **Mr. Chairman:** Well, I suppose the parallel that's been drawn
16 is that, you know—I think Mr. Peterson says if you employ a
17 painter to come and paint your house and he starts in the first
18 bedroom upstairs and he submits a plan for what he's going to
19 do, you may have not the first idea about painting, no idea
20 about the mixtures that need to be made, and so on. You're
21 only interested in the colour, perhaps, and that the work is done,
22 and that your expertise beyond that is limited. If a person goes
23 up a ladder and falls off, how can that be your responsibility?

24 **Mr. Maharaj SC:** Well, Mr. Chairman, that is the point. This
25 was not a contract like that. This was not a painting contract.
26 This was not a contract like that. This was a contract which,
27 under the permit to work procedure, impose an obligation for

1 Paria to control the works and control how it was to be done.
2 And under the common law this was a contract which was for
3 inherently dangerous works.

4 **Mr. Chairman:** Well, I was going to ask you that. Does it
5 make a difference that the place where the contract is to be
6 executed is itself a hazardous environment?

7 **Mr. Maharaj SC:** Well, it adds to it, Mr. Chairman. It adds to
8 it. So this is a contract, inherently dangerous work and at a
9 place where the place itself is in a hazardous environment.

10 **Mr. Chairman:** Yes. I mean, when we went there, we weren't
11 allowed to move around without putting on a whole lot of
12 equipment, in particular shoes and gloves and hats and
13 everything.

14 **Mr. Maharaj SC:** I was not fortunate to be in that—I opted
15 out of it.

16 **Mr. Chairman:** No, no. When I said “we” I was looking at
17 Mr. Bissessar. You avoided that particular one. Not just you,
18 Mr. Peterson did too, I noticed.

19 **Mr. Maharaj SC:** We share the same concern, My Lord.

20 **Mr. Chairman:** All right. Yes, well, thank you.

21 **Mr. Maharaj SC:** Yes.

22 Further, Paria's evidence is that because the works which
23 were to be executed by LMCS were highly specialized in nature
24 and were not of a kind which Paria had the competence or
25 experience to execute, Paria necessarily relied on the specialist
26 expertise of contractors, such as LMCS, to identify the relevant
27 safety risks. Well, this is probably on hindsight. This ought not

1 to have been done at all. It couldn't be.

2 Notwithstanding that Paria admitted that it did not have
3 the competence or experience to execute the works, it held itself
4 out as competent to review and accept the LMCS documents.
5 Paria, therefore, did not do a genuine review of the LMCS
6 documents and Paria on its own admission relied exclusively on
7 the specialist expertise of LMCS to identify the safety risks.

8 **Mr. Chairman:** And if they get it wrong, so Paria got it
9 wrong?

10 **Mr. Maharaj SC:** Correct.

11 **Mr. Chairman:** And there's no doubt, they did get it wrong,
12 didn't they?

13 **Mr. Maharaj SC:** They did get it wrong. LMCS got it totally
14 wrong.

15 **Mr. Chairman:** Yes.

16 **Mr. Maharaj SC:** And since Paria did not have the expertise,
17 it rubber-stamped—

18 **Mr. Chairman:** The error.

19 **Mr. Maharaj SC:**—the error.

20 **Mr. Chairman:** Yes.

21 **Mr. Maharaj SC:** Paria did not take the steps to have a client
22 representative engineer expert to advise it in reviewing the
23 LMCS documents before acceptance. Paria was in breach of
24 the PTW rules and also in breach of the principle of the
25 common law referred to above.

26 It would appear that if Paria had taken the steps in the
27 2020 contract to have a project engineer it may not have got it

1 wrong, because the project engineer—

2 **Mr. Chairman:** Well, they all came out alive in that project.

3 **Mr. Maharaj SC:** Yes, yes.

4 The above evidence must be considered in the context of
5 the evidence of the expert, Mr. Zaid Khan of In-Corr-Tech, in
6 which he stated that the root cause of this accident was the
7 failure by both Paria and LMCS to recognize that a latent
8 hazardous differential pressure condition, Delta P, would have
9 been created by the methodology used in the execution of the
10 works with particular reference to the removal of fuel oil from
11 Sealine 36. He further stated that if this hazard was recognized,
12 then simple mitigation steps and/or change in the methodology
13 of the works could have been instituted to eliminate this hazard.

14 In our submission, the failure by LMCS and Paria to
15 identify a latent Delta P hazard had a ripple effect throughout
16 the project. As a result, the risk assessment and job hazard
17 analysis did not identify control measures to reduce the risk of
18 such a hazard occurring, and as a result, no control measures
19 were in place. There was no adequate emergency response plan
20 to the accident of a Delta P event when it occurred. Thirdly,
21 LMCS and Paria employees who relied on the assessment of
22 LMCS and Paria were unaware of the risk and the control
23 measures for those risks. There was, therefore, a breach of duty
24 of care by both Paria and LMCS.

25 I will now go to the line clearing which I think is one of
26 the important aspects in this case—in this Enquiry.

27 **Mr. Chairman:** Yes.

1 **Mr. Maharaj SC:** We all know, according to the final In-
2 Corr-Tech report, at paragraph 3.1 that:

3 “The removal of the content with respect to the quantity
4 and method in line between berth 5 and 6 was the
5 underlying factor that led to this accident. The removal
6 created a gaseous void in the riser and sealine setting up a
7 latent differential pressure condition between the habitat,
8 and a gaseous void in the sealine when the mechanical
9 seal and the inflatable plug were installed and the habitat
10 was pressurized.”

11 End of quote.

12 The line clearing process began on the 18th January,
13 2022, and was completed around 3rd February, 2022.
14 According to Johnathan Ramdhan, Paria’s Operations Team
15 Supervisor, LMCS undertook to conduct the line draining in
16 accordance with Paria’s work instruction effective 5th January,
17 2022. The Paria work instructions—I put the reference—this is
18 a step-by-step instruction for the clearing of Sealine between
19 berths 5 and 6 developed by Paria’s Operation Department. It
20 was revised by Paria’s Visham Harrichan and approved by
21 Paria’s Jason Beckles and authorized by Paria’s Collin Piper.

22 Mr. Ramdhan stated that the purpose of the document
23 was to oversee the draining process and that the Operations
24 Department of Paria had control over the process. It is to be
25 noted that there are also method statements produced by LMCS
26 for both phases one and two. On page 1038 it is stated on the
27 work instruction that the operator at Paria was to be assigned

1 for monitoring and emergency response.

2 Mr. Ramdhan in cross-examination also confirmed that
3 Paria officials were witnessing, present, and overseeing the
4 draining process—and I put the reference to the [*Inaudible*].
5 Remember that Mr. Ramdhan is Paria.

6 Also, section 8 of the scope of works required the
7 contractor to follow not only the permit to work procedure but
8 also standard work instruction. So these were work instructions
9 with which the contractor had to follow.

10 **Mr. Chairman:** Is that what we have at page 1033?

11 **Mr. Maharaj SC:** Yes.

12 **Mr. Chairman:** What's been described as the internal
13 documents for Paria's staff, but which found itself into the
14 hands of LMCS?

15 **Mr. Maharaj SC:** Yes. And the scope of works require the
16 contractor to follow work instructions of Paria. Therefore,
17 LMCS would have had a contractual obligation to follow
18 Paria's work instruction. This work instruction was emailed by
19 Paria Maintenance Planner, Mr. Terrence Rampersadsingh, to
20 LMCS on the 10th January, 2022, and it was attached to the
21 work instruction.

22 **Mr. Chairman:** To the email. That work instruction was
23 attached to the email.

24 **Mr. Maharaj SC:** I'm sorry. The work instruction was
25 attached to the email.

26 **Mr. Chairman:** I think it was something I asked Mr. Peterson
27 yesterday. I mean, this wasn't done inadvertently. You know

1 how sometimes you can have an attachment to an email which
2 you don't really intend to be passing on. But in this case it was
3 deliberate.

4 **Mr. Maharaj SC:** In my respectful submission, the reasonable
5 inference to be drawn, it was intentional.

6 **Mr. Chairman:** Yes. And it is, as you say, literally a step-by-
7 step instruction of exactly how it's to be achieved, isn't it, and
8 in which order each step is to take place. Yes.

9 **Mr. Maharaj SC:** And then the scope of works at paragraph
10 4.5 provides that Paria's responsibility included providing
11 personnel to oversee isolation, de-isolation, depressurization,
12 pressurization, and draining filling product from lines at the
13 berth 5 and berth 6.

14 **Mr. Chairman:** This is one of the few things that they've
15 retained for their own responsibility in that very large
16 document.

17 **Mr. Maharaj SC:** Yes, Mr. Chairman.

18 **Mr. Chairman:** Yes, but it includes this. And on that
19 occasion there is no ambiguity. It says "oversee".

20 **Mr. Maharaj SC:** "Oversee". Mr. Terrence Rampersadsingh
21 of Paria who had the responsibility of overseeing the execution
22 of the project stated that this meant that operations would have
23 identified all of the points that need to be isolated, line up the
24 clamps and the valves for the product to go in. He further
25 stated that the contractor would be responsible for draining the
26 product to the required height and the Maintenance Department
27 would provide all the permits and all the mechanical support

1 that is required and the process would be overseen by Paria
2 through its Operations Department. That is his evidence, and I
3 put the reference in the—

4 **Mr. Chairman:** Yes. I have to say, I'm still struggling to
5 understand precisely why it was felt necessary to move from
6 pumping to blowing. I've read something in the papers that one
7 of the suggestions was that there was a danger that water would
8 ingress into the pipe at berth 6 when seeking to draw the fluid
9 from the pipe, and that that might have been one of the reasons
10 why they moved away from sucking to blowing, as I put it. But
11 I have to say, I have struggled a little with the idea, bearing in
12 mind you're only taking a relatively small amount out of it
13 altogether. And if there was a problem at one end, because it
14 was too low and there was a danger of water ingressing into the
15 pipe, do it at the other end—

16 **Mr. Maharaj SC:** Other end.

17 **Mr. Chairman:** Because you've got a pipe, that if you're
18 sucking it from that end it will eventually—as was
19 demonstrated, it would equalize.

20 **Mr. Maharaj SC:** It's basically a U.

21 **Mr. Chairman:** Yes.

22 **Mr. Maharaj SC:** It's a U. So if you couldn't do it at one end,
23 do it at the other end.

24 **Mr. Chairman:** I have to say, I have struggled with this idea
25 that it was felt necessary to move from one to the other. Whose
26 idea was it to move from one to the other?

27 **Mr. Maharaj SC:** It seems as though it was a joint decision.

1 **Mr. Chairman:** Between LMCS and Paria?

2 **Mr. Maharaj SC:** Yes. And both of them thought that by
3 doing it at the method and as submitted to that they would have
4 achieved the result. They obviously, genuinely thought that.

5 **Mr. Chairman:** No, no, I don't suppose they did it
6 deliberately, no. That's never the issue in this. No one is
7 suggesting any of this was deliberate. It's a question of
8 whether it was negligent at all.

9 **Mr. Maharaj SC:** But it would seem to anyone that even if
10 there was an error, why it was not detected when all this oil was
11 being—that is the difficulty in this case, in this Enquiry.

12 So it was the evidence of both LMCS and Paria that the
13 intention was never to drain the entire underwater pipeline
14 between berths 5 and 6, but rather to remove only sufficient
15 content to achieve a 30-foot ullage at berth 6 to install the plugs
16 in order for the works to be carried out.

17 Mr. Kazim Ali Sr. in his supplemental witness statement
18 at paragraphs 31 and 32 describe Phase I and Phase II line
19 clearing process by way of air blowing. This was a change
20 from the original method statement which proposed the use of
21 an air pump from the line clearing exercise. The use of the air
22 pump would have involved introducing an air pump at an open
23 riser at berth No. 6. However, this method was changed to air
24 blowing after LMCS was awarded the contract following
25 discussions at a kick-off meeting around June 2021 where
26 LMCS and Paria looked at the job in more detail.

27 **Mr. Chairman:** I mean, is there ever a justification for

1 pumping air into a pipe unless you are genuinely looking to
2 clear it completely? I simply don't have the answer to that.

3 **Mr. Maharaj SC:** Even someone who is a non-expert can
4 think that you're going to use the air to blow from one end to
5 the other end, what is the purpose of doing that, but to clear the
6 line?

7 **Mr. Chairman:** Yes, to clear the line. I can understand if, for
8 example, it was felt necessary to say wash the pipe in some
9 way, you know, that you would want to completely clear it of
10 all fluid, and then pump in, no doubt, some sort of cleaning
11 substance to remove all the gunk that has acquired over the
12 years. And then having done so, you flush it out and then you
13 refill it with fuel. I think if you're working on a line—well, you
14 know, it does seem extraordinary that anyone would have
15 thought that pumping air into the pipe was a good idea. And
16 we're dealing here with two highly experienced professional
17 companies: LMCS with many years' experience, and Paria
18 with many years' experience.

19 All right, thank you.

20 **Mr. Maharaj SC:** Mr. Kazim Ali Sr. stated that he decided
21 that the use of an air pump was not practical.

22 **Mr. Chairman:** That's the sucking?

23 **Mr. Maharaj SC:** Sorry?

24 **Mr. Chairman:** That's sucking. The way I put it—forgive me
25 for using non-technical expressions, but it helps me to
26 understand what it means. So the air pump to suck out the fluid
27 rather than pushing it out?

1 **Mr. Maharaj SC:** Pushing, yes. And he said because they
2 would have had to remove the flange from the top of the riser in
3 order to get the pump in and this risked water entering the riser
4 and was possibly an environmental hazard concern.

5 Further the top of the riser would have had to be open for
6 a prolonged period of time. If an air pump was used and if
7 water entered, this would have caused the oil in the riser to rise
8 and escape from the riser into the sea causing pollution. So
9 this—

10 **Mr. Chairman:** Again, I don't really understand that. How
11 would it have taken a long period of time for the lid to be
12 opened, as it were? You're only taking a few barrels out. I
13 mean, this is a company that must pump tens of thousands of
14 barrels of oil on a daily basis.

15 **Mr. Maharaj SC:** And those barrels could have been taken
16 out, as you said, in a bucket.

17 **Mr. Chairman:** Yes. Well, I know I've used that expression.
18 I know I've used that expression, but, I mean, realistically,
19 we're talking about 50, 60 barrels of oil. A barrel is only 42
20 gallons. Surely this is something ought to have been done
21 within an hour, call it two. How does it need to be open for a
22 prolonged period of time?

23 **Mr. Maharaj SC:** Ten days.

24 **Mr. Chairman:** I mean—anyway.

25 **Mr. Maharaj SC:** It is to be noted, however, that the evidence
26 of Paria with respect to its understanding that the line clearing
27 exercise was only to achieve a sufficient ullage to install the

1 plugs is inconsistent with the plain language of the following
2 contemporaneous documents.

3 The scope of works at page 564, CB3, paragraph 315
4 where it's stated:

5 "Properly coordinated works with Paria operations
6 maintenance and HSE personnel to perform the following
7 activities including but not limited to isolation, de-
8 isolation, depressurization, pressurization, and draining."

9 **Mr. Chairman:** The point you made before?

10 **Mr. Maharaj SC:** Yes.

11 **Mr. Chairman:** As I say, one of the features that they retain
12 for themselves, that is, Paria, as incumbent upon them, is the
13 oversight of draining. Yes.

14 **Mr. Maharaj SC:** And then the addendum, which made it
15 clear that the contractor was responsible for the safe removal of
16 hydrocarbon contents from the line to ensure that the line is
17 clear and dry. I mean, those are clear, unambiguous words.

18 **Mr. Chairman:** Well, yes. But even if one was charitable, it's
19 certainly at best ambiguous, isn't it—at best?

20 **Mr. Maharaj SC:** Yes.

21 **Mr. Chairman:** And given the seriousness with which this
22 kind of work ought to be taken, there should be no room for
23 ambiguity at all.

24 **Mr. Maharaj SC:** At all.

25 **Mr. Chairman:** None of the personnel, be they LMCS or
26 Paria, working on this particular project should have been in the
27 slightest possible doubt that there was only to be removed a

1 certain limited amount of fuel or substance from the line. And
2 to say as it does in a specific query raised by a contractor, not
3 necessarily LMCS, but a contractor, to Paria, the company
4 engaging them, that the line is to be clear and dry, does leave a
5 considerable gap between that which I would have thought
6 ought to have been made paramount and clear, rather than, as I
7 say, at best, ambiguous.

8 Yes, thank you.

9 **Mr. Maharaj SC:** Much obliged, Mr. Chairman. And Paria
10 work instructions refers to the scope as being clearing of
11 number 36 SL section between berths 5 and 6; clearing. The
12 permit to work at page 1074, which states in section B “line
13 drained”.

14 **Mr. Chairman:** This, as you know, has troubled me, and I
15 know Mr. Wilson, for some considerable time. As I say, at best
16 ambiguous, but combined pretty clear that the instruction seems
17 to be the complete removal of the fluid in the line. Anybody
18 who might not have been privy to the negotiations and what
19 was ideally attempted to be achieved by Mr. Kazim Ali and/or
20 the contractors, employer at Paria, would be forgiven for
21 thinking that that was exactly what it was that they were trying
22 to do. And, therefore, when hundreds and hundreds of barrels
23 were being removed from the line nobody would have been
24 alerted, would they? Because they wouldn't have been—if they
25 had known this language they wouldn't have thought anything
26 of it.

27 **Mr. Maharaj SC:** No.

1 **Mr. Chairman:** To say it's one of the most clear and obvious
2 flaws in the process that was—and, I mean, given the volume of
3 material that we've looked at, the words of every, every
4 particular clause, you would have thought at least somewhere it
5 would have been absolutely clear. We only need a small ullage,
6 therefore, no more than. And I think there's one document
7 where it was speculated that just a few—

8 **Mr. Maharaj SC:** Well, if I may offer it, it could be simple,
9 “Do not drain more than so and so”.

10 **Mr. Chairman:** Yes. Anyway, yes, thank you for that.

11 **Mr. Maharaj SC:** But to crown it all in Paria's daily work
12 reports compiled by Paria's personnel, which I refer to below,
13 these documents record that Paria was aware that more than
14 1,252 barrels of oil was received in its tank farm and also in
15 sloop barges. This as we shall demonstrate is more consistent
16 with the line being drained than an intention to partially drain to
17 achieve 30-foot ullage.

18 The fact that the daily work report show that Paria
19 wanted the line to be drained and it participated in the draining
20 process as it was monitoring the draining of the line, in order
21 for the line draining process at Paria's compound to be done,
22 Paria's resources and facilities including its workers were used
23 in that process, and it is clear from the daily work reports that
24 Paria kept a record of the draining of the oil.

25 **Mr. Chairman:** I noted from that when you were dealing with
26 it in the evidence that there were days when they were draining
27 and there was no record of how much was being drained, but it

1 would appear for whole days or at least substantial parts of days
2 there was draining taking place without recording the amount
3 that had been drained. So when you describe the 1,252 barrels
4 that was actually recorded, it is on any view in excess of that.

5 **Mr. Maharaj SC:** 1,252 plus.

6 **Mr. Chairman:** Bearing in mind that on some of those days as
7 I say, they were draining for much of the day.

8 **Mr. Maharaj SC:** Yes.

9 **Mr. Chairman:** And we've made it clear, I think, during the
10 course of the evidence that we've heard, that something in the
11 order of 50, 60, 70 barrels or so ought to have done it. So we're
12 not talking about some marginal difference here.

13 **Mr. Maharaj SC:** Major difference.

14 **Mr. Chairman:** Yes. Thank you.

15 **Mr. Maharaj SC:** Much obliged, Chairman.

16 I will now go to the total content of the topside piping.
17 The evidence showed that—

18 **Mr. Chairman:** Do you want to—I was going to suggest if
19 you finished this part of it we might take a short break.

20 **Mr. Maharaj SC:** Yes. Thank you very much.

21 The evidence show that Mr. Kazim Ali Sr. believed that 300
22 barrels had to be removed from the topside piping to drain the
23 topside piping. With respect to the underwater piping, Mr. Ali
24 Sr's evidence was that 60 barrels had to be removed to achieve
25 a 30-foot ullage in the riser at berth 6. Based on that evidence,
26 therefore, no more than 360 barrels ought to have been removed
27 during the entire line clearing exercise; that is 60 barrels from

1 the underwater riser at berth 6 and 3 barrels from the topside
2 piping. And if I can just follow just the next part.

3 **Mr. Chairman:** Yes. I mean, that was using his rule of
4 thumb, one 1 barrel per foot, wasn't it?

5 **Mr. Maharaj SC:** Yes. However, Paria produced
6 contemporaneous daily work reports created by its maintenance
7 technicians which shows 960 barrels were removed during
8 Phase I and 336 barrels were removed during Phase II. And
9 that is how I get the total of 1,252. Those daily work reports,
10 according to the evidence of Mr. Rampersadsingh, were
11 emailed to him on a daily basis. They were copied to Mr.
12 Manmohan Balkaran, Assistant Planning, and where required,
13 Operations.

14 **Mr. Chairman:** So it's not as though they were living in
15 sublime ignorance of it.

16 **Mr. Maharaj SC:** No. Paria—in the bosom of Paria it knew.
17 The imputed knowledge was that it knew the line was being
18 drained in excess of what was intended, and LMCS knew that
19 too.

20 **Mr. Chairman:** Right. And just to take the figures you were
21 dealing with earlier, that 916 barrels were removed under Phase
22 I and 336 under Phase II, even if in some odd way Phase I did
23 not have anything whatever to do with the subsea line and was
24 to do with top line pipes, or whatever it might have been didn't
25 involve that, it still left 336 barrels plus, I think, one day of
26 blowing without recording the amount.

27 **Mr. Maharaj SC:** Yes.

1 **Mr. Chairman:** So you had on any view even if you were to
2 take that lesser figure for Phase II, it was still hundreds of
3 barrels more on the face of it than it should have been.

4 **Mr. Maharaj SC:** Should have been. Correct, Mr. Chairman.

5 **Mr. Chairman:** Yes. Is that a useful moment to break off for
6 a short break?

7 **Mr. Maharaj SC:** Much obliged, Chairman.

8 **Mr. Chairman:** Well, let's do that then. Let's take—should
9 we resume at 10 minutes to 11.00, please, 10 to 11.00?

10 **Mr. Maharaj SC:** Much obliged.

11 **Mr. Chairman:** Thank you.

12 **10.38 a.m.:** *Enquiry suspended.*

13 **10.49 a.m.:** *Enquiry resumed.*

14 **Mr. Chairman:** Yes. I feel the final hurdle approaching.

15 **Mr. Maharaj SC:** Yes, yes, Chairman. I think everyone in
16 this room is looking forward for this evening, so that we
17 wouldn't have to be here on Monday morning.

18 **Mr. Chairman:** Sounds a little disappointing. I thought you
19 were all looking forward to it.

20 **Mr. Maharaj SC:** No, that is not because that we do not want
21 to be here, to be in your company and the company of Mr.
22 Wilson.

23 **Mr. Chairman:** That's a poor recovery.

24 *[Laughter]*.

25 **Mr. Maharaj SC:** It is just that there are other things to be
26 done and nothing else could have been done because of this
27 Commission.

1 **Mr. Chairman:** Of course. No, for my part I'm delighted
2 that—we have some comments to make a little later—but I'm
3 delighted that we've managed to maintain the timetable that
4 you've expressed right at the outset. Yes. Right.

5 **Mr. Maharaj SC:** Thank you very much. Thank you, Mr.
6 Chairman.

7 Mr. Chairman, I want to draw the Commissioners'
8 attention to a letter in the record from OSHA to Mr. Mushtaq
9 Mohammed. It's a letter dated the 20th July, 2022.

10 **Mr. Chairman:** It's in the bundle, I think, isn't it?

11 **Mr. Maharaj SC:** Yes. It's at pages 2905 and 2908 in the
12 electronic bundle submissions. It was signed by Mr. Mushtaq
13 Mohammed to OSHA in which OSHA asked certain questions
14 about the volume of the oil removed. And if you look at
15 page—

16 **Mr. Chairman:** As you say, this is a letter dated the 20th July?

17 **Mr. Maharaj SC:** Yes, 20th July, 2022.

18 **Mr. Chairman:** Well, I'll see it on the screen now.

19 **Mr. Maharaj SC:** And if you look at page 2906, it's headed
20 "Clarification of whether an Air Driven Pump or an Air
21 Compressor was used to remove hydrocarbon from Sealine 36
22 between berths 5 and 6 prior to the installation of the subsea
23 slip-on flange. Response." Paria confirms that an air
24 compressor provided by LMCS limited was used to remove
25 hydrocarbon from Sealine 36 between berths 5 and 6 prior to
26 the installation of the subsea slip-on flange 30 inches. And then
27 there was another question—

1 **Mr. Chairman:** So the highlighted part is the query from
2 OSHA?

3 **Mr. Maharaj SC:** Yes.

4 **Mr. Chairman:** And then underneath the responses from
5 Paria?

6 **10.52 a.m.**

7 And then you go to four, the question:

8 “Response of hydrocarbon removed from Sealine 36
9 between berths 5 and 6 prior to the installation of the
10 subsea slip-on flange 30-inch diameter as per method
11 statement.

12 Response: Given the configuration of the system, it is
13 impossible to segregate and measure the displaced
14 volume.”

15 So what this letter is saying that it is impossible to measure,
16 although from the daily report it showed that there could have
17 been some measurement, and there were measurements.

18 And then the next question: the volume of the
19 hydrocarbon removed from the Sealine 36 between berth 5 and
20 6 after the accident.

21 “Response: The volume of hydrocarbon removed is
22 estimated at 125 barrels. The quantity is based on the
23 estimated spilled hydrocarbon 6 barrels, and the recorded
24 volumes of hydrocarbons recovered in the Sea Manatee
25 119.88 barrels.”

26 **Mr. Chairman:** Sea Manatee is a slop barge I think or some
27 sort of barge was it not.

1 **Mr. Maharaj SC:** Yes, yes. That's what I understand.

2 **Mr. Chairman:** Yes. So they were able to tell the amount of
3 hydrocarbon—

4 **Mr. Maharaj SC:** In the underwater—

5 **Mr. Chairman:**—that came out of the pipe after—

6 **Mr. Maharaj SC:** Yes.

7 **Mr. Chairman:**—the incident happened, in other words, when
8 they were pumping in order to recover the bodies, and they
9 described that as about 125 barrels, but they were unable, at the
10 time that this document was signed by Mr. Mushtaq
11 Mohammed on the 20th of July, to tell OSHA how much had
12 been taken out of the pipe before the accident happened.

13 **Mr. Maharaj SC:** Yes.

14 **Mr. Chairman:** Well that's not true, is it?

15 **Mr. Maharaj SC:** No.

16 **Mr. Chairman:** I mean, they did know?

17 **Mr. Maharaj SC:** Yes, they did know.

18 **Mr. Chairman:** I mean, those daily report records were
19 contemporaneous, were they not?

20 **Mr. Maharaj SC:** Yes. And they were dated when? From
21 where? And I'm reminded that those records were compiled
22 contemporaneously so in January and February of 2022.

23 **Mr. Chairman:** As and when it happened?

24 **Mr. Maharaj SC:** As and when it happened.

25 **Mr. Maharaj SC:** Yes.

26 **Mr. Chairman:** And so to say, as he does in OSHA's inquiry
27 back in July of last year: "Given the configuration of the system

1 it is impossible to segregate and measure the displaced
2 volume”, that is simply not the case, is it?

3 **Mr. Maharaj SC:** No.

4 **Mr. Chairman:** Or even if you were unable to give an exact
5 figure, he was certainly in a position, was he not, to have given
6 the figures that you’ve given us before we had the break?

7 **Mr. Maharaj SC:** Yes.

8 **Mr. Chairman:** One thousand two hundred and fifty-two
9 barrels?

10 **Mr. Maharaj SC:** And this is a letter signed by the head of
11 Paria.

12 **Mr. Chairman:** Yes. It’s perhaps a pity we didn’t put this to
13 Mr. Mohammed when he was here.

14 **Mr. Maharaj SC:** Yes.

15 **Mr. Chairman:** Because it’s something that perhaps he ought
16 to have explained. What I’m going to do is this. This is
17 obviously quite a serious matter. I think that the sensible thing
18 would be to allow Mr. Mohammed, Mushtaq Mohammed, to
19 address this.

20 **Mr. Maharaj SC:** Yes.

21 **Mr. Chairman:** So I’m going to ask Mr. Peterson, obviously
22 it’s of some importance, and there may be a perfectly good
23 explanation, so can I ask that you invite Mr. Mushtaq
24 Mohammed to have a look at the letter that he wrote? I mean,
25 obviously it’s been part of the bundle from the start to finish so
26 it’s not as though it’s only something that’s just emerged. It’s
27 perhaps, as I say, a little lamentable that this wasn’t—that he

1 wasn't asked about it when he gave evidence, but, no loss.
2 What we can do is, perhaps you'll be good enough to provide
3 him with a copy of this and ask him if he would be good
4 enough to explain what he meant by, in paragraphs four and
5 five, if he's able and we will take that into account.

6 **Mr. Peterson SC:** I would do that, Sir, but, I could observe for
7 the time being that the focus between—the exchange between
8 my learned friend and the Commission is only focused and
9 isolated on measurement as opposed to the inability to
10 desegregate or deaggregate I think he said, desegregate the
11 system.

12 **Mr. Chairman:** No.

13 **Mr. Peterson SC:** So the quantity—

14 **Mr. Chairman:** If that's his explanation.

15 **Mr. Peterson SC:**—the 1,200 barrels dealing with
16 measurement but does not recognize the connectivity and the
17 interplay of the system, but Mr. Mohammed, I guess, will better
18 explain it.

19 **Mr. Chairman:** Well I—

20 **Mr. Peterson SC:** But I make that observation for the time
21 being.

22 **Mr. Chairman:** No, I'm grateful for that observation and of
23 course, as I've said, there may be a perfectly good explanation
24 as to why he gave that answer. On its face it doesn't seem to be
25 entirely accurate, to put it neutrally, and so I would welcome
26 any contribution he might wish to make in relation to that and I
27 shall ensure that that contribution is put up on the website once

1 we receive it, and anybody who wants to make a comment
2 about it would be free to do so. As I say, and we will certainly
3 take it into account, all right?

4 **Mr Peterson SC:** Sure.

5 **Mr. Chairman:** Thank you for drawing that to our attention.

6 **Mr. Maharaj SC:** Yes, Chairman. And I do apologize that it
7 was not brought before but in preparing the submissions,
8 looking at everything—

9 **Mr. Chairman:** Well, you know—

10 **Mr. Maharaj SC:**—and there are so many documents, yes.

11 **Mr. Chairman:** I, I, I, I am not going to hold anybody
12 responsible. It's equally my responsibility. These are
13 documents that have been as part of the bundle for a long time
14 now. We've managed tens of thousands of pages one way or
15 the other and—that we—there was an oversight of this, all of us
16 overlooked it. Mr. Peterson's team, your team, me and
17 everyone else. So—but we've clearly got to give him an
18 opportunity to address this—

19 **Mr. Maharaj SC:** Sure, sure.

20 **Mr. Chairman:**—and I'll invite him to do so. Thank you very
21 much for bringing it to our attention.

22 **Mr. Maharaj SC:** I now come to some of the evidence Mr.
23 Zaid Khan gave after he did the presentation and some of the
24 evidence as it relates to the line clearing. Mr. Zaid Khan in
25 the—in his In-Corr-Tech report in his letter dated the 6th of
26 January, 2022 stated that out of the 916 barrels removed during
27 Phase I, he estimated that approximately 200 barrels were

1 drained from the topside. This is based on his personal
2 knowledge of the capacity of the topside piping and therefore
3 that 777 barrels were removed from the underwater Sealine
4 during Phase I.

5 In Phase II, he states that at least 336 barrels were
6 removed from the underwater Sealine. Therefore, in his
7 opinion, a total of 1,052 of the 2000 barrels would have been
8 removed from the underwater line. These figures do not take
9 into account where air blowing occurred on occasions and the
10 quantities of the fuel oil removed were not recorded.

11 **Mr. Chairman:** Right.

12 **Mr. Maharaj SC:** This—there was no taking into
13 consideration of the quantity of the oil being removed. The
14 evidence shows that even though Paria had available to it the
15 daily records of the fuel oil being removed, those figures did
16 not form part of any consideration by LMCS or Paria to ensure
17 that only the target amount was removed from the riser at berth
18 6 to achieve the 30-foot ullage. LMCS did not measure the
19 quantity of fuel oil which was removed but was measuring the
20 ullage. It would appear that Paria also depended on the
21 measuring of the ullage rather than considering the actual
22 quantity of fuel oil which existed and what had been removed.

23 In Johnathan Ramdhan's evidence, and I have the reference
24 there, he stated that he couldn't say the quantity which was
25 removed. He stated that Operations was overseeing the
26 draining process by the contractor and that LMCS was doing
27 there ullaging to determine if the right amount of oil was

1 removed.

2 Then Visham Harrichan, reference there, stated that he was of
3 the impression that the ullage was actually giving the amount in
4 the line. Collin Piper, reference there, stated that the dip on the
5 line is the measurement that the contractor was going to.
6 Visham Harrichan also stated in cross-examination that he
7 could not say how much oil was drained or even how much had
8 to be drained. In fact, Mr. Harrichan was surprised by the
9 actual amount of line content which was drained. And the
10 question to him was:

11 “So having become aware of that now, would you not
12 agree that the unlimited draining of the line, the
13 underwater line between berths 5 and 6, should have
14 been closely monitored if it had to be drained?”

15 “Yes. And I thought it was closely monitored.”

16 And then the question here: “By whom?” And his answer was:
17 “The contractor and the maintenance department”, which is the
18 maintenance department of Paria.

19 However, Mr. Terrence Rampersadsingh of Paria maintenance
20 department who was in charge of overseeing the execution the
21 project, stated that he never worked out how many feet of the
22 content in the riser was equivalent to the terms in barrels—in
23 terms of barrels. Mr. Collin Piper Terminal Operations
24 Manager agreed that he had the overall responsibility of
25 ensuring that Paria instruction procedure was established by
26 reviewing and approving the work instruction and ensuring that
27 the offshore team lead understood the requirements of the work

1 instruction.

2 Mr. Piper agreed that the Paria work instruction was a step by
3 step process which was sequential for the line clearing process.

4 However, notwithstanding the evidence of Johnathan Ramadan
5 that the line clearing was undertaken by LMCS pursuant to

6 Paria work instruction, Mr. piper stated that the work
7 instruction did not go to LMCS and is solely an internal

8 instruction for Paria operators. However, this is inconsistent
9 with not only Mr. Ramdhan's evidence but also with

10 contemporaneous documentary evidence of the email from Mr.
11 Terrance Rampersadsingh copied to Mr. Manmohan Balkaran

12 and sent to LMCS on the 10th of the January, 2022.

13 In that email, Mr. Rampersadsingh attaches the work
14 instruction and states:

15 "Please see attached signed draining procedure. Let us
16 meet tomorrow at 10.00 a.m. to discuss draining
17 schedules. I want to start as early as possible this week,
18 bearing in mind the crude ship loading is on the 14th. I
19 will discuss with Ops now to firm up on any other
20 issues."

21 End of quote. According to 5.3 of the permit to work
22 procedure, Paria as the site authority was directly responsible

23 for the site facility and is responsible for ensuring that
24 conditions required for the safe conduct with the job are

25 maintained. Paria, pursuant to this duty and also in monitoring
26 the works, should have been able to identify from its record that

27 more fuel oil than was required was being drained from the

1 line. LMCS also ought to have known that more fuel oil than
2 was required was being drained from the line.

3 **Mr. Chairman:** The sheer time that it took might have
4 indicated that, mightn't it?

5 **Mr. Maharaj SC:** Yes.

6 **Mr. Chairman:** I mean, bearing in mind LMCS, it is their case
7 and indeed Paria's, that all they wanted to do was to achieve a
8 30-foot ullage on either side, the mere fact that this seemingly
9 took days, days of pumping, must have told them surely that
10 they were taking out more than the 30-foot ullage that they
11 required on either side. As I've indicated before, you could do
12 it with a bucket, you know, and it does seem somewhat
13 extraordinary that nobody at LMCS was saying, "Well hang on
14 there. How much are we actually taking out, if this is taking
15 day upon day upon day?"

16 **Mr. Maharaj SC:** And one would have thought that LMCS
17 who was actually operating the—ought to have realized that
18 more than that was being—

19 **Mr. Chairman:** Yes. I mean, it is the evidence of Kazim Ali
20 that he, he—that's all he wanted. He only wanted this 30-foot
21 ullage. I mean, someone of his experience must have
22 appreciated, surely, as the days ticked by, that they must be
23 taking out more than the ullage that is required and it's all very
24 well saying, "Well, I kept putting a dipstick down and to see
25 how—where it was", but the truth was that, um, he must—why
26 didn't he query it, is the obvious question I suppose. But he
27 didn't, did he?

1 **Mr. Maharaj SC:** He didn't.

2 **Mr. Chairman:** No. Thank you.

3 **Mr. Maharaj SC:** I now refer to Mr. Zaid Khan's evidence in
4 which he showed, from his evidence, the measuring of the
5 ullage did not detect the gaseous void.

6 **Mr. Chairman:** All right, will you just give me one moment?
7 I just want to make a note against there that, er—[*Writing*]
8 Thank you.

9 **Mr. Maharaj SC:** Mr. Zaid Khan said that the removal of the
10 line, and this is what he said in evidence before this
11 Commission, that the removal of the line contents to 35 feet
12 below sea level in the riser, if that had been undertaken, no
13 gaseous void would have been formed on the installation of the
14 plugs.

15 **Mr. Chairman:** That's his video number four?

16 **Mr. Maharaj SC:** Yes. Further, at paragraph 313 on page
17 1397 he stated that the method of air blowing from berth 5 to 6
18 would have resulted in the removal of the way in excess of the
19 optimum quantity of oil from the line, thus creating a
20 significant continuous gaseous void between berth 5 and 6.

21 His evidence given in cross-examination on the 10th of January
22 also established that, one, the method of removal of line content
23 would have given the impression that a target of a 30-foot
24 ullage was attained in the riser when a dip measurement was
25 taken but this would not detect a gaseous void in the horizontal
26 part of the line. He also stated that the pipeline sloped at point
27 2 degrees. Berth 6 is 4 feet lower than berth 5 end and berth 6

1 is deeper than berth 5. The line is sloped and the initial stages
2 of blowing would have resulted in a lot more liquid flowing out
3 from the line than if it was level.

4 He stated that the riser at berth 5 would be emptied first
5 as pumping was done from berth 5. He also stated that during
6 Phase I air blowing—during Phase I air blowing that a point
7 would have been reached when more air fuel—

8 **Mr. Chairman:** More air than fuel.

9 **Mr. Maharaj SC:**—sorry, more air than fuel would have been
10 seen coming from the control valves at berth 6 and onshore
11 where the flow was being monitored and measured. This would
12 have been an indication that a lot of the line content had been
13 removed.

14 He explained that when the compressor was shut down at berth
15 5 at the end of Phase I, air will be locked in and that pressurized
16 air would have supported a column of liquid in berth 6.
17 Therefore, whoever took the dip measurement at berth 6 would
18 have wrongly thought there was still liquid to be taken out to
19 achieve a 30-foot ullage.

20 In Phase II, the pipe was pressurized internally and a dip
21 hose used to remove the line contents at berth 6. However,
22 even when the ullage was achieved, it was a false ullage giving
23 the belief that the line was still flooded because nobody looked
24 in berth 5 to see what was happening.

25 **Mr. Chairman:** Well that would have been a simple test,
26 wouldn't it? Just have look what's happening at 5.

27 **Mr. Maharaj SC:** At berth 5.

1 **Mr. Chairman:** So if you're looking for a dip test at 6 of that
2 30-foot ullage you only had to be at the other end to see what
3 the ullage there, if it had completely drained the pipe there as it
4 would have done from the diagram that I drew on the board,
5 they would have appreciated that something was wrong.

6 **Mr. Maharaj SC:** Yes, Mr. Chairman. Then he talked about
7 the CARBER test. When the CARBER test at berth 5 was done
8 on the 25th of February, the pressure was released and it
9 created a vacuum on berth 6 under the plug and it accelerated
10 and made the system more dangerous. That was a dangerous
11 vacuum which could have dislodged the plug if it was not
12 holding.

13 **Mr. Chairman:** As I understood that evidence, the lid is on at
14 5 and they're taking fluid out of 6.

15 **Mr. Maharaj SC:** Yes.

16 **Mr. Chairman:** If you open the lid at 5, they then do their
17 CARBER test, but when they open that lid, any pressure that
18 existed in the process of drawing fluid from 6 would have been
19 released?

20 **Mr. Maharaj SC:** Yes.

21 **Mr. Chairman:** The consequences are the fluid then does this
22 again [*Demonstrating using hands*] but by now we've got the
23 plug in at 6, so when the fluid does that till it finds it balance, it
24 has created a vacuum underneath the plug—

25 **Mr. Maharaj SC:** The plug.

26 **Mr. Chairman:**—at 6.

27 **Mr. Maharaj SC:** Six.

1 **Mr. Chairman:** Lid put back on, preserving the position. As
2 soon as you take the plug out, the vacuum that would have been
3 drawing down on it is activated—

4 **Mr. Maharaj SC:** Yes.

5 **Mr. Chairman:**—because it's now loosened it and so the
6 whole thing not only have you got the downward pressure—

7 **Mr. Maharaj SC:** Yes.

8 **Mr. Chairman:**—from the habitat chamber pressure, gravity,
9 you also now have a vacuum. Treble whammy.

10 **Mr. Maharaj SC:** So it's more aggressive.

11 **Mr. Chairman:** Yes. Thank you.

12 **Mr. Maharaj SC:** I think that was the word I asked him and
13 he said—

14 **Mr. Chairman:** Yes.

15 **Mr. Maharaj SC:**—yes.

16 **Mr. Chairman:** That's exactly what he said, more aggressive.

17 **Mr. Maharaj SC:** And then he concluded that if the line was
18 filled on both sides to the elbow, the incident would not have
19 occurred and he demonstrated that on the screen.

20 **Mr. Maharaj SC:** Yes.

21 **Mr. Chairman:** And there would have been no conditions to
22 establish a flow for a vortex to form. He also stated that
23 whether it was 300 barrels removed or over 1,052 barrels
24 removed, there would have still been a latent Delta P hazard.
25 When he did he report he did not know the extent of the
26 contents removed from the line. He went by the method
27 statement supplied by LMCS which states 300 barrels would be

1 removed.

2 If 300 barrels were removed, there would have been a gap of 7
3 or 8 inches of air space along the top of the line. If more was
4 removed, the gaseous void became larger. He stated that 300
5 barrels was way too much to be removed. He referred to
6 LMCS' original plan which was to drain the topside piping,
7 take off the elbow and to remove fluid from berth 6 by way of
8 an air pump at berth 6. However, he doesn't know why there
9 was a change. This would have been a safer method of
10 removal.

11 The experts' conclusions therefore were that had only enough
12 line content been removed to create a 35 ullage, then a Delta P
13 event would not have occurred sucking the men into the pipe.
14 Further, he concluded that the method utilized of air blowing
15 resulted in more than the target quantity of line content being
16 removed which gave a false impression when a dip
17 measurement was taken at berth 6 that the line was full of
18 content.

19 If Paria and LMCS had identified, well, a possible Delta
20 P hazard in the documents submitted by LMCS to Paria for
21 review, this Delta P event would not have occurred because
22 measures would have been taken to mitigate the risk of a Delta
23 P event. This highlights the importance of having professional
24 engineers to monitor, well, to assess the risk in these kinds of
25 jobs and also to monitor properly trained people, persons, to
26 monitor this inherently dangerous works.

27 **Mr. Chairman:** I mean, the long and the short of it is that if

1 Mr. Khan had been given the facts prior to the work being
2 carried out, that is after the line draining, but prior to the work
3 being carried out, he would have at least identified the potential
4 for a Delta P hazard existing?

5 **Mr. Maharaj SC:** Yes, Mr. Chairman. And you would have
6 seen Mr. Khan's evidence and Paria, LMCS they did not
7 disperse his expertise and therefore anyone in this category
8 would have been able to give that advice. That is why it seems
9 that jobs like these really need a client, an expert client
10 representative, to safeguard the interest of whoever it is whether
11 it's the contractor—

12 **Mr. Chairman:** Well, somebody completely independent from
13 the contractual process in a way, isn't it?

14 **Mr. Maharaj SC:** Yes. Yes.

15 **Mr. Chairman:** Thank you.

16 **Mr. Maharaj SC:** I now go to the post-incident responses by
17 both Paria and LMCS. In examining the evidence of the rescue
18 efforts made by Paria and LMCS after the accident occurred,
19 when these men were sucked into the pipeline, it's important to
20 consider that evidence in the context of the following facts.

21 LMCS' documents, the emergency response plan, the risk
22 assessment, job hazard analysis, were reviewed and accepted by
23 Paria because Paria considered them satisfactory and that they
24 captured and properly identified all credible scenarios, potential
25 risks and hazards. Paria took the position that LMCS
26 adequately specified mitigating control and emergency
27 response measures, and I've put the references to Mr. Michael

1 Wei's evidence and Mr. Randy Archbold's evidence of Paria.

2 It is also not in dispute that both Paria and LMCS did not
3 identify in those documents the risk of a Delta P event.

4 **Mr. Chairman:** Yes, pausing there for a minute, I mean, as
5 part of recommendations that we're considering, the
6 documentation that exists both at Paria and any potential
7 contractor must, on its face, raise at least the prospect of Delta
8 P when dealing with anything to do with pipework. I mean,
9 one has only got to look at the sheer volume of pipes that run
10 around the system that is at Paria and valves that are being
11 opened and closed, volumes of fuel being moved from one
12 place to another, and, when you see that, the idea that anyone
13 could be working on a pipe and not at least give consideration
14 to the existence of differential pressure seems extraordinary.

15 **Mr. Maharaj SC:** I agree with—I agree with the Chairman. I
16 agree with you, Chairman.

17 **Mr. Chairman:** So some—whatever works are being carried
18 out or pipework in the future, there needs to be—someone
19 needs to say, what about Delta P and then you either rule it out,
20 you mitigate it, whatever it is, but at least you've raised it as an
21 issue that needs addressing.

22 **Mr. Maharaj SC:** For example, if that was followed in these
23 documents, and you had someone who could have identified
24 that an expert or an engineer or like the previous contract
25 probably, they would have probably said, "Listen, if you're
26 going to drain that amount of oil, let us check it and see
27 whether, by draining that amount of oil with the process, 300

1 barrels is permissible to be drained.”

2 **Mr. Chairman:** Well, I mean, the fact of the matter is there
3 are easy ways of testing whether it worked. I mean, one of the
4 most obvious was to open the flange at the other end and put
5 your dipstick down there.

6 **Mr. Maharaj SC:** Yes.

7 **Mr. Chairman:** Because if the ullage on that side was, was—
8 there should have been more than 4 feet difference, bearing in
9 mind one end is lower than the other. The maximum difference
10 between the two would have been 4 feet. So if you were
11 looking for 36 on one side you'd have had 32 or whatever it is
12 on the other, you know, and that would have told you
13 straightaway that you've got a full line. Yeah, all right, thank
14 you.

15 **Mr. Maharaj SC:** It is also not in dispute that both Paria and
16 LMCS did not identify in those documents the risk of a Delta P
17 hazard.

18 Now, Mr. Khan in the In-Corr-Tech report at paragraph
19 2.4, stated that LMCS' job safety analysis, method statement,
20 risk assessments, toolbox meetings, Paria's PTW 9320 and its
21 bid evaluation of LMCS' proposal all failed to identify this
22 potential differential pressure hazard. So the failure therefore
23 of both Paria and LMCS to identify a Delta P hazard in our
24 view from the evidence caused the accident in which these five
25 divers were sucked into the pipeline. Paria and LMCS were
26 therefore jointly responsible for the accident and were therefore
27 jointly responsible to make efforts to rescue the divers.

1 **Mr. Chairman:** What do you say to Paria's position that the—
2 starting with, if you like the toolbox meeting at least—there is
3 no reference to the removal of the plug? And there was a need
4 to obtain a work permit to remove the plug, the existing work
5 permits were—never said anything about removing the plugs
6 and had they—had LMCS workers adhered to that, this would
7 not have happened even though a Delta P had not necessarily
8 been identified, the mere fact that they had no authority to
9 remove those plugs, meant that they acted on their own and
10 without authority?

11 **Mr. Maharaj SC:** If that was the position, then I would not
12 have expected the method statement to accompany the work
13 permit. The method statement stated the plug to be removed
14 and if it is was Paria's—if, if Paria intended to take the position
15 that you needed another work permit for that matter, I mean,
16 there should be positive evidence that in matters like this before
17 another, a work permit was issued.

18 **Mr. Chairman:** Yeah.

19 **Mr. Maharaj SC:** It, it—but we have no evidence adduced,
20 but what we do have, a permit for the work to be done, signed
21 by the agent of Paria, we have a toolbox meeting in which you
22 had a method statement to remove the plug attached to the work
23 permit.

24 **Mr. Chairman:** Yes. But that method statement covered the
25 entirety of the works. It isn't said, is it, I mean, in fairness to
26 Paria, the mere fact that they've attached a method statement
27 which starts from, you know, the—moving the barge, if you

1 like right from the very beginning right to the very end when
2 the job is finally complete and the last bolt is tightened up and
3 you're taking the barge back again, it's not envisaged, is it, that
4 that method statement covers only the period that the work
5 permit was covering and the work permit sets out in those,
6 albeit, just three lines, but it does set out what the jobs are and
7 their case is, "Well look, the removal of those plugs is a serious
8 and significant part of the job, and if they were to be removed
9 that should have been spelled out in the work permit. It wasn't
10 and therefore you shouldn't have done it."

11 **Mr. Maharaj SC:** Well, that's the point, is that, um, there was
12 no—you had the method statement. So if it was the intention of
13 Paria that you had to have a separate work permit or it was not
14 to be part of the job, on that work permit, just as it was
15 "Migration barrier to be used", they could have stated exactly
16 what it means. But to leave it in the ambiguous position and
17 Paria taking the position of enclosing the method statement and
18 that is why now you have two sets of evidence, one saying that
19 the job was to be done, Paria saying it should not have been
20 done, but this has to be clear and unambiguous if that was
21 Paria's position. These are dangerous—

22 **Mr. Chairman:** But look, their position is, "Look, if you start
23 with the work that's being done on the day, you look to the
24 toolbox meeting. The toolbox meeting says nothing about any
25 of the works actually, but it certainly doesn't say anything
26 about removal of any of the barriers." So that's the starting
27 point on that day.

1 I appreciate that we've had evidence from Mr. Boodram
2 to the contrary, but, on the face of the documents, that is the
3 position. If you look at the work permit it says the, er, barrier
4 to be used, not to not be used or to be taken out but to be used,
5 and there is nothing on that document which suggests that
6 you're allowed to remove the barrier. And so, again, just
7 dealing with the documents, leaving aside the oral evidence that
8 we've heard, they say that that of itself is powerful evidence to
9 demonstrate that there was never an intention at that stage to
10 remove the barrier.

11 If we were to find that that is the position, then of course
12 LMCS removed it contrary to what appears to be the position
13 on the face of the documents now, appreciate we're going to
14 look at the oral evidence as well, but just on the face of the
15 documents there's nothing to suggest, is there, that they should
16 be removed. Appreciate that we've attached the method
17 statement, but that is a document which covers the entirety of
18 the operation, not just what was to be done on that day.

19 **Mr. Maharaj SC:** Mr. Chairman, I take the position that if
20 these are inherently dangerous works and Paria has a control of
21 works process and a system of works, it would seem that it is
22 only reasonable that if you are having a very hazardous area of
23 the job and you're saying that a migration barrier is to be used,
24 it should specify specifically, and bearing in mind in this matter
25 we do not have any minutes of what happened at the toolbox
26 meeting, Paria—

27 **Mr. Chairman:** Well we have a note. We do have a note of

1 what happened at the toolbox meeting.

2 **Mr. Maharaj SC:** But we do have—

3 **Mr. Chairman:** It just says nothing about it.

4 **Mr. Maharaj SC:** Nothing about it. So if—we don't have a
5 system or Paria did not introduce a system to monitor these
6 works, so we have a contemporaneous note—

7 **Mr. Chairman:** I'm sorry, is that entirely fair, though? I
8 mean, they had a system. It may be flawed and it may be open
9 to some criticism but a toolbox meeting is there designed to
10 provide a system of safe working immediately before the work
11 is carried out. So whatever might have gone before, "This is
12 what we're doing today, boys." All right? Or and girls, if
13 they're involved. "This is what we're doing today. That's the
14 job that needs doing. Here are some of the risks associated with
15 the job today." All right? "You guys, off you go. This is the
16 job." All right? That, it seems, on its face is not an
17 unreasonable approach to take. They are entitled, are they not,
18 to look at the document, which is after all in LMCS' hands, and
19 say, all right, all they did on that day on the face of it, now that
20 we look at it, is to describe COVID regulations, what if the
21 weather changes, don't slip over and hurt your finger or
22 something like that, that's basically dealing with that kind of
23 safety issue. It says nothing about the work at all.

24 Why are they not entitled to say, with all due deference
25 to whatever other evidence there may be, that on its face is a
26 virtually contemporaneous document that makes it clear
27 nothing was to be said about that? And adding to that, not

1 unreasonably they say, the work permit doesn't have to say,
2 "Do not remove the work barrier, that the, um, the, the, the line
3 barrier, don't—it doesn't—it's not meant—it doesn't have to
4 indicate do not take this out of the pipe. It simply has to
5 indicate what jobs they are entitled to do. That's their—I hope
6 I don't misrepresent it, I dare say if I do you'll jump up.

7 **Mr. Maharaj SC:** That toolbox meeting has to be taken in the
8 context, Mr. Chairman, that it was a process to ensure that what
9 works had to be done were known to LMCS for the works to be
10 done and that is why the control system provides for Paria's
11 representative to be there and ensure that what was discussed at
12 that meeting was for the works to be done.

13 In this case, that process was flawed. The gentleman
14 wasn't there. So, so, in effect, one has to look at the process for
15 the safe conduct of the works and the rules provide, the rules
16 provide for that toolbox meeting for the, the work-plan to be
17 discussed at the meeting and if the work-plan has to be
18 discussed at the meeting, Paria's representative had to be there
19 in order to monitor and ensure that it was doing its duty.

20 **Mr. Chairman:** Well I, I, I agree with that. I mean, I've made
21 the observation already that there was nobody on that berth first
22 thing in the morning when that, um, from Paria when that
23 toolbox meeting was being conducted. I accept that and that's
24 not in dispute. But, they are entitled, aren't they, to say, "Well,
25 look, look at the document. The document says nothing about
26 any other work."

27 **Mr. Maharaj SC:** Oh yes, they're entitled to say that, but, in

1 assessing the evidence, we have to look at the whole process
2 before the works were completed. And when you look at the
3 whole process, even if, even if that is in favour of Paria, one has
4 to see what were the safety measures by the rules to prevent this
5 thing from happening. And one of the safety measures is on the
6 morning of the work when the toolbox meeting was being
7 discussed, Paria's representatives had to be there in discussing
8 the work plan and Paria's representatives had to make sure that
9 the work-plan was in accordance with what was permitted to be
10 done that day.

11 **Mr. Chairman:** Yeah, I mean their position is that, "All right,
12 we didn't have any notion that this was a Delta P potential
13 hazard. What we were concerned with was that the gases
14 wouldn't go into the chamber and cause a problem for the
15 people working there", which was a legitimate concern. It
16 seems as though we don't want anything to fall into our
17 pipeline—

18 **Mr. Maharaj SC:** Fair enough.

19 **Mr. Chairman:**—and which we would have to then fish out.
20 So, in that sense, they had a genuine concern to preserve the
21 welfare on the one hand of the people working there, which no
22 doubt was their duty so to do, and, secondly, to ensure that the
23 integrity of their plant wasn't compromised by things falling
24 inside it.

25 **Mr. Maharaj SC:** So the—that's very important evidence
26 because, as far as Paria was concerned, it was not an accident in
27 which you will have a Delta P and the men could be sucked into

1 the pipe.

2 **Mr. Chairman:** No.

3 **Mr. Maharaj SC:** The plug, as far as they were concerned,
4 should not be moved because of something falling into the pipe.

5 **Mr. Chairman:** Yeah, and gasses coming out.

6 **Mr. Maharaj SC:** Right?

7 **Mr. Chairman:** Yeah.

8 **Mr. Maharaj SC:** And that brings to the question the
9 importance of having the process followed, otherwise a failure
10 of one of the process can have a ripple effect and, I mean, on
11 the evidence, Mr. Chairman, on the evidence, the failure of the
12 Delta P had a ripple effect—

13 **Mr. Chairman:** Yes, I follow that.

14 **Mr. Maharaj SC:**—right from the process

15 **Mr. Chairman:** But what—if Mr. Wilson and I were to
16 conclude that on balance, as I regard it is our duty so to do
17 rather than any other test, that if on balance we were to
18 conclude that there was no discussion about the removal of that
19 plug on that day at the toolbox meeting, what impact does that
20 have on the overall decision?

21 **Mr. Maharaj SC:** Well, it means that, it means that for that
22 meeting Paria did not discharge its duty to ensure that the work
23 plan was discussed in accordance with the rules.

24 **Mr. Chairman:** You mean the failure by LMCS to discuss the
25 actual work to be done that day because it wasn't being
26 monitored by anybody from Paria, um, both bear some
27 responsibility?

1 **Mr. Maharaj SC:** Yeah, it's a joint responsibility. LMCS—

2 **Mr. Chairman:** Now if somebody from Paria was there, he
3 would be saying, "Well, I think you really need to tell them
4 what they're supposed to be doing."

5 **Mr. Maharaj SC:** Correct. And that is why it was important
6 for Mr. Marjadsingh to be there and there's no excuse to say he
7 had something else to do.

8 **Mr. Chairman:** Yeah, all right. Yes, thank you for that. I
9 think Mr. Wilson did you want to ask something about the—
10 [*Crosstalk*] Lovely. Thank you very much for that.

11 **Mr. Maharaj SC:** And my—Ms. Maharaj has pointed out to
12 me that in 5.1, it was—it is stated at the end of page—

13 **Mr. Chairman:** Is this the method statement?

14 **Mr. Maharaj SC:** No, this is the permit to work rules.

15 **Mr. Chairman:** The permit to work procedure?

16 **Mr. Maharaj SC:** Yes, at page 21—at page 28, the duty of the
17 applicant, Mr. Marjadsingh, at the end of the page, to ensure
18 that pre-start meetings are conducted with the work crew to
19 discuss the job.

20 **Mr. Chairman:** That's paragraph?

21 **Mr. Maharaj SC:** Five point one.

22 **Mr. Chairman:** Five point one.

23 **Mr. Maharaj SC:** And the last bullet point on page 28. And
24 as the site authority at 5.3, page 30, Paria was directly
25 responsible for the site and it had a duty also to ensure that the
26 job was done in accordance with the approval.

27 **Mr. Chairman:** Yes, thank you very much.

1 **Mr. Maharaj SC:** Now, in dealing with the rescue in the
2 context that I am saying that both Paria and LMCS was
3 responsible for not having an emergency response plan on that
4 day, I then referred to the In-Corr-Tech report which stated that
5 the best time for the rescue was immediately following
6 Boodram's emergence from the pipeline at about 5.30 p.m. and
7 maintained that a rescue was possible. He explained that the
8 risk of a secondary Delta P event was minimal because the
9 system had stabilized and something would have had to trigger
10 a Delta P. And I put the—I wouldn't read what is stated there
11 because we have heard that in the evidence.

12 Mr. Zaid Khan in his evidence maintained that position
13 in cross-examination and explained why the rescue was
14 possible immediately after Boodram's emergence from the
15 pipeline and why a secondary Delta P event would not be
16 triggered by rescue divers. His expert evidence on that was not
17 challenged. In fact, Mr. Piper and the IMT's evidence is that
18 after the accident occurred at 2.45 p.m., conditions in the
19 pipeline were static. At paragraph 120 of his witness statement
20 Mr. Piper stated that the conditions on either side of the
21 inflatable plug appeared to have stabilized after the occurrence
22 of the event.

23 **Mr. Chairman:** And Mr. Piper says that, does he?

24 **Mr. Maharaj SC:** Yes.

25 **Mr. Chairman:** Thank you.

26 **Mr. Maharaj SC:** The evidence disclosed that LMCS devised
27 three rescue plans but none were implemented by Paria because

1 Paria, from 6.25 p.m. on Friday the 25th of February, 2022,
2 prohibited diving into the pipeline for the LMCS divers to
3 attempt a rescue. The evidence has disclosed that Paria did not
4 have any consultation with the LMCS divers to review and
5 assess their plans to rescue the divers from the pipeline. Paria
6 admitted that it did not have the requisite expertise to review
7 the emergency response plan submitted by LMCS at the bid
8 stage of the project.

9 Michael Wei in cross-examination said that Paria did not
10 have the competent diving personnel to assist it with planning
11 and executing the job. Paria did not retain an expert client
12 representative to advise it at that stage in assessing the
13 emergency response plan. The three rescue plans which LMCS
14 had, one, the first was just after the accident and it involved
15 Andrew Farah entering the pipeline with scuba. And I'll put
16 the references where that would be found. He could not do it
17 because Paria did not approve it.

18 The second plan was when Conan Beddoe arrived at
19 berth 6 at about 5.45 p.m. The plan was the first for Conan to
20 enter the habitat, to make an assessment using a rope, while
21 Farah and another person would be tending that rope from the
22 barge. If Conan assessed that it could do a rescue, he would
23 then go back into the habitat with Michael Kurban and Ronald
24 Ramoutar. He, Conan, would then enter the pipeline using a
25 rope and Michael Kurban and Ronald Ramoutar would be
26 tending him into the pipeline. Conan would go with scuba
27 equipment feet first and share his air with any of the men he

1 encountered and bring them out of the pipeline, and I've put the
2 reference in the proceedings.

3 The third plan was the second plan which was revised
4 when Conan's brother, Conrad Beddoe, arrived with
5 commercial equipment at 6.30 p.m. Conan supported by other
6 experienced divers could enter the pipeline with commercial
7 diving equipment. The plan was for Conan to go in feet first
8 and someone would tend the hose. The umbilical was 300 feet
9 long. His intention was to go as far as the umbilical would
10 allow. If Conan came into contact with one of the men, the
11 plan was that he would bring him out via additional half inch
12 hose connected to the umbilical. The men would use the
13 connection to breathe and Conan would hold them and bring
14 them back up and the others in the habitat would assist to take
15 him out.

16 The diver who Conan rescued would be down by his feet
17 so he would come out first and then the diver would then be
18 pulled out. The plan was that if Conan encountered any
19 obstructions, he would take them out one at a time. He would
20 do this as many times as he could.

21 Catherine Balkissoon was informed by the LMCS divers
22 that they wanted to execute the rescue plans on more than one
23 occasion and she was also informed that there was commercial
24 air equipment available. The evidence disclosed that Piper, Mr.
25 Piper first heard of the accident at 3.10 p.m. and Paria
26 commenced sea searches at 3.10 p.m. The divers were reported
27 missing at about 2.45 p.m.

1 Mr. Piper admitted that as the incident commander it was
2 his responsibility to respond urgently to the emergency. Mr.
3 Piper admitted when probed in cross-examination that at 5.36
4 p.m. he heard that Mr. Boodram emerged from the pipeline and
5 I put the quote there. When he found out that Mr. Boodram
6 emerged from the pipeline, that it was very important for him
7 and the IMT to take urgent steps to see whether he could have
8 saved human lives.

9 Mr. Piper also said at paragraph 47 of his witness
10 statement that in his mind this was an urgent and critical
11 situation. Catherine Balkissoon agreed that time was of the
12 essence. Michael Wei in cross-examination considered that the
13 men might be alive some 13 to 14 hours after Boodram
14 emerged and in his personal time frame, not the IMT, there was
15 no real prospect of the men still being alive after 7.00 a.m. on
16 Saturday.

17 Mr. Piper, on being questioned, suggested that the
18 timeline for a rescue was three to five hours after Mr. Boodram
19 emerged. He said that the IMT understood that we had to work
20 quickly but that no attempts were made to calculate the outer
21 limits of the breathable air available to the divers. He said that
22 the ICT had limited information at that time. Later, Mr. Piper
23 said that he was working with an outer limit of five hours which
24 may be midnight at the outside and agreed with the Chairman
25 that a timeline informed you about how to approach any
26 potential rescue.

27 Similarly, Mr. Mushtaq Mohammed said that Paria/the

1 IMT did not establish a specific timeline for rescue but were
2 thinking within six to 12 hours for available rescue. Mr. Piper's
3 midnight timeline must be contrasted with Mr. Michael Wei's
4 7.00 a.m. on Saturday, Mr. Mushtaq Mohammed's six to 12
5 hours, Mr. Randy Archbald 24 hours or 2.30 p.m. on Saturday,
6 and Ms. Balkissoon's "time was of the essence".

7 All of Paria's witnesses agreed, however, that there were
8 diminishing returns so the longer the delay the greater the
9 likelihood that the divers will not be alive. It follows, therefore,
10 that notwithstanding Paria's evidence, that it recognized the
11 urgency of a rescue and for the IMT to take urgent steps to see
12 whether lives could have been saved. The evidence discloses
13 that Paria's IMT failed to act urgently and decisively in that—
14 the following.

15 **Mr. Chairman:** Just pausing, pausing there for a minute, is it a
16 fair criticism?

17 **Mr. Maharaj SC:** Well I'll—

18 **Mr. Chairman:** Of, of—yeah, sorry—is it a fair criticism of
19 the—me and others, that there was no timeline established in
20 the IMT at the outset and that the first we discover of any kind
21 of reckoning in relation to the time that they considered
22 anybody might still be alive, varies widely between the various
23 people at the IMT?

24 **Mr. Maharaj SC:** Yeah. And I've itemized here, it continued
25 to search the open waters until 5.30 p.m. on Friday, even
26 though Mr. Piper admitted that he considered the possibility of
27 the men being in the pipeline since 3.20 p.m. when Kazim Ali

1 Sr. told him that the plug was being removed and I've put the
2 reference, Paria knew since between 3.20 p.m. and 3.30 p.m.
3 that LMCS divers were prepared to go into the pipeline to do a
4 rescue.

5 Paria did not take steps to urgently speak to Boodram
6 about the conditions of the pipeline, even though Boodram was
7 conscious and alert when he emerged at 5.30 p.m. Piper agreed
8 that Boodram was not overly injured, and I've but the
9 reference. Piper, in questioning, said that Shane Ramkissoon
10 visited Boodram in the hospital and admitted that he did not
11 know what Ramkissoon had asked Boodram, in particular,
12 whether he had asked Boodram about the conditions in the pipe.
13 I've put the reference.

14 The IMT notes also do not show that the IMT, through
15 Ramkissoon, asked Boodram about the conditions in the
16 pipeline. I've also put the reference. The IMT notes at page
17 51573 records that at 8.35 p.m. Ramkissoon was dispatched to
18 the hospital by Piper, by Mr. Piper and at 8.53 p.m., records
19 that Boodram was in a stable condition but is silent as to the
20 conditions of the pipeline.

21 Boodram, in his evidence when he was rescued, said that
22 everybody was a set of headless chickens and made it clear that
23 he was prepared to tell Paria or LMCS, soon as he was rescued,
24 about the condition of the pipeline. Questions to Mr. Boodram
25 when he was cross-examined, when he was questioned.

26 "Q. Okay, Mr. Boodram, I want to ask you a very
27 important question. If when you were rescued,

1 either by Paria or LMCS wanted to find out from
2 you the condition in the pipe in order to effect a
3 rescue, would—were you in a position to tell them
4 what the condition of the pipeline was?

5 A. When I now come out the pipe my mind and
6 everything was focused and tuned to everything to
7 save them fellas. If they had debriefed me there
8 and then, they would a get everything that they
9 could get from me.

10 Q. Including the condition of the pipe?

11 A. Yes man.” And his answer was—

12 A. Everything I could tell them.”

13 So after Boodram emerged from the pipeline and stated, “Fyzie
14 is just behind me”, Michael Kurban shortly thereafter dived into
15 the pipeline in order to rescue his father. He dived down the
16 vertical and then dived about 10 feet down into the horizontal
17 section of the pipeline. He had to return because he wanted a
18 longer umbilical and he was prevented thereafter from going
19 back into the pipeline.

20 Piper, Mr. Piper knew since about 7.15 p.m. on Friday
21 that there were competent LMCS divers who were willing to go
22 into the pipeline to do a rescue but stopped diving at 6.25 p.m.
23 and notified the coast guard to stop diving at about 7.00 p.m.
24 and refused to change those instructions. Paria did not act
25 urgently to obtain information from the diving companies when
26 they arrived and instead they were told to await further
27 instruction, and I would itemize that later.

1 Paria continued to await a rescue from the coast guard up
2 until 1.00 a.m. on Saturday, even though the IMT knew since
3 around 8.00 p.m. that the coast guard was not equipped nor did
4 they have the training and competence to dive into the pipeline.
5 Mr. Piper's explanation for stopping the diving into the pipeline
6 at 6.25 p.m. was that he had to assess the conditions in the pipe.
7 He said that he did not want to act instinctively or emotionally.
8 I've put the reference.

9 The IMT had a duty to explore all possible ways to
10 rescue the men in upholding its first principle of the ICS, which
11 was to safeguard human lives and it had to act to uphold that
12 principle of Paria's safety first system. Mr. Wei's description
13 of the performance of the IMT after much consideration was
14 excellent. The question arises, is this opinion supported by the
15 evidence? If—

16 **Mr. Chairman:** Pausing, pausing there for a moment, you say
17 that the IMT had a duty to explore all possible ways to rescue
18 the men in upholding the first principle of the ICS, which is to
19 safeguard human lives. Do you mean by that a legal duty or a
20 moral one?

21 **Mr. Maharaj SC:** Well, I respectfully submit that it was a
22 legal duty and I say this—I say that for this reason. From my
23 submission this morning, I have shown that there was a duty of
24 care to be exercised by Paria having regard to the inherently
25 dangerous work, quite apart from the permit to work. I have
26 shown this morning in my submission that both Paria and
27 LMCS ought to have detected the Delta P hazard from all the

1 documents before the works were done. That caused no
2 emergency response plan to have been—well, with the Delta P
3 hazard being approved. So Paria shared that responsibility. It's
4 a joint—that failure was a joint failure.

5 **Mr. Chairman:** I get the duty at that stage.

6 **Mr. Maharaj SC:** Right.

7 **Mr. Chairman:** Yes.

8 **Mr. Maharaj SC:** So if as a result of that failure an accident
9 occurred which occurred because of the failure to identify that
10 hazard, and there was no emergency response plan in place, my
11 submission is that in law there's a continuing duty in the
12 circumstances for Paria to take whatever steps that is
13 reasonably necessary to rescue the men.

14 **Mr. Chairman:** So in terms of a legal duty, we would have to
15 find that there was a duty of care at the outset and you say there
16 then that duty of care continues up until and including attempt,
17 at least, at a rescue?

18 **Mr. Maharaj SC:** Attempt.

19 **Mr. Chairman:** Right.

20 **Mr. Maharaj SC:** I think that is the word I should use,
21 attempt—

22 **Mr. Chairman:** Right.

23 **Mr. Maharaj SC:**—to rescue.

24 **Mr. Chairman:** So if we were not to find that there was a
25 duty—that Paria had a duty of care at the outset, that that was
26 all LMCS, there's no—there's therefore there's no continuing
27 duty?

1 **Mr. Maharaj SC:** Well I would submit that based on the
2 permit to work rules, quite apart from the common law duty—

3 **Mr. Chairman:** Right.

4 **Mr. Maharaj SC:**—based on the permit to work rules, there
5 were joint breaches by LMCS of that duty when the emergency
6 response plan did not identify a Delta P hazard.

7 **Mr. Chairman:** Yes, but in legal—I just trying to understand
8 what your submission is in legal terms. You're suggesting that
9 Paria had a duty of care to, um—at the outset, right? And it
10 follows from that that you're saying there was a continuing
11 duty of care that extended to the point of attempting a rescue,
12 and I understand what you're submitting is that they failed in
13 both of those, and I understand what you're saying, but, what
14 I'm asking you, I suppose, is that if we were to find that there
15 was no duty of care breach on the part of Paria to start with,
16 would there be a duty of care, continuing duty and there's
17 nothing to continue from, is there, the duty of care?

18 **Mr. Maharaj SC:** Yeah well if, if, if the Tribunal finds that as
19 a matter of law there was no duty of care from the beginning—

20 **Mr. Chairman:** Or no breach of it?

21 **Mr. Maharaj SC:** Yeah.

22 **Mr. Chairman:** At least.

23 **Mr. Maharaj SC:**—then I, I mean, I would think that, um, if
24 Paria is the site authority and you have a situation where men
25 are sucked into a pipeline and as the site authority where there's
26 a risk of men dying that the—and this is in the compound of
27 Paria, this is not outside there in the open.

1 **Mr. Chairman:** Not from it's on their land, no, I appreciate.

2 **Mr. Maharaj SC:** It's on their land and LMCS could not have
3 acted on their own to do this rescue, this is not a case where
4 LMC is saying that you should send somebody in to do this
5 rescue. LMCS was saying, this is not sending anyone to do this
6 rescue. This was people offering to risk their lives to do this
7 rescue, and it would seem to me, Mr. Chairman, and
8 Commissioner Wilson, it would seem to me that the law would
9 be impotent if, in a situation like this, there would not be a duty
10 of care in those circumstances to say that Paria had a duty,
11 because in this case on the facts of—in the facts of this matter,
12 what had happened is that Paria took the responsibility that that
13 is LMCS' responsibility.

14 They had to come up with a plan. They had to do it but
15 Paria took the position we—and the facts are, they didn't even
16 consult them. They didn't even talk to them to find out what is
17 the plan. They didn't get an expert to assess this plan to see
18 whether it could be done, and this is not a case where oil was
19 escaping. This is a case where men were in a pipeline and, and,
20 and it is in that context I say that even if it is not a continuing
21 duty or even if it is found that there was no duty of care from
22 the beginning, at the time when the incident occurred and it's
23 on Paria's property, in the circumstances of this contract, there
24 was an implied duty of care.

25 **Mr. Chairman:** But a continuing one? Not a separate duty of
26 care that arises only to rescue?

27 **Mr. Maharaj SC:** Well, if it is, if it is that there is not an

1 initial duty of care and the Tribunal find that as a matter of law
2 it cannot find that, notwithstanding that, I am submitting as a
3 matter of legal principles to the Commission—

4 **Mr. Chairman:** Right.

5 **Mr. Maharaj SC:**—that where, according to this contract,
6 Paria is the site authority, Paria was responsible, jointly
7 responsible, to LMCS for this incident to occur, this accident to
8 occur, so, in effect, they had joint responsibility for the men
9 being in the pipeline. They were responsible for the crisis just
10 as LMCS was.

11 **Mr. Chairman:** Yes, I follow that, but that all comes back to
12 the question, doesn't it, as to whether or not there's a duty of
13 care at the outset. But my concern, and let me illustrate that, I
14 mean, there's—we're not concerned here with the morality of
15 it—

16 **Mr. Maharaj SC:** No, no.

17 **Mr. Chairman:**—neither should we be. We all understand as
18 human beings what our moral obligations are—

19 **Mr. Maharaj SC:** Yes, yes.

20 **Mr. Chairman:**—where they lie, but—so I want to, for the
21 moment, just to set that to one side and concern myself with the
22 legal principles. There is no obligation in law in this country
23 and in many countries, in fact the majority of countries, to
24 rescue anybody, is there? If a person is drowning in a pool and
25 all you have to do is to reach out and pull them out of the pool,
26 there is no obligation on you to do so and a failure to do so is
27 not an offence—

1 **Mr. Maharaj SC:** I agree with that.

2 **Mr. Chairman:**—in crime neither is it a civil wrong.

3 **Mr. Maharaj SC:** I agree with that.

4 **Mr. Chairman:** It's neither of those things.

5 **Mr. Maharaj SC:** I agree with that, Mr. Chairman.

6 **Mr. Chairman:** So a small child is drowning at my feet in a
7 swimming pool and I—all I have to do is reach out and pull that
8 child out and I save their life. I choose not to do that. There
9 may be considerable moral opprobrium attached to that but I
10 am not legally liable, am I?

11 **Mr. Maharaj SC:** No, you're not liable.

12 **Mr. Chairman:** And there are countries which make that a
13 liability—

14 **Mr. Maharaj SC:** Yes.

15 **Mr. Chairman:**—but not in this jurisdiction—

16 **Mr. Maharaj SC:** Yes, by statute.

17 **Mr. Chairman:**—or in a vast majority of common law
18 jurisdictions.

19 **Mr. Maharaj SC:** Yes.

20 **Mr. Chairman:** So, if that is the position that there is no legal
21 obligation to effect a rescue, why does that not apply to Paria's
22 efforts, such as they were, to rescue?

23 **Mr. Maharaj SC:** Well I—with respect as it's—my duty is to
24 advise the Commission as best I can.

25 **Mr. Chairman:** Yes.

26 **Mr. Maharaj SC:** It is my submission that this is not a case
27 where someone is drowning in a public place and you have a

1 pedestrian walking and he did not attempt a rescue. This is a
2 case where there's a—

3 **Mr. Chairman:** What even if it's my swimming pool, I own it,
4 it's on my land, the child who came round to visit was my
5 friends.

6 **Mr. Maharaj SC:** Well, Mr. Chairman, this is a case in which
7 there's a contract.

8 **Mr. Chairman:** All right.

9 **Mr. Maharaj SC:** There's a contract and there's a contract for
10 Paria to—part of the contract, to ensure an emergency response
11 plan was put in place. That plan, that duty, was not performed
12 by both LMCS and Paria.

13 **Mr. Chairman:** So is it a breach of contract then that they
14 failed to effect a rescue?

15 **Mr. Maharaj SC:** Well it's because of the breach of the
16 contract and what happened, the accident occurred, the duty has
17 arisen as to whether they have a duty of care to do anything.

18 **Mr. Chairman:** All right.

19 **Mr. Maharaj SC:** So one can have an expressed contractual
20 duty or an implied contractual duty and therefore the question
21 is, this is a case in which you have Paria in charge of the
22 compound, Paria could prevent persons trying to save the lives
23 of these people. Paria exercised that right and therefore if it is
24 shown that it was grossly reckless or negligent for Paria to do
25 that, then in my respectful submission they had a duty, because
26 this is saving lives. This is not any other thing.

27 **Mr. Chairman:** Do you have any authority for that

1 proposition?

2 **Mr. Maharaj SC:** Well I don't have it with me but I can, I can
3 supply it to the Tribunal to make an argument.

4 **Mr. Chairman:** I would certainly like to see such an authority
5 because, it's something which, you know, has obviously
6 exercised me past a legal principles what obligation there was
7 on Paria. We all know there's a moral one—

8 **Mr. Maharaj SC:** Yes, yes, yes.

9 **Mr. Chairman:**—and, er, but I have to obviously consider—

10 **Mr. Maharaj SC:** No, no I agree.

11 **Mr. Chairman:**—beyond that morality.

12 **Mr. Maharaj SC:** I agree with you, Chairman. I agree with
13 you that one has to look and see what are the principles of
14 law—

15 **Mr. Chairman:** Yes.

16 **Mr. Maharaj SC:**—if they can apply and I will certainly assist
17 the Commission as best I can.

18 **Mr. Chairman:** Well I'd be grateful for any assistance and I
19 welcome anybody else making any submission, potentially,
20 hopefully in writing than anything else with any authority that
21 deals with it and I look in particular to Mr. Peterson and Mr.
22 Mootoo about that, if there are submissions in that respect, I
23 would like to see what law there is to support such a
24 proposition. Because I'm troubled by it.

25 **Mr. Maharaj SC:** Much obliged, Chairman.

26 **Mr. Chairman:** Thank you very much.

27 **Mr. Maharaj SC:** So it is in that context I submitted that if

1 Paria wanted to get information about the conditions in the
2 pipeline to decide whether to authorize a rescue from within the
3 pipeline, Paria could have gotten that information from
4 Boodram and from Michael Kurban.

5 Further, the IMT, IMT's handwritten note contained an
6 entry at 2.02 a.m. on Saturday 26th of February stating no signs
7 of oil. Further, all of the commercial equipment needed for the
8 rescue dive were available to LMCS divers by 7.14 p.m. on
9 Friday.

10 Seetaram's evidence to the Commission is that LMCS
11 had all the necessary equipment for the rescue when the vessel
12 Waterworld arrived at 7.14 p.m. Catherine Balkissoon at
13 paragraph 16 of her witness statement said that between 6.00
14 p.m. and 6.30 p.m. Andrew Farah, LMCS dive supervisor, told
15 her that LMCS divers and their diving equipment, scuba tanks,
16 were coming from Carenage and they wanted an escort. This
17 means that a dive plan was being formulated. Balkissoon also
18 said that she communicated LMCS diving plans to the IMT.
19 Balkissoon agreed that she was not merely a conduit for the
20 IMT and at paragraph nine of her witness statement she said she
21 had to provide onsite logistical and technical assistance and
22 support the search and rescue efforts.

23 Balkissoon was asked whether Andrew Farah had spoken
24 to her about a rescue plan that LMCS had devised to go into the
25 pipeline and Balkissoon responded saying that Farah told her
26 that LMCS had divers and commercial equipment and were
27 willing to do a dive and rescue. Balkissoon said that she spoke

1 to Collin Piper about it and Piper's response was to stand down,
2 and I'll put the reference.

3 **Mr. Chairman:** Thank you.

4 **Mr. Maharaj SC:** Balkissoon, in questioning, said that Farah
5 asked her more than once about a rescue and that her response
6 was the same. Both Catherine Balkissoon and Mushtaq
7 Mohammed stated in their cross-examination that it was not
8 possible to have an emergency plan to rescue someone after a
9 Delta P event. I submit that this cannot be correct.

10 **Mr. Chairman:** Yes.

11 **Mr. Maharaj SC:** Balkissoon said that the IMT did not have a
12 written plan to deal with the Delta P so that when the IMT met
13 on the 25th of February, it was now devising a plan. Mushtaq
14 and Balkissoon's views are important because it means,
15 particularly with Balkissoon, that they were unlikely to be
16 convinced about effecting or attempting a rescue of the divers
17 from within the pipeline. Balkissoon admitted in cross-
18 examination that she saw people diving and she considered that
19 it was her role to assist the IMT to try and see whether there
20 would be willing divers to effect a rescue. She said she passed
21 that information to Mr. Piper around 7.00 p.m.

22 **Mr. Chairman:** Thank you. I see there's a little bit to go. Is it
23 worth taking a 5-minute break now?

24 **Mr. Maharaj SC:** Yes, there is.

25 **Mr. Chairman:** Just to stretch our legs?

26 **Mr. Maharaj SC:** Much obliged.

27 **Mr. Chairman:** Could we do that?

1 **Mr. Maharaj SC:** Much obliged.

2 **Mr. Chairman:** Thank you very much. Five minutes, please?

3 **Mr. Maharaj SC:** Yes.

4 **12.05 p.m.:** *Enquiry suspended.*

5 **12.10 p.m.:** *Enquiry resumed.*

6 **Mr. Chairman:** Can I just, returning to my concern about the
7 duty of care point, assume, as I say for the purposes of this
8 argument, that we are—we don't find that there was a breach or
9 any duty of care at the outset on the part of Paria, right, but they
10 set up an IMT, and just step away from this case for a moment,
11 supposing there is an incident somewhere and an IMT is
12 created and that IMT makes a complete mess of it, as a
13 consequence people die, would they be taking on a liability by
14 creating the IMT and then messing it up? That they are, by
15 virtue of the creation of this IMT, taking on a responsibility to
16 act in accordance with its rules and a failure to do so which
17 results in loss or injury or death creates a separate liability?

18 **Mr. Maharaj SC:** Well the incident management system was
19 set up in order to prepare for an effective response in case of an
20 emergency.

21 **Mr. Chairman:** Right.

22 **Mr. Maharaj SC:** And if it is that they failed in that duty—

23 **Mr. Chairman:** Is it a duty?

24 **Mr. Maharaj SC:** Well, I would think that it's a duty because
25 one has to also appreciate there is something—occupier's
26 liability.

27 **Mr. Chairman:** Yes.

1 **Mr. Maharaj SC:** So therefore I think it's a recognition of the
2 duty of being in the position of an occupier at common law.

3 **Mr. Chairman:** So let us say—let's say they're not the
4 occupiers. There's an IMT set up after a terrible tragedy takes
5 place. An IMT is created bringing together a number of
6 specialists, or whatever it is it's created, and that IMT makes a
7 complete mess of it, and, as a result people are injured and/or
8 die. Are they taking on a liability by virtue of the creation of
9 this IMT? Quite separate from any—what caused the accident
10 or the incident in the first place to give rise to the IMT, it might
11 be a natural thing, a disaster naturally occurring or a ship, as
12 I've described before, crashing into a berth, nobody's fault,
13 [*Inaudible*] broken and it just crashed into a berth, so the IMT is
14 created and the people in charge of that mess it up, are they
15 liable?

16 **Mr. Maharaj SC:** Well, if it is not an accident on the site, I
17 think they're different considerations. But if it's an accident on
18 the site, it brings in the common law principles of the duty
19 under the occupier liability principle and it—and I could, I
20 could see that there could be an argument that—there could be
21 an argument and I would also include that aspect in the note I
22 would send to the Commission.

23 **Mr. Chairman:** All right.

24 **Mr. Maharaj SC:** But it is, it is, um—I, I recognize that this is
25 not an easy area of the law.

26 **Mr. Chairman:** Oh no. I can say that—

27 **Mr. Maharaj SC:** And I could understand that if I am a judge

1 and I had to decide the point, I would express the same
2 concerns or even more concerns that you, Chairman, had been
3 asking. But, when one looks—and that is how law is developed
4 as the Chairman knows. One takes principles which have
5 already been decided and try to fit them in and that is how the
6 law has been developed. So in my mind when I was looking at
7 these facts, I knew that these are the—some of the arguments
8 that may be used against it.

9 But, I have always tried to use the principles of law to be
10 able to fit a case, if I can, and even if it means breaking new
11 grounds. And I remember as a young lawyer when I was in
12 prison were contempt of court because I told a judge he was
13 acting unjudicially and most of the lawyers told me, you cannot
14 sue the State, they even told me the conviction would be
15 affirmed, I said no, and it was set aside and then I sued the State
16 to get damages and the law, was the common law is that you
17 can't sue a judge, but I sued the State.

18 So we told the courts, the upper courts, that I'm not going
19 against the judge, I'm going against the State, the judicial arm
20 of the State. And now that case is authority in the
21 Commonwealth. So, I know the principles of law probably are
22 not yet moulded but I would like to take a shot at it because I
23 believe that for the future if you have a con—an employer
24 having works done on its premises and men are in a life-
25 threatening situation, the employer must have a duty of care if it
26 knows that if it does not act the men can die, and this—

27 **Mr. Chairman:** No, no, I think that—I don't think there's a

1 difficulty about that. I think it's the extension of that as to
2 whether there is a duty to rescue, that is what I think is
3 troubling me more than anything else. I mean, a duty of care,
4 yes, a duty of care that might continue into a rescue, yes—

5 **Mr. Maharaj SC:** Well—

6 **Mr. Chairman:**—arguably, but of its own bat as it were, that
7 there is a duty to rescue?

8 **Mr. Maharaj SC:** Well, if it is—if there is a duty to take
9 reasonable steps to safeguard health, there could be—there's a
10 greater duty to take reasonable steps—

11 **Mr. Chairman:** All right.

12 **Mr. Maharaj SC:**—to prevent death.

13 **Mr. Chairman:** All right. Well let's not—let's look at the
14 finer details of the law perhaps separately from, er—

15 **Mr. Maharaj SC:** Much obliged.

16 **Mr. Chairman:**—your submissions generally but I mention it
17 now because you raised it during the course of your
18 submissions and I am anxious to give everybody an opportunity
19 to be able to make any submissions that they wish to on that
20 issue—

21 **Mr. Maharaj SC:** Much obliged.

22 **Mr. Chairman:**—particularly Paria obviously.

23 **Mr. Maharaj SC:** Yes.

24 **Mr. Chairman:** So I'll make a ruling about it afterwards—

25 **Mr. Maharaj SC:** Much obliged.

26 **Mr. Chairman:**—but, um, let's hear your submissions.

27 **Mr. Maharaj SC:** So I go to the—that Mr. Piper knew since

1 about 7.15 p.m. that there were competent LMCS divers willing
2 to go into the pipeline and that there was commercial
3 equipment available for rescue. Mr. Piper said that at some
4 time during Friday evening he knew that LMCS had equipment,
5 commercial air supply equipment, experienced divers and had
6 divers willing to go into the pipeline and yet took the position
7 that it was not safe for them to go into the pipeline.

8 In Paria's timeline it is recorded at 6.55 p.m. that divers'
9 diving equipment arrived at site. Mr. Piper said that even
10 earlier at 6.25 p.m. that it was not safe were divers to go into
11 the pipeline after Visham Harrichan told him that LMCS divers
12 were diving into the pipeline.

13 Alvin Seeterram, in his evidence, confirmed that Subsea Global
14 Solutions Limited had on board the Waterworld all the
15 commercial diving equipment and lighting that was necessary
16 for a rescue and that the coast guard had inspected his
17 equipment. He said that Waterworld had super lights, band
18 masks, that is helmets, diving umbilicals, have high pressure,
19 low pressure backup air supply, umbilical lengths of 375 feet
20 and 200 feet.

21 Seeterram also confirmed to the Chairman that while
22 SGS divers were not available to dive because they'd used up
23 their maximum dive time in previous dives, that all the
24 equipment was available for the divers to use for the rescue.
25 Seeterram said that he was told that Ronald Ramoutar had
26 available divers who could have used the equipment to dive
27 into the pipeline and this was from about 7.15 p.m. on Friday

1 evening.

2 He also said that the coast guard was impressed with
3 SGS equipment and confirmed to the Chairman that there was
4 nothing more than Paria could have wanted or desired in order
5 to effect the rescue over and above what already—what he
6 already had. Paria's instructions that no one was to be allowed
7 to dive in the pipeline continued.

8 I want to point out to the Tribunal what Paria did in
9 asking diving companies and when those diving companies
10 were asked. Mitchell's: Mitchell was contacted on Friday at
11 5.05 p.m. by Rolph Seales and at 5.23 p.m. received
12 confirmation that Mitchell's would be able to provide its
13 services and I'll put the reference. The Mitchell's team arrived
14 at around 8.40 p.m. with surface air supply equipment and were
15 told to remain on standby and I'll put the reference in the
16 evidence.

17 After 1.00 a.m. on Saturday, Rolph Seales asked
18 Mitchell's to view the video footage of an underwater camera
19 and Fitzroy King said Mitchell divers were too big to fit in that
20 pipeline and Mitchell were told to stand by at about 2.45 a.m.
21 on Saturday. Mitchell divers were told to stand down and they
22 returned to Mitchell compound at about 3.10 a.m.

23 **Mr. Chairman:** So they were just not really used?

24 **Mr. Maharaj SC:** No. Eastern Divers. Eastern Divers was
25 contacted at 11.40 p.m. on Friday and at 12.30 a.m. some of its
26 members arrived at berth 6 with the full team being assembled
27 at the compound by 1.25 a.m. on Saturday and was briefed by

1 the incident commander. Andy Johnson said that the incident
2 commander told him that due to the variables around the
3 incident, Eastern should prepare itself for retrieval of—retrieval
4 and not rescue due to the possibility that the divers may have
5 expired.

6 After its assessment on the site, Andy Johnson told the
7 incident commander that his team would not be able to make an
8 entry to perform the rescue operations as approximately 120
9 feet of the twelve hundred feet pipeline was filled with water
10 based on what was seen on the video footage. Eastern
11 remained on standby offsite for the next 12 hours from 5.00
12 a.m.

13 Hull Support. Hull was contacted at about 4.30 p.m. but
14 was unable to mobilize a crew. Gyasi Woodley who is Hull's
15 Operation Manager said that he had several discussions with
16 Rolph Seales and Hull advised against cutting the horizontal
17 section of the pipe as being too risky.

18 OTSL. OTSL was contacted on Friday afternoon and its
19 dive vessel arrived at Paria at about 8.30 p.m. and remained on
20 standby until 5.30 a.m. on Saturday and was not called upon by
21 Paria.

22 HHSL and the cameras. HHSL was only contacted at
23 about 10.50 p.m. on Friday by Michael Wei. A push rod
24 camera with operating crew arrived from Atlantic LNG at 9.00
25 p.m. but that camera was not inserted until midnight. Collin
26 Piper said that the push rod camera actually came at 11.00 p.m.

27 Then I submitted that Paria did not get advice from

1 Rolph Seales and Fuentes, persons they contacted, in order to
2 consider LMCS' rescue plans. Paria had available to it Rolph
3 Seales and Krishna Fuentes, who are experts in diving, to
4 request either or both of them to have discussions with LMCS
5 divers to consider their rescue plans so that Paria and the IMT
6 could have made a decision on whether to reconsider its
7 decision to prevent LMCS divers from diving into the pipeline.

8 Also, Paria could have attempted to contact the expert,
9 Mr. Zaid Khan in In-Corr-Tech to give them advice as to
10 whether there was a risk of another Delta P event after the
11 pressure in the pipeline was stabilized. Such an expert could
12 have also advised them about the risk of sending divers in the
13 pipeline to rescue divers from the pipeline and the Chairman
14 would recall that in questions to him, asked by you, Mr.
15 Chairman, that if he had the information which Paria had,
16 would he have given an evidence—would he have given an
17 opinion and would that evidence be to effect the rescue—to
18 attempt the rescue.

19 Paria used the diving companies on the evidence to
20 support its unreasonable insistence on receiving conclusive
21 video evidence of the inside of the pipeline. The evidence
22 disclosed that Paria became preoccupied and distracted by the
23 cameras and video and ignored the information of Boodram and
24 Michael Kurban. In any event, the video when it was
25 eventually received confirmed that the line contained clear
26 water, not oil, or not so much oil, so much so that the model
27 number on the tank pushed by the crawler was clearly visible.

1 Summarily the evidence discloses that the IMT on Friday
2 evening, we say as early as 7.15 p.m. when SGS came outside
3 offshore, there was commercial equipment for a rescue. In
4 fairness to Mr. Piper, he did say in his evidence that during
5 Friday evening he knew that LMCS had equipment,
6 commercial air supply equipment, experienced divers and had
7 divers willing to go into the pipeline.

8 Paria says that LMCS as a contractor was regarded as the
9 first responder, a point repeated by Mr. Archbald in his
10 evidence and underscored in Paria's opening statement. It is
11 submitted that Paria had a joint responsibility with LMCS to
12 take steps to first discuss the rescue plans, to determine whether
13 an attempt to rescue can be made. LMCS also had a duty to
14 attempt a rescue, and, from the evidence they did attempt that
15 but was prevented from doing so.

16 The next part, and I'm coming to the end, Mr. Chairman,
17 the next part is that the fact that Paria failed to identify a Delta
18 P as a potential risk meant that no emergency plans was
19 developed and I want to put that in the context of the rules. At
20 paragraph four of Paria's HSE requirements for the contractor,
21 all Paria contractors must conduct suitable and sufficient risk
22 assessment or job hazard analyses or job safety analyses for all
23 activities and for all work permits.

24 At paragraph seven zero of the same document, Paria
25 requires all contractors to have emergency response plan for
26 fire, gaseous emissions, spills and any other credible scenarios.
27 Moreover, at lines two to four of seven, this ERP will be

1 reviewed by Paria's HSSE personnel for—as they proceed prior
2 to the commencement of any work. So one sees from Paria's
3 rules, Mr. Wei's confirmation at paragraph 76 of his witness
4 statement, that Paria's maintenance department reviewed and
5 accepted LMC documents included its risk assessment means
6 that the risks identified by LMCS which did not include a Delta
7 P hazard were accepted by Paria. This means that Paria
8 wrongly did not regard Delta P as a credible risk. It also means
9 that since Paria did not regard Delta P as a potential risk, Paria
10 did not have any emergency plan to deal with the situation.

11 Accordingly, when the situation occurred, neither Paria
12 nor LMC recognized the root cause of Delta P and because
13 neither identified Delta P as a potential risk, neither has an
14 emergency response plan to rescue the divers. Certainly, Mr.
15 Khan's view is that Delta P was a credible risk and it is said
16 that since both Paria and LMC failed to identify as a risk, no
17 steps were taken to eliminate this hazard or even prevent it.

18 OSHA agreed with the Commission—OSHA agreed with
19 Mr. Khan's opinion and at paragraphs 5.3 and 5.4 of OSHA's
20 preliminary report it said that neither Paria nor LMCS'
21 emergency plan captured the emergency scenarios and in
22 relation to LMCS this was a scenario specific to the job and for
23 Paria scenarios based on a risk assessment. It follows therefore,
24 contrary to Mr. Wei's evidence, Delta P was both a credible
25 scenario required to be documented in an emergency rescue
26 plan approved by Paria and should have been included by
27 LMCS in its emergency plan following a suitable and sufficient

1 risk assessment.

2 Paria's failure to insist on this inclusion of a Delta P as a
3 credible scenario, which should have been part of LMCS'
4 emergency response plan, meant that Paria's HSSE personal did
5 not carry out a proper or adequate review of LMCS documents.
6 And then I come to the treatment of the families.

7 The families of Rishi Nagassar, Yusuf Henry and Faizal
8 Kurban were in the car park outside Paria's compound from
9 Friday, 25th February to Sunday, 27th February seeking
10 information on the rescue efforts. Both the families of Rishi
11 and Faizal indicated that they were informed of the decision to
12 transition from transition to recovery on the news on the
13 evening of Sunday the 27th of February, 2022. The evidence of
14 LMCS is that they had difficulty in contacting Rishi and
15 Yusuf's families but they gave the contact details which they
16 had to Paria.

17 Paria's evidence is that the families were updated
18 throughout—through a meeting at the staff club on Saturday the
19 26th of February, 2022 and thereafter by way of WhatsApp.
20 Mushtaq Mohammed's evidence is that the families were
21 informed of the decision to move to recovery on the evening of
22 the 26th of February by him via WhatsApp. In cross-
23 examination, Mr. Mushtaq Mohammed stated that
24 arrangements were made to accommodate the families on
25 Saturday afternoon, that is 24 hours after the incident.

26 The first time that Paria met with the families was on
27 Saturday the 26th of February at the Pointe-a-Pierre staff club.

1 Before this meeting, Mr. Mohammed says that he did not know
2 that the families were in the car park since Friday afternoon
3 trying to get information. Mr. Mohammed said that he
4 wouldn't argue the point and conceded that this was not an
5 acceptable position.

6 **Mr. Chairman:** Yes, well, I've made my position clear, I
7 hope—

8 **Mr. Maharaj SC:** Yes.

9 **Mr. Chairman:**—that whatever else might have happened, this
10 was woefully inadequate and frankly uncivilized. Nobody
11 should have to sit in a car park waiting for information for 24
12 hours when their loved ones are in an incident like this, and I'm
13 afraid I hold everybody responsible for that. It's not just Paria.
14 It is an unacceptable position to be in. I just simply do not
15 understand the humanity of that. I just don't.

16 **Mr. Maharaj SC:** Mr. Chairman, before I pass to
17 recommendations, I just want to say—I just want to submit that
18 the inevitable conclusion from the evidence about the rescue
19 which has been produced in these proceedings is that the hours
20 between the time of the incident—the hours of the time
21 between the incident when it occurred and the early hours of
22 Saturday morning from the evidence were, in effect,
23 squandered by Paria to attempt a rescue. This is the time period
24 in which the men were most likely to be alive, and, as each hour
25 passed, the possibility that they remaining alive became less
26 and less likely. So I will go to recommendations.

27 **Mr. Chairman:** Thank you.

1 **Mr. Maharaj SC:** I know one of the Terms of Reference is for
2 the Commissioner to make recommendations and we have a
3 few that we want to submit. Companies like Paria, which
4 undertake inherently dangerous works, ought to employ a client
5 representative or engineering expert to assist in the preparation
6 of the scope of works to review and accept the contractor's
7 documents and to oversee the execution of the project by the
8 contractor in accordance with the permit to work procedure.

9 **Mr. Chairman:** Should that be—should that always be an
10 independent person or could they have employed someone
11 themselves within the firm?

12 **Mr. Maharaj SC:** They can employ someone but provided the
13 person is suitably qualified.

14 **Mr. Chairman:** Right. So it doesn't have to be independent?

15 **Mr. Maharaj SC:** No, no, no. Next one, persons performing
16 the roles and responsibilities set out in the permit to work
17 procedure ought to have dedicated training and qualifications to
18 enable them to perform the functions in those roles in
19 accordance with the permit to work procedure.

20 Now, we have seen in the evidence in this Enquiry that
21 has not been the position. The client representative or
22 engineering expert should be empowered to coordinate the
23 various aspects of the project under supervision of the general
24 manager to ensure that the company's objectives to create a
25 safe system of work is achieved. The permit to work form
26 ought to be clear and unambiguous and the responses ought to
27 be clear and unambiguous. It ought to be redone and fit for the

1 purpose to be of—

2 **Mr. Chairman:** I mean, your position is that it's not fit for
3 purpose at the moment? The way in which it's set out on a
4 single page as it is, it needs—

5 **Mr. Maharaj SC:** It' inadequate, insufficient.

6 **Mr. Chairman:** Yes, it needs to be fuller?

7 **Mr. Maharaj SC:** Fuller.

8 **Mr. Chairman:** With a little more space to put the necessary
9 areas?

10 **Mr. Maharaj SC:** In order to put in the—

11 **Mr. Chairman:** Yes.

12 **Mr. Maharaj SC:** The permit to work form ought to be clear
13 in prioritizing the task including sequence of the task and it
14 ought to be contractually underpinned. Work instructions
15 should be clear and unambiguous and required to be co-signed
16 by the applicant and the contractor. Consideration ought to be
17 given to amending the permit to work procedure so that a
18 permit to work would be issued for specific tasks which are
19 inherently so dangerous that they should be given special
20 treatment.

21 This permit to work would only be issued after the issuer
22 is satisfied that the toolbox meeting was convened in relation to
23 the staff and the risks were discussed and the control measures
24 understood and agreed. There should be clearer guidelines in
25 the permit to work as to the meanings of “periodically” and
26 “continually”.

27 **Mr. Chairman:** Yes.

1 **Mr. Maharaj SC:** In this case it was the duty of the applicant
2 to continually monitor, however he did not arrive on the site
3 until 2.00 p.m. on the 25th of February, therefore there was no
4 monitoring by him at all prior to that time. Every risk
5 assessment or job hazard analysis with respect to any project
6 dealing with subsea works ought to address what we regard as
7 an obvious risk of Delta P.

8 **Mr. Chairman:** When you say subsea works, you mean, do
9 you, by that in relation to pipes?

10 **Mr. Maharaj SC:** Pipes, yes.

11 **Mr. Chairman:** I mean, you could be subsea work, um,
12 where—

13 **Mr. Maharaj SC:** Yes, we should specify, it should be pipes,
14 pipes. There should be a section in every risk assessment under
15 which the hazard is considered and a specific control measure
16 identified—measures identified.

17 The incident command system should be reconfigured to
18 address operational emergencies which may be regarded as
19 exceptional. This would assist with the development of an
20 action plan specifically identifying the control measures of
21 what resources are necessary—and what resources are
22 necessary to conduct any rescue. I couldn't understand that in a
23 company like Paria you didn't have an emergency response
24 plan in order to respond to a Delta P event and with so many
25 pipe works being done? So I think if you have a—

26 **Mr. Chairman:** You mean if even outside of this specific
27 job—

1 **Mr. Peterson SC:** Yes.

2 **Mr. Chairman:**—that there should be in existence a separate
3 emergency response—

4 **Mr. Maharaj SC:** Yes.

5 **Mr. Chairman:**—where Delta P has arisen as an incident?

6 **Mr. Maharaj SC:** Yes. Yes, Mr. Chairman. Under the
7 incident command system there should be more regular training
8 and drilling and the ICS respectively audited—and should be
9 periodically audited.

10 **Mr. Chairman:** Yes.

11 **Mr. Maharaj SC:** It should be periodically audited.
12 Consideration should be given to the establishment of a rotating
13 incident commander so that, depending on the nature of the
14 emergency, the most suitably trained, qualified and experienced
15 incident commander would be automatically appointed.

16 **Mr. Chairman:** Yes.

17 **Mr. Maharaj SC:** High-risk activities should be scheduled
18 only on those dates and times when the key members of the
19 incident command team are on site. On this day in question for
20 some reason from the evidence, all the important persons
21 seemed to be away from the site. I don't know what was
22 happening there.

23 **Mr. Chairman:** I think it was pointed out to me by Mr.
24 Peterson this was carnival time.

25 **Mr. Maharaj SC:** Oh, it's carnival, sorry. But there was no
26 carnival on that—

27 **Mr. Peterson SC:** Yes, there was a taste of carnival.

1 **Mr. Maharaj SC:** There was a—

2 **Mr. Peterson SC:** Yes there was an event, and those of us who
3 party, a taste is as good as the whole meal.

4 **Mr. Chairman:** I'm going to take Mr. Peterson's word about
5 that.

6 **Mr. Maharaj SC:** I would also take his word for that, Mr.
7 Chairman. He's the authority.

8 **Mr. Chairman:** But, I mean, it's a fair point to make, though,
9 isn't it?

10 **Mr. Maharaj SC:** Yes.

11 **Mr. Chairman:** That really should you be carrying out works
12 of this kind when people are away, for whatever reason?

13 **Mr. Maharaj SC:** Then the next one, the protocols for the
14 establishment, training and drilling of the ICT should be
15 accessible to regulators and periodically updated and tested. It
16 should be supported by an active communication team which
17 would ensure, without the need for direction by the incident
18 commander, that victims' families can be accommodated,
19 supported and communicated with on a timely basis.

20 Consideration should be given to having OSHA regulate
21 the operations of the incident command system and this
22 includes OSHA regulating the composition, training, procedure
23 and drilling of the incident command system and requiring
24 these to be certified annually as fit for the purpose.

25 There are no compulsory diving standards in Trinidad
26 and Tobago. There are however voluntary standards which
27 have been issued by the Trinidad and Tobago Bureau of

1 Standards. However, those standards have not been made
2 compulsory duty a lack of consensus among the stakeholders.
3 Also, because they're voluntary they are not enforced, so
4 consideration should be given to be looking at this.
5 Accordingly—

6 **Mr. Chairman:** Were they even used in this case?

7 **Mr. Maharaj SC:** Yes.

8 **Mr. Chairman:** Were they even used here? The voluntary
9 standards, it seems to me, were not even adhered to here.

10 **Mr. Maharaj SC:** No, they were not used. Accordingly, it is
11 recommended that Paria and similar companies adopt and
12 maintain international best practice in relation to commercial
13 diving in relation to its subsea repair and maintenance jobs on
14 pipelines.

15 **Mr. Chairman:** I mean, they could have done that anyway.
16 They didn't need to have statutory regulation. They could have
17 voluntarily had such a requirement for anybody bidding.
18 We've seen the voluminous documents that they've created, but
19 they could have required, couldn't they, that the company
20 should have at least the voluntary standards imposed by the
21 Trinidad and Tobago Bureau of Standards, but they didn't?

22 **Mr. Maharaj SC:** They didn't. And then the Trinidad and
23 Tobago Bureau be invited to repair, implement following
24 stakeholder consultation, a compulsory standard regulating the
25 commercial diving industry in Trinidad and Tobago. OSHA
26 implement regulations so that international best practice can be
27 implemented in relation to the health and safety on the subsea

1 worksite.

2 **Mr. Chairman:** I mean, OSHA could do that at the wave of a
3 wand, couldn't they?

4 **Mr. Maharaj SC:** Could, yes.

5 **Mr. Chairman:** They had the power—

6 **Mr. Maharaj SC:** They had the power.

7 **Mr. Chairman:**—under the Act to be able to introduce
8 regulation for any particular field of endeavour in this country
9 where they think that such regulation will be for the benefit of
10 those engaged in it. They've been in existence for 18 years,
11 have they not—

12 **Mr. Maharaj SC:** Yes.

13 **Mr. Chairman:**—the agency and the authority under the Act,
14 and still no regulation for something as fundamental perhaps in
15 country which—

16 **Mr. Maharaj SC:** Oil industry.

17 **Mr. Chairman:**—has an oil and gas industry?

18 **Mr. Maharaj SC:** Yes.

19 **Mr. Chairman:** And I might in passing also observe that
20 whilst Paria didn't impose the standards that were said to be
21 voluntary by the Trinidad and Tobago Bureau of Standards,
22 neither did LMCS adhere to such standards.

23 **Mr. Maharaj SC:** No. Correct, correct, Mr. Chairman. That
24 is correct. In pipeline less than 48 inches in diameter, that
25 consideration be given to augment existing pipelines and for all
26 new pipelines to be configured to permit, particularly at the
27 elbows, an additional installation or design to permit divers to

1 be able to turn around.

2 **Mr. Chairman:** Right.

3 **Mr. Maharaj SC:** The Accreditation Council of Trinidad and
4 Tobago be appointed an accreditation agency for commercial
5 diving in Trinidad and Tobago for amending the Accreditation
6 Council of Trinidad and Tobago Act, Chap. 39:06.

7 **Mr. Chairman:** This is creating a sort of teaching
8 environment—

9 **Mr. Maharaj SC:** Teaching environment.

10 **Mr. Chairman:**—for commercial diving in Trinidad and
11 Tobago and that there should be some accreditation, more
12 formalized accreditation?

13 **Mr. Maharaj SC:** Formalized, yes.

14 **Mr. Chairman:** All right.

15 **Mr. Maharaj SC:** And then I come to OSHA's powers to
16 prosecute under the OSHA Act.

17 **Mr. Chairman:** All right.

18 **Mr. Maharaj SC:** Having regard to OSHA's preliminary
19 report which suggested both Paria and LMCS may be guilty of
20 various offences under the OSH Act, the Commissioners may
21 consider, based on the evidence to recommend proceedings by
22 OSHA. Section 91(2) of the OSH Act permits OSHA
23 following an accident in an industrial establishment and where
24 it appears from the Commission's report that the OSH Act was
25 not complied with, to bring summary proceedings against a
26 person liable to be proceeded against in respect of such non-
27 compliance, and those proceedings are required to be

1 commenced within six months after the making of the report.

2 The OSH Act imposes duties on employers, occupiers,
3 employees, manufacturers and suppliers of goods. Some of
4 these duties are owed not only to persons working at the
5 industrial establishment but also to visitors and persons who
6 might be affected by the activities carried out at the industrial
7 establishment.

8 **Mr. Chairman:** Can I just, just pausing there for a minute, the
9 Act itself requires the agency created under OSHA to act if they
10 see it appropriate to bring a prosecution within the six-month
11 period?

12 **Mr. Maharaj SC:** Yes.

13 **Mr. Chairman:** In the Magistrates' Court?

14 **Mr. Maharaj SC:** Yes.

15 **Mr. Chairman:** And that applies to individuals, does it, as
16 opposed to companies or both?

17 **Mr. Maharaj SC:** Yeah, it, it, it applies to employers which
18 could be a company or an individual.

19 **Mr. Chairman:** Well it says to bring summary proceedings
20 against the person liable. Do you mean by that the company?

21 **Mr. Maharaj SC:** The company.

22 **Mr. Chairman:** And/or the individual if it's—

23 **Mr. Maharaj SC:** Yeah.

24 **Mr. Chairman:**—if I have employed someone and it's caused
25 a—

26 **Mr. Maharaj SC:** It must be the employer.

27 **Mr. Chairman:** Right. So when you say the person you mean

1 the employer?

2 **Mr. Maharaj SC:** Yes.

3 **Mr. Chairman:** Right. Thank you. I'll change that. Just a
4 moment. And in that case it will, certainly in Magistrates'
5 Court proceedings, are to be brought within six months but my
6 understanding of the Act allows this Commission to, if we
7 choose to do so, to recommend prosecution and the timeline
8 starts from then rather than the original Act?

9 **Mr. Maharaj SC:** Yes.

10 **Mr. Chairman:** So, this happened on the 25th of February,
11 ordinarily that would have expired in, if my maths is right,
12 August, but because a Commission of Enquiry has been
13 established, we have the power to, as it were, if we were to
14 make such a recommendation, for the six months to run from
15 the date of that recommendation?

16 **Mr. Maharaj SC:** Correct.

17 **Mr. Chairman:** Crucial in that of course is that once we hand
18 in our report, assuming it is at the end of this April, the time
19 runs from then and the government need to be aware that timely
20 disclosure of the report so that OSHA could act on it if they
21 chose to do so, will run from that date?

22 **Mr. Maharaj SC:** Yes.

23 **Mr. Chairman:** And any delay, any delay in disclosing the
24 report generally and in particular to OSHA may result in—

25 **Mr. Maharaj SC:** Timely.

26 **Mr. Chairman:**—the time being time barred?

27 **Mr. Maharaj SC:** Yes.

1 **Mr. Chairman:** Yes, thank you very much. You've dealt with
2 section 86.

3 **Mr. Maharaj SC:** Yes.

4 **Mr. Chairman:** Or you're just coming to that? Yes. Just
5 coming to section 86 of the Act?

6 **Mr. Maharaj SC:** Yes, section 86(1) of the OSH Act—

7 **Mr. Chairman:** Yes.

8 **Mr. Maharaj SC:**—states as follows:

9 “Subject to subsection (2) where a person dies, is
10 critically injured or develops an occupational disease in
11 consequence of an employer, occupier or owner having
12 contravened this Act, the employer, occupier or owner
13 shall without prejudice to any other liability or right of
14 action arising out of the death or critical injury or disease,
15 be liable to a fine of \$100,000 or an amount equivalent to
16 three years' pay of that person, whichever is greater, and
17 the whole or part of the fine may be applied for the
18 benefit of the victim or his estate or otherwise as the
19 court may determine.”

20 **Mr. Chairman:** It's not very much.

21 **Mr. Maharaj SC:** No. So, I think we should, um—we have
22 recommended that that should be looked at because the
23 evidence here discloses breaches of the OSHA Act as employer
24 of deceased or injured divers and by Paria as occupier of berth
25 6.

26 **Mr. Chairman:** Of course you all appreciate that it is no part
27 of our remit to recommend prosecution as such?

1 **Mr. Maharaj SC:** No.

2 **Mr. Chairman:** All we can do is to identify the facts—

3 **Mr. Maharaj SC:** And for you to consider.

4 **Mr. Chairman:**—and recommend, for example, either the DPP
5 before OSHA consider whether or not an offence has been
6 disclosed.

7 **Mr. Maharaj SC:** Yes.

8 **Mr. Chairman:** It is not part of our responsibility to say, oh,
9 um, LMCS are guilty of some crime or Paria are guilty of some
10 breach of the Act. This doesn't lie in our mouths—

11 **Mr. Maharaj SC:** No.

12 **Mr. Chairman:**—to say that. It is our responsibility to simply
13 report the facts as we see them—

14 **Mr. Maharaj SC:** Yes.

15 **Mr. Chairman:**—and then to invite any of those agencies to
16 consider whether or not they wish to prosecute.

17 **Mr. Maharaj SC:** Because we do not have the power to
18 recommend prosecution.

19 **Mr. Chairman:** No, no, no.

20 **Mr. Maharaj SC:** That is a function of the DPP.

21 **Mr. Chairman:** Some—there, there are other persons
22 responsible for that.

23 **Mr. Maharaj SC:** At the most that I think a Commission can
24 do is to recommend that you're sending the papers, depending
25 if the report is accepted, you're sending the papers to the police
26 or the DPP for investigation—

27 **Mr. Chairman:** Yes.

1 **Mr. Maharaj SC:**—further investigation.

2 **Mr. Chairman:** Or OSHA who are a separate—

3 **Mr. Maharaj SC:** Yes.

4 **Mr. Chairman:**—prosecuting authority?

5 **Mr. Maharaj SC:** Yes.

6 **Mr. Chairman:** Yes.

7 **Mr. Maharaj SC:** I think since this is a public matter I have a
8 duty to deal with Mr. Ramadhar's submissions so I just want to
9 say Mr. Ramadhar, on behalf of the—some the relatives of the
10 divers, raised the issue of the Commissioners making
11 recommendations for criminal Prosecution from the evidence
12 which is before the Commission. That issue has been engaging
13 the attention of the legal team but we are not prepared at this
14 time, because we have not completed are research on that. We
15 would have the research completed within the next seven days.

16 The law in this area has been developing. There's a
17 decision in Trinidad and Tobago in the case of Inquest No. 10
18 of 2008 in the inquest into the death of Mayo Oliver [*Phonetic*]
19 but I want to make it quite clear, any opinion I give to the
20 Commission is in law private and confidential and it would not
21 be made public and it would not be put up on the Commission's
22 website.

23 **Mr. Chairman:** Quite so.

24 **Mr. Maharaj SC:** That would be a private and confidential
25 document in my duty to assist the Commissioners in
26 considering the matter.

27 **Mr. Chairman:** Well I think advice that you're giving us is

1 something that ought to remain, in the first instance, certainly
2 confidential. Whether or not I would permit other parties to the
3 proceedings to know what your submissions were seems to me
4 something I will have to keep an open mind to. I think there is
5 a distinction between specific advice to us as Commissioners
6 and a submission as to a course that we should adopt.

7 **Mr. Maharaj SC:** I agree with that.

8 **Mr. Chairman:** And one needs to draw a careful distinction
9 between the two. If it's, if it's a submission then I do think that
10 the parties ought to be able to see what it is that you're
11 submitting.

12 **Mr. Maharaj SC:** It's purely a legal opinion.

13 **Mr. Chairman:** Yes. If, if it is a pure legal opinion, well, as I
14 say, I understand that that's what you're intending to do and I
15 will deal with a couple of these matters in a moment when you
16 conclude, but what I'm not going to do obviously is disclose
17 what is simple advice between Counsel to the Commission and
18 the Commission as opposed to a submission as to what we
19 ought to do or ought to consider doing and if it is that, if it's the
20 latter then I will certainly make sure that it's available to other
21 counsel in the hearing.

22 **Mr. Maharaj SC:** I'm in total agreement.

23 **Mr. Chairman:** Thank you very much all right.

24 **Mr. Maharaj SC:** Mr. Chairman and Commissioner Wilson,
25 if there's anything else I can assist, those are my—

26 **Mr. Chairman:** No, thank you very much indeed. I'm very
27 much obliged to you.

1 **Mr. Peterson SC:** Mr. Chairman, if I could just add by way of
2 the last point as to the law—

3 **Mr. Chairman:** Yes.

4 **Mr. Peterson SC:**—I think if my learned friend assists the
5 Commission on the law in a particular area that touch and
6 concern and applies to the evidence in the case, I think we are
7 entitled to see it and—because we may agree with my friend
8 and the law but, with respect, I know that we are not entitled to,
9 if my friend were to advise you that as a Chairman of a
10 Commission you can impose your own procedural rules, for
11 example, we're not privy to that kind—we're not entitled to
12 disclosure of that kind of thing but if it's, for example, the law
13 on a particular point with respect to the evidence, the duty of
14 care, all of those things, the law on that—

15 **Mr. Chairman:** Right.

16 **Mr. Peterson SC:**—I think we ought to know what a Tribunal
17 is being, um—

18 **Mr. Chairman:** Well you've heard what I had to say about it,
19 Mr. Peterson. I am not going to shut anybody out from what
20 might be a submission, and certainly I would regard any
21 submission made in writing by any party as being disclosable to
22 others. I think it's quite a different matter if, on a more
23 complicated area of law, we are to receive some advice from
24 our Counsel to this Commission, that would not ordinarily be
25 disclosable, but I would take it under advisement.

26 You have understood from the outset of this Enquiry I
27 have been as open and as public about every aspect of it that I

1 can be. As has already been pointed out there is not a—I don't
2 think there's a single document that has not been disclosed
3 other than those which are obviously sensitive and redactions of
4 people's addresses and telephone numbers, otherwise, every
5 single piece of paper that we've considered you can consider,
6 and indeed the public can consider. This is a public Enquiry.
7 Why shouldn't they? And, you know, aside from personal
8 matters, embarrassment or features of that kind, as far as I'm
9 concerned, have nothing to do with it. So the public have
10 complete access to all of the material that we have.

11 All right, can I deal first of all with the two matters that
12 have arisen during the course of my learned friend's—
13 Counsel's submissions? Reference was made to a response by
14 Mr. Mushtaq Mohammed in an email, in a letter, sorry, to
15 OSHA dated the 20th of July of last year. I think it right and
16 appropriate to give him an opportunity to respond to that letter
17 and the criticisms made of it that it seems, on its face, to be
18 inconsistent with other evidence that we've heard in the course
19 of this Enquiry. What I propose to do is to make a ruling that
20 he be given until the 20th of January of this year to respond in
21 writing to Ms. Sinanan who sits behind me so that we can
22 consider it.

23 It will, I will have it over that weekend. I will then cause
24 it to be published on the website for the 23rd of January of this
25 year and invite anybody who wants to respond to anything
26 contained in it or make any submission at all in relation to it,
27 including counsel for Paria, to do so by the 30th of January. All

1 right? So that that gives us a window of a couple weeks or so
2 from now for Mr. Mushtaq Mohammed, if he chooses, I don't
3 order him to do so. If he chooses to respond to it he can and
4 any counsel will, from the 23rd of January, be able to access it
5 on the website and be able to respond to it, all right? So—

6 **Mr. Peterson SC:** Just by way of clarification, Sir, I think Mr.
7 Maharaj dealt with a particular paragraph to that letter.

8 **Mr. Chairman:** Yes. It's a letter dated the—

9 **Mr. Peterson SC:** No I got the date already, Sir. That's the—

10 **Mr. Chairman:** Right.

11 **Mr. Peterson SC:**—20th of July.

12 **Mr. Chairman:** In which there are a series of questions being
13 posed by OSHA, 11 in all, and responses being given by Mr.
14 Mushtaq Mohammed on behalf of Paria Fuel.

15 **Mr. Peterson SC:** But the contention was with respect to a
16 particular question—

17 **Mr. Chairman:** The contention was with—what's been
18 identified is paragraphs four and five in particular.

19 **Mr. Peterson SC:** Four and five, right.

20 **Mr. Chairman:** But, as I say, since none of this was formally
21 Chad of Mr. Mohammed, and given the criticism that's being
22 observed by it, he has liberty within the course of the next
23 seven days to respond to that criticism.

24 **Mr. Peterson SC:** Thank you, Sir.

25 **Mr. Chairman:** As I say, I don't order that he should, merely
26 that he has the opportunity to do so and it will be taken into
27 account, all right? Now that's the position with that.

1 As to any submissions I raised during the course of this
2 arguments proffered by Mr. Maharaj, on duty to rescue, again, I
3 do not order anyone to provide anything in relation to that at all,
4 but, if anybody does wish to make a submission about any duty
5 to rescue that might arise either from an IMT or on the part of
6 LMCS' responsibilities in having a rescue plan, any duty that
7 might or might not arise, I will hear any or not hear, I will
8 receive any submissions on that by the 30th of this month. All
9 right? So by the 30th of January, please, if anybody wants to, I
10 don't order anyone to do so, merely that if they wish to do so,
11 they can. So that's the cut-off, the 30th of January, please?

12 **Mr. Peterson SC:** Just by way of clarification on that, Sir—

13 **Mr. Chairman:** Yes.

14 **Mr. Peterson SC:**—the 30th we we'll, um, we reserved
15 because of the point I made yesterday at the opening of my
16 closing. If the Commission gets to the stage where they wish to
17 issue letters to us then we—I think it would be prudent for us
18 to—

19 **Mr. Chairman:** Of course.

20 **Mr. Peterson SC:**—respond at that time.

21 **Mr. Chairman:** Well, it's a matter entirely for you. If you
22 want us to consider any of those issues in advance, we will.

23 **Mr. Peterson SC:** Yes.

24 **Mr. Chairman:** You'll need to make that submission by the
25 30th of January.

26 **Mr. Peterson SC:** Sure.

27 **Mr. Chairman:** If you wish to hold your powder dry, should it

1 be necessary to do so, if I issue Salmon letters, then of course,
2 the purpose of issuing them is for you to be able to respond to
3 it.

4 **Mr. Peterson SC:** I will—

5 **Mr. Chairman:** And if there is contained in such a letter any
6 duty which we raise as a prospect for you to consider, then of
7 course you'll be able to deal with it then.

8 **Mr. Peterson SC:** I'll check my powder stock if I have enough
9 to fire twice, Sir, I may do it.

10 **Mr. Chairman:** All right, all right, thank you very much. So
11 that deals with those matters. I'll make sure those rulings are
12 put up on the website.

13 Can I just say, as we draw to a close, Mr. Maharaj, a few
14 comments, please, both from me and Mr. Wilson. Certainly for
15 me on the 6th of July I was asked by the President to chair this
16 Enquiry, Mr. Wilson, some months before that. But today, just
17 six months after being so instructed, we have concluded all the
18 speeches. We have concluded all of the evidence. That would
19 simply not have been possible without the considerable
20 cooperation of everyone.

21 My team, headed by Mr. Ramesh Maharaj, has been
22 exemplary working, I can tell you, tirelessly on the evidence to
23 have it ready for these hearings. The backroom staff too, some
24 of whom sit here but working in the back, have played a
25 significant role in ensuring the smooth running of this Enquiry.

26 Above all, Sarah Sinanan, and I don't spare her blushes,
27 has been significant, frankly magnificent in putting together this

1 Enquiry for us all. It simply would not have happened without
2 her. I have to say she had no administrative skills that I know
3 of prior to joining us as a team. She's demonstrated an
4 extraordinary ability to be able to find ways around all of the
5 obstacles, some of which I've expressed previously, that have
6 been placed in our path. I wish I could take her with me.
7 [Laughter] She's been fantastic.

8 But neither would it have been possible without all of
9 your cooperation, sitting here very late some days, much to the
10 consternation and chuntering of some, but we've been able to
11 achieve the timetable that we set which was an ambitious one
12 but we have been able to do it and it simply wouldn't have been
13 possible without all of your cooperation. So I want to thank
14 you all and indeed thank you for your courtesy and assistance in
15 us being able to reach the stage that we have now.

16 I should like to say also something about the public.
17 Thank you, all of you, for making me feel personally welcomed
18 in this country and valued. All too often I've been stopped in
19 the street, people have come to me and say, "Can I have your
20 photograph?" It's been slightly embarrassing from time to time
21 but it has been rewarding to think that the efforts that we, Mr.
22 Wilson and I, have put in are appreciated by the population at
23 large. So I thank you all for that. It is good and gratifying to
24 know that the people of Trinidad and Tobago have so readily
25 taken to me, this foreigner, who has come to exercise my best
26 abilities in this Enquiry.

27 What I will say to you all is that we will continue to work

1 hard to ensure and produce a report of which everyone can be
2 proud by April of this year. It will of course be a matter for
3 government to determine when it is made available to the
4 public, but I know that Minister Stuart Young is anxious to
5 make this as available as soon as is possible and I shall be doing
6 all in my power to apply such pressure as I might be able to
7 bring to bear, if that be necessary, to ensure that the public have
8 a copy of this report as soon as it is impossible to do. Whatever
9 our ultimate findings, it will not be the person driven by
10 rumour, superstition or emotion. It will have been driven by the
11 evidence that we have heard and read.

12 We will not lose sight of the fact that Kazim Ali Jr., Rishi
13 Nagassar, Yusof Henry and Faizal Kurban lost their lives, that
14 Christopher Boodram continues to and remains scarred by the
15 events that took place on the 25th of February of last year. The
16 family, friends and those who are the loved ones of those who
17 died remain scarred by the events of the 25th of February, last
18 year. You will have a report. It will be ready by April.

19 Thank you all very much indeed and I ask counsel to join me
20 briefly in the witness room at the back of this courtroom, so
21 thank you all very much indeed. That is it, thank you.

22 **1.06 p.m.:** *Enquiry adjourned.*
