3 Q. And I asked you what you did having formed a view? What
4 you did with that view? You kept it to yourself or you told Mr.
5 Piper?

6 A. Well I was—I came there for a feedback, Sir, so I was getting a
7 feedback from Mr. Piper.

8 Q. You were, you were that, dealing with the view you formed.
9 What you did with it?

10 A. Well when he told me about the option of getting the water to
11 push the people out, then I expressed to him my view and the
12 view was, what I expressed to him was that, should this option
13 be considered, you are basically extinguishing any and all hope
14 of survivability, and, as far as I was concerned, there's no
15 reason to say people are surviving or not especially when he
16 told me that somebody who he got out of the pipe spoke to
17 other people.

18 Q. Commander, we got that. That view that you formed, you put it
19 into your reports to your Chief of Operations and Chief of
20 Defence Staff?

21 A. No, Sir.

22 Q. So you kept that view to yourself?

23 A. I'm not sure what you're asking.

24 Q. The view that you told me you formed about the likelihood of
25 the men's survival, you told me you formed view, huh? What
26 you did with it? You didn't tell it to Mr. Piper. I'm just asking
27 you if you communicated it to your Chief of Defence Staff or

1 your Chief of Operations?

2 A. And I just need you to know that I said something to Mr. Piper
3 about that view.

4 Q. You told—no, you said you told Mr. Piper if he was going to
5 flush and all of that, he's going to extinguish. The view that
6 you formed, did you tell it to your Chief of Defence Staff or
7 your Chief of Operations?

8 A. Sir, I'm not sure if you understand what I've been trying to
9 explain.

10 Q. No, all I asked you the view—

11 A. The answer to that question is no.

12 Q. Right, okay. So it's not in the document that we expect to see
13 shortly?

14 A. No.

15 Q. Right. You see, we are instructed and Mr. Piper said that he
16 had that conversation with you as you were referred to in
17 paragraph 66. You are the one who spoke about recovery. And
18 you deny that, right? Let's get it on the record. You deny that
19 you had that conversation?

20 A. I said that before. I am saying it again.

21 Q. Did you not also have a conversation at a family meeting
22 session at another location at Paria [*Inaudible*]

23 A. With who, Sir?

24 Q. The club, the staff club office, did you go there, staff club
25 building?

26 A. Yes, Sir.

27 Q. Right. And you spoke to Mr. Mushtaq Mohammed?

1 A. I was introduced to him.

2 Q. I didn't ask you if you were introduced to him. Did you speak
3 with him?

4 A. No, Sir, after we were introduced.

5 Q. Because I am instructed that you said to him that he should
6 have mentioned recovery to the families.

7 A. That is inaccurate, Sir.

8 Q. Weren't the families there at that meeting that you attended
9 later in the afternoon on the Saturday?

10 A. I think there was a meeting with the family, Sir.

11 Q. You think? You were there. Weren't you?

12 A. There was a meeting of the families, yes, Sir.

13 Q. Did Mr. Mushtaq speak at that meeting?

14 A. I spoke to him after that meeting.

15 Q. No, did Mr. Mushtaq Mohammed speak at that meeting?

16 A. I, I don't know, Sir.

17 Q. How you mean you don't know?

18 A. I can't recall.

19 Q. Commander, you must do better than that. You recall a very
20 detailed conversation with Mr. Piper. You cannot remember—
21 all right, let's back up. How you came to go to the club, the
22 club, staff club house?

23 A. I was told by—we had military persons on the Petrotrin
24 compound that are assisting with, um, security of different
25 things, and I was told by a member of the, er, that military
26 contingent, that the Minister was about to come on the
27 compound.

1 Q. Uh-huh.

2 A. And that he was coming to a meeting.

3 Q. Yes.

4 A. So then I went—I said well where is the meeting?

5 Q. Yes.

6 A. He indicated it was the staff club.

7 Q. Right. When—

8 A. I asked them what security arrangements they had in place.

9 They said that he was coming with his detail and the elements
10 of the Defence Force that were already on the compound would
11 also be there.

12 Q. Who you had this conversation with?

13 A. One of the members of the support team.

14 Q. You can't recall who it is by name, can you?

15 A. I can't recall at this time.

16 Q. Right. So you went across to the clubhouse, the staff club?

17 A. I wanted to ensure that the Minister's arrival was safe.

18 Q. Well the Minister moves heavy so he doesn't need your—well,
19 that's aside. He moves heavy so he doesn't need your
20 intervention, but, you went to the clubhouse. When you got
21 there what happened?

22 A. When I got there I saw that the Minister arrived and there was a
23 meeting that took place inside there.

24 Q. He arrived before you or you arrived before him?

25 A. I arrived before him.

26 Q. Right. And at what stage were you introduced to Mr. Mushtaq
27 Mohammed.

- 1 A. When Minister left.
- 2 Q. All right. And that's after Mr. Mushtaq Mohammed spoke?
- 3 A. [*No audible response*]
- 4 Q. That is a yes?
- 5 A. That's a question, Sir?
- 6 Q. Yes. That was after Mr. Mohammed spoke?
- 7 A. That was after the meeting. I'm not sure if he spoke at the
- 8 meeting.
- 9 Q. But you were present throughout the meeting.
- 10 A. I wasn't present throughout the meeting.
- 11 Q. But you say you got there before the Minister.
- 12 A. I got there before the Minister.
- 13 Q. And you were there up to when the Minister left.
- 14 A. I was not in the room where the meeting was.
- 15 Q. Where were you?
- 16 A. There's a anteroom just outside.
- 17 Q. Mr., um, Mr.—commander, let me give you an opportunity.
- 18 We have a photo of the Minister speaking and you stand up
- 19 behind him.
- 20 A. [*Nodding*] Yes, I was there when the—
- 21 Q. In the room. So don't tell me you were in any side room.
- 22 A. No, I'm saying that—you asked me about Mr. Mushtaq. I'm
- 23 not sure if—
- 24 Q. No, no, no; what you mean you're not—
- 25 A. —he spoke—
- 26 Q. —sure?
- 27 A. —at the meeting.

1 Q. But you said you were introduced to him when the meeting
2 finished?

3 A. Yes, yes, Sir.

4 Q. Right. And Mr. Mushtaq spoke before the Minister or after the
5 Minister?

6 A. I did not—Sir, I was in and out of the room.

7 Q. What do you mean in and out of the room whilst the Minister
8 speaking?

9 A. Well not only when the Minister was speaking, Sir.

10 Q. What were you doing in and out of the room?

11 A. I'm not sure I understand the question, Sir. What does the—

12 Q. Simple. What were you doing in and out of the room?

13 A. Went out the room, checked to see how things were looking
14 outside the room in terms of the security, came back in
15 periodically.

16 Q. It's not for me but it's for the Chairman. I ain't believe you.
17 Who introduced you to Mr. Mushtaq Mohammed?

18 A. I think, I think it was Mr. Piper. I can't be sure. I think it's Mr.
19 Piper.

20 Q. But I am instructed I'm putting to you that you said to Mr.
21 Mohammed that he ought to have mentioned recovery to the
22 families. You're doubting that too?

23 A. Yes.

24 Q. So after they introduced you to Mr. Mohammed, you just had
25 no conversation with him, you left?

26 A. Did I leave?

27 Q. Yes.

1 A. Yes, Sir.

2 Q. He was introduced to you as whom?

3 A. I think was the Manager or the Managing Director.

4 Q. Of?

5 A. Of Paria.

6 Q. And after that, that was it? “Nice to meet you, Mr.
7 Mohammed. I am Commander Maharaj”, and that’s it?

8 A. No, it wasn’t a meeting.

9 Q. You all didn’t discuss the event, the men, survival, anything
10 like that?

11 A. No, Sir.

12 Q. So it was just a social introduction and that’s it?

13 A. Yes, Sir. I came to get the update from Mr. Piper which I did.

14 Q. I’m putting to you that you’re not speaking the truth. Accept it
15 or deny it, because Mr. Piper, Mr. Mushtaq Mohammed will be
16 coming to the box. I’m putting to you, you’re not speaking the
17 truth.

18 A. Sir, I can’t tell you what to put.

19 Q. No, you could tell me is the truth you’re speaking. That’s what
20 you could tell me, it was—

21 A. Sir, I am telling the truth.

22 Q. Yes.

23 A. I swore to tell the truth, that is the truth.

24 Q. Now that I put them words in your mouth, you’re speaking the
25 truth.

26 **Mr. Peterson SC:** Mr. Chairman, no further questions.

27 **Mr. Chairman:** Mr. Maharaj?

1 **Mr. Maharaj SC:** I have no re-examination.

2 **Mr. Chairman:** Okay. Thank you very much for coming. I
3 hope it hasn't been wholly uncomfortable sitting down but
4 thank you very much for coming.

5 **Lt. Commander Maharaj:** Sir.

6 **Mr. Chairman:** Right, you may go. Just leave that there,
7 that's fine. Just leave it there. Thank you very much. I think
8 someone will give you back your documents. If you go out
9 with the clerk, she'll give you the documents that you came
10 with, all right, to make sure you take them with you and we'll
11 have a copy of just those parts that I said. Thank you very
12 much. Right.

13 [*Lieutenant Commander Michael Maharaj leaves Enquiry*
14 *room*]

15 **Mr. Maharaj SC:** Mr. Chairman, the next witness is leading
16 seaman Andre Leidgewood.

17 **Mr. Chairman:** Right.

18 **Mr. Maharaj SC:** What happened is that, um, we had asked
19 the Chief of Defence Force to provide statements and they
20 provided one for Mr. Hargreaves, and then we had seen the
21 name of Mr. Leidgewood mentioned in some other statements
22 given by the fire officers, and we summoned him to appear.

23 **Mr. Chairman:** Yes. Mr. Maharaj was saying that he was
24 never asked to provide a statement. Wait there a moment,
25 please, Mr. Leidgewood. Mr. Maharaj was saying he was never
26 asked to provide a statement. As I understand it, the command
27 was asked to get them all to write their statements.

1 **Mr. Maharaj SC:** Yes.

2 **Mr. Chairman:** That never happened and that was why we
3 felt it necessary to send a witness summons for them to attend.

4 **Mr. Maharaj SC:** Yes, Sir.

5 **Mr. Chairman:** And they had every opportunity thereafter to
6 provide a witness sum—statement, and chose not to.

7 **Mr. Maharaj SC:** No.

8 **Mr. Chairman:** All right, thank you very much. So, Mr.
9 Ledgerwood, am I pronouncing that correctly?

10 **Mr. Maharaj SC:** Mr. Ledgerwood [*Phonetic*].

11 **Mr. Chairman:** Ledgerwood [*Phonetic*], forgive me. Mr.
12 Leidgewood [*Phonetic*] If there was a way of getting it wrong
13 you can be assured that I would have been the one to do so, so,
14 forgive me, Mr. Leidgewood, um—

15 [*Mr. Andre Leidgewood sworn*]

16 **Mr. Leidgewood:** I, Andre Leidgewood, solemnly swear that
17 the evidence I shall give to the Commission in this case shall be
18 the truth, the whole truth and nothing but the truth.

19 **Mr. Chairman:** Yes, thank you for coming, Mr. Leidgewood.
20 Mr. Maharaj, who's standing up in front of you at the moment,
21 is going to ask you a number of questions, all right, and then a
22 number of other lawyers who are here may have questions for
23 you as well, all right? We expect to have your evidence dealt
24 with before lunch, all right, so you'll be able to go. Thank you
25 very much.

26 **Examination By Mr. Maharaj SC:**

27 Q. Mr. Leidgewood I just want to ask you a few questions, so see

1 if you could help us, right?

2 A. Okay.

3 Q. You remember the 25th of February this year?

4 A. I remember.

5 Q. And you—sometime that day you were at berth 6 of Paria?

6 A. Yes.

7 Q. And what were you doing—around what time you arrived
8 there?

9 A. Um, I would have received a call from—I was on duty that day
10 at Staubles Bay, Chaguaramas.

11 Q. As part of the, as part of the coast guard?

12 A. Yes, as part of the coast guard.

13 Q. Yes.

14 A. So I would have received a call to go to render assistance to a
15 incident that took place at the Paria platform. That would have
16 been around 16:00 hours, so I left, I got down there probably
17 like around 45 minutes later. The call I got was that, um, divers
18 went under the water and they didn't come back up so they
19 called coast guard to render assistance. So I went down with
20 me and my crew to make an appraisal of the situation and see
21 how best we could assist.

22 **12.01 p.m.**

23 Q. You were the leader in charge of the group?

24 A. I was the coxswain on the day. The coxswain is a term used to
25 describe the person who is in charge of the small fast patrol
26 craft, and I was the coxswain that day, and I had a crew under
27 my charge.

1 **Mr. Chairman:** Right. Can I just—

2 **Examination By Mr. Chairman:**

3 Q. Help me to understand how it works. Different coast guard
4 work in different ways. So if I want the coast guard, what do I
5 do? What do I have to—how do I get the coast guard?

6 A. You have to call the coast guard. You will call the Operations
7 Department or you call the—the number that you have for coast
8 guard there is a department that answers the call and—

9 Q. You don't just dial 911?

10 A. No. It's a coast guard number to call.

11 Q. Right. So it's not an emergency number like you would for the
12 police or—

13 A. I think they have an emergency number, but it's not like 911
14 or—

15 Q. It's a different one?

16 A. Yes.

17 Q. What is it?

18 A. It's 800TTCG.

19 Q. Say again?

20 A. 800TTCG.

21 Q. TTCG?

22 A. Yeah.

23 Q. Oh, match it up with the letters on the phone. Right.

24 A. Yes.

25 Q. 800 and then TTCG.

26 A. Or 634-TTCG. Yeah.

27 Q. All right. Thank you. And so, I call that number and say I need

1 the coast guard; there's an emergency situation or whatever it
2 is. Yes?

3 A. Yes.

4 Q. And then you respond to that. Do you?

5 A. Yes.

6 Q. Somebody tells you?

7 A. Yes. I get instructions from the senior officers on the day
8 relative to the information they would have received and they
9 would have dispatched to me on what I'm required to do.

10 Q. Got you. And were you at sea already on that day?

11 A. No, I wasn't. I was on the base.

12 Q. You were on shore?

13 A. Yes.

14 Q. Right. So you had to launch the boat and off you go?

15 A. Yeah.

16 Q. And how far away is that? Forgive me for asking these
17 questions. Everybody else here knows all of the answers to
18 that, but I don't.

19 A. This could have been about 13 nautical miles from—

20 Q. Thirteen nautical miles?

21 A. Yeah, from Staubles.

22 Q. Fifteen miles to the ordinary man, roughly, a bit less, perhaps.
23 That sort of distance. Yes?

24 A. Yeah.

25 Q. Right. And then how long would it take you to cover that sort
26 of distance?

27 A. About 45, 50 minutes.

1 Q. Fifty minutes?

2 A. Yeah.

3 Q. What? To go 15 miles?

4 A. On sea, yeah.

5 Q. All right. So that's the length of time it will amount; 50
6 minutes or so to get from where you were to the—

7 A. Yeah.

8 **Mr. Chairman:** Now I understand. Thank you very much.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. So around what time you reached there? Around five?

11 A. Around five, yeah.

12 Q. Five. And who instructed you? You remember who was the
13 superior officer who instructed you to go there?

14 A. I can't remember who was the duty operations officer on the
15 day, but, um—

16 Q. And am I correct in saying that your instructions were included
17 to go to assist in a rescue?

18 A. Yes.

19 Q. And did they tell you, from the instructions you got, where the
20 persons who had to be rescued were?

21 A. The information I got initially was that, yeah, persons went
22 under the water and they did not come back up.

23 Q. Oh, I see. So as far as you were concerned, when you left the
24 coast guard facilities you were going to assist in a rescue in
25 open waters?

26 A. Yes, that's initially. Is only when I got down there I realize
27 what it really was.

1 Q. So when you got down there to Paria, you then found out that it
2 was a rescue from within a pipeline?

3 A. Yes.

4 **Examination By Mr. Chairman:**

5 Q. How many of you were there?

6 A. It was me and five on the vessel.

7 Q. So six all together?

8 A. Yes.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. Right. When you got down there at Paria, did anyone from
11 Paria meet you and brief you?

12 A. Yes. I went alongside the platform. There was somebody in
13 charge of the platform that day—I can't remember his name—
14 and I got off and I spoke to him and he told me exactly what it
15 was happening—what had happened.

16 Q. Okay. Did you also—well, about how many persons from
17 Paria you saw there, if you remember—about?

18 A. At that time it had, um—on the platform itself could have been
19 about two or three people I saw. I spoke to one. But about two
20 or three people I saw at the time.

21 Q. And did you also observe persons from a firm called LMCS
22 who are divers?

23 A. Not initially but afterwards, yes.

24 Q. Afterwards. About how many persons from LMCS you saw?
25 Could you remember?

26 A. I can't remember.

27 Q. But the persons from LMCS, were they divers?

1 A. Yeah, they were divers; they were divers yeah.

2 Q. And were they diving in the water at the time when you went
3 there?

4 A. At the time, I think it had there; it had someone in the water at
5 the time. Yes.

6 Q. But can you tell us if they were divers from LMCS?

7 A. I can't.

8 Q. You can't say?

9 A. I can't say if they were from LMCS.

10 Q. Did you see any divers—well, did you know whether there
11 were divers from Paria?

12 A. Nah, I don't know where the divers were from.

13 Q. Okay. So you arrived there at around five?

14 A. Yes.

15 Q. And how long you stayed there?

16 A. I was there for about an hour and a half initially. Yeah.

17 Q. About an hour and a half.

18 **Mr. Chairman:** Initially.

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. Initially. Well, what happened after the hour and a half?

21 A. Right. Well, while I was there, I would have called back to
22 base to inform them of what actually happened. So I was there
23 on standby for them to give me back instructions. I believe
24 they were organizing a dive team to come down.

25 Q. Okay.

26 A. So I was there waiting for them to let me know when to come
27 to get them. While I was there, I was trying to render any

1 assistance I could.

2 Q. But you had a dive team there?

3 A. No, I didn't have a dive team.

4 Q. Oh, you didn't have divers with you?

5 A. I had one diver.

6 Q. One diver. And was that a scuba? That diver was scuba or
7 commercial diver?

8 A. No, not commercial, he was from coast guard; it was scuba.

9 Q. coast guard?

10 A. Yeah.

11 Q. So when you got there and you realized that the rescue was for
12 men who were in a pipeline—

13 A. Yes.

14 Q. —what was your reaction?

15 A. Well, my reaction—I was shocked initially, but I couldn't make
16 an assessment of the dive that had to take place or any rescue
17 operation because I don't specify in diving. So the diver I had
18 on board, he made his assessment and he said he's unable to
19 attempt any rescue. And that is when I would have called back
20 to my base for them to be aware of what's happening and for
21 them to make any further recommendations.

22 Q. But did you communicate what you decided to Paria officials or
23 to LMCS officials?

24 A. Yeah. We told the person on the platform at the time.

25 Q. And you knew that person was from Paria?

26 A. Well, he was on the platform. He said he was the supervisor,
27 so—

1 Q. He was the supervisor?

2 A. Yeah.

3 Q. And did you tell the other persons who were divers?

4 A. No, we didn't communicate with any other divers at the time.

5 Q. Okay. Whilst you were there, you knew that one of the divers
6 who were in the pipeline was—he came out; he was rescued?

7 A. Yeah, I was there while the one came out. Yes.

8 Q. And what did you see?

9 A. When he came out he was covered in oil. You could have only
10 seen his eyes when he opened them and his teeth in his mouth.
11 The—they had someone come to take him to land and they
12 rushed him to hospital.

13 Q. But from what you observed there and your presence there,
14 when he came out, did you know whether the persons who
15 helped him were LMCS divers?

16 A. I can't say. While I was there, I did, however—I was trying to
17 assist, as I said before. So it had times that I would leave the
18 platform and go across to the jetty. About two or three times I
19 did that. Once was to pick up divers from LMCS; once was to
20 pick up two other technicians; and then one diver later on
21 before I left to come back up for the dive team. And I brought
22 them across to the platform for them to do what—well,
23 wha'ever they came to do.

24 **Examination By Mr. Chairman:**

25 Q. So you took your boat to the jetty?

26 A. Yeah.

27 Q. And collect other people?

1 A. At one time a boat had already left the jetty, but it was a bit
2 slow. So my boat being faster to hasten the process, I went
3 across to the boat, they come over on my boat, and I brought
4 them back across.

5 Q. Right. So because you had a quicker boat you picked them up
6 at sea?

7 A. Yes, because I was trying to help.

8 **Mr. Chairman:** I got it, got it.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. And how many persons you picked up?

11 A. First was two, I believe. Then, again, was two other persons,
12 and then the last time was one person.

13 Q. And these were divers.

14 A. Yes.

15 Q. And you saw them dive subsequent to that?

16 A. Yes, I believe so.

17 Q. Yes. Now, did you know the names of anyone of these
18 persons?

19 A. I can't remember.

20 Q. You can't remember. Whilst you were there, did you see
21 anyone dive in the pipeline and came back out?

22 A. Yeah. While I was there, I didn't see how they were getting
23 into the pipeline. But while I was there, it had a point where we
24 heard shouting coming from the pipe, and dah is when, well,
25 they started to be a little more urgent. And ah think dah is
26 when they—someone went into the pipe and eventually they
27 came out with the survivor.

1 Q. With the survivor?

2 A. Yes.

3 Q. But after that, did you see anyone go back into—do you know
4 whether anyone went back into the pipeline?

5 A. I know—it always seemed to have a diver in the water at any
6 point in time it looked like. So I don't know when they would
7 actually go under and try to go into the pipe. I don't know. But
8 it always had divers, more or less, in the water.

9 Q. You remember a name called Michael Kurban?

10 A. I can't remember, no.

11 Q. You can't remember any of the names? Okay. Now, how long
12 you have been in the coast guard?

13 A. Sixteen years.

14 Q. Sixteen years. So would I be correct in saying that the
15 members of the coast guard who are divers are not trained to
16 dive in a pipeline?

17 A. I cannot confirm that. I don't know the training that divers
18 receive while doing their diving training. I have never done it.
19 I don't specialize as a diver.

20 Q. Oh, you're not—sorry.

21 A. No. So I've never done the diving course. So I don't know
22 what—

23 Q. So what position you occupy in the coast guard?

24 A. I am a Seaman. So I am—as I said, I'm a coxswain.

25 Q. So excuse my ignorance. You are a seaman but not a diver?

26 A. Right. So the coast guard, there are different—

27 **Mr. Chairman:** Can you swim?

1 **Mr. Leidgewood:** Uh?

2 **Mr. Chairman:** Can you swim?

3 **Mr. Leidgewood:** Yes, I can swim.

4 **Mr. Chairman:** I just thought I'd check.

5 **Mr. Leidgewood:** So there are different branches in the coast
6 guard. There is Seamen; there is technicians which cover
7 welders, mechanics, electricians. There's writers who are more
8 clerical. However, the seamen, when you come in as a Seaman,
9 it's a broad spectrum. So as a seaman you could do training
10 while in the coast guard to specialize in a certain field. So you
11 could do the diving course and you become a diver; work in the
12 Diving Department. I never did the diving course. I am a
13 medic and a physical training instructor. So I did those two
14 courses while in the coast guard. So I specialize in that.
15 Otherwise, I'm a seaman first so I operate as a coxswain.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. Whilst—

18 **Mr. Chairman:** That's like a captain, is it?

19 **Mr. Leidgewood:** Of the small boat. I'm in charge of the
20 small, fast boat.

21 **Mr. Chairman:** Of a small, fast boat. Right, gotcha.

22 **Continued Examination By Mr. Maharaj SC:**

23 Q. Okay. So whilst you were there, and you had seen the survivor
24 came out of the pipeline, how long after the survivor came out
25 of the pipeline that you remained there?

26 A. I can't remember. I can't give a—

27 Q. But there came a time when you handed over to somebody

1 else?

2 A. I didn't hand over down there at the time. Only time I handed
3 over is when I went back up for the dive team and came back
4 down with them, well, the dive team—the officer in charge
5 was—well, he was in charge.

6 Q. Okay. So help us then. So you left the scene at some stage and
7 you went back up to get the dive team?

8 A. Yes.

9 Q. Around what time you left the area?

10 A. Could have been around 6.30.

11 Q. Six-thirty And when you came back with—you came back
12 with the dive team?

13 A. Yes.

14 Q. And was at that time you had Lt. Hargreaves?

15 A. Yes.

16 Q. I see. And he was then in charge?

17 A. Yes.

18 Q. Right. When Lt. Hargreaves came and you came with the dive
19 team, did you see persons diving in the water?

20 A. I believe—yeah. I believe there was people in the water, yes.

21 Q. And how long did you remain with Lt. Hargreaves? Did you
22 remain during the period of time he was there?

23 A. Yeah, I was there for the entire time.

24 Q. Oh, good. And whilst you were there with him, would it be
25 correct to say that divers were trying to go into the pipe, to dive
26 into the pipe, and at first the coast guard were allowing them to
27 do it and then they prevented them from doing it?

1 A. All right. Um, at no time at all the coast guard prevented
2 anyone from diving.

3 Q. At No time?

4 A. I can't recall that at all?

5 **Examination By Mr. Chairman:**

6 Q. Could we be clear, please? There's a difference between
7 making an assertion "at no time did they ever prevent anyone"
8 from making an assertion that "I don't recall seeing anyone do
9 that" or "I didn't do that". What is it? Can you say whether or
10 not any member of the coast guard did prevent anyone from
11 going in—

12 A. No, no; no one from the coast guard prevented anyone from
13 diving.

14 Q. Right. Well, you weren't there for the better part of two hours,
15 I'm assuming, because if you had to go back to the coast guard
16 operations, pick up your divers, Mr. Hargreaves, and all the
17 equipment presumably, and then bring them back again?

18 A. Yeah.

19 Q. You told us the first time that took 50 minutes to make that
20 journey one way. Correct?

21 A. Yes.

22 Q. So it's not unreasonable to assume you took a couple of hours
23 to do that, is it?

24 A. Yes.

25 Q. There and back. So did you leave the coast guard in situ when
26 you left?

27 A. No. When I left I went with everyone who was with me.

1 Q. There were no coast guards there at all for that two—

2 A. There was a big vessel down there at the time, but they were
3 not—they couldn't—the size of that vessel, they could not go
4 into the platform.

5 Q. They couldn't go into the platform?

6 A. No.

7 Q. While you were there?

8 A. No.

9 Q. Or at all?

10 A. No, they couldn't go at all.

11 Q. Because?

12 A. So they were just off providing support.

13 Q. Why couldn't they go in?

14 A. The vessel is too big.

15 Q. Too big?

16 A. Yeah.

17 Q. I thought this took tankers. But never mind. This coast guard
18 boat couldn't come in. Correct? This is a different coast guard
19 boat to yours altogether?

20 A. Yes.

21 Q. It's a much bigger—

22 A. It is different. It's a bigger craft.

23 Q. And different people on it?

24 A. Yeah.

25 Q. Right. So they were standing offshore, were they?

26 A. Yeah, they were standing off—

27 Q. Right. I mean, did they drop anchor or what was—

- 1 A. I don't know.
- 2 Q. You don't know. All right. I mean were they static or were
3 they going round and round?
- 4 A. No, they weren't static. They were moving around.
- 5 Q. Moving around.
- 6 A. I don't think they did drop anchor.
- 7 Q. All right. And so, you left for this period of a couple of hours;
8 you didn't leave any of your people behind?
- 9 A. No, not the people I went with, no.
- 10 Q. Right. So for a period of two hours at any rate, as far as you're
11 aware, there were no coast guards on the berth at all?
- 12 A. As far as I'm aware, yeah.
- 13 Q. Okay. And at no time while you were there as coxswain for
14 your small boat, did you see any of your colleagues or yourself
15 prevent anyone from going in the water?
- 16 A. No time at all.
- 17 Q. One other matter, please. Did you—were any of you armed?
- 18 A. Yes, the crew was armed.
- 19 Q. All the time?
- 20 A. Yes.
- 21 Q. Right. So you have sidearms, do you?
- 22 A. Sidearms?
- 23 Q. Do you have some sort of automatic weapon?
- 24 A. Yes, primary and a secondary weapon, yeah.
- 25 Q. Right. So the primary weapon is a—
- 26 A. A rifle, yes.
- 27 Q. A rifle or an automatic weapon?

1 A. G36 rifle—automatic rifle, yeah.

2 Q. An automatic rifle. Short in length?

3 A. Not really. About this [*Mr. Leidgewood demonstrates*]

4 Q. Okay. And so that's standard procedure that the coast guard
5 carry these two weapons?

6 A. Yes.

7 Q. So you and your colleagues would have been carrying those
8 weapons whilst you were tending upon the scene. Is that right?

9 A. Yes.

10 Q. Okay. And can I take it that at no time did you feel it necessary
11 to pull one of those weapons out and point them at anyone?

12 A. No, at no time at all—

13 Q. This wasn't that kind of situation, was it?

14 A. No, no, definitely wasn't.

15 **Mr. Chairman:** All right. Thank you very much.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. So when you were there leading the team before you went back
18 to get the persons who were the divers, the coast guard had
19 weapons?

20 A. Yeah, my team had weapons.

21 Q. Your team had weapons?

22 A. Yes.

23 Q. And when you are on duty, you'd be holding the weapons but
24 pointing it down. Not so?

25 A. No. The weapons would be slinged across the body.

26 Q. So it's sling across the body?

27 A. Yes.

1 Q. Okay. And when you came back with Mr. Hargreaves, about
2 how many members were in the group that came back with
3 you?

4 A. I think the dive team was about 10. It was 10 of them.

5 Q. About 10?

6 A. Yeah.

7 Q. And did you have any other persons with you or just the dive
8 team?

9 A. Yeah. I had two other people from my crew. So I left back
10 some of who was initially on my crew to make room for the 10
11 divers.

12 Q. And so, when you came back with the divers it meant that the
13 divers had weapons with them also?

14 A. No, the divers had no weapons.

15 Q. So when you came back with the divers, they didn't have
16 weapons?

17 A. No, they didn't have weapons.

18 Q. So who had weapons on that occasion?

19 A. Just the two men on my crew.

20 Q. And who were they? And what about Mr. Hargreaves?

21 A. Mr. Hargreaves didn't have a weapon.

22 Q. He didn't have a weapon.

23 **Examination By Mr. Chairman:**

24 Q. So just three of you, basically; you and your two—

25 A. I didn't have a weapon either.

26 Q. You didn't bring one?

27 A. No, I didn't.

1 Q. Is that normal?

2 A. Yes. As the coxswain, more than likely whenever I'm at sea—

3 Q. Your hands are full?

4 A. Yeah. I have to drive the boat either—if I'm out there on some
5 suspect vessel, if they open fire on us, I can't drive and fire
6 back at them.

7 Q. No.

8 A. I have to either make evasive manoeuvres or some sort of
9 attacking manoeuvres.

10 Q. I gotcha. So it's just the two colleagues of yours that were on
11 the return journey who were armed?

12 A. Yeah.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. Now, I just want to get it clear from you, and I want to give you
15 the opportunity to—so you're telling us that after you came
16 back—you already told us that before you came back, at no
17 time you saw any of your coast guard or you preventing anyone
18 from diving?

19 A. No.

20 Q. When you came back with Mr. Hargreaves and you remained
21 there until you all left—you all left around what time?

22 A. It was after midnight definitely.

23 Q. After midnight?

24 A. Could be after one, yeah.

25 Q. So from the time Mr. Hargreaves came with you until you all
26 left at around midnight, did you see at any time the coast guard
27 prevented persons from diving?

1 A. No, I never saw that.

2 Q. Did you hear any instructions given to the divers from anyone
3 in the coast guard during that period of time for them not to
4 dive?

5 A. No, I never heard that.

6 Q. And you're sure you're speaking the truth?

7 A. I'm telling the truth.

8 Q. Okay. Did you at any time, whilst you were there the first time
9 or the second time, you got any briefing from a lady called
10 Catherine Balkissoon?

11 A. I can't remember. There was only one time I could remember
12 when I was there the first time, someone on the platform, I
13 can't remember who it was, he was on the phone, and he
14 shouted out to us to ask who is the senior person here at the
15 time. And my crew heard him and they identified it was me,
16 and he said someone wants to speak to me on the phone. I took
17 the phone, I answered the call, I can't remember who it was, but
18 what they asked of me was to take charge of the rescue
19 operations there. And I indicated to him that I can't do that as I
20 don't specify in that.

21 **Examination By Mr. Chairman:**

22 Q. Right. I want that broken down a little, please. So you spoke to
23 somebody; wasn't Ms. Balkissoon.

24 A. I can't remember—

25 Q. I think it was only one lady on that—

26 A. It on the phone. It was over the phone.

27 Q. Yes. Just a minute. Someone spoke to you while you were on

1 the berth?

2 A. Yes.

3 Q. To ask you who is in charge?

4 A. Yes.

5 Q. And you told them you were in charge. This is before Mr.
6 Hargreaves arrives or any of the dive team. This is the earlier
7 part. All right?

8 A. Yeah.

9 Q. So it's only your boat there. The other one is standing offshore.

10 A. Yeah.

11 Q. All right. And you're asked, and so you told them it was you,
12 did you?

13 A. I was the on-scene commander at the time, yes.

14 Q. Yeah; no, no, I appreciate that. So you're saying, well, I'm in
15 charge.

16 A. Yeah.

17 Q. Did you speak to someone then on the telephone?

18 A. On the phone, yes.

19 Q. Who did you speak to?

20 A. I can't remember who it was. I remember—

21 Q. Does the name Collin Piper ring any bells with you?

22 A. I can't remember.

23 Q. Can't remember. Well, was the person who spoke to you, did
24 they claim to be in charge on shore? Did they say who they
25 were?

26 A. I think they from Paria, yeah.

27 Q. Right. So somebody from Paria—

1 A. I think so.

2 Q. —who was in authority, whoever it might have been. All right?

3 A. Yes.

4 Q. And they spoke to you and said what?

5 A. They asked me to take charge of the rescue operations.

6 Q. They asked you if you would take charge of the rescue
7 operation?

8 A. They asked me to take charge.

9 Q. And what did you say?

10 A. I said I cannot take charge of the rescue operations because—

11 Q. Just a minute. And you said you cannot?

12 A. Yes.

13 Q. Because?

14 A. I'm not a diver. I'm not trained in diving in any capacity.

15 Q. Because you're not a diver?

16 A. Yeah.

17 Q. So how could you?

18 A. And I have to take instructions from the coast guard.

19 Q. And so, you take your instruction from the coast guard?

20 A. Yes.

21 Q. Did that person or any other person ask you to take charge of
22 security?

23 A. No.

24 Q. And in answer to questions from Mr. Maharaj you made it clear
25 that at no time at all did you ever, or any of your other
26 colleagues, prevent anyone from going in the water.

27 A. At no time at all.

1 Q. Right. And neither were you asked to do so.

2 A. No, never.

3 Q. Did you hear anyone giving instruction that the divers should
4 not go in the water?

5 A. I've never heard that, no.

6 Q. You never heard that?

7 A. No.

8 Q. So at no time when you were there you didn't hear that coming
9 from anyone not to go in the water?

10 A. No.

11 Q. No. All right.

12 **Mr. Chairman:** Thank you, Mr. Maharaj.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. So as far as you can tell us, whilst you were there, you did not
15 see anyone from Paria preventing persons from going into the
16 water?

17 A. I didn't see, no.

18 Q. And you, as far as you know, you and your colleagues did not
19 get any instructions from Paria to prevent persons from going
20 into the water?

21 A. No.

22 Q. And you're telling us here today that from the time you came
23 back with the dive team—

24 A. Yes.

25 Q. —until you left at around what time? Midnight you said?

26 A. It was after midnight. I can't recall the exact time right now.

27 Q. After midnight. During those hours?

1 A. Yeah.

2 Q. There were no instructions you heard from anyone to prevent
3 persons from going into the water?

4 A. I can't recall that, no.

5 Q. I'm sorry?

6 A. I can't remember that, no.

7 Q. You can't remember that. So is it that there may have been
8 instructions given and you heard it but you cannot remember it?

9 A. I, me, can't remember hearing anyone give any instructions like
10 that.

11 Q. You cannot remember?

12 A. Yes.

13 Q. Are you sure?

14 **Examination By Mr. Chairman:**

15 Q. This is the second time you've done that. There's a qualitative
16 difference between "I can't recall" or "I can't remember" from
17 saying "it did not happen". Do you follow what I mean? You
18 do follow what I mean, I'm sure?

19 A. As far as I know, no, that did not happen.

20 Q. You cannot now recall anyone saying to anybody else don't go
21 in the water or whatever it might have been?

22 A. No.

23 Q. No such instruction was ever given?

24 A. No.

25 Q. To your recollection or to your memory or at all?

26 A. To recollection and to memory is not the same?

27 Q. It is the same thing, exactly the same thing. I'm just using

1 another word for the same thing.

2 A. Okay.

3 Q. So either it's that or not at all. Either it did—I can say
4 positively it did not happen, or I can say it did not happen in my
5 presence, or you can say I do not recall that happening?

6 A. I do not recall that happening.

7 Q. Right. Thank you.

8 **Mr. Maharaj SC:** Much obliged. No further questions.

9 **Mr. Chairman:** Can I have a show of hands first before I
10 decide which order—right. Thank you very much. Mr.
11 Ramadhar first, then, please.

12 **Mr. Ramadhar:** Thank you very much, Chairman.

13 **Cross-Examination By Mr. Ramadhar:**

14 Q. Good morning, Sir.

15 A. Good morning.

16 Q. First of all, thank you for your service to our country, and on
17 that evening, the execution of your duty. Now, my name is
18 Prakash Ramadhar. I look after the interest of Yusuf Henry's
19 daughter and Mr. Kurban, his family. He's now deceased, of
20 course.

21 Now, you appreciate the environment you had gone to,
22 you went with the best of intentions. Isn't it?

23 A. Yes.

24 Q. Yes. But it was a noisy environment?

25 A. Not really, no.

26 Q. No? Well, good. There was a lot of movement to and fro with
27 different persons?

1 A. Yes.

2 Q. You were not focused on what other conversations were taking
3 place. You were focused on what you thought you could
4 possibly do to help. Isn't that accurate?

5 A. Yes.

6 Q. Yes. You had gone there without knowing the full scope of
7 what had happened?

8 A. Yes.

9 Q. And you did the best you could with what you had?

10 A. Yes.

11 Q. Correct?

12 A. Yes.

13 Q. That included two other colleagues with machine guns, if I may
14 call it that?

15 A. Yes.

16 Q. Yes. And sidearms. You, of course, had a sidearm with you?

17 A. Yes. No, I did not.

18 Q. Oh, you didn't have any sidearm at all?

19 A. Yeah, I didn't.

20 Q. And, of course, you know, as you told, very colourfully—as
21 you told the Chairman that there may be occasions when the
22 coast guard will be under, basically fire or dealing with high
23 violent potential issues—

24 A. Yeah.

25 Q. —that you need to be able to manoeuvre. Correct?

26 A. Yes.

27 Q. And you're fully aware then of the power to use deadly force in

1 an encounter?

2 A. Yes.

3 Q. And, in fact, you are aware of the use of deadly force by the
4 coast guard just two weeks before?

5 A. Two weeks before?

6 Q. Yes. Shootings of a civilian on the open waters. You know of
7 that—a baby?

8 A. Oh, yes, yes.

9 Q. Of course. Now, you are a Trinidadian and a Tobagonian first
10 before you became a coastguardsman?

11 A. Yes.

12 Q. You love this country. Correct?

13 A. Yes.

14 Q. And you were appalled that a baby had to die in circumstances
15 as it happened. Correct?

16 A. Yes.

17 Q. Now, you knew that that made major news in the country.
18 Yes?

19 A. Yeah.

20 Q. Yes. So let's see where we at now. You've come down; you
21 got a call; you have arrived at Paria; you knew that the assets
22 there were Paria's. It wasn't open water. Is that correct?

23 A. Yes.

24 Q. You knew Paria would have been—being the assets of Paria, it
25 would have been under Paria's control. Correct?

26 A. Yes.

27 Q. And it is Paria who had sought the assistance of the coast guard,

1 isn't it?

2 A. I think so, yes.

3 Q. Yes, of course. And, certainly, as you've told all of us, no coast
4 guards man pointed any gun at anybody and say, "Get out the
5 water; nobody is to go back in"?

6 A. No.

7 Q. Right, of course. But you appreciate that you didn't hear, as
8 you told us before, all the conversations between other persons
9 or among other persons?

10 A. No, I didn't hear.

11 Q. No. You cannot tell us, or so, what Paria officials may have
12 told persons who were in the water?

13 A. No, I can't say.

14 Q. No. But you were there. Notwithstanding making a, what we
15 considered, possibly a reasonable decision you couldn't help
16 with the dive, because you didn't have the equipment?

17 A. No, I couldn't.

18 Q. But you were there still?

19 A. Yeah.

20 Q. And in some form or fashion in communication with Paria
21 officials. Yes?

22 A. Some form or fashion, I guess, yes.

23 Q. Yes. I'm not trying to trap you, you know. I'm sincere when I
24 told you thank you for what you did as best as you could. But
25 you understand the chain of command more than anybody else.
26 You're a military man. Yes?

27 A. Yes.

1 Q. What time did you leave the scene to go retrieve—to help bring
2 back divers? What time did you actually leave?

3 A. About 6.30, yeah.

4 Q. About 6.30?

5 A. Yeah.

6 Q. By which time you knew that someone had come out of the
7 pipe alive?

8 A. Yes.

9 Q. Yes. As a human being first, your anxiety was to try, okay, if
10 we could get the other guys?

11 A. Yes.

12 Q. Isn't that why you left to go and hasten bringing the other
13 divers?

14 A. Well, because I got an instruction to do so, yes.

15 Q. But you as a person, right, you mash the gas, X to board going
16 to get these guys, right?

17 A. Yes.

18 Q. To come back, yes. You do not know what happened, as the
19 Chairman indicated, during that, at least one hour before you
20 returned, in relation to other coastguardsmen from the big boat?

21 A. I can't. I was not there.

22 Q. No, of course, that's the point. But that big boat, like OPV
23 size?

24 A. Small. It's about 50 metres.

25 Q. 150 feet?

26 A. Fifty metres length, yeah.

27 Q. Right. About 151, 60. That had to do with dingy—what they

1 call the small boats that we used to put on them so they could
2 come in?

3 A. Yeah.

4 Q. What you call them? The big boats have smaller ones on them?

5 A. Yes.

6 Q. Service craft?

7 A. You could say a dingy, you could say an interceptor.

8 Q. An interceptor. Fast moving, isn't it?

9 A. Yeah.

10 Q. And that is used to bring sailors to and fro from wherever they
11 wish to have gone. Correct?

12 A. Yes, yes.

13 Q. So when you left that area, you do not know whom or how
14 many others may have come from that—shall I call it the larger
15 boat? What's the name of that big boat?

16 A. Um—

17 Q. We have a few, just a few.

18 A. I can't remember which one it was, no.

19 Q. But that is one of modern boats fully equipped as far as you're
20 aware. Correct? Uh?

21 A. Yeah; as far as aware, yeah.

22 Q. None of those had life-saving, lifelines on them to your
23 knowledge? Like air, airlines, and so?

24 A. Wha' you mean? Like diving equipment?

25 Q. Yes, yes, yes, yes, yes.

26 A. Yes, they supposed to be equipped with diving equipment,
27 yeah.

1 Q. There you go. So was then an enquiry made—and I'm not
2 blaming you; right? And again, I thank you. Any enquiry
3 made by any one there as to the capacity and what that boat was
4 furnished with, whether it could have assisted there and then?

5 A. I doh know.

6 Q. Mr. Hargreaves—what time did he arrive on the scene?

7 A. Um, we got back down there, um, it could probably be around
8 9.00 p.m.

9 Q. Around 9.00. And what time you said you left the scene?

10 A. 6.30.

11 Q. And the next time you returned, Mr. Hargreaves would have
12 been there?

13 A. Yeah.

14 Q. Yeah. So you're talking about 2.2 and a half hours in your
15 absence. Isn't it?

16 A. Could be about, yeah.

17 Q. Do you know the names of the other two of your colleagues
18 who were armed with machine guns and sidearms?

19 A. The other two—when I went back down, you mean?

20 Q. No. When you first went. Remember you said you had two
21 guys—

22 A. Yes.

23 Q. What do you call them in—

24 A. This is mih crew; the crew.

25 Q. Your crew; your crew. Do you know the names of your crew
26 members who had guns?

27 A. I can't remember their names right now but I have it on a—

1 Q. It happens, it happens. Do you know whether anybody took a
2 statement from them as to what they did or did not do or said?

3 A. I doh know. I doh think so.

4 Q. Here you go. So you can't speak to what they said or did?

5 A. I'm speaking for myself.

6 Q. No. Brother, once again, no trick question here. Straight as
7 you get Ramadhar; right? As straight as it is. You cannot say
8 with honesty what they said or did, because you were focused
9 on other things too, isn't it?

10 A. I was, but they're under my charge.

11 Q. Of course, of course, and congratulations. So Mr. Hargreaves
12 returns around nineish; around there, right? I'm not holding
13 you to the minute. He's what rank?

14 A. Lieutenant.

15 Q. Lieutenant?

16 A. Yeah.

17 Q. He's, I understand, in retirement now?

18 A. I've heard so, yes.

19 Q. Yes. You know how long after this incident he retired?

20 A. I don't know. No.

21 Q. Okay, no problem. So as you have indicated, as you say
22 command structure, and so, at that point in time in that area that
23 you had arrived at, Paria was the authority there? It was their
24 assets. Yes?

25 A. Yeah.

26 Q. As you have already told us, you do not know what Paria
27 officials would have told other persons?

1 A. No.

2 Q. No. You do know, as you've been telling us, that there were
3 persons, you know, in and out of the water while you were
4 there?

5 A. Yes.

6 Q. You personally did not attempt to stop anyone?

7 A. No.

8 Q. No. But did you become aware at any point that diving had
9 come to a screeching halt—efforts to dive?

10 A. At a point when they ended for the night, I believe, yeah.

11 Q. Who?

12 A. I don't know who ended the operation.

13 Q. No, but when he returned, was there any effort being made to
14 dive?

15 A. Yes.

16 Q. When he returned around nine?

17 A. Yeah, there were efforts.

18 Q. Who made efforts to dive?

19 A. I don't know who. I can't identify—

20 Q. Was it military men?

21 A. I know they were making assessments while they were there.
22 But I don't think they attempted to dive. No.

23 Q. There you go. Did you see anybody dive when you returned at
24 nine o'clock?

25 A. Yes. I remember it had some—two guys in some big suits with
26 some helmets and they went under the water and—but I don't
27 know who they were from, what company they were from, or

1 what.

2 Q. I see. Well, you do the best you could to help us. Now, when
3 you were on scene, when you had just arrived until you left,
4 your two armed colleagues were in the same area with Paria
5 personnel. Isn't that accurate?

6 A. They were on the boat with me.

7 Q. Yeah. So that they never left the boat?

8 A. Yes. The only time we left the boat is when we came off on the
9 platform when we had just reach to speak to the supervisor.

10 Q. There you go. Let's deal with that. I beg your pardon, I didn't
11 mean to interrupt you. But they did leave the boat together with
12 you?

13 A. Yes.

14 Q. So a fulsome? What? How many coastguardsmen now on the
15 platform?

16 A. It's about three of us up there.

17 Q. Three?

18 A. Yeah.

19 Q. And when you were on the platform, there were Paria personnel
20 in and around the area you were at?

21 A. Yes.

22 Q. Yes. Do you also see part of your duty, not just in terms of
23 rescue, but protection and carrying out instructions?

24 A. Yes.

25 Q. Yes. That includes carrying out instructions to protect Paria's
26 property?

27 A. No. The coast guard is not a private security firm.

1 [Laughter]

2 Q. I know that. It is not a private security; everybody laugh. And
3 hear this one now: It is the people of Trinidad and Tobago who
4 pays for it?

5 A. Yes.

6 Q. Correct. Therefore, it not being a private security, Paria's
7 assets fall as a company belonging to the people of Trinidad
8 and Tobago, isn't it?

9 A. Yes.

10 Q. Yes. And you appreciate that part of coast guard duty is to
11 protect public property?

12 A. Yes.

13 Q. Yeah. Paria has its own private security. You know that?

14 A. [No response]

15 Q. Do you know that?

16 A. I don't know.

17 Q. You don't know?

18 A. Probably.

19 Q. So as far as you are concerned, you were the only ones who had
20 the wherewithal to protect property on that evening?

21 A. I wasn't there to protect property.

22 Q. You were going well.

23 A. I was there to render assistance.

24 Q. Yes. And what assistance did you render?

25 A. I provided transport for the dive team.

26 Q. Right. And anything amounted to help save the lives of those
27 divers?

1 A. When the dive team got there, the senior diver who was Lt.
2 Hargreaves, he would have been in talks with whoever
3 representatives he met there. I had nothing to do with anything
4 they discussed.

5 Q. No, no, no. Once again, brother, I'm not here to blame you,
6 you know. Understand, we congratulate your efforts.
7 Hargreaves spoke to representatives of whom? Paria?

8 A. I don't know who he was speaking to.

9 Q. But they were in uniform, and so? What I mean, the PPEs, you
10 know, the jumpsuits, and so? Yeah?

11 A. There were some. There were others in regular clothing.

12 Q. Thank you very much. And you saw a woman there as you told
13 us?

14 A. I—

15 Q. You can't remember—

16 A. No, I never said that.

17 Q. You didn't say so. I beg your pardon.

18 A. No.

19 Q. You didn't see a woman there?

20 A. There were men and women there.

21 Q. How many women you thought you saw there?

22 A. I can't remember.

23 Q. The woman spoke to you at all?

24 A. I can't remember that, no.

25 Q. Did you speak to a woman there?

26 A. I can't remember, no.

27 Q. You can't remember. Well, you are the person coming in; you

1 are the coast guard. You're the cavalry arriving to save the day.
2 Who did you first think you needed to speak with upon your
3 arrival?

4 A. I said I went to the platform and I spoke to the man who
5 identified himself as the supervisor on the platform.

6 Q. Supervisor belonging to whom? Private security?

7 A. Paria, I believe.

8 Q. Yes. So having spoken to this supervisor, at no stage did you
9 get his name?

10 A. Yes, I got his name.

11 Q. What's his name?

12 A. I can't remember his name.

13 Q. You took a note anywhere?

14 A. Yes, it's written down.

15 Q. Where?

16 A. On the patrol report.

17 Q. On the?

18 A. A patrol report.

19 Q. A patrol report. Do you know whether that has been made
20 available to the Commissioner and his fantastic legal team?

21 A. I do not know.

22 Q. Do you think that would have been important in terms—well,
23 let me make it helpful. When was that report done?

24 A. The report is done after any run the interceptor makes. So
25 whenever we go out, we come back in, you have to—

26 Q. It's a log, isn't it?

27 A. Yes, it's in a log, yes.

1 Q. And you yourself made that log?

2 A. Yes.

3 Q. When did you make that log?

4 A. When we got back to base.

5 Q. What time would that have been?

6 A. It's on the patrol report.

7 Q. And who has access to that now?

8 A. coast guard operations.

9 Q. Who is head of coast guard today?

10 A. Who's head of coast guard today?

11 Q. Yeah.

12 A. The Acting Commanding Officer is Commander Isaac.

13 Q. Isaac. And who is the Chief of Defence Staff?

14 A. Um—

15 Q. All right, don't answer that. I know. You ought to—now, after
16 you made your entry into that log as you have just hinted to us,
17 the name of the person you spoke with or the names of persons
18 you spoke with would be entered there, wouldn't it?

19 A. Yes.

20 Q. And the instructions you may or may not have received from
21 persons on that. Is that accurate?

22 A. Yes.

23 Q. But to be fair to you, that wasn't your highest priority—the log?

24 A. The log is written up after you come back in.

25 Q. Right. But that is not the highest priority. As a seaman, as a
26 human being, as a Trinidadian and Tobagonian, were you not
27 very disappointed that no lives were retrieved under the care

1 and control of the coast guard?

2 A. If I was disappointed? I understood the situation and it seemed
3 that the coast guard couldn't do much to help.

4 Q. And you wanted to do more, isn't it? If you could have saved
5 them you would have, wouldn't you?

6 A. Yes, if I could have I would have, yes.

7 Q. And you are disappointed as a human being that, you know,
8 with what you had you couldn't do it. Isn't it?

9 A. I guess, I guess.

10 Q. No trick question there. But you knew that there were persons
11 who were there willing, able—willing, and able, and available
12 to do rescue. Correct?

13 A. I did not know that, no.

14 Q. You did not know that. So did you know that efforts were
15 being made by persons who were going into the water to try to
16 get to rescue persons?

17 A. Yes, I saw that. Yes.

18 Q. Would it shock you to learn that persons instructed that they
19 should not continue any effort to rescue?

20 A. I've been hearing that—that that is what happened.

21 Q. And you have reason to doubt that?

22 A. I don't know.

23 Q. You don't know. Exactly the point.

24 **Mr. Ramadhar:** Thank you so much, Commissioner.

25 **Mr. Chairman:** Once again, I'm a little disturbed to find out
26 that there's some log somewhere which might help us all
27 understand what was happening contemporaneously.

1 **Examination By Mr. Chairman:**

2 Q. You're telling me that there is a log available which would have
3 your notes of what happened on the night virtually
4 contemporaneous with the events?

5 A. Every time we go to sea, when you get back you have to do up
6 a what is called a patrol report.

7 Q. Well, doesn't surprise me in the least. What does surprise me is
8 that we've been asking the Trinidad and Tobago coast guard for
9 information about their involvement in this matter, particularly
10 given the nature of some of the allegations being made at this
11 Enquiry and before for material in relation to it. What do we
12 get from the Trinidad and Tobago coast guard? The statement
13 of Lieutenant Edric Hargreaves who has apparently retired.
14 We've had nothing from them at all. I'm not having a go at
15 you. Please, understand this. We've had nothing from them at
16 all. We have had to issue summons for people to attend, you
17 included. Did you get any instruction from Commander Isaac
18 to provide a statement to this Enquiry?

19 A. No, I didn't.

20 Q. When was the first time that you heard that you were supposed
21 to come along and give evidence?

22 A. It was about a week before the first day I was supposed to
23 come, which was the 21st November; about a week before or
24 actually a few days before—

25 Q. When you received the summons?

26 A. I got the summons.

27 Q. Yes. Because of the lack of response from the Trinidad and

1 Tobago coast guard?

2 A. I can't—

3 Q. It's not your fault, all right? It's not your fault. But it is, to say
4 the least, disappointing. I mean, are we serious about trying to
5 find out what happened?

6 **Mr. Chairman:** All right. Anyone else, please? Yes. Thank
7 you, Mr. Ramadhar. Now, we have Ms. Alfonso who's going
8 to ask you a few question on behalf of the Union. Can we try
9 and get this done before lunch, please?

10 **Ms. Alfonso:** Yes, certainly. Thank you, Mr. Chairman.

11 **Cross-Examination By Ms. Alfonso:**

12 Q. Good—I think it's afternoon now—good afternoon, leading
13 seaman Leidgewood. Have I pronounced it right?

14 A. Yes, you pronounced it right. Good afternoon.

15 Q. Leading seaman, could you tell us what kind of boat that you
16 would have left Staubles with on at about 16:00 hours—four
17 o'clock?

18 A. It's a fast patrol boat. So it's more or less a speedboat.

19 Q. Like a pirogue or something?

20 A. It's about 40 feet in length, so bigger than a pirogue.

21 Q. So like a big pirogue, kinda?

22 A. Yes.

23 Q. All right. Okay. And you said you received a call at four
24 o'clock in the afternoon. Whom did you receive that call from?

25 A. From my Operations Department. Whenever I'm working, is
26 they always call me to—whenever I have to go to sea, that is
27 where I get my instructions from.

1 Q. Okay. Is there a particular person in the Operations Department
2 that you receive that call from?

3 A. On every day there's a duty operations officer.

4 Q. On this day. I beg your pardon; my bad. On this day, the 25th
5 February?

6 A. There would have been a duty operations officer on the day,
7 yes.

8 Q. Okay. You recall who that person is?

9 A. I can't recall who that person is, no.

10 Q. Okay. So you received a call from whoever the duty officer
11 was on that day?

12 A. Not from him directly or her directly but from the department
13 that calls me to disseminate the information.

14 Q. Okay. From a person from the Operations Department?

15 A. Yes.

16 Q. But you can't recall that person?

17 A. No.

18 Q. Rank of that person?

19 A. No.

20 Q. Okay. And did that person who you can't recall give you any
21 instructions?

22 A. Yes. The instruction was to go to the Paria area. The
23 instruction was persons went under the water and they didn't
24 come back up. We need to go to render assistance.

25 Q. Okay. So your instructions was to travel to the site and to
26 render any assistance that you could?

27 A. Yes.

1 Q. Those were your instructions. As a Leading Seaman, you were
2 the senior rating on the 40-foot, something bigger than a
3 pirogue?

4 A. Yes.

5 Q. And you had five other persons with you or six other persons?

6 A. Five.

7 Q. Five others. So a crew of six all together?

8 A. Yes.

9 Q. So you made your way, you would have told the
10 Commissioner, down to Paria and you would have arrived
11 before five o'clock?

12 A. Yes.

13 Q. And when you arrived, did you go on the, I think crane barge
14 that belongs to LMCS?

15 A. On the what?

16 Q. Crane barge, a barge. Did you see a barge? Did you go on that
17 barge?

18 A. Yeah, there was a barge, yeah. No, I didn't go on the barge. I
19 went on the platform. There was a platform with a little kind of
20 jetty. I went alongside there and I went up on the platform and
21 spoke to the supervisor.

22 Q. Okay. And when you spoke—you said the person who you
23 identified as a supervisor, and I think in response to my friend,
24 Mr. Ramadhar, you said a Paria supervisor?

25 A. I believe it was, yeah.

26 Q. Was that berth noisy at all?

27 A. I can't remember it being that noisy, no.

1 Q. Okay. There wasn't a compressor or anything running or
2 people moving around?

3 A. At times there was, yeah, something running.

4 Q. There was something running?

5 A. Yeah.

6 Q. Okay. So it might have been a little bit noisy?

7 A. Yeah, it could have been.

8 Q. So you have five other officers with you, leading seaman?

9 A. Yeah.

10 Q. What would those officers have been doing? They were with
11 you at all times?

12 A. Yes, they were with me.

13 Q. So everywhere you went, they went?

14 A. Yes. I didn't stay long on the platform. We just get the
15 information and then I went back on the boat.

16 Q. Okay. And when you were providing transportation as you
17 say—because you're a faster boat—to various divers or various
18 people, all of your crew, the remaining five member of crew
19 were always on the vessel with you?

20 A. Yes, they were.

21 Q. Okay. So that's it. Now, you mentioned there being a larger
22 coast guard vessel somewhere in the vicinity?

23 A. Yes.

24 Q. Okay. And you said it was one of the Damen 50-metre vessels?

25 A. Yeah.

26 Q. Okay. And you said that that vessel was too big to come in
27 where you were?

1 A. I believe that would have been the reason, yeah.

2 Q. Okay. Well, if I told you that oil tankers come into that area,
3 you would think that a 50-metre would be able to come in too.

4 Yeah?

5 A. Well, I guess, yeah.

6 Q. You guess. Okay. That 50-metre vessel, with whatever its
7 name is, did it not have a small boat moving from that vessel
8 and in various areas around the water as well?

9 A. No, I don't think so.

10 Q. Was there any other coast guard vessel in the water when you
11 were there, leading seaman?

12 A. No.

13 Q. You're certain?

14 A. Yes.

15 Q. Okay. So the only time that you can't account for is when you
16 returned to base, to Staubles, to collect the dive team?

17 A. Yes.

18 Q. And all your six members went with you?

19 A. Yes.

20 Q. And you're not able to say what happened in that period
21 between when you left to collect the dive team and when you
22 returned with the dive team?

23 A. I cannot, no.

24 Q. Okay. Thank you very much, Leading Seaman. Thank you.
25 Thank you for your time.

26 **Mr. Chairman:** Thank you, Ms. Alfonso. Anyone else? Yes.

27 **Cross-Examination By Mrs. Persaud-Maraj:**

1 Q. Good afternoon. Kamini Persaud Maraj for LMCS.

2 A. Good afternoon.

3 Q. The vessel that you would have left at—in the vicinity of the
4 incident, of the place of incident, can you say what crew was
5 present there?

6 A. No, I can't say what crew was present.

7 Q. Or how many persons?

8 A. No.

9 Q. Are you aware that there was a crew on board in the vessel?

10 A. Well, yeah, they were sailing in the vessel, so it had to—they
11 had a crew.

12 Q. They had a crew. But you won't be able to say how people?

13 A. No.

14 **Examination By Mr. Chairman:**

15 Q. Is there a standard number that are used for those size boats?

16 A. Um, yes, but the number varies based on—I don't know.
17 Different detachments of people who actually work on the boat,
18 they might have something else to do at the time of duty.

19 Q. Right.

20 A. So the number vary. So I can't say how many crew was on the
21 boat [*Inaudible*].

22 Q. Well, more than one and less than 50. So give us an idea of
23 what the normal crew would be?

24 A. Around 20.

25 Q. Right. Thank you.

26 **Continued Cross-Examination By Mrs. Persaud Maraj:**

27 Q. When you were present at the scene—

1 A. Yes.

2 Q. —Berth 5, berth 6, wherever you were, did you ever get a
3 report about LMCS's workers becoming aggressive?

4 A. No.

5 Q. Besides your duty operations officer, who would have given
6 you instructions on that day?

7 A. Just them until Lt. Hargreaves.

8 Q. Until Mr. Hargreaves at—

9 A. He would have—

10 Q. Around 9.00 p.m. that night?

11 A. Yeah, he would have become the On-scene Commander, the
12 person in charge.

13 Q. When you arrived at the scene—and this would have been just
14 after four or thereabout—did you and all your crew of five, six
15 in all, have your cell phones with you?

16 A. Yes, we had our cell phones. Yeah.

17 Q. And at any point in time, did you and/or any member of your
18 crew use your cell phones?

19 A. If we used our phones?

20 Q. Yes.

21 A. Yes, that's how I was communicating with base, with my
22 phone.

23 Q. Sorry?

24 A. I communicated with base with my phone.

25 Q. With base?

26 A. With Staubles Bay; with operations.

27 Q. With operations. Did anybody other than your base call you on

1 your cell phone?

2 A. No.

3 Q. All right. Would you be able to tell us if the crew on the vessel
4 that was docked at the scene whether or not it was armed? That
5 crew was armed?

6 A. My crew?

7 Q. No. The crew that was on the vessel that was docked, the big
8 vessel, whatever the name of that big vessel?

9 A. Oh, they weren't docked but I—

10 **Mr. Chairman:** They weren't docked. They were patrolling,
11 as I understand.

12 **Continued Cross-Examination By Mrs. Persaud Maraj**

13 Q. They were patrolling. My apologies. So would you be able to
14 say if that crew was armed?

15 A. I wouldn't be able to say, no.

16 Q. Is it usual for the crew to be armed?

17 A. Yes.

18 Q. All right. Your attire on the day when—at the time of the
19 incident, could you describe how you were dressed?

20 A. In coast guard uniform.

21 Q. The clothes that you were wearing?

22 A. It would have been coast guard uniform which is a blue shirt
23 and a blue pants, black boots, a black life jacket and a hat.

24 Q. All right. Was there anyone dressed in wet suit on your crew?

25 A. No.

26 Q. No.

27 **Mrs. Persaud Maraj:** Mr. Commissioner, I believe this is all

1 that I would have.

2 **Mr. Chairman:** Thank you, Ms. Persaud-Maraj. Mr.
3 Peterson?

4 **Mr. Peterson SC:** Nothing, Mr. Chairman.

5 **Mr. Chairman:** All right. I ask through you, but I make it
6 public, that we will be writing to your officer, Mr. Commander
7 Isaac, asking for all of the logs that were relevant for that day
8 for him to produce them. You might take that message back
9 with you when you go, please. He should be receiving a letter
10 from me in due course in relation to that. I think Mr. Wilson
11 might have a question for you.

12 **Examination By Commissioner Wilson:**

13 Q. Good afternoon.

14 A. Good afternoon.

15 Q. It didn't come out powerfully what your actions were the first
16 time around. I heard that you went case side and you met with
17 a supervisor, but I'm not clear or powerfully—like, what that
18 coordination was like? What actions were you given once you
19 stepped on stepped off the first time around before you headed
20 back up to Staubles?

21 A. When I got there I stepped off the platform and I spoke to the—
22 I stepped on the platform, sorry, and spoke to the supervisor.
23 He told me what actually happened. At that time, I called my
24 Operations Department and told them what he related to me and
25 after that I got back on the boat and, as I said, there were divers
26 trying to make rescue efforts and I was trying to help them in
27 any way I could. They were bringing people—

1 Q. Just let me interrupt. Sorry to interrupt. So divers in the water
2 and you're moving a vessel around with divers in the water?

3 A. No, not where they were.

4 Q. Okay.

5 A. I was a good way off—a safe distance.

6 Q. No problem. Okay. So that's what I'm trying to get in terms of
7 who was coordinating your activity and what really was your
8 activity. You was just jogging around the facility just looking
9 for survivors in the water?

10 A. No, I wasn't actually looking for survivors in the water. I was
11 just off of the platform, a good way off, and they would say—

12 Q. Who would say?

13 A. I can't remember who would say, but they would say, like, it
14 have people coming across from land. As I could recall, the
15 first time we went was for two divers, and then two technicians.

16 Q. Sorry to disturb you; that's what I'm trying to get. Who was
17 coordinating that: it have two divers on land?

18 A. It was someone from on the platform.

19 Q. Okay. So you just deem that as somebody or you assume it was
20 somebody from Paria?

21 A. I—as I say, I can't say exactly who is from Paria or not. I just
22 went down there, I saw people there, I—

23 Q. All right. Sorry to disturb that. So your activities going on now
24 ferrying people back and forth from. What else? Anything
25 else?

26 A. Well, not back exactly back and forth; just to. I didn't take
27 back anyone.

1 **Commissioner Wilson:** All right. Well, thanks for that.

2 **Examination By Mr. Chairman:**

3 Q. Can I just understand it. When you attended—at the point in
4 time when you attended you told us that at that stage all you
5 knew were that there were a number of divers who were
6 missing?

7 A. Yes.

8 Q. You didn't effect any search on arrival of the waters around the
9 berth?

10 A. No, I didn't.

11 Q. No. Was that because it was believed by then that the divers
12 were in the pipe?

13 A. I believe so, yes.

14 Q. And, indeed, whilst you were there one of them came out of the
15 pipe?

16 A. Yes.

17 Q. All right. Thank you. The reason why you were dispatched to
18 come back to your HQ and collect 10 divers was in the hope
19 that they might have been able to effect a rescue?

20 A. Yes.

21 Q. Thank you.

22 **Mr. Chairman:** Does anybody have anything arising from
23 that? Thank you very much. Mr. Maharaj.

24 **Mr. Maharaj SC:** I would like to ask two questions.

25 **Mr. Chairman:** Of course.

26 **Further Examination By Mr. Maharaj SC:**

27 Q. Do you know who was in charge of that large coast guard boat

1 that was outside?

2 A. No, I don't know.

3 Q. Were you in communication with that person at all?

4 A. No, I wasn't in communication.

5 Q. And you would not be able to say whilst you were away
6 whether anyone from that boat—coast guard persons from that
7 boat—went on berth 6?

8 A. No, I don't know.

9 Q. Okay.

10 **Mr. Chairman:** Thank you very much for coming. Please,
11 ask your senior officer, Mr. Isaac, to find that his logs—he'll be
12 receiving a letter from me later today, all right, that we want
13 these logs. Are you going back to your office now?

14 **Mr. Leidgewood:** No, I'm not going back to my office.

15 **Mr. Chairman:** You have a day off?

16 **Mr. Leidgewood:** Yes.

17 **Mr. Chairman:** All right. Is that because of us?

18 **Mr. Leidgewood:** Basically, yes.

19 **Mr. Chairman:** Enjoy the rest of your day off. Tell him
20 tomorrow, but I suspect he'll have had a letter before then.
21 Thank you very much indeed for coming. You're free to go.

22 **Mr. Leidgewood:** Thanks.

23 **Mr. Chairman:** All right. Thank you.

24 So the position is this. Mr. Hargreaves is going to be
25 giving his evidence from Barbados. Yes, he is in Barbados.
26 We have arranged for him to have a video link at 2.30 today.
27 So what I suggest we do is that we will rise now. We will come

1 back shortly before 2.30 in the hope that we can have a video
2 link set up for him, and then after him we'll have Rolph Seales
3 from Kenson.

4 I mention, Mr. Pegus, notwithstanding my instructions,
5 that he should provide his statement by midday on Friday,
6 apparently, it arrived at Saturday night. Anyway, he'll be
7 giving his evidence after Mr. Hargreaves. We'll conclude them
8 today. All right.

9 **Mr. Pegus:** Mr. Chairman, if I may, Saturday night or Friday
10 night?

11 **Mr. Chairman:** Friday night.

12 **Mr. Pegus:** Right. And we did provide an explanation. He
13 was offshore on Friday. So, unavoidably, we could not have
14 done it.

15 **Mr. Chairman:** I know. While he's only had seven months.
16 Never mind.

17 **Mr. Pegus:** Actually, no. He was notified in late October, if I
18 may.

19 **Mr. Chairman:** I struggle to understand why everybody
20 seems to be completely ignorant of an Enquiry taking place.
21 Your President announced back in March of this year that there
22 would be a public Enquiry and nobody does anything. You're
23 waiting for us to say please make a statement; please, come and
24 join us. We did say that, but I said it myself back in August.
25 Nothing happens. Anyway, it is what it is. We have it now and
26 he will give his evidence this afternoon. Whatever time it is,
27 he'll be giving his evidence this afternoon. All right.

1 **Mr. Pegus:** For sure. Yes.

2 **Mr. Chairman:** Thank you very much. So we'll adjourn now.
3 We will resume literally a couple moments before half past and
4 hope that we can have a prompt start at half past two.

5 Thank you very much, indeed.

6 **1.14 p.m.:** *Enquiry suspended.*

7 **2.31 p.m.:** *Enquiry resumed.*

8 **Mr. Chairman:** Who's going to do the summary? Good
9 afternoon. Can you hear me, Mr. Hargreaves?

10 **Lt. Hargreaves:** Yes, I can.

11 **Mr. Chairman:** Marvellous. Do I call you Mr. Hargreaves or
12 Lt. Hargreaves? You're retired—

13 **Lt. Hargreaves:** I'm not retired, Sir. Lt. Hargreaves is fine.
14 I'm an active member, Sir.

15 **Mr. Chairman:** You're not retired?

16 **Lt. Hargreaves:** No, Sir.

17 **Mr. Chairman:** Ah, right. Well, then I will call you Lt.
18 Hargreaves. Thank you for joining us. I understand you're in
19 Bermuda at the moment. Is that right? Barbados?

20 **Lt. Hargreaves:** Yes, Sir.

21 **Mr. Chairman:** So what's going to happen is that I don't
22 know what you can see of us. Are you seeing me at the
23 moment or just hearing me?

24 **Lt. Hargreaves:** I am seeing and hearing you, Sir.

25 **Mr. Chairman:** Marvellous. And can you see the rest of the
26 courtroom?

27 **Lt. Hargreaves:** No, Sir.

1 **Mr. Chairman:** Right. We'll arrange that in a moment. All
2 right. So Mr. Bissessar, who is one of Counsel for the Enquiry,
3 is going to summarize your evidence, all right, and then there'll
4 be a few questions from Mr. Maharaj and then others as it
5 arises. We will definitely dispose of your evidence this
6 afternoon. All right.

7 **Lt. Hargreaves:** Yes, Sir.

8 **Mr. Chairman:** So if you listen carefully to what Mr.
9 Bissessar says and his summary, if you agree with it, hopefully,
10 you will, you will tell us that. If not, you'll point out anything
11 that's wrong about it, all right, and we'll take it from there.

12 **Lt. Hargreaves:** Yes, Sir.

13 **Mr. Chairman:** So thank you very much, indeed.

14 **Mr. Bissessar:** Thank you, Chair.

15 Lieutenant Edric Hargreaves whose regimental number is
16 15040 has been a member of the Trinidad and Tobago coast
17 guard, the TTCG, for over 22 years.

18 He became a Commissioned Officer on 31st October,
19 2013 and his substantive posting in the TTCG since his
20 commissioning was Diving Officer.

21 Lt. Hargreaves gave a written signed statement dated
22 15th August, 2022 to the Commission—this is at WB65—but
23 had not responded to requests from the Commission to be
24 interviewed, and a witness summons was issued for him to
25 attend before the Commission.

26 The written statement provided to the Commission was
27 incomplete, and notwithstanding written requests by the

1 secretary to the Commission on 25th August, 2022, 20th
2 September, 2022, and 28th September, 2022, these were never
3 provided and there was a gap between paragraphs 18 and 20.
4 However, on 29th November, 2022, Lt. Hargreaves did provide
5 the requested pages and the completed witness statement is at
6 supplemental witness bundle 3006?

7 **Mr. Chairman:** Remind me, would you, please, once again,
8 where the original statement was?

9 **Mr. Bissessar:** The original is at witness bundle 65.

10 In his witness statement, Lt. Hargreaves certified that all
11 the facts in his witness statement are true and correct. Lt.
12 Hargreaves' principal duties as Diving Officer included
13 responsibility for the management, safety, and equipment of the
14 TTCG Diving Department; performing exploration or
15 extraction duties; supervising and training TTCG divers; and
16 performing activities related to underwater search and rescue.

17 Lt. Hargreaves says that he has 22 years' experience of
18 scuba diving and is qualified under the Professional Association
19 of Diving Instructors, PADI, with membership No. 269088. He
20 has various certificates including rescue diver dated 21st
21 February, 2010; dive master dated 31st March, 2010;
22 emergency first responder dated 28th August, 2012; and master
23 scuba diver dated 27th July, 2015.

24 Lt. Hargreaves says he was contacted at TTCG on Friday
25 25th February, 2022, at approximately 4.07 p.m. and informed
26 of the accident, and at 8.43 p.m. he arrived at berth 6 with 10
27 members of the TTCG Diving Department, and was surprised

1 by Catherine Balkissoon who identified her team members
2 involved in the recovery operation. She also identified persons
3 with first-hand knowledge of the accident including Michael
4 Kurban who Lt. Hargreaves interviewed.

5 Lt. Hargreaves' evidence is that it was recommended to
6 him by the diving enlisted senior ratings that no scuba rescue
7 attempt should be made because, firstly, the space provided no
8 room for manoeuvrability. Secondly, that the TTCG possessed
9 inappropriate equipment. Thirdly, the cause of the accident was
10 still unconfirmed; and fourthly there was still hazardous
11 material in the pipeline. Lt. Hargreaves says that these all
12 posed serious health and safety challenges which could not be
13 ignored.

14 Lt. Hargreaves explained that he pointed out the
15 limitations and potential hazards to Catherine Balkissoon, and
16 that the TTCG Diving Department was not trained for nor
17 possessed the specialty equipment needed for a rescue
18 operation. He said he advised Catherine Balkissoon that a
19 rescue operation of this magnitude would require commercial
20 equipment such as a dive helmet with ship air supply. Lt
21 Hargreaves said that TTCG divers were only trained to perform
22 operational scuba diving and not commercial diving.

23 Lt. Hargreaves says that after this conversation with
24 Catherine Balkissoon she sought out the assistance of
25 Commercial Vessels which took over the dive rescue operation
26 with the TTCG on standby, and at 1.10 a.m. on Saturday
27 morning all TTCG operations ceased. Lt. Hargreaves recalls

1 that Ms. Balkissoon told him that if Paria required any further
2 assistance from the TTCG dive team he would be notified, and
3 she expressed her gratitude to the TTCG and said that its
4 presence was no longer required.

5 Lt. Hargreaves says that all TTCG personnel departed
6 berth 6, arriving in Staubles Bay in Chaguaramas at
7 approximately 3.30 a.m. on Saturday morning. He says that on
8 Sunday, 27th February, 2022, a virtual meeting was convened
9 with Paria and he and Chief Petty Officer, M. Jarrott, discussed
10 the rescue mission prepared by LMCS. He said that what was
11 proposed created further opportunity for greater casualties. He
12 said an alternative method was then decided on, and a decision
13 was made to have the TTCG Diving Department return on
14 Monday, 28th February, 2022, to offer assistance. Lt.
15 Hargreaves did not, however, say what was the alternative
16 method decided upon.

17 On Monday, 28th February, 2022, at 4.55 a.m. a team of
18 seven TTCG divers departed Staubles Bay for berth 6. Lt.
19 Hargreaves says that the operation was no longer one of a
20 rescue, but a recovery exercise, as the missing divers were
21 presumed to be deceased due to the length of time they were
22 missing under water.

23 He concludes his witness statement in the following
24 terms. Paragraph 19 he says, "At no time during the period
25 Friday, 25th February, 2022 to Thursday, 3rd March, 2022, was
26 either, any member of the TTCG Diving Department, or any
27 other member of the TTDF armed with weapons. Further,

1 neither I nor any member of the TTCG Diving Department nor
2 any other member of the TTDF either physically or through
3 coercion by being armed with any weapons prevented persons
4 from going into the pipe to attempt a rescue.

5 And at paragraph 20 he says: As far as I am aware the
6 decision to prevent persons from attempting a rescue was made
7 by Paria personnel and not by either myself, any member of the
8 TTDF Diving Department or by any member of the TTDF.
9 Neither I, nor any member of the TTCG Diving Department nor
10 any member of the TTDF had the requisite authority to do so.
11 He says that the decision by Paria, however, was based on the
12 assessment by the TTCG Diving Department, that an attempt at
13 a rescue can have severe health and safety implications as
14 stated in paragraphs 9 and 10 of his witness statement.

15 Lt. Hargreaves, can you confirm whether what I have
16 presented is a true and accurate summary of your evidence?

17 **Lt. Hargreaves:** Yes, Sir, except the part where you said that
18 in August I presented the document with incorrect—with the
19 paragraph missing. That was submitted. It was not my fault
20 that what was sent was not accurately received.

21 **Mr. Bissessar:** Chairman, before Lt Hargreaves continues,
22 perhaps I should just indicate that my recollection is that the
23 witness was not put under oath. So before he says anything
24 more, perhaps that can be done.

25 **Mr. Chairman:** Quite so. You were to take the oath. Perhaps
26 that can be done now. Thank you.

27 *[Lt. Edric Hargreaves sworn]*

1 **Lt. Hargreaves:** I, Lt. Edric Hargreaves, solemnly swear that
2 the evidence I shall give to the Commission in this case shall be
3 the truth, the whole truth, and nothing but the truth.

4 **Examination By Mr. Chairman:**

5 Q. Thank you. Mr. Hargreaves, can you just confirm, first of all—
6 leave aside the question of your statement for one moment; I'll
7 come back to that in a second, if I may—but the summary that
8 has been read to you with that caveat, do you agree it's an
9 accurate reflection of what you've told us?

10 A. Yes, Sir.

11 Q. Thank you very much. And I think you were making the point
12 that in the original statement that you provided or your office
13 provided, there was an omission. It stopped at paragraph 18 or
14 halfway through paragraph 18, missing out 19 and resumed
15 paragraph 20, and you were saying that this wasn't your fault;
16 that's an administrative error or something like that. Is that
17 right?

18 A. Yes, Sir.

19 Q. All right. Well, I take it that you didn't do it deliberately, so
20 you can rest assured I'm not going to hold it against you. All
21 right?

22 A. Yes, Sir.

23 Q. All right. Good. So one thing I wanted to ask before any other
24 questions are asked of you. Can you just help me about this.
25 At paragraph—do you have your statement in front of you?

26 A. Yes, Sir.

27 Q. Right. Do you have anything else in front of you?

1 A. No, Sir.

2 Q. Marvellous. Good. Well, at paragraph 13—by all means, look
3 at it if you wish, please—you will see that you deal there with a
4 meeting that you had, a virtual meeting that you had on the
5 27th—Sunday, 27th February.

6 A. Yes, Sir.

7 Q. Can you just tell me that that virtual meeting that you had, was
8 that in the morning or the afternoon?

9 A. Sir, honestly, I believe it was in the afternoon.

10 Q. In the afternoon. Can you give us any sort of idea? Between
11 midday, in the evening, say 6.00? What sort of time?

12 A. I would believe it was right after lunch.

13 Q. Right.

14 A. Yeah. I believe it would have been right after lunch on the
15 Sunday—

16 Q. I have had to ask others this, but when do you take your lunch?

17 A. I believe between 12.00 and 1.00.

18 Q. So sometime after one o'clock you would have had this
19 meeting, you think?

20 A. I believe so, Sir, yes.

21 Q. Marvellous. Thank you. I am not going to hold you to it; just
22 give us some idea that's your best recollection that that meeting
23 was held sometime after one o'clock on Sunday afternoon?

24 A. Yes.

25 Q. So this is getting on to 48 hours after the incident, isn't it?

26 A. Yes, Sir.

27 Q. Yes, thank you very much.

1 **Mr. Chairman:** Thank you, Mr. Maharaj. Mr. Maharaj is
2 going to ask you some questions now.

3 **Examination By Mr. Maharaj SC:**

4 Q. Good afternoon, Lt. Hargreaves. I have a few questions for
5 you, and I'll be glad if you could assist us, please.

6 A. Yes, Sir.

7 Q. I want to go to your witness statement on which you state the
8 grounds on which you advised that no rescue attempt should be
9 made—and that is at paragraph 9 of your witness statement, at
10 page 3011.

11 A. Right. In this—when I was speaking about no rescue attempt
12 will be made, I was speaking in terms of the Trinidad and
13 Tobago coast guard Diving Department.

14 Q. Yes. But at paragraph 9 you stated that: It was recommended
15 to me by the diving enlisted senior ratings that no scuba attempt
16 should be made.

17 A. Yes, Sir.

18 Q. This was because the space in question provided no room for
19 manoeuvrability. We possessed inappropriate equipment. The
20 cause of the incident was still unconfirmed, and there was still
21 hazardous material contained within the pipeline. These all
22 posed serious health and safety challenge which could not be
23 ignored.

24 So I want to ask you questions to each of these grounds that you
25 stated there.

26 A. Yes.

27 Q. The first ground, you said that no scuba attempt should be made

1 because the space in the pipeline provided no room for
2 manoeuvrability. Correct?

3 A. Yes, Sir.

4 Q. So what I want to ask you is that in paragraph 8 of your witness
5 statement, you stated that you had a conversation—Mr. Kurban
6 stated that he was the person who had recovered the drowned
7 diver, one Mr. Christopher Boodram, from the pipeline. Okay?

8 A. Yes, Sir.

9 Q. So you had known—you were aware that Christopher Boodram
10 had just emerged from the pipeline?

11 A. Yes, Sir.

12 Q. Now, Boodram—did you know whether Boodram had scuba
13 diving equipment, or—

14 A. No, Sir.

15 Q. And you were also aware that Michael Kurban—because you
16 spoke to Michael Kurban?

17 A. Yes, sir, I did.

18 Q. And were you aware that Michael Kurban had also gone into
19 the pipeline after Boodram came out?

20 A. No, Sir.

21 Q. But if you were aware, if you had then become aware that
22 Michael Kurban had gone into the pipeline and he went with
23 scuba, would you still maintain that scuba would have been
24 unsafe for the person to go into the pipeline?

25 A. I would like to ask. When you say for who to go into the
26 pipeline? Because when I'm referring to who, I am referring
27 to—in our SOPs as the Trinidad and Tobago coast guard

1 Diving Department, we are not required to do such a rescue. So
2 if that in a sense that you required information concerning
3 scuba, and if somebody wanted to attempt it, that was okay with
4 their SOPs, but in the SOPs of the Trinidad and Tobago coast
5 guard Diving Department, we are not such qualified to do such
6 a rescue.

7 Q. So what you were—in effect what you meant, then, that no
8 coast guard officer should go into the pipeline?

9 A. Yes, Sir.

10 Q. But you are saying that if there were other persons who were
11 prepared to go into the pipeline you did not see a problem with
12 that?

13 A. No, Sir, because at the time, as I said, I was there to assist with
14 any operation that was being—would have [*Inaudible*] and this
15 was my clear indication, that the Trinidad and Tobago coast
16 guard is not qualified or equipped for such. But again, we were
17 there to render assistance because that is our due diligence of
18 the Defence Force of the coast guard Department to render
19 assistance in any capabilities that they wanted.

20 **Examination By Mr. Chairman:**

21 Q. Before you carry on, can I interpret that to mean this, Mr.
22 Hargreaves, that you would not order any one of your divers to
23 effect a rescue using scuba equipment?

24 A. In such a pipeline?

25 Q. Yes.

26 A. Yes, Sir.

27 Q. In that scenario, yes, that you were faced with, it would not be

1 right for you to order someone to do it. But if someone
2 volunteered that would be a different matter. Is that what I am
3 to understand?

4 A. No, Sir. Even in volunteering I would have to stand down that
5 request, because, again, as I said, based on our SOPs requires
6 sufficient qualification and experience, and nobody in my
7 department was even such qualified or have the experience to
8 perform such a rescue. So, again, even if a volunteer came
9 forward from the Diving Department it would have been same.

10 Q. So you wouldn't have let even one of your men, even if he had
11 volunteered, go into the pipeline with scuba equipment.

12 A. No, Sir.

13 Q. Is that what I'm to understand?

14 A. Yes, Sir.

15 Q. But you wouldn't—am I also to understand you would not
16 stand in the way of somebody outside of your team voluntarily
17 saying, look, I'm happy to go and do it?

18 A. No, Sir, I would not stand in the way of a rescue attempt.

19 Q. No. And I suppose if he was related to somebody in the
20 pipeline you'd be even less inclined to stand in his way?

21 A. Correct, Sir.

22 **Mr. Chairman:** Thank you. Thank you, Mr. Maharaj.

23 **Continued Examination By Mr. Maharaj SC:**

24 Q. And you said as part of your grounds that with scuba equipment
25 there would be a problem of manoeuvrability in the pipeline?

26 A. Yes, Sir.

27 Q. But Christopher Boodram—were you aware that Christopher

1 Boodram had scuba and he manoeuvred himself out of the
2 pipeline?

3 A. No, Sir.

4 Q. But you know he came out of the pipeline?

5 A. Well, that is what I was told, that he was rescued on top the
6 pipeline. I didn't know he was inside the pipeline. That's all I
7 was told. I didn't know he went into the pipe.

8 Q. Oh, I see. You did not know that Christopher Boodram was
9 inside of the pipeline?

10 A. No, Sir.

11 Q. When was the first time you knew that he was inside? Well, at
12 any time after, did you find out that he was inside of the
13 pipeline?

14 A. I believe this would have been after he went—I think after he
15 went and said or either somebody said that he was inside the
16 pipeline. I didn't know he was inside the pipeline. Nobody
17 told me he actually went into the pipe. I was told he was
18 sucked into the pipeline and he was rescued coming out. That's
19 what I was told.

20 Q. Okay. So you were aware that he was rescued from inside the
21 pipeline?

22 A. Yes, Sir.

23 Q. And before you arrived at Paria that day, did you know that the
24 divers were in the pipeline?

25 A. No, Sir.

26 Q. You didn't know they were in the pipeline?

27 A. No, Sir.

1 Q. Did you know anybody was in the pipeline—anyone was in the
2 pipeline?

3 A. From the information which came through the coast guard
4 Operations, that four divers were missing by Paria berth 6 and
5 they were to go and make an assessment to see if a rescue—
6 only later in the evening then we were told that they were
7 sucked inside the pipeline. That was later the night.

8 Q. Okay. So based on what you are telling us, coast guard officers
9 are not trained to dive into a pipeline?

10 A. No, Sir.

11 Q. And they do not have the equipment to dive into a pipeline.
12 Correct?

13 A. No, Sir. Correct, Sir.

14 Q. Right. So if when you left to go on this mission you knew that
15 you were going on a mission to rescue divers from inside a
16 pipeline, would you have gone?

17 A. It would have been still my due diligence to go and render
18 assistance, because the Trinidad and Tobago coast guard is to
19 respond to all seagoing [*Inaudible*], it is my job as part of a
20 search and rescue environment to go and render assistance. But
21 at the same time—

22 Q. I'm sorry, go ahead.

23 A. No, what I'm saying is that this is our due diligence as the
24 Trinidad and Tobago coast guard Diving Department to and
25 render assistance and search and rescue purposes. Yes, we may
26 not be qualified to such, but at the same time we still have to be
27 there to provide assistance in the event of anything that they

1 needed.

2 Q. But the assistance you have to provide was to assist in the
3 rescue from the pipeline?

4 A. Correct, Sir. So the assistance would have been, in that, if it is
5 such an attempt was made, we would have been there to help
6 assist, not to go in, but probably be around the area in the water
7 in that capacity, to render assistance to the other divers while
8 the attempt is being made, but not to enter the pipeline.

9 **Examination By Mr. Chairman:**

10 Q. So that I'm clear, please. First of all, you were unaware that
11 Mr. Boodram had been sucked into the pipeline and had made
12 his way out. Is that right or wrong?

13 A. That is correct, Sir, I was not aware.

14 Q. All right. All you knew is that he was near the mouth of the
15 pipeline and someone had helped to haul him out from that
16 position?

17 A. Yes, Sir, that is what I was—

18 Q. It is on that basis that you were proceeding until you came to
19 learn that the other four remaining divers were still in the
20 pipeline?

21 A. Yes, Sir.

22 Q. All right. And it was on that basis that you were, as it were,
23 operating on a misapprehension of the facts when you first
24 joined the boat to go to the berths 5 and 6? Is that right? We
25 know that they were sucked into the pipeline, but you were not
26 aware of that when you gathered your divers together and your
27 equipment and headed off back to berth 6 in order to effect a

1 rescue, you didn't know that at that time?

2 A. No, Sir.

3 Q. Right. And it's only when you got there that you came to find
4 out that that was the position?

5 A. Yes, Sir.

6 **Mr. Chairman:** Right.

7 **Continued Examination By Mr. Maharaj SC:**

8 Q. So you were not aware, then—you were not aware that
9 Christopher Boodram was sucked into the pipeline with scuba
10 diving equipment—

11 A. No, Sir.

12 Q. —and that he manoeuvred himself out of the pipeline with
13 scuba diving equipment? You were not aware of that?

14 A. No, Sir.

15 **Mr. Chairman:** Over a period of two hours.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. Over a period of two hours; you were not aware of that?

18 A. No, Sir.

19 Q. No. And you were also not aware that after he was rescued,
20 Michael Kurban went in with scuba with an umbilical, and went
21 15 feet in the horizontal path? He went down the riser and he
22 went 15 feet in the horizontal path of the pipeline underwater.
23 You were not aware of that?

24 A. No, Sir.

25 Q. But you spoke to Kurban when you went there?

26 A. Yes, Sir, but he did not interpret to me that he went into the
27 pipeline. He didn't tell me that.

1 Q. He didn't tell you that?

2 A. It's Ms. Balkissoon who told me that he was the one that went
3 and rescued Mr. Boodram.

4 Q. But were you interested to find out how that rescue took place?

5 A. Sir, honestly, at that time I can't say if I was interested because
6 he was behaving very erratic, as I stated, and he wasn't really
7 somebody to be, like, talking face-to-face, because he was
8 using a lot of explicit, and, like I said, I didn't really want to
9 have that energy. Because at the same time I understand the
10 situation, but like I say, if it was a conversation of what it is he
11 were doing, then probably yes. But at the time, that was not the
12 discussion at that time.

13 Q. But, Mr. Hargreaves, you gave an opinion here in paragraph 9
14 that it was not safe for anyone to do a rescue in the pipeline. So
15 I'm asking, one of the things you relied upon was the question
16 of scuba diving equipment cannot be used. In effect what you
17 were saying you need commercial air supply and diving
18 equipment. Am I correct?

19 A. Yes, Sir.

20 Q. And were you not interested in talking to Christopher
21 Boodram? You were there when he came out of the pipeline?

22 A. No, Sir.

23 Q. But were you not interested in talking to Kurban to find out
24 whether he knew of anybody who went in the pipeline; did he
25 go into the pipeline?

26 A. As I said, Sir, Mr. Kurban, when I saw him he was dressed in a
27 blue jumper and he was—he told me, yes, he was one of the

1 rescue divers that was there and he rescued Mr. Boodram. But
2 at the same time, as I said, he was in a very erratic state, and
3 using a lot of 'explicit's and asking why it is we doh go in the
4 pipeline, why it is we don't try to help, or anything like that.
5 And he just—eventually he walked off and that was the last I
6 saw of him.

7 Q. Well, according to your grounds, would you agree with me that
8 your decision not to have a rescue was influenced by the fact
9 that the TTCG did not have appropriate equipment and was not
10 trained for that purpose?

11 A. For the grounds of the Trinidad and Tobago coast guard, yes;
12 we are not trained for that. So, no, I would not have attempted
13 my team to do such a rescue.

14 Q. But you knew whilst you were there that commercial equipment
15 was available for any diving to be done in the pipeline?

16 A. Yes, Sir. Because when I came I saw divers in the water and
17 they were attaching a riser onto the pipeline from what I was
18 observing. So, yes, they were there doing work and—

19 Q. And as a matter of fact, you advised Catherine Balkissoon that
20 she should get commercial equipment if persons are to go into
21 the pipeline—commercial diving equipment. Correct?

22 A. Yes, Sir. Yes, Sir.

23 Q. And as a matter of fact, whilst you were there you saw that she
24 contacted commercial boats nearby and commercial boats took
25 over the rescue operation?

26 A. Well, that's what I was looking at. Yes, Sir, I saw them in the
27 water. They were performing duties as a diver. They had on

1 helmet and umbilical and their boats were there and they were
2 being used. I don't know if it was a—I don't know if that was
3 the rescue operation, but they were being used.

4 Q. But they were trying to do a rescue?

5 A. I can't say if they were trying to do a rescue, Sir, but I know
6 they were there in the water. When I came they were there in
7 the water.

8 Q. But did you prevent persons who were trying to do a rescue in
9 the pipeline from doing that rescue?

10 A. No, Sir, I don't have the requisite qualifications to stop such a
11 rescue.

12 Q. Did Paria instruct you to prevent persons from going into the
13 pipeline?

14 A. No, Sir.

15 Q. No?

16 A. No, Sir.

17 Q. Paria never gave you instructions to prevent person from doing
18 a rescue in the pipeline, from within the pipeline?

19 A. No, Sir.

20 Q. You are telling the Court that?

21 A. Yes, Sir. The only person I spoke to was Ms. Balkissoon that
22 said night. I didn't speak to nobody else on that night because
23 she was the person who would, I would have assumed, being
24 the Incident Commander, based on she was the senior
25 supervisor at the time on site and I was dealing all information
26 through her alone.

27 Q. And according to your evidence, she did not give you

1 instructions on behalf of Paria to prevent persons from going
2 into the pipeline?

3 A. No, Sir, she did not.

4 Q. So when you say at paragraph—the last paragraph of your
5 witness statement at paragraph 20. I want you to read that
6 paragraph. It's on the screen.

7 A. "As far as I'm aware, the decision to prevent persons
8 from attempting a rescue was made by Paria and not by
9 myself nor either members of Trinidad and Tobago
10 Defence Force Diving Department."

11 Q. Okay. I want you to read paragraph 20 to yourself, and then I'll
12 question you?

13 A. [*Reading*] Yes, Sir.

14 Q. In the first sentence:

15 "As far as I'm aware, the decision to prevent persons
16 from attempting a rescue was made by Paria personnel
17 not by either myself or any member of the TTDF
18 Diving Department or any member of the TTDF."

19 What do you mean by that?

20 A. Right. So what I mean, Sir, is that the timings that I came and
21 when I was speaking to Ms. Balkissoon I wouldn't have known
22 what happened between the hours, well, when the incident
23 happened to the time I arrived. So I could only speak on the
24 accounts of after I came, which was at 8.43 p.m., and at that
25 time I could say that we did not get any instructions to prevent
26 persons. If an instruction came before, that would have been
27 probably on Paria's side, but not from the Trinidad and Tobago

1 coast guard or the Defence Force. So that is what I'm stating.
2 But I should have put based on the timing because, as I said, we
3 did not prevent it in that time.

4 Q. Lt. Hargreaves, I'm suggesting to you, in paragraph 20 of your
5 witness statement that you have stated that Paria made a
6 decision to prevent persons from attempting to go in the
7 pipeline and that you—and that decision was made on the
8 advice given by you. You don't agree with that?

9 A. Advice given? No, Sir.

10 Q. Okay.

11 A. The advice I say—if an advice was given is because, like I said,
12 the Trinidad and Tobago coast guard is not qualified. Paria
13 cannot make a decision based on my assessment for my team.
14 The—

15 Q. Listen to me what you said in the last:

16 "The decision by Paria, however, was based on the
17 assessment by the TTCG Diving Department and that
18 an attempt at rescue can have severe health and safety
19 implications as stated in paragraph 9 and 10."

20 A. Right, Sir. So understand what I'm trying to say is that because
21 the Trinidad and Tobago coast guard made an assessment Paria
22 probably went with that assessment. But you see now, as I said,
23 we are not trained for such. We are not trained. So if they
24 made an assessment based on—if they made a decision based
25 on our assessment, I cannot do anything about that. But what I
26 did know is that I did tell them is that we cannot make such,
27 because at the same time the environment was unsafe for us. It

1 was unclear for us and we cannot do such. If they made an
2 opinion and say, hey, well, if the coast guard is not doing it,
3 then nobody should do it, that is on their part, Sir, not the
4 Trinidad and Tobago coast guard or the Trinidad and Tobago
5 Defence Force.

6 Q. But if the coast guard does not have any experience in diving in
7 a pipeline and does not do commercial diving in a pipeline or
8 commercial diving, how could it make an assessment of
9 whether diving in a pipeline was safe or not? Could you
10 explain that to us? How can it do that if it has no experience,
11 not trained to dive in a pipeline? You as an officer also not
12 trained to dive in pipeline. You have never done it with
13 commercial and you have never done it with scuba. How could
14 you make an assessment whether diving in that pipeline was
15 safe or unsafe?

16 A. Again, Sir, the assessment was for my team of the Trinidad and
17 Tobago coast guard Diving Department. It was not for anybody
18 else. If somebody else came and said, hey, we want to make an
19 attempt, we were going there to assist.

20 **Examination By Mr. Chairman:**

21 Q. Sorry, can I just follow this? You were being asked to provide
22 a team of divers to effect a rescue. That's the first thing, isn't
23 it? We agree on that, don't we?

24 A. Yes, Sir.

25 Q. You are saying, from what I understand you to have said so far,
26 is that you did not understand the full implications or the
27 requirements for that rescue until you got there and made an

1 assessment of your own. Is that right?

2 A. Yes, Sir.

3 Q. Your assessment was, first of all, that your team were just scuba
4 divers. I say just; obviously experienced scuba divers, but
5 nonetheless, just scuba divers. That's the position, isn't it?

6 A. Yes, Sir, operational scuba divers. Yes, Sir.

7 Q. As a result of what you then discovered about the nature of this
8 rescue, it was clear to you that it would be quite improper to
9 invite any of your people to effect such a rescue?

10 A. Yes, Sir.

11 Q. That did not mean that there weren't others who might have
12 been very well qualified to carry out such a rescue, did it?

13 A. Correct, Sir.

14 Q. And if there were such others it was a matter for them together
15 with Paria and whoever else to make their own assessment. It
16 did not involve you. Is that right?

17 A. Correct, Sir. Yes, Sir.

18 Q. When you say:

19 "As far as I'm aware, the decision to prevent persons
20 from attempting a rescue was made by Paria personnel
21 and not by either myself or any other member of the
22 TTDF Diving Department."

23 What you mean is, is that you had no part to play in a decision
24 not to attempt a rescue by others?

25 A. Yes, Sir.

26 Q. And when you say:

27 "The decision by Paria, however, was based on an

1 assessment by your Diving Department, that an
2 attempt at a rescue can have severe health and safety
3 implications...”

4 —as stated in your earlier paragraphs, what you mean by that is
5 any decision that Paria might have made in relation to that was
6 in relation to your team and only your team. Is that what you
7 mean?

8 A. Yes, Sir.

9 Q. Right. So the net result is this then, isn't it, is that insofar as
10 you had dealings with Paria about effecting a rescue, you were
11 asked to do so; on assessment you decided your people were
12 not best placed to do so and you told them that?

13 A. Yes, Sir.

14 Q. But you did not tell them, did you, that they should not effect a
15 rescue with people who were qualified?

16 A. Correct, Sir, because they never indicated to me that they had
17 persons qualified.

18 Q. And notwithstanding your own qualifications and experience,
19 you were in no position to make an assessment of whether or
20 not commercial divers who were on the site were the right
21 people to carry out such a rescue, were you?

22 A. Yes, Sir.

23 Q. Right. So if anybody at Paria or anywhere else relied on your
24 recommendation not to effect a rescue, they would have
25 misunderstood you because all you meant by that was that they
26 should not effect a rescue with your people or scuba divers?

27 A. Correct, Sir.

1 **3.05 p.m.**

2 Q. That's it, isn't it? That's what we should take away from your
3 evidence. Thank you. I want to go to the aspect of your
4 evidence and the evidence in the matter about the TTCG, the
5 coast guard, being armed with weapons that day.

6 A. Yes, Sir.

7 Q. Could you assist us, when you got on the scene at Paria there
8 was another coast guard vessel, am I correct?

9 A. No, Sir.

10 Q. No. How many vessels accompanied you from Staubles Bay to
11 Paria, was it one?

12 A. Only one, Sir.

13 Q. Only one?

14 A. It was one, Sir, and it had a ship—it had a vessel, a ship was,
15 was in the vicinity to—in the event of further assistance, it had
16 a ship in the vicinity but, um, small vessel and Interceptor, was
17 only one, Sir.

18 Q. It didn't have a coast guard vessel in the vicinity of your coast
19 guard vessel when you arrived?

20 A. No, Sir, not to my knowledge.

21 Q. Did the vessel you were in, were the officers armed?

22 A. Yes, Sir, I would say they were armed so I did make an error in
23 my last statement stating that there would not have been no
24 weapons. So yes, I must say the ship's crew, they were armed
25 with weapons.

26 Q. Before I go on, you said there was—who was in charge of that
27 ship that you said was in the waters, the coast guard vessel?

1 A. The big ship, the big vessel?

2 Q. Yes.

3 A. I think—I believe the officer in charge, the captain would have
4 been Lieutenant Joseph.

5 Q. And do you know what his, that mission, the mission of that
6 ship was there that day?

7 A. No, Sir. No, Sir.

8 Q. Did you communicate with that ship with the person there?

9 A. No, Sir.

10 Q. There is evidence in this case that has been adduced by
11 witnesses that they were prevented by the coast guard from
12 entering into the pipeline to effect a rescue.

13 A. At what time that would have been conveyed, Sir?

14 Q. Well, at various times, but during the period you were there, did
15 you see any attempt being made to rescue divers, rescue
16 persons from the pipeline?

17 A. Sir, just now. Say that over, Sir? I didn't understand what you
18 said.

19 Q. During the period of time you were at—

20 A. Paria.

21 Q. —at sea, at Paria—

22 A. Right.

23 Q. —did you prevent—well, first I should ask you, did you see any
24 rescue efforts being made or trying to be made for persons to be
25 rescued from the pipeline?

26 A. What I can say, Sir, is that when I—when I arrived I saw divers
27 in the water, so I would have been—I would have presumed

1 that probably as they were attaching the riser on probably a
2 rescue attempt was being formulated of such, and that was the
3 only thing I could have say because they were divers,
4 commercial divers in the water at the time when I came. But to
5 say if a rescue was being formulated or being performed, no, I
6 cannot say, but I know there were men in the water and we
7 were watching them while they were performing their task of
8 putting on the riser at the time.

9 Q. When you, um—when you prepared your witness statement,
10 were you aware that there was the allegation being made
11 against the coast guard that there were attempts made by the
12 coast guard to prevent persons from attempting rescue from the
13 pipeline?

14 A. Yes, I heard about it. I heard allegations, Sir, yes.

15 Q. Right. And did you think that you had to make—in making
16 your statement—you are making a statement on behalf of the
17 coast guard?

18 A. Yes, Sir.

19 Q. And did you think that you had to make inquiries about that to
20 try to help the Commission to get to the truth of the matter?
21 Did you make any such—did you check the records? Did you
22 make any such inquiries?

23 A. Make such inquiries from who?

24 Q. From the coast guard, from the coast guard records. Wouldn't
25 the coast guard have records of what happened—

26 A. Yes, Sir but—

27 Q. —on duty when vessels are on a certain mission?

1 A. Yes, Sir. So what I would say is that the vessel would have a,
2 a, um, a vessel number and it would have a cockswain—

3 Q. A?

4 A. —so which means—somebody to drive the vessel, a cockswain.
5 The crew falls under a different operational department called
6 squadron. They are given taskings in a different nature. From
7 my recollection when I went down, there was no other coast
8 guard vessel in the area at the side of the berthing area in that
9 capacity, because, like I said, we reached down there minutes to
10 nine the night so I cannot say if a coast guard vessel was there
11 from before, I can't say for that. All I knew is that I had to wait
12 on a vessel to be escorted down to the site.

13 Q. But, um, would the coast guard have records, if there was a
14 coast guard vessel there, right, assuming there was a coast
15 guard vessel there, would the coast guard have a record of that
16 vessel being there on that particular day?

17 A. Yes, they would have a chronological record—

18 Q. Yes.

19 A. —of the—

20 Q. And they would have a, and they would have a record of who were
21 on that vessel?

22 A. Yes, Sir.

23 Q. And who were in charge of that vessel?

24 A. Yes, Sir.

25 Q. Correct? And—

26 A. Yes, Sir.

27 Q. —what activities they were involved in?

1 A. I can't say about the ac—I can't say about the activities. Um,
2 but—

3 Q. But wouldn't they have a log of what mission they was on and
4 what they were doing?

5 A. Yes, Sir.

6 Q. Yes. And they would have a record of the—of whether there
7 was guns and whatever it is?

8 A. Well, Sir, Sir, the—

9 Q. And—

10 A. —the SO—the SOP, the SOP is one of such of the Trinidad and
11 Tobago Coast Guard squadron department is that once you—
12 ship goes to sea you are asked to be armed. You are armed as a
13 coast guard officer ascending to a nature out at sea. So, yes,
14 they would have weapons to carry out their duties. As such,
15 they were given instructions to do such, to go and attempt or to
16 go and see whether what it is was going on, so, the squadron
17 departments that go to sea, they are all armed.

18 Q. Okay. So let me get to the final aspect of it. So, according to
19 you, you left Staubles Bay with the intention of doing a rescue,
20 correct? Assisting in a rescue, okay?

21 A. Assisted in a rescue, yes, Sir.

22 Q. And you thought that this rescue would have been in open
23 waters, correct?

24 A. Yes, Sir.

25 Q. Right.

26 A. Yes, Sir.

27 Q. When you got there, you found out it was not a rescue in open

1 waters, correct?

2 A. Yes, Sir.

3 Q. And therefore, as far as you were concerned, you considered
4 you all were not trained for that, you had no equipment for that,
5 correct?

6 A. Yes, Sir.

7 Q. So what was your mission? What was your mission then at
8 Paria for the rest of the evening and into the night and the early
9 hours of the morning?

10 A. To, to render—

11 Q. What was your mission?

12 A. To render any assistance that they would be needed. I was
13 given instructions.

14 Q. Assistance to do what?

15 A. I was given instructions to stay on site and to render any
16 assistance—

17 Q. Who gave you those?

18 A. —to Paria or—what's that?

19 Q. Who gave you those instructions?

20 A. Those instructions would have come from the duty
21 commanding officer.

22 Q. So the coast guard commander gave you instructions to remain
23 on site to give whatever assistance is necessary or was it—

24 A. Yes.

25 Q. —assistance only in respect of rescuing?

26 A. Assistance to rescuing. That was our main purpose. Yes, Sir.

27 Q. Well when you, when you went there you could not rescue

1 because you could not assist in rescuing?

2 A. Right.

3 Q. So what was your mission there, remaining there? Was it to
4 help out Paria in carrying out instructions?

5 A. No, Sir.

6 Q. No. Was it to help in rescuing?

7 A. It was just to help in rescuing, yes.

8 Q. But you could not help in rescuing because you cannot rescue
9 by diving into a pipeline.

10 A. Correct.

11 Q. So how could you help in the rescue?

12 A. Because that is the role of the Trinidad and Tobago Coast
13 Guard in any sea going nature we are there to assist. And if it is
14 we have to stay there and see what it is going on, we were there
15 to assist. As I told Ms. Balkissoon, if any assistance they
16 needed in anything, we are here.

17 Q. Any assistance who needed, Paria needed or LMCS needed?

18 A. Correct.

19 Q. Any assistance who needed?

20 A. Anybody who wanted the assistance, they could have asked for
21 it.

22 Q. So anybody who wanted to go and dive in the pipeline, you
23 would assist for them to dive in the pipeline?

24 A. I will assist not, not for me to dive in the pipeline. If they
25 wanted to go and dive in the pipeline.

26 Q. But it had people who are saying that they wanted to dive in the
27 pipeline. Do you know that?

1 A. Well Sir, up to, up to this time, when we were there, nobody
2 came and told us we wanted to attempt to dive in the pipeline.

3 **Mr. Maharaj SC:** I have no further questions for this witness.

4 **Examination By Mr. Chairman:**

5 Q. Just taking stock for a moment please? You, I believe, arrived
6 with your team of 10 diving, scuba diving rescuers at about
7 quarter to 9.00 that evening?

8 A. Yes, Sir.

9 Q. That you had well in mind was well over three hours after Mr.
10 Boodram had come out of the pipe? You knew that?

11 A. No, Sir.

12 Q. I'm sorry, you didn't know that?

13 A. Just now, you're saying that or—

14 Q. Yes, I'm asking you if you knew that Mr. Boodram, the man
15 who had been rescued from the pipe, had come out about three
16 hours plus before you arrived?

17 A. No, I didn't know that, Sir.

18 Q. Well why wouldn't you have asked?

19 A. I was told by Ms. Balkissoon when I got there.

20 Q. You were told what?

21 A. That the—Mr. Boodram was res—was one of the guys who was
22 rescued.

23 Q. Yes, but—

24 A. She told me—

25 Q. You would have wanted to know, surely, how long before he
26 had been rescued, wouldn't you?

27 A. Well Sir, I did ask to attempt to talk to the individual but they

1 said he was—

2 Q. No, no, no, no, no forget him. Forget Mr. Boodram. He's been
3 whisked off to hospital. I want to know, please, you were going
4 there to effect a rescue. Now I appreciate you couldn't because
5 you didn't have the right people and I'll come to that in a
6 minute. But, I want to understand, you see, presumably you
7 would have wanted to know first of all, when did this accident
8 happen? What time? Second, did they have breathing
9 equipment when they—when the accident happened? Third,
10 what time did Mr. Boodram come out of the pipe? Fourth, how
11 long since then to now has he been out of the pipe? All of these
12 must have been relevant factors for you to estimate whether you
13 were prepared to even consider a rescue of your own people, by
14 your own people, surely? Now you may not remember doing
15 that but surely you must have done?

16 A. Well Sir, I believe at the time in—questions was asked but at
17 the same time it's based on what question—what answers were
18 given. So, yes, we may have asked it but I being honest, I
19 really can't remember at that time because, as I said, it was late
20 in the night and there was a lot of confusion on. I did ask about
21 Mr. Boodram and they said that he was at the hospital and I did
22 question if it is we could go and interview him and I believe I
23 was turned down. I can't say by, I can't remember who
24 because they didn't tell us which hospital he was or anything
25 like that.

26 Q. You were turned down?

27 A. Yeah, well they told us he couldn't he interviewed at this time

1 because—

2 Q. Who told, who told you that?

3 A. I can't remember, Sir.

4 Q. Was it the lady?

5 A. But I did, but I did—I, I really can't remember who it was if it
6 was Ms. Balkissoon.

7 Q. All right.

8 A. But I know I did ask about his welfare and how was he and they
9 said that how he was a little shaken up.

10 Q. Well, because you would have regarded it as important to have
11 got from the person who has just emerged from the pipe such
12 information—

13 A. Correct.

14 Q. —as he might have been to give you if you were going to send
15 anybody or allow anybody to go into the pipe, I follow that.
16 But anyway, are you telling us that you would—you did not
17 appreciate that between the time that this accident happened
18 and your arrival at berth 6 that six hours had passed?

19 A. No, Sir, because when I got the initial call—

20 Q. Don't matter about the because. Is it a yes or a no to that? You
21 can give me the because in a minute. Are you saying that you
22 did not, no one told you that there was a 6-hour gap between
23 the accident happening and your arrival of your 10-man team
24 arriving to effect a rescue? Did you know that or not?

25 A. I would say I did not know fully, because, when I got the call at
26 after 4.00 the afternoon, I was just told of an incident that four
27 divers was missing.

1 Q. Yeah.

2 A. And, right? So that's why I'm saying that I was aware but I
3 was not aware of the detailed information at the time.

4 Q. All right. This is not detailed—forgive me, Mr. Hargreaves,
5 you're an extraordinarily experienced diving expert, certainly
6 with scuba, with many, many years and many qualifications,
7 only a few of which have been read out by Mr. Bissessar but
8 anybody wants to look can have a look online. You've got a
9 large number of qualifications as a diver and a huge amount of
10 experience. You know, more than most, that anybody who is
11 underwater, even as an experienced diver, has limited time.

12 A. Yes, Sir.

13 Q. Right.

14 A. Yes, Sir.

15 Q. And it follows from that that you, as a first line rescuer, would
16 have wanted to have effected a rescue, if it was possible, as
17 soon as possible, yes?

18 A. Yes, Sir.

19 Q. Right. One of the things you would want to know, beyond
20 anything else, is, when did this happen? How long is it? How
21 long have they been missing? Surely that is the—if not the first
22 thing it's got to be at least the first three things you'd want to
23 know?

24 A. Well, Sir, actually I did but, again, the information coming
25 through to the operation department, they only indicated to me
26 that the in—when the incident happened, which I got the call
27 after 4.00, that it happened, I believe it happened could be

1 about after 2.00 or minutes to 3.00 in the afternoon, that a
2 incident happened at Paria, so yes, one of my questions would
3 have been how long would have been they missing and how
4 long again in that sense but, again, the information was not
5 detailed, and, for a diver of my interest to get detailed
6 information because you must have detailed information to
7 perform such a rescue, at least you understand your parameters
8 in what you would have attempted and it's only when we
9 understood that they were sucked into the pipe then we realized
10 that, okay, um—

11 Q. Forgive me, forgive me I'm going to stop you, because, you
12 know, in a way it's not really—I'm not really interested in the
13 de—that level of detail.

14 A. Okay, Sir.

15 Q. I simply want to know from you, and it is a pretty
16 straightforward question, Lieutenant, either you knew it was six
17 hours had passed or you didn't.

18 A. No, Sir, I didn't know it was six hours when I arrived.

19 Q. Okay. Anyhow the fact is, is we now know it was and
20 obviously that would have, had you known, would have
21 affected your view about things, all right? In the event, you
22 identified four separate matters that you thought were important
23 to reject any question of your people being able to go and effect
24 a rescue. Correct?

25 A. Yes.

26 Q. Four things you identified. One was, this was a confined space,
27 that is to say that what you describe it as, there was no room for

1 manoeuvrability, somebody couldn't turn around in the pipe,
2 could they?

3 A. Yes, Sir, because, based on the size of the equipment that we
4 use, a BCD is 18 inches in width, and—

5 Q. Making it even more restrictive?

6 A. Correct, Sir.

7 Q. Yes.

8 A. Whether you have on the right equipment, yes, it would have
9 been very difficult especially with fins.

10 Q. Mr. Hargreaves, Mr. Hargreaves, I'm not criticizing your
11 assessment. I think they're entirely fair points, all right? I just
12 want to address them, if I may. All right? First one is that you
13 say that you didn't—there was no room for manoeuvrability
14 and part of the reason why you observed that was because your
15 people were not trained in confined space rescue, were they?

16 A. Yeah. Correct, Sir.

17 Q. Right. So if you had someone who was trained in confined
18 space rescue, that would have dealt with that issue for you,
19 wouldn't it?

20 A. Yes, Sir. I believe—

21 Q. Right.

22 A. —that would have—

23 Q. Second point, that you didn't have the necessary equipment.
24 You said you had inappropriate equipment which you've
25 identified us to and to Mr. Maharaj and that is the truth, isn't it?
26 You didn't have the appropriate equipment?

27 A. Yes, Sir.

1 Q. But there were others who were there who did, weren't there?

2 A. [*Moving head*]

3 Q. That's right, isn't it? You have to say yes or no.

4 A. Yes. Yes, Sir.

5 Q. So there were? So that dealt with that point, didn't it?

6 A. Yes, Sir.

7 Q. Right. The third thing you identified was that you were
8 unaware of the cause of the incident or it was still unconfirmed.

9 Is that right? You didn't know what had actually caused these
10 men to be sucked into the pipe, did you?

11 A. Correct, Sir.

12 A. No, Sir I did not know.

13 Q. Did anyone say to you the words Delta P?

14 A. No, Sir.

15 Q. You're looking quizzical. Do you know what Delta P is?

16 A. Yes, I know what is differential pressure, yes, Sir.

17 Q. Right, differential pressure, exactly. Did anyone suggest to you
18 that the reason why these men were in the pipe was because
19 they got sucked into there because of differential pressure?

20 A. No, Sir.

21 Q. Did it occur to you that it might be that they were in there
22 because of differential pressure?

23 A. No, Sir.

24 Q. You had no answer to that question of as to what might have
25 caused the incident?

26 A. Yes, Sir, because at the time nobody was clear-cut to say, well,
27 what caused the incident.

1 Q. All right, fair enough.

2 A. So nobody could—

3 Q. Leave that one to side. Leave that one aside. Fourthly, this,
4 that there was still hazardous material contained within the
5 pipeline.

6 A. Yes, Sir.

7 Q. Where did you get that from?

8 A. I was told, I believe Ms. Balkissoon because they said it was a
9 oil, oil riser so oil would have been, um, lodged in the pipeline
10 itself

11 Q. All right.

12 A. And I know with oil and diving equipment it's not best of
13 friends I would say, because, one, it malfunctions the
14 equipment and it is kind of difficult to breathe in scuba with oil
15 in the water.

16 Q. Right, well, leaving aside scuba, we've set that to one side.
17 Your view is they shouldn't go in with scuba equipment, but,
18 given that there was now top quality equipment for commercial
19 diving available, such as hoses and full head masks and/or
20 helmets if necessary, all of that, that would have dealt with your
21 concerns about hazardous material being in the pipeline, would
22 it not?

23 A. Yes, Sir.

24 Q. Yes. So, the only thing, then, that I take away from this is that
25 you were concerned about and remained concerned about was
26 the fact that nobody, as far as you were concerned, had
27 confirmed to you what had caused the accident?

1 A. Correct, Sir.

2 Q. All right. Very well. Thank you very much. I don't—oh yes,
3 there's one other thing I did want to ask you about from your
4 statement. Yes. On Sunday the 27th of February, paragraph 13
5 of your statement please, on Sunday the 27th of February, you
6 said that there was a virtual meeting and I asked you about this
7 how little before, all right, but the upshot of that meeting, you
8 knew by then that no rescue mission had actually been
9 performed, don't you?

10 A. No, Sir.

11 Q. You didn't know that?

12 A. No, Sir.

13 Q. So you mean when you had this virtual meeting, along with
14 your CPO, who's CPO?

15 A. Chief Jarrott, Chief Petty Officer.

16 Q. Chief Petty Officer? Right, Chief Petty Officer Jarrott, you and
17 he sat down together in a virtual meeting with whom?

18 A. It would have been members of LMCS and the Paria health and
19 safety team.

20 Q. Can you remember who was there?

21 A. I believe Mr. Piper was there, and there was someone from
22 Heritage. I can't remember her name, offhand.

23 Q. Uh-huh.

24 A. Um the LMCS I think it was the owner—

25 Q. Kazim Ali?

26 A. —was there.

27 Q. Senior.

1 A. Yes, he was there, and—

2 Q. Oh. I think we know which meeting you're talking about then,
3 fine. Anyway these people were there when you had this
4 virtual meeting with them?

5 A. Yes, Sir.

6 Q. And there was discussion that whilst they're there that the
7 rescue mission was prepared by LMCS?

8 A. Yes, Sir.

9 Q. Right. However—and you say this:

10 “However, that method which LMCS proposed to utilize
11 created further opportunity for greater casualties.”

12 A. Yes, Sir. That, um—

13 Q. That was your opinion, was it?

14 A. Because based on what they discussed and what they wanted to
15 do—

16 Q. Right.

17 A. —um, to my opinion, my opinion again, as I said, I just find it,
18 it was very—it was hazardous in the way what they wanted to
19 do.

20 Q. Right. Well I—

21 A. I mean, it was—I don't know if it was—

22 Q. It's fair to say—I'm sorry, carry on.

23 A. No, Sir, I'm saying I don't know if it was disclosed the type of
24 rescue even they wanted to try, but, again, when they spoke it,
25 it was kind a inappropriate—

26 Q. Right. What—

27 A. —the way what they wanted to do.

1 Q. Whatever it was, you were uncomfortable with it and you made
2 that clear?

3 A. Yes, Sir.

4 Q. All right, I got you.

5 A. Yes, Sir.

6 Q. You then say this:

7 “An alternative method was then decided on and a
8 decision was made to have the TTCG diving department
9 return on Monday, the 20th of February, to offer
10 assistance to the ongoing exercise.”

11 Well, leaving aside the unfortunate turn of phrase, did you
12 mean by that that your team was going to come back on the
13 Monday to offer assistance in a rescue or something else?

14 A. No this—I—the alternative method they decided on was to
15 flush the pipe and that’s why they told us to return on Monday
16 to help in aiding the recovery after the flushing would have
17 been commenced.

18 Q. You mean by then it was already decided that they were dead?

19 A. Yes, Sir.

20 Q. All right. Thank you very much.

21 **Mr. Chairman:** Yes. Hands up please for those who are
22 interested in asking Mr. Hargreaves any questions? Yes, Mr.—
23 er, Ms. Mootoo, did you have your hand up? Not Mootoo. Ms.
24 Alfonso, did you have your hand up? I was looking at Mootoo
25 thinking he was going to but [*Crosstalk*] Yes, sorry.
26 [*Crosstalk*] No, um, perhaps he should tell us.

27 **Ms. Alfonso:** Um, yes, yes, I did have—yes, it’s true—

1 **Mr. Chairman:** Right.

2 **Ms. Alfonso:** I did have my hand up, Sir.

3 **Mr. Chairman:** All right, Mr. Hargreaves, Ms. Alfonso from
4 the trade union is going to ask you some questions, maybe Mr.
5 Mootoo will do as well, but, for the moment it's Ms. Alfonso.

6 **Lt. Hargreaves:** From where?

7 **Ms. Alfonso:** Oh.

8 **Mr. Chairman:** From the union. She'll introduce herself.

9 **Ms. Alfonso:** Yes, but, Sir, can—he indicated that he couldn't
10 see anybody else in the room.

11 **Mr. Chairman:** Can you see Ms. Mootoo? Perhaps you'd
12 stand up. [*Laughter*]

13 **Lt. Hargreaves:** I'm seeing her, yes. I'm seeing her now, yes.

14 **Mr. Chairman:** Ms. Alphonso is going to stand so you can see
15 her.

16 **Ms. Alfonso:** Okay, is that any better? Well—

17 **Lt. Hargreaves:** Yes, yes, Ma'am I can see you.

18 **Mr. Chairman:** Right, he can see you now. All right.

19 **Ms. Alfonso:** Okay, thank you very much, Lieutenant.

20 **Cross Examination By Ms. Alfonso:**

21 Q. Good afternoon, Lt. Hargreaves. I am—

22 A. Good afternoon, Ma'am.

23 Q. My name is Nyree Alfonso. I represent the interest of the
24 SWWTU and I have a few questions I would like to ask you.

25 A. Yes, Ma'am.

26 Q. Lt. Hargreaves, following from the line of questioning of the
27 honourable Chairman, I want to try and understand the time

1 frame. You say that you received a telephone call at 4.07 on
2 Friday the—

3 A. Yes, Ma'am.

4 Q. —25th. Could you explain—and you received a call that divers
5 were missing in the water. Let's start with that's your first
6 information?

7 A. Yes, Ma'am.

8 Q. But you don't arrive, and I don't mean you personally, you and
9 your other dive team members do not arrive until 8.00, until
10 four and a half hours later and a little bit over that too.

11 A. Yes, Ma'am.

12 Q. So if you—would you consider that an emergency, four divers
13 are missing, unaccounted for in the waters off of Paria's
14 facilities? That would be an emergency?

15 A. Yes, Ma'am, I would consider it an emergency, yes.

16 Q. Okay. So those of us who may be called upon to—be
17 unfortunate enough to call upon the coast guard to assist us in
18 case of emergency, why would it take four and a half hours for
19 the designated dive team, because this is a designated dive
20 team, actually two, why would it take four and a half hours to
21 get from Staubles to Paria's facilities?

22 A. Well Ma'am, one, it was the Friday afternoon. I know the
23 majority of the diving department fellas, they would have been
24 dispersed already and who probably would have been home in
25 their house and when an emergency was called, when that
26 emergency was called, based on the areas of where my team
27 lives, I have to give them a window to respond to the

1 headquarters, to the diving department base in Staubles Bay,
2 and that is what initiated right after.

3 Q. So let me get this. So you have a diving emergency, four divers
4 are unaccounted for, they're clearly not on the surface, one
5 assumes they're not on the surface, they're under water and you
6 think a window of four and a half hours is, what, rapid
7 response?

8 A. No, I wouldn't say a window of four and a half hours—

9 Q. Okay, but—

10 A. —in our SOPs.

11 Q. Okay from the first time—

12 A. Yes, in terms—

13 Q. —you received the call—

14 A. In terms—

15 Q. —it took you more than four and a half hours to reach on, on
16 the location, yes?

17 A. Yes, Ma'am, because I had to wait on a vessel to carry us down
18 there.

19 Q. Okay, so there was also vessel issue, a transportation issue?

20 A. Yes Ma'am.

21 Q. Okay. Let me ask you something, Mr. Hargreaves. Is the
22 person or the vessel that you came—okay, the vessel that you
23 came from Staubles down to the location at just before quarter
24 to 9.00 on Friday, was that captained by Mr. Leidgewood?

25 A. Yes, Ma'am.

26 Q. Okay. In the trip—how long did that trip between Staubles and
27 Paria's facility take?

1 A. I would say an hour and a half.

2 Q. Okay. In an hour and a half, Lt. Hargreaves, did you—you
3 knew that Mr. Leidgewood had come from the site to collect
4 you and to carry you back? Did you know that?

5 A. No, Ma'am.

6 Q. You didn't know that leading seaman Leidgewood had been on
7 the scene before he collected the dive team and yourself?

8 A. No, Ma'am.

9 Q. So in an hour and a half, Lt. Hargreaves, you're the senior
10 officer, you're far senior than leading seaman Leidgewood, you
11 had no conversation with the leading seaman who had just
12 come from the scene? He didn't tell you—

13 A. N Ma'am.

14 Q. —anything about the scene that he had just come from?

15 A. No, Ma'am.

16 Q. Hmm, oh. Most extraordinary. Very extraordinary. So when
17 you arrived on the scene, all you have in terms of information is
18 whatever was relayed to you at 4.07, missing divers?

19 A. Yes. Yes, Ma'am.

20 Q. I see. Most extraordinary.

21 **Mr. Chairman:** Unbelievable.

22 **Examination By Mr. Chairman:**

23 Q. Did you not speak to Mr. Leidgewood?

24 A. When, when, when was that, Sir?

25 Q. Well, I thought he came to pick you up?

26 A. Well, yeah, we had to wait on the vessel. I—the vessel, if
27 they—the vessel came, I didn't know where they were but they

1 came and we went.

2 Q. No, when he picked you up and was taking you to berth 6 to
3 assist with this rescue, did he not tell you, “Look, I’ve just been
4 there. There is a terrible thing, you know. These guys were
5 sucked into a pipe and I managed to get—one of them managed
6 to come out”?

7 A. No, Sir.

8 Q. “I was there when he got out”.

9 A. No, no.

10 Q. Did he speak to you about it at all?

11 A. No, Sir. I had no recollection of that information with Mr.
12 Leidgewood.

13 Q. He said—I mean, did you talk to him at all about what
14 happened or any information he might have been able to give
15 you about what happened at berth 6?

16 A. No, Sir.

17 Q. I want to be clear about this. Are you saying you can’t
18 remember or are you saying there was no conversation?

19 A. I can’t remember any conversation myself and leading seaman
20 Leidgewood. On the way to Paria with my team, I can’t
21 remember any conversation we had.

22 Q. Of course, if he had any information, it was something you
23 would have wanted to know, isn’t it?

24 A. Well, Sir, let me be honest, yes. The information from the
25 leading hand would have been appropriate, but, again, he’s not
26 a diver. He may not understand what was going on, so, at the
27 same time, based on how information does he skewed in the

1 possess, it would have been better that I get the proper
2 information when I received on site and not from a third-party
3 or fourth party.

4 Q. Well, your loyalty does you credit, but I'm afraid, um, surely
5 you would have wanted to know every little scintilla of
6 information from an experienced man, a seaman, who would
7 have been able to at least give you his own appraisal. I
8 understand he had one diver with him, anyway. But, are you—

9 A. Okay.

10 Q. —seriously saying that you weren't interested in anything he
11 might have been able to give you by way of information before
12 your arrival?

13 A. I wouldn't say I was not interested, Sir.

14 Q. Good.

15 A. That would be inappropriate—

16 Q. Yes.

17 A. —to say I was not interested.

18 Q. So, help us, please? Is it the case then that he said absolutely
19 nothing to you in the several minutes or so that it must have
20 taken him to get you there?

21 A. Well like I said, Sir, I can't recall having a conversation with
22 Mr. Leidgewood.

23 Q. Perhaps there was a conversation; you'd just forgotten, then.
24 All right, thank you.

25 **Ms. Alfonso:** Thank you, Mr. Chairman.

26 **Continued Cross Examination By Ms. Alfonso:**

27 Q. Lt. Hargreaves, you have a very impressive, well I'll say a

1 résumé, but a very impressive resume of diving qualifications
2 and certifications, very lengthy and very long but I notice one
3 of them, or two of your qualifications are referred to something
4 called public safety diving. Am I correct?

5 A. Yes, Ma'am.

6 Q. Okay. Now public safety diving doesn't that involve the
7 recovery of persons and/or bodies below the water?

8 A. Yes, Ma'am.

9 Q. Okay. And in addition to public safety diving certification,
10 which you received fairly recently, 2019, yes, you also have
11 surface support, a specialty in surface support?

12 A. Yes, Ma'am.

13 Q. Okay. Also in public safety diving?

14 A. Yes, Ma'am.

15 Q. Yeah? Okay. So, you—so part of your training and experience
16 is the recovery of bodies or live people, hopefully more live
17 people? So—

18 A. Yes.

19 Q. And in confined spaces too.

20 A. No, Ma'am.

21 Q. No?

22 A. Public safety does not go in to—well into confined space
23 diving.

24 Q. I didn't say pipelines, huh, confined spaces.

25 A. No, Ma'am. Confined space is different. Confined space is—
26 confined space is enclosed. For example, cave diving is
27 considered confined spaces. Anything that is enclosed and

1 inability to manoeuvre properly is considered confined space
2 diving.

3 Q. And you don't have any certification in that area?

4 A. No, Ma'am.

5 Q. Okay. But you have a certification with respect to what was
6 the, what's the right term to use here, surface supply of air?

7 A. Right.

8 Q. From—so you—

9 A. Surface supply in support of public safety is that public safety
10 diving is considered law enforcement diving, right, and in law
11 enforcement you have to be able to support from on top the
12 diver in that capacity. So that is what I mean by—that is what
13 the certification meant where that you can support someone
14 from on top the surface.

15 Q. Okay. I—

16 A. It's not, it's not an—it's not in event of using, um, air supply
17 from vessel. That is something totally different.

18 Q. Okay. But your qualification in public safety diving is to—
19 allows you to—well, your training allows you to effect
20 underwater search and rescue operations, no?

21 A. Yes, Ma'am.

22 Q. Okay. You also have a certification that allows you to inspect
23 underwater pipelines, yes?

24 A. Outside of the pipeline we can do inspections outside of a
25 pipeline to make sure that—

26 Q. Outside a pipeline.

27 A. —yeah, outside the pipeline, not inside.

1 Q. Okay. And that includes remote operated vehicles as well?

2 You have a—

3 A. RO—ROV.

4 Q. —you have certification in that?

5 A. In ROV, yes, Ma'am.

6 Q. I hope I got it right. Is not remote operated vehicles, that's
7 ROV?

8 A. It's, it's the same, it's the same thing, ROV, yes, Ma'am.

9 Q. I hate acronyms. I always get it mixed up. So, when—I know
10 you don't have it in your witness statement. When you arrived
11 at minutes to 9.00, quarter to 9.00 thereabouts on Friday, did
12 you find yourself on a vessel called Waterworks?

13 A. Waterworks? Waterworks? Waterworks?

14 Q. A diving vessel, a diving assisting vessel called Waterworks?

15 A. I could—we could be because I know we had to use one of the
16 vessels to move, manoeuvre onto the platform because they
17 were berthed alongside the, the, um, one of the areas and the
18 dive, the Interceptor had to go alongside there for us to come
19 off. So, we had to transit through one of the boats to go on to
20 the platform.

21 Q. One of the witnesses that preceded you today, Lt. Hargreaves,
22 indicated that you were on a dive vessel called Waterworks and
23 that you were inspecting—your team. Five or six of the dive
24 team were inspecting the equipment on that vessel. You will
25 agree that happened?

26 A. I can't recall. I can't remember, Ma'am. It probably did. I
27 can't remember.

1 Q. And they said that you were very interested in this equipment
2 that you were not familiar with. Would that be correct?

3 A. Like I said, Ma'am, I really can't remember if I did speak to
4 somebody on the vessel or if I did say that. Um, I can't
5 remember.

6 Q. No, were you—okay, so you could have spoken to somebody
7 but did you inspect equipment? Did you inspect commercial
8 diving equipment, helmets, umbilical cords, that type of thing?

9 A. Yes, I'm not—I am, I am not authorized to inspect those type of
10 equipment, Ma'am, because I'm not trained in equipment. I
11 may be—I may have had an interest in it because it is
12 something that I do want—I did want to do at some point, but,
13 for me to inspect somebody else's equipment would be very
14 appropriate for me especially if I'm not trained or qualified in
15 the equip—in using the equipment, so how—I can't inspect
16 somebody else equipment.

17 Q. Okay. Did you have an interest to the extent that you wanted to
18 see what it looked like?

19 A. Well, again, like I said, Ma'am, I did have an interest in
20 becoming a commercial diver at some point.

21 Q. I see.

22 A. And I wanted to see what it looks like, as I say, but I guess I
23 really can't remember if I did do such at that—on that night in
24 questioning because like I said we had to use one of the vessels
25 to go back.

26 **Mr. Chairman:** Yes, thanks. Where is this going, Ms.
27 Alfonso?

1 **Ms. Alfonso:** I just want to know if he saw the equipment, Sir.

2 **Mr. Chairman:** All right.

3 **Ms. Alfonso:** All right?

4 **Lt. Hargreaves:** Well Ma'am, to be honest, diving equipment
5 would be—the diving equipment was laid—would have been
6 laid on the deck of the boat, so, I mean, if it is we had to pass,
7 yes it would have been there to go through, but, like I said, I
8 can't pick up somebody's—

9 **Mr. Chairman:** All right, we've flogged this subject enough, I
10 think. Can we have another subject, please?

11 **Ms. Alfonso:** Okay.

12 **Continued Cross Examination By Ms. Alfonso:**

13 Q. And I don't want to traverse this area again, you would have
14 formed the view that it was not safe for your team to, to—

15 A. Correct Ma'am.

16 Q. —to conduct any rescue using scuba or anything else for that
17 matter?

18 **Mr. Chairman:** Well, if you don't want to traverse it again—

19 **Ms. Alfonso:** Yes but I have one question to ask him based on
20 that—

21 **Mr. Chairman:** All right.

22 **Ms. Alfonso:**—Mr. Chairman.

23 **Continued Cross-Examination By Ms. Alfonso:**

24 Q. Would you accept—because you have your—aside from the
25 qualifications I've pointed you to, you have certification as a
26 rescue diver, yes?

27 A. Yes Ma'am.

1 Q. Yes, right. So would you accept, Lt. Hargreaves, that if one is
2 to effect a rescue there may be some level of risk?

3 A. Yes.

4 Q. To the rescuer?

5 A. Yes.

6 Q. He is going to rescue somebody but there may be some level of
7 risk to the rescuer himself or the, or, or, you know, if it's more
8 than one person. You'll accept that?

9 A. Yes, Ma'am, I will accept the risk, yes.

10 Q. Okay. But your job as the head of the dive team would be to
11 mitigate that loss or manage—sorry, mitigate that risk or
12 manage that risk?

13 A. Yes, Ma'am.

14 Q. Minimize it, any, any, any, any of those things. That would be
15 your job, yes?

16 A. Yes, Ma'am. I must make an—a proper risk assessment must
17 be done at the site to understand the feasibility of such
18 operations.

19 Q. And as you say risk assessment, Lt. Hargreaves, did you make
20 any risk assessment whether a rescue attempt could be made
21 with equipment that you may have seen, laid out on the deck of
22 a certain vessel, even if you can't remember the name of the
23 vessel?

24 A. Again, Ma'am, as I said, if a risk assessment would have
25 been—was done, it would have been done by the team or even
26 the team that was there before, because if they had—if there
27 was a commercial equipment boat there in the vicinity, which

1 means the supervisor there would have made—could have
2 made an assessment also in that capacity, because he is a
3 commercial trained individual, so yes a risk assessment would
4 have been done on their behalf and provided information in that
5 capacity to the higher authority for an attempt of rescue to be
6 made.

7 Q. Okay, but you made no such assessment yourself other than?

8 A. I made an assessment—

9 Q. Other than it can't be done, your officers—

10 A. For my—

11 Q. —can't, can't do it? Your ratings can't do the dive?

12 A. Correct.

13 Q. And you can't do the dive?

14 A. Yes, Ma'am.

15 Q. Are you familiar with a vessel called Fair Chance?

16 A. Fair Chance? Um—

17 Q. That's a vessel that overturned in Chaguaramas.

18 A. Yes, Ma'am.

19 Q. Okay. Were you or any of your divers on that scene in April of
20 this year?

21 A. Yes, Ma'am.

22 Q. In April of this year.

23 A. Yes, Ma'am, we were at the scene, yes.

24 Q. Okay. My instructions are that certainly coast guard divers
25 dived into that vessel.

26 A. Yes.

27 Q. Okay. And that—this was a little—well I don't want to say a

1 little cargo, but this was a Caricom cargo vessel, not a very big
2 vessel. Isn't that, isn't that diving into confined spaces, Lt.
3 Hargreaves?

4 A. I wouldn't say confined space because, one, there's difference
5 between confined space and penetrating dives, right? So, a
6 vessel of that nature and size would have been considered being
7 a penetrating dive. It is not a confined space because, one, the
8 cabins would have been opened and what we did first was an
9 assessment around the vessel to see if there were any areas
10 where diving could be—have been done inside the spaces based
11 on the size of the space. That was done first, an assessment.

12 Q. Is it then your evidence this afternoon that the coast guard does
13 have the capability to do penetration diving then?

14 A. Yes, but not in a pipeline. It's a totally different concept.

15 Q. You recall that the Fair Chance was a vessel that had turned
16 upside down, yes?

17 A. Yes Ma'am.

18 Q. So you're diving with the hull this way [*Demonstrating with*
19 *hand*] and the cabins and accommodation below water?

20 A. It would have been, it would have been the keel on top and the
21 cabins underneath, yes.

22 Q. Yes, thank you, but your dive team was quite capable of
23 performing that, what turned out not to be a rescue either?

24 A. Um, I wouldn't—I would say we performed because, one, what
25 we identified, there were a lot of debris in the boat that caused
26 us to reach to the diver—to the victims that were in the vessel,
27 because of the amount of debris that was blocking—was doing

1 blockage of the doors and thing and I remember that was one of
2 the assessments that there was a lot of debris and because of
3 where they were located in the lower space of the vessel, it was
4 very difficult to manoeuvre down through the debris into that
5 space so a dive when—a decision was made to float the vessel
6 in that way.

7 Q. Wouldn't that be a very difficult dive, Lt. Hargreaves, because
8 of the cargo that we—had come loose—because of all the
9 things that were loose floating around at the, the—well, the top
10 of the vessel which was below the water?

11 A. Well, again, Ma'am, as I said, the assessment that was done by
12 the guys who did the assessment, they came and gave their
13 expert advice on it and say that, you know, this is the most we
14 can do and what is the parameter, because, with the information
15 that we got that day that the, the survivors or the—not the
16 survivors, the victims, they were in the area that they wanted us
17 to look but again it was inappropriate—

18 **Mr. Chairman:** Right, I, I—

19 **Ms. Alfonso:** I accept. I accept that. I accept that, Mr.
20 Chairman. I accept that. I got what I wanted from Lt.
21 Hargreaves. Thank you very much, Lt. Hargreaves, for your
22 information. Thank you.

23 **Mr. Chairman:** Yes, Mr. Ramadhar.

24 **Cross-Examination By Mr. Ramadhar:**

25 Q. Good afternoon, Lieutenant.

26 A. Good afternoon, Sir.

27 Q. You're in Barbados today?

1 A. Yes, Sir.

2 Q. I am Prakash Ramadhar. I represent the interest of the child of
3 Yusuf Henry and Mr. Kurban who unfortunately died in the
4 event. Of course, you were very eager for the truth to be told in
5 this matter, is that true? Is that accurate?

6 A. Yes, Sir.

7 Q. When did you prepare first your statement?

8 A. I believe as soon as the counsels of the State informed me,
9 through the Defence Force lawyers, that a statement is to be
10 provided.

11 Q. And when was that?

12 A. I would believe could be August, somewhere about there, Sir.

13 Q. And certainly by August you would have known there were
14 serious statements or considerations that the coast guard of
15 Trinidad and Tobago prevented, in some form or fashion, an
16 effort to rescue the deceased divers. You knew that?

17 A. Yes. Yes, Sir.

18 Q. Did you put in your statement any denial of that, yes or no?

19 A. Yes, well we did—yes, Sir.

20 Q. You put in your statement that the coast guard did not prevent
21 an attempted rescue of the deceased divers?

22 A. Yes, Sir.

23 Q. Thank you very much. Now, when did you go to Barbados?

24 A. I went on—I left to Barbados on the 25th of May of this year.

25 Q. Oh, you've been there for this time?

26 A. Yes, Sir.

27 Q. Okay. Thank you very much. Now, as a military man you

1 knew full well, and I'm so grateful to the Chairman and of
2 course my most learned Senior, Mr. Ramesh Lawrence
3 Maharaj, at whose feet I've learned and continue to learn, that
4 you, on the way to the scene and the site as you've described it,
5 made no effort to ascertain from persons who were already or
6 who had already been at the site to find out the conditions there.
7 Is that still accurate?

8 A. Yes, Sir.

9 Q. Yes. Is that part of your military training to not find out as
10 much as you could before you arrived?

11 A. Well again, Sir— like I said, that.

12 Q. No, my question is very different, you know. Is that part of
13 your military training to not ascertain all that you could before
14 you arrive on site?

15 A. I would have gotten the information from the commander
16 who—

17 Q. We're dealing with training. Training. Is it part of your
18 training to not find out?

19 A. Of course it's part of my training to find out.

20 Q. Thank you.

21 A. But to find out from the source, the authority.

22 Q. So, part of your training, as you've indicated, and forgive me
23 for trespassing, Chairman, you did not ascertain from anyone of
24 the coastguardsmen who had been on site? Is that accurate?

25 A. Yes, Sir.

26 Q. Thank you. You knew, when you got to the site, that you'd be
27 meeting someone in authority. Is that accurate?

1 A. Yes, Sir.

2 Q. Yes. And who was that person you were expecting to speak or
3 meet and speak with?

4 A. I would have been believed it would have been an incident
5 commander.

6 Q. And who be that?

7 A. Um, at the time when I met the person there was Ms.
8 Balkissoon.

9 Q. Yes.

10 A. She was the senior person on site.

11 Q. Yes.

12 A. I would have believed she would have been the incident
13 commander at the time because she was the one giving me
14 information, nobody else.

15 Q. That was very easy. Now, having met and spoken with the
16 incident commander could you tell us, as best as you can, what
17 time that might have been?

18 A. That—I believe we arrived at 8.43, um, well it probably took us
19 at least 5 to 10 minutes. I would have believed it was after 9.00
20 when we met.

21 Q. Yes.

22 A. Um, because, um, like I said there was a lot of—

23 Q. Okay. We're good. We're good there, right? Just after 9.00?

24 A. Yes, Sir.

25 Q. Did you ever see and speak to a Mr. Piper on site?

26 A. No, Sir.

27 Q. No. But you agree you said the words that basically an

1 assessment on site, and tell us if it is correct, is the best thing to
2 be on site and making assessments there and then?

3 A. Yes, Sir.

4 Q. Yes. Because a lot could be lost in communication, isn't that
5 correct?

6 A. Yes, Sir.

7 Q. Now, even here, there was uncertainty by what your written
8 word was, which I'm sure you would have read before you
9 signed, as to whether you gave an instruction or a
10 recommendation only in relation to coast guard's divers or in
11 relation to any diver? You agree with that? Mr. Maharaj so—

12 A. Yes.

13 Q. —brilliantly handled that. Yes?

14 A. Yes.

15 Q. You agree with that?

16 A. Yes.

17 Q. Now, Ms. Balkissoon—oh, before I get to that, you said
18 something quite interesting, that there was a lot of confusion in
19 the area that you were operating within. Is that still accurate?

20 A. As I—so, well let me be clear up what is confusion.

21 Q. Yes I want you to be clear.

22 A. Right. So because of the—um a lot of—there were a lot of
23 vessels—

24 Q. Uh-huh.

25 A. —in the area, so when I say vessels, other small vessels, small
26 boats.

27 Q. Right.

1 A. And it was very confu—it was a confused area for us especially
2 to get alongside.

3 Q. Ah.

4 A. So that's what I meant by confusion in that we couldn't really
5 get a proper berthing, so we had to use one of the vessels to
6 berth alongside because of the amount of vessels that was
7 pitched in and out of the area that we were around.

8 Q. I appreciate what you've just said. So that when you got on
9 board to solid ground, when I say solid ground, a non-, a non-
10 floating environment, a platform, there was no confusion there?

11 A. Um, I wouldn't say it had any confusion, no. Like I said, I was
12 dealing with one individual.

13 Q. Yes, with one individual?

14 A. And then she was—

15 Q. Yes.

16 A. Yes, Sir.

17 Q. Ms. Balkissoon—

18 A. She was [*Inaudible*]

19 Q. She was the boss?

20 A. —she was provided [*Inaudible*]

21 Q. Yes, she was the boss lady, by which time she had already
22 told—certainly you would have known, having spoken with
23 her, that there was a live rescue around sixish, at least before
24 7.00?

25 A. On—no.

26 Q. What?

27 A. No, I didn't know that, Sir.

1 Q. So having spoken to the person in authority, you did not know,
2 after having spoken to this person in authority, there was a live
3 rescue around—before six o'clock that evening?

4 A. No, Sir. I was just told that Mr. Boodram was one of the
5 persons that was rescued. They didn't give a timing. Timing
6 was—there were no timings for anything I [*Inaudible*]

7 Q. You are a diver and you appreciate underwater rescue of men
8 who are submerged, to put it mildly, time is of the most
9 important essence, isn't it?

10 A. Yes, Sir.

11 Q. Right. To make your assessment you will need to know as to
12 how long they—

13 A. A time.

14 Q. Yeah, how long, you agree with that?

15 A. Yes, Sir.

16 Q. Yes. Tell me something. In your experience, you knew the
17 incident occurred, as you told Mr. Chairman, around three
18 o'clock and you were there after nine o'clock, yeah? Eh?

19 A. Yes, Sir.

20 Q. Six hours having passed, yeah? Did you form the view that the
21 men were already dead?

22 A. No, Sir.

23 Q. No? I want to suggest, because it, it is the only possible
24 reasonable explanation that many had thought and written them
25 off as dead and therefore there was no urgency to attempt any
26 rescue for them. Tell me if that doesn't make sense?

27 A. It makes—that makes perfect sense.

1 Q. Thank you so much.

2 **Mr. Ramadhar:** Mr. Chairman, do forgive me. I have called
3 you My Lordship many times and I will repeat that.

4 **Mr. Chairman:** Pales into insignificance as to what I've called
5 everybody else, so don't worry about it.

6 **Mr. Ramadhar:** Thank you.

7 **Continued Cross-Examination By Mr. Ramadhar:**

8 Q. Now, Mr. Maharaj dealt with this and I am almost afraid to trod
9 the ground upon which he has walked but you went there and
10 you made a decision to not pursue a dive by the coast guard and
11 he asked you a very significant question, and I will explore that,
12 and thank you Mr. Maharaj for this. Your function, after you
13 had made a clear, definitive decision to not endeavour a rescue
14 by the coast guard, was no longer part of the rescue of the men
15 in the pipe, is that accurate?

16 A. Yes, Sir.

17 Q. Yes. How many coastguardsmen remained thereabouts on the
18 platform or close to the berth after that decision was made?

19 A. After the decision was what, a rescue would not be performed?

20 Q. Yes.

21 A. I mean, at the end of the day we were there until—we were
22 there until to render any assistance.

23 Q. Yes.

24 A. So we remained, we remained but at the same time, as I said, no
25 formal plan came to us indicating of a rescue attempt or
26 anything was going to happen, right at any time. We were there
27 waiting for assistance to help in any assistance possible.

1 Q. So you were left literally and figuratively in the dark as to what
2 next, isn't it?

3 A. Basically yes, Sir.

4 Q. Yeah. But did you as a—first—forgive me, eh, you're coast
5 guard yes but first you're a Trinidadian and Tobagonian, right,
6 a citizen, yes? And before that you're even that—even that,
7 you're a human being. Were you deeply concerned about the
8 wellbeing of the men who had gone missing, about whether
9 they're alive, they're dead, what conditions they were in?

10 A. Yes, Sir, that would have been going through my mind based
11 on the parameters of what happened.

12 Q. Yes.

13 A. Um, the urgency as, I said, um, the most, the most we could
14 have done was I'll just keep asking questions about, you know,
15 what is the next step and this is where I did indicate I asked Ms.
16 Balkissoon and she, um—concerning, like you know, if any of
17 you required of us again for everything because at the same
18 time—

19 Q. Yes.

20 A. —they were not giving us any clear information of if an attempt
21 was to be going on if an attempt—all I saw, as I said when I
22 reached, was that there were divers in the water—

23 Q. Yes.

24 A. —in commercial use putting on that riser, and I was—I
25 believed or used that to say, well, hey, probably an attempt is
26 being done.

27 Q. Thank you. Mr. Hargreaves, I want to tell you, first of all, the

1 country is grateful to our protective services. You put your
2 lives on the line for us every day, police, coastguardsmen,
3 Defence Force, firemen and, you know, EMT. I just say these
4 things, but what I want to enquire of you is this. And you just
5 told us that you made enquiries of the authority there, Ms.
6 Balkissoon, as to what next. Did she respond to you what next?

7 A. No, Sir.

8 Q. No. So there you were, you too are an authority figure, because
9 you were the most senior coastguardsman on site, is it not true?

10 A. Yes, Sir.

11 Q. Yes. Ms. Balkissoon was the most senior authority from Paria
12 on site, is that also true?

13 A. I believe, I believe so, she was because—

14 Q. What you believe is what it is, okay? So you believe that she
15 was and she's the person that you spoke with, correct?

16 A. Yes, Sir.

17 Q. Now, what time did you transmit to her that you, as far as you
18 are concerned, could not authorize a dive by your
19 coastguardsmen? What time was that?

20 A. Hmm. That would have probably been, I would say, between—
21 it wasn't, it wasn't, it was, it was a lil while after so I believe
22 between—after we spoke she carried us to the barge and where
23 the incident happened because, like I said, we were on the
24 platform so we had to transfer to the barge.

25 Q. Yes.

26 A. And then she showed us around an area of where the tanks of
27 the LMCS divers were, and—

1 Q. Sir, with all due respect, with all due respect—

2 A. I just, I just trying to ascertain—I trying to get a timing
3 because, again, as I say I don't want to be incorrect

4 Q. Oh.

5 A. I want to—so, because, like I say, um, so I would believe
6 between, I would say about 9.20, nine, 9.30—

7 Q. Yeah.

8 A. —in that, in that, in that aspect because the walk from the
9 platform to the barge probably take us—

10 Q. Right. Sir, we do not—we cannot—we don't have the luxury
11 of time, just like the gentlemen who died didn't have the luxury
12 of time for all of this.

13 A. Right. Yes.

14 Q. My question is, right, approximately what time was it that you
15 transmitted your decision to Ms. Balkissoon that the
16 coastguardsmen you could not authorize a dive by them,
17 9.30ish, ten o'clock?

18 A. It would be, it would be before ten o'clock, yes.

19 Q. Before 10.00, but between 9.30 and 10.00, you think?

20 A. Yes, Sir.

21 Q. Right. Now, when you arrived, you saw men in the water,
22 divers, swimmers, whatever, correct?

23 A. Yes, yes, Sir.

24 Q. Yes. Did you see any effort made after you communicated to
25 Ms. Balkissoon, any effort to dive into the pipe, yes or no?

26 A. No, Sir.

27 Q. No. Did you make an inquiry, as you have already told us,

1 what next? “Listen men in there.” You know as a diver, every
2 second counts, isn’t it?

3 A. Yes, Sir.

4 Q. Yes. Did you make an enquiry from her what next? Is it that
5 no dive is to take place?

6 A. No, Sir, I didn’t, I didn’t get that. I just asked what about the
7 emergency plan.

8 Q. Yeah.

9 A. And—

10 Q. So you never asked her what, what is the next dive, what is the
11 next effort going to be made to save these men?

12 A. Well actually they were the ones to provide the information
13 because they were there before.

14 Q. Or. And having not provided to you as a senior
15 coastguardsman interested as a Trinidadian, a human being
16 first, you made no enquiry, “When are we going to implement
17 anything”, isn’t it?

18 A. No, Sir, I did not enquire.

19 Q. Of course. But tell His Lord—Mr. Chairman and other
20 Commissioner, all of Trinidad and Tobago, after you
21 communicated your decision, you cannot tell us that any effort
22 was made to dive into the pipe?

23 A. No, Sir.

24 Q. No. Now, how many coastguardsmen were on the scene after
25 you communicated your decision that no coastguardsman will
26 be permitted to go into the pipe?

27 A. My whole thing—my well team was there, Sir.

1 Q. How many?

2 A. Ten.

3 Q. Ten. A little army, isn't it?

4 A. I don't know about—

5 Q. Well, you know, if it's a small island, yeah, 10 is a large
6 number of military men. You agree with that?

7 A. Yes, Sir.

8 Q. Yes. Several of whom were armed with machine guns, correct?

9 A. No, Sir. The diving—

10 Q. None?

11 A. —department was not armed with machine guns. The squad—

12 Q. None of them had machine guns?

13 A. The squadron department, the squadron men on the vessels
14 were the ones—

15 Q. Sir, Sir, my question is, none of them had guns on the scene?

16 A. Yes, Sir, the squadron, yes. The squadron were armed.

17 Q. Right. You know what a bouncer is?

18 A. A what?

19 Q. The term bouncer, nightclub bouncer, hmm?

20 A. Yes, Sir.

21 Q. Right. You know what a enforcer is?

22 A. Yes, Sir.

23 Q. Right. You know sometimes they don't have to say a word, the
24 boss man there and he say something and the fellas just in the
25 back lay back, as Mr. Gilbert put it, moving heavy. You said it
26 earlier about the Minister. you said the Minister travels heavy.

27 **Mr. Chairman:** You've become Mr. Gilbertson again.

1 **Mr. Ramadhar:** Did I? I've known him for 35 years. Don't
2 tell me I'm now mistaking who he is.

3 **Continued Cross-Examination By Mr. Ramadhar:**

4 Q. Right, you understand the concept, right? To be fair to you,
5 you do not know what Ms. Balkissoon told men who were in
6 the water or who were or who wished to assist in a rescue?
7 You do not know what she told them?

8 A. No, Sir.

9 Q. No. What you do know is that the communication, as you've
10 told us before, was between coast guard and who, who?

11 A. Paria.

12 Q. Yes. But you all were standing around?

13 A. Yes, Sir, we were just there to—

14 Q. Yes, yes. Yes, yes.

15 A. —we were standing around willing to assist.

16 Q. And after, as, just to be clear, after that communication of your
17 decision, there was nobody trying to go into the pipe again,
18 isn't it true?

19 A. Correct, Sir.

20 Q. Yes. Now, Sir, you used the term sucked into the pipe. Sucked
21 suggests what, differential pressure?

22 A. A suction.

23 Q. Yes. Differential pressure. Correct?

24 A. Yes, Sir.

25 Q. Yes. You in the many years, even before you became a
26 coastguardsman and you went into your diving, and since that
27 time till today, can visualize any rescue into a confined space as

1 a pipe? Can you even visualize that?

2 A. Um, with the proper training and equipment—

3 Q. Yes.

4 A. —yes, it can happen. Because, like I said, confined space
5 diving is what cave divers do.

6 Q. No, I understand all that.

7 A. And—

8 Q. Let's keep it to the pipe. Let's keep this pipe straight.

9 A. Okay.

10 Q. Okay? And stay within it, okay? You could visualize that
11 happening with the proper equipment, as you've told us, proper
12 training?

13 A. Yes.

14 Q. And the will to do it, correct?

15 A. Yes, Sir.

16 Q. Did you ascertain from anyone on site, seeing that you were
17 there, first of all, interested in rescue as an officer of the State
18 of Trinidad and Tobago, where there was that capacity in your
19 numbers, I don't mean coast guard, I mean in the numbers who
20 had, you know, the coalition of the willing, we're trying to put
21 it like that, who were present, did you ascertain whether there
22 was anyone with that capacity, training and equipment?

23 A. No, Sir, nobody at that time came forward.

24 Q. So you had given up hope all together about a rescue because
25 the coast guard did not think it—

26 **Mr. Peterson SC:** Can the witness be allowed to answer the
27 question, Sir?

1 **Mr. Chairman:** Just a, just a, just a minute. Just a moment.
2 Mr. Ramadhar, you can make your speech later on, all right?
3 I'm going to permit you to make a speech later on.

4 **Mr. Ramadhar:** Oh.

5 **Mr. Chairman:** Looking forward to it. But—

6 **Mr. Ramadhar:** I did not know.

7 **Mr. Chairman:** But—

8 **Mr. Ramadhar:** I did not know.

9 **Mr. Chairman:** But, please don't make it now. Just ask him a
10 question.

11 **Mr. Ramadhar:** And I'm most grateful. But, I thought they
12 were questions but in the questions there may have been an
13 inkling of a speech.

14 **Continued Cross-Examination By Mr. Ramadhar:**

15 Q. Now I don't mean to speechify you, Mr. Hargreaves, right, but
16 what was my question?

17 **Mr. Chairman:** It wasn't a question, it was a speech. I keep
18 telling you.

19 **Mr. Ramadhar:** Mr. Peterson, has successfully almost
20 derailed me but I will not get completely derailed.

21 **Continued Cross-Examination By Mr. Ramadhar:**

22 Q. Now, Sir, you having made the decision, right, you having
23 made the decision that the coast guard couldn't and would not
24 go, did you ascertain whether any in that number of persons
25 who were there, some of whom would have been in the water in
26 and out, as we shall call them, the coalition of the willing, had
27 the capacity, that is the training, the equipment, to go in and

1 save lives? Did you?

2 A. Sir, as I said, if such information was to come out—

3 Q. Yes.

4 A. —Ms. Balkissoon would have relayed such to me. We have
5 seen people on standby that are willing to assist and want to
6 attempt such, and at that time, like I say—

7 Q. Yeah.

8 A. —that nothing of the sort was brought to my attention—

9 Q. Correct.

10 A. —and we were just there waiting for further instructions.

11 Q. And—

12 **Mr. Chairman:** All right, all right, all right, let me just ask
13 you this please?

14 **Mr. Ramadhar:** Sure.

15 **Examination By Mr. Chairman:**

16 Q. Leave aside the 10 divers that you brought yourself, were there
17 many divers there in the course of that evening?

18 A. When you say many divers, as in commercial divers?

19 Q. Well, any divers at all to start with. Were there a large number?
20 I say large number, a significant number of divers present
21 during the course of that evening.

22 A. I saw, I saw two vessels, two commercial vessels, two dive
23 commercial vessels were on site.

24 Q. Yeah, well, I'm less interested in number of vessels. I'm
25 more—

26 A. I, I, I—

27 Q. —interested in number of divers.

1 A. —I don't—I can't say the, I can't say the number. I can't say
2 the number of divers, Sir. I doh don't know—

3 Q. Right.

4 A. —how much their teams would require. I can't say.

5 Q. Let's be clear. There were probably around another I want to
6 say 10 at least other divers present other than your own 10?

7 A. Um, I can't say, make that assumption of how much, but, yes
8 there were divers present also on the commercial vessels.

9 Q. And you saw—

10 A. But I cannot say—I can't say how much.

11 Q. All right, all right, well let's, let's say six. I believe there were
12 more, but never mind, let's say that it was just six.

13 A. Yes.

14 Q. There were two vessels fully equipped with commercial diving
15 equipment?

16 A. Yes, Sir.

17 Q. Yes. And did you, as the most senior officer present, and in
18 charge of the coast guard present on the scene, did you speak
19 with Ms. Balkissoon, who was the most senior person present
20 on behalf of Paria as to what might—well use might be made of
21 those divers and their equipment?

22 A. No, Sir. She did not indicate to me whether—

23 Q. No, no, no, no, no. Never mind what she indicated to you. Did
24 you say to her, “Look, Ms. Balkissoon, we are not able to effect
25 this rescue but it's clear that there are commercial divers here
26 who can. What shall we do? You and me, let's work it out
27 what we're going to do? There are men down there. What are

1 we going to do?" Did you ask her that?

2 A. No, Sir.

3 Q. Did you make any suggestions at all as to how they might be
4 rescued?

5 A. I did ask a question, yes, about how the rescue would—how the
6 rescue attempt would have been—

7 Q. And the response was?

8 A. I didn't really get an answer.

9 Q. You didn't get an answer. So let me understand this, then, Mr.
10 Hargreaves. Between the time when you made it clear that
11 none of your 10 divers were going to carry out any kind of
12 rescue, which you tell us was sometime between 9.30 and ten
13 o'clock that evening, between that time and when you finally
14 left that night, what were you actually doing?

15 A. We were just standing by waiting for any information
16 concerning a rescue and we were told, we were told to stand by
17 to help assist in anything going forward and I believe I said in
18 my statement that I believe it was around after 11.00, let me
19 just get back to, to that— when the—

20 Q. As a matter of fact you were never asked do anything? Is that
21 what you're saying?

22 A. Yes, I was not asked to do anything.

23 Q. After you made it clear you were not going to subject any of
24 your divers to any kind of rescue attempt and you tell us you
25 were put on standby by Paria, you were not actually asked to do
26 anything?

27 A. Yes, Sir.

1 Q. And as a matter of fact, you did nothing?

2 A. Yes, Sir.

3 Q. Do you need any more?

4 **Mr. Ramadhar:** Permit me, please? I shan't be long.

5 **Continued Cross-Examination By Mr. Ramadhar:**

6 Q. Now, Mr. Hargreaves, you said something quite interesting to
7 all of us earlier and just to remind you, you say, or you said that
8 you had made efforts to speak with Christopher, the survivor.
9 Is that still true?

10 A. Yes, I did ask about his welfare when I said that how I wanted
11 to speak to him as how he was the person who was rescued and,
12 um, I was told that he was in the hospital.

13 Q. Yes.

14 A. And I believe that they were not allowing anyone to see him,
15 um—

16 Q. Yes. And, and, and—

17 A. —as such.

18 Q. —and to be clear with you, we understand—your reputation
19 precedes you, Sir, that you're a man with specifics, you're a
20 very specific person scientifically minded, correct?

21 A. Yes, Sir.

22 Q. Yes. Who is the “they” that didn't want you to speak to him?

23 A. Um, I really can't recall who is the they but I know like I said I
24 was passing the information through Ms. Balkissoon—

25 Q. Yes.

26 A. —um, to get information.

27 Q. To short-circuit—

1 A. So I believe—

2 Q. —to short-circuit the long version, somewhere along that line
3 you got from Ms. Balkissoon, who was on your end, that there
4 was a reluctance for you to speak with Mr.—with Christopher,
5 isn't that accurate?

6 A. I would believe so, yes.

7 Q. Thank you.

8 A. Because again—

9 Q. Thank you. Now, you said also something quite interesting.
10 Do you know Mr. Kurban's son attempted rescue so his father
11 and his brothers in water? Do you know that?

12 A. Did I know if he attempted?

13 Q. Yes, to rescue his own father and his colleagues.

14 A. No. I was only told that he, um, helped with Mr. Boodram.

15 Q. Right.

16 A. I didn't know about the others.

17 Q. You knew he had actually gone into the chamber, correct?

18 A. Yeah. He—

19 Q. I put it as gently as I could, because you are not saying you
20 knew he had gone into the pipe, you knew he had gone into the
21 chamber, correct?

22 A. The habitat, yes.

23 Q. Yes, the habitat. But he was acting erratically?

24 A. Yes, Sir.

25 Q. Yes. In other words—

26 A. I mean, he was emotional, very emotional. Very emotional.

27 Q. Of course. Your daddy dying and he's right there and you have

1 all of the resources of Trinidad and Tobago available and
2 nobody going in to save his own father? What do you expect
3 him to be?

4 **Mr. Chairman:** All right, all right.

5 **Mr. Ramadhar:** I'm sorry, I'm sorry, I'm sorry. I'm sorry I
6 lost my [*Inaudible*]. Sorry—

7 **Mr. Peterson SC:** Playing to cameras. Camera is present.

8 **Mr. Ramadhar:** You know, Mr. Peterson could—

9 **Mr. Chairman:** All right—

10 **Mr. Ramadhar:**—could talk about cameras—

11 **Mr. Chairman:** Yes, I—

12 **Mr. Ramadhar:**—all right, but I have heart.

13 **Mr. Chairman:** No, no, look, I'm not going to get into a spat
14 over this but you, you do need to just confine yourself to asking
15 questions.

16 **Mr. Ramadhar:** Of course.

17 **Mr. Chairman:** As I've said to you already, I will give you
18 your opportunity to make your speech at the conclusion of all of
19 this.

20 **Mr. Ramadhar:** Yes.

21 **Mr. Chairman:** All right?

22 **Mr. Ramadhar:** Yes.

23 **Mr. Chairman:** Now, you will have that opportunity.

24 **Mr. Ramadhar:** Of course.

25 **Continued Cross-Examination By Mr. Ramadhar:**

26 Q. But you used the word "erratic". You understand that's a
27 specific term you used?

- 1 A. Yes, Sir, because he was using a lot of explicit language.
- 2 Q. Right, the obscene.
- 3 A. He yes—yes, he was—
- 4 Q. Right, cussing, huh?
- 5 A. Yes he was.
- 6 Q. And in fact, apart from the obscene language, he was basically,
7 “What are you all doing”, isn’t it? “What is going to happen?”
8 “What is the plan?” “Anybody going to help save the men?”
9 Isn’t that what he was about?
- 10 A. He was not talking to specifically the divers that were not,
11 because, yes, we were there because he was speaking in
12 general—
- 13 Q. Oh.
- 14 A. —um, on the deck, on the deck of the, of the, um, LMCS barge.
- 15 Q. Right.
- 16 A. After. Yeah that is—
- 17 Q. How far away were you from he when he was speaking these
18 obscenities and other things?
- 19 A. I was about three feet.
- 20 Q. Three feet.
- 21 A. Because at that time—
- 22 Q. So he’s right in your face, right up?
- 23 A. No, I wouldn’t say—um, at that time we were actually
24 understanding that COVID was still round so we were not
25 really speaking in close proximity but three to four feet apart,
26 yes he was. And—
- 27 Q. So you were, you were exercising COVID protocols, yes, yes?

1 You were concerned about COVID protocols?

2 A. Well Sir I don't want nobody speaking in my face in that
3 manner.

4 Q. Right. So, in other words, he was literally within your space?

5 A. Yes he was.

6 Q. Yes. You were offended by that, were you not?

7 A. Um, I wouldn't say offended, because I—

8 Q. Did you tell him to back off, back off?

9 A. No I didn't.

10 Q. Did you back off?

11 A. No I didn't.

12 Q. So you maintain the protocols with the space of three feet?

13 A. He walked off eventually and—

14 Q. Eventually, I coming to that.

15 A. And after he walked off, that was the last time I saw him.

16 Q. You were an authority figure. Did you, at the time, know that
17 he was intimately involved in rescue operations?

18 A. I was not intimately. All I know that he was the person that
19 was assisting Mr. Boodram. That's all I was told.

20 Q. It never came to your attention that his father was in the pipe?

21 A. No.

22 Q. Nobody you this?

23 A. No.

24 Q. No.

25 A. The names of the persons in the pipe were not disclosed at that
26 time to me.

27 Q. That's all right. That's all right. Well, we're not talking about

1 names here. So, when did you first learn—

2 A. Only—but you said, you said specifically his father—

3 Q. Yes.

4 A. —so how would I have known his father—

5 Q. Right.

6 A. —was in the pipeline if names were not provided?

7 Q. Or, okay. That's fine. You appreciate somebody—you could
8 know somebody's relationship, father/son without knowing the
9 names, you know that, right? Just to humour you a little bit.
10 You know that, don't you?

11 A. Yes, Sir.

12 Q. Yes. When did you first learn that this fella who behaving
13 erratically, that his father was in the pipe?

14 A. I believe that would have been after the names were given out
15 of the missing—of the gathering of persons who were—

16 Q. When, when, when?

17 A. That would have probably been—

18 Q. Wednesday, Sunday, Saturday?

19 A. I can't remember. I can't remember when.

20 Q. So you say eventually he walked off, huh?

21 A. Yes, eventually he walked off.

22 Q. Yes. Did you do anything after he walked off?

23 A. Well, yeah, I went back to Ms. Balkissoon to get information
24 again. Like I said, Sir, we, we—

25 Q. Yes. All right, we get that, so you gone to Balkissoon. Did you
26 find out who this young upstart erratic behaving person was?

27 A. Of course I did state in my statement that she introduced me to

1 him.

2 Q. Right. I'm not interested in—

3 A. Yes, she introduced me to him.

4 Q. —we stay within your live evidence.

5 A. Yes, I know who he was.

6 Q. Yes, okay. Did you ascertain whether he was a person capable
7 of doing the very thing that you had said your coastguardsmen
8 could not do—

9 A. No I didn't.

10 Q. —that is to dive into the pipe? Huh?

11 A. No, Sir.

12 Q. Ms. Balkissoon didn't volunteer that to you, did she?

13 A. No, Sir.

14 Q. Now, remember I asked you about bouncers, right, and you
15 know what a bouncer is, men who are there to enforce things,
16 right? You agree?

17 A. Yes.

18 Q. Who were the main authorities on site that day? Give me the
19 names? Not the names of persons but authorities, State
20 authorities.

21 A. State authorities?

22 Q. Yes.

23 A. To be honest—

24 Q. I thought you were all along.

25 A. Well I am, yes, but at that time I only knew of myself, when I
26 say myself I would say the Trinidad and Tobago Coast Guard
27 because no other agency was provided, saying that you know

1 we have say fire services we have this we have—

2 Q. Police, or police either?

3 A. —um, no, or police, correct, no other State agency.

4 Q. Or no—and they gave us earlier, private security for Paria?

5 A. Um, Paria private security I believe was on site. They were
6 with guns.

7 Q. As was—

8 A. I can't say. I can't say.

9 Q. Why can't you say?

10 A. Um, I can't say because I didn't see them but I you know they
11 were on site but I didn't because, um—

12 Q. Oh.

13 A. I didn't see them. I didn't see them, but I know that normally
14 those pipelines would have security on it but—

15 Q. All right, let's, let's—we could go along with speculation but
16 we shan't. Question. You are the most visible armed security
17 agents of the State on site, you agree?

18 A. Um, yes, I would say so, yes.

19 Q. And not, not just that. The other Interceptor boat right there,
20 it's a fast little boat, zzzzt, right, you carry guns and everything
21 on that, correct?

22 A. Yes, Sir but they, the men did not come off the vessel, they
23 were on the vessel.

24 Q. But we're talking about in the area.

25 A. They never came off the vessel.

26 Q. Yeah, in the area of this catastrophe and there was a larger coast
27 guard presence, a military boat, isn't it?

1 A. Yes, Sir.

2 Q. Yes. Patrolling up and down?

3 A. No, Sir. No, Sir, they were not patrolling.

4 Q. They were anchored of course?

5 A. Yes, Sir.

6 Q. Thank you. And of course you know from your wide
7 experience and years in the coast guard that that boat carries a
8 lot a resources, men, machines, material, ammunition, guns,
9 yes?

10 A. Well, yes, Sir it's a vessel, it's a vessel, yeah.

11 Q. Yes. It's a military vessel.

12 A. Yes, Sir.

13 Q. And we joked a bit earlier. It carries artillery?

14 A. I dent know about the artillery but—

15 Q. You don't know they have big guns with large bores?

16 A. Sir, if it have I am—

17 Q. You do not know whether—hold on, hold on, hold on, no if, if,
18 if, if now. You were there. You're a coastguardsman. You are
19 not aware that the [*Inaudible*] vessels carry fixed, high, give me
20 what is the word for it, boy, um, um—

21 A. Yes, Sir but the vessel was nowhere in vici—that vessel was
22 nowhere close to the dive site, you know, to what happened.
23 That was a good, a lil way off of it. They were not in the
24 presence of any—

25 Q. No, we know they couldn't come and park by the berth. We get
26 that, but they was within sight?

27 A. And, to be honest, yeah they was in sight but they were—

1 Q. Thank you.

2 A. —barely visible.

3 Q. That's all I want to know. All I want to know, did that vessel
4 provide any, any, any assistance in terms of material, men or
5 anything to you?

6 A. I can't—I can't—no, no Sir, not to me, Sir, no.

7 Q. Sir, looking back on things, looking back on things as you were
8 the authority from the coast guard and representing the State of
9 Trinidad and Tobago on site, how would you rate the
10 importance of rescuing these men that evening?

11 A. Of high, high, high importance.

12 Q. High, well we have, uh, low, medium, high, highest, highest
13 even. Where do you put that?

14 A. At highest.

15 Q. Highest. Looking back now, all that you today know, would
16 you have done it differently?

17 A. Um, when you say differently as in the Trinidad and Tobago
18 Coast Guard or you mean—

19 Q. Anyhow because you are a part of the coast guard and you're
20 part of the society. Would you not have spoken better with Ms.
21 Balkissoon to get more information, find out who were
22 available and to say, "Look, fellas all yuh willing to risk—you
23 know, this is something that we could achieve"?

24 A. No. Um, to be honest, willing to risk it would have put me at a
25 disadvantage, because, one in my—in our SOPs we are not to
26 perform such a rescue because it would have made me, um—

27 Q. Responsible?

1 A. —incapable—

2 Q. Make you responsible?

3 A. It would have made—and if it is that I—

4 Q. Hold, hold, hold, hold. You will answer my question. It would
5 have made you responsible, correct?

6 A. Yes.

7 Q. Thank you very much. No further questions.

8 **Mr. Chairman:** Right. Yes, please? Ms. Persaud Maraj is
9 going to ask you a question now.

10 **Cross-Examination By Mrs. Persaud Maraj:**

11 Q. Lt. Hargreaves, Kamini Persaud Maraj of LMCS. Are you
12 hearing me?

13 A. Yes, Ma'am.

14 Q. I have a few questions for you. Can you say whether you
15 appreciate the difference between a rescue and a recovery?

16 A. Um, yes, I will appreciate the difference but to say a rescue,
17 one, you have to be on site to perform an immediate rescue
18 which means, say, for example, something happens on spot and
19 you are there, you can perform a rescue ne time because you
20 were on site.

21 Q. Okay. So, a rescue, let's just break this down in terms of what
22 we're dealing with. We have some men in a pipe, yeah,
23 agreed?

24 A. Yes, Ma'am.

25 Q. Right. Your understanding of a rescue would mean that there
26 would be an attempt to save their lives, is that correct?

27 A. Yes, Ma'am.

1 Q. All right. As opposed to recovery, which is not necessarily to
2 save their life but to recover whatever is in that pipeline
3 inclusive of deceased bodies?

4 A. Um, well yes, I mean if, if we recover them alive also could be
5 said—could be of—could be used in—widely too because, like
6 I say, it does cover, it does cover the parameters of rescue also,
7 so a recovery of somebody is also either between alive or
8 deceased, so, it depends on how you use the term.

9 Q. Okay. So, at the night in question at round 9.00 p.m. let's just
10 make it simple, around 9.00 p.m. when you would have gone on
11 site, your understanding was that you were there for the purpose
12 of a rescue of men?

13 A. Yes, Ma'am.

14 Q. Not a recovery?

15 A. No, a rescue.

16 Q. All right. Might the witness be shown paragraph seven of his
17 witness statement?

18 **Mr. Chairman:** Look at paragraph seven of your statement.

19 **Continued Cross-Examination By Mrs. Persaud Maraj:**

20 Q. And you would have read your statement?

21 A. Yes.

22 Q. Before—okay.

23 A. Involved in, in, any, any members involved in the recovery
24 operation?

25 Q. Right. So you're saying in this paragraph, upon your arrival at
26 berth number 6 you would have met with Catherine Balkissoon
27 who you came to learn was the team lead engineer at the

1 operations with Paria. She apprised me of the incident and
2 identified her team members involved in the recovery
3 operations. Do you see that?

4 A. Yes, Ma'am.

5 Q. Right. So, again, I'm going to ask the question did you
6 appreciate that your presence was for the purpose of rescue or
7 recovery?

8 A. Well, like I said, it depends. It would be rescue, yes, but again,
9 we also use the term recovery in the same context. So it's not
10 to, it's not to say—

11 Q. So you're saying it's interchangeable for your purpose?

12 A. Yes. Yes because like I said we have been on dives where we
13 performed a recovery of live personnel. It's like I say how you
14 use the term.

15 Q. And how did you intend to use the term when you're describing
16 recovery operations?

17 A. In the best interest you have to be very optimistic of what was
18 going on, so, yes, the term recovery in my statement would
19 have been as of rescue purposes.

20 Q. Okay.

21 A. Because like I said—

22 Q. I'm going to put, I'm going to put to you that—

23 A. Uh-huh.

24 Q. —the use of recovery operation was not intended to mean
25 rescue. You can answer that.

26 A. Say that over?

27 Q. The use of the term recovery operation by you in your

1 paragraph seven was never intended to mean rescue.

2 A. Why would you say that?

3 Q. A live rescue. You can answer that.

4 A. Yes, I believe it were—a live rescue would have been possible,
5 yes, but like I said it's how you use the term recovery because
6 you can recover somebody alive also.

7 Q. All right.

8 A. It's a, it's a difference, as I said, in how you use the term.
9 Some people take it in a negative or in a positive. It depends on
10 how you use it, but, at the same time search and rescue, search
11 and recovery, they're words, they are used differently. It
12 depends on the person interpreting it.

13 **Examination By Mr. Chairman:**

14 Q. You see it's quite an important question you're being asked by
15 Ms. Persaud Maraj, because, factoring in risk, putting your own
16 men at risk to effect a rescue is different from factoring in
17 putting your men at risk for recovery, isn't it?

18 A. Well, Sir, well let me state that probably I used the wrong term
19 in that context.

20 Q. No, no, just answer my question first then you can say whatever
21 you like. What I want to know is, when you're factoring risk,
22 rescuing someone you might be prepared to take a greater risk
23 than if you're simply recovering a body. You follow what—

24 A. Yes.

25 Q. —I'm asking you, don't you?

26 A. Yes, Sir.

27 Q. Do you agree with me, that, in assessing risk, it depends on

1 whether you think you're rescuing someone or recovering a
2 body?

3 A. Um, like again, yes, but again, it depends on how you use the
4 term so that's why I say I probably used the wrong terminology
5 in that one.

6 Q. Whatever the terminology, rescuing someone who's alive as
7 opposed to recovering someone who's dead is a difference in
8 approach taken by you or any first line rescuer in any sphere,
9 would you not agree? There is a quantitative difference
10 between the two?

11 A. It depends on how you use it.

12 Q. Dead or alive, I don't care which term you use, if you're
13 recovering someone who's dead or rescuing someone who's
14 dead it is different from recovering or rescuing someone who's
15 alive. The risk factors are different, aren't they? Do you have a
16 difficulty with this question?

17 A. No, Sir, I have no difficulty, Sir.

18 Q. Right. Well please answer it, then?

19 A. Yes.

20 Q. Yes what?

21 A. Well—

22 Q. Yes there's a difference between the two?

23 A. Yes, yes there's a difference in the two.

24 Q. Thank you very much.

25 A. But.

26 **Mr. Chairman:** That wasn't so hard. Thank you, Ms. Persaud
27 Maraj.

1 **Mrs. Persaud Maraj:** Thank you.

2 **Continued Cross-Examination By Mrs. Persaud Maraj:**

3 Q. Now, Lt. Hargreaves, you've said to this Commission today
4 that you've spoken to Ms. Balkissoon. Is there any other
5 person that you would have spoken to from Paria to the best of
6 your recollection?

7 A. That night?

8 Q. On the 25th.

9 A. On the 25th? No.

10 Q. No?

11 A. Not to my knowledge.

12 **Ms. Persaud Maraj:** Might the witness be shown at page one
13 three six one, that's the evidence of Mr. Collin Piper, paragraph
14 82?

15 **Mr. Chairman:** He can't be shown it. You can tell him
16 what's in it.

17 **Mrs. Persaud Maraj:** Okay.

18 **Continued Cross-Examination By Mrs. Persaud Maraj:**

19 Q. I'm going to read for you What Mr.—

20 **Mr. Chairman:** He hasn't a document.

21 **Mrs. Persaud Maraj:** Oh, I appreciate that, Mr. Chairman.

22 **Continued Cross-Examination By Mrs. Persaud Maraj:**

23 Q. I'm going to read to you what Mr. Piper says. At his paragraph
24 82 of his statement he says this.

25 "At about 16:45 hours I was advised by either Visham or
26 Leandra that the TTCG had arrived and had commenced
27 a search and rescue pattern in the sea in the vicinity of

1 berth number six. I was also advised by Visham and/or
2 Johnathan that the Lt. Hargreaves indicated that when the
3 incident was reported to them not many details were
4 given and they did not have the appropriate equipment on
5 site to enter the water or the hyperbaric chamber, but that
6 a dive crew was on its way to berth 6.”

7 Would you like to change—having heard what Mr. Piper has
8 said, would you like to change your evidence that you just gave
9 to the Commission?

10 A. Change what, Ma’am?

11 Q. I asked you if you’d spoken to anyone else and I’ve just read to
12 you the account of Mr. Piper.

13 A. But I didn’t speak to Mr. Piper.

14 Q. No, he’s not saying that you spoke to him.

15 A. That team.

16 Q. Allow me to read it back to you very slowly. At around 1645
17 hours, I—

18 **Mr. Chairman:** All right, we’d better have it on the screen,
19 otherwise no one’s going to follow it, so just put it on the
20 screen, please?

21 **Mrs. Persaud Maraj:** Page one three six one of the witness
22 bundle, paragraph 82.

23 **Continued Cross-Examination By Mrs. Persaud Maraj:**

24 Q. Can you see that on screen, Lt. Hargreaves.

25 A. No.

26 **Mr. Chairman:** One three six three?

27 **Mrs. Persaud Maraj:** One three six one, please.

1 **Mr. Chairman:** Paragraph?

2 **Mrs. Persaud Maraj:** Eighty-two.

3 **Lt. Hargreaves:** No, I can't see it.

4 **Mrs. Persaud Maraj:** Permit me to read it back to you and I'll
5 read from the part or the portion that pertains to you.

6 **Continued Cross-Examination By Mrs. Persaud Maraj:**

7 Q. I was also advised, this is Mr. Piper saying, that he was advised
8 by Visham and/or Johnathan, that Lt. Hargreaves indicated that
9 when the incident was reported to them, not many details were
10 given and they did not have the appropriate equipment on site
11 to enter the water or the hyperbaric chamber, but that a dive
12 crew was on its way to berth number 6.

13 **Mr. Chairman:** Right. So breaking that down, did you speak
14 to somebody called Visham or Johnathan?

15 A. No. I don't know who is that. Visham? I don't know.

16 Q. Did you indicate that when the incident was reported you didn't
17 have very many details?

18 A. Well, like I said, yes, in when—the coast guard operations
19 spoke to me—

20 Q. What you said so far. He said that there was a, there was an
21 incident at Paria where four divers was missing and that is all I
22 was told and that we supposed to scramble team to head down
23 to make an assessment of what was going on. We didn't know,
24 I didn't, um, and got the call at after 4.00, I was at Defence
25 Force headquarters and I didn't reach down there, I don't know
26 who—I never spoke to anybody from Paria.

27 Q. All right. Anyway, you didn't have all the appropriate

1 equipment on site to enter the water or the hyperbaric chamber,
2 is that correct?

3 A. At what time that was?

4 Q. Well, I'm assuming this relates to the period of time when you
5 were first or when he was first asked about it. As far as I'm
6 aware that's before you arrived on site. This is at 1645.

7 A. Sixteen forty-five?

8 Q. Which I believe to be on the Friday, so I don't think we could
9 take that any further.

10 **Mrs. Persaud Maraj:** Yes, yes please Mr. Chairman.

11 **Examination By Mr. Chairman:**

12 Q. All right? And the fact of the matter is you didn't arrive until
13 much later in any event, did you?

14 A. Yeah, that was correct, Sir. I didn't—

15 Q. Yeah.

16 A. —I was nowhere in the vicinity.

17 Q. And when you did arrive you had your divers with all their
18 equipment, but, it was clear that that wasn't the equipment that
19 was necessary to effect any kind of search?

20 A. That is correct, Sir.

21 Q. Yeah, well I think we—

22 **Mrs. Persaud Maraj:** As you please. All right.

23 **Continued Cross-Examination By Mrs. Persaud Maraj:**

24 Q. Were you—so, earlier you answered to Mr. Ramadhar, I think it
25 was, that you were the person in charge at the site from the
26 TTCG

27 A. In charge of—

1 Q. —from the—

2 A. Yes, I was the most senior—I was the most—I was the most
3 senior person on site, yes, from the coast guard, yes.

4 Q. You were the most senior, but prior to your arrival, would you
5 be able to say who was the most senior officer there?

6 A. No, Ma'am.

7 Q. No. At any point in time were you informed by Paria that you
8 are to take control of that site?

9 A. No. And, and, who by Paria would say such a thing?

10 Q. Well, it's in the statement of Mr. Piper at paragraph 109 that the
11 TTCG should take control of the site to safeguard Paria/Kenson
12 personnel and to take control of the ongoing rescue operations.
13 And this would include preventing LMCS divers from entering
14 the pipeline.

15 A. Oh, really? I know, I know, I know nothing of that. Nobody
16 indicated to me that Mr. Piper told the coast guard because, like
17 I said, we were not—we are not authorized to take control of
18 anything. We were there to help in assistance. Nobody told me
19 about taking control of anything that.

20 **Mr. Chairman:** *[Inaudible]*

21 **Mrs. Persaud Maraj:** Paragraph 109. It's on screen.

22 **Continued Cross-Examination By Mrs. Persaud Maraj:**

23 A. I trying to read it, honestly, but, like I said I never had no
24 conversation with Mr. Piper about taking control of anything.

25 Q. I accept same, but I must ask you of that. You said that the
26 initial report that was given to you at around 4.00 p.m. that day
27 that there were four missing divers? You've said it repeatedly

1 this afternoon.

2 A. Yes there were four missing, there were four missing divers in
3 Paria, four missing divers—well four divers were missing.

4 Q. Four di—at, at around 4.00 p.m., the first time you heard of
5 this?

6 A. Four oh seven was when the call came in from our [*Inaudible*]
7 operations, yes.

8 Q. All right. Did you learn subsequently there were actually five
9 divers missing and one recovered?

10 A. No.

11 Q. Or throughout this incident your—

12 A. No.

13 Q. —understanding is that there were four persons?

14 A. There were just four, yes.

15 Q. So—

16 A. Only when I reached onsite then I was told about Mr. Boodram,
17 but, again, they did not say if he was a fifth or if he was one of
18 the four. They just said he was one of the persons who was
19 rescued, so nobody told me he was a fifth individual.

20 **Examination By Mr. Chairman:**

21 Q. May I ask you, was anyone else from your team, that is to say,
22 the grub that were finally brought back to berth 6, the 10 divers,
23 yourself, Mr. Leidgewood and his team, were any of those
24 people, other than yourself, in touch with anyone from Paria?

25 A. No, Sir.

26 Q. To your knowledge?

27 A. Um, no, Sir, not to my knowledge because, um, again, as being

1 the senior person on site and then I had a Chief Petty Officer
2 with me and Petty Officer of course we had full control of our
3 team and the men on the boat and they knew that nobody
4 couldn't come off that vessel unless it had to pass through one
5 of the seniors or myself so they were on the vessel at all times.

6 Q. So any communication between—

7 A. No, Sir.

8 Q. —Paria and yourself or your team would have been through
9 you, is that the—

10 A. Yes, Sir. Yes, Sir.

11 Q. Do you think there's even a remote possibility that somebody
12 else from your team would have had a conversation with
13 anybody from Paria without your knowledge?

14 A. Um, Sir that, that, um, I can't say because I know the, the, the
15 trust of my men and they know exactly how I operate and if any
16 information had to go through one of them, and I doubt Paria
17 would have had their numbers or anything because I know
18 strictly I was the only person with a cell phone on the site at
19 that time.

20 Q. All right. Thank you.

21 **Mr. Chairman:** Yes?

22 **Mrs. Persaud Maraj:** Mr. Chairman, I think that would be all
23 for this witness that I have.

24 **Mr. Chairman:** Your turn, Mr. Mootoo.

25 **Cross-Examination By Mr. Mootoo:**

26 Q. Good afternoon, Lt. Hargreaves. My name is Jason Mootoo
27 and I represent the interest of Paria and I only have one or two

1 questions for you. In the course of giving your evidence earlier
2 today, you spoke about a meeting that was held on Sunday, the
3 27th of February, 2002 at which LMCS—2022, forgive me, at
4 which LMCS proposed to utilize a method which you say
5 created further opportunity were greater casualties. You recall
6 giving that evidence?

7 A. Yes, Sir.

8 Q. Yes. What's not in your statement is the reasons why, in your
9 opinion, the method proposed by them created a further
10 opportunity for greater casualties. I'd like you to tell the
11 Commission, in your own words, why you considered their
12 method one which would create that situation?

13 A. Um, can I say, can I say what they, what they proposed—

14 Q. Please do?

15 A. —to do?

16 Q. Tell us, in your own words, as far as you're aware, what they
17 proposed to do and why you feel that create—in your
18 professional opinion, why that created a greater risk?

19 A. Right, right, right, so what they, what they proposed was
20 lowering a diver into the pipeline on a rope and pulling him or
21 you—attaching him to a pulley or something like that and using
22 him and lowering him on a rope into the pipeline and, on
23 hearing it, I believe, I mean like I said, I wouldn't—I was
24 advised putting a rope to tie on to somebody in a 60-foot
25 vertical pipe because it would have either caused some type of
26 infraction or pain to the diver itself and then we'll have another
27 situation on hand, and I think that was the main, one of the

1 main reasons why to me that when I said it was—I didn't like it
2 because of the rope, that rope indicating you want to lower a
3 man into the piping on a rope, I asked—because when they did
4 their emergency plan, when they showed the emergency plan, it
5 didn't state clearly how it would have been executed and that's
6 when they decided—that's when they said about the rope issue
7 and I think that was the main concern for me about lowering a
8 person into the pipeline with a rope.

9 Q. Right. And you communicated that concern to Paria on the
10 Sunday, didn't you?

11 A. Well they were all there. They were all there in the meeting so
12 I, um—they asked about this, and, I mean, like I said I, I gave
13 them my opinion that, you know, and LMCS didn't question to
14 say, well, you know, we'll try a next method or anything like
15 that, or, you know, because, like I said, they were there. Um,
16 they were all in the—well I was virtual, they were sitting there,
17 and, um, I didn't have—when I objected to the method itself I
18 told them I don't like the method. They didn't indicate, “Okay,
19 well, you know, we'll try something else” in that capacity, so—

20 Q. Did you form the view that the method really was not properly
21 thought-out?

22 A. Um, I would believe so. I believe that, yes, it wasn't very
23 thought, properly thought-out because like, again, a rescue plan
24 would not involve, I being honest, lowering a man on a rope
25 which, you know, into a pipeline and using, you know,
26 whatever methods to pull him back out in a vertical 60-foot
27 drop. Again, it's gravity you're looking at.

1 Q. Okay. Just one other area. Randolph Archbald, he is the
2 health, safety, security and quality lead at Paria Fuel Trading
3 Company Limited. He's given a statement in the Commission.
4 He says he spoke to you at approximately 23:00 hours on
5 Friday the 26th—Friday the 25th of February. He says that:

6 "Lt. Hargreaves eventually advised me that the TTCG
7 would not be able to attempt a rescue into the pipeline.
8 He advised that such a dive in the pipeline was too high
9 risk and that there were too many unknown factors."

10 I know that that—the assessment as to the dive is consistent
11 with what you've said today but earlier on when you were—
12 well, you were asked whether you spoke to anyone at Paria
13 other than Ms. Balkissoon. Is it possible that, um, you did in
14 fact did speak to Mr. Archbald and that you have forgotten?

15 A. To be honest, to be honest with that I really can't recall talking
16 to Mr. Archbald because I—first time I'm actually hearing the
17 name.

18 Q. Right.

19 A. I don't know if it is the information could have been relayed
20 but, like I said, I can't remember speaking to Mr. Archbald
21 personally because I really can't recall it. I really can't recall
22 that.

23 Q. Okay, so is it possible that it did happen but you can't recall
24 now, or is it the case that you didn't speak to him?

25 A. I mean, honestly, Sir, I would have none who I spoke to so
26 that's why I say I don't recall speaking to him, but, like I said I
27 know I was speaking to Ms. Balkissoon alone.

1 Q. Okay, thank you.

2 **Mr. Mootoo:** May I have one moment? [*Mr. Mootoo confers*
3 *with Mr. Peterson S.C.*] No further questions.

4 **Mr. Chairman:** Thank you, Mr. Mootoo. Just one matter
5 arising from that.

6 **Examination By Mr. Chairman:**

7 Q. Was it your understanding that the person who was going to be
8 lowered in a rope was going to drop, not free fall but in air
9 down a pipe till he got to the bottom, held by a rope? Was that,
10 was that your understanding?

11 A. Well, yes, Sir, because we didn't know how far the water or
12 how far water or oil or anything in the pipeline would have
13 been. We didn't know how far up the levels would have
14 been—

15 Q. Who's "We"?

16 A. —in the pipeline.

17 Q. Who's "We", we the coast guard or we generally.

18 A. As in we the coast guard. We, I—well, sorry, I did not know.

19 Q. You didn't know. Right. So when you say we what you mean
20 is you did not know where the water level started in that pipe?

21 A. Yes.

22 Q. That's why you had an apprehension about someone being
23 lowered in pipe by a rope?

24 A. Yes.

25 Q. Hopefully not around their neck. Yes?

26 A. Yes, Sir.

27 Q. Yes, thank you very much.

1 **Mr. Chairman:** Anything arising from that? No. I think Mr.
2 Wilson wants to ask you a question.

3 **Examination By Commissioner Wilson:**

4 Q. Good afternoon, Lt. Hargreaves.

5 A. Afternoon.

6 Q. I just want to take you back to the examination by the lady from
7 the Seamen and Waterfront. I heard you mention a numerous
8 amount of times that you conducted a risk assessment and/or
9 you conduct a risk assessment. I want to sort of interrogate
10 your dive planning. Are risk assessments always a part of your
11 dive plan?

12 A. Yes, Sir.

13 Q. All right. Thank you. And do you have any formal training in
14 risk assessments?

15 A. Yes, Sir.

16 Q. So before you execute an activity or a rescue, do you use any
17 risk assessment tools and/or any other tools like your
18 decompression tables and stuff, incorporating it into that risk
19 assessment?

20 A. Yes, Sir you must convey to your table based upon the amount
21 of time and length that you would attempt to dive, and, um
22 based on the depth also too, so, yes, that would have been
23 conveyed in the plan for a risk assessment.

24 Q. What I'm trying to get at also is, is your risk assessment a
25 verbal exercise or is it a proper, sit down and have a dive plan
26 before you execute?

27 A. Um, well you must sit down and plan out the dive because

1 our—one of our roles is you dive—you plan the dive and then
2 you dive the plan so what we will do is plan it and then execute
3 it after.

4 Q. How long does a risk assessment or a dive plan usually take
5 when you're going into an emergency type res—um, situation?

6 A. It depends, it depends on the environment, Sir.

7 Q. Okay. So, again back to—and I appreciate the difference
8 between confined space and penetration diving into a pipeline,
9 so for the example of going into a confined space or into a
10 vessel, how long would—that plan would have taken on site?
11 Do you do it at Staubles or do you do it on site?

12 A. Which one Ish that, the—

13 Q. The—one of the—not pipeline.

14 A. Or, the vessel?

15 Q. Yes.

16 A. Right, so what we did, the one at—that pipe, that vessel would
17 have done at Staubles Bay because what we would have gotten
18 is the schematics of the boat and ascertain what entry point can
19 be used to gain access as based on the areas of entry, is it that
20 through a scuttle or probably through a door in that way, and
21 what we would also look at is based on information from, um,
22 individuals who were on the boat, given that there were a lot of
23 debris, so we want to make sure the assessment of the vessel
24 was safe also to penetrate in that matter, based on the amount of
25 debris that they were carrying at the point in time when the
26 about overturned.

27 Q. Thank you. Are you risk assessments documented and

1 archived?

2 A. Um, I would say it wouldn't be documented as in documented
3 and archived, um, like I say we would speak about it, draw it
4 out on the board, on a board and understand, you know, what is
5 the parameters to do, but nowhere it is not documented to say
6 and archived in that capacity.

7 Q. Okay.

8 A. But we do write it out but for our knowledge.

9 Q. Okay. No problem. I just want to switch over to coast guard
10 diver training. I understand you're the head of the diving team
11 in coast guard, so what I want to sort of interrogate is, from
12 when you get an initial qualification under the coast guard
13 management system or practices or standard operators
14 practices, do you guys do competency assessments for—

15 A. Yes, Sir.

16 Q. How often?

17 A. So one of the criteria—so, in becoming a coast guard diver,
18 one, this is an eight-week programme, but to be a part of the
19 diving department, yes you have to be recruited under being
20 one of the top tiers in the training, and your competency would
21 go through basically a six-month period as an inductee into the
22 department, so which means you would be qualified and trained
23 to a certain level. All my dive, most—the majority of my
24 divers are qualified as dive matters and assistant instructors
25 equivalent and public safety divers, so, you will have to go
26 through a extensive period of training and competency and your
27 dive—

1 Q. Or, just excuse, just excuse, sorry to interrupt. I want to offer
2 you there's a difference between training qualifications and
3 competency. So, where I'm going—

4 A. Yes there is.

5 Q. So where I'm—

6 A. Competency, competency means also that you must be able to
7 do what we do, especially in diving departments, so, yes, you
8 would be taken out with a operational dive and you be given
9 tasks to perform and make—and you will be literally
10 schooled—not schooled, you will be educated in how you
11 operate also too.

12 Q. Right. So where I was going with the competency assessments,
13 to your competency assessments, does it interrogate rescue
14 dives, penetration dives, confined space dives, recovery body
15 dives? What does the assessments cover? What do the
16 assessments cover, sorry?

17 A. Um, so, operationally the assessments would not cover one
18 confined space. We have done limited penetration dives
19 because, like I say, it's not something common that we do but
20 one of our main common training is rescue and performing
21 rescues, for example, a lost diver and how we would mark, um,
22 based on information how we would mark the area, using tidal
23 streams and understanding how tide works and what we would
24 use in ascertaining a proper direction of where to start proper
25 search.

26 Q. Thank you. Outside of the competency assessments, do you
27 guys drill and the frequency of those drills?

1 A. Um, I would say not as much because, for one, the diving
2 department is, honestly is always on call. When we do get a
3 downtime, our drills will more ascertain to equipment checks
4 and making sure that the equipment is proper because you don't
5 want to go on a site and the equipment is not working properly.
6 So one of—I know for sure that we do make sure and check
7 when it comes to our drills is making sure our equipment is
8 spot-on at all times and we have no wear and tear that in the
9 event of a dive that it becomes into an incident for one of our
10 own.

11 Q. Okay, thank you for that. And lastly I just want to touch on the
12 phrase where you said, um, once you ascertain that you were
13 not willing to make a rescue that you remained on site to render
14 assistance. Do you have a medic on your team?

15 A. Yes.

16 Q. Or anyone with medical training?

17 A. Yes, Sir.

18 Q. One personnel or two persons?

19 A. Two personnel.

20 Q. And that could possibly fall under rendering assistance in the
21 event someone comes out injured or something, coast guard is
22 an option?

23 A. Yes, Sir.

24 Q. Okay.

25 A. I have two EMTs on my team.

26 Q. Okay. I heard you use the phrase "incident commander". Are
27 you familiar with incident management or that philosophy?

1 A. Yes, Sir.

2 Q. Are you familiar with the phrase, “command and control”?

3 A. Yes, Sir.

4 Q. Okay. So, one of the things, and let me back it up, even out of
5 Paria, have you ever been part of an incident management or
6 managing an incident for any other operator in Trinidad and
7 Tobago?

8 A. Um, not in Trinidad, but, in Dominica I was the person for the
9 hurricane Maria incident where I had to—I was deployed on
10 that to do an assessment of the port of Dominica for our vessels
11 to render assistance.

12 Q. Okay, thank you. So, lastly, on that point under rendering
13 assistance, and you’re familiar with the philosophy of incident
14 management, and in your experience have you ever seen the
15 coast guard utilized in a security capacity, enable, essentially
16 securing a site where there’s an incident from any errant
17 vessels, anyone coming in to take photography and stuff? Now
18 I ask you this understanding that you are the dive team but were
19 there any other vessels performing that security—

20 A. Not to my knowledge, Sir, no.

21 Q. Okay.

22 A. No, not to my knowledge.

23 Q. And you were not instructed by—and were you instructed by
24 the IMT to perform security at any time?

25 A. IMT?

26 Q. The incident command team, so—

27 A. No. I really didn’t notice a incident command team.

1 Q. Yes.

2 A. But no, nobody, nobody of that nature told me to perform any
3 type of command and control in that, if you want to put it in
4 that way, to anybody.

5 Q. Okay. Thank you for that, Mr. Hargreaves?

6 **Mr. Chairman:** Thank you Mr. Hargreaves. One thing.

7 **Examination BY Mr. Chairman:**

8 Q. You said in answer to my colleague Commissioner, you do
9 understand about risk assessment and you carry out risk
10 assessment as part of a dive plan invariably, all right? Can I
11 just ask you, who did you get your risk assessment training
12 from?

13 A. The OSHA academy.

14 Q. OSHA.

15 A. Yes.

16 Q. Thank you.

17 **Mr. Chairman:** Right. That's it for today, thank you very
18 much. You can—we can lose I think now. Thank you very
19 much, indeed, Mr. Hargreaves for coming along, albeit to
20 whatever location you are in Barbados. I hope the weather
21 there is as good as it is here and I appreciate your contribution.
22 Thank you very much indeed. All right, so he can cut off.

23 I was hoping, as you know, to deal with Mr. Seales
24 today. We are not now going to deal with it. I think we've all
25 had enough today and he's likely to take at least an hour, so it
26 seems to me we're going to have to lose him today. He will be
27 advised. Mr. Pegus, he will be advised as to when he is needed.

1 It will not be this year. It's going to be in January now, all
2 right? So if you could tell him we'll certainly advise him. I
3 think he's still here? Yeah he's still here so—

4 **Mr. Pegus:** I would relay the message, Mr. Chairman.

5 **Mr. Chairman:** Yes. Well, convey as I will ask my Secretary
6 to do, our apologies that we didn't get to him today. I had
7 every intention, as you know, of doing so but we have not been
8 able to.

9 **Mr. Pegus:** We totally understand.

10 **Mr. Chairman:** All right. Good. Well, tell him we will let
11 him know when he's required, and as I've indicated we will not
12 be sitting tomorrow. We will sit at nine o'clock on Wednesday
13 please, nine o'clock on Wednesday when we will hear first of
14 all from Catherine Balkissoon and we will have Mr. Piper,
15 please, at around—he need not come until lunchtime. All
16 right? So I don't want to inconvenience people unnecessarily
17 but he can come at lunchtime and he'll be call as soon as we
18 finish with Ms. Balkissoon. That's the programme for the rest
19 of this week. It's Balkissoon, Piper and then Mohammed who
20 will give evidence, Mushtaq Mohammed, is it?

21 **Mr. Peterson SC:** Mr. Chairman, you said after lunch but I
22 realize your lunch is not truly lunch. You say Mr. Piper to
23 come—

24 **Mr. Chairman:** My lunch is a very different lunch to
25 everybody else's.

26 **Mr. Peterson SC:** You say Mr. Piper to come after lunch,
27 so—

1 **Mr. Chairman:** Yes. I think if he comes here for two
2 o'clock—

3 **Mr. Peterson SC:** Two o'clock.

4 **Mr. Chairman:**—that will be sensible, thank you very much.
5 All right, good. That's what we will do. Thank you very,
6 everybody. Please feel free to pack up and go. I'm going to
7 grab my papers in the usual way. Thank you.

8 **5.08 p.m.:** *Enquiry adjourned.*

EVIDENTIARY HEARING DAY 9

9.00 a.m.: *Enquiry commenced.*

Mr. Chairman: Good morning, all. Can I just mention that the material that we received from Paria over the course of the weekend, last weekend and Monday, has now been posted on the Internet. Unfortunately, there are two versions of it, because the very first version we had, the one that I rather unfortunately threw down on the desk yesterday, was the smaller version. This is the larger version, because there were some that were double-sided. So there are two versions—the original smaller version plus this larger version, which are both on the website for everyone to access. So you’ll forgive us if we are, during the course of the evidence, referring to two paginated bundles. I’ll try to make sure that everybody understands where we are with that. But that’s the position at the moment.

Can I mention, please, Mr. Peterson, that tomorrow we will be hearing from Mr. Mushtaq Mohammed as I understand it. He is the Terminal and Trading General Manager. I would like him, if you would, please, indicate to him to deal with the reason why we had this material so late, please. It would be helpful to understand what the position was. So if you could forewarn him of that—I don’t want to spring it on him—I should be grateful.

Mr. Peterson SC: Yes, Sir.

Mr. Chairman: Thank you very much. Who’s going to be doing—no, we don’t have any summaries of this, do we, Mr.

1 Maharaj?

2 **Mr. Maharaj SC:** Ms. Vijaya Maharaj.

3 **Mr. Chairman:** She's going to summarize the—all right,
4 marvellous. Thank you. So it's Ms. Balkissoon first, is it not?

5 **Mr. Bissessar:** Yes; 1327.

6 **Mr. Chairman:** Sorry, is there a problem?

7 **Mr. Peterson SC:** The witness had a long night and was
8 requesting if she could have had her coffee with her instead of
9 water, and I cleared it with Counsel to the Commission but I
10 heard it was taken from her.

11 **Mr. Chairman:** I don't have a problem with her having a cup
12 of coffee, if that makes you feel more comfortable, Ms.
13 Balkissoon.

14 **Mr. Peterson SC:** Neither did, Mr. Maharaj, Sir. I did clear it
15 with him.

16 **Mr. Chairman:** Can we arrange for someone to let her have a
17 cup of coffee?

18 **Mr. Peterson SC:** She has her coffee.

19 **Ms. Balkissoon:** I didn't get time to drink it on the way. I was
20 so nervous. I'm sorry.

21 **Mr. Chairman:** First of all, there is absolutely no need to be
22 nervous. All right? We're all sitting down. We're not wearing
23 wigs and gowns like they do in some places. All right? So you
24 relax. I'll arrange for you to have a cup of coffee. You're
25 going to take the oath first. This gentleman is going to ask you
26 to take the oath, and once he's done that, you sit down; we'll
27 wait for coffee to arrive, all right, and then we'll make a start.

1 Okay?

2 **Ms. Balkissoon:** Sure. Thank you.

3 *[Ms. Catherine Balkissoon sworn]*

4 **Ms. Balkissoon:** I, Catherine Balkissoon, solemnly swear that
5 the evidence I shall give to the Commission in this case shall be
6 the truth, the whole truth, and nothing but the truth.

7 **Examination By Mr. Chairman:**

8 Q. So first of all, while the coffee is being arranged for you—is
9 that your coffee?

10 A. Yes. It's kind of attached to me since—well, I don't know,
11 since I started working.

12 Q. All right. Well, look, you use that whenever you feel you need
13 to.

14 A. Thank you.

15 Q. There's water there also for you.

16 A. Thank you.

17 Q. First of all, let me apologize. I understand you were scheduled
18 to give your evidence yesterday. That has been delayed, no
19 doubt, has added to your nerves. All right? But as I've said,
20 there's no need to be nervous. If for any reason you need to
21 take a short break or anything like that, you just indicate that to
22 me, okay, and then we'll make sure that you have one. Okay?

23 A. Thank you very much.

24 Q. All right. So first of all, what's going to happen, Ms. Maharaj
25 who sits opposite you, is going to summarize the statement that
26 you've made and provided to us. All right? That will serve as
27 your evidence-in-chief as we call it, as if you'd given it

1 yourself, delivered it here. But it's quicker to do it that way.
2 All right? But you know, I am assuming, what is in your
3 statement.

4 A. Yes, but it was written a long time ago.

5 Q. Well, of course. But if anyone refers to any part of it you'll get
6 a copy of it and it will be put in front of you, all right, so you'll
7 be able to see—it's not a memory test, all right. We're trying to
8 get to truth here. So if you need it to answer any question, all
9 you need do is ask, all right, and we'll make sure you have it.
10 All right?

11 A. Okay. Thank you.

12 Q. So Ms. Maharaj is going to read a summary of your evidence.
13 Listen to it carefully, please. If you agree with that summary
14 you'll tell her so. If there's something you disagree with, you
15 will let us know. All right?

16 A. Sure.

17 Q. After that there'll be some questions from Mr. Maharaj who sits
18 opposite you also. He'll ask you some question on behalf of the
19 Commission. After that there'll be a number of other lawyers,
20 not all of them but some of them who may want to ask you
21 questions. All right? So we'll take it from there one step at a
22 time. One way or the other, you will conclude your evidence
23 today. All right?

24 A. That would be good.

25 **Mr. Chairman:** So please relax. Don't worry about it, and
26 Ms. Maharaj will now deliver the summary.

27 **Ms. Vijaya Maharaj:** Thank you.

1 Ms. Catherine Balkissoon submitted a witness statement
2 to the Commission dated 16th August, 2022. It's in the witness
3 statement bundle at page 1327. Ms. Balkissoon has been acting
4 in a position of Technical Lead at Paria since November 2021.
5 She reports to Mr. Michael Wei, the Technical Maintenance
6 Manager.

7 Ms. Balkissoon first learned of the incident involving the
8 five divers through Mr. Wei on Friday 25th February at 3.55
9 p.m. He indicated that Mr. Piper may require assistance. She
10 immediately called Mr. Collin Piper who asked her to come
11 onsite. The incident command team had to be convened under
12 Mr. Piper as the Designated Incident Commander in response to
13 the incident, which could be classified as a major emergency.
14 The incident command team designated incident command post
15 as a shipping building at Paria's premises in Pointe-a-Pierre.

16 Ms. Balkissoon arrived at Paria around 5.00 p.m. on
17 Friday. She attended an incident management meeting at the
18 shipping building and was again informed of the incident and
19 that water searches were being conducted.

20 Mr. Terrence Rampersadsingh, Paria's Maintenance
21 Planner and Ms. Balkissoon then left for berth 6. While on her
22 way to berth 6 she observed the retrieved diver who she later
23 learnt was Christopher Boodram being transported in a vessel
24 heading toward shore.

25 Her role in the aftermath of the incident was to provide
26 onsite, logistical, and technical assistance in support to the
27 search and rescue efforts to update the incident command team

1 on her observations and information from onsite and to act as
2 the liaison, where necessary, between persons onsite and the
3 IMT and vice versa.

4 Upon arrival at berth No. 6 at about 6.00 p.m. Ms.
5 Balkissoon called Mr. Paul Yearwood, Paria's HSE
6 Coordinator and requested lights, and she introduced herself to
7 Mr. Dexter Guerra, LMCS' Construction Supervisor. She
8 stated that upon her arrival at berth 6, she observed both Paria
9 and Kenson personnel onsite, including HSE, operations and
10 maintenance personnel.

11 She observed persons who appeared to be LMCS divers
12 in the water and going back and forth, in and out of the water.
13 She also observed that the air compressor was running and
14 concluded that the hyperbaric habitat was unlikely to have been
15 flooded. Ms. Balkissoon observed LMCS persons huddled
16 together looking at something small being held by one of them.
17 Ms. Balkissoon was informed by Paria's HSE personnel that a
18 GoPro camera was recovered and she requested that same be
19 secured if possible. She was also informed that a scuba tank
20 was recovered from within the chamber.

21 Between 6.00 p.m. and 6.30 p.m. Ms. Balkissoon was
22 informed by Andrew Farah, LMCS' Dive Supervisor, that
23 LMCS was running out of scuba air and their divers with diving
24 equipment were trying to make their way from Carenage. Ms.
25 Balkissoon made attempts to seek assistance for an escort for
26 LMCS' divers and to source additional scuba tanks. She called
27 Mr. Paul Yearwood for such assistance.

1 She observed LMCS divers in the water in the vicinity of
2 the hyperbaric chamber and that visibility was decreasing due
3 to the time of night. She tried to source additional lighting.
4 However, she observed that lights from Paria's tugs and vessel
5 were used to assist with visibility.

6 After 7.00 p.m. Mr. Piper instructed Ms. Balkissoon that
7 further diving was unsafe and not allowed. She placed her
8 phone on the loudspeaker so Mr. Piper's instructions were
9 audible to the persons around and she relayed the instructions to
10 the group of LMCS personnel which included Mr. Dexter
11 Guerra. Some of the said LMCS personnel reacted in a hostile
12 manner. At this time, divers were still in the water and no diver
13 came out of the water or stopped diving after Ms. Balkissoon
14 delivered Mr. Piper's instructions.

15 Ms. Balkissoon informed Mr. Piper that in spite his
16 instructions persons continued diving. Mr. Piper asked whether
17 he should call security. Ms. Balkissoon responded that you
18 shouldn't as calling security would make things worse. To her
19 knowledge, no instruction was given by Mr. Piper or anyone
20 else to the coast guard or any Paria security personnel to
21 enforce Mr. Piper's instructions. She states that while she was
22 on berth 6, no officer of the coast guard, no member of Paria
23 security, or any other person did anything to enforce Mr.
24 Piper's instructions.

25 A ROV camera arrived at around 7.35 p.m. but LMCS
26 Dive Supervisor, Andrew Farah, advised it was too big to fit
27 into the pipe and would not work. Around the same time

1 representatives of Professional Inspection Services Limited
2 arrived with a camera. However, it could not be used as it did
3 not have sufficient light and the tether line was about 100 feet.

4 Around 8.00 p.m. LMCS personnel indicate they were
5 hearing knocking sounds from the vicinity of berth 5 and they
6 wanted to open the flange. Ms. Balkissoon passed this
7 information on to Mr. Piper. Ms. Balkissoon herself did not
8 hear such sounds. Around 8.30 p.m. to 9.00 p.m. Ms.
9 Balkissoon spoke with the coast guard and showed Lt.
10 Hargreaves the cut riser on the crane barge so he could
11 understand the size of the pipeline. However, he indicated that
12 a dive rescue was too risky and the coast guard were not trained
13 nor have the equipment to perform commercial dives.

14 Around 9.15 p.m. Mr. Kazim Ali Sr. told Mr. Piper and
15 Ms. Balkissoon about the knocking sounds reportedly being
16 heard at berth No. 5 and requested that LMCS be permitted to
17 install the topside riser and remove the flange at berth No. 5.
18 Around 10.00 p.m. Ms. Balkissoon observed LMCS divers
19 entering the water to install the topside to the lower piece of the
20 riser. Ms. Balkissoon stated that Mr. Piper told her that Mr.
21 Boodram had indicated that he came across two air pockets and
22 two weld seams on his way out. At around 11.00 p.m. Mr.
23 Piper instructed Ms. Balkissoon to not remove the flange at
24 berth 5 and he also instructed that the cover from the habitat
25 needed to be removed.

26 Ms. Balkissoon indicated that between 10.30 to 11.00
27 p.m. she spoke several times to the coast guard officers

1 providing updates. Around midnight a new borescope camera
2 was used in the pipeline. Ms. Balkissoon was advised that the
3 camera did not show any air pockets or signs of missing divers
4 and they could not proceed beyond a further point in the pipe.

5 Between midnight and 1.00 a.m. on Saturday 26th
6 February, Ms. Balkissoon asked the incident management team
7 whether the flange at berth 5 should be removed as requested
8 by Mr. Kazim Ali Sr. However, she was told by the incident
9 management team to stand down on that activity as they were
10 waiting on camera assessments.

11 At 2.15 a.m. Lt. Hargreaves with the coast guard asked to
12 be stood down and Ms. Balkissoon referred him to the incident
13 command team who would make that decision. At around 3.00
14 a.m. Ms. Balkissoon observed that a pipeline crawler with a
15 camera was inserted inside the riser at berth No. 6. She was
16 informed that the crawler could not move past the scuba tank
17 that blocked the pipe.

18 At around 3.35 a.m. she called Mr. Yearwood to enquire
19 about sourcing additional oxygen tanks as Mr. Andrew Farah
20 had indicated that while the decompression chamber was
21 available for Mr. Boodram on the vessel Gulf Stream Eagle,
22 three additional tanks of oxygen were needed. However, Ms.
23 Balkissoon was subsequently informed that the tanks were no
24 longer necessary.

25 At around 4.30 a.m. Ms. Balkissoon was instructed by
26 the incident command team to proceed with the removal of the
27 blank flange at berth 5. Around 6.00 a.m. the crawler was

1 inserted into the riser at berth 5. The crawler went in vertically
2 but then the camera went black due to the presence of oil at the
3 bottom of the riser. Ms. Balkissoon stated that around 9.45
4 a.m. she attended a meeting with Mr. Kazim Ali Sr., Mr. Wei,
5 and Mr. Piper in the shipping building.

6 Mr. Kazim Ali Sr. indicated that the migration barrier
7 was moved and dropped into the sea and LMCS was in the
8 process of taking out the inflatable plug when the incident
9 occurred. She explains that around lunchtime she went to the
10 offshore control room and requested an operator, Mr. Narine, to
11 perform a water and oil dip at berth No. 5 in order to determine
12 if the inflatable plug was really intact or acting as a seal within
13 the pipeline. He reported to Ms. Balkissoon that one foot of
14 oily emulsion was detected which meant that there was some
15 water in the oil. Ms. Balkissoon relayed this information to the
16 incident management team.

17 Around 5.45 p.m. on Saturday, 26th February, a meeting
18 was held with the incident command team to outline a plan for
19 the night shift that included the removal of the chamber,
20 installation of booms at berth 6, removal of oil on the top of the
21 riser, and pumping out of water from berth No. 6. Ms.
22 Balkissoon indicated that this plan was intended to determine
23 whether a rescue dive into the pipeline from berth 6 could be
24 accomplished after removal of the chamber and any oil and any
25 obstruction in the line.

26 At around 10.30 a.m. on 27th February, a brief session
27 was conducted to follow up on the plan from Saturday to clear

1 the line. The plan was to fill the riser at berth No. 5 with water
2 using the Laing pump to move the oil from the horizontal part
3 of Sealine 36 so that the oil could be pumped out of the line
4 into the La Reine B vessel which was at berth 6. However,
5 during the course of the morning, Ms. Balkissoon was informed
6 that the operation by Paria had changed to focus on the
7 recovery of the divers. At around 12.40 p.m. Ms. Balkissoon
8 requested a video footage which had been collected so that it
9 could be used by the incident command team in a risk
10 assessment for a dive operation proposed by LMCS.

11 At about 2.00 p.m. Ms. Balkissoon requested Operator
12 Mr. Narine to perform water and oil dip at Berths 5 and 6. The
13 result of this dip show that the water level was higher at one
14 end of the pipeline than the other and it meant that the inflatable
15 plug was acting as a seal. She said this meant that the
16 horizontal part of the line was likely filled with fluid and this in
17 turn would eliminate any air pockets. She also stated that the
18 inflatable plug could be used as a water displacement device to
19 assist in the recovery.

20 At 3.00 p.m. the Paria and Heritage engineers and Ms.
21 Balkissoon commenced technical evaluation preparation of risk
22 assessment and operation procedure documents associated with
23 a water displacement exercise using the inflatable plug that was
24 already in the line. Around 7.15 p.m. during an IMT meeting,
25 Ms. Balkissoon was informed of the requirement to commence
26 onsite activities to recover the bodies of the four divers at 4.30
27 a.m. on Monday, 28th February.

1 Ms. Balkissoon was involved in the recovery efforts for
2 the bodies of the divers from Monday, 28th February to
3 Wednesday, 2nd March, and she gave details of those efforts in
4 her witness statements.

5 Ms. Balkissoon, is that an accurate summary of your
6 witness statement?

7 **Ms. Balkissoon:** Yes, but there's just one mistake. The La
8 Reine B can't fit at berth 6—

9 **Mr. Chairman:** Sorry, say that again? Pull the whole thing
10 towards you a little bit. That's it, yes.

11 **Ms. Balkissoon:** The La Reine B, which is a vessel that we
12 use, can't fit at berth 6. So that would have been at berth 5. I
13 don't know if I—

14 **Mr. Chairman:** Right. All right. Thank you very much. That
15 aside, you agree with the summary of your evidence, do you?

16 **Ms. Balkissoon:** Yes.

17 **Mr. Chairman:** Thank you very much.

18 **Examination By Mr. Chairman:**

19 Q. Before Mr. Maharaj ask you some questions, can I just
20 establish, please, your experience and your qualifications? I
21 think you've been in the industry for some years?

22 A. Well, yes.

23 Q. Don't be shy. Just tell me, please, how many years have you
24 been in the industry?

25 A. I would have started working in Petrotrin from probably 1998.

26 Q. From '98?

27 A. Yes, all the way through in the refinery until it was shut down.

1 And then I would have moved over into Paria. My degree is in
2 Chemical and Process Engineering, but I would have worked
3 also in—

4 Q. Right. I'm going to have to ask you to do what I asked Ms.
5 Maharaj, is to just slow down a little bit, please, because I
6 struggle to keep up with the speed at which you speak.

7 A. Sorry.

8 Q. All right. So it's very clear, it's just a little fast for me and I
9 want to try and make a note as well.

10 A. Okay.

11 Q. Just revise: you've done about 25 years or so in the industry?

12 A. Correct.

13 Q. Right. And were you at Paria when it was first created?

14 A. Yes.

15 Q. And your role there has been described as a Technical Lead. Is
16 that right?

17 A. Well, when I started Paria I would have been in Operations as
18 the Onshore lead.

19 Q. Right. And now, you're there still, I take it?

20 A. Yes, and I'm the Technical Lead now—

21 Q. You're the Technical Lead now and you were at the time of this
22 incident?

23 A. Yes.

24 Q. Right. And you've told us about your qualifications. As
25 Technical Lead, what does that require you, in broad terms, in a
26 couple of sentences, to do?

27 A. As Technical Lead I'm the technical authority onsite. So that

1 means scope of works, inspection falls under me, the lab, all the
2 engineering services.

3 Q. Right. It's a substantial job?

4 A. Yes, it is.

5 Q. Well, marvellous. All right, thank you very much. I needed to
6 know that because the questions that are going to be asking
7 you, so that everybody else knows, you're not just passing
8 information when you were onsite on that day, passing
9 information. You have an expertise of your own to bring to
10 bear.

11 A. I have an expertise in Process Engineering, yes.

12 Q. Yes, thank you. All right.

13 **Mr. Chairman:** Thank you very much, Mr. Maharaj.

14 **Mr. Maharaj SC:** Much obliged.

15 **Examination By Mr. Maharaj SC:**

16 Q. Ms. Balkissoon, I want you to relax and I want you to try and
17 help us in answering some of the questions. Okay?

18 A. Sure.

19 Q. Would it be correct to say that Paria, on that date, had a written
20 documented Incident Command System to manage major
21 emergencies?

22 A. Yes, we have a policy.

23 Q. That—it's documented?

24 A. The policy is documented. We've taken—

25 Q. And would you agree with me that the accident which occurred
26 on the 25th February this year in which the five divers were
27 sucked into that 30-inch diameter pipeline was a major

1 emergency?

2 A. Yes.

3 Q. Yes. Now, I want to refer you to Paria Incident Command
4 System which has been documented, and it's in core bundle one
5 at page 107.

6 **Mr. Chairman:** 107.

7 **Mr. Maharaj SC:** 107.

8 *[Document handed to Ms. Balkissoon]*

9 **Ms. Balkissoon:** Thank you.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. And you see at page 107 a mini heading: "Incident Command
12 System for Major Emergencies"—after the heading "Paria"?

13 A. Yes.

14 Q. And I'll just—you see the second paragraph—well, I'm sorry,
15 the second sentence:

16 "Paria shall therefore develop and implement emergency
17 response plans for all credible emergency situations that
18 may arise. The Incident Command System is utilised for
19 scenarios such as impact of tropical storms or hurricanes,
20 major fires, offshore spills and other major emergencies."

21 You see that?

22 A. Yes.

23 Q. And then you see, "The Principles behind managing a response
24 to an emergency...are", and it has a few. And the first one is
25 safeguarding human life?

26 A. Agreed.

27 Q. So would you agree with me that in accordance with the

1 principles in the Incidents Command System which is
2 documented by Paria, its paramount aim in managing a major
3 emergency is to safeguard human life?

4 A. Yes.

5 Q. Yes. Now, if you go to page 107A, the next page. I see your
6 name at No. 7, Catherine Balkissoon, Onshore Lead. You were
7 a member of the Incident Management team. Am I correct?

8 A. On that night, yes.

9 Q. And there is a diagram at page 107E which shows the structure
10 of the IMT on that night. Am I correct?

11 A. Yes.

12 Q. Yes. Now, if you go to page 107B at paragraph 1.0: “The
13 Objectives of this Plan are:” And it has several, but I’ll refer
14 you to the first one.

15 “To ensure that there is a clear, documented Plan for
16 responding to Major Emergencies”

17 A. Yes.

18 Q. Do you understand this to mean that in respect of any major
19 emergency which can arise from any one of the works or
20 operations being done, there should be a documented plan for
21 responding to a major emergency?

22 A. Yes.

23 Q. Yes. Did Paria have any plan to respond to any emergency
24 arising from an active Delta P hazard situation?

25 A. No.

26 Q. No. You are aware now, at least now or after the incident, that
27 the accident was caused by a latent Delta P hazard which

1 became active when the plug—

2 A. Sorry. You want to repeat that? The accident was caused—

3 Q. You're aware—you became aware after this accident that the
4 accident was caused by a latent Delta P hazard which became
5 active on the 25th February when the inflatable plug was
6 removed?

7 A. Well, is that the root cause? Meaning that the plug was
8 removed causing the—I don't know if you want me to explain
9 further, all right, but when that plug was removed, the
10 mechanical plug, and as they were in the process of removing
11 the inflatable plug, right, the accident occurred which pulled the
12 men in.

13 Q. Yes, yes.

14 A. Right. So I'm sorry if I'm a little bit technical.

15 Q. No. All I'm asking you, after this accident occurred, in the
16 position you occupied on the IMT, you became aware that the
17 accident was caused by an active Delta P situation?

18 A. You see, I'm not saying that, because—

19 Q. Well, you want to tell us what you are saying?

20 A. Yeah, if you mind, because I want to assist as much as I could,
21 right. Well, I'm more accustomed to math than English, right,
22 so let me explain, right. I'm allowed to do that or—because at
23 the time, if you remove the mechanical plug and if you are in
24 the process of removing the inflatable plug, right, because I
25 hear you say about a latent Delta P which, okay, no problem,
26 but we have latent risk everywhere, in a tank, et cetera. So I
27 don't want to say—that's why I asked you if that's the root

1 cause.

2 **Examination By Mr. Chairman:**

3 Q. Well, let's see if we can shorten this. You understand what
4 Delta P is, don't you?

5 A. Yes.

6 Q. Right. There's a differential in pressure between one side of a
7 barrier and the other?

8 A. Correct, correct.

9 Q. There was, was there not, we now know, a differential in
10 pressure between one side of the plug and the other?

11 A. Correct.

12 Q. Right. When you remove the plug it wanted to equalize?

13 A. Correct.

14 Q. That causes a problem?

15 A. Yes.

16 Q. And it sucked the men into the pipe?

17 A. Yes.

18 **Mr. Chairman:** Proceed.

19 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

20 **Continued Examination By Mr. Maharaj SC:**

21 Q. So I'll be correct in saying, because I've looked, Paria did not
22 have any emergency—well, any—

23 A. No, we didn't.

24 Q. You didn't have any plan?

25 A. Yeah.

26 Q. Now, according to—

27 **Mr. Chairman:** Before you move on, do you now?

1 **Ms. Balkissoon:** No.

2 **Continued Examination By Mr. Maharaj SC:**

3 Q. According to page 107C—if you look at 107C—

4 A. Yes.

5 Q. At paragraph 5.1, you see at the middle of the paragraph, just a
6 heading; it's darkened.

7 “The ICS is activated by and mobilized upon notification
8 of an emergency.”

9 You see that?

10 A. Say that again? 107C; which paragraph?

11 Q. 107C under 5.0, 5.1; you see at about the fourth paragraph; it's
12 darkened.

13 “The ICS is activated by and mobilized upon notification
14 of an emergency.”

15 A. Yes.

16 Q. So am I correct to interpret that to mean that if you do not have
17 a plan before to deal with a situation if there is such an
18 emergency, the ICS is activated so a plan can be devised to deal
19 with the emergency?

20 A. No. The ICS is activated whenever we have an emergency
21 whether or not—because we do have emergency response plans
22 for fires, for other—

23 Q. Okay. So the ICS is activated whenever you have an
24 emergency?

25 A. Yes.

26 Q. So on that date you didn't have a written plan to deal with the
27 emergency. So was the ICS activated then?

1 A. Yes.

2 Q. Yes. And that is how you all had meetings. The IMT met?

3 A. Yes.

4 Q. Yes. Now, at page 107D under “Incident Action Plans”?

5 A. Yes.

6 Q. Do you see “For simple”—at about lines 5:

7 “For simple incidents the plan may be oral or written.

8 Large or complex incidents will require that the action
9 plan be documented.”

10 A. Yes.

11 Q. Okay. In this matter, having regard to the position you occupy,
12 your experience, would you regard this incident that occurred
13 on the 25th as a simple incident or a large or complex incident?

14 A. A large and complex.

15 Q. A large or complex incident. But it says there:

16 “Large or complex incidents will require that the action
17 plan be documented.”

18 A. Yes, it does.

19 Q. But you did not have a documented plan?

20 A. No, we don’t have a documented plan.

21 Q. No. So would I be correct to say then that in devising a plan on
22 that date—because you all were trying to devise an action plan
23 to deal with this emergency?

24 A. Correct.

25 Q. So you were treating it like a simple incident?

26 A. No, you would not be correct to say that.

27 Q. You not treating it like a simple incident. But since this

1 incident occurred, have steps been taken by Paria to have a plan
2 to deal with Delta P, a written plan to deal with the Delta P
3 emergency?

4 A. No.

5 Q. No.

6 **Examination By Mr. Chairman:**

7 Q. You think they should?

8 A. I think we should engineer out the possibility of the impact of a
9 Delta P in this situation.

10 Q. Certainly you should try and do that, but in the event you failed,
11 do you not think you should have an emergency plan to deal
12 with it if you failed to engineer out the prospect?

13 A. I don't think that we could ever come up with an acceptable
14 emergency plan to rescue someone in there. That's my opinion.
15 I haven't had—

16 Q. That's not quite the same thing, is it? Having a contingency
17 plan, an emergency plan to deal with the various types of Delta
18 P situations that might exist, different forms, do you not think
19 it'd be worthwhile having some sort of plan to deal with that?

20 A. Well, there's a little bit of misunderstanding, really, right,
21 because we do have Delta P situations all through the plant.
22 When we pumping that's a Delta P—

23 Q. Yes.

24 A —and so on. So a pumping emergency response plan could
25 have been a loss of containment, a leak, which we do have. We
26 have plans to deal with those things. But the Delta P as it
27 pertains to this particular event, right, I mean, I prefer to

1 engineer it out. Right? To the best of my knowledge, I'm
2 unsure if we could ever have an emergency plan such that, you
3 know—

4 Q. Right. So that I understand, please.

5 A. Yes.

6 Q. You're saying that you think it's not possible to have a plan that
7 could deal with a Delta P situation; that it's simply not
8 something that you could document in a way that you could
9 action?

10 A. To the best of my knowledge in my expertise, I don't think
11 there is anything that—and, I mean, it's something that sits with
12 me every day, eh. I don't think there's anything that I could
13 have done more to have an emergency response plan such that
14 you could make it safe for someone to enter, and so on. That's
15 my opinion.

16 Q. I'm not sure I do understand what you're saying and I don't
17 want to misrepresent you. I don't want to misrepresent you.
18 Do you think that it is worth trying to find a plan that could deal
19 with such an emergency for the future or not?

20 A. Yes, it's worth trying to find a plan.

21 Q. Thank you. Have you?

22 A. No.

23 **Mr. Chairman:** That's all I want to know. Thank you very
24 much.

25 **Continued Examination By Mr. Maharaj SC:**

26 Q. Ms. Balkissoon, you told us this morning you have been with
27 Petrotrin and then you have been with Paria. Okay?

1 A. Yes.

2 Q. You have been working with Petrotrin and then you continued
3 to work at Paria. Correct?

4 A. Yes.

5 Q. Right. Petrotrin—well, let's say Paria is engaged in doing—in
6 having works like this, which was being done on the 25th
7 February, in which risers were being cut and replaced under
8 water in hyperbaric chamber?

9 A. Yes.

10 Q. And would you agree that from the experience you have and for
11 the qualifications you have, that if you have a hyperbaric
12 chamber under water and you have to cut pipe and replace pipe,
13 there comes a situation in which you could have differential
14 pressure in the pipe and in the habitat?

15 A. There are many ways to handle a Delta P. That's why I'm
16 saying I would have engineered it out. Now, differential—

17 Q. Right. There are many—no, sorry. Go ahead.

18 A. Well, okay. Let's look at the habitat, right.

19 Q. Yes. There are many ways to handle a Delta P. And, therefore,
20 if you have such works being done, there are ways to handle it.

21 A. Yes.

22 Q. But would you not agree that in creating an emergency response
23 you will have to have a plan to be able to know what are the
24 risks and the risks must not occur and, therefore, if the accident
25 occur, how you would deal with the accident?

26 A. Yes, but we don't—okay. Like, for example, right, even the
27 document that you keep referring me to, that Incident

1 Command System, if you look at 107, right—I'm not trying to
2 be facetious, all right—but if you look at No. 107, right:

3 “Paria shall therefore develop and implement emergency
4 response plans for all—”

5 **Mr. Chairman:** Sorry, sorry, where are we? Forgive me, Ms.
6 Balkissoon.

7 **Mr. Maharaj SC:** At page 107 she said. Page 107. I think
8 it's at the top of the page, the second sentence.

9 **Ms. Balkissoon:** I'll try to slow down, right.

10 “Paria shall...develop and implement emergency
11 response plans for all credible emergency situations that
12 may arise.”

13 Right? What I'm trying to explain, right, is that by having the
14 compressor on and flooding and pushing around the liquid on
15 the other sides, right, that is a sort of a Delta P, right. Because
16 at that point in time you're relying on the compressor to ensure
17 the chamber is dry. The risk involved is if the compressor drips
18 it becomes flooded, so you'll have an emergency response plan
19 to address that. What I'm trying to say, and maybe I'm not
20 explaining very well, is that inside a pipe if you have two forms
21 of barrier, right, and those barriers are such that—and we could
22 talk about, well, okay, we could try engineering off flooding,
23 whatever it is, right. If those two barriers are in place, then to
24 have an emergency response plan, that entails someone trying
25 to go in to do certain things, it's not something that—I mean,
26 we could try to get one, but it's not something that I'm in a
27 comfortable place to ever have to do again. So my preference

1 would have tried to engineer out the risk. You understand? So
2 like in a—trying to explain.

3 **Examination By Mr. Chairman:**

4 Q. I think I get you. I mean, it obviously makes sense to try and
5 prevent anything from happening.

6 A. Correct.

7 Q. That's what you mean by when you say engineering out the
8 risk. So for example, in a plant that has gas and oil, one of the
9 potential dangers is fire or even explosion.

10 A. Yes, correct.

11 Q. So you try and engineer out the prospects of that happening,
12 minimize it to its bare minimum, so that there—there will
13 always be a potential risk, but you try and engineer it out.
14 Don't you?

15 A. Yes.

16 Q. What I think Mr. Maharaj is trying to get at with you is that
17 there is in pipes and the kind of work that is part of Paria's
18 operation, there are likely to be Delta P situations from time to
19 time. Like you said yourself, even the hyperbaric chamber
20 itself was a sort of differential pressure—

21 A. Yes.

22 Q —between what's in the chamber and what's outside the
23 chamber.

24 A. Correct.

25 Q. Right. Of course, we understand that. Well, we do now. I
26 confess straight away I didn't before, but I do now. And so,
27 what I want, and I think Mr. Maharaj is getting at, is that given

1 that there are those latent risks inevitably on the site that is
2 Paria, whilst on the one hand you would want to engineer out as
3 best you can those risks, there remains a latent risk. And I think
4 all that we are trying to get at is that given that there is a latent
5 risk, why don't we have a plan to deal with that in the event that
6 you haven't managed to engineer it out? It isn't the first time,
7 is it, that somebody has died as a result of Delta P? Is it? Well,
8 not at Paria, but I am saying in the world.

9 A. Well, first time to my knowledge that someone has died in a
10 pipe.

11 Q. Well, they die in a variety of different potential ways given that
12 Delta P exists in different environments.

13 A. Yes.

14 Q. We've learnt that much. Right, you've come to give your
15 evidence. So it's really a question of whether or not there is a
16 plan to try and deal with it should you fail to prevent the act
17 happening in the first place like you do with fire or explosion.

18 A. Okay. Well, I can only say we don't have one.

19 Q. Yes, I understand. Where are we? We've recognized that there
20 isn't one, and we're now looking at seeing what might have
21 been foreseen?

22 A. Um, yes.

23 Q. Well, the fact that you recognize it—and you've heard of Delta
24 P? You know what it is?

25 A. Yes.

26 Q. You probably knew that a lot longer than I have. Right?

27 A. Yes. I mean, thinking back, I wouldn't have known Delta P as

1 it relates to—I'm not a diver or anything, right.

2 Q. No.

3 A. But, I mean, you do know that there is a Delta P situation across
4 inherently: once side is higher than the other. So that's what
5 Delta P is: difference in pressure.

6 Q. Yeah. We have it in an aerosol can.

7 A. Yeah.

8 **Mr. Chairman:** All right.

9 **Mr. Maharaj SC:** Much obliged.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. Okay. So there is no plan; this accident occur. So at the IMT,
12 you all were trying to come up with a plan in order to deal with
13 this emergency?

14 A. Based on our ICT training, and so on, yes.

15 Q. Yes. Now, I just want to ask you, in the IMT that existed, did
16 you all have drills at all over the period of time to deal with
17 emergencies that may happen?

18 A. We don't have drills per se. What we have is that we run like a
19 tabletop, but not a full drill to say that we go out and we have
20 the full IMT in place. However, unfortunately, we have had a
21 number of instances, at least for myself since I've been at Paria,
22 at least more than five.

23 Q. And those drills are drills to sort of show what you must do in
24 an emergency response in respect of certain scenarios?

25 A. Not only to show what we must do; to identify if we have any
26 gaps, to see if the timing, and so on, is on point; if everybody
27 knows what they're supposed to do. It provides also a little bit

1 of training for our operator guys. So there are a number of
2 reasons why you do drills and that also is one of them. Yes.

3 Q. Did you all—and you keep record of these drills? There are
4 records of the drills and what you do?

5 A. That would be lodged with HSE, because it's—

6 Q. Sorry?

7 A. It would be part of the HSE.

8 Q. Yes, but there'll be written records, contemporaneous records?

9 A. Yes.

10 Q. Did you all ever have any drill to deal with a Delta P hazard in
11 a pipeline where men could be sucked into the pipeline?

12 A. No.

13 Q. No. As a member of the IMT on that date, would you agree
14 that your role—because you were sent by Mr. Piper to berth 6
15 to monitor what was happening after the accident. Am I
16 correct?

17 A. It was not just to monitor what was happening after the
18 accident.

19 Q. Well, tell me what your role there was as a member of the IMT?

20 A. Okay. So I would have gone outside to also provide a first-
21 hand knowledge, a direct line of what's happening onsite to Mr.
22 Piper. Right? In the event that—because that particular role
23 calls for directing any tactical operations, and so on. So in the
24 event there was a plan to be actioned onsite, that's what I would
25 have been there to do. Right? I also would have been able to
26 identify what resources they had onsite, find out if—and see if
27 there's anything onsite that would have been needed further that

1 was not being provided and pass that up to the Incident
2 Commander. Right? So that's how the IMT works. Right?

3 Q. So were you interested on that date in assessing whether any
4 rescue efforts could have been made that day to rescue the
5 divers?

6 A. I would have been interested in finding out what resources were
7 available. Right?

8 Q. And the resources would be their what, commercial diving
9 equipment?

10 A. Yes.

11 Q. Commercial divers?

12 A. Divers, yes.

13 Q. And willing divers?

14 A. Yes.

15 Q. Experienced divers?

16 A. No, because the—there's another section called planning, right?
17 So at the end of the day, when I get information I pass it up to
18 the Incident Commander. The Incident Commander together
19 with his planning, and so on, persons would have determined
20 what level of competency is required in order to execute a plan.

21 Q. But you would pass the information as to whether onsite there
22 are experienced divers?

23 A. I can't—I don't have records, Sir, of competency. I won't
24 know that.

25 Q. But would you not be involved in talking to divers—
26 interviewing divers who are available and want to go into the
27 waters?

1 A. No. I would have been talking to Andrew Farah who was the
2 dive supervisor from LMCS.

3 Q. So you were only talking to Andrew Farah?

4 A. Yes.

5 Q. How many hours you spent at berth 6 that evening? From what
6 I saw, you went there at about six o'clock. Am I correct?

7 A. Correct.

8 Q. What time did you leave?

9 A. Six the next day.

10 Q. Six the next day. And during that period of time, you saw
11 people were diving?

12 A. I saw people were diving, yes.

13 Q. And did you consider that one of your ways to assist the IMT
14 was to try to see whether there would be willing divers to effect
15 a rescue?

16 A. Yes, and that information was passed up.

17 Q. And that information was passed. Who you passed that
18 information to?

19 A. Collin.

20 Q. Around what time you passed that information, you first passed
21 that information to him?

22 A. That would have been, probably around, even around as early
23 as—when I came onsite I saw them in the water. Right? And
24 that—early as probably around seven.

25 Q. Around seven?

26 A. Yes.

27 Q. Now, in paragraph 8 of your witness statement—you have it

1 there before you?

2 A. I have something called Core Bundle Volume One.

3 Q. Okay, no, no. You'll get it now.

4 A. [*Document shown to Ms. Balkissoon*]

5 **Ms. Balkissoon:** Paragraph 8?

6 **Mr. Chairman:** Page 1329.

7 **Continued Examination By Mr. Maharaj SC:**

8 Q. Yes, 1329. I'm sorry.

9 A. Sure.

10 Q. You see at the—that is when you started heading to the
11 shipping building on your arrival. And later on you said that
12 you left and you were going to berth 6. You see that?

13 A. Paragraph 8.

14 Q. Look about three lines to the end of the paragraph.

15 “While on my way to berth 6 I observed the retrieved
16 diver who later I learned to be Christopher Boodram
17 being transported in a vessel heading towards the shore.”

18 Correct?

19 A. Yes.

20 Q. So whilst you were going to berth 6, you observed that—at that
21 time you may not have known the name of the diver, but you
22 observed that one of the divers was rescued and was going on
23 shore?

24 A. Yes.

25 Q. Right. The purpose of you going to berth 6 at that time was to
26 assist the IMT in giving them information, and part of that
27 assistance would be to see whether the men, wherever they

1 would be, could be rescued?

2 A. Yes.

3 Q. And, therefore, you would have seen one diver returning to
4 shore and, therefore, your paramount aim that day would have
5 been to save human life, not so?

6 A. And preserve human life.

7 Q. And preserve human life. So you saw him going on shore. Did
8 you know where the other divers were at that time?

9 A. In the very instant, no.

10 Q. No. How long after you knew where they were?

11 A. As soon as I arrived, because I would not—so I'm coming to
12 the berth and I'm seeing him heading this way. I would not
13 have known where he came from. I don't know if he was
14 picked up from sea search or so.

15 Q. But you knew he was one of the rescued divers?

16 A. I knew someone was injured, yes.

17 Q. But you knew he was one of the rescued divers. Am I correct?

18 A. I did not know he was a rescued diver, no. All I knew—

19 Q. You said:

20 I observed a retrieved diver who I later learnt was
21 Christopher Boodram.

22 A. Yes.

23 Q. So you knew then that he was one of the retrieved diver?

24 A. Retrieved, yes.

25 Q. So when you saw him and you knew he was one of the divers,
26 did you consider it important for you to give directions to turn
27 around and to go with him and get information about the other

1 divers?

2 A. No, because he was heading to shore, and at shore they would
3 have had support staff there also.

4 Q. So as far as you were concerned, you were not—you didn't
5 consider it important at that time to get information from
6 Christopher Boodram, well, that retrieved diver, as to where the
7 other divers were?

8 A. Because it would have been my understanding if someone came
9 out and was heading towards shore in an injured state, whatever
10 information he could have in that time would have already been
11 communicated. And then he would have headed to shore where
12 he could have been speaking to—

13 Q. In paragraph 9 of your witness statement you said that you
14 considered your role in the aftermath of the incident to provide
15 onsite logistical and technical assistance and support to the
16 search and rescue efforts.

17 A. Yes.

18 Q. So if that was your aim, would you not think it was important
19 on seeing him to get—did you consider it an urgent matter, that
20 quick action; time was of the essence?

21 A. Well, I thought it might be more important to head to the site
22 where, perhaps, they had more people injured—I mean, sorry,
23 who were injured and needed assistance. If I'm seeing—

24 Q. But if you went with him, you would have assisted in getting
25 the information quicker to the IMT?

26 A. No, because I would not have known who's on the tug or the
27 vessel with him that was going and carrying him. The onsite

1 commander, right, would have—it's not me alone in that
2 moment. You would have had other Paria people there, other
3 Kenson people there. Just because I personally would not have
4 asked the vessel to turn around and go for me to jump on to
5 another vessel to get information, that doesn't mean
6 information wasn't sought.

7 Q. But did you have another member of the IMT with you?

8 A. No.

9 Q. Was Mr. Harrichan with you at that time?

10 A. No, he wasn't.

11 Q. But he was not a member of the IMT? He was not a member of
12 the IMT, was he?

13 A. He would have been there prior to my arrival.

14 Q. So you had Mr. Harrichan there where you were going?

15 A. Yes.

16 Q. And you were the member of the IMT?

17 A. Yes.

18 Q. Would you not agree with me that for the IMT to get quick
19 information, if you would have gone with Mr. Boodram and
20 whatever information you could have got or the condition,
21 where he was rescued, all the relevant information, you could
22 have given it to Mr. Piper immediately?

23 A. I'm not sure, because you're asking me to ask in that moment
24 how much information I would have received from Mr.
25 Boodram, and so on. I don't know if that would have been my
26 best route at that time. I can only tell you what I did.

27 **Examination By Mr. Chairman:**

1 Q. Can I ask you; you said in answer to Mr. Maharaj that you
2 thought that there were support staff at shore ready to receive
3 him?

4 A. Yes.

5 Q. Yes. So what did you anticipate the support staff would be
6 doing?

7 A. When they received him?

8 Q. Yes.

9 A. Well, making sure to stabilize him because I don't know what
10 condition he would have been in. Right?

11 Q. Sure.

12 A. And also arranging for him to go into the ambulance, and, if
13 possible, seeking more information.

14 Q. Yes. So, and probably in that order, I imagine.

15 A. Yes.

16 Q. So first of all, make sure he's okay; whatever needs to done
17 medically is attended to?

18 A. Yes.

19 Q. And then to make sure he was whisked off to the hospital by
20 ambulance?

21 A. Correct.

22 Q. And then to try and ensure that you had as much information
23 from that man as you could possibly obtain given the lack of
24 knowledge of what had happened?

25 A. Yeah, and given his ability to impart that knowledge. Yes.

26 Q. Yeah, well, obviously, it would depend on his condition. If he
27 was unconscious he couldn't not have done very much?

1 A. True.

2 Q. But the fact remains is that those were the sorts of things that
3 you would have expected to happen?

4 A. Yes.

5 Q. And part of the reason, I suppose, why you didn't feel it
6 necessary to turn around and join him?

7 A. Yes.

8 **Mr. Chairman:** Right. Gotcha.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. Now, when you reached berth 6, you saw LMCS divers in the
11 water. Correct?

12 A. Yes.

13 Q. Around what time you would have reached berth 6?

14 A. Around six.

15 Q. Around six. And during the time you were at berth 6, would I
16 be correct, from what I see in your witness statements from
17 paragraphs 12 onwards, that you were assisting the divers to get
18 scuba tank, et cetera?

19 A. Yes.

20 Q. Yes. At that time you saw them diving in the open waters?

21 A. I can't see inside the hyperbaric—

22 Q. I know, you couldn't see inside the hyperbaric. So it's open
23 waters?

24 A. Yeah.

25 Q. But at that time you knew that the other divers were in the
26 pipeline?

27 A. Yes.

1 Q. Yes. And you would assume, although you were not seeing
2 them diving in the pipeline, that they were diving in an effort to
3 try and see what they could do to rescue the divers?

4 A. Yes.

5 Q. And you were trying to help them in that process?

6 A. Well, not by going in the pipe or anything. I mean—[*Ms.*
7 *Balkissoon laughs*]

8 Q. No, by providing the scuba tanks, et cetera?

9 A. Yes.

10 Q. Yes, yes. Having arrived at berth 6 at about six, would I be
11 correct to say that the—you saw the—did some of the divers
12 talk to you during—when you arrived?

13 A. When I came on to berth 6?

14 Q. Yeah?

15 A. When I came on to berth 6—well, I don't know how much you
16 know, right, but berth 6 is like the platform on top but the
17 divers, and so on, would have been more associated with the
18 barge.

19 Q. On the barge. Yes. And you went on the barge?

20 A. Yeah.

21 Q. Yes. And when you went on the barge, was that LMCS barge?

22 A. That was the Sunny Day.

23 Q. I'm sorry?

24 A. I think it's called the Sunny Day, or something. I can't
25 remember the name of the barge.

26 Q. Right, okay. And you would have talked—you would have
27 spoken to the LMCS divers?

1 A. I would have spoken to Andrew and Dexter.

2 Q. Andrew Farah and Dexter Guerra?

3 A. Yeah.

4 Q. And at some stage they wanted to get lighting and you assisted
5 in getting lighting. Am I correct or—

6 A. Well, I noticed it was getting dark, right, so as soon as I came I
7 saw it was getting dark, right. And I asked, I think HSE, to
8 organize some lights. And when I went on the barge it was still
9 getting dark and we didn't have any lighting towers, and so on.
10 Right? So I think I called Michael, who was in the logistics, to
11 try and get some lights. And I also spoke to—

12 **Examination By Mr. Chairman:**

13 Q. Michael?

14 A. Wei.

15 Q. I wonder if I could ask you to use the surnames. I know you
16 know them, obviously, by their first names, but it helps me
17 because they're sometimes the same names.

18 A. True, yes.

19 Q. So it would just help me to know who we're talking about. So
20 if you would, please.

21 A. Yeah, sorry.

22 Q. That's all right.

23 A. Yeah. So I would have asked Michael Wei to help me to get
24 some lighting, and so on, because we do have on shore, we
25 have lighting towers, right, but in the absence of that, I also ask
26 operations people, because those vessels like the tugs and the
27 launches, they do have lights in front. So I asked them if they

1 could have just positioned themselves so we could have
2 actually, you know, see better.

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. So you were facilitating the lighting in order to assist the divers
5 in whatever rescue efforts they were making?

6 A. Whatever rescue efforts that we could have done that night, yes.

7 Q. Yes, yes. And those were the divers from LMCS?

8 A. At the time, yes.

9 Q. Yes. There were no divers from Paria at that time?

10 A. No.

11 Q. And, as you said, you couldn't see where they were diving, if
12 they were diving in the chamber or not. But as far as you were
13 concerned, at that time you knew the men were in the pipeline
14 and you were assisting them to do whatever rescue they could
15 have done?

16 A. Yes.

17 Q. Yes. But you got a call at around 7.00 p.m.?

18 A. Yes.

19 Q. From who? Mr. Piper?

20 A. From Mr. Piper.

21 Q. And he told you that the divers should not be allowed to dive in
22 the pipe?

23 A. Well, he didn't say, to the best of my memory, that divers were
24 not allowed in the pipe, eh. From my best recollection, he used
25 the words "stop diving", or words to that effect. Right?

26 **Examination By Mr. Chairman:**

27 Q. No diving at all?

1 A. Well, he didn't say no diving at all, but he didn't—to me, in
2 that moment, he didn't say don't go into the pipe.

3 Q. Well, your paragraph 15 of your statement says that at seven
4 o'clock Mr. Piper called you to instruct you that further diving
5 was unsafe, not allowed, or words to that effect.

6 A. Correct.

7 Q. And that was his instruction.

8 A. Correct.

9 Q. Right. He didn't differentiate, did he, according to what you
10 say there, between the pipe, the chamber, or the open ocean?

11 A. No, he didn't.

12 Q. No. No diving, that's it?

13 A. No diving, because it was unsafe.

14 Q. Yes. No, I understand why he's saying it, but that's what you
15 understood to be his instruction?

16 A. Yes.

17 **Mr. Chairman:** Thank you.

18 **Continued Examination By Mr. Maharaj SC:**

19 Q. So at 7.00 p.m. you knew that Christopher Boodram was in the
20 pipe and he had come out alive. Correct?

21 A. Yes.

22 Q. Yes. Whilst you were there, did you also found out that
23 Michael Kurban had gone into the pipe and had come out alive?

24 A. I knew that Mr. Kurban was diving, and I knew that around that
25 time they would have recovered items.

26 Q. I'm sorry?

27 A. I knew they would have recovered like a tank and a GoPro.

1 So—

2 Q. Yes, but weren't you aware that he had gone into the pipe?

3 A. It was told to me that he went in the pipe, yeah. I can't—

4 Q. He told you that?

5 A. No, he didn't, other people did.

6 Q. Other people did?

7 A. Yeah. He was in the water, eh.

8 Q. Did you talk to him about going into the pipe, what the
9 condition was in the pipe, and things like that?

10 A. At that moment in time, no.

11 Q. No. Were you interested to find that out from him?

12 A. At that moment in time?

13 Q. Yes.

14 A. No. At seven o'clock you're talking, right?

15 Q. Yeah. At any time were you interested to find out that from
16 him?

17 A. Later on.

18 Q. Around what time?

19 A. Later on while he was—and this is my memory, right—later
20 down when he was—

21 Q. Take your time. I know this must be very difficult. So take
22 your time to try to help us.

23 A. So later on—I mean, that night was very difficult, right, and it
24 continue to be a difficult—so later on when I saw him sitting on
25 one of the—well, it's a bollard you call it—right. And he was
26 just sitting there and he was in coveralls, and, I mean, he was
27 very distraught. Right? I went up to him and asked him,

1 well—because I didn't know it was his father at the time, right.
2 Remember I don't know any of the LMCS people really, right.
3 I went up just to ask him, well, you okay, that kind of thing.
4 And in the course of that conversation he said, well, I went in
5 the pipe. So I asked him, well—he say he couldn't go in that
6 far. But, I mean, that conversation was all tied up together with
7 his dad, and so on. Right. So it wasn't information that we
8 didn't have already.

9 **Examination By Mr. Chairman:**

10 Q. What time?

11 A. That would have been like very early in the morning or some
12 time—it was way after, way after.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. In the early hours of the morning?

15 A. Yeah. Because, I mean, rain started to fall too and we were all
16 trying to huddle and—

17 Q. But, let me see if I could jog your memory. You remember Mr.
18 Hargreaves came there at some time?

19 A. It would have been after Hargreaves and they left, eh.

20 Q. No. But you remember he came there at some time?

21 A. Yes.

22 Q. You remember he came around what time?

23 A. He came around half eight, nine.

24 Q. Eight, nine. And didn't you introduce Mr. Hargreaves to him
25 and to tell Mr. Hargreaves this is one of the men who would
26 know?

27 A. I introduced him because I knew he was one of the divers in the

1 water. So I said, look, this is one of the divers in the water,
2 right. This is one of the people that would have assisted Mr.
3 Boodram, and that was the extent of my—

4 Q. But you are the representative of the IMT at the scene to help
5 the IMT to get relevant information to possibly send divers into
6 the pipeline?

7 A. Yes.

8 Q. And you knew—let's say you knew just before eight o'clock or
9 at eight o'clock when Mr.—

10 A. If suppose so, okay.

11 Q. Did you not think that you should have talked to Mr. Kurban to
12 find out what he saw in the pipe in order to give that
13 information to the IMT?

14 A. He didn't come out in oil or anything, eh. This is Mr. Kurban
15 you're talking about. Right?

16 Q. Yes; he didn't come out in oil or anything. Yes.

17 A. He didn't come out in oil or anything.

18 Q. No, but you knew he had gone into the pipe.

19 A. No. I was told that—I don't know how far he went or if is
20 anything. And you have to understand too, eh.

21 Q. But were you interested to find out how far he went?

22 A. To the best of my knowledge, he might have only gone in just
23 at the corner, because that is where they said they got the tank
24 and the—

25 Q. That is where they say they got the tank? Who they?

26 A. LMCS.

27 Q. Who?

1 A. Someone in LMCS. Remember I didn't speak to Kurban
2 directly. He was in the water at the time.

3 Q. No, but he came out of the water?

4 A. Yes, sometime later. I don't know when.

5 Q. And you introduced him to Mr. Hargreaves?

6 A. Sometime later—well, there's different sorts of instruction, eh.

7 There is the Chairman is over there; please go speak to him.

8 And there is "Good afternoon, Sir, this is Mr. Lynch, this is Mr.

9 Ramesh". So there are different kinds of introduction. And—

10 Q. Okay.

11 A. And at that point in time Mr. Kurban was not in the best state of

12 mind. Well, I don't want to—you know. It's not somebody I

13 would have gone up to.

14 Q. Were you aware that his father was in the pipeline?

15 A. No, Sir, not at that time.

16 Q. No. Did you communicate the information about Mr. Kurban

17 to the IMT on that night, on the Friday night?

18 A. The information about Mr. Kurban to?

19 Q. Yeah, to the IMT?

20 A. Which information that was?

21 Q. The information that you found out that Mr. Kurban had gone

22 into the pipe, and had come out alive, and he didn't have oil on

23 him.

24 A. I would have. If you go back to my statement, right, when I

25 said—

26 Q. What paragraph?

27 A. Just now, eh; looking for it. You see when I said that people

1 are in and out the pipe—the in and out and I wasn't sure where
2 they were, that would have been—where did I say this? Hold
3 on. And they had something like a GoPro, that is when I told
4 him. Is it 12?

5 Q. Paragraph 12.

6 A. Yeah, I'm not very—yeah. So in here I knew that people were
7 diving in and out. Right. You understand?

8 **Examination By Mr. Chairman:**

9 Q. One of the good things, if I can say that, about your statement,
10 is that you put it chronologically in terms of time and you give
11 in each, almost every paragraph, you deal with the time that
12 you're dealing with. Do you follow?

13 A. Yes.

14 Q. Which is very helpful, if I may say so. All right. But in
15 paragraph 12 you don't actually give a time. What you say in
16 paragraph 12 at the end is that:

17 I was informed by Paria HSE personnel, whose name I
18 do not remember, but their GoPro camera was recovered.

19 A. Yes.

20 Q.
21 I requested the said HSE personnel to secure the same if
22 possible. I was also informed that the scuba tank was
23 recovered from within the chamber.

24 You see that?

25 A. Yes.

26 Q. Right. Given that that is between paragraphs which deal with
27 six o'clock and 6.30, is that when you discovered that they had

1 recovered, someone had recovered, apparently, a GoPro camera
2 and a tank?

3 A. Yes, yes, and that's when I called Collin Piper.

4 Q. Right. So you told him that sometime between 6.00 and 6.30?

5 A. Yes.

6 Q. Right. So it follows from that that you must have been told,
7 obviously, in order to tell him?

8 A. Yes.

9 Q. Right. Do you recall who told you?

10 A. No. It would have been an HSE person at that time. But with
11 respect to speaking to Kurban, Mr. Kurban, right, and knowing
12 that it was his dad, and so on—

13 Q. No, no, you've told us that. I got that. What I'm interested in
14 and what Mr. Maharaj is interested in knowing is when you got
15 that information, did you understand from where it had come?

16 A. I would have assumed it came from inside the chamber or
17 inside the pipe.

18 Q. Someone has obviously been in the pipe?

19 A. Correct.

20 Q. And had recovered these items?

21 A. Yes.

22 Q. Did you ask who?

23 A. No, I didn't ask who.

24 Q. Did you think it prudent to ask who?

25 A. There were only at that time, early, they only had about three
26 people there, which would have been—I don't know their
27 names.

1 Q. No, no, it doesn't matter who their names are. I just want to
2 understand. Did you not think it important—you knew that
3 about between 6.00 and 6.30 that less than an hour earlier a man
4 had been recovered from the pipe?

5 A. Correct.

6 Q. You knew that time was of the essence?

7 A. Yes.

8 Q. And you now know that somebody else had been in the pipe to
9 retrieve these items?

10 A. Yes.

11 Q. Did you not think it prudent to find out directly from that
12 person, if at all possible, what they observed having gone in the
13 pipe so that you could relay that back to the IMT?

14 A. So if you look immediately after, which was 13, I did go to
15 Andrew.

16 Q. Yes, you did.

17 A. All right. I mean, I did speak to him. I didn't ask him because
18 the divers are in the water. I didn't go to Kurban and ask him,
19 well, what did you see, how far it is, and so on, I didn't ask him
20 that. I went to Andrew and I asked him, look, what else you
21 need at that time. I didn't ask him what did I see—what did he
22 see. I didn't ask him that. No, I'm telling you.

23 Q. No, no, I understand and I appreciate your honesty about it.
24 But, I mean, just think about it now, all right?

25 A. Yes.

26 Q. You knew a man had emerged from the pipe some hours after
27 the first incident?

1 A. Yes.

2 Q. He was whisked off to hospital?

3 A. Yes.

4 Q. You knew that another person had gone into the pipe and had
5 recovered a number of items from inside the pipe?

6 A. Yes.

7 Q. And you would understand that it was important for the IMT to
8 know as much as they possibly could about the conditions in
9 that pipe?

10 A. Yes. I also—

11 Q. Just a minute, please. So is it the case, then, that you didn't
12 find out first-hand from the person who went into the pipe what
13 the conditions were? That's the first question.

14 A. No, I didn't find out myself.

15 Q. Did you find out from Mr. Farah, Andrew Farah, as to what he
16 knew about the conditions in the pipe following Mr. Kurban
17 going in?

18 A. No, but—there's a but.

19 Q. Yes, I imagine there would be.

20 A. Okay. But at that time, right, I'm seeing divers in the water and
21 I know that there is an LMCS Dive Supervisor there, Andrew,
22 right, and I would have understood that they were going in the
23 pipe, and so on, right, and they were doing what they could to
24 rescue whoever they could have rescued. I didn't find out at
25 that time or until probably later too, about what were the
26 conditions in the pipe, because at that time Andrew is diving,
27 Andrew is organizing his divers to go on. I didn't know—

1 Q. The problem I have with that, Ms. Balkissoon, is this, is that
2 within half an hour of that, or so, you had Mr. Piper issuing an
3 instruction to you and all the other divers “Do not go in the
4 water; no diving allowed; it is unsafe.”

5 A. Correct.

6 Q. That is what he was telling you?

7 A. Yes, he was. Surely it would have been incumbent upon you to
8 have found out everything you could from those who had been
9 in the pipe to tell him that. You made the observation in
10 answer to Mr. Maharaj a little while ago that it didn't appear to
11 you as if Mr. Kurban was covered in oil.

12 A. No, he didn't.

13 Q. Right. Well, that was quite an important factor, don't you
14 think, to have relayed that information to the IMT?

15 A. No, but, but, but, the IMT would have—well, I'm making an
16 assumption and I shouldn't—but I do know that Mr. Boodram,
17 because I was told, had oil all over him.

18 Q. Oh?

19 A. I also knew—I'm just—

20 Q. No, no, we understand that. You were told that. When were
21 you told that?

22 A. When I arrived onsite.

23 Q. Right, okay. So he had oil all over him?

24 A. So he had oil all over him, right, and we didn't know what
25 caused it. At that time, I didn't know what caused it.

26 Q. What caused the oil to be over him, or why it was there?

27 A. What caused the event; I didn't know that. I do know that one

1 person had oil; one person didn't. So when Collin called to say
2 stop diving and he says it's not safe to do so, right, it's not only
3 whether or not someone came up with no oil on them, eh.

4 Q. But did you tell him that? You see, what we're trying to find
5 out is what information was being relayed to the IMT and what
6 they were doing with the information they had. Did you say to
7 Mr. Piper when he was giving you the instruction at seven
8 o'clock, "No diving because it was unsafe", did you say to him,
9 look, there's been a man who's just, only within the last half an
10 hour been inside the pipe. He's recovered a tank; he's
11 recovered a GoPro. He didn't appear to me to be covered in oil.
12 Did you give him that information?

13 A. So at seven when he said stop diving and I would have walked
14 away—

15 **Mr. Maharaj SC:** I would have, sorry?

16 **Ms. Balkissoon:** I would have walked away and took my
17 phone off speaker. At seven o'clock he said stop diving.

18 **Examination By Mr. Chairman:**

19 Q. Yes.

20 A. Yes. Right. So that my phone was on speaker, and when my
21 phone was on speaker I wanted everybody to hear also because
22 it's directly, so there's no miscommunication too. And he said,
23 look, stop diving because it's not safe, or words to that effect.
24 And by that time, obviously, people were not happy. I took my
25 phone off and I walked away. And then—because I asked
26 Collin: When you say diving—I mean, I'm not a robot to go
27 like, okay, stop diving. I wanna know, well, okay, well, when

1 you say stop diving, well, why? What's the reason?

2 Q. What did he say?

3 A. Because it's not safe. We don't know the conditions; we don't
4 know how much oil in there.

5 Q. Exactly.

6 A. Wait, no.

7 Q. Right.

8 A. Hold on.

9 Q. Fair enough.

10 A. And you also don't know if it is that the condition still existed.
11 Right? I told him about the GoPro and thing, but that was
12 earlier. So he knew that.

13 Q. You did tell him that?

14 A. Yes, earlier; sometime earlier I told him. But when he—in the
15 heat of the moment if someone says, okay, you're onsite, you
16 see people diving, right, I didn't stop—you notice I didn't stop
17 them initially because, well, why not, because I'm seeing
18 Andrew there and he's diving. Right? Moving on, right,
19 sometime after I talked to Collin and I say, well, look, we
20 recovered X, Y, Z. Right? Then he calls me later, which is
21 when I asked, and he says, look, stop diving because it's not
22 safe. You don't know what's going on in there. And then like,
23 you know, well oh, okay, hold up; yeah, I really don't know.
24 It's not that they have fallen into the pipe and can't get out. It's
25 more than that. I don't know if something could have happened
26 more. Right? And you have to recognize too that I don't know
27 even if Mr. Boodram came up with an amount of oil, I don't

1 know where that oil pocket was. I do know it's fuel oil, and I
2 do know—I mean, you can't really swim in fuel oil. So this is
3 how it was. I'm sorry if I don't have the answers you want to
4 hear, but that's how—

5 Q. I don't have any particular answer I want to hear. I do have
6 particular questions, but I'm gonna leave it to Mr. Maharaj to
7 ask them.

8 A. Sure.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. So let's see if I can get this from another way.

11 A. Sure.

12 Q. During the time you were there that evening, did you have any
13 instructions or did you believe Mr. Piper wanted to find out
14 what was the condition in the pipe from Mr. Kurban?

15 A. From Mr. Kurban?

16 Q. Yes?

17 A. No.

18 Q. No. You had no instructions from Mr. Piper to get from Mr.
19 Kurban what the condition in the pipe was when he went in?

20 A. No.

21 Q. No. And it would be correct to say from what you are telling us
22 today that you were not interested to find out from Mr. Kurban
23 what was the condition in the pipe when he went in?

24 A. Say it again, I were not interested?

25 Q. I'll take my time and I'll repeat the question.

26 A. Sure.

27 Q. Okay. On that date when you were there, you did not consider

1 it important for you to find out from Mr. Kurban what was the
2 condition in the pipeline when he went in the pipeline?

3 A. I didn't ask him.

4 Q. I did not?

5 A. Ask him.

6 Q. And you did not consider it important to ask him?

7 A. In hind—I can't say if it was important at the time or not, but I
8 didn't ask him.

9 Q. But on hindsight, do you think that you should have asked him?

10 A. Yes.

11 Q. And that you should have communicated that—where if you
12 asked him and he had given you answers, communicated that to
13 the IMT?

14 A. Yes, but—there's a but. Right?

15 Q. And you considered that that would have been relevant for the
16 IMT to consider in order to make decisions in respect to any
17 rescue plan that they have?

18 A. The information that could have been provided by Mr. Kurban
19 would not have been enough for us to derisk—

20 **Examination By Mr. Chairman:**

21 Q. How do you know?

22 A. Because—

23 Q. How do you know?

24 A. Because, no, because he didn't have any oil on him, eh.

25 Q. Sorry?

26 A. He didn't have any oil on him.

27 Q. Yes. But unless you know what he was going to tell you, how

1 could you possibly determine whether that information was
2 enough or even just some contribution towards the overall
3 information received?

4 A. I didn't say it wasn't a contribution. I said that it won't have
5 been enough.

6 Q. Well, what did you understand the information to be?

7 A. I understood that he would have gone down in the vertical and
8 some very small part of the horizontal.

9 Q. Right.

10 A. And I understood that he would have come out without oil.
11 And I also understood at the time, right, that the ocean would
12 have come into the pipeline and thus that could have explained
13 the presence of water. I would not have known, right, how far
14 that water is versus oil, but I do know as far as he went had
15 water. And that's what I understood.

16 Q. Yes, but you had no idea what he might tell you about
17 visibility, about potential obstacles, whether he could see into—
18 to what extent he could see in the pipeline, anything like that at
19 all?

20 A. Yes, and I believe I answered.

21 Q. No, no. You don't know about those things, because you didn't
22 ask him?

23 A. No, no, and I said I—yeah.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. But you agree with me that if you wanted to get the full
26 information of what was in the pipe, you could have got it from
27 Christopher Boodram?

1 A. No, not the full information, no.

2 Q. Not the full information?

3 A. No, not the full information, no.

4 Q. Do you know that he spent two hours in the pipeline?

5 A. Closer to three.

6 **Examination By Mr. Chairman:**

7 Q. Yep, correct; closer to three. You're correct.

8 A. Yeah, closer to three.

9 Q. It was about two and three-quarter hours he was in the pipeline?

10 A. Yeah.

11 **Continued Examination By Mr. Maharaj SC:**

12 Q. And do you consider Mr. Boodram could have given you
13 important relevant information to know what was the condition
14 in the pipeline at that time?

15 A. I consider his information important, yes.

16 Q. And you had a golden opportunity to turn around and go and
17 meet him when you saw that he was the retrieved diver?

18 A. I had an opportunity, yes, but the opportunity could have made
19 itself available to others also.

20 **Examination By Mr. Chairman:**

21 Q. If I may say so, I don't think it unreasonable for you to have
22 taken that view, given that there were people on shore who
23 might have gone with him?

24 A. Yeah, well—

25 Q. And you are entitled to assume that somebody would go with
26 him.

27 A. Yeah.

1 Q. It didn't need you?

2 A. No, it didn't.

3 Q. Did you ascertain whether anyone did actually go with him?

4 A. No. But later on Collin did call me to let me know what Mr.
5 Boodram said, right. He called me and he told me that he spoke
6 to Mr. Boodram.

7 Q. Sadly, that was about five hours after he'd come out of the pipe.
8 A little bit late, don't you think?

9 A. Yes.

10 **Mr. Maharaj SC:** May I proceed, Mr. Chairman?

11 **Mr. Chairman:** I'm sorry; and I really ought to let you do
12 your job.

13 **Mr. Maharaj SC:** No. I just wanted to know if you wanted to
14 ask her any more—

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. Ms. Balkissoon, while you were there at around 7.30 p.m. you
17 saw LMCS placing diving equipment on the barge?

18 A. Yes.

19 Q. And you would have known that that was to be used to assist
20 them in dives to rescue the men?

21 A. Well, yes.

22 Q. And you are familiar with the evidence given by Lieutenant
23 Hargreaves in this matter?

24 A. No.

25 Q. At paragraph 7 of his witness statement at WSB3010,
26 supplemental witness bundle, at paragraph 7?

27 **Mr. Chairman:** 3010.

1 **Ms. Balkissoon:** 3010?

2 **Mr. Chairman:** It's not in your bundle.

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. It's the supplemental bundle. It's on the screen.

5 A. Okay, sorry. Yeah.

6 Q. And you see in the last paragraph of his statement at that
7 paragraph referring to you. He said:

8 "She also identified other persons who possessed first-
9 hand information about the incident, including Mr.
10 Michael Kurban, the son of one of the missing divers."

11 A. Yes.

12 Q. So you recognized that Kurban had first-hand information of
13 what was in the pipe?

14 A. Well, he has first-hand information of the incident, right,
15 including Mr. Kurban. Yes.

16 Q. At paragraph 72 of Mr. Piper's witness statement, page 1359.

17 **Mr. Chairman:** That is in your bundle.

18 **Ms. Balkissoon:** Okay. What page, sorry?

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. 1359, paragraph 72. It said "Catherine", that is you:

21 "...and Visham Harrichan operated as the eyes and ears
22 of the ICT on the scene as described above. I liaised
23 regularly with Visham, particularly during the hours
24 following the incident on the Friday and I used them both
25 to pass requests and instructions to LMCS and
26 information to the TTCG and others. Catherine also
27 performed a critical technical role in the assessment of

1 the pipeline conditions and the execution of the recovery
2 efforts.”

3 So according to him, you performed a critical role in the
4 assessment of the pipeline conditions on that day, and you
5 could have got those conditions from both Boodram when you
6 saw him coming while you were going and you could have got
7 it from Michael Kurban. Can you tell us why you did not do
8 that?

9 A. No, I can't, but I could also say that the same paragraph says
10 that he's also liaising with Visham.

11 **Mr. Chairman:** Sorry?

12 **Ms. Balkissoon:** Not to say he might not have had the
13 information, because Visham operated as the eyes and ears also.

14 **Continued Examination By Mr. Maharaj SC:**

15 Q. If you look at the last sentence.

16 “Catherine also performed a critical technical role in the
17 assessment of the pipeline conditions and the execution
18 of the recovery efforts.”

19 What he was saying, as I understand it, they were relying upon
20 you. You were playing an important role to assist them in
21 getting the pipeline conditions so that they can assess and you
22 can make recommendations or assess recovery efforts?

23 A. Yes. However, however, right, I can't say if Collin never got it
24 or not. I'm not making excuses. I know I didn't tell him,
25 except for later on around seven o'clock when I walked away
26 and I asked him. I didn't tell him anything that says I spoke to
27 Mr. Kurban or anything like that. And it's what I've answered

1 before, to the best of my knowledge.

2 **Examination By Mr. Chairman:**

3 Q. Did you understand your role to be that which Mr. Maharaj has
4 identified from Mr. Piper's statement? Did you understand that
5 to be the case? He's saying you performed a critical technical
6 role in assessing the pipeline conditions so that a recovery
7 could be effected.

8 A. Yes.

9 Q. You understood that to be your role?

10 A. I understood, yes.

11 **Mr. Chairman:** Thank you.

12 **Continued Examination By Mr. Maharaj SC:**

13 Q. Also, Ms. Balkissoon, at paragraph 35 of Mr. Piper's statement
14 at page 1353, his last sentence—he said:

15 "I relied on Catherine and Visham, in particular, to
16 provide me with regular real-time information on all
17 observations and developments at the scene of the
18 incident offshore and to communicate requests and,
19 where applicable, instructions to LMCS, to Trinidad and
20 Tobago Coast Guard, and other personnel on the scene."

21 So he relied on you and Visham in particular to provide him
22 with information on all observations and developments at the
23 scene?

24 A. Yes.

25 Q. Was that correct? Is that an accurate statement of Mr. Piper?

26 A. Yes, he relied, yes, for on-scene information, yes.

27 Q. Did you discharge that duty?

1 A. Yes.

2 Q. You think you discharged that duty?

3 A. Yes.

4 Q. Okay. Now, did you consider—well, whilst you were there,
5 you were seeing the equipment which were being brought on by
6 LMCS—the diving equipment. Correct?

7 A. Scuba.

8 Q. Scuba. Didn't you also see later on commercial equipment?

9 A. I saw the commercial vessels, the Waterworld and, um, the—

10 Q. And you knew they had commercial equipment?

11 A. Yes.

12 Q. Yes. And that commercial equipment were available for divers
13 to attempt a rescue if they were permitted?

14 A. That the diving equipment was available, yes.

15 Q. Yes, because the vessel remained there all night?

16 A. Yes.

17 Q. Yes.

18 **Examination By Mr. Chairman:**

19 Q. This is from around seven o'clock onwards?

20 A. I think one came around seven and one came about an hour
21 later.

22 Q. So from around seven there was commercial [*Inaudible*] with
23 the divers at the scene?

24 A. Yes.

25 **Mr. Chairman:** Thank you.

26 **Continued Examination By Mr. Maharaj SC:**

27 Q. And whilst you were there, you knew that the coast guard had

1 taken the position that they were not going to dive in the
2 pipeline, because they were not trained for that and they didn't
3 have the equipment to do that?

4 A. Yes. I spoke to Mr. Hargreaves.

5 Q. And while you were there on that afternoon, you knew that
6 LMCS had divers who were experienced commercial divers
7 available with commercial equipment prepared to do a rescue?

8 A. Yes. But I won't have intimate knowledge of their experience
9 and competencies.

10 Q. I know, I know, I know. The fact is that—I'm not blaming you
11 for that at all. What I'm—I'm trying to get the information.
12 They were there and they were prepared to do a rescue if called
13 upon to do a rescue?

14 A. Sure.

15 **Examination By Mr. Chairman:**

16 Q. But this coincided—this first arrival of commercial divers and
17 equipment, coincided, did it not, if not exactly but pretty
18 closely, with the instructions that you were receiving from Mr.
19 Piper that nobody should dive?

20 A. Well, exactly so.

21 Q. Yes. Did you tell Mr. Piper, look, whatever you might think of
22 LMCS, we've got some commercial people here now, who
23 really know what—appear to know what they're doing.
24 They've come in with a—I think one of the boats is called
25 Spearfish?

26 A. No. The Spearfish had a—

27 Q. Waterworld. Thank you. Waterworld, I think, was one of those

1 that arrived. Is that right?

2 A. Yes.

3 Q. And they had, as you told Mr. Maharaj, commercial diving
4 equipment and commercial divers, or at least they were
5 asserting as such?

6 A. Um-hmm.

7 Q. Did you tell Mr. Piper that?

8 A. Yes.

9 Q. Can you remember when?

10 A. No. As it—in real time.

11 Q. As it happened?

12 A. As it happened, yeah.

13 Q. So he would have been aware. As far as you're concerned, he
14 would have been aware in and around seven o'clock that there
15 were commercial divers and commercial equipment available
16 onsite?

17 A. Yes.

18 Q. Thank you.

19 A. It would have been—they came—not around—well, I didn't—
20 I'm not sure about the seven, because around seven is when he
21 told me stop diving, right. So it wasn't in that same
22 conversation.

23 Q. No, no. I didn't mean to imply that. It was in and around the
24 same time he told you no divers, and then shortly after that,
25 these commercial divers arrived?

26 A. Correct.

27 Q. Right. And you would have told him in real time that that's the

1 position?

2 A. Yeah, correct.

3 Q. Did he change the instruction to you about permitting diving?

4 A. No.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. Apart from Michael Kurban who was one of LMCS—well,
7 who was a diver there too, did you speak to Ronald Ramoutar?

8 A. No, I don't remember speaking with him.

9 Q. Did you see him there? Do you know whether a person by the
10 name of Ronald Ramoutar was there?

11 A. No. I only really spoke to Andrew Farah.

12 Q. Did you see a man called Conan Beddoe?

13 A. No, I don't—

14 Q. Corey Crawford?

15 A. I'm not going to say they weren't there because they had a
16 group of people there.

17 Q. But you don't know them by name?

18 A. Yes.

19 Q. So LMCS had a group of people there who stated they were
20 divers, but you don't know their names?

21 A. No, and the interaction wasn't between the group of divers, and
22 so on. Andrew Farah would have had his crew of divers there,
23 well, for want of a better word.

24 Q. Andrew Farah had what?

25 A. I would say a crew.

26 Q. A crew of divers?

27 A. If that's the word for it?

1 **Mr. Chairman:** That's the collective noun, apparently, for
2 divers. Well, it is now anyway.

3 **Ms. Balkissoon:** I do apologize. Math is a little bit easier for
4 me, you know. This is very intimidating.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. Were you there when—according to Andrew Farah, but I want
7 to put it to you. Were you there when Paria and Kenson
8 officials was telling Andrew Farah that they cannot dive?

9 A. I didn't see anybody telling Andrew Farah he can't dive, eh. I
10 don't know—

11 Q. Well, you may not have been there at that time, in fairness to
12 you.

13 A. Well, I was there on the barge that entire night, and during that
14 night I didn't—

15 Q. Because you were there on the barge after Christopher
16 Boodram was rescued. Correct?

17 A. Yes.

18 Q. And that would have been at a later time. Did Andrew Farah
19 talk to you about a rescue plan that they had devised to go into
20 the pipeline?

21 A. Andrew told me—Andrew Farah told me that he had divers,
22 and they had commercial equipment, and they're willing to go
23 in to do a dive, and they want to do a rescue. That's the
24 conversation.

25 Q. And you told him you were not in charge and you kept telling
26 him that you would communicate their request to your
27 superiors?

1 A. Well, I spoke to Collin about it, Collin Piper about it, but—

2 Q. And what happened when you spoke to him? What was the
3 response?

4 A. He said to stand down. He told me to stand down. Well, the
5 decision won't have been changed [*Inaudible*], if that's a better
6 way to put it.

7 Q. And according to my instructions, they made several requests
8 of that and they were told to stand down several times?

9 A. At the very start around seven, right, they asked to dive; that
10 would have been around seven. And then sometime after, and
11 that would have been after they got the—when I saw the people
12 with the air commercial people came, he asked. Andrew Farah
13 asked. Right? And I told him stand down; I not in charge. Let
14 me talk to Collin Piper about it. So definition of several—it's
15 not like—it was like, um, you know that “Are We There Yet”
16 movie? It was, like, “Are you there yet? Are you there yet?”—
17 that every minute asking; he wasn't asking me like that, if that's
18 what you mean by several. I don't know. He did ask me more
19 than once.

20 Q. He did ask you more than once?

21 A. Yeah.

22 Q. And the answers was the same; you had to contact your
23 superiors?

24 A. The answer would have been the same. Now, I did call Collin
25 Piper and asked him too. But I wouldn't have called Collin
26 after that first one. And I think Andrew probably asked me
27 once again sometime later, and that was it.

1 Q. And you're aware that when he couldn't get through with you
2 he tried to talk to the coast guard also? You're aware of that?

3 A. No.

4 Q. I just want to refer you to paragraph 46 of Mr. Farah's
5 statement to put it to you what he said. That would be at page
6 449 onwards. I'll read from paragraph 43 what he said. You
7 will see it there on the board.

8 A. Okay.

9 Q.
10 "I kept going back to Catherine and she kept saying that
11 we don't have permission, just stand down. She said that
12 they themselves had additional equipment coming down.
13 She said that a camera was going to come in. It was back
14 and forth back, back and forth with the Paria persons.
15 Their position was to stand down."

16 Is that an accurate statement of Mr. Farah?

17 A. Well, I don't know what he meant by back and forth, back and
18 forth. So I can't comment on his statement. I'm just saying—
19 all I'm saying is that the time I said that, sometime after when
20 we had the commercial diving equipment there, he did ask me,
21 right, and I told him to stand down. Well, he said the same
22 thing.

23 Q. You really do not know what he means by back and forth?

24 A. Well, this implies that he's coming up to me all the time asking
25 me the same question, which didn't happen.

26 Q. And it could mean a few times too?

27 A. And it could mean a few times. It could also mean as he is

1 coming to talk to me and I'm talking to him about—because I
2 said that we have additional thing. He could have also been
3 coming—I don't want to comment on his thing. But there were
4 numerous conversations about I giving him status updates, and
5 so on. So I don't want to say what he meant by that.
6 [Inaudible] should ask him that. All I could say is that he asked
7 me after, which is probably this time, because the additional
8 equipment would have been after the commercial equipment
9 would have been here. Right. That would have been camera, I
10 think, right. And I did tell him stand down.

11 **Examination By Mr. Chairman:**

12 Q. Was it your understanding that Mr. Piper's position at that stage
13 was that nothing should happen until the camera arrived?

14 A. Well, yes, because you wanted to see.

15 Q. I mean, did he tell you that?

16 A. He did not say nothing to happen until the camera arrived. He
17 said he wanted to assess the conditions of the pipe inside.
18 Yeah, so—

19 Q. [Inaudible] he said stand down?

20 A. Yeah.

21 Q. He meant by that and had issued an instruction at seven o'clock
22 that no one—there should be no diving?

23 A. Correct. But this is after, eh.

24 Q. I'm sorry?

25 A. This is after in the 43 when I told Mr. Farah to stand down.
26 This is after that seven o'clock.

27 Q. Yeah, no, no. The position hadn't changed is—what I was

1 going to say is that his position was it was too dangerous to
2 dive and, therefore, it should not happen. And that was an
3 instruction issued to you to issue to everybody else which you
4 dutifully did?

5 A. Yes.

6 Q. The point I think we're after here is the extent to which you
7 conveyed to him that there were now commercial divers and
8 equipment onsite?

9 A. Yes.

10 Q. And as Mr. Maharaj has suggested, that Mr. Farah is saying he
11 tried to speak to you or did speak to you back and forth a
12 number of times about effecting some sort of permission to
13 dive. You say you don't recall that being the position; it's not
14 the case?

15 A. I'm saying, right, and Mr. Farah is saying the same thing, I'm
16 saying that at the point in time when I spoke to Mr. Farah about
17 stand down, I apparently said to Mr. Farah that there have
18 additional equipment coming which is a camera.

19 Q. Yes. So you told him that?

20 A. Yes.

21 Q. Yes.

22 A. So why would he come—I don't want to comment on his—

23 Q. No, all right. I understand your reticence and I won't press it.
24 What I'm interested in knowing is this: You had a basic
25 instruction, "No diving". You conveyed that to everybody.
26 You were being told in effect that a camera was due to arrive?

27 A. Correct.

1 Q. And that is why there should be no diving until the cameras had
2 a look in the pipe so you'd know the conditions?

3 A. Correct.

4 Q. Right. So that was the position that you understood it to be and
5 that's what you passed on to Andrew Farah?

6 A. Yes.

7 Q. Right. Did you have any notion as to when the camera would
8 arrive?

9 A. Um, it would have been—no, I wouldn't have known at that
10 time how long it would take. But, I mean, I don't remember
11 asking them if it's a 30 minutes, an hour, or so. But I was
12 under the impression it's coming soon.

13 Q. You were under the impression it was coming soon?

14 A. Yes.

15 Q. That's when you were told?

16 A. Yes.

17 Q. Can you remember when Mr. Piper told you about this camera?

18 A. That would have been early because, you see, that would have
19 been after the first set of cameras, the first set that didn't work
20 that came onsite.

21 Q. The borescope?

22 A. Yes. So this would have been the second one and that would
23 have been sometime around midnight, or half 11, or something
24 like that it came. So he would have told me that—well, the
25 time has to be somewhere between nine o'clock or whenever
26 those and—good thing, I remembered.

27 Q. That's all right.

1 A. Right. So around nine o'clock is when I was told to install
2 the—to go ahead. And I spoke with—he put me on a three-way
3 call with Mr. Ali, Kazim Ali, and I joined that call. And then in
4 that call, right, we were saying, well, okay, Catherine, go ahead,
5 LMCS wants to install a riser. Right.

6 Q. We're moving away from what I want to know. I think we're
7 going to get to that in due course. But can I just understand?
8 You were told stand down?

9 A. Yeah.

10 Q. You were told a camera is on its way, a borescope, right?
11 Correct?

12 A. Correct.

13 Q. Can you remember when Mr. Piper told you that?

14 A. That would have been around the same time, around nine
15 o'clock, or so.

16 Q. Around nine o'clock you understood a camera was on its way?

17 A. Yeah.

18 Q. I think it must have been a little before that, but never mind.

19 A. Yeah.

20 Q. If you look at your statement, do you see at paragraph 19.

21 "At circa 7.35 I received a call from the vessel Spearfish
22 saying that they have an ROV"—an underwater robotic
23 vehicle, I think, connected to a ship.

24 "I went to the LMCS supervisor, Mr. Farah, and asked
25 him to communicate directly with the vessel."

26 Yes?

27 A. Yes.

1 Q. The ROV was too big to fit into the pipe and will not work.

2 A. Yes.

3 Q. Then paragraph 20:

4 "Around the same time representatives and Professional
5 Inspection Services Limited arrived on the barge with a
6 borescope."

7 A. Yes.

8 Q. Right. So this is around 7.35. Yes?

9 A. Well, yeah, around there.

10 Q. Sadly, nobody bothered to tell them that their borescope was
11 going to be too big for the pipe?

12 A. Well, the issue was the light also. The light intensity wasn't
13 enough.

14 Q. So there was no light on it and it didn't fit?

15 A. Well, the tether line was only 100 feet. Yeah?

16 Q. The ROV didn't fit, right?

17 A. Yeah.

18 Q. In any event, you were talking about cameras at about 7.30?

19 A. We were talking about the first camera, yes.

20 Q. Yeah. When did you first get the camera into the pipe?

21 A. The first time?

22 Q. Um-hmm.

23 A. That would have been around midnight.

24 Q. Right. What are we talking about?

25 A. That's paragraph 28.

26 Q. Six or seven hours after Mr. Boodram has come out of the pipe?

27 A. Yeah. That's paragraph 28, yeah.

1 Q. And in that time, that is the time between Mr. Boodram coming
2 out of the pipe, your being onsite around sevenish, through to
3 this time when the camera finally did get into the pipe, the basic
4 order was no diving?

5 A. From around seven o'clock. I can't speak to whatever
6 happened before, right.

7 Q. No, of course not.

8 A. From around seven o'clock I passed the instruction. They were
9 still diving. I can't really say what time LMCS stopped diving,
10 right. But from around—because in that time I remember
11 Andrew Farah asking me about tanks and stuff too. Right? So
12 sometime after seven, they were continuing to dive. Right. So
13 that's the sequence.

14 Q. You mean, they were continuing to dive in spite of the fact that
15 the instructions was not to?

16 A. I saw them in the water, yes.

17 Q. Yes. Well, they were in the water; slightly different. But
18 anyway, the instruction, which is my question, was no diving
19 between seven and when this camera finally arrived?

20 A. Yes.

21 Q. That was Paria's position, of the IMT?

22 A. That was the instructions, yes.

23 Q. Yes. Did you agree with that?

24 A. So as mentioned before—

25 Q. Did you agree with it?

26 A. Not to dive?

27 Q. Yes, that there should be no diving for a period of five hours in

1 the immediate aftermath of Mr. Boodram coming out of the
2 pipe?

3 A. Yes.

4 Q. You agreed with that position?

5 A. Yes.

6 Q. You did. All right. Thank you.

7 **Continued Examination By Mr. Maharaj SC:**

8 Q. As a member of IMT, you knew they wanted the camera to see
9 the condition inside the pipe?

10 A. We wanted the camera—

11 Q. They wanted a camera to go into the pipeline to see the
12 condition within the pipe?

13 A. And to ascertain the risk, yes.

14 Q. Yes. As a member of the IMT, did you tell Mr. Piper that we
15 could see the condition in the pipe through Mr. Boodram and
16 Mr. Kurban?

17 A. I not—it's the same question as before. I did not tell Collin
18 Piper anything, first-hand knowledge or so, about the
19 conditions in the pipe as reported by Mr. Boodram or Mr.
20 Kurban. Right.

21 Q. Ms. Balkissoon—

22 A. Yes.

23 Q. Your role as a member of the IMT, would you not agree with
24 me—was not merely as a conduit pipe to give messages to and
25 from. You had a role to make assessments and, if necessary,
26 make recommendations. Not so?

27 A. I had a role also, because you pointed it out to me what Collin

1 said, to also make critical assessment. Yes.

2 Q. Yes, to make assessments?

3 A. Yes, yes.

4 Q. Where you were that day, did you consider if these men in the
5 pipe, their lives had to be saved, quick and urgent action had to
6 be taken to rescue them?

7 A. Yes.

8 Q. Did you consider that you all took quick and urgent action?

9 A. We took quick and urgent—hold on, because—quick and
10 urgent action to try to derisk going inside a pipeline that had oil,
11 right. And also, we did not know what was the cause of the
12 incident, right. So if it is I could turn it around and say I also
13 took—Paria also took action by telling LMCS not to dive.
14 Paria also took action to say, listen, hold up, are you sure you
15 want to dive in there because these are the risk too, eh.
16 Someone lives could be lost, eh. It's a balancing act, right.

17 **Examination By Mr. Chairman:**

18 Q. It might be a different balancing act if it was your father that
19 was in the pipe or your son. I think we'll take a break there.

20 A. No. That's not fair, though.

21 **Mr. Chairman:** No, no. Is there an objection to that?

22 **Mr. Peterson SC:** Yes, Mr. Chairman. That's, that's—I don't
23 think the witness should be subjected—I don't think it's fair,
24 with the greatest of deference, to do that to the witness. We on
25 this side representing Paria, have been respectful and sensitive
26 to Mr. Ali, and all of that. It's only fair, it's only fair that we
27 extend the same respect and deference to Paria's witnesses who

1 would have been on the—obvious. It's not her family, yes, but
2 she's a human being as Mr. Ramadhar would say.

3 **Mr. Chairman:** All right. You've made your point.

4 **Ms. Balkissoon:** Do you know my—*[Ms. Balkissoon cries]*

5 **Mr. Chairman:** Of course, it's not my intention—I'll say
6 straight away. It is not my intention to upset anybody, and I
7 have been meticulous in trying to avoid doing that, and, of
8 course, I'm very sorry that you are upset by this, Ms.
9 Balkissoon. But part of the risk analysis must include the
10 person being willing to go into a pipe and take a greater risk. I
11 cannot divorce myself from the fact that if it were my son I
12 would take a risk that I might not if it were not my son, and that
13 is a perfectly reasonable—

14 **Ms. Balkissoon:** My—

15 **Mr. Chairman:** Just a moment, Ms. Balkissoon. It is a
16 perfectly reasonable factor to take into account. And I'm
17 simply asking the question whether or not there were willing
18 people prepared to enter the pipe and that risk, whether that was
19 factored into deciding whether to prevent people from going
20 into the pipe. That is all I am interested in ascertaining. It's
21 certainly not designed—and I regret deeply that Ms. Balkissoon
22 is upset by it.

23 But it does seem to me that it is a relevant factor because
24 everybody who has a child or a father would wish to make a
25 different decision to the professional who may not be prepared
26 to enter a pipe. You might be prepared to risk your life far
27 quicker if it were your son or your father than you would if it

1 was a stranger. That is a factor. And to prevent somebody
2 from being able to do that even if they're putting their own life
3 at risk, considerable risk, is a big step. And that is the only
4 purpose for which I ask that question. And I'm sure Ms.
5 Balkissoon—

6 Ms. Balkissoon, I'm sorry. I apologize to you personally.
7 I don't want to upset you, but it is a factor and something which
8 I'm interested to know whether it was calculated as part of the
9 overall assessment. That's all I'm asking. All right? It must
10 have been difficult for you, of course, it was.

11 All right. We're going to take a break now. We'll come
12 back. If you go with the usher he'll make sure you get some
13 fresh coffee. All right. Please, go with the usher, with this
14 gentleman here. All right. Yes, thank you. We'll take 15
15 minutes' break.

16 **11.06 a.m.:** *Enquiry suspended.*

17 **11.12 a.m.:** *Enquiry resumed.*

18 **Mr. Chairman:** You're all right? Did you get some fresh
19 coffee?

20 **Ms. Balkissoon:** It's okay.

21 **Mr. Chairman:** You're all right? You sure?

22 **Ms. Balkissoon:** Yeah, I'm fine. I just—

23 **Mr. Chairman:** Good.

24 **Ms. Balkissoon:**—want it over with.

25 **Mr. Chairman:** All right. Mr. Maharaj is going to ask you a
26 few more questions.

27 **Ms. Balkissoon:** Sure.

1 **Mr. Maharaj SC:** I just have a few more questions for you.

2 Yes, I just have a few more questions for you, Ms. Balkissoon.

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. In your role as providing technical assistance to Mr. Piper and
5 to the IMT, did you consider it as your role to tell Mr. Piper that
6 there was—there were available experienced and competent, or
7 there were available commercial divers? They had commercial
8 equipment and that he should reconsider his decision and
9 permit a dive into the pipeline?

10 A. Um, yes.

11 **Examination By Mr. Chairman:**

12 Q. Yes, what? Sorry, I don't understand. You're agreeing with
13 Mr. Maharaj that's what you should have done?

14 A. No, I'm saying I did talk to Collin about the decision made not
15 to dive and that would have been very early, in truth, around
16 7.00, right, about, um—

17 **Continued Examination By Mr. Maharaj SC:**

18 Q. And you told him to reconsider his decision and permit the
19 dive?

20 A. Yes, but, but then, you see, your instinct of course is always to
21 have, right, but, when you think about it and you say, but hold
22 up, do we really know what's going on in there? Right? And
23 also, um—

24 Q. All right.

25 A. —do you really, yeah, do you really know what's going to
26 happen to someone if someone goes in there? Will they be able
27 to come back out? And it's not only about saving those in

1 danger but also preventing someone from putting, well, their
2 lives at undue, at undue risk too, huh. You don't want to—if
3 it—it's—so if I look back at my, um, days in the refinery, right,
4 but, so, it's, it's almost tantamount to saying, well, okay, um,
5 we have a release of H₂O₂ or something like that, a gas release,
6 right, and someone that's in there, the first instinct of course is
7 to go try and help. But do you—you go, but wait a minute,
8 hold on, rescuers' lives also matter and you don't want to have
9 a situation where—and there are instances, right? If you look at
10 any sort of—well, okay, part of my other technical duties would
11 have been, um, safety management too. And if you look, there
12 are a number of cases where rescuers themselves have, you
13 know, passed, in a rescue attempt.

14 **Examination By Mr. Chairman:**

15 Q. Yes. I mean that, that there is an intent—an attendant risk for
16 anybody to effect a rescue, isn't there?

17 A. Yeah, but sometimes the risk is too high to do so.

18 Q. You said that very softly. You said sometimes the risk is too
19 high. Did you make that assessment?

20 A. No. That wouldn't have been my decision to make.

21 Q. Not your decision to make?

22 A. No. But remember where I was, right, I would not have had the
23 benefit of having those specialist diving companies and so on
24 feeding back in to the IMT, the ICP, or their knowledge, right?

25 Q. Well they were there, on your berth?

26 A. They were—they visited and then they left. The, the, the, the
27 specialist diving companies?

1 Q. Yes, for a period of some hours from seven o'clock or so, they
2 were there, weren't they?

3 A. The vessels were there but the people that would have been
4 taking part and liaising with the ICP would have just visited and
5 then reported back in to, um, the ICP.

6 Q. I'm not sure I'm following you. I thought you told us that
7 they—from seven o'clock onwards there was at least one and
8 then shortly afterwards another—

9 A. Uh-huh.

10 Q. —expert dive boat—

11 A. Yes.

12 Q. —that had arrived—

13 A. Of course.

14 Q. —with divers and equipment?

15 A. Yes, but the Waterworks was there and the Gulf Stream was
16 there.

17 Q. Right.

18 A. Right? The Waterworld, um, people, right, um, they were
19 liaising through Andrew Farah, right, and I know that they
20 would have had equipment.

21 Q. Sorry, I don't want to interrupt you. You didn't speak to them.
22 I think you told Mr. Maharaj that earlier. He identified a
23 number of people to you by name. You didn't speak to any of
24 those people, did you?

25 A. No.

26 Q. Mr. Beddoe—

27 A. No.

1 Q. —and, um, Ramoutar?

2 A. So all I know I was speaking to Mr. Farah right?

3 Q. Right.

4 A. So that would have been that. The only other time I would
5 have spoken to, um—actually, no, that was—that would have
6 been my extent of conversation with divers on that night
7 because the, um, specialist diving people that would have come
8 on behalf of Paria, who one of them owned that Gulf Stream
9 vessel, right, they just visited, looked at the, um, er, camera
10 footage and they went back in to report to Collin Piper.

11 Q. Okay.

12 A. So it's not that I was liaising with the Mitchells divers or the
13 OTSL divers or anybody like that.

14 Q. It didn't occur to you to say to those that were there, once you
15 had them, "Look, gather round, folks. This is the position here.
16 What can you tell me about the prospects of effecting a
17 rescue?" Did you, did you enquire with them, um, at all, being
18 the person on site? You were the most senior on site—

19 A. Yes.

20 Q. —from Paria, weren't you?

21 A. Yes.

22 Q. So did you say to those people, "Look, gather round. I need to
23 be persuaded by you that this is a sensible plan that you have in
24 mind to effect a rescue so that I can say to Mr. Collin Piper,
25 look, your order not to go in the water ought to be rescinded
26 because I think that these people could carry out such a
27 rescue?? You didn't do anything like that.

1 A. No because that's not how the—

2 Q. Did you—

3 A. —IMT works.

4 Q. Right. You didn't regard that as your responsibility?

5 A. Yeah. How the—that's not how the IMT works.

6 Q. Right.

7 A. We execute at that site and so on, right, and the planning and
8 the logistics, all those arms feed back into the Incident
9 Commander. So—and I, I do know they would have had
10 discussions between Mr. Piper and those specialist diving
11 companies. Right? So that's what my understanding was.

12 **Continued Examination By Mr. Maharaj SC:**

13 Q. So I just want to get it clear.

14 A. Sure.

15 Q. So are you telling us that, as a member of the IMT, you could
16 not have an independent view to make a recommendation to
17 Mr. Piper?

18 A. Mr. Piper is always open to recommendations, yes.

19 Q. So on this eve—on that evening you considered yourself that
20 you had a role that you could have had an independent view to
21 make an assessment and make a recommendation to Mr. Piper?

22 A. No, that that's not, that's not how it works. At, um—there's a
23 reason why there's a chain of command in the IMT. Right?
24 Mr. Piper would have appreciated any recommendations but
25 what I'm saying is that I would not have had or it would have
26 been an assumption of me to say—it would be assuming of me
27 to say that I have—would have had all the information that

1 would have had all the plans that put together and then
2 presented. That doesn't occur there. It occurs at a different
3 level where all other information is fed back into—you
4 understand?

5 Q. Okay. So based on the information you had during the time
6 you were there, did you consider that you had sufficient
7 information to recommend to Mr. Piper, instead of spending
8 time getting cameras, that here it is you have willing divers,
9 they have the equipment and they want to go into the pipeline
10 to make the rescue?

11 A. No, no, no.

12 Q. You didn't consider—

13 A. No.

14 Q. —that was it?

15 A. Because—no.

16 Q. Because what?

17 A. Because, at that time, right, I don't know if that plug would
18 have slipped.

19 Q. Oh, so—okay.

20 A. I don't, I don't know that.

21 Q. All right, so, so let's take it. One, you did not know whether
22 the plug would have slipped. What is the other reason?

23 A. So when the plug slips, right, I don't know if it would have
24 caused anything—further harm to anybody inside that pipe,
25 right?

26 Q. So that's the second reason. Right.

27 A. Right?

1 Q. What's the third reason?

2 A. And you have to forgive me, right, because I'm not a diver and
3 I would not have the benefit of those other experts.

4 Q. Okay, okay.

5 A. But from my perspective right, fuel oil is not something you
6 could see in, right? This is not light mauby dark mauby, right?
7 This is something opaque and I know when oil—what happens
8 when oil gets on stuff, right?

9 Q. Okay. Any other reason?

10 A. If someone goes inside there, how you're going to get them
11 back out safely if they have an emergency? Can someone
12 breathe there in that environment? You know—do you know
13 that fuel oil also may have H₂S and so on in it and VOCs? This
14 is, this is the benefit of my experience where I worked before
15 and those would have been the reasons where I'm thinking,
16 well, hold up, after that first instinct of, well, let's try to help,
17 hold up. We don't know what caused it. We, we just don't
18 know what's going on inside a there, right? How you're going
19 to pull somebody out? It's—

20 Q. Are you aware that in these proceedings in the In-Corr-Tech
21 report it stated that no Delta P could have occurred after the
22 pressure stabilized?

23 A. I read the In-Corr-Tech report, right? And there are a number
24 of issues with that report.

25 Q. What, so you're challenging some of the opinions given there?

26 A. I'm, I'm, I'm saying—

27 Q. You're disagreeing with some of the opinions in that report?

1 A. I'm disagreeing with some of the assumptions made.

2 Q. Do you know whether Paria got any expert to review that
3 report?

4 A. No.

5 Q. No.

6 A. However, it's very basic what I'm—what the question I'm
7 saying. If you look at the—I don't know if I'm allowed to.

8 Q. But are you aware—are you aware in that report—

9 **Mr. Chairman:** She's allowed. She's asked me if she's
10 allowed and to she's allowed to.

11 **Mr. Maharaj SC:** I'm sorry, I'm sorry.

12 **Mr. Chairman:** It's all right.

13 **Examination By Mr. Chairman:**

14 Q. You have a view about it, you were asked your view about it—

15 A. Well, the—yeah.

16 Q. —so you're allowed to tell me what your view about it is. All
17 right?

18 A. Well, it's you that, um, from one of the schematics, right, it was
19 almost look, at least in the picture that he had, that the liquid
20 level was the same on both sides, right? But I know it wasn't.
21 It was more like this [*Demonstrating by placing one hand*
22 *above the other*]. Sorry, berth 5, berth 6; berth 6, berth 5, so if
23 it's more like this, right, versus this, then if something is like
24 this something is pushing down and if you have something
25 stuck here, I don't know if that, you know, might have moved.
26 That's the—

27 Q. That was a factor which you regarded as important to take into

1 account in assessing risk?

2 A. Yes.

3 Q. It's not a factor to prevent any rescue at, though, is it, or isn't?

4 A. Well, if something moves, right, in that line, right, I don't know
5 the impact it would have had on a diver and on whatever he's
6 attached to, because, remember at that time, right, something
7 violent would have happened to cause 5 able-bodied people to
8 go inside.

9 Q. Yes.

10 A. And these were—these are people, eh.

11 Q. And all their equipment?

12 A. Well, true, and all their equipment, right, something violent
13 would have happened, right?

14 Q. Yes.

15 A. And then here it is, I don't know where that plug is and I don't
16 know if this is going to slip.

17 Q. What I'm asking—I follow all of that and I'm—I respect the
18 point you're making that this is an unknown factor.

19 A. Correct.

20 Q. What I'm asking you is whether or not it is a factor such that it
21 would prevent you from effecting any rescue at all.

22 A. I would want to say that certainly I would have preferred if the
23 plug could not move because—

24 Q. *[Laughter]*

25 A. No, no, no. Hear why, right? I could—let me give you a
26 simple example, right? I could, um, fall down the steps and I
27 might be fine but I could also fall down the step and break my

1 neck and unconscious divers don't breathe well. I don't know
2 how well it works. IN—

3 Q. Well, how did you know they were unconscious?

4 A. Well if something happens in that pipe with a rescuer that
5 causes him to hit his head or causes him to get in contact with
6 equipment or whatever—

7 Q. Uh-huh.

8 A. —right, this is just me as a lay person, I'm not a—

9 Q. No, no. Well I, I, no, I don't need your speculation as a lay
10 person. I need your, I need your opinion as someone who
11 understands the dangers involved in, in the oil industry.

12 A. Well, well, well, oil, well it's slightly different to what
13 pressures you expect to get when something like that plug
14 moves. Right? So if that plug moves, right—

15 Q. There's a potential for danger?

16 A. —there's a potential for danger.

17 Q. Yes.

18 A. Because there's a potential for something slipping and having a
19 rush of liquid, taking with it the diver or having something hit
20 him.

21 Q. Yeah.

22 A. That's what—that is my opinion.

23 Q. So I'll come back to my question please. Is it in your mind
24 such that it is an impediment to any rescue at all?

25 A. Yes.

26 Q. Right. So, irrespective, then, of anything that might have been
27 obtained by way of expert divers and equipment and all of that,

1 your view, your independent view, and I appreciate it is your
2 independent view—

3 A. Yeah, not, not, not Paria's.

4 Q. —your independent view is that that plug of itself was
5 sufficient to justify no rescue?

6 A. At that time, because if you recall, right—

7 Q. I thought that's what you just said.

8 A. Yes. No, but there's a way to deal with the plug, eh.

9 Q. Right.

10 A. And so if you—I don't know if I'm jumping ahead.

11 Q. No, no, no. You said there's a way to deal with the plug and
12 still effect a rescue?

13 A. And, and still—

14 Q. As opposed to recovery?

15 A. —and still lower the risk associated with the plug, all right?

16 Q. Okay, what is that?

17 A. So, if you recall, we would have looked at trying to find out
18 where the plug is and we took off the flange at berth 5.

19 Q. Yes.

20 A. Right? So we wanted to see where that plug was, right? It's to
21 determine whether or not you will move or not, and, later on,
22 right, later on we were thinking well okay, can we just do the
23 In-Corr-Tech report, which is to see if it couldn't have been
24 equalized or so.

25 Q. Right.

26 A. The both sides.

27 Q. I'm struggling a little, Ms. Balkissoon, with this. If no one had

1 ever been in that pipe, I could understand what you're saying,
2 in the sense that, "Look, we have no idea whether they're alive
3 or dead. We have no idea of the circumstances in which they
4 came to be sucked into that pipe", in the violent way that you
5 described.

6 A. Uh-huh.

7 Q. But we know and what you knew, and Mr. Piper knew, LMCS,
8 was that a man had been in that pipe for nearly three hours and
9 had managed to get himself out of it.

10 A. Yes.

11 Q. That is more information than you would ever normally expect
12 in such a situation. It was his—through his own heroics that he
13 managed to get himself out of that pipe. So it gave you
14 information that, first of all, they were alive, secondly, that they
15 were alive because there were air pockets inside that pipe, and
16 thirdly, that they'd all tried to escape. Did you know any of
17 that?

18 A. At that time?

19 Q. Yes.

20 A. At that time, when I first arrived, I did not know about any air
21 pockets. It's only later—

22 Q. Later when?

23 A. Um, when Collin told me that, um, he spoke to Mr. Boodram
24 about air pockets.

25 Q. Right.

26 A. That was, the—

27 Q. And you didn't know that until ten o'clock that night?

1 A. Yes, but, um, yeah, I don't remember where it is I—

2 Q. Doesn't matter. You certainly mentioned it.

3 A. Yeah.

4 Q. So, so that I'm clear, the position at the moment is this, is that,
5 um, you independently take the view that the plug was the
6 crucial issue and, that, in the absence of knowing where that
7 plug was, you would not have permitted anyone to effect a
8 rescue?

9 A. Well, not the crucial, there were other considerations, right?

10 Q. No, no, I appreciate that, but I thought you were saying that of
11 it itself was sufficient, that the fact that there was that issue
12 would have prevented you from saying, um, anybody should
13 enter that pipe?

14 A. Among other things, yes.

15 **Mr. Chairman:** All right. Thank you.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. So, your concern about the plug was that you were concerned
18 about if there could have been another Delta P to push the plug?

19 A. Yes.

20 Q. Yes. I want to read to you—

21 A. Um—go ahead.

22 Q. I want to read to you what the In-Corr-Tech report stated at
23 the—it's dated addendum 6th of December, 2022 and it's at
24 page—it starts at page 1533 and it's at 1534 at paragraph 4.5.
25 It's on the screen.

26 A. Oh, sorry.

27 Q. “Prior to Mr. Christopher Boodram's rescue, the entire

1 system stabilized and equalized itself at both ends of
2 SL36 and thus allowed Mr. Boodram to negotiate the
3 pipe without any disruptions, as the system was static.
4 This condition was the best opportunity to attempt a
5 rescue as removing the blank at berth 5 or shutting down
6 the compressor would have released the stored potential
7 energy from the compressed air and thus disturb the
8 equilibrium and thereby imperil any divers in air
9 pockets.”

10 So, number one, do you understand that to say that Delta P was
11 no longer a threat?

12 A. Well, I understand that the In-Corr-Tech person said that the
13 entire system stabilized and equalized itself at both ends.

14 Q. And it also said that the best time for a rescue—

15 A. Uh-huh.

16 Q. —was shortly after Boodram came out of the pipe.

17 A. Because he's basing it on that the system was static, yes.

18 Q. Yes.

19 A. But how would he have known that?

20 Q. Okay, okay.

21 **Examination By Mr. Chairman:**

22 Q. Because Boodram came out the pipe.

23 A. No, that's not—no, that's not technically correct.

24 Q. That's not technically correct, why?

25 A. Well, because, because, just because you have—his report
26 earlier would have been like this, [*Demonstrating with hands*
27 *level with each other*] right? So Mr. Boodram came out the

1 pipe when it was like this [*Demonstrating with one hand higher*
2 *than the other*]. Right. That does not mean that the plug
3 itself—that's not any guarantee that that plug itself is never
4 going to move. That could move under somebody hit it, it
5 deflated more, all sorts of things

6 Q. Any moment in time?

7 A. Yes.

8 Q. It could have moved at any moment in time?

9 A. Yes, correct. And if you go on to read what he says, right,
10 right:

11 "This condition was the best opportunity to attempt a
12 rescue as removing the plug or shutting down the
13 compressor would have released the stored potential
14 energy and thus disturb the equilibrium and imperilled
15 any divers in air pockets. If the plug moved then"—the
16 sentence continues—"this means that...and thus disturb
17 the equilibrium and imperil any divers in air pockets."

18 Just like if the plug moved, the equilibrium would be disturbed
19 and imperil divers also. Right? I'm not—

20 Q. I understand exactly what you're saying.

21 A. Yeah?

22 Q. I get it, yeah. If that plug moved, it could have caused a
23 problem, for example, if it went further into the pipe it would
24 have presumably sucked more water and fuel in that direction?

25 A. Yeah. Maybe I'm not ex—yeah, because it seems—

26 Q. That's what you mean, isn't it?

27 A. Yeah, yeah.

1 Q. And the point that Mr. Maharaj is asking, actually, though, is,
2 whatever the position is with the fluids in this pipe—

3 A. Uh-huh.

4 Q. —at that particular moment in time it was kept in equilibrium
5 partly because the flange was on at this end so it was lower
6 here. When that plug moved in, it compressed the air between
7 the flood and at the top of the flange, the bottom of the flange,
8 such that it created an equilibrium between the plug—I see you
9 shaking your head. Allow me to finish in a moment, please?
10 When the plug was sucked into the pipe it stopped at a point for
11 one of two reasons.

12 A. Uh-huh.

13 Q. Either because it got jammed in the pipe—

14 A. Uh-huh.

15 Q. —a little kink or something like that, it could have got jammed
16 on a weld or any of those sort of things, or equilibrium was
17 reached—

18 A. Oh.

19 Q. —whatever it was. One of those two. Do you agree with that
20 first of all?

21 A. It's not one of two.

22 Q. One of those two.

23 A. It's not one only of one of those two.

24 Q. You mean there are other possibilities?

25 A. Well, if you think about it a little bit, right, I just trying to be—
26 the plug could have just slowed down and stopped. I
27 wouldn't—at that time, we would not have known what is up,

1 down, we would not have known that.

2 Q. No, the plug would slow down and stop because equilibrium
3 was reached.

4 A. Because there was no more force pushing it.

5 Q. Exactly. So equilibrium is reached.

6 A. So, so, therefore, on one side it may not be just because the air
7 was compressed, right, and therefore pushing that way. It could
8 be also when you're moving the plug along this way, it
9 naturally comes to a stop.

10 Q. Why would it naturally come to a stop? It's only moving
11 because there's a force on it.

12 A. Because of the friction. Because of the friction and the forces.
13 By that time—

14 Q. Yes.

15 A. —right, from what I understand also, um, it could be that the
16 compressor would have been able to blow around the chamber.
17 And therefore—

18 Q. That's the point isn't it? At one end you had the force of the
19 compressor pushing down. At the other end you had the flange,
20 all right? In between the two is this plug—

21 A. Yes.

22 Q. —that has now moved from where it was originally, right?

23 A. Yes.

24 Q. And it's come to a stop. I'm suggesting to you, tell me if I've
25 got this wrong, that it's only one of two reasons why it could
26 have come to a stop, either because the pressure on either side
27 is equal, or because it's hit some sort of kink or weld or

1 something in the pipe and it's jammed it in place.

2 A. Or, or—

3 Q. Or?

4 A. —the force behind it would have slowed it down such that it
5 naturally came to a stop. When you say stuck, right, it means
6 jammed and there's no way for fluid or air or anything to pass
7 through, right? But it could have also stopped here, naturally
8 slowing it down. If you, if you take a ball and you, you, you
9 roll it on the ground, it just, you know, and you roll it on the
10 ground, right, it could stop because it bounces on something. It
11 could stop naturally of its own accord. You understand?

12 Q. Forgive me, I don't because I don't see that as being a proper
13 comparison at all.

14 A. Okay, well—

15 Q. You're in a tube which is sealed at either end, either because
16 you've got a force or pressure on one end or a flange on the
17 other, it's closed, and anything that moves along it is only going
18 to move because there's a force greater on one side or the other.
19 I recognize that there is every prospect that the plug might have
20 stopped because of some rupture in the pipe, some sort of either
21 kink or a part of a weld or something stopped it moving along.
22 That would pose a greater risk because obviously there is now
23 still a differential between the two sides. If it stopped of its
24 own accord, merely because the pressure on that side was the
25 same as the pressure on that side, doing anything to affect that
26 was more likely to cause a problem, surely?

27 A. Yes, doing anything to affect the equilibrium would have, yes.

1 Q. If it was—so, right, and that is the reason why I think for a
2 period of 6 or—four or 6 hours you did—you—Mr. Piper
3 refused to remove the flange at number 5.

4 A. Yes.

5 Q. Because there was the prospect that the pressure that had built
6 up between the fluid and the top of the underside of that flange
7 was such that it was holding everything in place.

8 A. Yes.

9 Q. The minute you opened it, psssssh. So it would go—

10 A. Yes.

11 Q. —across, wouldn't it?

12 A. Yes.

13 Q. And that was a good reason not to do it?

14 A. Yes.

15 Q. Right. So that was one reason. Forces are equal that's why it's
16 stable.

17 A. Uh-huh.

18 Q. That is why—it may be the reason why Mr. Boodram was able
19 to come out the pipe and Mr. Kurban was able to go in it. And
20 that may be the reason, it may be that that is not the reason. It
21 may be that the plug has just got jammed in there and there's a
22 problem, the kind of problem you anticipate. I don't see any
23 other alternative, apart from your ball rolling across the floor
24 and coming to a halt, which I don't understand.

25 A. No but there's friction force—but there's friction of whatever's
26 behind too pushing it.

27 Q. There's what?

1 A. There's friction of whatever is behind it also.

2 Q. Well there—friction is another force, I understand that, as is
3 gravity. All of these things are coming together to create an
4 equilibrium one side or the other.

5 A. Okay.

6 Q. Isn't it?

7 A. So—

8 Q. So, I, I, I don't understand the point you're making. I—as I
9 understand it, your concern, so not without some merit if I may
10 say so, is that you did not know where this plug was or why it
11 stopped, and it seems to me, from what we've heard so far and
12 what we've read, is there are only two possibilities, equalized
13 pressure on either side of that plug or it's jammed.

14 A. Well, there—

15 Q. You're saying that's not right? There may be other
16 possibilities?

17 A. Yes.

18 Q. Right, okay. We'll no doubt discover them from somewhere
19 else because I don't follow yours, I'm afraid. But I understand
20 you're rejecting what I've suggested to you.

21 A. I'm saying there may be other reasons why the plug stopped.

22 **Mr. Chairman:** Right. Thank you very much.

23 **Continued Examination By Mr. Maharaj SC:**

24 Q. In respect of the opinion you have given us today about that
25 plug, did you communicate that opinion to the IMT?

26 A. I don't understand the question.

27 Q. The opinions that you have given how the plug that—your

1 concerns about the plug—

2 A. That it could move?

3 Q. Yes.

4 A. Yes.

5 Q. —did you communicate that to the IMT?

6 A. I spoke to Collin, yes.

7 Q. Yes.

8 A. Piper.

9 Q. Do you know whether—do you know whether Paria or the IMT
10 in Paria got an expert opinion in respect of your views?

11 A. Yes.

12 Q. From who?

13 A. I believe he contacted someone from Heritage.

14 Q. From Heritage?

15 A. Yes.

16 Q. And you don't know who that person is?

17 A. No.

18 Q. Was it a written opinion?

19 A. You have to ask Collin that.

20 Q. Oh, I have to ask Collin that.

21 A. Right?

22 Q. Well, can I tell you I've—so far in the proceedings I've not
23 seen any such opinion.

24 A. Um, I, can't agree with that.

25 Q. Okay, okay.

26 **Mr. Maharaj SC:** No further questions.

27 **Mr. Chairman:** Thank you, Ms. Maharaj. Ms. Balkissoon,

1 you're all right?

2 **Ms. Balkissoon:** Yeah, I'm fine. I just want to, you know, get
3 it over with.

4 **Mr. Chairman:** You want over with. I understand that
5 entirely. We're going to do our best. All right, I'm going to
6 ask who would like to ask questions. I'll see a show of hands
7 first of all. So we'll hear, first of all, from Ms. Alfonso. She
8 represents the union. She's the lady sitting at the back. She
9 will introduce herself.

10 **Ms. Alfonso:** Thank you very much, Mr. Chairman.

11 **Cross-Examination By Ms. Alfonso:**

12 Q. My name is Nyree Alfonso and I represent the interest of the
13 SWWTU as the Chairman has said. Ms. Balkissoon, I'm
14 struggling with a few issues so I hope that you could assist me.
15 You said you've been working with I gather was the
16 predecessor to Paria since 1998, yes?

17 A. Yes.

18 Q. And I did hear also, but, very sotto voce, that you worked
19 somewhere else before? You were saying something where
20 you worked before you had certain experience. Where is that
21 place?

22 A. No, well I said I worked Petrotrin.

23 Q. Okay.

24 A. And I would have worked at Paria.

25 Q. Or, okay. So when you said somewhere else, you meant
26 Petrotrin?

27 A. Well Petrotrin and Paria are two different.

1 Q. Okay. Right, so since 1998. And if I understand your evidence
2 earlier today, Mrs. Balkissoon, there is—the Paria and—

3 A. Uh-huh.

4 Q. —presumably, presumably Petrotrin did not have any
5 emergency—part of their emergency response plan that dealt
6 with the possibility of a Delta P. That is correct?

7 A. Paria didn't have an emergency response plan, no.

8 Q. Could you say if Petrotrin did?

9 A. No, I can't say that.

10 Q. You can't say that. Okay. Ms. Balkissoon, and you would
11 have said that the way to avoid the risk attendant with a Delta P
12 would be to engineer that out of the works, I suppose?

13 A. Yes.

14 Q. Out of any plan or any works or any scope of works as the case
15 may be?

16 A. Yes.

17 Q. Okay. Ms. Balkissoon, are you aware that in or about, and
18 these are my instructions, between 2001 and 2002, there was an
19 incident involving Delta P at the Point Fortin facilities of
20 Petrotrin? Are you aware of that?

21 A. No.

22 Q. Okay. Are you aware that the diver, I'll have to say
23 diver/welder from my instructions, was working in a habitat,
24 there was an explosion, he was sucked into the—into a pipeline
25 on the Point Fortin jetty and that he was rescued successfully by
26 a diver, one diver, with scuba and a rope? Well I can't say he's
27 alive now but he did not die of his injuries.

1 A. Okay.

2 Q. Okay. So, if an incident happened like that having regard to
3 your long tenure in Paria and Petrotrin, wouldn't that form part,
4 well a institutional memory, wouldn't you try to, as you say,
5 engineer your way around a reoccurrence or something of that
6 nature? Because it's something that's already happened in a
7 pipeline—

8 A. It, it really depends on the circumstances by which it, um, that
9 accident and incident occurred, right? Um, I mean, we're
10 always open in safety to learn from incidents of the past.
11 Right? And if that, um, accident report was on paper or
12 something accessible to me, surely I would have [*Inaudible*]

13 **Mr. Chairman:** Can I ask please, Ms. Alfonso, is there a
14 report of this incident? I'm assuming there would be one.

15 **Ms. Alfonso:** Well, my—I must say I have been trying my
16 damndest to get access to some written format and so we were
17 obliged to go to, I should say, the former union, not the
18 SWWTU, in order to get some institutional memory of this
19 incident and the actual gentleman who was rescued is now
20 deceased.

21 **Mr. Chairman:** All right, well I, I think—

22 **Ms. Alfonso:** So you need to get some health and safety
23 persons—

24 **Mr. Chairman:** I would be interested obviously to know, no
25 doubt with others, of such an existence. There's nothing in the
26 papers that we have—of the many tens of thousands of pages
27 that we have, there's nothing to suggest that this had happened

1 then. If it did, could we, can I ask you please to find in your
2 hardest, rather than damndest, to discover such information as
3 you're able to provide to us, please? We will do the same but it
4 seems to me if this lady knows nothing about it we can't really
5 ask her any more about it.

6 **Ms. Alfonso:** And certainly, Mr. Chairman, I said I only
7 recently found out this information—

8 **Mr. Chairman:** All right.

9 **Ms. Alfonso:**—and we have been really trying to see if we can
10 get some documents that would assist, however, of course,
11 because that entity is no longer alive, commercial entity—

12 **Mr. Chairman:** Of course, yes.

13 **Ms. Alfonso:**—um, I, and I think that is—that's part of the
14 difficulty but it seems to me that it, you know—I asked myself
15 the question, could this be the first time that something like this
16 happened ever in the world? And it does not appear that is the
17 case.

18 **Mr. Chairman:** Well, one has only got to go on to Google to
19 find out that that isn't. But leaving that aside, obviously if it's
20 something that has happened at the predecessors to Paria, with
21 many of the same employees still engaged there, there's
22 nothing wrong with you asking them about it, but once the
23 witness has said she knows nothing about it, it's not, it's not
24 fair to her, as it were, trying to elicit it through her or anything
25 more, so leave that subject please? We will do our
26 investigations, you'll do the same.

27 **Ms. Alfonso:** I—

1 **Mr. Chairman:** And I won't stop you asking any other Paria
2 people who might have been there at that time if they know
3 about it. If they do they can no doubt tell you, but, I think
4 that's as far as we can take it with this lady.

5 **Ms. Alfonso:** Thank you very much, Mr. Chairman. Okay, but
6 Ms.—

7 **Mr. Chairman:** I'm sorry, Mr. Ramadhar, is your hand up for
8 a reason to intervene because of some legal position or—

9 **Mr. Ramadhar:** No, um—

10 **Mr. Chairman:** You're just anxious to get on your feet, are
11 you?

12 **Mr. Ramadhar:** [*Inaudible*] Thank you, Sir.

13 **Mr. Chairman:** All right. Hold your horses, Mr. Ramadhar.
14 You'll get the chance.

15 **Ms. Alfonso:** Thank you, Mr. Chairman, and thank you, Mr.
16 Ramadhar.

17 **Continued Cross-Examination By Ms. Alfonso:**

18 Q. Ms. Balkissoon, um, and I am leaving that issue aside but I'm
19 sure I heard you say something in your evidence this morning
20 about your experience in, in, in, I don't know, recovery/rescue,
21 in pipeline. Did I hear it incorrectly?

22 A. Um, yes you did.

23 Q. Okay. Right? Okay. My junior tells me that, you know, he
24 heard the same thing, that you had some experience with rescue
25 operations. I don't know. Maybe I misheard it.

26 A. No, no. So, um, not rescue operations, right, but remember,
27 um, in the refinery world and in the hydrocarbon industry we

1 would have a department called operations, right? And as part
2 of operations you would be part of other IMTs and so on. So
3 it's not operations in the sense that operations of rescue in a
4 pipeline, no.

5 Q. Well are there other kinds of rescues that you're aware of from
6 your involvement in the operations department?

7 A. Yes, well, for example—

8 Q. Uh-huh.

9 A. —right, if someone is feeling unwell on top of his tank that's a
10 form of rescue also.

11 Q. Okay.

12 A. Right? So it's not specific to something that, well, diving and
13 guys in a pipeline. Anybody who has worked in the industry
14 would have, in my field as well as in operations, would have
15 had some level of experience in operations and, yeah, IMT.

16 Q. Okay, and would you be able to tell us, Ms. Balkissoon, from
17 your experience in the operations department or division as the
18 case may be, Petrotrin/Paria would have some emergency
19 protocols, meaning, I'm just using your example—

20 A. Sure.

21 Q. —somebody feels unwell at the top of a storage tank or you
22 know of that nature—

23 A. Sure.

24 Q. —you would have emergency protocols to bring that person
25 safely down?

26 A. Yes.

27 Q. To the, well, to the ground I assume and whisk them away to

1 hospital or give them some emergency care on site, something
2 of that nature, yes?

3 A. Yeah, we'll bring them down, stabilize and so on and send them
4 to the emergency care, yes.

5 Q. So this scenario that we are before the Commission, well, for
6 the last few weeks for, this was also an emergency, yes?

7 A. Yes.

8 Q. And wouldn't quick response be absolutely necessary in this
9 emergency as well involving four different people, not just one
10 person on the top of a tank?

11 A. Yes. Yes.

12 Q. In your view, Ms. Balkissoon, the response of Paria insofar as
13 you were involved, did you find that urgent? Did you find that
14 response urgent in relation to the scenario that was known to
15 you before you came on the scene, which is that four persons
16 were missing and presumably in the pipe, not presumably by
17 that by that time, known to be in the pipe?

18 A. You're asking me if—I just make sure I understand the
19 question.

20 Q. Sure, please.

21 A. You're asking me if I thought—

22 Q. Uh-huh.

23 A. —that the response prior to my arrival on site was urgent?

24 Q. No, no.

25 A. Okay.

26 Q. No. Did you find the response of Paria, of which you were part
27 of it, yes—you're part of the ICT, you're part of the process—

1 did you find that response to be urgent?

2 A. Yes.

3 Q. You found all the actions of Paria to be urgent?

4 A. I found the response to be urgent, yes.

5 Q. Okay. So let's look at that. When I—and I want to be fair to
6 you. I understand your position to be is Paria, including
7 yourself, did not know the conditions in the pipe.

8 A. Correct.

9 Q. Right? And you, I wouldn't carry you over, you know, what
10 you thought were the conditions in the pipe and you didn't
11 know what they were and you wanted to ascertain what they
12 were.

13 A. Correct.

14 Q. Okay. Did you, Ms. Balkissoon, at any point in time think
15 that—okay, so let's be fair to you again. You knew there were
16 divers there with commercial equipment, yes?

17 A. Yes.

18 Q. Okay. Did you—that commercial equipment would have
19 involved surface supplied air, tethering, communication,
20 lighting, to which—all of which the diver who would be, well, I
21 want to say attached to or have access to.

22 A. Yes.

23 Q. Did you see any of that equipment, did you in your own—for
24 your own self did you see any of that equipment able to
25 counteract the risk that you felt existed in the pipeline?

26 A. No—not, not—there's a, there's a, there's a difference.

27 Q. Okay.

1 A. There's a difference, right, to having all the equipment there,
2 right, so, for example, right, communications would have been
3 important, lighting would have been important too.

4 Q. Uh-huh.

5 A. However, to what extent? Because you're in a oil environment
6 and so on, so there's a difference to how much equipment you
7 have, the best equipment you have, and being able to
8 adequately use that equipment in a—to perform a safe rescue.
9 There's a little bit of difference.

10 Q. Ms. Balkissoon, you've said earlier that you are not a diver
11 yourself.

12 A. Yes. But you asked me my opinion.

13 Q. Okay. So you did not feel that having all of these things I just
14 described would be able to counteract the risk that you thought
15 existed in the pipe? So let's take your risk. The plug could
16 move.

17 A. Yes.

18 Q. Yes, and may perhaps cause some other secondary vortex?

19 A. Yes.

20 Q. Although the technical report says differently and my
21 instructions say differently too.

22 A. Okay.

23 Q. But I'm taking you at what you appreciate are the risks.

24 A. Sure.

25 Q. The fact that a diver would be tended and tended means
26 somebody is holding the lighting, the air and so on that is I
27 being supplied to the diver from topside on a vessel, so that if

1 this was created, this person is being held in place, meaning, he
2 can't be sucked further into the pipe because he is being tended
3 topside?

4 A. Yes.

5 Q. Did you not find that, in your mind, I know you said you're not
6 a diver but if that equipment was there, would that not
7 counteract the risk that you believed existed?

8 A. If an event occurred where something is causing a suction and
9 someone is tethered to something then it does this, it's jerked,
10 right, [*Demonstrating a tugging motion with hand*] and the
11 person who's attached means he can't move in the same force
12 that everything else surrounding him is moving, so he would
13 have been jerked and so on. He remaining in place and having
14 other objects past him and so on could mean that things hit him.
15 So—maybe I'm not understanding the question.

16 Q. Okay. So, let me—so one of the things that a diver of that
17 nature would be wearing, Ms. Balkissoon, would be a helmet.

18 A. Okay.

19 Q. So let's assume, again I can't say that I'm an expert in Delta P,
20 if that person really was in that environment you described, he's
21 wearing a helmet, he's being held, he's being tethered—

22 A. Okay.

23 Q. —he can be withdrawn, he can be held in place, he's wearing a
24 helmet so if a tank hit him, an empty or full, for that matter,
25 diving tank hit him, he'd be wearing a helmet which we have
26 heard in previous—from previous witnesses might weigh as
27 much as 28 pounds.

1 A. Okay.

2 Q. All right? Do you not think that that will counteract the risk
3 that you felt—

4 A. No.

5 Q. —was existing? No. Not that either?

6 A. No.

7 Q. So the position is, no matter what equipment came, First World,
8 Second World, best divers in Trinidad, saturation divers,
9 commercial divers, no amount of equipment or personnel would
10 be sufficient to attempt the rescue?

11 A. I could only go and tell you what I saw there. Right? And on
12 that night with that equipment, right, that we had, and based on
13 the experts and the specialist diving companies that were
14 present also, right, all of them said it was too risky and they
15 themselves would have had an understanding, because it's their
16 equipment, of how the equipment works, how it is tethered and
17 the—and they also would have been in the best position to
18 know risk and so on. That, that is what I'm saying.

19 Q. Which specialist said that, Ms. Balkissoon, or which diver said
20 that? Because I just want to be clear. We know from—

21 A. You need to—

22 Q. —we know from Waterworks—is it Waterworks or
23 Waterworld—Waterworld's divers that they were willing to let
24 other certified divers use their equipment because their time to
25 dive had passed, meaning they had been in the water for some
26 time before they came on location to assist. So, they couldn't
27 send their divers because their divers like how I think airline

1 pilots are, they have X amount of hours that they can, can
2 operate in but they were willing to let other people use their
3 equipment to effect the rescue. So could you tell us which
4 divers?

5 A. No, but—

6 Q. Which divers or which experts, to your knowledge, said it was
7 too risky to go down into the pipeline?

8 A. Those, those, those conversations would have been taking place
9 at the ICP level.

10 Q. Okay.

11 A. Inside that—well not level I should say, in that off—not on the
12 barge.

13 Q. So how do you know, Ms. Balkissoon?

14 A. Because Mr. Piper told me.

15 Q. Mr. Piper told you?

16 A. Yes.

17 Q. Okay, Mr. Piper is coming after you. We will ask Mr. Piper.
18 So you do not know, nobody told you Ms. Balkissoon it's too
19 ris—and I want to be fair to you. Lt. Hargreaves would have
20 told you from the coast guard, "We are not trained. We don't
21 have the equipment to undertake this rescue."

22 A. Yes.

23 Q. Not that it's too risky, "We are not trained and we do not have
24 the equipment."

25 A. No, he, he also said it was too risky.

26 Q. Did he not—

27 A. Well that was their first crew, eh.

1 Q. Do you know why he said it was too risky, Ms. Balkissoon? I
2 was trying to be fair to you. Not because he wasn't trained and
3 his men were not trained and they didn't have the equipment?

4 A. Remember he had only scuba. His men, when I showed him
5 the cut riser, he also said it was too risky. Didn't I say that?

6 Q. Did he not also tell you that his men were not trained?

7 A. Yes, he did say he didn't have the commercial equipment.

8 Q. And he didn't have the equipment?

9 A. Correct, correct.

10 Q. So that I put it to you, Ms. Balkissoon, that is why he did not
11 undertake or he and his men to be fair, it's not one person, did
12 not undertake the rescue. They did not have the training. They
13 were not saturation divers. They're not confined spaces divers.
14 They're not being—

15 **Mr. Chairman:** All right, all right, all right, all right, please?
16 Put this—

17 **Ms. Alfonso:** Sorry. I'm sorry I'm sorry.

18 **Mr. Chairman:** Just a moment. Just a moment. Just a
19 moment. You don't need to answer that question. We have the
20 evidence already. The position is clear. As far as I'm aware,
21 the evidence is that the, er—the coast guard were not prepared
22 and regarded it as too risky for themselves because they didn't
23 have either the equipment or the training for their divers to
24 effect the rescue. That is quite a separate matter from
25 commercial divers who arrived on the scene also. So we've
26 already got that evidence. We don't need to pursue it any
27 further and I don't need your view about it, with the greatest

1 respect to you, all right? It's not your fault, Ms. Balkissoon.
2 It's not necessary to put each and every particular divergence of
3 fact to each and every witness. This is not a court of law, all
4 right? We're seeking to establish facts and we'll decide what
5 those facts are in due course. All right, thank you very much.
6 Next matter, please?

7 **Ms. Alfonso:** Thank you, Mr. Chairman.

8 **Continued Cross-Examination By Ms. Alfonso:**

9 Q. Mr. Balkissoon, one of the issues you've raised this morning as
10 well is the presence of oil in the pipeline and the difficulty—I
11 guess you're trying to say difficulty in swimming in it or
12 manoeuvring in it or seeing in it as the case may be, yes?

13 A. Yes.

14 Q. Okay. So if I go towards the end of your witness statement
15 submitted to the Commission, when what is—the water
16 displacement process was being undertaken—

17 A. Um—

18 Q. —I note—

19 A. —which article or—

20 Q. Sorry, the water displacement? We would go to Monday and
21 thereon, if there's the—a system of pumps was being used to
22 pump the pipes from Monday onwards, yes?

23 A. Um—

24 Q. Monday the 28th, I think?

25 A. —during the recovery exercise?

26 Q. Yes, during the recovery exercise, yes, to be fair.

27 A. Okay.

1 Q. I notice what you—this is your narrative, I noticed what you
2 have described as coming out of the pump during the water
3 displacement exercise, is water. For the first day in particular
4 it's water coming out. Yes, am I right?

5 A. Yes.

6 Q. Okay. So that means—and tell me if I'm wrong because I'm
7 likely to be wrong at all times, that means that the contents of
8 the pipeline, a large amount of the contents of the pipeline was,
9 in fact, water?

10 A. Yes.

11 Q. Okay. So that we know—so that when you say that one of the
12 factors which influenced your, um—you, that it was unsafe to
13 go down in the pipeline because it's a lot of oil in the pipeline,
14 isn't it the pipeline you could see when it was pumped was
15 largely filled with water? Seawater I presume? You do say
16 later—again to be fair to you, you do say later that you
17 estimated some oil came out, perhaps mainly on the last day.
18 When you were looking for the fourth remaining diver. And
19 you estimated the amount of oil or hydrocarbon that was still in
20 the line as I think about 200 or 250 barrels, something around
21 there.

22 A. Yes.

23 Q. So, so okay, so that would mean largely what was contained in
24 this particular pipeline running between berth 5 and 6 was
25 water.

26 A. Yes.

27 Q. And therefore, a diver could have—do you think, to be fair to

1 you, do you think a diver would have been able to manoeuvre
2 in a largely water environment?

3 A. Yes. However—yes.

4 Q. Yes. Okay, thank you for that. Okay, so that one of the factors
5 that could—you know, influenced your decision that it was too
6 dangerous to conduct the rescue, that is not so then? Because
7 when you pumped the line, when the line was pumped, it was
8 largely water?

9 A. Yes.

10 Q. Okay, thank you for that, Ms. Balkissoon. Ms. Balkissoon,
11 when, um—there was a report of knocking on the pipe and this
12 would be, this would be—there were two reports to be fair to
13 you, but in your time on the berth or the barge, there was a
14 report that knocking was heard by LMCS' personnel towards
15 berth 5.

16 A. HSE told me, yes.

17 Q. Okay. Oh, well, okay. Your HSE people told you that they
18 heard knocking, that they heard knocking or there was a report
19 of knocking?

20 A. I don't remember.

21 Q. Okay. So didn't you—

22 A. All I knew is that—

23 Q. —you know something was knocking?

24 A. Yeah. All I remember is that they came to me and they said,
25 um, LMCS people saying that they're hearing knocking on the
26 pipe but—and then I asked, I asked the, um, HSE guy, I don't
27 remember his name, um, well who is it so I could talk to them,

1 and, if it was a pattern, you know what I mean, is it, or if it's a
2 random and, um, they said no, they're not—they can't tell me
3 who or anything like that so—

4 Q. Okay.

5 A. —it's—yeah. That's just how it was.

6 Q. So, to be fair again—

7 A. But—yeah.

8 Q. —or, sorry, to be fair to you again, Ms. Balkissoon, in the, um,
9 what the Chairman has described as the document dump that
10 we received on Monday, we have an S. Ramkissoon reported
11 hearing divers knocking. This is the, this is the—this is Paria's
12 records that were supplied from the ICT.

13 A. Okay, um—

14 Q. Right, is that somebody you know, S. Ramkissoon?

15 A. Um, I know—

16 Q. Because this is Paria's, this is Paria's—

17 A. —he's an HSE person.

18 Q. Yeah?

19 A. He's an HSE person.

20 Q. Okay And that is—

21 **Mr. Peterson SC:** Could my friend allow the witness to
22 answer the question when she poses it?

23 **Ms. Alfonso:** Sorry.

24 **Mr. Chairman:** Yes, I think also, I'd quite like to see the
25 document you're referring to. Can you give us a page number
26 please?

27 **Ms. Alfonso:** Fifteen seventy-two, Sir.

1 **Mr. Chairman:** Of the corrected bundle?

2 **Ms. Alfonso:** Unfortunately no, um—

3 **Mr. Chairman:** Fifteen?

4 **Ms. Alfonso:** Fifteen seventy—that's the correct page, yes.

5 **Mr. Chairman:** Right, thank you.

6 **Ms. Alfonso:** Sixteen forty-eight hours.

7 **Continued Cross-Examination By Ms. Alfonso:**

8 A. Um, this is, um, this is, this is where you're referring to?

9 Q. Yes. Sixteen—you're seeing 1648 there highlighted?

10 A. Yes, "S. Ramkissoon reported heard the divers knocking", yes.

11 Q. Okay. So this is before—well this is before Mr. Boodram was
12 rescued?

13 A. Yes.

14 Q. Okay. And I want you to go to the next page which I hope is
15 1573, to 1900—I hate these versions—1959 hours.

16 A. Right.

17 Q. Right? "Faint knocking being heard ever so often, reported via
18 radio personnel", yes?

19 A. Yes.

20 Q. Okay. This would be at berth 5?

21 A. I wouldn't know that. I don't know what information was
22 passed to the ICT.

23 Q. Okay. Sure. So did anybody report to you, Ms. Balkissoon,
24 while you were on or around berth 6, that knocking was being
25 heard?

26 A. Yes. The HSE persons did tell me that the LMCS people—I
27 don't know where. Hold on, I could find it back what time that

1 was.

2 **Mr. Chairman:** It's in your statement at paragraph 21.

3 **Ms. Balkissoon:** Oh, right. Twenty-one has it.

4 **Continued Cross-Examination By Ms. Alfonso:**

5 Q. Did you relay that to the Incident Commander or anybody else
6 in the ICT?

7 **Mr. Chairman:** She says so in the paragraph.

8 **Ms. Alfonso:** Yeah, okay.

9 **Continued Cross-Examination By Ms. Alfonso:**

10 Q. And when you heard this information, when you heard this
11 information about the knocking, Ms. Balkissoon, did that
12 influence your position at all with respect to the rescue?

13 A. Well, well, when, when you mean influence, because this was
14 around eight o'clock, right? I didn't hear any noises or
15 anything like that, right? I believe at that time Visham was still
16 there, right? And I think I might have asked him to go and
17 check.

18 Q. Check?

19 A. Either—

20 Q. Check?

21 A. Check by berth—so on the barge, right, if it is you're on the
22 barge and someone who is an HSE person came and said
23 there's knocking, LMC saying there's knocking, right, I didn't
24 hear it, right, and I've tried to find out, well, who said it, so on,
25 so the next place of information was to go to the berth 5 and I
26 think might have asked Visham to check.

27 Q. Okay. So you yourself did not go—

1 A. No.

2 Q. —to berth 5?

3 A. No, I didn't take the boat to go over, no.

4 Q. So the question was Ms. Balkissoon, the fact that at this time at
5 about eight o'clock—

6 A. Uh-huh.

7 Q. —that there's reports of knocking—

8 A. Uh-huh.

9 Q. —at berth 5—

10 A. Uh-huh.

11 Q. —did that influence your position with respect to the rescue
12 that it should, you know, that it, you know, we should really
13 rescue because by this time diving is stopped. Mr. Piper has
14 told you diving is to stop?

15 A. Yeah, by this time, yes.

16 Q. Right? And there are divers and equipment on site, and now I
17 would use Mr. Ramadhar's formulation from Monday, this
18 might have been proof of life? Knocking inside the pipe might
19 have been proof that other divers, aside from Mr. Boodram,
20 were alive?

21 A. If they were, true, yes.

22 Q. If it were true—

23 A. Yeah.

24 Q. —it might mean that there were people in the pipeline—

25 A. True, yes.

26 Q. —trying to signal—

27 A. Yes.

1 Q. —that they were alive?

2 A. Yes.

3 Q. Did you relay that to the ICT—

4 A. Yes.

5 Q. —commander or chief or anybody else in the ICT?

6 A. Yes. And maybe that's why they have this note or something, I
7 don't know, on the ICT log.

8 Q. Well I'm not sure how it was compiled. I have to confess.

9 A. No well, how it works is that everything, um, that's normally
10 reported in real time, that log is updated by a scribe. That's
11 how it is.

12 Q. So bringing you back to the environment that you felt would
13 not sustain life, we know now that it's largely water from what
14 was pumped from the line on Monday and Tuesday and
15 Wednesday and so on, after the incident, and we also know that
16 up to eight o'clock there are people potentially alive in that
17 environment?

18 A. Yes.

19 Q. And, well, I have your answer already, that did not influence
20 your position with respect to facilitating any, um, any rescue
21 operation so I wouldn't ask. I see you mention a couple things
22 here. There's one you mentioned a GoPro device was
23 discovered at some point in time fairly early because it's around
24 the 6.00 p.m. time which is when you arrived?

25 A. Yes.

26 Q. Okay. And you requested your health and safety personnel to
27 recover it?

1 A. Because I was interested to see what was on it to help to see
2 what caused the event.

3 Q. Okay. And what did you do with the GoPro when it was
4 retrieved?

5 A. I wasn't able to access it.

6 Q. You could help me out a little bit by what that means?
7 Somebody placed the GoPro in your hand and you were not
8 able to access the footage on it?

9 A. I was unable to put my hand on the GoPro.

10 Q. Okay. Okay. Do you know what happened to the GoPro? You
11 asked somebody to retrieve it for you, it wasn't retrieved, do
12 you know what happened to it?

13 A. It wasn't retrieved. It wasn't handed over to Paria.

14 Q. It wasn't handed over, okay. Thank you very much for that.
15 The footage that was received from what went down first is the
16 borescope, yes?

17 A. Yes.

18 Q. Okay. Did you share—I think—I'm sure in your witness
19 statement you said you viewed the footage that was obtained
20 from the borescope firstly, yes?

21 A. Not at that—not on that night, no.

22 Q. Okay. Did—

23 A. And not, and not in real time.

24 Q. Not in real time. Okay. Did anybody, to your knowledge,
25 share the information or the footage obtained by the borescope
26 with anybody from LMCS or any of their rescue divers?

27 A. I can't say that if that was shared at a different level than

1 myself.

2 Q. Sorry, say that again?

3 A. I can't say if it was shared at a different level to myself.

4 Q. Okay, but you yourself don't know?

5 A. No.

6 Q. Okay. And you didn't view it in real time as you said?

7 A. No.

8 Q. And what about the footage from the crawler?

9 A. The footage from the crawler?

10 Q. Uh-huh.

11 A. The footage from the crawler, um, to my knowledge because I
12 looked at it in real time, um, wasn't shared with LMCS, no.

13 Q. No.

14 A. But I don't know and I can't confirm it was shared any time
15 else—

16 Q. Okay.

17 A. —with LMCS.

18 Q. But to your knowledge it wasn't shared with LMCS or any of
19 their rescue divers?

20 A. On that night, no.

21 Q. Well—

22 A. Yeah.

23 Q. —it's an emergency, so you—

24 A. Yeah.

25 Q. Okay. The purpose of the borescope and the crawler, Ms.
26 Balkissoon, was to ascertain what the conditions were in the
27 pipeline, yes?

1 A. Yes.

2 Q. Because you felt that the conditions in the pipeline could not
3 sustain life and might be dangerous for another person to go
4 down into it, yes?

5 A. It would be dangerous for someone to go on, yes.

6 Q. Okay. So would it not have been important, Ms. Balkissoon,
7 for the rescue volunteer divers, I see all sorts of names, but let's
8 say the volunteer rescue divers, would it be important for them
9 to view that so they can, you know, plan, they could plan, you
10 know, a dive or a rescue or put together a plan as the case may
11 be, because they will have information?

12 A. The information would have been shared with our specialist
13 diving companies.

14 Q. Okay. Could you identify who those "our", meaning Paria I
15 presume—

16 A. Yes.

17 Q. —specialist diving companies were?

18 A. OTSL and Mitchell.

19 Q. And Mitchell. Okay. Thank you.

20 **Ms. Alfonso:** Thank you, Ms. Balkissoon.

21 **Mr. Chairman:** Thank you.

22 **Ms. Alfonso:** Thank you very much. Well I'm saying thank
23 you very much. Mr. Ramadhar has his hands up.

24 **Mr. Chairman:** Mr. Ramadhar.

25 **Cross-Examination By Mr. Ramadhar:**

26 Q. Good afternoon, Ms. Balkissoon. You of course wish to
27 expedite your position out of that seat, don't you?

1 A. Yes.

2 Q. Yes. My name is Prakash Ramadhar. I represent Aliyah and,
3 um—[*Crosstalk*]—yeah, of course, Aliyah Henry and the
4 family of Kurban, okay?

5 A. Okay.

6 Q. You appreciate that you would have been in that box a little
7 short, or a little bit beyond two and a half hours?

8 A. My impression of time is somewhat much more than that, but
9 okay.

10 Q. Yeah, okay. Yeah. Seems pretty long, doesn't it?

11 A. Yes it does.

12 Q. Yeah. At least the time that Christopher would have been in
13 that pipe before, by the grace of God, he was rescued, yes?

14 A. Yes.

15 Q. Yeah? Pretty long time, yeah?

16 A. Yes.

17 Q. Yeah. You're a scientist. You told us you believe in English
18 and in maths, correct?

19 A. I'm an engineer.

20 Q. Science.

21 A. Engineer.

22 Q. Engineer. Yes. And you appreciate then engineers deal with,
23 first of all, possibilities, with scientific basis, correct?

24 A. Yes.

25 Q. And then probabilities?

26 A. Yes.

27 Q. Explain to us commoners the distinction between possibilities

1 and probabilities?

2 A. I—

3 Q. Let me help you. It is possible—

4 A. Yes.

5 Q. —that I could win the lotto, right? But it is not probable if I
6 didn't buy a ticket, you agree?

7 A. It is possible for you to win the lotto.

8 Q. Yes.

9 A. And it's probable because you didn't buy a ticket?

10 Q. Yeah.

11 A. Well it's impossible—

12 Q. Thank you so much.

13 A. —if you didn't buy—

14 Q. So that if you took no action to rescue, no rescue was possible.
15 You agree?

16 A. No, I don't agree.

17 Q. If you took no action to rescue, no, zero action to rescue, no
18 rescue was possible.

19 A. No, I don't agree.

20 Q. Well, explain.

21 A. Because if I took no action—

22 Q. When I say you, let me—I put that in Paria and the resources of
23 the state. If no action was taken to rescue then no rescue was
24 possible?

25 A. There were other people there, though.

26 Q. All right. And you have told us Paria took a decision that no
27 diving, right?

1 A. Yes.

2 Q. So that, let's—we don't have much time, eh. I mean,
3 unfortunately. If no action by anyone is taken to rescue there
4 will be no possibility of a rescue. You agree with that, don't
5 you?

6 A. Yes.

7 Q. Thank you so much. Now, we've been hearing about this Delta
8 P business, right? The function basically in a pipeline laden
9 industry is basically Delta P. You pump and you push. Isn't it?

10 A. Yes.

11 Q. Yes. And therefore, one of the highest forms of your expertise
12 will be about pumping, vacuum creation and pushing and
13 creating Delta Ps, isn't it?

14 A. No.

15 Q. No?

16 A. No.

17 Q. Isn't it one of the largest parts of oil production or oil
18 movement, pumping?

19 A. Yes.

20 Q. Thank you.

21 A. But—

22 Q. Now, I want to, and I want to, I want to ask one big favour of
23 you, please? Because the gentlest of—

24 **Mr. Chairman:** If Ms. Balkissoon, as she's done with
25 everyone, including me, wants to give an answer which she
26 does, and to be commended for it but then adds a but, she must
27 be allowed to say what the but is, all right?

1 **Mr. Ramadhar:** Oh, oh sorry, sorry, sorry. Of course.

2 **Mr. Chairman:** She has the commendable aspect of
3 answering questions with a yes or no and then adding her but,
4 which I would encourage everyone to do. And so if there is a
5 but—

6 **Mr. Ramadhar:** Yeah.

7 **Mr. Chairman:**—but, um, so, can I, um—

8 **Mr. Ramadhar:** Of course.

9 **Mr. Chairman:**—she did but and then you cut in, so allow her
10 to say what she has to say.

11 **Continued Cross-Examination By Mr. Ramadhar:**

12 A. Well, well, I mean, oil movement, yes, but you asked me about
13 my experience. I'm not only experienced in oil movement and
14 so on, eh. I would have worked on reaction type plans, et
15 cetera, so—

16 Q. In fact, you have a wider experience and knowledge than just
17 that simple issue of Delta P, correct?

18 A. I wouldn't say simple, but yes.

19 Q. Yes. But you know full well that a large part of the business
20 involves Delta P as a matter of the daily exercise of your
21 functions of that institution of Paria, isn't it?

22 A. Yes.

23 Q. Thank you. Now, I was asking a favour please, because the
24 gentlest of gentlemen brought you to tears and I do not intend
25 to do that. Okay?

26 A. Well I do appreciate that.

27 Q. Thank you. It is nothing personal. You, of course, appreciate

1 that immediately upon the accident being reported to you with
2 your wide experience, '98, you were there, 1998, Nyree?
3 Yeah—that accidents do occur from time to time on the plant,
4 in the industry, yes?

5 A. Yes.

6 Q. Yes. And you have told all of us that one of your grave
7 concerns, which you shared with your team, was the issue of
8 the further movement of this plug, correct?

9 A. Yes.

10 Q. Which may have created a catastrophic movement to endanger
11 the lives that are already imperilled within the pipe, correct?

12 A. Yes.

13 Q. And possibly those who may wish to put their lives literally on
14 a line, we heard about tether, to save them. Their too—their
15 lives too could have been imperilled, yes?

16 A. Yes.

17 Q. Now, we're dealing with fluids, air in the pipe, air? Did you
18 have a view that there would have been air in the pipe at any
19 stage?

20 A. If you look at my statement—

21 Q. No, no, I'm not interested in your statement. I'm interested in
22 your evidence as you have sworn here today, sitting as you are
23 with the widest of experience. Did you consider that there may
24 have been air in the pipe at any stage?

25 A. I thought it if it had air—

26 Q. Uh-huh.

27 A. —it would not be called air. It would be called a vapour space.

- 1 That's one. Two, it's very unlikely with a very high—
- 2 Q. Uh-huh—
- 3 A. —level on one side—
- 4 Q. Right.
- 5 A. —right—
- 6 Q. Of what, unlikely what? Finish you with a but or whatever, uh-
- 7 huh.
- 8 A. Well if you allow me, right?
- 9 Q. I am.
- 10 A. So there's unlikely on one side—
- 11 Q. Yes.
- 12 A. —you have a liquid level, right?
- 13 Q. Yes.
- 14 A. And then you have a plug—
- 15 Q. Yes.
- 16 A. —which stuck.
- 17 Q. Uh-huh.
- 18 A. You have a force of liquid—
- 19 Q. Uh-huh.
- 20 A. —pushing down that you're going to have any significant
- 21 vapour space—
- 22 Q. Yeah.
- 23 A. —in that line.
- 24 Q. Right. So whether we call it air, we call it vapour space we call
- 25 it water, we call it oil, fluids, right, in that confined, yes?
- 26 A. Yes.
- 27 Q. And that this plug that you were mortally afraid of moving as

1 you have—help us, isn't it that one of the causes that in your
2 surmise is that it had been deflated somewhat and that caused
3 the movement into the pipe?

4 A. Yes.

5 Q. Right. So it is not a full plug at that stage, because it would
6 have been in, at some level, deflated, correct?

7 A. Correct.

8 Q. Right. So the likelihood, as a scientist or whatever you want to
9 be, common sense person, that that was unlikely to create a
10 restrictive, vacuum-proof barrier, wouldn't it?

11 A. I don't understand the question.

12 Q. I, I, I expected you not to. Did you expect it to reinflate itself,
13 to reinflate itself—

14 **Mr. Peterson SC:** *[Inaudible]*

15 A. I am not, I am not—

16 Q. You know if you want to go into the witness box I am so
17 delighted to take you after hours, but I am dealing with this
18 witness here and—

19 **Mr. Chairman:** I know, but it was quite not a question.

20 **Mr. Ramadhar:** Yeah. Of course—

21 **Mr. Chairman:** Please, please ask the question again—

22 **Mr. Ramadhar:** Of course. Yeah.

23 **Mr. Chairman:**—and it's about the question—

24 **Mr. Ramadhar:** Thank you.

25 **Mr. Chairman:**—because I didn't follow it.

26 **Mr. Ramadhar:** Of course.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. This plug, did it reinflate itself to become a plug again?

2 A. The plug was stuck in the pipe.

3 Q. Well yeah. Well when you mean stuck, to the point that
4 nothing moved beyond it?

5 A. To the point that when we opened it—

6 Q. Opened what it?

7 A. The flange—

8 Q. Uh-huh.

9 A. —at berth 5—

10 Q. Uh-huh.

11 A. —there was a difference in level between 5 and 6—

12 Q. Yes.

13 A. —days later—

14 Q. Right.

15 A. —right?

16 Q. Thank you.

17 A. Okay.

18 Q. Right? Okay. So, tell all of us, with your science, that if you
19 wanted to prevent the furtherance of a, of a Delta P to cause
20 catastrophic movement, what is the simplest answer to that?
21 How do you do that, not to plug off or put a flange at 5, to
22 prevent the movement of air or fluid out of it, yes or no?

23 A. No, no.

24 Q. No?

25 A. No.

26 Q. Is that what you ultimately did, though, to mitigate the danger
27 of a Delta P recurring?

1 A. No.

2 Q. You all never plugged off one end?

3 A. We, we, we removed the, the blind flange from 5.

4 Q. You removed?

5 A. Yes.

6 Q. You removed—let me have you quite clear, you removed what
7 from 5?

8 A. The, the, the, the blind flange—

9 Q. Uh-huh.

10 A. —from on top of 5—

11 Q. Right.

12 A. —we took it off.

13 Q. And, and that—what was the purpose it was put there?

14 A. Because when they finished the CARBER testing on 5—

15 Q. Uh-huh.

16 A. —and they checked it was good, as part of their works is that
17 you don't leave an open pipeline, you, you, you close it—

18 Q. Right.

19 A. —with, with a blind flange.

20 Q. Yeah. So, when you removed—

21 **Mr. Chairman:** Put a lid on it.

22 **Mr. Ramadhar:** I beg your pardon, Sir?

23 **Mr. Chairman:** That's what she means you put a lid on it.

24 **Mr. Ramadhar:** Yeah.

25 **Mr. Chairman:** Right.

26 **Mr. Ramadhar:** Yeah.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. So having put a lid on it—

2 **Mr. Peterson SC:** [*Inaudible*]

3 **Mr. Ramadhar:** My friend knows everything.

4 **Continued Cross-Examination By Mr. Ramadhar:**

5 Q. When you removed the lid, would there not have been a danger
6 of movement of the Delta P, yes or no?

7 A. There's no, there's no danger of movement of Delta P, you
8 mean movement of the plug?

9 Q. Yes.

10 A. Yes, yes.

11 Q. Thank you.

12 A. Yes.

13 Q. But the differential moves, right? There are different areas for
14 different differentials? You agree with that?

15 A. One side of the plug—

16 Q. Uh-huh.

17 A. —would have had a higher pressure—

18 Q. Right.

19 A. —than the other side.

20 Q. Yes.

21 A. So that would cause the plug to move.

22 Q. Good.

23 A. Right?

24 Q. There we go. We understand each other now. So having
25 removed that flange, was there not a danger in causing a
26 differential P to cause movement of the plug?

27 A. Yes.

1 Q. What time was that flange removed?

2 A. I can't remember, maybe about in the three o'clock or—

3 Q. There you go.

4 A. —four o'clock in the morning or something around there.

5 Q. Now—so by which time—

6 **Mr. Chairman:** Five o'clock in the morning, half past 4.00.

7 **Continued Cross-Examination By Mr. Ramadhar:**

8 Q. Five o'clock in the morning.

9 A. Right.

10 Q. So by which time we take it then that you were no longer afraid
11 of the movement of this plug and the differential P causing a
12 catastrophic vortex?

13 A. At that time, right, we would have already knew that we can't
14 really enter and see anything else from berth 6.

15 Q. Wow.

16 A. So we moved—

17 Q. Hold on. I'm sorry, if I'm, you dropped your voice a little bit.

18 **Mr. Chairman:** She's saying, she's saying something.

19 **Mr. Ramadhar:** Yes.

20 **Mr. Chairman:** Let her finish.

21 **Mr. Ramadhar:** Yes.

22 **Continued Cross-Examination By Mr. Ramadhar:**

23 A. So by that time when we moved the plug, the blind flange from
24 5—

25 Q. Uh-huh—

26 A. —it was because we would have already installed the riser on 6,
27 we would have been—we would have sent a crawler in and we

1 couldn't go any further and we couldn't see any further, so
2 then, you, you—it's a pipe, you could only go from either one
3 side or the other, right, so we went to the other side and took off
4 the lid, right, and we sent the crawler in from that end.

5 Q. Beautiful.

6 **Examination By Mr. Chairman:**

7 Q. Can I understand that, please? Given that there was a plug in
8 the pipe which you guarded as a really rather important issue—

9 A. Yes.

10 Q. —what was the point of sending a crawler in on the other side
11 of that plug? There couldn't have been, could there, anything
12 other than fluid on the other side of it?

13 A. I—at that time, I would not have known what size that plug
14 could have been deflated to. Right? I, I would—

15 Q. You mean it could have been made so small that a person could
16 have gone past it?

17 A. I won't, I won't, I wouldn't have known that. I wouldn't have
18 known if it's—what's possible or what's not, if there was none.

19 Q. Well undeflated—that's not a right word.

20 A. Deflated.

21 Q. Uninflated. Uninflated or deflated, either of those would work,
22 so, um uninflated, how big is the pipe anyway, the plug
23 anyway, did you know?

24 A. At that time, no.

25 Q. I mean it's quite important to know that, isn't it? I mean, if you
26 take pressure out of the plug and it's still quite big it's like a car
27 tyre, isn't it, in a way?

1 A. Yes, yes.

2 Q. Whereas how we've been likening it to that, obviously with the
3 weight of the car on the tyre it makes it flat so that you can see
4 that you've got a flat tyre when it's not inflated, yes?

5 A. Yes.

6 Q. If you take the wheel off the car, it doesn't look uninflated,
7 does it?

8 A. No.

9 Q. Deflated. It doesn't look deflated because it's, it's just a big
10 thing, a big, round thing, isn't it?

11 A. Yes.

12 Q. I'm assuming the plug is the same.

13 A. Well, from my understanding, and reading a little bit after—

14 Q. Yes.

15 A. —you know, Google, the plug is a certain size inflated and a
16 certain—when you deflate it, it becomes smaller.

17 Q. Well obviously it's—

18 A. But, but, but, no, but, um a little—

19 Q. But are you saying that you, you, you—deflated it was small
20 enough for persons to have passed by it?

21 A. I, I can't remember now but it's—to me it was about I don't
22 know, 18 inches or something, I can't remember exactly, I'll be
23 guessing.

24 Q. To you it was what?

25 A. I think it's about 18 inches or something like that.

26 Q. Eighteen inches?

27 A. Yeah, it's on the, um—I allowed to say where I got the

1 information from?

2 Q. Well we've got a document which deals with the plug
3 somewhere.

4 A. Or.

5 Q. We'll find it and have a look.

6 A. Okay, because it's a, it's, um, it's from the—

7 Q. We've got the manufacturer's—

8 A. Yeah.

9 Q. —specifications as well.

10 A. Yeah. Okay?

11 Q. But I, I, I'll—all I'm interested in, and I think Mr. Ramadhar is
12 interested in is, if it is deflated, is it so small that it is now
13 possible for a person or, say, an air tank to go past it, or is it just
14 slightly smaller so that it's not—

15 A. Well—

16 Q. —clinging to the sides?

17 A. Well, I mean, if you're taking into account also that people
18 were saying they were hearing knocking, but from 5—

19 Q. Uh-huh.

20 A. —then, I mean, it—you couldn't see anything from 6, so, you
21 want to check and open and see if you could see anything from
22 5 side.

23 Q. From 5, yeah.

24 A. Yeah, you know—

25 Q. But that rather presupposes, doesn't it, that it was capable of
26 being small enough—

27 A. Yes.

1 Q. —for someone to get past it in a 30-inch pipe?

2 A. Yes.

3 Q. Did you understand at the time—

4 A. No.

5 Q. —before opening the flange—

6 A. No.

7 Q. —at number 5, whether that was possible?

8 A. No, I didn't know.

9 Q. No. Did you seek to anybody about that?

10 A. No.

11 Q. No, all right, thank you.

12 **Mr. Chairman:** I'm sorry, Mr. Ramadhar.

13 **Mr. Ramadhar:** I'm very grateful to you, Sir.

14 **Continued Cross-Examination By Mr. Ramadhar:**

15 Q. So, we're sending in the camera from one end, yes? You
16 believed, of course, science tells us that the plug would have
17 gone in first from 6, berth 6, into the pipe and then the men?
18 You agree with that?

19 A. Yes.

20 Q. Yeah. Now, when you arrived on the scene, your function was
21 the point person for the Incident Command Team or incident
22 management team, is that accurate?

23 A. Yes.

24 Q. Your function was to provide as best information to the team so
25 that proper and intelligent decisions could be made. Is that
26 accurate?

27 A. Yes.

1 Q. Yes. And of course, you appreciate in a moment of anxiety and
2 a moment of catastrophe that your function is not one of being
3 sitting in an office, as an example, but you have to go out and
4 get information, yes?

5 A. And receive, yes.

6 Q. And receive, of course, multiple sources, isn't it?

7 A. Yes.

8 Q. Yeah? To that end you wouldn't rely only on speaking with
9 one person?

10 A. No.

11 Q. No. To that end you will listen to different points of view and
12 different information and then pass that on? You were not the
13 decision-maker. Let me get that clear. You were not the
14 decision-maker on that scene that day at that time?

15 A. Oh, sorry, no I wasn't.

16 Q. No. So, you understood, if I may say not just your sole, but
17 your most crucial function, was the, what shall I, the ears and
18 the eyes of Paria on that scene, yeah?

19 A. Yes.

20 Q. Right. Seeing that you'd been in the system for so many years
21 before, you know that oil floats, correct? In water, I beg your
22 pardon. Oil floats in water.

23 A. Yes.

24 Q. Yes. You heard and you had seen indeed this boat returning to
25 shore whilst you were going, and you learned at some stage that
26 Christopher, a survivor, had been in that boat, yes?

27 A. Yes.

1 Q. And you took time to tell us that he was covered in oil, yeah?

2 A. Yes.

3 Q. That was a crucial part, in your mind, of the information you
4 required? Yes or no?

5 A. It was a crucial part of information, yes.

6 Q. Yes. You appreciate that air pockets could happen in a, in
7 aquarium at your home or in any water environment?

8 A. You meaning when air is bubbled through the aquarium?

9 Q. Yes.

10 A. Yes.

11 Q. Right? Or pockets in a pipe?

12 A. Yes.

13 Q. Right, including Paria pipe will have air pockets from time to
14 time?

15 A. Yes.

16 Q. Right. And with a Delta P, you would expect to have air
17 bubbles because that is a suction issue with a vortex, water and
18 oil coming in, isn't it?

19 A. It's a two-phased flow, yes.

20 Q. Yes. And you appreciate that Paria's pipes are not pristine in
21 terms nobody went in with a scrubbing brush and, and, and
22 detergent and cleaned it out so that there'll be no remnant oil in
23 a pipe? You agree with that, yes?

24 A. Not this time, yes.

25 Q. Eh?

26 A. Not this time, yes.

27 Q. Right. So that you appreciate that a diver will seek to find

1 wherever there's a supply of air, air pocket or so, yes?

2 A. Vapour space, yes.

3 Q. Vapour space. You like this thing vapour space. Right? I'll
4 call it air pocket, you keep with your vapour space.

5 A. Sure.

6 Q. Right. And above the water, if there is such a thing as a vapour
7 space or air will be water first, as you told us, air above, and in
8 between that where oil floats on water there'll be oil, correct?

9 A. Yes.

10 Q. Right. You would imagine, would you not, it'd be very
11 probable that a diver will be trying to obtain whatever vapour
12 space he could get and therefore have to pass his face through
13 that film, if I may put it like that, of oil, yes?

14 A. Yes.

15 Q. Yes. But you were of the view, without knowing much more,
16 that there may have been a far larger quantity of oil in that pipe
17 to the point that visibility would have been impossible, isn't it?

18 A. I'm saying that I wouldn't have known—

19 Q. Of course.

20 A. —how—okay.

21 Q. But without knowing, you formed the view, because you told us
22 this, that visibility is impossible in oil. We agree with that,
23 maybe?

24 A. Yes.

25 Q. Yes. So, you took out the ability to see within the pipe without,
26 without information, isn't that correct?

27 A. No.

1 Q. That was your assessment. Did you convey that assessment
2 that visibility would have been removed because of oil in the
3 pipe?

4 A. I'm saying visibility would have been impaired because of oil
5 in the pipe.

6 Q. Yes.

7 A. Yes.

8 Q. Impaired to the point, and I don't want to go back into what you
9 said this morning, I still remember it, that impaired to the point
10 of being non-existent?

11 A. If you, if you recall—

12 Q. Help me, I'm, I'm not infallible.

13 A. —right, if you recall, I said that you can't see in oil.

14 Q. Yes.

15 A. I never—

16 Q. That's the point.

17 A. —that's what, that's what I said.

18 Q. Yeah.

19 A. Right? Now you're speaking about because it's a pipe, right?

20 Q. Uh-huh.

21 A. I don't know if you all hearing me, right? It's a pipe, right, and
22 you're saying the oil, there's water and then there's oil and then
23 there's a vapour space. How do you know, how do you know it
24 was not water, oil and vapour space? Additionally—

25 Q. Hold—no hold, hold, hold, hold—

26 A. No, no, wait.

27 Q. —but you asked a question.

1 A. No, but, you see—

2 Q. So I want, I want to be clear—

3 **Mr. Peterson SC:** Will you allow the witness to answer the
4 question?

5 **Ms. Balkissoon:** I'm trying really, really hard to—

6 **Mr. Ramadhar:** He probably doesn't like the answer.

7 **Mr. Ramadhar:** I like all the answers, Mr. Peterson, all of
8 them.

9 **Mr. Chairman:** Just a minute. You've got to let her—

10 **Mr. Ramadhar:** Yes.

11 **Mr. Chairman:**—give her own explanation, all right?

12 **Mr. Ramadhar:** Yes. How do I know?

13 **Continued Cross-Examination By Mr. Ramadhar:**

14 A. Right? And, and remember, right, so if you have oil and water
15 and you mix it up, it's not just going to be instantly, right, water
16 and then instantly it settles into oil. Right? When you whip or
17 you have some turbulence—

18 Q. Yeah.

19 A. —right, you're going to have a oil and mixture with water and
20 so on and it takes a little time for that to occur to settle. I
21 cannot say the—well I can't say the impact of how long it will
22 take in salt water because it all depends on impurities and so on
23 for how long something takes to settle. Right. That's all I was
24 trying to say.

25 Q. Yeah, I heard you. So you think it would take at least two
26 hours for water to rise or the oil to rise? Which is it?

27 A. Well, I don't know. I haven't performed that particular

1 scientific experiment.

2 Q. You're still working at Paria?

3 A. Well for this—for the time being, yes.

4 Q. Oh, well, are you still part of the incident management team,
5 Madam?

6 A. The Incident Command Team is stood down now.

7 Q. Stood down?

8 A. Yes. It's only activated when you have an emergency.

9 Q. Are you still part of the team?

10 A. No.

11 Q. No. Are you part of a structure?

12 A. Yes.

13 Q. Well let me finish because I don't want no buts after this one,
14 right? Are you still part of any structure for planning for
15 emergencies?

16 A. Yes.

17 Q. Wow. So, we do know that Christopher came out of that pipe?

18 A. Yes.

19 Q. And as you, as you appreciated, he was a live witness, correct?

20 A. Yes.

21 Q. So that you of course we appreciate that you believed that there
22 were others who may have obtained information and, and, and
23 as you say multiple sources coming to you and you would make
24 inquiries of others. When you got there, knowing that there
25 was a live survivor and your function was to go and get the best
26 evidence, best information as Mr. Maharaj always reminds us,
27 from whom did you obtain information in relation to

1 Christopher Boodram?

2 A. As when I arrived on the, um, barge—

3 Q. Yes.

4 A. —right, I would have spoken to, um, the Paria people who were
5 on site.

6 Q. The Paria people mean what? Whom? Names?

7 A. I believe—

8 Q. Or you know nobody there? Or people below your rank they
9 don't even bother to speak with and you only dealing with a
10 certain rank of people? Isn't that it? You're too big to talk to
11 small people to get information, isn't that—

12 **Mr. Peterson SC:** Mr. Chairman, Mr. Chairman, Mr.
13 Chairman.

14 **Mr. Ramadhar:** I am putting that to him.

15 **Mr. Chairman:** Enough.

16 **Mr. Peterson SC:** Yeah.

17 **Mr. Chairman:** Yes, now, that's going too far. All right?

18 **Mr. Ramadhar:** Withdrawn. Thank you so much.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 Q. Now, let me know from whom did you—whom did you speak
21 with from Paria to get information?

22 **Mr. Chairman:** She's already told us she's spoken to Andrew
23 Farah.

24 **Mr. Ramadhar:** Not from—that is LMCS. I'm talking about
25 Paria.

26 **Mr. Chairman:** Yes, yes, sorry.

27 **Mr. Ramadhar:** Yes.

1 **Mr. Chairman:** She's already told us she spoke to Andrew
2 Farah from LMCS—

3 **Mr. Ramadhar:** Yes.

4 **Mr. Chairman:**—when she was there. She regarded him as
5 the lead or supervising diver.

6 **Mr. Ramadhar:** Right.

7 **Mr. Chairman:** That's the person she liaised when she was
8 there.

9 **Mr. Ramadhar:** Yeah.

10 **Mr. Chairman:** Hence you're asking about Paria now?

11 **Mr. Ramadhar:** Yeah.

12 **Continued Cross-Examination By Mr. Ramadhar:**

13 Q. Paria has a structure, correct?

14 A. When I arrived on site—

15 Q. Uh-huh.

16 A. —right, I can't remember whether it would have been Visham
17 or Jason Beckles, right, or anyone of HSE guys who told me
18 about it, but there—you will have to understand, right, there
19 were a number of people on that day on the barge, all present.
20 Right? And I can't remember who told me, but as soon as I
21 reached someone did tell me, because, I mean I would have
22 seen him, we passed like this, [*Indicating by moving hands one*
23 *past the other*] right, and as soon as I reached—

24 **Mr. Chairman:** We've covered this ground—

25 **Mr. Ramadhar:** Sir, you see, because I don't want—

26 **Continued Cross-Examination By Mr. Ramadhar:**

27 Q. Forgive me. When I try to interject is not to stop you from

1 saying what, but it's that matters that we have already dealt
2 with so we could save some time. You remember you told us
3 you went there as the eyes and the ears of Paria to make
4 decisions back to your commanding officer, Mr. Piper, correct?

5 A. Yes.

6 Q. Yes. Did you ascertain from anyone with specifics as to the
7 condition of divers who were still in the pipe upon your arrival?
8 Did you do that?

9 A. When I arrived I was informed of Mr. Boodram's condition and
10 how it was reported that, um, he said his father right behind.
11 That's the information I had. I also asked, well, anybody else?
12 And they said no.

13 Q. Hold, hold, hold, hold, wait, so let me get this.

14 A. So, that is—no, but that is the information, as soon as I
15 arrived—

16 Q. Yeah.

17 A. —on site—

18 Q. Right.

19 A. —an incident site or an accident site, right, you, you—you're,
20 you're busy trying to find out, as you come, you go like, "Okay,
21 so what's going on?" I saw someone being this way,
22 transported back to shore, and I came, I said, "Okay, so I just
23 saw somebody", that, that sort of information. Right?

24 Q. No, no, no, well—

25 A. If, if—I didn't write down every single thing.

26 Q. We appreciate that, but you went there with—on a mission.
27 You went there and let's see if we could have a listing here, to

1 ascertain whether men were alive or dead. Let's put it as
2 bluntly as that, correct?

3 A. No, I wouldn't put it like that.

4 Q. Okay, you wouldn't put it like that. So you went there to
5 ascertain whether men could have been saved? Yes or no?

6 A. I went there to assess the scene.

7 Q. For what purpose, to put a report?

8 A. No.

9 Q. No.

10 A. To render—

11 Q. To render. Yeah. There being a live person having just come
12 out, all you learned was that, and what you just said, "His father
13 is right behind." Is that it?

14 A. Yes.

15 Q. Thank you. You never then enquired of the father, now we
16 ain't talk—we're talking about Christopher Boodram here,
17 having said that to someone who reported that to you, you
18 never enquired about the other—how many, how many did you
19 believe other divers were involved at that time?

20 A. Four.

21 Q. Four. Could you give me their names?

22 A. Sir, listen, eh, this is—[*Ms. Balkissoon crying*]

23 **Mr. Chairman:** Take a moment. Let's take a moment. I
24 don't—do we need her to recite the names of the people who
25 died? Is that really necessary?

26 **Mr. Ramadhar:** Well I would hope so. But if it is—

27 **Mr. Peterson:** [*Inaudible*]

1 **Mr. Ramadhar:** You know, we keep hearing these mutterings
2 about drama.

3 **Mr. Chairman:** No, no, no, well, just a minute. We're not
4 going to press that question.

5 **Mr. Ramadhar:** No, I will withdraw it.

6 **Mr. Chairman:** Yes.

7 **Mr. Ramadhar:** I ask you please, don't cry for me. And I
8 apologize.

9 **Mr. Chairman:** Just, just, just take a moment. Look, we're
10 both guilty of this.

11 **Mr. Ramadhar:** No, you are not, Sir, I am. I beg your pardon.

12 **Mr. Chairman:** We're guilty of this. We must recognize that
13 on any view and whatever we may conclude at the end of this,
14 four people have died and this lady was part of the team, er,
15 um—

16 **Mr. Ramadhar:** Responsible.

17 **Mr. Chairman:**—res—

18 **Mr. Ramadhar:** Yes

19 **Mr. Chairman:**—responsible for the activities that night.

20 **Mr. Ramadhar:** Yes.

21 **Mr. Chairman:** And as a human she's bound to be affected by
22 the fact that people died, in a sense, on her watch.

23 **Mr. Ramadhar:** Yes, Sir.

24 **Mr. Chairman:** So we can't, we can't ignore that fact. I
25 appreciate that then there are questions that need to be asked
26 where they need to be asked, but asking her to name the four
27 people who died is not a question that needs to be asked, all

1 right?

2 **Mr. Ramadhar:** I appreciate that.

3 **Mr. Chairman:** So—

4 **Mr. Ramadhar:**—but there's a reason—

5 **Mr. Chairman:**—could we—

6 **Mr. Ramadhar:**—and I will withdraw.

7 **Mr. Chairman:**—bearing in mind, bearing in mind the time
8 now, I was hoping that this lady might conclude her evidence
9 before lunch so that she doesn't have to have it stewing over
10 lung and have to come back afterwards, so, let's see how we go,
11 please, but can I ask you to move along a little?

12 **Mr. Ramadhar:** I thought I was doing so and, and, and, and
13 that is why I sometimes, you know, get ahead of myself in not
14 asking or allowing the witness to repeat that which was pretty
15 obvious.

16 **Continued Cross-Examination By Mr. Ramadhar:**

17 Q. So, tell me something, in an accident is there a presumption of
18 death or a presumption of life that you take?

19 A. Depends on the accident I suppose.

20 Q. Yes. In this one, what was the presumption you went there
21 with, upon your arrival?

22 A. Life.

23 Q. Life? And therefore, you appreciated action needed to be taken
24 in a matter of minutes because we're dealing with air, vapour
25 space, isn't it?

26 A. When I arrived at six o'clock, yes.

27 Q. Right. And what time the accident occurred?

1 A. Two forty-five.

2 Q. How much? Two forty-five? So two plus hours having passed,
3 what was your view, it being in your mind that this place, that
4 flooded pipe was with water and oil and vapour, what was your
5 view as to the likelihood of life within that pipeline? Slim,
6 wasn't it?

7 A. Okay.

8 Q. Yeah. Not okay; that you were the decision-maker in terms of
9 the information you had to relay, isn't it? With your leave,
10 Your Worship, I mean My Lord, um, Commissioner, may I—
11 this dump that was cast upon us lately, was there a white board
12 at the command centre before you left?

13 A. I went—I didn't go upstairs. I won't know that.

14 Q. So you didn't go to find out up there what had happened
15 already, what they knew already before you went there?

16 A. The incident meeting took place downstairs. When I came—

17 Q. Yes.

18 A. —it was downstairs.

19 Q. Okay.

20 A. Right?

21 Q. Okay, we're not in a upstairs downstairs situation. Was there a
22 white board in the downstairs meeting area, a white board with
23 all the issues, what they know, what they didn't know, huh?

24 A. Yes.

25 Q. Good. Was there not on that board 1548 p.m., that is 3.48 p.m.,
26 correct, that a decision had been taken or at least a view
27 formed—

1 A. I'm not seeing where you're—

2 Q. I'm not asking you to look at anything and we will show you it
3 in a moment.

4 **Mr. Chairman:** But I need to know where you're going.

5 **Mr. Ramadhar:** Of course. I beg your pardon then and we
6 will go by the time. What page number? Fifteen seventy-two.
7 Could we move to the time frame of 15, 15—

8 **Mr. Chairman:** Which day?

9 **Mr. Ramadhar:** This would be on the 25th. Sixteen? Fifteen.
10 [*Crosstalk*]. Yeah, 1548.

11 **Mr. Chairman:** Yes: "1548, HSE personnel reported chances
12 of survival are slim."

13 **Mr. Ramadhar:** Thank you so much.

14 **Mr. Chairman:** Yes.

15 **Continued Cross-Examination By Mr. Ramadhar:**

16 Q. And you went with that view—

17 **Mr. Chairman:** Just a minute. Just a minute.

18 **Mr. Ramadhar:** I beg your pardon, Sir.

19 **Mr. Chairman:** Do you see that Ms. Balkissoon?

20 **Ms. Balkissoon:** You mean the, um, ICT log?

21 **Mr. Chairman:** Yes, in the log, do you see it says there 1648?

22 **Ms. Balkissoon:** Yes, I see that, yes.

23 **Continued Cross-Examination By Mr. Ramadhar:**

24 Q. Yes. So that those who had been gathered in this meeting you
25 had downstairs had that information?

26 A. Okay. You'll have to ask them that, but okay.

27 Q. Well, you had—you didn't know this?

1 A. I didn't see that, "Chances of survival are slim".

2 Q. Why did you not enquire, when you got there, people living,
3 people dead, what is the likelihood?

4 A. When I got there I went downstairs, right?

5 **Mr. Chairman:** Now, now you don't need to answer that
6 question. What we know is this, that that's at 1548. This is
7 pre-Boodram's rescue. When she arrived, Boodram had been
8 rescued.

9 **Mr. Ramadhar:** That's the point.

10 **Mr. Chairman:** The position had somewhat changed.

11 **Mr. Ramadhar:** And that's the point.

12 **Continued Cross-Examination By Mr. Ramadhar:**

13 Q. So between the time of that notation and the time that you
14 arrived and knew that Boodram was alive, there was a view
15 held by Paria that the likelihood of survival was slim at best,
16 isn't it?

17 A. I cannot comment on what is written there because I didn't see
18 that.

19 **Mr. Chairman:** I think that's better directed to Mr. Piper,
20 don't you?

21 **Mr. Ramadhar:** All right. We look forward to him. So—

22 **Mr. Chairman:** Well the sooner we [*Inaudible*]—

23 **Mr. Ramadhar:** Sir, with all due respect—

24 **Mr. Chairman:**—the quicker we're going to have Mr. Piper.

25 **Mr. Ramadhar:** I don't want the burden on my shoulders that
26 I'm keeping back this thing. I have a job to do and I'll do it as
27 quickly as I can and because—you're highly favoured, Sir, and

1 I appreciate that and, um, I will do what I can to speed it along.

2 **Continued Cross-Examination By Mr. Ramadhar:**

3 Q. Now—so you went there on site with a presumption of life,
4 yes?

5 A. And a hope in my heart, yes.

6 Q. “And a hope in my heart.”

7 A. Yes.

8 Q. Acting upon that hope, when Mr. Piper gave you an instruction
9 around 7.00 p.m. that there should be no further dive, did you
10 make an inquiry of him, because—as to what is the next step in
11 saving these lives knowing time was of a—the most critical
12 nature?

13 A. Yes.

14 Q. Yes. Did you ascertain from him what that plan was, to get a
15 camera to go in?

16 A. Yes.

17 Q. Right. Camera does save lives or they help only in making
18 decisions?

19 A. Cameras provide information that can—

20 Q. Uh-huh.

21 A. —save a rescuer’s life, yes.

22 Q. Thank you. When was the decision made, having received all
23 that you could have, that, let us do the rescue?

24 A. I didn’t understand the question so—

25 Q. Right. I’ll repeat it.

26 A. Or break it down.

27 Q. When—I will not wreck it down. I will help—I will simplify it.

1 A. Okay.

2 Q. Right. When was the decision made by Paria to execute a
3 rescue to save the lives of these men?

4 A. It was not made to have a rescue.

5 Q. Thank you. Let me hear you, eh. Paria did not make a decision
6 to rescue the men. That is that. Thank you. Now, Madam, Mr.
7 Piper, when did you first see him on the site?

8 A. When I arrived?

9 Q. Uh-huh. And at the site of the accident?

10 A. I, I—he—if you're asking me if he was there that night, is that
11 the question?

12 Q. I'm asking you when did you first see him on the site of the
13 accident?

14 A. I would have left the site of the accident at 6.00 in the—that
15 morning, so it is that but—

16 Q. Right. So you saw him at 6.00?

17 A. No, I didn't.

18 Q. So during that period Piper never came on, on site?

19 A. No.

20 Q. Did you see Mr. Wei?

21 **Mr. Chairman:** That really isn't his job. The IMT specifies
22 he's not—he's meant to be at the IMT.

23 **Mr. Ramadhar:** Absolutely.

24 **Mr. Chairman:** Unless you want to attack the whole premise
25 of the IMT, which you're at liberty to do.

26 **Mr. Ramadhar:** Which is what I think, if—

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. Well let me put it to you like this.

2 A. Uh-huh.

3 Q. In all the procedure and all the plans and everything that you
4 had, four men died. Do you think that you and your procedure
5 and your, and your plans and everything was adequate?

6 A. If you—you're asking me if I think the IMT plan was adequate?

7 Q. All of it.

8 A. You're asking me if the IMT plan is adequate?

9 Q. All of it.

10 A. All of what?

11 Q. All of Paria's plans, resources, IMT plans, do you think it's
12 adequate?

13 A. I think we—what we did, I think we did the best we could have
14 done.

15 Q. So—

16 A. At—well—

17 **Mr. Chairman:** No, let her finish please?

18 **Mr. Ramadhar:** Yes, yes, yes, yes.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 A. Right? I think we did the best that we could have done.

21 Q. Yes.

22 A. Right? That is what I think.

23 Q. The best?

24 A. I, I—let me finish, right, and let me say, right—

25 Q. I getting bouff here now, boy?

26 A. —I've been thinking about it for quite some time every day, is
27 there something else, right—

1 Q. Look, we appreciate that, you know. You're a human being as
2 Mr. Peterson reminded me.

3 **Mr. Peterson SC:** You didn't know that before I said it?

4 **Mr. Chairman:** So, what you're saying is that ever since you
5 have been searching your own mind to see whether there was
6 something more you could have done?

7 **Ms. Balkissoon:** [*Nodding*]

8 **Mr. Chairman:** Have I got that right?

9 **Ms. Balkissoon:** Uh-huh.

10 **Mr. Chairman:** Yes, can we move on, then?

11 **Mr. Ramadhar:** Thank you, of course.

12 **Continued Cross-Examination By Mr. Ramadhar:**

13 Q. How would you rate the per—the, um—rate yourselves on that
14 day.

15 A. Against which yardstick? Against saving a rescuer's life? I
16 think I did well.

17 Q. Of course.

18 A. Right?

19 Q. You saved the world and allowed four to pass—to perish. That
20 is the equation, isn't it? You knew, did you not, that the man's
21 son was willing to go and, like risks for all first responders,
22 took that upon himself and said, "I am willing to go". You
23 knew that?

24 **Mr. Chairman:** We have already asked that, well I have, a
25 asked that question already.

26 **Ms. Balkissoon:** I just.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. Well, with all due respect, right, you knew, not just he but
2 several others were willing to—

3 **Ms. Balkissoon:** Mr. Chairman—*[Ms. Balkissoon sobbing]*

4 **Mr. Chairman:** We, we—yes. You want a break?

5 **Ms. Balkissoon:** *[No audible response]*

6 **Mr. Chairman:** Yes, right, well, first of all can I say—well,
7 you can have your break. Please, allow—take the lady out.
8 We're going to adjourn for lunch now. You'll have your lunch
9 hour now, right? So go with this gentleman here.

10 *[Ms. Balkissoon leaves Enquiry room]*

11 **Mr. Chairman:** Mr. Ramadhar, I asked that question. It
12 generated the same responses we've just obtained. It is not
13 necessary for you to ask the question again. We know that
14 there is a different equation between those who are related to
15 those inside the pipe might have taken a rather different view
16 about risking their own lives. I asked her if she took that into
17 account. She got upset. We don't need to press it any further.

18 **Mr. Ramadhar:** With all due respect, I have no intention of
19 pressing that issue of whether it was her own son, no. I'm on a
20 different level because this is a structure and no structure is
21 anything other than the people who are within it. And the—

22 **Mr. Chairman:** We've already—

23 **Mr. Ramadhar:**—have to ascertain how we could prevent this.

24 **Mr. Chairman:** I know, but Mr. Ramadhar, we've already
25 elicited the fact that at no time did the IMT recommend a
26 rescue. That—we've established that and that, that—we will
27 consider in due course whether that was an appropriate action

1 or not. But the position as it stands at the moment was that they
2 never made that recommendation irrespective of the fact that
3 there were those who were both prepared and potentially
4 willing and able to perform a rescue were permitted to do so.
5 They were not, according to Paria. All right? So that's where
6 we are. What more do you have after lunch?

7 **Mr. Ramadhar:** Sir, I have a few short areas so I will address
8 that then.

9 **Mr. Chairman:** What sort of time are we talking about?

10 **Mr. Ramadhar:** Maybe 15 or less minutes.

11 **Mr. Chairman:** Can we keep it to 15, please? All right?

12 **Mr. Ramadhar:** I will try to make it even less.

13 **Mr. Chairman:** Do your best to keep it to 15.

14 **Mr. Ramadhar:** Of course.

15 **Mr. Chairman:** Thank you.

16 **Mr. Ramadhar:** As I say, you're highly favoured, yes, and
17 your words do mean a lot. We appreciate that.

18 **Mr. Chairman:** Complimenting me isn't going to get you any
19 longer [*Inaudible*]

20 **Mr. Ramadhar:** I know, It never has, so—

21 **Mr. Chairman:** It's a nice try but it's not going to work.

22 **Mr. Chairman:** Mr. Pegus, do you have any questions?

23 **Mr. Peterson SC:** I have two—oh, sorry.

24 **Mr. Chairman:** Just a moment. Mr. Pegus, do you have any
25 questions?

26 **Mr. Pegus:** No, Mr. Chairman, no questions for this witness.

27 **Mr. Chairman:** No, right. Mr. Peterson, I imagine you will

1 have some—

2 **Mr. Peterson SC:** Sir, I have two questions.

3 **Mr. Chairman:** Two questions. And what about you, Ms.
4 Persaud Maraj?

5 **Mrs. Persaud Maraj:** I have just one area. It's—

6 **Mr. Chairman:** Well it is a pity that we couldn't have—

7 **Mrs. Persaud Maraj:** Yeah, I, I don't propose to take any
8 length of time.

9 **Mr. Chairman:**—concluded this and allowed this lady to have
10 gone off before lunch. Anyway, there it is, we've not been able
11 to do that. We will resume at two o'clock sharp. I expect her
12 to have concluded by 2.30, all right, and then we will have Mr.
13 Piper. Thank you very much. We're adjourned till after lunch.

14 **1.02 p.m.:** *Enquiry suspended.*

15 **2.00 p.m.:** *Enquiry resumed.*

16 **Mr. Chairman:** Good afternoon.

17 [*Ms. Balkissoon re-enters Enquiry room and sits at witness*
18 *table*]

19 **Mr. Chairman:** All right, Ms. Balkissoon, you all right?

20 **Ms. Balkissoon:** Yes, thank you.

21 **Mr. Chairman:** Yes? I'm hoping we'll be able to dispose of
22 your evidence within the next half an hour or so, all right?

23 **Ms. Balkissoon:** Sure. Yes.

24 **Mr. Chairman:** We'll do our best. Yes, Mr. Ramadhar.

25 **Mr. Ramadhar:** Thank you very much, Chairman.

26 **Cross-Examination By Mr. Ramadhar:**

27 Q. Good afternoon, Ms. Balkissoon.

1 A. Afternoon.

2 Q. Could I just take you back to an equally important issue, at least
3 it appears to be? A GoPro is what, a camera, yes?

4 A. Yes.

5 Q. And you all had delayed that, I mean you all, Paria, had delayed
6 any effort until you had cameras going in to ascertain the status
7 within the pipe, yes?

8 A. Yes.

9 Q. Yes. You appreciate the camera was found within the pipe, the
10 GoPro, sorry?

11 A. Yes.

12 Q. Yes? And therefore, crucially important in your mind would be
13 the contents of what it had recorded?

14 A. Yes.

15 Q. Yes. And you being the senior Paria person on site, did not
16 view what was recorded on that GoPro?

17 A. No, I did not.

18 Q. No. And common sense would indicate, wouldn't it, that if the
19 GoPro was within the pipe, there would be recordings of
20 material within the pipe?

21 A. Well, to go to the extent of wherever it was found.

22 Q. There you go.

23 A. Yes.

24 Q. And you made efforts, of course, as the most senior Paria
25 personality there, to view it?

26 A. Yes.

27 Q. And someone or something prevented you from so doing?

1 A. I was unable to get ahold of it, yes.

2 Q. What does that mean? It slip out your hand? It was too oily?

3 A. That means that the person that had it did not share it.

4 Q. I see. And who was that person?

5 A. Well, I can't say who—exactly who it was but it was people
6 from LMCS huddled around looking at something.

7 Q. Thank you. Did you make a request of the lead person at
8 LMCS to view the contents of the GoPro?

9 A. I spoke to Collin.

10 Q. I didn't ask you whether you spoke to Collin I asked you if you
11 made a request of the lead person LMCS to view the contents
12 of his—of the GoPro?

13 A. No, I didn't ask Kazim—

14 Q. No.

15 A. —Ali.

16 Q. Okay. You didn't ask Kazim. You asked Andrew Farah?

17 A. No, I didn't ask Andrew Farah.

18 Q. No. Thank you very much. Now, what time did you observe
19 the coast guard being present?

20 A. Around half 8.00.

21 Q. Around half 8.00?

22 A. Well, which, which coast guard? Because there were two sets,
23 right?

24 Q. Wow, well, you seem to know more. The first set of coast
25 guard that you saw, when did you first see them?

26 A. When I arrived.

27 Q. They were already there?

1 A. Yes.

2 Q. And what time, remind us, you arrived at?

3 A. Around 6.00.

4 Q. Around 6.00.

5 A. Yeah.

6 Q. And of course you observed coast guard's personnel with
7 machine guns?

8 A. They had—well, I don't know the difference but they had guns,
9 yes.

10 Q. Not handguns, longer guns.

11 A. Long guns, yes.

12 Q. Yes. Paria has its own private security, does it not?

13 A. Paria has security, yes.

14 Q. Yes. You observed Paria security present?

15 A. No.

16 Q. When, if at all, did you observe any Paria security personnel on
17 the scene of the accident?

18 A. When I went across to berth 5—

19 Q. Yes.

20 A. —I saw Paria security there. I can't remember seeing any Paria
21 security on the barge.

22 Q. Around what time did you first see Paria security personnel?

23 A. On the barge, on the—

24 Q. Wherever, on the scene area, meaning 5 or 6, barge or
25 wherever?

26 A. That would have been when I went across with the, um, the
27 crawler, so that would have been maybe around fiveish.

1 Q. Yeah. Around fiveish?

2 A. I don't remember the exact time, maybe about five o'clock, um,
3 Saturday morning.

4 **Examination By Mr. Chairman:**

5 Q. And this is berth 5 not 6?

6 A. Yes.

7 Q. Yes. There was no one at 6?

8 A. No, I—remember I was on the barge and I didn't see any
9 security on the barge or so on.

10 **Mr. Ramadhar:** Excellent.

11 **Continued Cross-Examination By Mr. Ramadhar:**

12 Q. And the coastguardsmen that you had first seen, when you first
13 saw them, where were they?

14 A. They were in their vessel.

15 Q. Vessel meaning what, a big, boat or a little, um, what you
16 described us to?

17 A. No, no, it was, um, it was small because when I came I had to
18 kind a go over on their boat too—

19 Q. Right.

20 A. —to go on to the, um, space.

21 Q. Excellent. And of course you as the senior Paria personnel on
22 site at that moment saw and spoke with the senior
23 coastguardsperson on site at that moment?

24 A. No.

25 Q. No? When did you first see and/or speak with a
26 coastguardsperson in authority there?

27 A. Mr. Hargreaves.

1 Q. Thank you very much. By which time of course, as you have
2 indicated, there would have been—a second batch of
3 coastguardsmen had come?

4 A. Mr. Hargreaves, from my understanding, would have been the
5 people, the diving part—

6 Q. Right. But a—

7 A. —of [*Inaudible*]

8 Q. —second crew, if I may call it that, of coast guards?

9 A. Yes, they were, um—

10 Q. Yes.

11 A. Mr. Hargreaves came on to the barge, yes.

12 Q. Yes. Now after the conversation with Mr. Hargreaves and he
13 had indicated clearly to you that they were in no capacity to do
14 any rescue, he remained on site together with other
15 coastguardspersons, isn't it?

16 A. He was with his—he was with his—the rest of his dive crew.

17 Q. Yes.

18 A. Yes.

19 Q. And other coast guard persons with guns?

20 A. Not on the barge.

21 Q. No, no, in the vicinity of where the accident occurred.

22 A. The coast guard would have been in their vessel, well, that part,
23 that particular people of the coast guard were in their vessel
24 which was adjacent to, um, the barge, yes—well, yeah.

25 Q. Within the close vicinity of where the accident occurred?

26 A. Yes.

27 Q. Where the diving was taking place?

1 A. Yes.

2 Q. Yes. There were two authorities on site then, that is you,
3 representing Paria, correct?

4 A. Yes.

5 Q. And the coast guard, they were an authority there also?

6 A. Yes.

7 Q. Yes. You saw and spoke regularly with members of the coast
8 guard there or only Mr. Hargreaves?

9 A. With Mr. Hargreaves.

10 Q. Yes.

11 A. And, um, a Maharaj, sometime, well, by phone.

12 Q. Oh, I see. And tell us now, please, that when the order came
13 for there to be no diving after seven o'clock or thereabouts from
14 Mr. Piper, you conveyed that information to whom first?

15 A. Well—

16 Q. Forget that you put it on speakerphone, right? Forget the phone
17 part. Who was that information conveyed to?

18 A. LMCS.

19 Q. And who else?

20 A. LMCS.

21 Q. And the coastguardsmen were right close by, were they not?

22 A. No.

23 Q. Where were they at that time?

24 A. I don't know where they were.

25 Q. Yes.

26 A. But they weren't in my vicinity at all.

27 Q. Well, vicinity means what?

1 A. They weren't on the barge.

2 Q. What was the closest distance—

3 A. No, it's—

4 Q. Let's not waste too much time. How far away might they have
5 been?

6 A. Well I don't know. I, I don't remember seeing any coast guard
7 at that time. Mr. Hargreaves came around half past 8.00 or so
8 with his crew.

9 Q. Right the first crew?

10 A. Right?

11 Q. Yes.

12 A. The other person, they were in their boat, I mean, I didn't pay
13 attention if he was there when I was saying it or not, I don't
14 know, because, to me they were moving around too, huh.

15 Q. Thank you.

16 A. I don't remember seeing—

17 Q. They were not static, they were moving around?

18 A. Yeah.

19 Q. Is that accurate? Correct?

20 A. I don't remember seeing any coast guard there.

21 Q. Yeah. So tell us now, please, there came a time when you saw
22 no further diving taking place, isn't that accurate?

23 A. Yes.

24 Q. What time was that?

25 A. I don't remember.

26 Q. Help us a little bit.

27 A. Well, I trying to help the best. I don't remember. I can't put a

1 exact time, right? They were diving and then they stopped
2 diving and I know it was sometime before nine o'clock they
3 stopped.

4 Q. Yes. While the coast guard were present?

5 A. It might be around the same time. I don't know.

6 Q. Thank you very much. Tell us now, you said something very
7 interesting as you told us when you started you believe in
8 English and in maths—

9 A. Well I—

10 Q. —that Mr. Hargreaves—

11 A. —I didn't say that, I didn't say that but go ahead.

12 Q. No, I don't want to misquote you. I'm the fairest person you'll
13 meet you know.

14 A. Really?

15 Q. Yes.

16 **Mr. Peterson SC:** [*Inaudible*]

17 **Continued Cross-Examination By Mr. Ramadhar:**

18 A. I said—

19 Q. Even Mr. Peterson agrees. Yeah, yeah.

20 A. No, no, go ahead ask the question.

21 Q. Yeah.

22 A. I want to go home.

23 Q. You said, you said that Mr. Hargreaves, speaking to you,
24 requested to be stood down. Remember having said that?

25 A. That, that would have been sometime early in the morning—

26 Q. Yes.

27 A. —Hargreaves asked, um, if they would be needed again in the

1 night and if they could be stood down.

2 Q. Thank you much, meaning that they could be relieved from
3 duty, isn't it?

4 A. Well, be moved from the site, yes.

5 Q. Yes. And they spoke to you—

6 A. Yes.

7 Q. —asking to be stood down?

8 A. Yes.

9 Q. And you of course gave your authority and consent to that?

10 A. I said I will—I'll talk to Collin Piper, the commander.

11 Q. Thank you.

12 A. And I did.

13 Q. Yeah.

14 A. And then I relayed the information.

15 Q. And then they left?

16 A. After—yes.

17 Q. Thank you so much.

18 **Mr. Ramadhar:** Mr. Chairman if you'd just give me one
19 moment to—

20 **Mr. Chairman:** Of course.

21 **Mr. Ramadhar:**—I think I'm within my 15 minutes,
22 admonished as I have been, I have learned.

23 **Continued Cross-Examination By Mr. Ramadhar:**

24 Q. Michael Kurban, you said had been—well you saw him and
25 you knew who he was at some stage?

26 A. Yes.

27 Q. Yes. And he was clearly in an upset state of mind from what

1 you observed?

2 A. Yes.

3 Q. Yes. Emotional?

4 A. Yes.

5 Q. Do you know why?

6 A. Yes.

7 Q. Why?

8 **Mr. Chairman:** Well, really?

9 **Mr. Ramadhar:** Well it may be obvious to some but there's a
10 record that's to be made.

11 **Mr. Chairman:** Well that is obvious to everybody?

12 **Continued Cross-Examination By Mr. Ramadhar:**

13 Q. And for the record, did you know why.

14 A. Well maybe you should ask Mr. Kurban why—

15 Q. Yeah, well, he—

16 A. —he was emotional.

17 Q. Yes. He was prevented from saving his father. You knew that?

18 A. Okay.

19 **Mr. Chairman:** All right.

20 **Mr. Ramadhar:** Thank you. Thank will be all.

21 **Mr. Chairman:** Great, thank you. Yes, Ms. Persaud Maraj,
22 would you like to ask some questions? Yes.

23 **Mrs. Persaud Maraj:** Thank you, Mr. Chairman.

24 **Cross-Examination By Mrs. Persaud Maraj:**

25 Q. My name is Kamini Persaud Maraj and I'm attorney-at-law for
26 LMCS.

27 A. Yes.

1 Q. Ms. Balkissoon, I'd like to take you to Saturday the 26th—

2 A. Saturday? Sure.

3 Q. —of February. In your statement at paragraph 36 you said
4 there was a meeting between Kazim Ali Sr., Mr. Wei, Mr.
5 Collin and yourself.

6 A. Um—

7 Q. Paragraph 36. It would be page one three three four.

8 A. Yes.

9 Q. Right. Would it be fair to say that the—

10 **Mr. Chairman:** We have that on the screen, please?

11 **Continued Cross-Examination By Mrs. Persaud Maraj:**

12 Q. The two constant persons in that meeting was actually you and
13 Mr. Kazim Ali Sr.?

14 A. There was a point in time that it was just Kazim and myself,
15 yes.

16 Q. Right. So, Mr. Wei and Mr. Piper wasn't always in that
17 meeting with you and Mr.—

18 A. That's true.

19 Q. Right. Good. And that meeting lasted for about two, two and a
20 half hours?

21 A. No, no.

22 Q. Up to lunchtime?

23 A. No, I don't recall it being so long, no.

24 Q. You don't recall it being so long?

25 A. No.

26 Q. All right. My instructions are that that meeting lasted up to
27 about lunchtime—

1 A. Okay.

2 Q. —with you—

3 A. Okay.

4 Q. —and Mr. Ali.

5 A. Okay.

6 Q. So, in that meeting, Mr. Ali came to the ICT or he came to the
7 terminal building?

8 A. Yes.

9 Q. And he came to speak to the persons there, which included
10 yourself in part—in full, and in part Mr. Piper and Mr. Wei,
11 about rescue plans?

12 A. I can't say what his intent was but I know he came.

13 Q. And he was discussing rescue plans?

14 A. All he said, he came to tell me—well, at that meeting, right, he
15 told me about a bar that had to be removed which was news to
16 me, right? There's a, there's a bar across the riser, right, and he
17 told me that he thinks the plug was intact, right? He told—
18 yeah, right, told me he mentioned something about, I don't
19 know, some pumps he had saw by the, um, gate or something
20 like that.

21 Q. And that was all that he discussed with you?

22 A. Yes.

23 Q. So, by your estimation that meeting would have lasted for about
24 10 minutes, 15 minutes?

25 A. No, it was longer.

26 Q. Pardon?

27 A. It was longer because that's was—that was the work part of it.

1 Q. Right.

2 A. But then after, um, he went on to—

3 Q. To discuss rescue?

4 A. No, to discuss the fact that he think he lost his son and the
5 reason he was thinking of—well—

6 Q. I'm sorry?

7 A. —some personal stuff he discussed about his family.

8 Q. All right. I'm going to take you to paragraph—well, can the
9 witness be shown the witness statement of Mr. Kazim Ali at
10 page 486 of the witness bundle? Witness statement bundle,
11 well, paragraph 40. According to Mr. Ali's evidence that he
12 has given, which is already before this Commission, he says at
13 this paragraph:

14 "I had just finished saying"—well, let me take you to the
15 last sentence of that paragraph there. "We then discussed
16 further my plan for dive rescue which involved, one, a
17 surface supplied rescue diver outfitted with escape
18 bottle."

19 Sorry.

20 A. Okay. [*Ms. Balkissoon is assisted by Enquiry staff*]

21 Q. Yeah.

22 A. Yes, I have it.

23 Q. Yes, you're with me now?

24 A. Yes, I have it.

25 Q. Right. So it's the second sentence there.

26 "We then discussed further my plan for dive rescue
27 which involved a surface supply rescue diver outfitted

1 with escape bottle, spare airline and communication to
2 surface entering the pipe feet first, the rescue diver
3 reversing into the pipe until reaching one of the trapped
4 persons, the rescue diver getting a rope around the person
5 he finds to act as a lifeline, the rescue diver giving the
6 person being retrieved a regulator via spare airline, the
7 crews diver escorting the person back topside while the
8 surface crew takes up slack on the rope. When the pair
9 gets to the top of the riser the surface crew would assist
10 the rescue out of the chamber and the procedure would
11 be repeated for the remaining men. While the rescue was
12 being executed, spare dive sets would be left in the
13 pocket to sustain remaining people.”

14 According to Mr. Ali’s statement and evidence that is currently
15 before this Commission, this is what he said he discussed with
16 you as the plan on Saturday the 26th of February, 2022.

17 A. Okay, if that’s what he said.

18 Q. Are you saying that this never happened?

19 A. I’m saying this was not discussed with me, what—from
20 items—actually the whole of number 40, because, by that time I
21 didn’t have to get any call about anybody willing to go in the
22 pipe or anything. That just didn’t happen.

23 Q. Okay. So, it was—so you’re talking about you never had to get
24 any call. And that is in direct reference to a plan that he was
25 explaining that you laid out to him that Paria had. So the first
26 question that I would have there, was there not a plan that Paria
27 had to empty the line and have a confined space expert enter for

1 the purposes of commissioning a rescue?

2 A. Yes, but—

3 Q. Yes.

4 A. But that was not Saturday morning. That was Saturday
5 sometime in the evening they were discussing it and also, right,
6 that plan was in place since actually—

7 Q. Ms. Balkissoon, I'm asking you about the discussion with Mr.
8 Ali. I'm not asking you when Paria would have come up with
9 the plan.

10 A. Sure.

11 Q. I'm not asking you—

12 A. Item 40, that didn't happen with me.

13 Q. Item 40 didn't happen with you?

14 A. That, that, what's on that screen, that discussion did not take
15 place.

16 Q. All right.

17 A. Which other one?

18 Q. And you're saying that there was never a con—and, in your
19 answer to me you said there was never any call that you
20 received?

21 A. Correct.

22 Q. Correct. Right. Now I'm taking you back to a plan that Paria
23 had, which, my instructions are you communicated to Mr. Ali
24 on that morning and that's the plan that I just explained about a
25 confined space expert entering a dry pipeline.

26 A. And I'm saying I didn't tell Mr. Ali about that.

27 Q. You didn't tell Mr. Ali about that plan?

1 A. Yes.

2 Q. Okay. I'm going to put you to that, at that meeting on
3 Saturday, you did explain that plan to him and he told you that
4 you would not be able to find someone who would be willing to
5 go into a dry pipeline to commission a rescue. You can answer
6 that.

7 A. I'm saying I didn't have that conversation at all with Mr. Ali.

8 Q. All right. And I'm also saying that whilst you were in this
9 meeting and discussion with Mr. Ali, you would have received
10 a call that had—the contents of which was that there was no
11 one willing to be able to go into the pipeline according to the
12 plans that you—that I had just explained.

13 A. That's what I'm saying. That discussion that Mr. Ali—

14 Q. Conjuring?

15 A. I didn't say conjuring. I'm saying that item 40, as well as any
16 discussion about a confined space and he's telling me that I
17 won't get anybody and then subsequently I'm getting a call,
18 that didn't happen.

19 Q. Nothing of that sort happened?

20 A. No.

21 Q. So he simply went there on Saturday to bare his personal issues
22 to you?

23 A. No. I believe he went there to inform me that there was a bar
24 across the riser and that we would need to do that because it
25 would hamper any other efforts.

26 Q. And that was the only purpose for him being there?

27 A. Well I can't speak to what Mr. Ali was going there else for.

1 Q. Okay.

2 A. But I can only tell you what he told me—

3 Q. All right.

4 A. —on that day.

5 Q. Okay.

6 A. Which was the riser, oh, and about the plug.

7 Q. So I'm going to put to you that you are being untruthful, that
8 Mr. Ali came on Saturday and he had for two and a half hours
9 sat with you, and, from time to time in the presence of Mr. Wei
10 and Mr. Piper, discussing rescue plans.

11 A. No, I'm not being untruthful.

12 Q. And I'm also going to say to you, that, as part of those
13 discussions he mentioned to you some divers, some—13
14 persons who were rescued in Thailand—

15 A. He did not—

16 Q. —from a confined space.

17 A. He didn't mention that either. If you look also, because I
18 wasn't allowed, I flipped the page to the one before, and he
19 says, he says something about he met with Paul Yearwood and
20 myself and Michael Wei.

21 Q. No, I'm not asking you about, about—

22 A. I'm sorry, I shouldn't do that but, I read before.

23 Q. I'm asking you about the meeting on Saturday the 26th, that
24 commenced about 9.45, around 10.00 a.m..

25 A. I'm, I'm saying again, no such discussion took place—

26 **Mr. Chairman:** Right.

27 A. —with myself.

1 **Examination By Mr. Chairman:**

2 Q. Can I, can I be clear? Um, just so that we do understand it, you
3 met with him for a fair amount of time that morning, whether it
4 was all morning or part of the morning—

5 A. Yes.

6 Q. —whether it was up to lunchtime—

7 A. Yes.

8 Q. —I'm not particularly concerned about.

9 A. Yes.

10 Q. But you met with him not for 5 or 10 minutes but for more than
11 that, a considerable amount of time?

12 A. Yeah, maybe—no, it won't have—maybe, maybe it was close
13 to like an hour or so—

14 Q. Right, all right.

15 A. —if so much.

16 Q. Let's pro—let's proceed on the basis for an hour or so.

17 A. Yeah.

18 Q. This is Saturday morning, yes?

19 A. This is Saturday morning.

20 Q. It's at the IMT?

21 A. It's in a separate room which would have been adjacent to my
22 previous office, yes

23 Q. Right. And there's you there, him there, who else?

24 A. Michael Wei was there for a while as well as Collin Piper was
25 there.

26 Q. Michael Wei?

27 A. Michael, yes, as well as Collin Piper.

1 Q. And Mr. Piper. Anyone else?

2 A. Um, I think Rajiv or, um, somebody came in for a permit or
3 something like that.

4 Q. Right, right, but those were the four that were present that time
5 that morning?

6 A. Yeah, but Rajiv only came in and out.

7 Q. Whether somebody came in or out—

8 A. Yeah.

9 Q. —doesn't particularly concern me.

10 A. That's—

11 Q. The four of you were having this meeting. During the course of
12 that meeting, is it your evidence that there was no discussion of
13 rescue?

14 A. No, there was no discussion of rescue.

15 Q. Right. So whatever the position is, whatever else you might
16 have discussed, rescue did not feature?

17 A. No.

18 Q. Right, thank you. And you understand that that's been put to
19 you that that's not true and you've denied that? You said
20 that—

21 A. Yeah, I—

22 Q. —that was the position?

23 A. I mean, I have my own memory.

24 **Continued Cross-Examination By Mrs. Persaud Maraj:**

25 Q. All right, Sunday morning, you received a call from Mr. Ali?

26 A. Sunday mor—yes, that would have been early.

27 Q. Right. And he asked you to arrange for a meeting with the

1 IMT?

2 A. He said he was coming on site with a diver.

3 Q. Right. And did he not explain to you that he was coming on
4 site with a diver to discuss his plans for rescue?

5 A. He said he was coming on site with a diver and that's it.

6 Q. That's it?

7 A. Yeah.

8 Q. That was the extent of it and you made the arrangement—

9 A. Yes.

10 Q. —for that meeting?

11 A. Yes, yes. Now, hold on, right, I would have been, um, under
12 the impression that it might have been for a rescue, eh. I'm just
13 saying—putting it out there. It's not like I asked him
14 specifically or anything. Right?

15 Q. All right. And this was on Sunday, so Sunday you were of the
16 impression that he wanted to discuss with the IMT the
17 possibilities and the—

18 A. That was my impression.

19 Q. That was your impression?

20 A. That was my impression.

21 Q. But on the Saturday when he met with you, he made no such
22 discussion with you?

23 A. No.

24 Q. All right.

25 **Mrs. Persaud Maraj:** That is all for this witness, please.

26 **Mr. Chairman:** Mr. Peterson.

27 **Examination By Mr. Peterson SC:**

1 Q. Two questions, Sir. Ms. Balkissoon, I just want to take you
2 quickly to the point, I didn't quite get the full explanation when
3 you were talking about the friction with the movement of the
4 plug in the horizontal. Could you just explain the friction part
5 of it?

6 A. Well, what I was just trying to say is that something could be
7 stuck, something could be stuck and therefore it couldn't be
8 moved, right? Something like, um, what, what Mr. Chairman is
9 saying, it could be compressed so that you have a compressed
10 air and the force of the liquid. Right? So meaning that it is a
11 compressed movement. What I was trying to explain, really,
12 just like if you have the plug moving along, it could have
13 stopped a little bit on its own because, I know—I trying not to
14 use, um—it loses its momentum, all right? And that could be
15 because you have something on the other side slowing it down,
16 right, so it may not necessarily be something that compresses
17 the liquid so much so that you have compressed air on one side.
18 That, that, that's all I was trying to say.

19 Q. Okay. And—

20 A. I mean, it doesn't make any real, not real material difference.

21 **Mr. Chairman:** I didn't hear that.

22 **Ms. Balkissoon:** I didn't want to say, um, it makes any real
23 material difference really because, I mean, it's beyond me to
24 figure out where that plug stopped, eh. I'm just saying
25 mathematically.

26 **Continued Examination By Mr. Peterson SC:**

27 Q. Okay. And, lastly, at some point, um, Mitchells and OTSL—

1 A. Yes.

2 Q. —those are commercial diving outfits?

3 A. Those are, um, the specialists, specialty diving people.

4 Q. They came on site at the behest of Paria?

5 A. Yeah, I think it was maybe around—it was somewhere just
6 around we did the, um, the crawler video.

7 Q. Yes.

8 A. So that would have been somewhere midnight, one o'clock,
9 somewhere around that time.

10 Q. And notwithstanding they being commercial divers summoned
11 there by Paria, did they attempt to dive after assessment?

12 A. No, they didn't.

13 Q. Okay.

14 **Mr. Peterson SC:** Thank you, Mr. Chairman, that's all.

15 **Mr. Chairman:** Yes, um, two things, please. First of all, as I
16 understand it, Mr. Maharaj, we—the plug that was actually
17 removed from the pipe is available? It's at In-Corr-Tech's
18 office, is that right?

19 **Mr. Maharaj SC:** Yes.

20 **Mr. Chairman:** Is there any reason why we can't have it here,
21 not today obviously, but at some point?

22 **Mr. Maharaj SC:** It's possible. It's possible.

23 **Mr. Chairman:** Right.

24 **Mr. Maharaj SC:** I saw it there. We saw it there.

25 **Mr. Chairman:** Okay. Well, in the light of that I'm not going
26 to ask these questions about plugs and so on. Seems to me we
27 might as well have the plug and make have a look at it.

1 **Mr. Maharaj SC:** Yes.

2 **Mr. Chairman:** And then we can make up our own mind
3 about its diameter and whether it'll pass—if somebody could
4 pass—

5 **Mr. Maharaj SC:** That's right.

6 **Mr. Chairman:** All right, so that—if that could be arranged
7 I'd be grateful.

8 **Mr. Maharaj SC:** Yes. It—

9 **Mr. Chairman:** The second thing is this.

10 **Examination By Mr. Chairman:**

11 Q. And you may or may not be able to help me, Ms. Balkissoon,
12 but—

13 A. Sure.

14 Q. —it struck me that it was potentially possible to calculate the
15 amount of air a man would need to survive for a—per hour?

16 A. Yes.

17 Q. And that that is simply a mathematical exercise with a plus or
18 minus depending on how he breathes. I mean, I know, I go
19 diving, I tend to last—a tank lasts me maybe 45 or 50 minutes.
20 Some people seem to make it last double that, but, be that as it
21 may, it seems to me that some sort of average could be arrived
22 at as to the volume of air, or, as I think you prefer to call vapour
23 space that might be available—

24 A. The volume.

25 Q. —for someone to breathe.

26 A. Volume of air available—

27 Q. Yes.

1 A. —for them to breathe. Well, you could do a mathematical
2 calculation if you simulate the event itself. Right?

3 Q. If you?

4 A. You could do a simulation.

5 Q. Yes.

6 A. Right? So like in the past, right, um, when I was an engineer on
7 another plant, right, we would have done—we would have
8 engaged somebody to do a complex mathematical calculation
9 with a simulation to work out the drag force as well as the, um,
10 friction losses and the movement of the plug. It's up to you.
11 You can have someone do that.

12 Q. Yes. That's a different, a slightly different question from what
13 I'm asking. If I create a sealed box—

14 A. Yes.

15 Q. —into which I put a person—

16 A. Yes.

17 Q. —all right, they will only have so much time before the air in
18 that sealed box runs out?

19 A. Correct.

20 Q. Right. So it's possible, isn't it, to work out how long or how
21 much by way of volume there would need to be per hour for a
22 man to breathe?

23 A. Yes.

24 Q. With a plus or minus I accept.

25 A. Sure.

26 Q. Do you know if that exercise was ever entertained in the IMT?

27 A. No.

1 Q. Because it would give you—

2 A. Because—

3 Q. Sorry, carry on.

4 A. Yeah, no, because, to figure out the size of the box per se—

5 Q. Uh-huh.

6 A. —right, you would have to understand where the plug ended up
7 and, and the whole liquid dynamics associated with how much
8 water, um, the amount, so it really depends on how you, how—
9 it's very simplistic, right—how you're going to find out the size
10 of the box, right?

11 Q. Well, I follow that. Well, I was, I suppose, approaching it from
12 a slightly different view. Supposing this room, which is a
13 substantial room, represented the entirety of the air by way of a
14 pocket inside the pipe? Right?

15 A. Yeah, you could work it out.

16 Q. We have no idea what size these air pockets were.

17 A. Yeah.

18 Q. Right?

19 A. Uh-huh.

20 Q. But, you could work out, couldn't you, if there was one person
21 in this room—

22 A. Yes.

23 Q. Which was sealed—

24 A. Yes you can.

25 Q. —how long they would last if there was, well—

26 A. Yeah.

27 Q. —hopefully a hundred people in here, 50 people in here—

1 A. —that's fine.

2 Q. —how long it would last? You could work that out, couldn't
3 you?

4 A. Correct.

5 Q. So it works equally the other way. If you had four men—

6 A. Yes.

7 Q. —breathing air in an air pocket, what size of volume of an air
8 pocket would there have to be per hour for them to be
9 surviving? Do you follow what—do you follow the question
10 I'm asking?

11 A. Yes, I'm understanding, yeah.

12 Q. I think everybody else does because I'm—

13 A. Yeah, yeah, no, I get—I get you now.

14 Q. I [*Inaudible*] I could do it myself.

15 A. You taking it from another angle.

16 Q. Yes, and so, you could say, right, we now know—we know
17 what the capacity of the pipe is, we know how much oil we
18 thought we'd pumped out of it, how much volume would there
19 have to be inside this pipe per hour—

20 A. I—

21 Q. —for one or four men to be breathing it?

22 A. I, I—well, I don't know about anybody else but I didn't know
23 how much oil was in that pumped out.

24 Q. No, I think the evidence is nobody could, but, leaving that to
25 one side it would still tell you, wouldn't it, how much of an air
26 bubble you would need to sustain life per hour—

27 A. Yes, per hour.

1 Q. —for one to four men?

2 A. Yes.

3 Q. And then you could make it an estimate, based on reason, as to
4 whether after one hour it was X number of feet in this pipe.

5 A. Yes.

6 Q. After two hours—

7 A. But—

8 Q. —Y number of feet in this pipe, after three hours—

9 A. Certainly.

10 Q. —and so on, you know?

11 A. Yeah.

12 Q. So that you could make an estimate, well, after a few hours
13 they're realistic, unless the pipe was empty, there was no
14 chance for them being alive. Do you follow what I mean?

15 A. Yeah, I understand that.

16 Q. So you could work it out, did—was that exercise ever
17 entertained, as far as you're aware, by the IMT?

18 A. No, but, it's not—

19 Q. Because such an exercise might have informed the speed with
20 which you needed to operate, mightn't it?

21 A. Yes. Now, also, right, um—

22 Q. Am I, am I right about that or am I barking up the wrong tree?

23 A. No, you're right to the extent that it's very difficult to figure out
24 the size of the box, but you could make a number of
25 assumptions, I get.

26 Q. Of course.

27 A. Also, um, not to be taken lightly, right, there is, I'm just going

1 to say it, vapour space is different, a little bit different.

2 Q. Yes. You mean—

3 A. Right?

4 Q. —it's not, not as much breathable air as ordinary air in the
5 atmosphere?

6 A. Yeah.

7 Q. Right. So you would have to reduce it by a percentage?

8 A. Yeah, and that's a guesstimate.

9 Q. So that—it would be a guesstimate, I accept.

10 A. Yeah.

11 Q. But you—but—

12 A. I understand.

13 Q. —it would give you some idea, wouldn't it—

14 A. Yes.

15 Q. —of where you were at in terms of progress to be made and the
16 time span to be made, for it to be made in, do you follow?

17 A. Yes.

18 Q. See, for example, if you knew that it was not going to be a
19 camera available for three hours, let's say, and you weren't
20 prepared to do anything for a period until you had the camera,
21 that might have informed you, well, on any view, they will not
22 be alive in three hours, in which case you'd say, what's plan B
23 because the camera's not going to work? There's no point in
24 waiting for a camera for three hours because, on any view,
25 they're going to be dead or there's a high likelihood they're
26 going to be dead. So what's plan B? What do we do without a
27 camera?

1 A. Yeah, and—

2 Q. Was that exercise ever entertained?

3 A. Not, er, me, no.

4 **Mr. Chairman:** Does anybody wish to ask any questions
5 arising from that? No. All right. Thank you very much. Well,
6 er, you'll be happy to know—unless Mr. Maharaj, you have any
7 questions—

8 **Mr. Maharaj SC:** No.

9 **Ms. Balkissoon:** Or, it's—

10 **Mr. Chairman:**—perhaps Mr. Wilson?

11 **Commissioner Wilson:** No, Chair.

12 **Mr. Chairman:** Right. Then I can tell you that that is your
13 evidence. Thank you very much for coming. I know it was
14 distressing but I'm afraid the whole matter's distressing, so, and
15 it is for everybody, so, thank you so very much indeed for
16 coming. Appreciate it, all right?

17 **Ms. Balkissoon:** Thank you.

18 **Mr. Chairman:** You're free to go or you can stay as you
19 choose, all right? Now, you can stay or go. You've probably
20 been told you ought not to be watching the evidence, but you
21 can now, all right?

22 **Ms. Balkissoon:** I just want to take a walk.

23 **Mr. Chairman:** Yes, so while you—off you go, then.

24 **Ms. Balkissoon:** Thank you.

25 **Mr. Chairman:** All right. We'll have Mr. Piper, I think, next
26 then please?

27 [*Ms. Catherine Balkissoon leaves enquiry room*]

1 [Mr. Collin Piper enters enquiry room and is sworn]

2 **Mr. Piper:** I, Collin Piper, solemnly swear that the evidence I
3 shall give to the Commission in this case shall be the truth, the
4 whole truth and nothing but the truth.

5 **Examination By Mr. Chairman:**

6 Q. Please do sit down, Mr. Piper.

7 A. Thank you, Sir.

8 Q. If you move that whole microphone apparatus towards you then
9 you won't have to awkwardly lean forward each time to answer
10 questions, all right?

11 A. Thank you.

12 Q. Good. So, what's going to happen, so that you know, Mr.
13 Bissessar, who sits at the end the front row here, is going to
14 summarize your evidence, the statement that you've provided to
15 us.

16 A. Thank you.

17 Q. All right? That hopefully will mean it can be taken in a shorter
18 compass. There's a quite a lot of it so I imagine it'll take a little
19 while. Once he's done that, if you listen carefully, please, and
20 tell us at the end if you agree with that summary? If you don't
21 then obviously you'll point that out, all right?

22 A. Thank you.

23 Q. Thereafter, Mr. Maharaj who sits next to him, will have a
24 number of question for you. I imagine that's probably as far as
25 we're going to get today—

26 A. Okay.

27 Q. —if we get that far, I hope so, and we'll see, all right? So I'm

1 afraid you're going to have to come back tomorrow, all right?
2 And that can't be helped, I'm afraid. You'll appreciate how
3 important your evidence is—

4 A. Understood, Sir.

5 Q. —and it's likely to take a little while, all right?

6 A. Okay.

7 Q. Once he's concluded, there will be a number of other lawyers
8 who are sitting here who no doubt wish to ask you questions.

9 A. Of course.

10 Q. And that's what's going to happen, all right? One way or the
11 other, you will be concluded tomorrow for sure? All right? I
12 can assure you of that, even if it means sitting very late, so
13 perhaps those who've got questions for you will bear that in
14 mind when they consider how many questions they have for
15 you.

16 A. All right.

17 **Mr. Chairman:** All right, good, so, Mr. Piper, please listen to
18 Mr. Bissessar.

19 **Mr. Bissessar:** Thank you, Chairman.

20 Mr. Collin Piper was Paria's Manager Technical Operations
21 and was also its Incident Commander leading the Incident
22 Command Team, the ICT, activated by Paria on 25th February,
23 2022. He reported to Paria's General Manager, Mr. Mushtaq
24 Mohammed. Mr. Piper gave a witness statement dated 1st
25 September, 2022 and a supplemental witness statement dated
26 13th December, 2022 to the Commission. These are at witness
27 bundles 1343 and supplemental witness bundle 3141

1 respectively. Mr. Piper declined to be interviewed by the legal
2 team to the Commission.

3 Mr. Piper holds a Master of Science degree in operational
4 Maritime management awarded in 2018 by the University of
5 Trinidad and Tobago and has occupied the post of Manager
6 Technical Operations since 1st December, 2018. Previously, he
7 worked for Petrotrin for 27 years from 1991 holding several
8 positions including Manager of Port and Marine from February
9 2016 to November 2018. Mr. Piper says that from the time he
10 joined the maritime industry age 17, part of his education and
11 training was how to respond to an emergency. At Petrotrin he
12 also received training in incident command systems.

13 Mr. Piper's role as Terminal Operations Manager meant that he
14 identified Sealine 36 pipeline at berths 5 and 6 as being in need
15 of repair and he was a member of the management tenders
16 committee that approved the award of the contract for repairs to
17 the Sealine 36 pipeline to LMCS.

18 Mr. Piper was first notified of the accident on Friday, 25th
19 February, 2022 at 3.10 p.m. when he was telephoned by
20 Visham Harrichan. Upon notification, Mr. Piper assumed the
21 position of Incident Commander and then requested Visham
22 Harrichan and Catherine Balkissoon to be his eyes and ears at
23 berth 6. Mr. Piper describes the incident command system, the
24 ICS, and says that Paria had developed an emergency response
25 plan for major emergencies like this one.

26 As Incident Commander he says his duty, first and foremost,
27 was to safeguard lives and under the incident command system

1 the primary designated incident command post, ICP, was the
2 conference room on the ground floor of Paria's shipping
3 building. Mr. Piper later explained that he moved the incident
4 command post upstairs to his office.

5 He says that after the incident, he was desperate to speak to
6 Kazim Ali Sr. and spoke to him at 3.23 p.m. and the latter
7 confirmed to him that 5 LMCS divers were missing including
8 his son, Kazim Ali Jr. Kazim Ali Sr. told Mr. Piper that the
9 divers had taken out one plug and were attempting to take out
10 the second when the incident happened. Mr. Piper had further
11 discussions with Kazim Ali Sr. that day and continuing.

12 Mr. Piper says that as the Incident Commander, he was required
13 to be stationed onshore at the incident command post and
14 remained there throughout except when his physical attendance
15 at an offsite meeting was requested. Mr. Piper described the
16 composition of the Incident Command Team comprising seven
17 Paria officials but he also involved Mr. Rolph Seales who was a
18 Heritage dive expert, Mr. Osei Fleming-Holder and Mr. Rawle
19 Arneaud both of HSE Heritage as liaison between Paria and
20 Heritage.

21 Mr. Piper explains that Paria did not have the required
22 knowledge of or access to competent, experienced divers,
23 diving contractors and/or confined space entry specialists so
24 that the Incident Command Team relied on the expertise of
25 Heritage personnel which made contact with several diving
26 companies to assist the Incident Command Team, namely
27 Mitchells Professional Diving Services Company Limited,

1 Eastern Divers Company Limited, Offshore Technologies
2 Solutions Limited, Humming Bird Helicopter Services Limited
3 and Hull Support Services Limited and these experts were all
4 on site by 2.00 a.m. on Saturday morning.

5 He says that the Incident Command Team also received
6 assistance from external persons and agencies including the
7 Trinidad and Tobago Coast Guard, Mr. Krishna Fuentes who he
8 says is a dive expert, Professional Inspection Services Limited
9 and Atlantic LNG, the latter two providing a borescope and
10 crawler respectively. Mr. Piper explains that the coast guard
11 arrived at 4.40 p.m. on Friday and conducted searches for the
12 divers and took control of the incident scene. Further, that Mr.
13 Randolph Archbald was the designated planning chief and his
14 role was to assess the probable cause of events and to prepare
15 action plans pursuant to the Incident Command Team's
16 emergency response plan.

17 He said that Mr. Randolph Archbald collected information from
18 the coast guard and Eastern Divers Company Limited with
19 respect to the feasibility of entering the pipeline to attempt to
20 rescue the divers. Mr. Piper says that around the time that
21 Christopher Boodram was rescued, Randolph Archbald advised
22 him that it was unsafe to—for divers to enter the pipeline
23 without firstly developing a rescue plan, diving plan, secondly,
24 having a reliable air supply, thirdly, having reliable
25 communications and, fourthly, an extraction plan.

26 He said that Randolph Archbald assisted the Incident Command
27 Team to obtain access to Christopher Boodram while the latter

1 was at the San Fernando General Hospital. Mr. Piper says that
2 Michael Wei's role as logistics chief was to assemble
3 personnel, resources and equipment to respond to the incident
4 and Michael Wei and Catherine Balkissoon provided the bulk
5 of the technical expertise relied on by the Incident Command
6 Team.

7 He says that he also asked Catherine to report to the Incident
8 Command Team on her observations and information she
9 gathered, further, that she played a critical and technical role in
10 the assessment of the pipeline conditions and the execution of
11 the recovery efforts. He also identified Nerissa Feveck who
12 worked closely with Mushtaq Mohammed in coordinating and
13 organizing Paria's communication with the divers' families.

14 Other than LMCS' objection to the prohibition on diving in the
15 pipeline at about 5.00 p.m. on Friday, Mr. Piper maintains that
16 at no point did Kazim Ali Sr., Dexter Guerra or any LMCS
17 representative complain to him or objected in relation to Paria
18 or the Incident Command Team's conduct in the aftermath of
19 the incident up and until the recovery of the last diver, nor was
20 any request made to him for an LMCS representative to join the
21 Incident Command Team.

22 Mr. Piper explains that it was always his intention, as Incident
23 Commander, to work closely with LMCS in order to make an
24 informed, collaborative, efficient response to the emergency. It
25 was reported to Mr. Piper that the coast guard did not have
26 many details of the incident nor did they have the appropriate
27 equipment on site to enter the water or the habitat but that a

1 dive crew was on its way. Mr. Piper says that at about 5.00
2 p.m. on Friday, he received information that LMCS' employees
3 heard knocking and shouting from the habitat and at 5.36 p.m.
4 he received information that one of the divers had been rescued.
5 Mr. Piper says that based on the circumstances surrounding
6 Boodram's rescue, it was now evident that there was a real
7 possibility that the missing divers were all trapped within the
8 pipeline but that Mr. Rolph Seales advised that it was too risky
9 to dive into the pipeline having regard to the unknown
10 conditions of the pipeline. He says that the coast guard also
11 said that they were unwilling to do a rescue in the pipeline
12 because of the unknown conditions inside, the poor lighting and
13 changing tide conditions.

14 He said that he received advice from Mr. Randolph Archbald
15 that it was unsafe for rescue divers to dive into the pipeline
16 without a regular and emergency supply of air and a proper
17 means of communication and extraction, particularly since no
18 rescue plan was presented to the Incident Command Team.
19 Based on this advice and the relevant factors, Mr. Piper says he
20 gave instructions that diving into the pipeline was not allowed
21 because it was too dangerous and he told Catherine Balkissoon
22 to pass these instructions to LMCS.

23 Mr. Piper also explained that he received reports of tension and
24 hostility at berth 6, and, after discussing the volatility with Mr.
25 Mushtaq Mohammed, both of them agreed that the coast guard
26 should take control of the site. He said that Mushtaq made this
27 request to the coast guard in his, meaning Mr. Pipers, presence.

1 Later, at about 10.00 p.m., the Incident Command Team spoke
2 to Christopher Boodram who was at the San Fernando General
3 Hospital who said in effect that “he did not think them fellas
4 make it.” Mr. Piper said that he relayed the information that
5 Mr. Boodram provided to the Incident Command Team to
6 Catherine Balkissoon and instructed her to give this information
7 to the coast guard and to enquire of them with this new
8 information whether the coast guard would be willing to enter
9 the pipeline to perform a rescue operation inside the pipeline.

10 Mr. Piper also spoke to Kazim Ali Sr. who said that conditions
11 on either side of the inflatable plug appeared to have stabilized
12 after the occurrence of the event which caused the divers to be
13 drawn inside the pipeline. Mr. Piper explains that at about
14 11.39 p.m. on Friday, Hull Support Services Limited informed
15 the Incident Command Team that they would not be performing
16 any rescue attempts in the pipeline because it was too risky.
17 And at 11.50 p.m., that Lieutenant Hargreaves said that the
18 coast guard will not dive into the line.

19 At about midnight, a borescope was inserted inside the pipeline
20 up to a certain point horizontally before coming upon a dive
21 tank and could proceed no further. Mr. Piper says, that, based
22 on his reports, the line appeared filled with clear water and no
23 air pockets or divers were seen. Mr. Piper says it was reported
24 to him By Mr. Rolph Seales that the dive supervisors at OTSL
25 and Mitchells diving, having reviewed the footage, both agreed
26 that it was too risky to send their divers into the pipeline. Mr.
27 Seales also said he reviewed the footage and agreed with the

1 dive supervisors.

2 Between 3.00 a.m. and 4.00 a.m. on Saturday morning, having
3 regard to the positions taken by the dive experts that it was too
4 risky to enter the pipe, and since the ALNG borescope and the
5 HHSL crawler could not get past the scuba tank, Mr. Piper took
6 the decision to permit the removal of the flange at berth 5 so
7 that the crawler could be inserted from that berth. Mr. Piper
8 says he then left for home and returned three hours later and
9 was told that Eastern Divers now considered the exercise to be
10 a recovery.

11 He said that it was reported to the Incident Command Team that
12 IOCL and Laing were mobilizing pumps to pump the water out
13 of berths 5 and 6 but that the Incident Command Team had not
14 yet given up on the possibility of a rescue attempt in a dry line.
15 Mr. Piper briefed Minister Young between 9.00 a.m. and 9.30
16 a.m. on Saturday. Later on Saturday at about 4.00 p.m., Mr.
17 Piper met with Paria and Heritage personnel to discuss the
18 transition from rescue to recovery.

19 On Sunday at about 3.40 p.m., Mr. Piper was informed that the
20 habitat had fallen to the bottom of the sea while being lifted by
21 LMCS, and, later that morning Mr. Kazim Ali Sr., Mr. Imtiaz
22 Ali, Mr. Andrew Farah and Mr. Conan Beddoe came to the
23 shipping building and Kazim Ali Sr. said that he accepted that
24 his son was now gone and he was now considering recovery.

25 According to Mr. Piper, the LMCS team was told By Mr.
26 Mushtaq Mohammed to provide a method statement, risk
27 assessment and diver certification for any exercise that LMCS

1 wanted to do. Mr. Piper said that the documents presented by
2 LMCS were reviewed by the coast guard, Mr. Krishna Fuentes
3 and Mr. Rolph Seales and the dive was deemed too risky.

4 Mr. Piper said that on Monday, 28th February, 2022 at about
5 5.45 p.m., three bodies were retrieved together with three scuba
6 tanks and other diving equipment and on Thursday, 3rd March,
7 2022 at 12.28 a.m., the fourth body was retrieved.

8 Mr. Piper, do you agree that what I have presented is a true and
9 accurate summary of your evidence?

10 **Mr. Piper:** Yes, Sir, um, the—I was never technical manager,
11 always terminal manager. I believe you said—you read that,
12 um, the coast guard took charge of the site. That is not
13 accurate. I believe you said Hull Support Services said they
14 didn't dive. Let me correct that. That should have been HHSL.
15 Those are I think are the corrections.

16 **Mr. Bissessar:** I see. Thank you, Mr. Chairman.

17 **Mr. Peterson SC:** Mr. Chairman, before, there were just two
18 errors that the witness had intimated to us two times that may
19 have been wrong in the statement that he wished to revisit.
20 Could I take the two paragraphs?

21 **Mr. Chairman:** [*Inaudible*] Yes, thank you.

22 **Mr. Peterson SC:** Paragraphs 79 and paragraph 92.

23 **Mr. Chairman:** Two areas you wanted to ask about?

24 **Mr. Peterson SC:** No, the witness had indicated before to us
25 that he had seen two areas that he—

26 **Mr. Chairman:** That he was concerned about?

27 **Mr. Piper:** There were errors, in the times, in the times, Sir.

1 **Mr. Chairman:** Errors in the description given or errors that
2 are on the face of the document?

3 **Mr. Piper:** Errors on the face of the document, errors that I
4 [*Inaudible*].

5 **Mr. Chairman:** Right, so your errors that you want to correct?

6 **Mr. Piper:** Yes, Sir.

7 **Mr. Chairman:** Of course you should do that.

8 **Mr. Piper:** Yes.

9 **Mr. Chairman:** Yes, by all means. So, which were the
10 paragraphs?

11 **Mr. Peterson SC:** Paragraph 79 first, Sir.

12 **Mr. Chairman:** Seventy-nine.

13 **Mr. Peterson SC:** If it could be brought up?

14 **Mr. Chairman:** Can we have 79? Can we have—

15 **Mr. Peterson SC:** Yes, it's up.

16 **Mr. Piper:** Yes.

17 **Mr. Peterson SC:** One three six one.

18 **Mr. Chairman:** Yes, 1361. Mr. Piper, you're going to be
19 given a copy of your statement.

20 **Mr. Piper:** Okay, thank you. [*Document handed to Mr. Piper*]

21 **Examination By Mr. Chairman:**

22 Q. So, have a look at that. Paragraph 79 you say there's an error
23 on the face of it?

24 A. Yes. Yes, Sir, um—

25 Q. Which is what?

26 A. This should read, um, when I passed instruction to LMCS,
27 about 1900 which would be seven o'clock, 7.00 p.m.—

1 Q. And not 1700 hours?

2 A. Not 1700.

3 Q. Right.

4 A. Right.

5 Q. Well, I'm glad you've make that correction because I have a
6 note next to that.

7 A. With whom I'd been a regular—

8 Q. So it's, um—it should be 1900 hours?

9 A. Yes. Right, and the complaint would have been after, 1825, all
10 right? So—because the 1900 hours comes after 1825 so they
11 could not made the—they could have not made the claim—the
12 complaint before. Okay? So this is actually reading incorrectly
13 here.

14 Q. “The complaint reached my attention at about 1825.”

15 A. Yeah. Right? I made—it was about 1825—

16 Q. Yes.

17 A. —when I actually passed the instruction and it would have been
18 about 1900 when they actually made the complaint, so that is a
19 lil reverse there.

20 Q. All right.

21 A. Okay? I apologize for that.

22 Q. That's all right.

23 **Mr. Peterson SC:** And.

24 **Mr. Chairman:** And, and the other—

25 **Mr. Peterson SC:**—paragraph 92.

26 **Mr. Chairman:**—correction you wanted to make?

27 **Mr. Piper:** Yes.

1 **Mr. Peterson SC:**—92, paragraph 92.

2 **Mr. Piper:** Yes, yes, that time is incorrect. Mr. Rolph Seales
3 actually arrived around 2000, between 2000, 2030.

4 **Mr. Chairman:** Right, so we should delete 1800 hours,
5 paragraph 92, and put 2000 hours?

6 **Mr. Peterson SC:** Yes.

7 **Mr. Piper:** Yeah, 20—between 2000 and 2030, Sir.

8 **Examination By Mr. Chairman:**

9 Q. Right. So about 2000 hours, that's eight o'clock at night?

10 A. That's correct.

11 Q. To 2030 hours, half past 8.00 at night—

12 A. Yes.

13 Q. —Mr. Rolph Seales arrived?

14 A. Yes, yes Sir, that is correct.

15 Q. Well, what about the next one, "At about 1810 Mitchell made
16 arrangements to access a borescope—

17 A. Yes, that is

18 Q. —has that also been—

19 A. Yeah, no, that's as far as I'm aware should be okay.

20 Q. That's all right, is it?

21 A. Yes, that should be okay, yes, Sir. Thanks, Sir.

22 Q. So chronologically you've got this wrong way round?

23 A. Yes.

24 Q. Ninety-two should be quite some time later on in—

25 A. Yes, yeah.

26 Q. —in this document?

27 A. Yes, and there, there, there—it's not fully chronological may I

1 add the whole—

2 Q. No, no, no. That's just become clear to me reading it.

3 A. Yes.

4 Q. But, um, can I ask you this, since we're dealing with the
5 chronology, did you, when you made this statement which is an
6 extensive statement, it runs to, um, 245—

7 **Mr. Peterson SC:** Two hundred and fif—

8 **Examination By Mr. Chairman:**

9 Q. —245 paragraphs, but, when you made that statement did you
10 have with you documents that you were able to refer to?

11 A. Yes, Sir, I did refer some to the timelines.

12 Q. Right.

13 A. Yes, Sir.

14 Q. And can you remember what documents you were referring to?

15 A. Well, mainly the timeline, maybe the timeline.

16 Q. Paria's own timeline on this?

17 A. Yes, Sir. Yes, Sir.

18 Q. Is that a contemporaneous document that you—

19 A. Yes, Sir.

20 Q. —in the IMT?

21 A. Yes, Sir.

22 Q. As matters were unfolding?

23 A. Yes, Sir.

24 Q. All right. Thank you. So you used that to help you with timing
25 and events?

26 A. Yes, Sir.

27 Q. All right. Thank you very much. And you say you're the

1 terminal manager?

2 A. Terminal operations.

3 Q. Terminal Operations Manager?

4 A. Yes, Sir.

5 Q. And are you still?

6 A. Yes, Sir, I am.

7 **Mr. Chairman:** All right, thank you. Mr. Maharaj.

8 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

9 **Examination By Mr. Maharaj SC:**

10 Q. Mr. Piper, I want to start my questioning of you by asking you
11 of some of your role and duties as Terminal Operations
12 Manager?

13 A. Uh-huh.

14 Q. At paragraph 11 of your witness statement, which is at 1346,
15 starts at 1345, and particularly at page 1346, at 11,
16 subparagraph 11, you stated that one of your duties at Paria was
17 to develop marine emergency response strategy and respond as
18 necessary.

19 A. That's correct, Sir.

20 Q. Is that correct?

21 A. Yes, Sir.

22 Q. And if you look at 12, subparagraph 12:

23 "Oversee operating and supply contracts with external
24 service providers to ensure business needs are met and
25 adherence to standards, regulations and operating
26 practices."

27 A. Correct.

1 Q. Correct? And at subparagraph 16, you said that one of your
2 duties also include implementing health, safety, environment
3 and quality standards?

4 A. Correct.

5 Q. Correct?

6 A. Correct, Sir.

7 Q. All right. Now, would you agree with me that the scope of
8 works for this project was developed by Paria?

9 A. Yes, Sir.

10 Q. And the scope of works was accepted by LMCS?

11 A. Sir, um, the scope of works in this case is developed by our
12 technical and maintenance department. Right? They developed
13 the scopes of works. They handled the scopes of works. The
14 operations department does not get involved in those
15 preparations and deliberations on the scope of works.

16 Q. But from your knowledge of this contract—

17 A. Yes.

18 Q. —would you agree that the scope of works was accepted by
19 LMCS?

20 A. Well, I would have to assume yes they were accepted by
21 LMCS.

22 Q. Yes. Right. And as from your knowledge of this contract, you
23 would know that in respect of this contract, LMCS did a risk
24 assessment and that was reviewed by Paria and accepted by
25 Paria?

26 A. It would have been reviewed by Paria, um, and I suppose, yes,
27 accepted by Paria.

1 Q. And would you agree that LMCS also did an emergency
2 response plan in respect of this contract and it was reviewed by
3 Paria and accepted by Paria?

4 A. Yes, so, if I may, right, so, there—LMCS is—in their risk
5 assessments and their emergency response plans have to
6 include all credible scenarios, right, all credible risk, all
7 credible scenarios. So LMCS, in their risk assessment, would
8 have in their minds, right, being the experts, right, in this job,
9 because we hire them to do this job, so they would have, right,
10 identified, as they should have done, they should have
11 identified all credible risk. Paria, in reviewing those—well,
12 they should have identified all credible risk, that was their duty,
13 and plan emergency responses for those risks and also plan
14 mitigation strategies.

15 Paria, not being the expert in diving or in this particular job, Paria in
16 reviewing those risk assessments and those emergency response
17 plans which go with those risk assessments, Paria will look for
18 what are the obvious operational type risk, right, but they will
19 not be able to identify the specialized risk, right, so it is in that
20 vein that Paria would have reviewed those risk assessments and
21 emergency response plans.

22 Q. But this contract could not have been given to LMCS unless
23 Paria had accepted the risk assessment?

24 A. That is correct. Once the—that is correct, once LMCS
25 identified as the specialist contractor. Once they identified the
26 credible risk which Paria is not in a position to do necessarily,
27 Paria will again, as I said, look at the operational risks, identify

1 them, ensure that they're identified that we are aware of the
2 obvious risks.

3 Q. So—

4 A. Once that is done, then we will be in a position to say, okay,
5 this seems okay to us.

6 Q. So you depended on LMCS to identify the risks?

7 A. We depended on LMCS to identify all credible risk, yes, Sir.
8 That is what would have been done.

9 Q. But during the discussions with LMCS, do you have any
10 documents, I haven't seen any, that you made that clear to
11 LMCS?

12 A. So, as I said, Sir, this, this contract was done under the
13 technical and maintenance department. I was not involved in
14 that contract preparation.

15 Q. But you are a member of the management tenders committee
16 that approved the award of this contract?

17 A. Yes, Sir, that is correct.

18 Q. As a matter of fact, you have said that at paragraph 12
19 subparagraph two of your witness statement at page 1348?

20 A. Yes, Sir, that is correct.

21 Q. So you are—you represented to your company that this contract
22 was okay, you were happy with the risk assessment, you were
23 happy with the emergency response plan?

24 A. Right. In, in—when, when, when contracts are presented to the
25 management tenders committee, right, those contracts, they
26 will, they will not go through risk assessments. The presenters,
27 which in this case will be technical and maintenance

1 department, they will not go through those risk assessments
2 what—to the management tenders committee. They will not
3 present that. What they will present is that they have gone
4 through the evaluation criteria, they would have assessed and
5 they would have identified that the contractor has met the
6 scores, he has been successful in the particular areas. That is
7 what they will present. The management tenders committee
8 will not dig down into those details of the contract. And, of
9 course, we will also look at the value of the contract.

10 Q. Would you agree with me that Paria represented that it had the
11 experience to review and determine the method statements in
12 the case, in this contract?

13 A. Paria is not an expert diving contractor or an expert—does not
14 have the expertise in this job. Paria therefore hired a contractor.

15 Q. Who was that contractor?

16 A. They expected—LMCS—with the expectation that the
17 contractor provides that expert knowledge and the execution of
18 that contract.

19 Q. Okay. I'm asking you a question, would you answer me? Did
20 Paria represent that it had the experience to review and
21 determine, to accept the method statements in this contract?

22 A. Insofar as the obvious risks are.

23 Q. Did it qualify its acceptance and say insofar as the obvious
24 risks? Is there any document you know of?

25 A. Sir, that would be technical and maintenance will have to—

26 Q. Okay.

27 A. —answer that.

1 Q. All right.

2 A. I cannot answer that.

3 Q. Well, well, Paria has produced all the documents to us about
4 this contract, and would you accept it that you have not seen
5 any such document of qualification.

6 A. Sir, I did not review the documents.

7 Q. Okay. Would you agree that Paria represented that it had the
8 experience and knowledge to accept the risk assessment of the
9 works of this contract?

10 A. Sir, I will repeat, the contractor was obligated to provide all
11 credible risk. If it's not provided, Paria will not be able to
12 identify those risks—

13 Q. Okay.

14 A. —and we deal with the obvious risks that we would know—

15 Q. Okay.

16 A. —in the industry.

17 Q. We have the documents in this matter, Mr. Piper. Since you
18 were on the management tenders committee, was anywhere in
19 the invitation to bid or any—in any of the pre-award documents
20 and discussions did Paria represent that it did not have the
21 requisite expertise to vet and approve all aspects of this
22 contract?

23 A. Not to my knowledge, Sir.

24 Q. Not to your knowledge. If Paria, as you are saying, considered
25 it did not have such expertise to vet this contract, the risk
26 assessment, the method of work, the emergency response plan,
27 could it not have retained experts to assist it to vet it on their

1 behalf, on its behalf?

2 A. That is, that is a possibility. However, this contractor had
3 performed works like this in the past and successfully, so this—
4 it was considered that this contractor knew exactly—knew what
5 he was doing. So, we didn't see that as necessary. This
6 contractor is an experienced contractor in the marine industry—

7 Q. Okay.

8 A. —and indeed in the port.

9 Q. So you're telling us that because this contractor did work for
10 you in the past, you did not think it was necessary to retain
11 experts to assist Paria in vetting the contract?

12 A. Yes, Sir, I did not think it was necessary because the contractor
13 came with a wealth of experience in these types of works.

14 Q. Would you not agree with me also that Paria could have even
15 had an expert client representative on its behalf to oversee the
16 pre-contract stage, the contract stage and the execution of the
17 contract?

18 A. Again, this—if we thought that was necessary, because a
19 contractor did not have the experience, we would have so done.
20 In this case, this contractor had a wealth of experience. This
21 was not the first time this contractor was doing a job of this
22 type. This is not the second nor the third time. This contractor
23 had a wealth of experience so we did not see that as necessary.

24 Q. On hindsight, would you agree that that is what Paria should
25 have done, have experts, retain experts, to advise it in the
26 vetting of the contract in overseeing the works, since they did
27 not have—since you are saying here today that Paria did not

1 have the competence and the expertise—

2 A. But the contractor did, Sir.

3 Q. —to vet it?

4 A. The contractor had the expertise and the competence.

5 Q. So you still maintain that, the contractor had the expertise.

6 A. The contractor was very experienced in this type of work.

7 Q. Are you maintaining that the contractor had the expertise to vet
8 this contract and to monitor the contract?

9 A. Yes, Sir.

10 Q. Okay. And also to monitor the risk assessment?

11 A. The contractor was supposed to provide all credible risk. This
12 is an experienced contractor in this field, and he had done
13 several jobs of this nature before.

14 Q. Now, you are the head man, the chairman or the, the, the—the
15 head person in the IMT, not so?

16 A. The Incident Commander in this case, yes, Sir.

17 Q. Yes. And, um, would you agree that the first priority of the
18 IMT, and you as head of the IMT, in, in, in, um, in dealing
19 with, um, managing the incident command system, is to
20 safeguard human lives?

21 A. Yes, Sir.

22 Q. Yes. And would you agree with me that on that date with this
23 accident—

24 A. Uh-huh.

25 Q. —when it occurred and when you knew that it was occurred—
26 when you knew it occurred, and when you found out that Mr.
27 Boodram emerged from the pipeline, that it was very important

1 for you and the IMT to take urgent steps to see whether you
2 could have saved human lives?

3 A. Yes, Sir.

4 Q. Right. Now you would agree with me that you found out—
5 well, around what time you found out about Mr. Boodram's
6 emergence?

7 A. When Mr. Boodram emerged from the pipe I found out around
8 1736, that is 5.36 in the evening.

9 Q. And, um, you knew, you knew that during that afternoon or
10 during that afternoon going into the evening—

11 A. Uh-huh.

12 Q. —that LMCS had divers who were prepared to go into the
13 pipeline to do a rescue?

14 A. Yes, Sir.

15 Q. And around what time you first knew that?

16 A. I was—I, when I, when I first spoke to Mr. Kazim Ali, which
17 was around, just around between 1520 to 1530, around there,
18 maybe 1525, he—when I first spoke to him, he told me—I
19 asked him which divers he had on site. He told me he had
20 Andrew Farah, the dive supervisor, so I know he had a
21 supervisor on site at that time. Right? He also told me when I
22 asked him, he said he had divers on the way, divers who are on
23 the way, right.

24 Q. So—sorry.

25 A. Go ahead?

26 Q. Sorry.

27 A. Right. So he told me he had divers on the way. When I arrived

1 at the ICT, right, I also, because we were not getting
2 information, and I suppose we'll deal with it after, I asked Mr.
3 Farah to come and see me, at which case they said they had
4 knocking on the pipe. I instructed for Mr. Farah to return and I
5 understood at that time they had some additional divers arrive
6 on site. Yes, Sir.

7 Q. Okay, I'll come back to this but I want to ask you one question
8 before I go on to another topic, all right?

9 A. Go ahead.

10 Q. At some time during that evening—

11 A. Yes, Sir.

12 Q. —you knew that LMCS had equipment, commercial air supply
13 equipment, had experienced divers and had divers willing to go
14 into the pipe, and you took the position, and the IMT took the
15 position that it was not safe for them to go into the pipe?

16 A. Yes, Sir.

17 Q. When did you decide, after Mr. Boodram's emergence from the
18 pipe, when did you decide that it was not safe for them to go
19 into the pipe?

20 A. All right. Sure, if I may, if I may?

21 Q. I'm asking around what time.

22 A. Or, around what time?

23 Q. Yes.

24 A. This would have been around 1825.

25 Q. That is around 6.00 p.m.?

26 A. Around 6.25 when I understood that I was advised, I believe by
27 Mr. Visham Harrichan, that a diver had entered into the

1 pipeline. I believe—I don't know if at that point in time he said
2 it was his father, but a diver had entered into the pipeline. At
3 that point in time, Sir, I told Mr. Harrichan, listen, we don't
4 know the conditions in the pipeline, the coast guard had also
5 indicated we don't know the conditions in the pipeline.

6 Clearly, at that time, we did not know what had caused the accident.

7 We did not know at that time what the condition in the pipeline
8 was. We did know that there was oil in the pipeline. Right?
9 We did understand at that time there were men in the pipeline.
10 So we didn't know where the men were in the pipeline, we
11 didn't know how much oil was in the pipeline so there were
12 several unknowns to us in that pipeline.

13 This, this is a confined space. This is not an ordinary space, Sir. This
14 is a confined space of quite a magnitude. All right? So this is a
15 30-inch pipeline which is a quarter of a mile long. That is an
16 oil pipeline, a few oil pipeline. That is not a simple space for
17 someone to go in for any reason. So, I took the decision at that
18 point in time to pause. What I was—had to pause because
19 we—

20 Q. To pause?

21 A. —we needed to assess.

22 Q. You needed to assess?

23 A. And—

24 Q. What you wanted, um—

25 A. If I may, if I may finish?

26 Q. What you wanted, a method statement?

27 A. No, Sir. If I may finish?

1 **Mr. Chairman:** No, you, let, let him, let him finish what he
2 has to say.

3 **Mr. Maharaj SC:** Okay.

4 **Mr. Chairman:** You were saying you paused.

5 **Mr. Piper:** Yes, Sir.

6 **Mr. Chairman:** Right, take it from there, please?

7 **Mr. Piper:** Sir, in an emergency response, the worst thing you
8 can do in an emergency response is to act, is to act instinctively
9 and to act emotionally. That is the worst, that is the, that is the
10 absolute way you should not respond in an emergency, and
11 definitely in this case. You don't respond like that in an
12 emergency, and therefore, I had no choice but to say stop. We
13 NI need to assess. We need to understand what is going on. So
14 I took that decision, as difficult as that decision was. Don't
15 believe for one minute that was a simple decision.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. And you—

18 A. That was a—that was an extremely difficult decision, but at that
19 point it was the decision that had to be taken.

20 Q. So you took that decision at 6 what, at 6,25?

21 A. At 6.25, Sir.

22 Q. Six twenty-five a.m. You knew then that—sorry, p.m., so
23 sorry. You knew then that Christopher Boodram had come out
24 of the pipeline about an hour before?

25 A. Yes, Sir.

26 Q. You said you wanted to know the condition in the pipeline?

27 A. Yes, Sir.

1 Q. Did you make urgent efforts to get that condition from Mr.
2 Boodram?

3 A. When Mr. Boodram came ashore, right, he was brought out and
4 he was covered in oil. Right? Mr. Boodram was placed on our
5 LMC—on our launch, Paria's launch, and he was taken ashore.
6 He was rushed ashore, right? During that time they were
7 trying, we had one of our safety guys talking to Mr. Boodram.
8 The information coming to me, right, from, from on the scene
9 was that he said the men are there. The men in the pipeline,
10 right, and go get them.

11 When Mr. Boodram was brought ashore on the launch, you will
12 understand Mr. Boodram was in that pipeline for some two and
13 a half hours, right? Mr. Boodram, therefore, would have been
14 in a traumatic condition. When he was brought ashore, we had
15 our safety person there, Mr. Yearwood, to receive him ashore.
16 Mr. Yearwood tried speaking to Mr. Boodram and Mr.
17 Boodram just kept repeating, "They're in the pipeline. They're
18 in the pipeline. Go get them." Right?

19 The GMRTT ambulance, right, he was moved very quickly from the
20 launch, of the launch control, um, and I know Commissioner
21 you had visited so you may be able to envisage what I'm
22 saying. From the launch, they took him off the launch and
23 rushed him into the ambulance, and within a minute or so Mr.
24 Boodram was out of there. Mr. Yearwood did request to the
25 GMRTT EMTs for somebody to accompany Mr. Boodram and
26 he was denied. He did try, in that little moment, speaking to
27 Mr. Boodram and all he got from Mr. Boodram was they're in

1 the pipeline, in the pipeline. Right?

2 He did not believe Mr. Boodram was—he, he—well, he, he, he was
3 not—Mr. Boodram was not clear of time, of time and place, so
4 he, you know, he was still trau—he was in a traumatized state,
5 right? And you would appreciate that the primary concern for
6 Mr. Boodram at that time was his wellbeing by the GMRTT
7 attendants. That was their primary concern for Mr. Boodram,
8 Sir.

9 Q. But according to you, it was important to get information about
10 the condition of the pipeline—

11 A. Yes, Sir.

12 Q. —in order for you to make a determination or whether you
13 would send rescue divers into the pipeline, and you wanted to
14 know the condition of the pipeline, correct?

15 A. Yes, Sir.

16 Q. But, am I correct that you did not have anyone from the IMT or
17 anyone from Paria talk to Mr. Boodram on the way to the
18 hospital?

19 A. Sir, I just said that we were not—we requested that someone
20 accompany Mr. Boodram in the ambulance to the hospital. Mr.
21 Year would made that request and that request was denied.

22 Q. Well I looked at the records that Paria submitted to us in this
23 Enquiry and I haven't seen any documents to that effect. Did
24 you all make a note, a contemporaneous note, that that request
25 was made?

26 A. No, I did not make a note.

27 Q. Because I've also checked the IMT records that Paria has

1 disclosed and I see nothing of that effect. Do you know
2 whether any written record was made that Paria or you or the
3 IMT requested just to send someone to accompany Mr.
4 Boodram to find out important matters to save people lives?
5 Do you know whether—

6 A. No, Sir, I cannot say I came across that record.

7 Q. You didn't come across that record? Did you—

8 **Mr. Chairman:** Just before you move on, please?

9 **Mr. Maharaj SC:** Sorry.

10 **Examination By Mr. Chairman:**

11 Q. Can I just ask you, and to be clear about this, did Mr. Yearwood
12 tell you that he had asked to accompany Mr. Boodram in the
13 ambulance so that he could speak to him, or did you instruct
14 Mr. Yearwood to ask to go in the ambulance?

15 A. Mr. Yearwood—

16 Q. [*Inaudible*]

17 A. Mr. Yearwood advised me.

18 Q. So—

19 A. Yes.

20 Q. —let's be—so that I am clear, because Mr. Yearwood is yet to
21 give evidence, I want to be clear, it was of his own initiative
22 that he sought to go with Mr. Boodram in the ambulance to the
23 hospital?

24 A. It's either he sought to go or I believe he sought to send one of
25 his EMTs into the ambulance.

26 Q. Right, either by himself or one of his own people?

27 A. Yes, Sir.

1 Q. And was it your understanding the purpose of that was to try, at
2 least en route, to gain as much information as you could from
3 Mr. Boodram about the condition of the pipe?

4 A. Of course, yes, to get information, yes.

5 Q. So what's clear is this, that whether it was your initiative or Mr.
6 Yearwood's, you were being thwarted in that purpose because
7 the ambulance people said no?

8 A. Yes, Sir.

9 Q. And just to follow up from that, once that was—well, did Mr.
10 Yearwood tell you that straight away?

11 A. I know he came to, he came to see me, right, immediately after
12 he came to see me and he probably would have told me then.

13 Q. Straight away, right. I mean, that doesn't—unfortunately in
14 your 250 odd paragraphs of your statement, none of that
15 features in there, does it?

16 A. Yes, yes, I'm sorry, Sir.

17 Q. No, no, all right. So it's an omission?

18 A. Yeah.

19 Q. Because, clearly, you would have regarded it as crucial,
20 notwithstanding his disorientation, to seek to obtain as much
21 information as you possibly could from Mr. Boodram?

22 A. Of course.

23 Q. Yes. Because uniquely you had someone who'd been in that
24 pipeline for several hours to have been able to inform you as
25 much as he possibly could about the conditions and the other
26 men that were in there?

27 A. Yes, um, yes, Sir, yes, Sir. Right? Um, yes.

1 Q. All right? I understand what you're saying.

2 **Mr. Chairman:** Thank you very much.

3 **Mr. Maharaj SC:** Much obliged.

4 **Examination By Mr. Chairman:**

5 A. I did make several calls to the on scene people, I made some
6 calls to the on scene people to find out if any—what
7 information they would have garnered from Mr. Boodram.

8 Q. On scene people, what do you mean?

9 A. Sorry, on the site. On the site I made a—

10 Q. Berth 6?

11 A. Yes, at berth 6—

12 Q. Right, okay.

13 A. —right, who had seen him coming up.

14 **Continued Examination BY Mr. Maharaj SC:**

15 Q. But you were the head of the IMT?

16 A. Yes, Sir.

17 Q. Right. According to you, he was not permitted, someone was
18 not permitted to be in the ambulance with him? He was in—

19 A. That is what I was advised, yes, Sir.

20 Q. Yeah, he was in the hospital?

21 A. Yes, Sir.

22 Q. Did you make effort for someone to visit him in the hospital in
23 order to get information?

24 A. Yes, Sir.

25 Q. As to the condition in the pipeline?

26 A. Yes, Sir, we sent someone to the hospital.

27 Q. To get information on the condition of the pipeline?

1 A. We sent someone to the hospital so that we can—we wanted to
2 speak to Mr. Boodram correctly.

3 **Examination By Chairman:**

4 Q. Time, time when?

5 A. I cannot recall what time exactly that I would have sent
6 somebody, asked somebody.

7 Q. Let me be clear again, please?

8 A. Yes.

9 Q. This was upon your instruction, someone should go to the
10 hospital to take as information as they can from Mr. Boodram?

11 A. No. I needed—we needed to speak to Mr. Boodram.

12 Q. Yes.

13 A. Yes.

14 Q. To get—it's not no point in talking at him. You wanted him to
15 respond?

16 A. Yes, yes, yeah.

17 Q. Well, so you wanted answers from him if he was able to give
18 them?

19 A. Correct.

20 Q. Right. So, um, we've had some evidence, you see, that Mr.
21 Boodram, whilst a little disoriented, obviously upset, was lucid,
22 conscious and not overly injured. Did you understand that?

23 A. Yeah. I understood, I understood that he was not overly
24 injured, he seemed to be okay, his skin was burning, his eyes
25 and mouth and so on, so, um—

26 Q. He was not in a good way?

27 A. Yes.

1 Q. I think we all—

2 A. No, no, no.

3 Q. I think we [*Inaudible*] that.

4 A. He just—and he just kept repeating, repeating himself.

5 Q. Yeah, well, all right.

6 A. Yes.

7 Q. But you, so that I'm clear, you, you wanted someone to go to
8 the hospital and dispatched someone to go to the hospital for
9 that purpose?

10 A. Yes, Sir.

11 Q. Right. Can you recall when that was?

12 A. I cannot recall the time but I must say it was not immediately.

13 Q. Right, not immediately?

14 A. Yes.

15 Q. Is this something that ought to have appeared in your log?

16 A. I—it should have but I don't—I remember I think—I don't
17 know if it is in the log—

18 Q. I do.

19 A. —the time. Yes.

20 Q. It isn't.

21 A. I can't tell you that. Okay, but I did request somebody go to
22 speak to him.

23 [*Crosstalk*]

24 Q. If it is, then I'm happy to be corrected. Anyway you said you
25 should—you sent someone to go to the hospital to—

26 A. Yes.

27 Q. —obtain information from him?

1 A. Yes, Sir.

2 Q. And that you can't recall when that was but it was not
3 immediately?

4 A. That's correct.

5 Q. We know that I think somebody did speak to him around ten
6 o'clock that night?

7 A. I did speak to him in the presence of, um, some of the IMT
8 members.

9 Q. Right. Was that then shortly before that time that you sent
10 someone to the hospital?

11 A. No, it was maybe a couple hours before then.

12 Q. Before that?

13 A. Yes.

14 Q. Thank you. All right, so just so that I have a timeline. So, um,
15 about four hours passed between him coming out of the pipe
16 and you speaking to him a bit more than that but roughly four
17 hours?

18 A. Yes.

19 Q. So about halfway through that time you would have dispatched
20 someone to the hospital?

21 A. It is possible about halfway, Sir.

22 Q. All right, thank you.

23 **Mr. Chairman:** All right, well, um, counsel, Mr. Peterson, I
24 think if you or Mr. Mootoo are able to point me in the right
25 direction of this then I'll be happy to be corrected.

26 **Mr. Peterson SC:** It's somewhere in my mind, yes.

27 [*Inaudible*]

1 **Mr. Chairman:** All right, thank you.

2 **Mr. Peterson SC:** [*Inaudible*]

3 **Mr. Chairman:** Yeah, what concerns me is that you probably
4 have more stuff than I do.

5 **Mr. Peterson SC:** No, Sir. You have everything there.

6 **Mr. Chairman:** All right.

7 **Mr. Peterson SC:** Now you have everything there.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Okay, according to Mr. Yearwood, in his witness statement at
10 paragraph 33, at page 1307, you said:

11 “At about 9.53 p.m., on the 25th of February, I received a
12 call from Shan Balkissoon, HSE technician Kenson on
13 my cell phone. At the time he indicated he was in the
14 San Fernando General Hospital with Christopher
15 Boodram. A person who identified himself as
16 Christopher Boodram was put on the line and spoke to
17 me. Mushtaq Mohammed, Collin Piper and Nerissa
18 Feveck were in the room at the time of this call which
19 was on speaker and audible to all parties.”

20 So this was at 9.53 p.m., correct?

21 A. Yes, Sir.

22 Q. About—

23 A. Well, er, it was about that time, around ten o'clock, yeah.

24 Q. So that's about three hours after?

25 A. Yes, Sir.

26 Q. Yeah. Now, in the timeline that Paria has given us at core
27 bundle Volume II at page 1091, for the 25th of February, at

1 16—at 8.10 hours, 1810 hours, that is 6.10—

2 A. Uh-huh.

3 Q. —that is almost three columns to the end of the page:

4 “C. Boodram tended to by EMTs at”—I suppose is the
5 hospital—“government ambulance. Treated for muscular
6 injury. Patient was alert and conscious. Complained on
7 pain on right shoulder.”

8 So would that indicate that he was—at 6.10 he was conscious,
9 he was alert, he, he was—in effect you could have got
10 information from him?

11 A. My information is, Sir, when the EMT, when our EMT went
12 into the hospital to try to speak with Mr. Boodram, he made
13 several attempts and he was unable to speak to Mr. Boodram
14 for quite a while, while they were attending to him.

15 Q. Who was that person?

16 A. Um, I believe it was Shan Balkissoon. I’ll have to confirm. Or,
17 or, Shan or Shane Ramkissoon. I have to confirm, Sir.

18 Q. Well would you have considered that very important for the
19 IMT to be able to inform this Commission that attempts were
20 made to speak to Mr. Boodram very early?

21 A. Yes, yes, Sir, I—it’s an omission in—yeah.

22 Q. And therefore, would you not—would have wanted to get a
23 statement from this gentleman so that we will be able to
24 interview him and be able to assess his evidence?

25 A. I don’t know if he provided a statement, Sir.

26 Q. He did not.

27 A. Okay.

1 Q. And Paria did not provide any statement of him.

2 A. Yes, he's a Kenson employee, Sir, yes.

3 Q. Kenson but it's Kenson slash Paria?

4 A. Yes, Sir, yes, I was not in—

5 Q. Kenson employee—

6 A. Yes, Sir. Yes, Sir.

7 Q. —employed at Paria?

8 A. Yes, Sir. I was not involved—

9 Q. And take instruction from Paria?

10 A. Yes, Sir.

11 Q. All right. But apart from Boodram, you—based on your
12 evidence you have given us, you knew that another diver had
13 gone into the pipeline?

14 A. Yes, Sir.

15 Q. Shortly after Boodram came out?

16 A. Yes, Sir, I believe Mr. Michael Kurban.

17 Q. Kurban. And he had reached some distance in the horizontal
18 section of the pipeline?

19 A. I believe it's about 10 to 15 feet, Sir, yes, Sir.

20 Q. And based on the information you had, he was prepared to go
21 back in and get longer umbilical?

22 A. Yes, Sir.

23 Q. But you stopped the diving in the pipeline?

24 A. Yes. I told them to stop diving. It was dangerous.

25 Q. Did you make any attempt to talk to Mr. Boodram to find out
26 the condition in the pipeline—according to Kurban—

27 A. Mr. Kurban—Mr. Kurban, Sir.

1 Q. Mr. Kurban, sorry.

2 A. Yeah. Right. So, Sir, this pipeline is quarter of a mile long.
3 Right?

4 Q. I know the length, Mr.—

5 A. Yes, Sir. Sure.

6 Q. I'm asking you a different question.

7 A. Sure, yes. No, I did not speak to Mr. Kurban, Sir, right? I
8 knew, I knew he went down the vertical and about 10 feet along
9 the horizontal. I was told he found a—I was told he found a,
10 um, face shield and a tank and he came back out. Right?

11 Q. But from the information you got—

12 A. Yes.

13 Q. —he was not injured in the pipeline?

14 A. No, Sir.

15 Q. He was okay?

16 A. Yes, Sir.

17 Q. He wanted to go back in again?

18 A. I understand.

19 Q. Yeah.

20 A. But Sir—

21 Q. And—but you made a decision—

22 A. Yes, Sir.

23 Q. —for him not to go back without finding out from him whether
24 inside the pipeline was safe for a diver to go back in?

25 A. Right. Sir, going down that vertical and going 10 feet along
26 that horizontal, there is no way Mr. Kurban could, from that,
27 tell me if that pipeline is safe. That is not possible. But the

1 length of that pipeline he just saw, he just saw the very end of
2 that pipeline. He could not assess inside that pipeline, Sir.

3 Q. Mr. Piper, but you had known that afternoon that Mr. Boodram
4 had reached some distance in the pipeline?

5 A. Yes, Sir.

6 Q. And he came back alone—well he came back without any
7 rescue in the pipeline.

8 A. Yes.

9 Q. And he found no obstacles.

10 A. I don't know that, Sir.

11 Q. No, but based on what you got information, did he find any
12 obstacles to prevent him from coming out of the pipeline?

13 A. He did not, he did not indicate that, Sir.

14 Q. He did not indicate that to you?

15 **Examination By Mr. Chairman:**

16 Q. Well, as a matter of logic, he obviously didn't have an obstacle
17 from prevented him from coming out.

18 A. Exactly.

19 Q. Because he came out.

20 A. Exactly.

21 Q. Right, so, you could make certain deductions of—

22 A. Of course, Sir, yes.

23 Q. Yes, thank you.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. Are you a diver?

26 A. No, Sir.

27 Q. So you have no experience in diving?

1 A. I did a lil PADI course one time, um, I've never had to dive
2 since, so, I am not a diver.

3 Q. So, so you—that decision you made when Mr. Kurban wanted
4 to go back in the pipeline, that was made around what time?

5 A. As I said, um, it was around 1825, 6.25 p.m.—

6 Q. Around 6.25?

7 A. —when I was advised that people were going in.

8 Q. And you were advised. Who were you advised by?

9 A. Mr. Visham Harrichan told me people, yes he understood men
10 were diving into the pipeline.

11 Q. No, what I'm asking you, who—you made the decision to stop
12 the diving?

13 A. Yes, Sir.

14 Q. And stop Mr. Michael Kurban going back into the pipeline?

15 A. Yes, Sir.

16 Q. On what basis you made that decision? On the same basis that
17 the, that the pipeline might be dangerous, inside the pipeline
18 might be dangerous?

19 A. Sir, I've been in this industry for 45 years. Right? And I think
20 we need to understand what we are dealing with. I've served
21 on tankers, right, for eight years and I've been in this petroleum
22 industry for 45 years. All my life in this industry, confined
23 space entry has taken lives. Confined space entry is not
24 something you take lightly. And in this industry lives are lost
25 regularly with people entering into confined spaces out of
26 emotion and out of instinct, not understanding the dangers in
27 confined spaces.

1 So, based on that, I am not a diver but this was a confined space inside
2 a 30-inch pipeline, the conditions of which we did not know but
3 we knew it had oil in the pipeline, right, we knew the plug—we
4 assumed the plug went in the pipeline. We did not know if that
5 pipeline was stable, right? It is based on that that Paria could
6 not sanction somebody going into that pipeline so that is—that
7 was a dangerous, extremely dangerous space.

8 Q. I just want to get it clear from you. You did not get any expert
9 advice at that time to make the decision for Mr. Michael
10 Kurban not to go back into the pipeline?

11 A. Sir, I did not, and I will repeat, Sir, I did not get any expert
12 diving advice but this was a confined space—

13 Q. So Mr. Piper—

14 A. —and I've been in this industry for 45 years.

15 Q. Mr. Piper, would you not agree with me, there are many rescues
16 made from people, divers, in confined spaces? I have read. I
17 am not a diver.

18 A. Yes, Sir.

19 Q. But I have read—

20 A. Yes, Sir.

21 Q. —and there are many rescues from people who were in trouble
22 in confined spaces.

23 A. Yes, Sir and—

24 Q. So you are telling us that, yes, it can be dangerous; yes, people
25 can get into difficulties but would you not agree that there have
26 been rescues effected from persons who ended up in difficulties
27 in confined spaces?

1 A. And I will also agree, I will also agree that more rescuers die in
2 confined spaces in the maritime industry than people who are
3 saved.

4 Q. But I want to ask you this.

5 A. That's the victims.

6 Q. I want to ask you this.

7 **Mr. Peterson SC:** Mr. Chairman the document, sorry to
8 interrupt, the document you had asked us to try to locate, it's at
9 page 1573 of the ICT bundle, before my learned friend moves
10 on to another area. ICT bundle at page 1573, before my learned
11 friend moves on to another area, so I thought we'd bring it to
12 your attention. It shows 2035 hours. Yeah, that's—I think
13 that's what you are looking for, Sir.

14 **Mr. Chairman:** For what time, what time?

15 **Mr. Peterson SC:** Twenty thirty-five, 203.

16 **Mr. Chairman:** Thank you very much. I'm much obliged to
17 you. That—so that's at 2035, just, so that we go back on it
18 because I'd misrepresented the position, all right?

19 **Examination By Mr. Chairman:**

20 Q. Mr. Balkissoon, that's Shan Balkissoon, he's a health and
21 safety officer isn't he?

22 A. Yes.

23 Q. Does he work—

24 A. Yes, Sir, He's an EMT—

25 Q. All right.

26 A. Kenson with Paria.

27 Q. Right, he works for Paria and he was asked or he did proceed

1 then to the hospital to interview Mr. Boodram?

2 A. Okay.

3 Q. Thank you very much.

4 **Mr. Chairman:** Let me just make a note of that. Thank you,
5 Mr. Peterson.

6 **Mr. Peterson SC:** You're welcome, Mr. Chairman.

7 **Mr. Chairman:** Thank you. I'm sorry Mr.—

8 **Mr. Maharaj SC:** I think you were going to ask the witness a
9 question about the accidents in maritime—I don't know
10 whether you still want to pursue that.

11 **Mr. Chairman:** Well, no, no. I was just a little surprised by
12 the assertion made that more people have died than have
13 been—that have died trying to carry out a rescue than were
14 actually rescued.

15 **Examination By Mr. Chairman:**

16 Q. Is that, is that correct?

17 A. Sir, um—

18 Q. Where did you get that from?

19 A. It would be, I think it's OSH or NIOSH, right, NIOSH did a
20 report in 1986. Right? Some of the stats in that report they
21 looked at, they looked at accidents.

22 Q. OSHA?

23 A. It wasn't—this is, this is not the maritime industry. I'm just
24 giving a reference and I'll come back. They did a report,
25 NIOSH, National Institute Occupational Health and Safety,
26 Safety and Health in the US, in 1986 they did a report spanning
27 for the last up I think to 1983, there were eight incidents in

1 enclosed spaces, 16 deaths, and of those 16 deaths 10 would be
2 rescuers. All right? In the maritime industry, I will give you
3 two cases, that happened recently, right?

4 Master of a vessel there, one seaman went into a tank, right? He was
5 overcome. The master of the vessel rushed into the tank,
6 despite, despite warnings that he should not, and they had to lift
7 both of them out. Both of them died. Right? There's was a
8 recent case in 2018 where a seaman was trapped, not trapped,
9 he was overcome in a chain locker, right, which is a small,
10 relatively small compartment on a vessel. Two men rushed in.
11 One raised the alarm and rushed in. He was also overcome and
12 died, and then the guy who came to save him he was also
13 overcome and died. Right? So these are regular occurrences in
14 the maritime industry.

15 Indeed, Sir, deaths in confined spaces are one of the major causes of
16 deaths in the maritime industry. And a number of those deaths
17 are rescuers. So warnings continually go out against the people
18 acting on emotion and instinct rather than knowledge and
19 experience and training. That—it is a regular cry in the
20 Maritime industry.

21 Q. Well that's very helpful. Obviously there's a distinction
22 between the untrained rescuer and the trained rescuer.

23 A. Yes, Sir.

24 Q. So that—

25 A. Yes.

26 Q. We all might feel compelled to rush into a burning house if we
27 hear a baby crying. We might be overcome whereas the, the

1 fireman—

2 A. Yes.

3 Q. —might not be. Yes, all right, thank you.

4 A. Right? In fact, Sir, if I may add, um, the marine accident
5 investigation branch in the UK in—they recently in their
6 international forum, they started researching and between 1991
7 and 2007, they asked different flag states seafaring
8 administrations, they wanted to get an idea of confined space
9 deaths and 18 states at the time of writing the report had
10 submitted, and there are many more states. and of the 18 states
11 they identified 120 deaths in confined spaces with 123 injuries.
12 It is a very serious issue in the maritime industry.

13 Q. Are you saying that this is something that—confined space
14 deaths are such now that they're so prevalent it should be
15 addressed in your own reports, your own, um, risk assessments
16 and, er—

17 A. Well, yeah, right, to enter any confined space in Paria we also,
18 we also take great precautions for entry into confined spaces.

19 Q. Yes. I mean, I'm just looking at—you've given us some
20 helpful information about historical position of deaths in
21 confined spaces and what must have been prevalent in your
22 own mind about whether to proceed or not with a rescue, but,
23 none of that seems to be contained in any of the documentation
24 that you have as part of the, um, of the, er, way in which that
25 Paria operates and how people should operate with Paria. Is
26 there any specific addressing confined spaces?

27 A. Right. So, the HSE will be able to provide that documentation

1 but I—but when we enter confined spaces in tanks and so on,
2 because we're doing tank cleaning, right, we have particular
3 procedures we follow for entry into confined spaces for rescue
4 into confined spaces and so on.

5 Q. Yeah. That was never addressed? Confined space rescue was
6 never addressed in this matter, though, was it?

7 A. If you'll explain Sir, what you mean?

8 Q. Well, leave aside the pipe for a minute.

9 A. Or yeah.

10 Q. There was a habitat which is a confined space, isn't there?

11 A. Correct.

12 Q. Yes.

13 A. Yes.

14 Q. And was that addressed as a potential issue?

15 A. Right, so, yes, there was continuous, continuous monitoring—

16 Q. Monitoring?

17 A. —of the confined space, Sir, yes; monitoring of the air quality.

18 Q. I imagine, yes. Well, air quality is one thing but yes.

19 **Mr. Chairman:** Thank you.

20 **Mr. Maharaj SC:** Much obliged.

21 **Continued Examination By Mr. Maharaj SC:**

22 Q. But I don't want to—remember the last question I asked you
23 was, and you said that you did not get expert advice to stop
24 Michael Kurban from diving into the pipeline and then you told
25 us about all the incidents of maritime. So am I correct in saying
26 that you didn't get expert advice and you relied on your own
27 tuition and what you knew about maritime accidents in

1 confined spaces?

2 A. Sir, I did not get any diving expert advice, right, I did not rely
3 on my own intuition. I relied on my knowledge and experience
4 of 45 years in the maritime industry.

5 Q. But you knew you were making a decision which impacted
6 whether persons live or die?

7 A. Yes, Sir.

8 Q. And you were prepared, in making that decision, to rely on
9 what you have just told us?

10 A. It is a real problem in the industry, Sir.

11 Q. I see.

12 A. It is a real issue. Also, if I may, you put it that I made a
13 decision and someone would live or die. I would like to—I
14 would like us to understand that that decision also applies to the
15 responder.

16 Q. To the?

17 A. To the responder, the rescuer. That decision also applies to the
18 rescuer, Sir.

19 Q. What you mean by that?

20 **Mr. Chairman:** Whether he lives or dies.

21 **Mr. Maharaj SC:** Whether—you mean whether—

22 **Mr. Chairman:** The rescuer himself.

23 **Continued Examination By Mr. Maharaj SC:**

24 Q. —the rescuer lives or die?

25 A. Yes, Sir. That is what I'm saying. Rescuers die very often.

26 Q. So what—

27 A. And, and it is—there's always—they are always clear. Would-

1 be rescuers, right, they go in there on instinct and emotion and
2 they perish because they don't—not going in on knowledge and
3 training, so that decision was made with the rescuer as well in
4 mind.

5 Q. Okay. Let's go to—I'll come back to some of that—

6 A. Sure.

7 Q. —but I want to get, get some—let's deal with some of the
8 duties. Would you agree that Paria had a control work system
9 in respect of this contract?

10 A. Yes, Sir.

11 Q. And that Paria supervised the works? I talked to you about
12 entering the contract but Paria supervised the works?

13 A. Yes. Paria will have a supervisor to supervise the works and
14 coordinate the works, yes, Sir.

15 Q. Right. And it performs a supervisory role and you would have
16 known about the permit to work procedures?

17 A. Of course.

18 Q. Right. And, in this matter, in respect of these particular works,
19 I want to point out to you to paragraphs 22 and 23 of Mr.
20 Michael Wei's witness statement.

21 A. Page, please?

22 Q. Page 1276. And would you read it and then I'll ask you
23 whether you agree with what I'm—

24 **Mr. Chairman:** Which paragraphs are we dealing with?

25 A. Which paragraph?

26 Q. Paragraphs 22 and 23.

27 **Mr. Chairman:** Right.

1 **Mr. Maharaj:** At 1276.

2 **Continued Examination By Mr. Maharaj SC:**

3 Q. Okay?

4 A. Okay Sir.

5 Q. Would it be correct to say that Mr. Michael Wei has said in that
6 witness statement that the maintenance lead and planner,
7 Mohan Balkaran, and Terrence Rampersadsingh, were assigned
8 by him to further develop the scope of works and to oversee, in
9 quote, “to oversee the execution of the project by the
10 contractor”?

11 A. Yes, Sir, that’s correct.

12 Q. That’s correct. And at paragraph 67 of Michael Wei’s
13 statement at page 1283, paragraph 67—

14 A. I’m reading.

15 Q. —1283.

16 A. Yes, Sir.

17 Q. He said that the terminal and maintenance department under
18 Michael Wei on the ground level monitored and reported on
19 ongoing works through Mr. Terrence Rampersadsingh, Rajiv
20 Mangalee and Houston Majardsingh on the instructions of
21 Terrence Rampersadsingh who were on the site at berths 5 and
22 6 and also offshore.

23 A. I, I didn’t see the terminal—it just, it just started here on the
24 ground level.

25 Q. If you increase it a bit so he could see?

26 A. Yeah, on the ground level.

27 Q. On the ground level?

1 A. Yes, I thought you had said the terminal.

2 Q. On the ground level.

3 A. Yes, Sir.

4 Q. Yeah. And that would be on the site between berth 5 and berth
5 6 also?

6 A. Yes, and also offshore services that you mentioned, yes.

7 Q. And also at berth 6. Now, would you agree with me, you had—
8 you have read the In-Corr-Tech report and on the cause of this
9 accident, correct?

10 A. Yes, Sir.

11 Q. And would you agree that the volume of liquid content in the
12 line, both topside and underwater, are very important
13 considerations into this matter?

14 A. Yes, Sir.

15 Q. Right. So I want to take your mind to some of that, right? At
16 the core bundle, page 564—

17 **Mr. Chairman:** Would it be convenient to take a 5-minute
18 break?

19 **Mr. Maharaj SC:** Yes, yes.

20 **Mr. Chairman:** I think you've got a little way to go.

21 **Mr. Maharaj SC:** Yes.

22 **Mr. Chairman:** We've been going since two o'clock.

23 **Mr. Maharaj SC:** Yes.

24 **Mr. Chairman:** Shall we just take 5 minutes?

25 **Mr. Maharaj SC:** Yes, Sir.

26 **Mr. Chairman:** Let's do that, thank you. Please feel free.
27 Don't stand on ceremony. I'm going to grab my papers so,

1 we'll adjourn for 5 minutes. I'm going to grab my papers.

2 **3.55 p.m.:** *Enquiry suspended.*

3 **4.01 p.m.:** *Enquiry resumed.*

4 **Mr. Chairman:** Thank you. I hope everyone's a little more
5 comfortable. There's just one thing that's been nagging me a
6 little if you'd help me please, Mr. Piper.

7 **Examination By Mr. Chairman:**

8 Q. I was asking you about confined space and you were good
9 enough to give me all your—the benefit of your knowledge on
10 past experiences in the industry of confined space deaths and
11 the like and this is all new to me. None of this in is in your
12 statement. I'm not criticizing you, but I mean, you didn't come
13 for an interview so we couldn't have asked you about it. But
14 I—be that as it may, you're telling us now, and I'm grateful for
15 that, there is, um, or I've not seen any particular document
16 that's been provided to us about a strategy to deal with confined
17 space problems of the kind you're talking about within Paria,
18 and you tell me that I should find out there may be something,
19 but what I do want to ask you about, is, would you turn please
20 to page 1074? You'll see it come up on the screen. It's in our
21 bundle Volume III, a document we're all very familiar with
22 which is the work permit, and I'm sure you're very familiar
23 with it but do you see, if you go down to section 3—

24 A. Uh-huh.

25 Q. —there is there reference to a number of certificates that should
26 accompany this—

27 A. Yes.

1 Q. —work permit—

2 A. Uh-huh.

3 Q. —isn't there?

4 A. Yes.

5 Q. And one of them, um, that is marked, um, second down—

6 A. Uh-huh.

7 Q. —after hot work certificate, it says “Confined Space
8 Certificate”.

9 A. Yes.

10 Q. And that would apply, do I understand it, in any situation where
11 there is work to be done—

12 A. Yes.

13 Q. —which might involve some kind of confined space issue—

14 A. Uh-huh.

15 Q. —of the kind that you'd been describing—

16 A. Right, yes.

17 Q. —and confined space is not limited, is it, to a 30-inch pipe, it's
18 any space where it's difficult to manoeuvre?

19 A. Yes.

20 Q. Or, or it's tight in one way or another, correct?

21 A. Correct.

22 Q. Would you agree with me then that the habitat, that was being
23 used by LMCS—

24 A. Yes.

25 Q. —was a confined space?

26 A. Yes.

27 Q. Can you tell me why, do you know, you may not know, why

1 there was no certificate available for that?

2 A. Sure. Right, so, um, so Paria is, Paria is a young company and
3 we have been of course, in our development, developing our
4 HSE permit to work system was one of the first things we had
5 to do. We would do a lot of hot work and so on so we
6 developed a certificate for that. We're, um, doing things like
7 process isolation certificates and so on. We are still in the
8 developmental stages of a confined space entry certificate, but,
9 notwithstanding we carry out the, we carry out the tests and so
10 on for confined space entry. So when he says there certificate
11 of—no certificate available, we do not have a certificate per se
12 but we carry out the duties that would be on such a certificate.

13 Q. All right, let me see if I have understood that then. First of all,
14 how long has Paria existed?

15 A. Well, over four years now, Sir.

16 Q. Four years? Right.

17 A. Yes, Sir.

18 Q. So for four years no document that could be described as a
19 permit for confined space—

20 A. Certificate.

21 Q. Yeah, no document that could be a certificate, not permit, a
22 certificate, to deal with confined space has yet been developed?

23 A. That is correct.

24 Q. Is that still the position?

25 A. That is still the position.

26 Q. Right. All right?

27 A. However—

1 Q. No, no I'll come to the however.

2 A. All right.

3 Q. I'll give you a chance to have your however in a moment. I
4 always allow buts and however, but, in answer to my question,
5 that's the position, it still remains the position? All right?

6 A. Yes, Sir.

7 Q. There is a procedure behind the certificate which you say exists
8 as part of Paria's ordinary operating methodology?

9 A. Correct, Sir.

10 Q. Yes. And that procedure is written down somewhere, is it?

11 A. Well, we—in the HSE will have, that but what we do, we
12 monitor the spaces, we do all the tests, so any time somebody's
13 going into a confined space there are standard ops that we do
14 with the HSE group, yes, Sir.

15 Q. Well, we know it was—the air was monitored and there were
16 various cameras and things. What I'm interested to know is, is
17 it written down somewhere what the procedure is to deal with
18 confined spaces, a Paria document—

19 A. Yeah.

20 Q. —that says this is the procedure you need to follow, for if we
21 had a certificate that you would have to follow in order to get
22 the certificate?

23 A. Yeah.

24 Q. Is there such a document?

25 A. I will have to double-check, Sir.

26 Q. You don't know?

27 A. Yeah, yeah, I'll have to double-check—

1 Q. Well—

2 A. —but—because, because I really deal with—when we're going
3 in, I deal with—ensure that the technicians, they do the checks
4 when I'm going in the confined spaces.

5 Q. Right. You recognize, and this document which you
6 presumably had put together—

7 A. Uh-huh.

8 Q. —as the work permit for Paria—

9 A. Correct.

10 Q. —recognizes that it's sensible to have such a certificate?

11 A. Yes, Sir.

12 Q. Right. And you're going to get round to it, no doubt, in due
13 course, but, can I just be clear about this? The procedure,
14 unwritten but understood, was followed as far as you're aware?

15 A. Correct.

16 Q. Yeah?

17 A. Yes, Sir.

18 Q. Is there a concomitant emergency procedure to deal with
19 situations where it goes wrong in your confined space?

20 A. Right, so if we are doing, say, entry into a tank, right, if you're
21 doing tank entries, for instance—

22 Q. Right.

23 A. —we, in our, in our process—

24 Q. When you say a tank, do you mean those great big round things
25 that I see when I came down to your—

26 A. Yes, Sir.

27 Q. —I mean—

1 A. Yes, if we're doing tank repairs or tank cleaning for any repairs,
2 right, so, part of that you'll appreciate we have to enter the tank,
3 right? So there are—we do gas-free those and we wash them,
4 we do gas free the tanks and with contracts and so on, gas free
5 the tanks, then when some—before somebody enters those
6 tanks we air blow tanks, et cetera. And we do—

7 Q. So you have a procedure again?

8 A. Yeah, and you do constant quality, air quality testing.

9 Q. I, I, I don't need to know the—

10 A. Yeah.

11 Q. —procedure specifically for tanks. So you have a procedure for
12 tanks?

13 A. For confined spaces.

14 Q. Yes.

15 A. Yes, mainly to—which will be mainly tanks.

16 Q. [*Inaudible*] the inside of a tank, I imagine—

17 A. Yes.

18 Q. —would be larger than this room?

19 A. Yes.

20 Q. Yes, which, er, so it's not the same sort of confined space
21 issues.

22 A. Correct.

23 Q. So I'm interested to know if, in fact, that there is any
24 emergency plan or anything written down about what to do in a,
25 if I might put it this way, a genuinely small, confined space,
26 what you would do, what—is there anything, any kind of
27 procedure that you would have?

1 A. Yes. So I—so we will have, we will have our, um, we'll have
2 our EMTs there, we will be monitoring people's blood pressure
3 so on.

4 Q. Right.

5 A. Make sure they're okay, um, well before they enter the tank, we
6 will have—they will stand by, we'll have somebody—

7 Q. Is this written down?

8 A. I'll have to confirm, Sir.

9 Q. Right, you're going to let me know?

10 A. Right? But I know every time I go in—every time I have to
11 enter a tank, unseen tank entry, this is the procedure and then
12 we will have somebody stationed there with self-contained
13 breathing apparatus and so on to enter the tank, if there's any
14 rescue. So we always have people standing by.

15 Q. Right. When you depart today—

16 A. Yes.

17 Q. —could you make an inquiry, please of—

18 A. Of course.

19 Q. —someone in your firm as to whether there is anything written
20 down as part of a procedure—

21 A. Right, okay Sir.

22 Q. —for dealing with confined spaces? I accept that there's no—
23 you told me frankly there's no certificate and there's—but if
24 there's anything written down, and, as I say concomitant to that
25 whether or not there is any emergency procedure that is
26 associated with that.

27 A. Right, okay, Sir.

1 **Mr. Chairman:** All right, thank you a thank you, Mr.
2 Maharaj.

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. Yes, Mr. Piper, I want to go, as I told you, right, to the line
5 clearing issue—

6 A. Yes, Sir.

7 Q. —in this case—

8 A. Uh-huh.

9 Q. —and before I point out at 564 that I was going to do—

10 A. Okay.

11 Q. —I did ask you whether you read the In-Corr-Tech report and
12 you said yes.

13 A. Yes, I read it.

14 Q. And I just want to, because it has a bearing in line clearing—

15 A. Uh-huh.

16 Q. —so I want to refer you to one of the paragraphs.

17 A. Uh-huh.

18 Q. —and that is at the supplemental core bundle page 1394
19 paragraph 2.3.

20 A. Thirteen ninety-four you said, Sir?

21 Q. Yes, 1394.

22 A. I have a blank. Drew a blank.

23 Q. Oh, I see. I'm sorry. It's on the screen.

24 A. Or, it's on the screen? Or, okay, that's fine, thank you.

25 Q. Paragraph 2.3. I'll read it with you.

26 “The removal of fuel oil from line and the installation of
27 a migration barrier as stipulated in Paria's scope of

1 works, section 2.1 and 3.12 respectively created a large
2 gaseous void in Sealine 36. This void served as a
3 prerequisite for the latent differential pressure hazard that
4 was created when the habitat was installed and
5 pressurized to facilitate work within the said habitat. The
6 hazards associated with this void were overlooked by
7 both Paria and LMCS.”

8 Right?

9 A. Uh-huh.

10 Q. Would you agree with that?

11 A. Yes, Sir.

12 Q. Yes. So, you would agree that the quantity of oil which was
13 removed from Sealine 36 is critical and relevant in this matter?

14 A. Yes, Sir.

15 Q. Right. So if you look at page 564 of the core bundle Volume
16 II—

17 A. [*Document handed to Mr. Piper*] Thank you.

18 Q. —and this was scope of works document, section 3.0, scope of
19 work—

20 A. Uh-huh.

21 Q. —and you see what section A is described as, and then you go
22 down there are some—there’s the isolation list, and then it says
23 estimated volume of product—[*Crosstalk*]—sorry, estimated
24 volume of product between isolation points 2000 barrels. And
25 if I point you out to: “The contractors shall execute the
26 following”—and then you have 3.1.5 on that same page.
27 You’re seeing it?

1 A. Yes, Sir.

2 Q. Yes.

3 “Properly coordinate the works with Paria operations,
4 maintenance and HSE personnel to perform the following
5 activities including but not limited to
6 isolation/deisolation, depressurization/pressurization and
7 draining/filling product from SL36 at berth 6 and 5.”

8 Right? So what I want to get from you, you are the operation
9 manager?

10 A. Correct.

11 Q. The estimated value that would be here, would that be got from
12 records at Paria?

13 A. I, I don't know where they got that estimate to follow.

14 Q. Okay. Do you know whether that is an estimation of the, of the
15 topside—

16 A. I don't know, Sir.

17 Q. —the underwater part or both, do you know? Could you help
18 us?

19 A. Well, it says between isolation points, Sir.

20 Q. So what that means?

21 A. Isolation points between 5 and 6.

22 Q. Between 5 and 6?

23 A. Six.

24 Q. So we are referring to the underwater piping, then?

25 A. Yes, Sir.

26 Q. Right. So, um, look at, um, at—how do you interpret paragraph
27 3.1.5 that I just read to you? From the scope of works Paria

1 was asking for the line to be drained?

2 A. No, Sir.

3 Q. What, what Paria was asking for?

4 A. Paria was asking for the line to be prepared so, so that the
5 contractor could effect his works.

6 Q. But it doesn't say so. It says draining and filling product from
7 Sealine 36 at berth 6 and 5. But I'll take your explanation,
8 okay?

9 A. Okay.

10 Q. Then I want you to look at the addendum at CB 598.

11 **Mr. Chairman:** CB?

12 **Mr. Maharaj SC:** Five nine eight.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. And that is Addendum 1 and you see that there is a query?

15 A. Uh-huh.

16 Q. And then you have a response. Right?

17 A. Uh-huh, yes, Sir.

18 Q. And the query is: "Who is responsible for pumping back from
19 the berths to clear the lines with water?"

20 A. Uh-huh.

21 Q. "Response: The contractor is responsible for the safe
22 removal of hydrocarbon contents from the line and to
23 ensure that the line is clear and dry."

24 A. Yeah, go on.

25 Q. That's correct?

26 A. Yes, Sir, that's what I see.

27 Q. So Paria is telling the contractor that is what has to be done?

1 A. Yes, Sir, so clear, clear and dry, right? In all my discussions,
2 right, clear and dry would be clear to the point at which the
3 contractor needs to insert his plug. Right? So it's clear down
4 to that point? Right? That was the understanding.

5 Q. Clear down to that point?

6 A. Where the contractor need to insert his—to clear, to clear the
7 section so he could install his plug.

8 **Examination By Mr. Chairman:**

9 Q. Can I understand, please? Would you agree that that is at least
10 ambiguous?

11 A. It is.

12 Q. Bearing in mind that this is a query being raised by the
13 contractor?

14 A. Yes, Sir.

15 Q. And he is saying, “Well who’s responsible for pumping back
16 from the berths to clear the lines with water? Who’s
17 responsible?” And the response from Paria is that the
18 contractor is going to be responsible for the safe removal of all
19 the hydrocarbon content.

20 A. Uh-huh.

21 Q. And to ensure, ensure that the line is clear and dry, not to
22 ensure that the line is clear and dry to the point at which the
23 plug is put in.

24 A. Yeah. Correct, Sir.

25 Q. I mean, it is at best ambiguous. Do you agree?

26 A. I agree.

27 **Mr. Chairman:** Thank you.

1 **Continued Examination By Mr. Maharaj SC:**

2 Q. Look at 659, page 659. That's LMCS' original method
3 statement. "Removal of line content between berths 5 and 6."

4 And then you see the bullet point at one, two, three, four, five:

5 "Using air driven pump, pump out approximately 300
6 barrels of line content to be pumped in Paria Fuel
7 Trading Company's slop barge and ferried to lube oil
8 jetty where it—the line content will be removed by Paria
9 Fuel Trading Company Limited."

10 A. Uh-huh.

11 Q. So, based on your answer, that is between berth 5 and 6?

12 A. Yes, Sir.

13 Q. And then if you look down below:

14 "Once level in the riser has dropped to 35 feet below sea
15 level—

16 A. Uh-huh.

17 Q. —a line plug will be installed."

18 A. Right.

19 Q. So it is saying to drain 300 barrels of oil between berth 5 and 6
20 and install the plug?

21 A. Right. Right. So, all right, so, the contractor is—the contractor
22 uses estimations, right, but the dip on the line, which is the 35
23 feet, is the measurement that he's going to.

24 Q. But it doesn't say so.

25 A. Well it says once level in the riser has dropped to 35 feet.

26 Q. But it also says pump approximately 300 barrels.

27 A. Right. But once it reaches to 35 feet. So he, he, he's, he's

1 dipping the line to monitor the level.

2 Q. But it says pump 300 barrels and it also says once level in the
3 riser is 35 feet the line plug will be installed?

4 A. So once it gets, once it gets there, right, everything else is an
5 estimation but once it gets to that point, he installs the plug.

6 Q. But Paria approved this method statement?

7 A. I will assume the technical department would have read it's
8 there.

9 Q. And therefore the works are being conducted in accordance
10 with the method statement?

11 A. I—you're correct, Sir, to get to the 35 feet.

12 Q. And Paria was monitoring the works in accordance with the
13 permit to work rules?

14 A. Para was monitoring the works in accordance with the permit to
15 work rules, but the contractor is the—the contractor is to dip the
16 line, not Paria.

17 Q. But Paria has to monitor the works in accordance with the
18 permit to work rules which requires the work to be safely done?

19 A. Down to the 35 feet, Sir, yes, Sir.

20 Q. All right. I want to show you another document, CB 1033.
21 [*Crosstalk*] Okay. I couldn't find it in my volume but I found
22 it, 1033. You have it on the screen.

23 A. Right.

24 Q. You see, "Clearing of Sealine 36 between berths 5 and 6"?

25 A. Yes, Sir.

26 Q. And you see the responsibilities?

27 A. Uh-huh.

1 Q. Terminal Operations Manager, that's you, not so?

2 A. Correct.

3 Q. "...has the overall responsibility for ensuring that this
4 procedure is established by reviewing and approving this
5 work instruction and, two, ensuring the offshore team
6 lead understand the requirements of this work
7 instruction."

8 A. Correct.

9 Q. Correct? And you see the offshore team lead, that was Mr.
10 Jason Beckles?

11 A. Correct.

12 Q. He had direct responsibility to ensure compliance with the
13 procedure by reviewing and approving this work instruction,
14 ensuring offshore operations team supervisor, et cetera, et
15 cetera. Okay? Now, this was signed authorized by you?

16 A. That's correct.

17 Q. I see your signature there.

18 A. That's correct.

19 Q. Authorized, approved by Jason Beckles,?

20 A. Correct.

21 Q. Also signed by Harrichan?

22 A. Yes, Visham Harrichan, yes.

23 Q. Yes. I notice there is no date of your signature. There are dates
24 on the other signature. Is there any reason for that?

25 A. No, Sir, there's no reason for that. An oversight.

26 Q. It's an oversight. But would you say that you signed it around
27 the same date or on the same date?

1 A. Yes, Sir.

2 Q. As the others?

3 A. Yes, yes.

4 Q. Now, the line instructions, I have looked through it—

5 A. Uh-huh.

6 Q. —and I have not seen anything about Delta P. It's very detailed
7 from 10.35 to 10.36 to 10.38. Would it be correct to say that at
8 that time you all did not identify Delta P as a hazard in this
9 operation?

10 A. That's correct, Sir.

11 Q. That's correct. And that is why you would say also that it is not
12 in the scope of works, the method statement or in the risk
13 assessment, because Paria did not identify a Delta P hazard?

14 A. Yes, Sir. And I would say that the—we depended on the
15 contractor.

16 Q. I know you did.

17 A. —to identify the special, specialized risks, yes.

18 Q. Now, if Paria had identified that hazard, would you agree that
19 they would have—they would not have approved the works as
20 it was without a plan to minimize that risk or to deal with a
21 mitigation of the risk?

22 A. If, if Paria had identified that and—they would certainly have
23 gone to the contractor.

24 Q. And, for what purpose?

25 A. Right. They would certainly have gone to the contractor to
26 ensure that he, that he mitigates against that risk.

27 Q. Right.

1 A. So, right.

2 Q. And if Paria had retained specialists and experts to assist it in
3 reviewing the risk assessment, and in monitoring the works,
4 would you agree with me that that risk would likely have been
5 identified?

6 A. May have been identified. But again, we had a specialist
7 contractor who was well versed in these types of works and
8 who was supposed to identify all credible risk.

9 Q. I looked at the documents and I'm not seeing that the contract
10 was with a specialist contractor. You could probably assist me
11 with that.

12 A. Well, this contractor, this contractor did a number of these
13 particular types of jobs, Sir, in the past.

14 Q. Can I ask you a question?

15 A. Of course.

16 Q. If, if Paria had no role to play in ensuring these works were
17 done safely, how would you account for the permit to work
18 rules of Paria to put that obligation on Paria to ensure that the
19 works were suitably done and done safely?

20 A. Can you, can you ask that question again, please?

21 Q. All right. Let me take you to the—let me take you to the permit
22 to work rules. Well I won't take you to all but I just want to
23 take you to some, all right?

24 A. Volume I?

25 Q. Volume I, page 28. [*Document handed to Mr. Piper*]

26 A. Right.

27 Q. Now the applicant under the permit to work rules is Paria,

1 correct?

2 A. Yes, Sir, in this case, that's the applicant.

3 Q. Look at page 28, paragraph 5.1.

4 A. Uh-huh.

5 Q. "The applicant is the person who initiates the job activity
6 by completing section A of the work permit. The
7 applicant must have the necessary competence to execute
8 the job or to supervise the execution of the job."

9 So that is putting an obligation on Paria to be competent to
10 execute the job and to supervise the execution of the job?

11 A. Uh-huh, yeah. Right. So the permit to work, in the permit to
12 work, the applicant can also be the contractor. Right? Now—
13 so this applies in this case with this—with the permit to work
14 system, right, we have the applicant could be the contractor, the
15 applicant could be a Paria employee. Right? So the applicant
16 in this case, we have a specialist contractor. In this case the
17 applicant was really just coordinating the works, right, but the
18 contractor had that responsibility to actually execute the works.

19 **Examination By Chairman:**

20 Q. Just a minute. That might be what you thought the position
21 was—

22 A. Yes.

23 Q. —but that's not what the documents show.

24 **Mr. Maharaj SC:** The permit to work.

25 **Examination By Mr. Chairman:**

26 Q. If you go back to the document I was showing you earlier at
27 1074, the work permit—

1 A. Right Sir.

2 Q. —there the document is?

3 **Mr. Maharaj SC:** At 1074.

4 **Examination By Chairman:**

5 Q. Yes 1074 we can see. Have you got it?

6 A. Yes, Sir, I'm seeing it on the screen.

7 Q. Yes. All right. Well you can see there it says, doesn't it,
8 "Applicant" under section A?

9 A. Uh-huh.

10 Q. Applicant.

11 A. Yes, Sir.

12 Q. Right. The applicant is Houston Majardsingh?

13 A. Correct.

14 Q. Who is Houston Majardsingh?

15 A. Well, he is the Kenson employee working for Paria.

16 Q. Right.

17 A. Yes.

18 Q. So, the applicant there—if it was your intention that the
19 applicant in those circumstances should be the contractor, why
20 isn't it signed by the contractor?

21 A. No, right, so let me rephrase what I said.

22 Q. Please?

23 A. Right, I'm saying the applicant is—the way the permit to work
24 system is written, the applicant is not necessarily the
25 Kenson/Paria employee. The applicant can also be the
26 contractor.

27 Q. Where does it say that?

1 A. Right? No, that is how we—that is—it doesn't say that here but
2 that is how we use the permit to work system.

3 Q. Yeah. But where does it say that in your, in—

4 A. No, it does not say that here, Sir, but that's how we use this
5 system.

6 Q. Right. So—and you're saying something that doesn't exist in
7 any document?

8 A. That is correct, we, we—but that is how we use it. That's how
9 we use this system.

10 Q. No, I'm not doubting that that's what you said—that you're
11 saying that is how you use it, but it's not actually written down
12 anywhere, is it?

13 A. That's correct.

14 Q. Right. And to the observer, not just the casual observer but the
15 one who is—any observer who has looked at this document—

16 A. Yeah.

17 Q. —would come to the view, not wrongly, that the applicant was
18 a Kenson employee?

19 A. That is correct.

20 Q. And that that Kenson employee was employed by you?

21 A. That is correct.

22 Q. Right. And then if they looked, as I have, at the permit to work
23 procedure—

24 A. Uh-huh.

25 Q. —that you, your firm, not you personally, I don't know whether
26 you had a hand in it, but whether your firm would have drafted
27 this procedure and sets out who the applicant is because it tells

1 you who the applicant is, doesn't it?

2 A. Correct.

3 Q. It doesn't give any kind of option for it to be—

4 A. Correct.

5 Q. —somebody else. All right?

6 **Mr. Chairman:** Yes, thank you Mr.

7 **Mr. Maharaj SC:** Much obliged.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. I just want to show you that on the form itself it has a separate
10 place for the contractor—

11 A. Yes.

12 Q. —at the [*Inaudible*] form.

13 A. Yes.

14 Q. So the work permit, the applicant is Paria and the contractor is
15 referred as to the contractor?

16 A. Yes, Sir.

17 Q. Not the applicant?

18 A. Right. But, um, at times what we do, right, we have the
19 contractor actually signing as the applicant as well, Sir. We do
20 use the system like that.

21 **Examination By Mr. Chairman:**

22 Q. I appreciate, but you didn't do that in this case?

23 A. No, no. We did not, no, we did not do that.

24 Q. Whether you might do in other cases—

25 A. Yes.

26 Q. —in this case what you did was to have a Kenson employee—

27 A. Yes.

1 Q. —as the applicant?

2 A. Correct.

3 Q. Who worked for you?

4 A. Right.

5 Q. Right. So the question that Mr. Maharaj is asking is, when he
6 reads this, the applicant is the person who initiates the job
7 activity by completing section A of the work permit, the
8 applicant must have the necessary competence to execute the
9 job or to supervise the execution of the job. What he's saying
10 there, what I—how I read that is, is that either you must be able
11 to do the job yourself—

12 A. Uh-huh.

13 Q. —and if you can't, you must at least be able to supervise the
14 job?

15 A. Correct, which is what he was doing.

16 Q. So that Kenson employee needs to be someone who actually
17 understands what's going on?

18 A. Yes, correct.

19 Q. Did you take it that Mr. Majardsingh understood what was
20 going on?

21 A. Yes, Sir. In supervising the job not executing.

22 Q. And he—

23 A. Yes, yes.

24 Q. —was in the role of supervisor?

25 A. Yes coordinating all the works, coordinating the works—

26 Q. Well—

27 A. —ensuring that the works were being done.

1 Q. And how do you supervise a job, how?

2 A. Right, so, with the con—with the—how the system works—

3 Q. No, no, no just answer my question. How do you supervise
4 something?

5 A. Right.

6 Q. If I'm going to supervise my team of lawyers, what do I have to
7 do to supervise them?

8 A. Right, so, to know the work that is to be done—

9 Q. Uh-huh.

10 A. —right, he cor—he would in this case coordinate the permits
11 with the, with the operations, get those permits signed, make—
12 get—make sure the permit, the supervi—the contractor gets on
13 site, make sure—um, the contractor would then do his toolbox
14 talks, make sure the contractor understands the work to be
15 done—

16 Q. Uh-huh.

17 A. —right, and of course he's coordinating those works to be done
18 with the contractor who really in this case executes.

19 Q. Right.

20 A. So he is coordinating the whole process, yes.

21 Q. I follow that. I follow all of that. That's good. And then
22 presumably wants to make sure that what they're—whatever it
23 is they're doing they're doing properly?

24 A. Correct.

25 Q. Yeah. And if they're doing something that they're not allowed
26 to do, under the work permit, to stop the work?

27 A. Yes, Sir, correct.

1 Q. He can only do that by keeping an eye on them?

2 A. Yes, Sir, he could, yes, but he's not, he's not required to be
3 there all the time. He's not required to be there continuously,
4 Sir.

5 Q. So he could, he could, he can slip away for a little bit, have
6 some lunch somewhere and just hope that all goes well?

7 A. Well, we have the contractor supervisor who has to be on site at
8 all times, right? So, in this case, the applicant in this case is
9 supervising the job. Part of that supervision will be to ensure
10 that the contractor supervisor is on site, understands, knows that
11 the contractor supervisor is familiar with the job, they're there
12 on the job and he, he has other, he has other tasks to do during
13 the course of the day, so he will visit the job because he has
14 other jobs going on, so he will visit the job.

15 Q. So that—

16 A. He's not there, he's not there fixed. He's not fixed there
17 necessarily.

18 Q. So that I understand what you're saying, the applicant in this
19 case, never mind about generally, but in this case—

20 A. Correct.

21 Q. —would have had other tasks to perform by—for Paria on their
22 behalf?

23 A. Yes. I know he was working at berth 5 as well. In this case on
24 this day I understand he was working at berth 5. They were
25 doing the, um—they were doing the CAARBER test as well,
26 right? What other task he has, I can't say.

27 Q. As far as you're aware that he was only involved, though, in

1 this job, that is to say berth 5 and 6?

2 A. Yeah, I'm not quite sure. I'm not sure. I know he was involved
3 in 5 and 6.

4 Q. All right thank you.

5 **Mr. Chairman:** Thank you Mr.—

6 **Mr. Maharaj SC:** Much obliged.

7 **Continued Examination By Mr. Maharaj SC:**

8 Q. Mr. Piper, your answers are not consistent with the rules. Look
9 at rule 5.1. “The applicant must have the necessary competence
10 to execute the job.”

11 A. Uh-huh.

12 Q. In this work permit, Paria was the applicant?

13 A. Uh-huh.

14 Q. So Paria represented to have the necessary competence to
15 execute the job or to supervise the execution of the job, and it
16 goes on.

17 “He shall be knowledgeable of the hazard associated with
18 the job and the necessary controls for these hazards. He
19 shall be responsible for the job and for the safety of the
20 people who work on the job.”

21 A. Right.

22 Q. So if Paria was the applicant in this work permit, ent that will
23 be the responsibility of Paria, according to this rule?

24 A. Right, Sir, so if I may?

25 Q. Is it—would it be the responsible of Paria—

26 A. Yeah.

27 Q. —according to this rule?

1 A. In this case he was, in this case he was supervising. He did not
2 have that competence to execute as far as I'm aware but he was
3 supervising, yeah.

4 Q. So he was not acting in accordance with this rule?

5 A. Sir, it says he must have the necessary competence to execute
6 the job or to supervise.

7 Q. And it also said he shall be knowledgeable of the hazards
8 associated with the job and the necessary controls for these
9 hazards.

10 A. Right. So—

11 Q. He shall be responsible for the job and the safety of the people
12 who work on the job.

13 A. Right, so, in this case, once again, he would—he would be—he
14 would understand the obvious risk, the risks that we, that we
15 experienced. In this case he will not know the specialized risks.
16 That's why we hire the contractor.

17 Q. So he won't be competent? He won't be competent to
18 supervise?

19 A. He will be competent to supervise but he has—he'll be
20 competent to supervise based on the normal risks, the obvious
21 risks. He does not have the competence that the contractor has
22 in this case, that's correct.

23 **Examination By Mr. Chairman:**

24 Q. Right, so I get that. I understand what you're saying. He's a
25 supervisor, and he could only know the risks that he knows.

26 A. Correct.

27 Q. You told us before, when I was asking you questions about this,

1 that sometimes the applicant is the contractor.

2 A. Yes, Sir.

3 Q. Because it makes sense in certain circumstances for the
4 applicant—

5 A. That's correct

6 Q. —to be the contractor.

7 A. Uh-huh.

8 Q. Can you conceive of a situation more important than this one
9 where the contractor should have been the applicant?

10 A. I would say yes, Sir, the contractor should have been the
11 applicant.

12 Q. On any view?

13 A. Yes.

14 Q. Although it doesn't state this anywhere—

15 A. Uh-huh.

16 Q. —but you told us that it is a practice adopted by Paria from
17 time to time that the applicant in the—

18 A. Uh-huh.

19 Q. —work permit form could and should be the contractor
20 himself?

21 A. Uh-huh.

22 Q. And given your reliance, as you tell us—

23 A. Uh-huh.

24 Q. —on the contractor for his expertise, in this case he should have
25 been the applicant? That's what you're saying?

26 A. Right, so, in this case, the, the, the person who was the
27 applicant in this case, Mr. Majardsingh, right, he was

1 coordinating these works to be done.

2 Q. No, no, no, er, forgive me, forgive me, please.

3 A. All right.

4 Q. It's been a long day for us, all right? Just help me understand.

5 A. Yes.

6 Q. If you were doing this over—

7 A. Yeah.

8 Q. —we're starting today with this, and you had this work permit
9 in front of you, you're in charge of it, all right—

10 A. Yes.

11 Q. —you've got this in front of you, who were you going to make
12 the applicant?

13 A. I would make the contractor the applicant.

14 Q. LMCS?

15 A. Yes, Sir.

16 Q. Right. So whatever we might think of this, this is what, it
17 shouldn't have been? It shouldn't have been Majardsingh?

18 A. I would say it should have been the contractor.

19 **Mr. Chairman:** All right, thank you.

20 **Continued Examination By Mr. Maharaj SC:**

21 Q. Look at page 29, what the applicant has to do. Four points from
22 the top of the page.

23 "Continually monitor the job to ensure that it is
24 performed in a safe manner and within the conditions
25 prescribed in the work permit certificates and JHA/risk
26 assessment."

27 You see that?

1 A. Yes, Sir. Yes, Sir.

2 Q. According to this form, according to this form, that was the job
3 of Paria?

4 A. In this case being the applicant, yes, Sir.

5 Q. Yes. And then goes the next one.

6 “Stop the work if there are changes in site conditions that
7 increase the risk, or if new hazards are identified, and
8 promptly notify the site authority of these changes.”

9 In this case, it was Paria?

10 A. Right. So one—right, and as I said—

11 Q. And Paria could have stopped the work?

12 A. And as I said, if the applicant, the applicant, right, we have the
13 contractor supervisor who’s on site at all times, right? The
14 applicant was moving between at least I know 5 and 6, right?
15 He’s not required to be on the site all the time. Right? But
16 once he’s on the site and he sees, he identifies something, he
17 stops the job.

18 Q. Yes. And if it’s Paria is the applicant, must act in accordance
19 with these rules?

20 A. Once he’s on the site, Sir, yes, he will act in accordance.

21 Q. He is the applicant Mr. Piper.

22 A. Yes, Sir.

23 Q. Yes. And look at the next rule, 5.3, site authority. Who was
24 the site authority, not Paria?

25 A. Yes, Sir.

26 Q. And look at what the site authority is responsible for.

27 “The site authority is appointed by the senior area

1 authority, Terminal Operations Manager...”

2 Who is that?

3 A. That is me, Sir.

4 Q. “...or technical and maintenance manager, and is
5 responsible for ensuring that the conditions required for
6 the safe conduct of the job are maintained or that the
7 permitted activities are promptly stopped if there are any
8 changes or violation of any prescribed conditions.”

9 So if LMCS was supposed to be the applicant in this, and you
10 were aware of it, you would have stopped, you would have
11 stopped it in order to change it to LMCS?

12 A. Sir, can you just ask that again, please?

13 Q. You want me to explain it?

14 A. Yes please?

15 Q. From what you saw, the applicant was Paria, Mr. Majardsingh
16 on behalf of Paria?

17 A. Correct.

18 Q. Correct. You have told the, this Enquiry, a short while ago—

19 A. Uh-huh.

20 Q. —that you believe that LMCS should have been the applicant?

21 A. Uh-huh. Right. So—

22 Q. Did you say that?

23 A. Yes, I said that, right? Let me explain if I may, if I may please?
24 All right? In this case, right, the applicant, Mr. Majardsingh,
25 right, Paria, did not have the competence to actually execute the
26 work but he was supervising the work, right?

27 **Mr. Chairman:** We’ve got that. I do understand that, um, I

1 don't want to cut you off.

2 **Mr. Piper:** Okay, Sir.

3 **Mr. Chairman:** But you have made that petty clear to us?

4 **Mr. Piper:** Right, okay.

5 **Mr. Chairman:** And I have that pretty much in mind, all
6 right?

7 **Mr. Piper:** Good.

8 **Continued Examination By Mr. Maharaj SC:**

9 A. All right, so, so it's something that Paria will maybe have to
10 look at closely. I don't know.

11 Q. All right. Now you said the site authority was Paria?

12 A. Yes, Sir.

13 Q. Correct?

14 A. Yes.

15 Q. Now look at page 30 what the site authority shall do: "Ensure
16 that a suitable and sufficient JHA", that is a—

17 A. Job hazard.

18 Q. —job hazard analysis—

19 A. Uh-huh.

20 Q. —has been prepared for the job." You see that?

21 A. Yes, Sir.

22 Q. Right.

23 "Ensure that all necessary supporting safety certificates,
24 job hazard analyses and drawings are completed and
25 attached to the permit."

26 That's the site authority job. And then you go down, we go
27 down in the page:

1 “Ensure, ensure by face-to-face discussions and/or site
2 visit that the person in charge of the activities at the job
3 site knows the exact location, all the hazards that may be
4 peasant, all the precautions to be taken during the work,
5 this includes discussion of the JHA with the person
6 receiving the work permit.”

7 In this matter, Johnathan Ramadan, you remember I was asking
8 you about the line clearing?

9 A. Yes, Sir.

10 Q. Yes, and the quantity of the oil that was supposed to be
11 removed?

12 A. Yes, Sir.

13 Q. Johnathan Ramadan, who is an employee of Paria, he at—at his
14 wit—in his witness statement at paragraph eight at page 1470,
15 paragraph eight, he said that:

16 “Part of the pre-work LMCS undertook to drain the
17 product from the pipeline at berths 5 and 6 in accordance
18 with a Paria work instruction effective the 5th of January,
19 2022 which was developed by the offshore section of the
20 terminal operations department.”

21 So, Mr. Ramadan was saying that LMCS did this line draining
22 pursuant to these instructions which were signed by you on
23 behalf of Paria.

24 A. Right. So, this, this, um—sorry, this line clearing instruction,
25 right—

26 Q. This is a Paria document?

27 A. Yes, Sir, right.

1 Q. And you are the man responsible—

2 A. Right, yes.

3 Q. —for the overall responsibility for ensuring that this procedure
4 is established by reviewing and ensuring, et cetera, et cetera.

5 A. Right.

6 Q. So you had a role in this?

7 A. So let me explain this document if I may, right?

8 Q. Well it says what it is, so you want to explain it?

9 A. Sir I think we, I think I should explain the document.

10 Q. All right, okay, go ahead.

11 A. Okay, thank you. This document was—this document is, is a
12 work instruction that directed to our offshore, our offshore
13 operators. Right? So, our offshore operators, he comes on and
14 the contractor who would have his line clearing procedure,
15 right, separate and apart, the contractor comes and he has to do
16 his line clearing procedure. Our, our operations team and our
17 operators need to understand what is taking place because they
18 have to line up the system. Right? So this document, this
19 document, consists of tasks and events as a guide for our
20 operator to follow. This is not a document for LMCS.

21 Q. So it is a—so it's instructions for Paria to follow?

22 A. It is instructions for—it is instructions and it is—and they are
23 guides in here, so let me, if I may explain, right?

24 Q. No, well let me hear it. These are instructions and guides that
25 Paria imposed?

26 A. These are instructions, right, and a list of instructions which
27 consists tasks and events that the operator should be aware of.

1 If I may explain, right? S so if we look at 6.1 in this document,
2 right, preparation for installation of the slip blank at berth 5.

3 **Mr. Chairman:** Where are we?

4 **Mr. Piper:** I'm looking at the work instructions, Sir.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. At paragraph what?

7 A. Six point one, item 6.1.

8 Q. That's at page 1034?

9 A. Ten thirty-four.

10 Q. Right, you're looking at 6.

11 **Mr. Chairman:** Yes.

12 A. Right. So this is written to our offshore—this is written for the
13 person who finally receives. This is our offshore operator. Let
14 me explain this operator's job. This operator is on the berth.
15 He basically, er, he basically helps with the mooring unmooring
16 of vessels and he helps with lining up the systems for cargo
17 transfers, loading and discharging of cargo of ships. That is his,
18 that is his function.

19 This now, this is a, this is an unusual line-up for him to do. So
20 therefore we produced this work instruction for the operator.
21 Right. So there are some things in this work instruction that the
22 operator is required to do and there are some things in this
23 instruction he's required to know, that is to be done, that is
24 done, so that he could coordinate with the contractor with for
25 the line clear. For example, in 6.1 item one, "Install
26 containment booms around 36 Sealine riser." The operator
27 does not do that, Sir. "Mobilize air compressor on the main

1 deck”, that is a, that is a contractor’s responsibility but the
2 operator, when he goes on his berth, will understand that the
3 contractor has now mobilized that, that compressor. When he
4 goes on his berth he sees a compressor, he understands that—he
5 knows, okay, this was part of the job to be done. “Connect air
6 hose”, that is a contractor’s function. Right? Well close—

7 Q. Mr. Piper, Mr. Piper—

8 A. Yes, Sir.

9 Q. —it doesn’t say that on the document.

10 A. No, Sir, this is understood. The operator understands clearly
11 what is required of him.

12 Q. I take that. But would you agree with me that what you are
13 saying here as to what the contractor has to do and what he
14 should know is not stated on this document?

15 A. It doesn’t need to be stated, Sir. The operator understands
16 clearly what his tasks are.

17 Q. But you signed this document as authorizing this to be done?

18 A. Yes, Sir.

19 **Examination By Mr. Chairman:**

20 Q. Is this an internal document?

21 A. This is an internal document to our offshore operators.

22 Q. It would never find its way into the contractor’s hands?

23 A. It should never—it should not find its way into the contractor’s
24 hands.

25 Q. But this is—this is instruction internally between one
26 department and another?

27 A. Correct.

1 Q. Right.

2 A. This is to our offshore operator.

3 Q. All right.

4 A. So he needs to understand what he will see on his berth.

5 **Mr. Chairman:** I absolutely understand what you're saying.

6 **Mr. Piper:** Right.

7 **Continued Examination By Mr. Maharaj SC:**

8 Q. But at paragraph eight, Mr. Ramadan says:

9 "As part of the pre-work LMCS undertook to drain the
10 product from the pipeline at berths number 5 and 6 in
11 accordance with a Paria work instruction effective the 5th
12 of January, 2022."

13 So Mr. Ramadan of Paria is saying that LMCS had to act and
14 drain this in accordance with that work instruction?

15 A. This document does not go to LMCS, Sir. This document—

16 Q. So, so—

17 A. —is a, is a operations document. I don't know what he meant
18 there but this does not go to LMCS. This was to our offshore
19 operator.

20 Q. So do—you're not agreeing with Mr. Ramadan then?

21 A. I am not agreeing that the contractor clears the line according to
22 this document. What I'm stating is this document is only for
23 our operators.

24 Q. Okay. Well, assuming that, right, would you agree with me that
25 nowhere in this document it says how much oil is to be
26 drained?

27 A. I agree, Sir.

1 Q. Right. And wouldn't that be something important to put in this
2 document?

3 A. Right. The operator, right, the operator would not need to
4 know. He is not dealing with the volumes in this case. He is
5 simply dealing with the line-up. You need to understand the
6 audience. Your audience is the operator who is simply opening
7 and closing valves. He opens and closes his valves. Once the
8 contractor finishes his air blowing, he checks his line and so on.
9 He says, "Listen, I'm finished" and the operator opens and
10 close his valves.

11 Q. Okay. We take what you say. I want you to look at the Daily
12 Work Reports of Paria at Volume II CB 994 to 1006.

13 **Mr. Chairman:** Mr. Maharaj when you've dealt with this
14 topic I think we're going to call it a day, all right? So we'll
15 deal with this topic and then I think we've had enough.

16 **Mr. Maharaj SC:** Okay, Sir.

17 **Mr. Chairman:** Well I have, anyway. I think Mr. Peterson
18 might want to stay but—

19 **Mr. Maharaj SC:** I doubt very much, My Lord. Page 994 in
20 Volume II of the core bundle.

21 **Continued Examination By Mr. Maharaj SC:**

22 Q. I want you to just look at page 994 to 1006. This is the Daily
23 Work Report of how the oil was drained, right?

24 A. Uh-huh.

25 Q. You would recognize these documents and then I'll put
26 something to you. I'll put some figures to you. Okay?

27 **Mr. Chairman:** I think although it's more laborious I do think

1 you should take him through the particular passages.

2 **Mr. Maharaj SC:** Oh, okay, okay.

3 **Mr. Chairman:** Otherwise, you know, he's just reading
4 through the whole of it and it's not necessary to do that. Just
5 take him to each part of the page—

6 **Mr. Maharaj SC:** Right.

7 **Mr. Chairman:**—994 at page 3.

8 **Mr. Maharaj SC:** Okay.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. At page 994 you would see at number 3:

11 “Ongoing: air blowing started at 12.22 p.m., due to
12 operations setting up to drain to tank 111, and air blowed
13 until 1800 hours. A total of 798 pa barrels of oil were
14 drained to tank.”

15 You see that?

16 A. Yes, Sir.

17 Q. And you would agree that this is a record of Paria on a daily
18 basis how much oil was being drained?

19 A. Yes, Sir.

20 Q. Yes. If you go to 997, you see at number 3:

21 “Air blowing contents of SL Sealine 36 from berths 5 so
22 6.”

23 A. Uh-huh.

24 Q. “Air blowing started at 11.00 a.m., due to installation of
25 slip blank and air blowed until 5.30 p.m.. A total of 118
26 barrels of oil was drained.”

27 A. Yes, Sir.

1 Q. Then at page 1002, you see at the top, the top column, number
2 1:

3 "Job status completed. Installed two lengths of 6 feet 30-
4 inch hose together with one length of 6-inch 40-inch
5 pipe"

6 And it gives the description of the hose and the riser to assist
7 with Phase II air blowing.

8 A. Uh-huh.

9 Q. So, the line content was removed in two phases?

10 A. Right, yes, Sir.

11 Q. Phase I and Phase II?

12 A. Yes, Sir.

13 Q. Phase I was topside?

14 A. Uh-huh.

15 Q. And Phase II was underwater?

16 A. Yes. As I said, yes.

17 Q. Right. Then you go to number four on that page, 1002:

18 "Completed. Level was checked and pipe estimated to
19 be three-quarter full with oil content."

20 You see that?

21 A. Yes, Sir.

22 Q. Right?

23 **Mr. Chairman:** Is this above or below the water?

24 **Mr. Maharaj SC:** This would be below the water.

25 **Mr. Chairman:** Right. So the last part dealing with above the
26 water level is one where it says completed—

27 **Mr. Maharaj SC:** Yes.

1 **Mr. Chairman:**—installed two lengths of pipe, so that’s the
2 top part—

3 **Mr. Maharaj SC:** Top part.

4 **Mr. Chairman:**—of berth 5 drained? Right. So Phase II now
5 starts at number four, is it?

6 **Mr. Maharaj SC:** Number four.

7 **Mr. Chairman:** Right. “Level was checked, the pipe was
8 estimated to be three-quarters full with oil content.” Yes?

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. And then we go to 1003 at number 1:

11 “Phase II air blowing from Sealine 36 to Sealine 66.
12 Ongoing, air blowing was conducted between 11.00 a.m.
13 and 3.00 p.m. Onshore noted that they received 276
14 barrels of oil. Note: started air blowing 11.00 a.m. due to
15 lining up of tanks and waiting for pressure to build up.”

16 Then if you, then if you go to number four, is it number?

17 **Mr. Chairman:** Five. Four?

18 **Continued Examination By Mr. Maharaj SC:**

19 Q. Yes, number four:

20 “Level was checked after draining at PB80 and pipe
21 estimated to be one-quarter full with oil contents to
22 continue draining tomorrow.”

23 Then you go to number 5:

24 “Draining contents of Sealine 36 into slops barge.
25 Connect hose on to two-inch valve and placed end into
26 slops tank, open valve and drain. Ongoing: Two slops
27 barge was filled approximately a hundred barrels of oil.”

1 A. Uh-huh.

2 Q. And all of this is underwater?

3 **Examination By Mr. Chairman:**

4 Q. This is now underwater, yes.

5 A. They're different sections.

6 Q. Sorry?

7 A. They're different sections of line, right?

8 Q. Different sections of what?

9 A. So if you look, if you look at, if you look at, if you look at
10 number four—

11 Q. Yes.

12 A. —right, you will see in red:

13 "Ongoing. Level checked after draining at pile bent 80."

14 So pile bent, the con—berth number, I have berth number 6.

15 Q. Uh-huh.

16 A. I have the line going to berth 6.

17 Q. Five.

18 A. Going to 5—

19 Q. Yes.

20 A. —from 6, the line comes up at 5.

21 Q. Uh-huh.

22 A. And then it goes submarine again down at 5 opposite the side,
23 and it goes across the harbour to berths—to pile bent 80—

24 Q. Right.

25 A. —right, where we manifold it. So, they were actually draining
26 on this section as well where you see a quarter full. So it is on
27 that side of berth 5 not between 5 and 6.

1 Q. So this is from 5 toward the shoreline?

2 A. Towards the shoreline pile bent 80.

3 Q. Right.

4 A. It's a different section of number 36—

5 Q. I'm with you. So, now, when we look at number 5 then—

6 A. Number 5.

7 Q. —it said two slops barges were filled with approximately a
8 hundred barrels of oil. Is that from that issue that [*Inaudible*]
9 ashore?

10 A. If you look in the blue highlight you'll see pile bent 80.

11 Q. Yeah.

12 A. Right.

13 Q. I got you.

14 A. It's there again, yes.

15 Q. So what we're talking about here then is a hundred barrels of
16 oil taken from—

17 A. Five to pile bent 80.

18 Q. —5 through towards the shoreline?

19 A. Yes.

20 Q. And not between 5 and 6?

21 A. That is correct.

22 Q. Right. So that—so it's actually three different sections this is
23 being drained, three phases?

24 A. Yes, yes.

25 Q. So that I got this right, so level was being checked, it was a
26 quarter full and then two slops barges were used—

27 A. Uh-huh.

1 Q. —which took out a hundred barrels?

2 A. Correct.

3 Q. What's the bit above? You see at number 1 it says, "Air
4 blowing" and was conducted between certain times?

5 A. Right, so that is—

6 Q. Then it says 276 barrels of oil were taken.

7 A. Yes.

8 Q. But that's between 5 and 6?

9 A. That's correct.

10 Q. All right, so this is the bit we're concerned with.

11 A. Yes.

12 Q. That's the U pipe. So it's 276 barrels from that part and 100
13 barrels from a different part altogether?

14 A. Correct.

15 Q. So I could ignore that hundred barrels as being any—

16 A. And the quarter full.

17 Q. —anything to do with this?

18 A. And the quarter full, yes.

19 Q. Right, I got you.

20 **Mr. Chairman:** Thank you very much for that. Next, are
21 we—

22 **Continued Examination By Mr. Maharaj SC:**

23 Q. And if you go—if you, um—if you go down to number four,
24 "Check oil levels on Sealine 36 riser, remove blank", et cetera,
25 "Ongoing level was checked after draining of PB80 and pipe
26 estimated to be one quarter full with oil pumps to continue
27 draining tomorrow", and I talked about the slops barge?

1 **Mr. Chairman:** Yes so that deals with the slops barge. That's
2 the other part of the—

3 **Mr. Maharaj SC:** Yes.

4 **Mr. Chairman:**—draining that we needn't be concerned with.
5 So we go to the next one which is 1004.

6 **Mr. Maharaj SC:** Four.

7 **Mr. Chairman:** Yes.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. And you go to number 1:

10 "Air blowing Phase II air blowing. Air blowing was
11 conducted between 1300 hours to 1500 hours. Onshore
12 noted that they received 55 barrels of oil. Note: Started
13 air blowing 1300 hours due to waiting on onshore to give
14 clearance to start."

15 Then we go to number four, "Check oil levels on Sealine 36
16 riser", et cetera.

17 "Completed. Level was checked after draining at PB80
18 and oil content was approximately 8 inches [*sic*] below
19 tee on riser."

20 **Mr. Chairman:** Again, this is the part that we needn't be
21 concerned with.

22 **Mr. Piper:** Correct.

23 **Mr. Maharaj SC:** Okay.

24 **Mr. Chairman:** I'm going to cross that out.

25 **Continued Examination By Mr. Maharaj SC:**

26 Q. Then we go to number 5:

27 "Draining contents of SL36 into slops barge. Connect

1 hose”—et cetera. “Two slops barge was filled
2 approximately 100 barrels of oil.”

3 **Mr. Chairman:** And that’s, that’s PB80 again?

4 **Mr. Piper:** Correct.

5 **Mr. Maharaj SC:** Yes.

6 **Mr. Chairman:** So again we can ignore that part. Thank you.

7 **Mr. Maharaj SC:** Okay.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Then we go to page 1005 number 1:

10 “Phase II air blowing from Sealine 36. Air blowing was
11 conducted between 10.30 a.m. to 1430 hours.”

12 And then we go to the next—

13 **Mr. Chairman:** Pause, pause there please?

14 **Examination By Mr. Chairman:**

15 Q. It doesn’t give a quantity of oil removed there, does it?

16 A. No it does not.

17 Q. They were pumping or blowing, rather, for four hours?

18 A. Yeah.

19 Q. So one assumes that they were blowing it for something?

20 A. I, I can’t answer, Sir. I can’t say.

21 Q. You can’t say?

22 A. I can’t say, yes.

23 Q. But, I mean, there wouldn’t have been any point in air blowing
24 for four hours if there was just air coming out the other end of
25 that?

26 A. Agreed.

27 Q. Right. So an unknown quantity of oil or fluid must have been

1 removed?

2 A. I—one could only assume, Sir.

3 Q. Sorry?

4 A. One could only assume so, yes.

5 Q. What other possible explanation is there?

6 A. Yeah, yeah.

7 Q. Right. Okay. So an unknown quantity. Thank you.

8 **Mr. Maharaj SC:** I think that's it.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. Even on that calculation that—with the, with the qualification
11 you stated, my team has told me that the barrels of oil removed
12 from underwater was way in excess of 300 barrels.

13 A. Uh-huh, yeah.

14 Q. And that is in excess of the amount stated in the method
15 statement?

16 A. Uh-huh, yes.

17 **Examination By Mr. Chairman:**

18 Q. Well, just so that we're fair about this, I calculate it to be 331
19 barrels plus the unknown quantity that was being air blown for
20 four hours.

21 A. Yeah.

22 Q. Whatever that is.

23 A. I can't say.

24 Q. No, obviously not. Where was it going, do you know?

25 A. Right, so, um, if I may—in—right, so if I may, in the procedure
26 that I, that I had authorized—

27 Q. Yes.

- 1 A. —there's some line work, right?
- 2 Q. So what page are you on?
- 3 A. Ten thirty-nine—one zero three nine.
- 4 Q. One zero three nine?
- 5 A. Yes, Sir.
- 6 Q. Okay. Go ahead.
- 7 A. Okay, so, we have the U-piece between berths number 5 and 6,
8 right, and we also have it's coming up to the left of the page
9 here, right, 36 Sealine.
- 10 Q. Yep.
- 11 A. Right? And you will see it goes into—it goes up where you see
12 birth 6, it says "36 Sealine double valves at manifold".
- 13 Q. Yep.
- 14 A. Right. And then from the—
- 15 Q. Your microphone's gone.
- 16 A. I'm sorry. It goes into 33 Sealine and then you'll see it goes
17 into number 66 Sealine.
- 18 Q. Right.
- 19 A. Right. And then number 66 Sealine goes to tank 111.
- 20 Q. [*Inaudible*]
- 21 A. Yeah, right.
- 22 Q. And then goes to tank?
- 23 A. It goes to a tank, tank to shore, right. Now—
- 24 Q. And is there a method by which you measure the amount that
25 goes into the tank?
- 26 A. Yes. We can take a dip on the tank, yes, Sir.
- 27 Q. So the fact that on this document that we've been looking at,

1 the Daily Work Report, shows no amount were four hours of air
2 blowing—

3 A. Yeah.

4 Q. —if it was going into Sealine 66—

5 A. Sixty-six, yeah.

6 Q. —66—

7 A. Yeah.

8 Q. —and ended up in tank 111—

9 A. Yes.

10 Q. —it should have been telling us how much went into that tank?

11 A. Correct, Sir, yes.

12 Q. So there's something missing there, isn't there?

13 A. Yes, Sir.

14 Q. So it could be one barrel, if it took them four hours to move one
15 barrel, or it could be hundreds? We just don't know?

16 A. I just don't know, Sir.

17 Q. And neither would anybody else who was doing the job at the
18 time?

19 A. Yesh. I don't know if they dip—I cannot say what they did—

20 Q. Right, so—

21 A. I cannot say what they did on the day, Sir.

22 Q. But, you see, it makes a difference?

23 A. Of course.

24 Q. Once you open both ends—

25 A. Yes.

26 Q. —you got this U-bend, right? You put your dip stick in—

27 A. Correct.

1 Q. —on either side, you see where the level is—

2 A. Uh-huh.

3 Q. —okay? And as you told us earlier, what you would want is to
4 make sure that the level is 36 feet, I think—

5 A. Uh-huh.

6 Q. —you said down so they can put the plugs in?

7 A. Correct.

8 Q. And assume it was 36 down that side and 36 down this side?

9 A. Correct.

10 Q. Right?

11 A. Uh-huh.

12 Q. If the pipe, when you opened it up, was full, you would know
13 exactly what you'd need to take out in order to get to 36 feet,
14 wouldn't you? It's just a mathematical exercise?

15 A. Correct.

16 Q. You know, it's volume, isn't it?

17 A. Yes.

18 Q. It's like if [*Inaudible*] achieved, you could measure the volume
19 you'd need to take out, it's X number of barrels and then we
20 had a guesstimate given to us of about one barrel per foot.

21 A. Correct.

22 Q. It's a, it's a rough guesstimate.

23 A. For that size of pipe, yes.

24 Q. Yes, but that sort of thing?

25 A. That diameter.

26 Q. Right. One barrel per foot. So you were—if it was full, 36
27 feet—

1 A. Yeah.

2 Q. —both sides—

3 A. Uh-huh.

4 Q. —72 barrels?

5 A. Right.

6 Q. That's all you'd need to take out, if it was full?

7 A. Right.

8 Q. It couldn't be fuller than full, could it?

9 A. Correct, right.

10 Q. It's either full or it isn't?

11 A. Right, yeah.

12 Q. If it's less than full it's going to be less than 72 barrels?

13 A. Of course.

14 Q. Right. Somebody said 300 barrels needed to be taken out of
15 this pipe.

16 A. Right.

17 Q. That doesn't seem, if I may say so, correct.

18 A. Correct.

19 Q. Only—in addition to that, more was taken out—

20 A. Correct.

21 Q. —than the 300 barrels.

22 A. Uh-huh.

23 Q. Whatever the amount was, it was more than 300 barrels?

24 A. Right.

25 Q. Right. So if, let's say, for a conservative estimate, 400 barrels
26 were removed—

27 A. Uh-huh.

1 Q. —from this pipeline, that is way in excess of what should have
2 been removed—

3 A. Right.

4 Q. —if it were full.

5 A. If 400 barrels were removed from that section, sure. So—

6 Q. Your records.

7 A. Right, so—right. So let me, if I may, let me finish explain,
8 right? Now, when this—this line goes into number 66 Sealine,
9 right. This is a 50-inch diameter line, 50-inch, 40-inch, 48 in
10 some places, right? So this is a huge line. It's a crude line
11 going into this tank. And this line is approximately 2 miles
12 long, right? So we are looking, you, barrel per foot with a line
13 diameter that size is about two barrels, just over two barrels per
14 foot. So I'm looking at about 22,000 barrels in this line for a 2-
15 mile long line. Right?

16 Q. Before it even gets to the tank?

17 A. Correct. So the volumes reaching the tank I don't know how
18 much of that volume would have come out of this 66 Sealine.
19 So the only way to, the only way to determine the height in that
20 pipe is actually to take a dip in that pipe because some will
21 come out of the 36 Sealine there and some will—a lot will
22 come out of the 66 Sealine.

23 Q. Yeah.

24 A. So, so the one method to, to identify the level in that riser is
25 taking a dip, what we call a dip.

26 Q. I'm not sure I quite understand what you're saying.

27 A. Okay, Sir.

1 Q. And I do need to understand.

2 A. Yeah.

3 Q. Let me see if I've got this right, all right?

4 A. Uh-huh.

5 Q. The amount of fuel, of liquid that you're taking out of this
6 line—

7 A. Uh-huh.

8 Q. —is an important factor?

9 A. Correct.

10 Q. Right? The maximum that could possibly be taken out of a full
11 pipeline would be about 76 barrels, let's call it 80 for round
12 figures, all right? That would justify bringing you down to the
13 level you wanted to bring?

14 A. Correct.

15 Q. If you took out more than that, you're going to be below the 36
16 feet, aren't you?

17 A. Uh-huh.

18 Q. You're going to go a lot lower?

19 A. Uh-huh.

20 Q. And perhaps right the way down into the horizontal pipe at the
21 bottom?

22 A. Correct.

23 Q. Your records, on the face of it, show that something around, as
24 a conservative estimate, 400 barrels were taken out, maybe
25 more? Right? I can't understand how it's possible for your
26 records to show that much oil coming out of a, of a pipeline that
27 should have only had about 70 or 80 barrels coming out of the

1 pipeline. I simply don't understand how the record could show
2 that much. I think that's what Mr. Maharaj is really asking you,
3 is, how is it possible—

4 A. Uh-huh.

5 Q. —to take that much out unless your records are wrong?

6 A. Okay, so let me try to explain that.

7 Q. Please?

8 A. The line—

9 Q. There's a board behind you. You can use that if that—if you
10 prefer to use that. There's a microphone that you can take with
11 you so that you can speak at the same time as pointing. Right.

12 *[Microphone handed to Mr. Piper]*

13 **Mr. Chairman:** Can everybody see this? Let's see if we
14 can—

15 **Examination By Mr. Chairman:**

16 A. Okay so I'm going to be air blowing, I'm air blowing from
17 here, okay. I'm going to get into this line.

18 Q. Air blowing starts where?

19 A. From there. From here. Right?

20 Q. Right. There's a little valve there but you won't be able to read
21 this, but there's a valve that's shown at the top of that where
22 your little finger is pointing now, right?

23 A. Right. Correct. It's correct. Right.

24 Q. That's correct isn't it? You attach a hose to that and start
25 blowing?

26 A. Correct.

27 Q. And what that does is to push all the way down there, across the

1 bottom, back up the other end and goes in to show us where

2 it—

3 A. Correct.

4 Q. Yeah.

5 A. So it manifolds on the berth, berth number 6.

6 Q. Uh-huh.

7 A. It goes into a manifolding system.

8 Q. Right.

9 A. Good? From that manifolding system it goes into number 66

10 Sealine.

11 Q. Uh-huh.

12 A. It then goes to, you'll see it says 66 Sealine to shore tank 111.

13 This line is 2 miles long.

14 Q. All right.

15 A. Good?

16 Q. So—

17 A. To get to shore.

18 Q. Yeah.

19 A. So, right, so you appreciate you're blowing here, I can—when

20 this gets to the tank, when the volumes reach the tank—

21 Q. Uh-huh.

22 A. —I cannot determine if the vol—how much came from here

23 and how much came from here. I, I don't know.

24 Q. Well surely you—

25 A. Because volumes—

26 Q. Forgive me—

27 A. —a lot a volumes will come from here.

1 Q. If I pour a pint of—into one end of a tube and there's water
2 already in the tube and I pour a pint in one end, surely a pint
3 comes out the other end?

4 A. Not necessarily if there's slack in the line.

5 Q. If there's slack in the line?

6 A. But I, but I—yeah, not necessarily.

7 Q. All right, so—

8 A. I, I don't know.

9 Q. —if there was air in the line—

10 A. Yes.

11 Q. —less would come out, not more?

12 A. Right. So it, it is the—oh, sorry.

13 Q. I don't want to be sued.

14 A. It is—at the end of, at the end of the process, I simply don't
15 know what left this line. I, I cannot tell what left this line.

16 Q. I am, I am struggling to understand and I'm doing my best to
17 but I simply don't understand how you end up with more at the
18 other end than you should—I could understand you having less,
19 because, by the time it goes through all of that system, it fills up
20 little air pockets and things like that, I can get it, and there may
21 be even, even 50 barrels or something like that, but I—what
22 we're talking about is hundreds of barrels more.

23 A. I'm just trying to [*Inaudible*]

24 Q. No, no you help me because I am genuinely struggling to
25 understand how it's possible to have more at the other end than
26 you actually needed to remove from this pipe. I simply don't
27 get how you can have more. You could have less because it

1 goes through the system and it fills up holes and so on, but how
2 could you have more?

3 A. I'm just trying to think of a simple arithmetic.

4 Q. Right. Well I'll tell you what we're going to do, right? Since
5 we're not going to finish today, you could think about it
6 overnight and explain it to me all again in the morning. All
7 right?

8 **Mr. Chairman:** And I think we'll call it a day, Mr. Maharaj.
9 I'm sorry to—I'm sorry I'm being so dense about it but, I mean,
10 maybe you can explain it to me because I simply don't
11 understand at the moment, all right, how we end up with more
12 at the other end and I want to understand it because it seems to
13 me quite important. So I will thank you for your attendance
14 today. We will see you tomorrow morning. It's going to be
15 nine o'clock I'm afraid and so we're adjourned for the day. I
16 don't need everybody to stand on ceremony. I'm going to
17 collect up my papers, so please, that's it for today. Thank you
18 all very much. Thank you.

19 Can I tell you, you ought not to discuss your evidence
20 with anybody else particularly those who are yet to come, all
21 right? Thank you.

22 **Mr. Piper:** Yes, understood.

23 **5.16 p.m.:** *Enquiry adjourned.*

24

25

26

27

1 **EVIDENTIARY HEARING DAY 10**

2 **9.00 a.m.:** *Enquiry commenced.*

3 **Mr. Chairman:** Good morning, all. First of all, Mr. Peterson,
4 can you thank your instructing lawyer, Ms. Baird, for sending
5 me the documents I asked yesterday from the witness.

6 **Mr. Peterson SC:** Yes, Sir.

7 **Mr. Chairman:** He has sent me something called a Site
8 Specific Emergency Response Plan for Paria as a template and
9 a Standard Operating Procedures Confined Space Rescue
10 document, which sets out a sort of plan.

11 **Mr. Peterson SC:** Yes, Sir.

12 **Mr. Chairman:** I'm grateful for that. Thank you. We post it
13 on the site. Can we have the witness—I'm told that there are
14 some problems with the air-conditioning in here. It may get
15 very warm. If it gets too warm, I shall invite everyone to
16 remove their jackets.

17 Good morning. Yes. Yes, good morning, Mr. Piper.

18 **Mr. Piper:** Good morning.

19 **Mr. Chairman:** I don't require you to take the oath again.
20 You know you're on oath.

21 **Mr. Piper:** Yes, Sir.

22 **Mr. Chairman:** So it will apply. Thank you. Do take a seat.
23 Make yourself comfortable. Bring that microphone a little
24 closer to yourself. That's it. The water is there for your use.
25 And we'll start now.

26 Mr. Maharaj, thank you.

27 **Mr. Maharaj SC:** Much obliged. Much obliged.

1 **Continued Cross-Examination By Mr. Maharaj SC:**

2 Q. Mr. Piper, yesterday afternoon when the adjournment was
3 taken, we were on the line clearance.

4 A. Yes.

5 Q. And I want to refer you back to that document, the instructions
6 at Volume III, page 1033 of the core bundle.

7 A. Yes, Sir.

8 Q. You're seeing it? And you would see that in the pages, as you
9 flip it, you would see on each page the three persons signed,
10 including you.

11 A. Yes, Sir.

12 Q. And you—

13 **Mr. Chairman:** Forgive me, Mr. Maharaj. I need to just catch
14 up with where I am.

15 **Mr. Maharaj SC:** 1033.

16 **Mr. Chairman:** Right. We're in which core bundle?

17 **Mr. Maharaj SC:** Volume III.

18 **Mr. Chairman:** Thank you. And we're on page?

19 **Mr. Maharaj SC:** It's page, yes, 1033.

20 **Mr. Chairman:** Sorry. Which page we're on?

21 **Mr. Maharaj SC:** 1033.

22 **Mr. Chairman:** 1033.

23 **Mr. Maharaj SC:** 1-0-3-3.

24 **Mr. Chairman:** Right, I'm there. Thank you.

25 **Mr. Maharaj SC:** And the question I had asked him, Mr.
26 Chairman, was that on each page there is a signature of the
27 three persons including himself.

1 **Mr. Chairman:** Yes, I got you. Thank you.

2 **Continued Cross-Examination By Mr. Maharaj SC:**

3 Q. And the next question I was going to ask you is that—and
4 would you agree it is a step-by-step process for the line
5 clearing?

6 A. Yes, Sir. It's pretty much sequential.

7 Q. Yes. And could you look at page 1038?

8 A. Yes, Sir.

9 Q. And you would see under "Risks":

10 “(a) All risks associated with this job covered under
11 JSA...”

12 —and it gives the reference. Am I correct in saying all risks
13 associated with this job covered by the risk assessment which
14 was submitted by LMCS and approved by Paria—accepted by
15 Paria?

16 A. Yes, Sir.

17 Q. Yes. And if you look at "Resources":

18 “1. Manpower - Operator to be assigned for monitoring
19 & emergency response, required manpower to conduct
20 works by contractor”

21 A. Uh-huh.

22 Q. So this operation was an operation, well, an instruction being
23 carried out by both the Operator, which was Paria, and the
24 contractor?

25 A. No, Sir. Just to explain again, if I may. We don't write—in our
26 Operations Department, we write work instructions for our
27 Operations Department. We do not write work instructions for

1 any other department nor for any contractor. So this, as I tried
2 to explain yesterday, this is simply a series of tasks. For
3 instance, when the Operator has to open his valves, and so on,
4 this is simply those series of tasks that he understands that he
5 has to perform, because he is simply aligning his system on the
6 Berth. But he also, in writing this, the Operator to be assigned
7 for monitoring and emergency response. That monitoring is the
8 monitoring of his berth and if there—for instance, you would
9 see that we had earlier in the document, to install containment
10 booms. So he is monitoring for any pollution, and so on. That
11 is what his job is, Sir.

12 Q. Well, Mr. Piper, I don't want to spend much time in this, but I
13 referred you yesterday to the witness statement of Mr.
14 Johnathan Ramdhan. And I'll just give you the reference
15 because you would remember what he said.

16 A. Correct.

17 Q. Witness bundle 1417 at paragraph 8 in which he stated that
18 LMCS undertook to drain the pipeline based on that
19 instruction?

20 A. No, Sir. This instruction does not go to LMCS. This
21 instruction is simply and solely an internal instruction for our
22 Operators.

23 Q. Mr. Piper, I have to put to you that what you are telling us is not
24 accurate, because there are documents which showed that it
25 went to LMCS, and I'll refer you to that document. Volume II,
26 witness statement bundle at page 917. It's an email from Mr.
27 Terrence Rampersadsingh, copied to Mr. Manmohan Balkaran,

1 addressed to LMCS, Subject: Draining of 36 SL. Page 917.

2 A. I'm seeing it on the screen.

3 Q. I'll read the email. Right?

4 A. Uh-huh.

5 Q. And Mr. Terrence Rampersadsingh is Paria. Correct?

6 A. Yes, Sir.

7 "Please see attached signed draining procedure, let us
8 meet tomorrow at 10 am to discuss draining schedules. I
9 want to start as early as possible this week, bearing in
10 mind the Crude Ship loading is on the 14th. I will
11 discuss with Ops now to firm up on any other issues."

12 A. Right. So, again, this draining procedure that target audience
13 when we develop this in operations is for our offshore operator.
14 Right? This is not an instruction nor was it intended to be an
15 instruction to the contractor. I cannot write an instruction to the
16 contractor, Sir. I write a work instruction to my operators. Of
17 course, you would appreciate that we would want to coordinate
18 with the contractor. If this document was passed to the
19 contractor, it is passed so he understands that we also are
20 coordinating just as we need to know, my operator needs to
21 know he will have—he will see the booms out there. For
22 instance—let me give you a for instance.

23 Q. Well, I think—

24 A. No, if I may, Sir, if I may, please? I need to explain. Right?
25 So—one second. Right. So if you look at 6.2, "Pre-Blowing
26 And Draining Conditions". Right. Item No. 5—so item No. 4,
27 item No. 5:

1 “4. Remove slip from manifold area connecting #36sl...”

2 So that is just the contractor—he understands that we
3 understand. Item No. 5:

4 “5. Contractor to be on stand-by to address any leaks
5 (flange, valve etc.) on the lower sulphur fuel oil system
6 as identified during the clearing of #36sl...”

7 So that simply is our operator understands that he has to have a
8 contractor on standby. If technical and maintenance shared this
9 document, the contractor also understands he has to have
10 somebody standby. But the audience is our offshore operator.

11 Q. Based on what you said, look at 6.5, No. 8.

12 A. 6.5 No. 8. Yes, Sir.

13 Q. “Periodically monitor the level of product in the riser via
14 the gauging port.”

15 A. Right. So our operator—

16 Q. Who is supposed to do that?

17 A. That is a contractor’s function, Sir.

18 Q. That’s a contractor’s function?

19 A. Yes. Our operator does not do any monitoring like that. This is
20 simply so he understand what is going on and he understand
21 when he needs to open and shut his system.

22 Q. Okay. I am suggesting to you that you are not speaking the
23 truth because Mr. Ramdhan and this email shows that these
24 were instructions given by Paria to carry out the line draining in
25 accordance with those instructions. What you have to say about
26 that?

27 A. And I’m saying to you, Sir, that this was never an instruction to

1 the contractor. I do not write—operations does not write any
2 work instructions to the contractor. I cannot write any work
3 instructions to the contractor.

4 Q. Okay. Assuming you are correct—

5 A. I am correct, Sir.

6 Q. All right. Would you agree that these instructions that you give
7 to your internal department would be instructions as to how the
8 line should be drained?

9 A. It is an instruction to what he has to do with his valving, and so
10 he has an idea what the contractor has to do.

11 Q. Okay. Let's pass on to something else. You would agree with
12 me—

13 **Mr. Chairman:** Just before you pass on to something else.

14 **Examination By Mr. Chairman:**

15 Q. Is it normal for the contractor to have this document or similar
16 document in different works? Is that normal?

17 A. No, Sir. Right. I—

18 Q. If you say that that's not normal, so would you agree then that
19 this is an unusual feature of this, that this particular document
20 was emailed to the contractor?

21 A. It is unusual, but I can understand that the—technical and
22 maintenance—I can understand that the supervision would want
23 the contractor to know, listen, we are ready with our procedure.
24 I want you to—so he understands that we know what to do, and
25 we are working with him to line up. But this is never for the
26 contractor.

27 Q. Well, you say never. I mean, as a matter of fact, it was; because

1 it was sent to him.

2 A. Yes. And it's simply information to the contractor, I would
3 imagine, on this occasion, so he just understands, listen, we are
4 ready.

5 Q. Yeah, I hear what you're saying. But, you see, when you look
6 at the actual email, that's not what it is saying, is it: this is just
7 for your information? What it is saying is:

8 "Please see attached signed draining procedure, let us
9 meet tomorrow at 10 am to discuss draining schedules."

10 Right. So it is intended, isn't it, to indicate the manner and the
11 system of work that is to take place the next day?

12 A. Correct. So I interpret this as, if I may, "Listen, we are ready.
13 Our operations is ready. They have their procedure. I'm just
14 sharing it with you, right, but let us discuss tomorrow." I'm
15 indicating to you that we are ready. Let's—we have our
16 schedules to discuss; let's discuss. That is how I interpret that.

17 Q. Well, I understand how you're interpreting it post the event.
18 Can I ask you, please, would you agree that at best it is
19 ambiguous?

20 A. At this point, Sir, I don't fully agree that it is ambiguous. I
21 understand how it works.

22 Q. No, you understand how it works. I want to try and understand
23 how it works. I'm suggesting the interpretation you're placing
24 on it, which may be a completely accurate one, but that is not
25 actually what it says. It is ambiguous in the way in which it is
26 drafted at best, isn't it?

27 A. Right; correct.

1 Q. So it is not saying, look, I'm just sharing this with you so you
2 understand that we are ready at this end; this is what we are
3 going to be doing. Right? It's not saying that, is it?

4 A. Right. So let's discuss the draining schedules tomorrow. So if
5 I go back to say—this document has gone to operations, right,
6 so I share this with you so you are aware you need to put your
7 compressor; you are aware you need to provide—you need to
8 install the containment booms; you are aware that you need to
9 put your slip blanks; you also are aware that you have a
10 manpower provision to put on the berth during the time that we
11 start this air blowing.

12 So once you could put all of that in place, let's discuss
13 this schedule so that—because you now know what you need—
14 you now—we're confirming, yes, and these are some of the
15 things that we, Paria, need to have from you as, a la, the
16 manpower. So that is how I interpret this.

17 Q. And you think that's what it says to you?

18 A. Well, as I keep repeating, Sir, this document is a work
19 instruction to our offshore operator.

20 Q. No, no. You think that's what the email is?

21 A. I think that is what—that is my interpretation of that. Right. I
22 am saying to you, listen, these are the things I need; let us sit
23 down and discuss when you can provide these things.

24 Q. Can we agree this much, at least, that it could have been better
25 crafted—the email?

26 A. I will agree with that, Sir.

27 Q. Thank you.

1 **Mr. Chairman:** All right. Thank you.

2 **Mr. Maharaj SC:** Much obliged.

3 **Continued Cross-Examination By Mr. Maharaj SC:**

4 Q. I want to go to something else, Mr. Piper. I want to go to the
5 Emergency Response Plan of LMCS, which was accepted by
6 Paria. Okay? That is in Volume II of the core bundle, page
7 877.

8 **Mr. Chairman:** Core bundle 877?

9 **Mr. Maharaj SC:** Yes, Sir.

10 **Continued Cross-Examination By Mr. Maharaj SC:**

11 Q. Okay. And you would see at page 879 just after the first
12 paragraph:

13 “In the event of any Emergency on a Berth,
14 Respond in accordance with Paria Fuel Trading
15 Company Limited’s ‘FIRE EMERGENCY RESPONSE
16 PROCEDURE’...”

17 You see that?

18 A. Yes, Sir.

19 Q. And then you see lower down:

20 “In the event of any Emergency in the Hyperbaric
21 Chamber...”

22 A. Okay.

23 Q. And you would see—do you see it have anything there relating
24 to if men are sucked into a pipe by Delta P or any other reason?

25 A. No, Sir.

26 Q. No. So would you—and you’re familiar with this plan. Not
27 so?

1 A. Well, yes, Sir.

2 Q. Yes. And would you agree with me that in the Emergency
3 Response Plan, this Emergency Response Plan, the Delta P
4 hazard was not identified as a risk or a hazard?

5 A. Yes, Sir.

6 Q. And the plan, when you read it, does not envisage that there can
7 be a situation where divers could be sucked into one of the
8 pipelines of Paria?

9 A. Yes. So that—

10 Q. You agree with me or you don't agree?

11 A. I agree with you, but if I may?

12 Q. Yes.

13 A. Once again, in specialized risk the contractor was supposed to
14 identify all credible scenarios.

15 Q. We get your answer on that, and that would be a matter—

16 A. Right. So if he didn't identify it, it would not be in here. Yes,
17 Sir.

18 Q. Yes. But Paria had to approve it?

19 A. Paria has to review it and accept it and Paria will, again, if I
20 may, Paria will look at those obvious risk to us, not the expert.

21 Q. So Paria in accepting it did not recognize that that was a risk?

22 A. That is correct, Sir.

23 Q. That is correct. Right. Let's go to something else, Mr.—before
24 I pass to that, I want to get, in respect of the line clearing, I
25 forgot to ask you two questions. Was there any reason that you
26 could give us for the issuance of these work instructions from
27 Paria, which is dated the 5th January, 2022, be it financial, or

1 logic—or because of any problems of any other matter in the
2 contract execution when the contract was dated in January
3 2021, if I remember correctly? About June 2021. Could you
4 give us any explanation why these work instructions were on
5 the 5th January, 2022, when the contract was in July 2021?

6 A. So if I may, are you—is the question—if I may rephrase the
7 question so I understand. Is the question why the lengthy
8 period in between the work instruction? Is that what I
9 understand the question is?

10 Q. Well, is there any reason why these instructions or these
11 method or this method of work was not issued by Paria before
12 at the time of the—during the execution of the contract before?
13 And why it was done at this stage?

14 A. Right, so—

15 Q. In effect, a few weeks before?

16 A. Yeah, I understand. Right. So it depends on how they write the
17 contract. So when they write the contract they would not have
18 all necessarily the fine details. Once the contract is awarded,
19 they then come to operations, “Listen, part of the contract, of
20 course, is to do the line preparation.” Operations then looks at
21 it and we write our work instructions. There’s no reason one
22 way or the other, but they just came to us at that period and we
23 wrote our work instruction.

24 Q. Okay. And operations would be Paria?

25 A. Yes, Paria Operations, yes.

26 Q. Right. The other question is that, were there any reason for
27 separating the removal of the line contents in two phases, phase

1 one and phase two?

2 A. Sir, I would prefer to leave that to technical and maintenance
3 for what really was their thinking in that. Right? But I would
4 say it might have been easier—it would have been easier for
5 them to take the ullage, you were—part of phase one would
6 have been to clear the top section, then I had to remove an
7 elbow. So, and once the elbow would have been removed in
8 phase two, now the contractor would have had access to take
9 what was really the determining measurement, which was an
10 ullage. So with the removal of the elbow that would be easier
11 for him.

12 Q. Okay. I want to go to the IMT now; on the issue of the IMT.

13 A. Okay, Sir.

14 Q. Because you were the commander?

15 A. Yes, Sir.

16 Q. You were the commander. Correct?

17 A. Yes, Sir.

18 Q. I want to refer you to paragraph 13 of your witness statement?

19 A. Where is it?

20 Q. That is at 1348.

21 A. [*Document passed to Mr. Piper*]

22 Q. And would you agree with me that based on what you said
23 there, that at 3.10 p.m. that you had information that the divers
24 were conducting works in the habitat. Kirt Scott saw a splash
25 on the monitor and after that the divers were not seen—based
26 on what you said there?

27 A. Yes, Sir.

1 Q. And then if you'll go to paragraph 28—so I'm trying to get
2 from you the timeline in order to assess what the IMT did. So
3 this is the context in which I'm trying to get that.

4 A. Okay.

5 Q. So go to paragraph 28 and that is at page 1351. When you read
6 that—and tell me if I'm correct—that at that time all that Paria
7 was doing—well, what Paria was doing in respect of the rescue,
8 was doing diving in the open water; doing open water searches
9 at that time?

10 A. Yes. Paria has no divers, Sir, so we were not doing any diving.

11 Q. Oh, so you were not doing any diving?

12 A. No, Paria has no divers, so Paria was doing searches with their
13 launches.

14 Q. I see. Okay. Thanks for helping us out. Okay. Then if you go
15 to paragraph 30, you referred to a telephone conversation you
16 had with Mr. Kazim Ali Sr, and that was at 3.23 p.m. at which
17 he informed you that the divers had taken out the first plug
18 when attempting to remove the second plug and the incident
19 happened. Okay?

20 A. Yes, Sir. Yes, Sir.

21 Q. You would have known at that time about Delta P hazard?

22 A. I can't say yes, Sir, that I did know at the time.

23 Q. At that time, did you have any inclination or am I correct to say
24 that you would have thought that apart from the men being in
25 the water, the men could have been sucked into the pipeline?

26 A. I wasn't sure what happened, Sir.

27 Q. You wasn't sure?

1 A. Right. Because I did ask Mr. Kazim Ali what happened and he
2 said, listen, they were attempting to remove it when the incident
3 happened. He also said he didn't know what happened.

4 Q. Now, I notice that Mr. Wei was also a member of the IMT?

5 A. Yes, Sir.

6 Q. And in Mr. Wei's witness statement he said he knew about
7 Delta P. Did Mr. Wei indicate to the IMT that it could have
8 been a Delta P situation and the men could have been sucked
9 into the pipeline?

10 A. My earliest recollection of discussions with Mr. Wei was when
11 we were speaking to someone from OTSL. Right? He was in a
12 conversation from—

13 Q. What time was that, around?

14 A. That would have been some time after eight, I believe, right, in
15 the evening, and we were discussing the Delta P?

16 **Mr. Chairman:** Just a minute. First time, I recall—I'm
17 writing this down to make sure I've got this right.

18 **Mr. Piper:** Yes, Sir.

19 **Examination By Mr. Chairman:**

20 Q. "The first time I recall having a conversation about Delta P was
21 with OTSL"?

22 A. Yes, Sir, right. And that was with Mr. Wei.

23 Q. And Mr. Wei?

24 A. Yes, Sir.

25 Q. "Way" I think he pronounces it. But anyway, Mr. Wei. And
26 that was at approximately eight o'clock that night?

27 A. Correct.

1 Q. That's the first time that you had considered Delta P?

2 A. Right. That's the first discussion I had on the Delta P. Right?

3 Q. So I'm coming back. Did you consider it before that?

4 A. Right. Well, I consid—well, not in the word "Delta P", right,
5 but I did consider—

6 Q. Differential pressure, whatever it was. Yes.

7 A. Yeah. I did consider that the possibility that the men could
8 have been in the pipeline.

9 Q. You did?

10 A. Yes, Sir.

11 Q. When did you consider that possibility, please?

12 A. When Mr. Ali told me about the plug being removed, we
13 weren't—

14 Q. Right. That's at twenty past three in the afternoon?

15 A. Yes, somewhere there. We weren't seeing the men in the
16 chamber, so it did occur to me, listen, these men could possibly
17 be in the pipe.

18 Q. Right. Pause there, please. As in—in the pipe, as in being
19 sucked into the pipe?

20 A. Or washed into the pipe.

21 Q. Or washed into the pipe?

22 A. Yeah.

23 Q. And did you have that conversation with Mr. Ali?

24 A. No, I did not have that conversation with Mr. Ali. When we
25 were speaking he said, listen, I don't know what happened.

26 Q. No, I know, but did you suggest that to him?

27 A. No, well, it didn't flash to me immediately, because this was

1 just new information coming. And the conversation moved
2 to—and he said, listen, Junior is missing, and, you know, I
3 immediately said I know—I knew Junior as a lad, maybe 17,
4 18, years old, working with Kazim Sr. Right?

5 Q. I think you knew him for 30 years or so, is that right?

6 A. Yes, yes.

7 Q. Kazim Sr?

8 A. I knew Mr. Kazim while at Petrotrin for about 30 years. Right?
9 And I knew when Junior—as a lad he had Junior under his
10 wings. And so I knew this young man for quite a long time.
11 When Kazim said that, of course, you know, it was very
12 upsetting, you know. So I just said, Kaz, listen, I'm so sorry,
13 and, you know, and then I said, well, listen, do you have any
14 divers on site, and so on. And he told me Andrew was there
15 and he was sourcing divers. I said so, okay, Kazim. I know
16 this is going to be really difficult for you; so sort of get your
17 divers on site. So, you know, that is how the conversation
18 flowed.

19 Q. All right. But it was in and around that time that you first
20 considered the prospect that these men might have been in the
21 pipe?

22 A. Yes, Sir.

23 **Mr. Chairman:** Thank you. Thank you.

24 **Mr. Maharaj SC:** Much obliged.

25 **Continued Cross-Examination By Mr. Maharaj SC:**

26 Q. And that would have been around 3.23 p.m.?

27 A. The time of the conversation?

1 Q. Yes.

2 A. Yes.

3 Q. So in answer to the Chairman just now, you asked him to get
4 his divers, and, et cetera?

5 A. Yes, Sir.

6 Q. Before Boodram came out of the pipe, and that would have
7 been at around 5.00 to 5.30, right, you knew that there were
8 LMCS divers trying to get a—do a rescue in the waters?

9 A. Right. So if I may, right, as I was—I arrived on site about five
10 minutes to 5.00.

11 Q. You arrived where?

12 A. I arrived on site at the Incident Command in the Port.

13 Q. You mean at the Incident Command Centre?

14 A. I arrived in the Port at the Incident Command Centre at about
15 five minutes to 5.00. Okay? When I arrived at the Port, Mr.
16 Yearwood had, in the conversation—on my way to the Port at
17 the incident, I had several conversations, right, calling people,
18 mobilizing, advising them we had an incident. So I had several
19 conversations of that nature.

20 When I arrived at the Port, one of those conversations
21 was with Mr. Paul Yearwood, our Safety Officer. He had
22 arrived and he called me and he asked if he should convene the
23 Incident Command. I told him yes, go ahead. He said he will
24 assume and when I come over I will take up the role. I said,
25 yes, Paul, go ahead please; just start setting it up. When I
26 arrived at about five to 5.00—sorry, before I arrived my
27 conversations with those at the Port, my conversations were

1 that—and my information was that Mr. Farah had gone into the
2 chamber on more than one occasion—on two occasions I was
3 told—and he did not see anybody. Right? There was no
4 discussion about anybody going into the pipeline.

5 When I arrived at the Port at five minutes to 5, I
6 immediately went into the Incident Command Post which was
7 in the conference room downstairs. I spoke to Mr. Yearwood; I
8 asked him if there was any further information; I asked him if
9 we found any of the divers; he said no; I asked him if there was
10 any further information, he said no. He also indicated to me
11 that they were trying to get information from LMCS and LMCS
12 persons were not responding to them. I also had that
13 information from Mr. Harrichan, right, and Mr. Ramdhan.

14 So at about five o'clock after I took over quickly from
15 Paul, I contacted Mr. Harrichan and I told them I needed to get
16 Mr. Farah who was the LMCS' dive supervisor. I needed to
17 have him at the Incident Command Post immediately so that I
18 could personally speak to him so I can find out what is going
19 on. Up to that time, nobody had given me any indication that
20 anybody was diving into the pipeline.

21 Q. Between 3.23 p.m. on that Friday to the time Boodram emerged
22 from the pipeline which was around five to 5.30 p.m., did you
23 take any steps to ascertain with a Delta P event, if the men were
24 in the pipeline, what rescue could you do? That is about two to
25 three hours.

26 A. Right.

27 Q. What did you do in order to focus on a rescue if the men were

1 in the pipeline?

2 A. Right. So if the men were in the pipeline, what I knew I
3 would—this was something completely—I’ve never had an
4 experience like this before, right. So for me, in the discussions
5 I—at that point in time, right, remember at this time I am
6 mobilizing my team. At this point in time I am calling people, I
7 am advising people; listen, this is what is happening, right. We
8 don’t know what is happening. I even got a call from a Mr.
9 Shyam Dyal from Heritage just as I entered the compound. He
10 said, Collin, what assistance do you need. I said to Mr. Dyal, I
11 said, “Shyam, I don’t know what has happened. I really—I’m
12 not certain. I’m trying to find out. Anything you can mobilize,
13 any equipment you can mobilize, mobilize it for me.” So at
14 that point in time I was just trying to get my thoughts together
15 to get down there and to mobilize people.

16 Q. Thank you. So you were trying to mobilize equipment to try
17 and do a rescue if the men were in the pipeline. Correct?

18 A. I was trying to mobilize any equipment, Sir. It was not specific
19 to if the men were in a pipeline. I had no confirmation; I did
20 not know.

21 Q. No, but you are the Commander of the IMT?

22 A. Yes, Sir.

23 Q. Emergency?

24 A. Correct.

25 Q. You don’t know whether the men in the pipeline?

26 A. Yes, Sir.

27 Q. Or whether the men in the waters?

1 A. Yes, Sir.

2 Q. So you have to plan for both. Not so?

3 A. Correct.

4 Q. Right. So you were trying to mobilize because if the men were
5 in open waters you already had divers?

6 A. Correct.

7 Q. LMCS had divers. Correct?

8 A. Well, they had Mr. Farah. They did not have any other divers.

9 Q. Okay. But they would have had access to divers?

10 A. I was told by Kazim Ali they had divers on the way, yes.

11 Q. Right. So you were trying to mobilize equipment, resources to
12 go into the pipeline if it became necessary?

13 A. No, Sir, not at that point in time because I was still trying to
14 figure out. I was not sure.

15 Q. Not at that point. Okay, all right. So let's take it in stages then.
16 So then at around 5.00 to 5.30 Christopher Boodram came out
17 of the pipeline?

18 A. Correct.

19 Q. When he came out of the pipeline, were you interested to find
20 out—you must have been interested to find out—if the other
21 divers were in the pipeline?

22 A. Yes, I was advised that the other divers were in the pipeline.

23 Q. And, therefore, won't it be immediately—because you said in
24 your affidavit this was a critical and urgent situation?

25 A. Yes, Sir.

26 Q. So the other divers were in the pipeline; Christopher Boodram
27 came out. Right? Were you interested then to get as much

1 information as you could get from Boodram to make a decision
2 whether the resources you were trying to get could go into the
3 pipeline?

4 A. Well, I was interested to get any information I could get from
5 Mr. Boodram. And as I said yesterday, right, Mr. Boodram,
6 when he came out the pipeline he just kept saying “The men in
7 there; go for them, go for them”. We couldn’t get any—

8 Q. Well, let us see what you did—because I’ve looked at the
9 affidavit—I’m sorry. I’ve looked at the witness statement and I
10 want to see what you did. Right?

11 A. Okay.

12 Q. So Boodram came out of the pipeline at around 5.30 p.m. I
13 know that you said the IMT was meeting; they were discussing,
14 and things like that. And then I see at around 8.40 p.m. you
15 contacted Mitchell’s, and that is at paragraphs 4 and 5 of
16 Fitzroy King affidavit at page 3017. I think they arrived at the
17 site at 8.40 p.m. I will let you know when you contacted them
18 just now. At page 3016?

19 A. Page?

20 Q. 3016, Supplemental Witness Statement. This is Fitzroy King of
21 Mitchell’s. And he said at about 4.30 p.m.—at paragraph
22 301—he received a telephone call from Rolph Seales who he
23 knew as a Heritage employer. And then he said he called
24 Ashton Campo mobilized a Mitchell team and left Point Fortin
25 for Paria and arrived at 8.40 p.m. Correct?

26 A. Yes, Sir.

27 Q. And, therefore, Mitchell was on standby. Correct?

1 A. Yes, Sir.

2 Q. Yes. And based on Mr. Mitchell's witness statement, according
3 to him—and his next thing is that on Saturday 26th February—
4 paragraph 6:

5 "Just after 1.00 a.m., I received a call from Rolph Seales
6 who told me to come across to Paria's shipping
7 facility..."

8 So he was on standby at 8.40 p.m. and he received a call from
9 Mr. Seales at one o'clock in the morning, Saturday morning, to
10 stand by. And then at paragraph 7 he was shown a footage,
11 then he returned to Badger Dock and told to stand by. And then
12 at paragraph 9 at about 2.00 a.m. Mitchell was told to return to
13 its compound and prepare the decompression chamber. So as
14 far as I can see from the evidence, that is what Mr. Mitchell
15 did?

16 A. Okay.

17 Q. Right? I'm sorry, that's what Mr. Fitzroy King did. So let's go
18 to Eastern Emergency Responses Services. And I will look at
19 the affidavit of Andy Johnson which is witness bundle, 1526 at
20 paragraph 6.

21 **Mr. Chairman:** Sorry, can I have that page again?

22 **Mr. Maharaj SC:** Page 1526.

23 **Continued Cross-Examination By Mr. Maharaj SC:**

24 Q. At paragraph 6, 25th February, 2022.

25 "At approximately 23:40hrs..."

26 So my maths are not very correct. That would be 11.40?

27 A. Correct.

1 Q. 11.40.

2 "...on Friday 25th February 2022, I received a telephone
3 call from Mrs. Arlene Chow..."

4 In effect, he was contacted at 11.40. And then you would see at
5 paragraph 7 what happened. There was a diagram at 11.43.
6 Ms. Patricia King of Heritage contacted him. And then at
7 paragraph 8 at 11.45 he contacted the scheduler and activated
8 the rescue team. And he arrived at Paria on Saturday morning
9 just after midnight, probably 12.30.

10 At paragraph 9, arrived at Paria after the checkpoint, and,
11 et cetera, and he remained with—look at paragraph 10; he
12 remained with team members. And at approximately 1.25 on
13 Saturday morning, he was briefed by the Incident Commander.
14 And approximately 2.15 a.m., paragraph 12, boarded the vessel;
15 was taken to the scene. And then at paragraph 13, at 2.35 a.m.
16 the team arrived at berth 6 and then they described what
17 happened, that there was a blockage.

18 So I'm trying to work out the timeline. So, you see,
19 that's about 2.35 a.m. Okay?

20 A. Yes, Sir.

21 Q. Then let's go to OTSL. If you look at paragraph 6 and 8 of Mr.
22 Ian Bertrand's witness statement at bundle 2842.

23 **Mr. Chairman:** Page number again, sorry?

24 **Mr. Maharaj SC:** Sorry, 2841, supplemental at paragraph 6
25 and 8 and that would be at page 2842.

26 **Continued Cross-Examination By Mr. Maharaj SC:**

27 Q. Paragraph 5, he spoke to OTSL Executive Director—that's at

1 2841—Mr. Donawa, and asked him to make arrangements, and
2 about 5.30 p.m. or so, gave instructions. But he arrived—he
3 remained in touch with the Gulf Stream Eagle. What happen,
4 the boat is the Gulf Stream Eagle. It arrived at Paria at about
5 8.10 p.m., that's on the Friday. Okay?

6 A. Okay, Sir, yes.

7 Q. And was told to dock at berth 6 and was awaiting instruction
8 from Paria.

9 A. Correct.

10 Q.

11 "At about 8:37 p.m. OTSL received an email from
12 Paria's Legal Counsel and Assistant Corporate
13 Secretary..."

14 They wanted an indemnity if loss, and, et cetera.

15 "OTSL was not called upon by Paria to do anything."
16 —according to this. And then at paragraph 9 at 5.30 a.m.,
17 OTSL was told by Paria that it was no longer required to be on
18 standby. Correct?

19 A. Correct. That's what it says.

20 Q. And I want to—I want to go to Hull, because these are the
21 companies that you said you contacted. Right?

22 A. Uh-huh.

23 Q. I want to go to Hull Support Services. Witness bundle pages
24 2990 and 2991. At 2991 at paragraph 6:

25 "I did call Andy back, at about 5.30 p.m., and told him
26 that most of the fellows had left for the day and others
27 had family arrangements, but I will keep trying. He told

1 me he would call me back to give me more information.”

2 And to put that in context, you would have seen at paragraph 5:

3 “At about 4:30 p.m. while in office he received a call
4 from Andy Fortune who is Heritage Marine Lead.”

5 And then as far as Friday was concerned at paragraph 7:

6 “I later learnt that Rolph Seales (Heritage’s SME) did
7 contact Hull’s Diving Manager, Anthony Nivet and Hull
8 provided a decompression chamber. I was, in fact, part
9 of the crew that operationalized the chamber even though
10 it was not needed by Paria.”

11 And then if you go to paragraph 12:

12 “Andy told me that the Incident Command Team (ICT)
13 did not want anyone to go into the pipeline. Andy did
14 not request assistance from Hull in relation to any
15 rescue.”

16 A. Okay.

17 Q. That’s what it says, yes. The Hummingbird was contacted at
18 10.50 p.m. on Friday. It was contacted by Michael Wei; at
19 paragraph 107, witness bundle page 1290.

20 **Mr. Chairman:** This is the next agency, is it, Hummingbird,
21 yes?

22 **Mr. Maharaj SC:** Yes, Hummingbird.

23 **Mr. Chairman:** Page?

24 **Mr. Maharaj SC:** Page 1290 at paragraph 107.

25 **Continued Cross-Examination By Mr. Maharaj SC:**

26 Q. According to that he was contacted at 10.50 p.m. And
27 Catherine Balkissoon, at paragraph 31 of her witness statement

1 at page 1333 said that the pipeline crawler went in at 3.00 a.m.
2 on Saturday. I'll show you that—at page 1333 paragraph 31.
3 There's where she said at 3.00 a.m. on Saturday the crawler
4 went in. Is that correct?

5 A. That is what it says, Sir.

6 Q. Yeah.

7 **Mr. Maharaj SC:** Have you found it, Mr. Chairman?

8 **Mr. Chairman:** No.

9 **Mr. Maharaj SC:** 1333, Volume IV, at paragraph 31.

10 **Mr. Chairman:** Yup. Got it.

11 **Mr. Maharaj SC:** Yes.

12 **Continued Cross-Examination By Mr. Maharaj SC:**

13 Q. Then I want to refer to what Mr. Michael Wei stated in respect
14 of the pushrod camera, and, et cetera. So if we look at witness
15 bundle 1289 at paragraphs 104 and 105.

16 **Mr. Chairman:** Yup.

17 **Continued Cross-Examination By Mr. Maharaj SC:**

18 Q. You would see there that according to what is stated prior to
19 Hummingbird being contacted.

20 "At around 9.00 pm. a pushrod camera with operating
21 crew arrived from Atlantic LNG..."

22 At 9.00 p.m. But that camera was not inserted until three hours
23 later at midnight.

24 A. Uh-huh. Okay, Sir, that's what it says. I can explain when you
25 are ready.

26 Q. Okay. I will go to your affidavit [*Inaudible*].

27 A. Of course.

1 Q. And in your affidavit, at paragraph 134, page 1369, you said
2 that Atlantic LNG arrived at 11.00 p.m. on the Friday night
3 with the pushrod camera?

4 A. Uh-huh.

5 Q. Now, in your statement you mentioned Krishna Fuentes. So I
6 want to point out to you what the evidence shows of Fuentes.
7 Right?

8 A. Okay.

9 Q. I am suggesting to you that there is no evidence that Krishna
10 Fuentes was on site prior to 4.00 p.m. on Sunday. And I say
11 that because I want to point out in your witness statement at
12 paragraph 208 at page 1381 you said:

13 "I was told by Mushtaq that the documents presented by
14 LMCS were reviewed by the TTCG, Krishna Fuentes and
15 Rolph Seales, all of whom he indicated that LMCS
16 proposal was too risky and advised that we should not
17 proceed with the dive proposed by LMCS."

18 So this would have been on Sunday?

19 A. Correct.

20 Q. Now, we know from the evidence so far and the references,
21 witness bundle 13, paragraph 33, that the Coast Guard came
22 originally to do an open water search for the divers. And based
23 on the intervention of Commander Maharaj, the Coast Guard
24 was redirected to Staubles Bay to pick up a dive crew and
25 equipment. And that dive crew and equipment arrived at Paria,
26 I think, about 8.30 to 9.00 p.m. on the Friday?

27 A. Okay.

1 Q. Now, as the Commander of the IMT—

2 A. Uh-huh.

3 Q —when Christopher Boodram—I would take it from there.
4 When Christopher Boodram came out of the pipeline, did the
5 IMT have a kind of timeline that if they had to do a rescue in
6 the pipeline how many hours they had in order to ensure that
7 the men would survive? You had a timeline? Two hours?
8 Three hours? Four hours? Five hours? Saturday morning?
9 Sunday morning? What timeline you had?

10 A. Right. So when Mr. Boodram came out of the pipeline, right,
11 immediately, we recognize—we did not know the conditions in
12 the pipeline. Right? That was understood. We simply did not
13 know. At the time we weren't sure what had happened in the
14 incident, what caused the incident—

15 **Examination By Mr. Chairman:**

16 Q. Forgive me for interrupting you, but we have heard all of this
17 many times.

18 A. Okay, Sir.

19 Q. I would like you address the question that's being asked. Did
20 you have a timeline?

21 A. We knew if there was any air pocket there would be vapours in
22 it, so we knew it would be a vapour space. We also knew all
23 they will have other than that would be their air bottles, and that
24 would give them maybe a couple hours. So that was the
25 timeline. We understood.

26 **Continued Cross-Examination By Mr. Maharaj SC:**

27 Q. And a couple hours would have been—

1 A. Well, two—three hours at the most.

2 Q. Two to three hours. So he came out at around 5.00 to 5.30?

3 A. Yes, Sir.

4 Q. And the timeline you would have given yourself was about—
5 given the IMT—would have been about two to three hours?

6 A. Yes, that is what we thought, but there was no way to tell
7 definitively.

8 **Examination By Mr. Chairman:**

9 Q. Yeah, I know. Just a minute. He'd already been in the pipeline
10 for nearly three hours?

11 A. Yes, Sir.

12 Q. So, I mean, did you factor that in?

13 A. Yes, Sir.

14 Q. The air that might have been available to them was being used
15 up in that time?

16 A. Yes, Sir.

17 Q. Yes. So I suppose the question really is, did you have, from the
18 moment of the incident—leave aside for a moment Mr.
19 Boodram's heroics, leaving that to one side—the incident you
20 knew had happened at about quarter to three that afternoon?

21 A. Correct.

22 Q. And really, was there a timeline from then? So we start at
23 quarter to three; we know five men have gone missing; we
24 don't know where they are at that stage?

25 A. Correct.

26 Q. So we're searching the ocean. We don't find anything in the
27 ocean at all, which is pretty extraordinary; I would have thought

1 within a half an hour even of doing that, that you would find
2 nothing at all. So you start to think about other alternatives,
3 presumably?

4 A. Yes.

5 Q. So all—I think what Mr. Maharaj is asking you is, did you start
6 to say, well, we've got from then maybe a couple of hours—
7 forget whether they went into the pipe or not—couple of hours
8 to find these guys otherwise they're going to drown and die?

9 A. Yes, Sir.

10 Q. You must have had that in mind?

11 A. Yes, of course.

12 Q. And then, like a moment of salvation, for everybody, Boodram
13 comes out of the pipe. You must have thought, renewed hope.

14 A. Of course, yes, Sir. Yes, Sir.

15 Q. It's at that point you might have been thinking, well, they're all
16 dead anyway. So when he comes out of the pipe you must have
17 truly thought renewed hope.

18 A. Yes, Sir.

19 Q. And what timeline, now that you know beyond per adventure
20 that they are in the pipe, what timeline did you apply to that?

21 A. Right, so—

22 Q. If at all?

23 A. Well, we, again, just to repeat, we knew they would have had
24 their air bottles; they would have been in a vapour space, you
25 know. We would have, maybe, yes, maybe listen maybe three,
26 four hours, five, you know. Of course, everybody was in hope.
27 Mr. Boodram—

1 Q. Three, four, maybe five hours. From when? From when he
2 emerged or from when it happened?

3 A. From when Mr. Boodram came out. We simply didn't know,
4 but we understood we had to work quickly.

5 Q. No, I understand that. I asked Ms. Balkissoon this question,
6 though. I think I did anyway. Was any attempt made to
7 calculate the amount of space that would have been necessary
8 within the pipe to sustain five—four men now—and how much
9 that would be by way of volume in the pipe? Do you follow the
10 question I'm asking you? So one man per hour breathing X
11 amount of vapour space—let's hope as much air as was
12 breathable—but what was the sort of outer limit? Did you try
13 and make any sort of estimate of what the outer limit might
14 have been?

15 A. Umm—

16 Q. I mean, apart from a guess? I mean, presumably, it's something
17 that is calculable?

18 A. Right. At that point in time, we didn't calculate anything. At
19 that point in time, we were just really saying, listen, this is a
20 vapour space. We looked at the air bottles, and so on, you
21 know. If one man had one—one air bottle per man, if even one
22 man had maybe two air bottles. So that was the sort of limits
23 we were giving, three, four, five hours at the most.

24 Q. Right.

25 A. But we did not attempt to calculate it, because we had limited
26 information at the time.

27 Q. No, but you realized by then—well, you knew, not realized,

1 you knew that there were air pockets or vapour pockets within
2 the pipeline, because you've been told that?

3 A. Yes, Sir.

4 Q. Right. So it was simply a question at that stage, wasn't it, well,
5 how much air per man per hour? It's a calculable number, isn't
6 it?

7 A. Of course. And, again—

8 Q. Did you?

9 A. No, we didn't. Well, it was just guess-work at that time. We
10 could only estimate inasmuch information we had, and the only
11 information we would have had would have been the air tanks.
12 We didn't know the vapour space. We simply didn't have that
13 information at the time.

14 Q. No, I follow that. But, you see, you knew how much was in the
15 pipeline by way of oil before it started, and you knew how
16 much you'd pumped out, or you should?

17 A. Well, we didn't know. I did not know at the time.

18 Q. Did you have a look at the records that you were shown
19 yesterday by Mr. Maharaj?

20 A. No, not at that time, Sir, yes.

21 Q. At any time during the IMT, did you look to see, well, how
22 much had been pumped out of this pipe? So what is the best
23 guess that we could make as to the amount of air that could be
24 in it?

25 A. Right. So, no, I did not look at that record. At the time I didn't
26 know we had that record at the time, and I knew—I did not
27 know how much oil was left. I did not know how much water.

1 I did not know how much vapour space. I simply did not know.

2 Q. I appreciate you didn't know. But what you're saying is that
3 you didn't look?

4 A. No, Sir, not on that night. I did not look.

5 Q. You didn't look to see whether there was any records kept by
6 your own company as to the amount of oil that there might have
7 been in the pipeline at any time?

8 A. No, Sir, I did not look.

9 Q. Because it's maths, isn't it? You know the amount of volume
10 that was in that pipe. You could calculate how much oil has
11 been pumped out of it if it were full. That would leave X
12 amount of space potentially for air. That is a certain amount
13 which you could then calculate per man. So here's our best
14 outside limit—six hours let's say. We've got to act within six
15 hours or not at all.

16 A. Yes, Sir, yes, I didn't calculate it.

17 Q. No. You think it would have been a good idea, wouldn't it? It
18 would have informed you as to what needed to be done in the
19 time available?

20 A. Well, we—again, it may have been a guide, but we simply—we
21 understood, listen, this was only a few hours. We understood
22 that; this was a few hours.

23 Q. Are you saying that realistically once five hours had passed, it
24 was too late?

25 A. I could not say that definitively, Sir. We were working here
26 with, you know, we were looking at what is the best—we were
27 hoping for the best.

1 Q. Diminishing returns, though, isn't it? Come on.

2 A. It is diminishing returns, yes, Sir.

3 Q. I mean, realistically, you know, as each minute passes, so the
4 chances or the prospects of saving anybody diminishes, doesn't
5 it?

6 A. Of course.

7 Q. And there is an outer limit?

8 A. Yes.

9 Q. And that outer limit was potentially calculable?

10 A. Yes, Sir.

11 Q. You were working on the premise of what; five hours as a
12 maximum?

13 A. I was working maybe five hours, maybe midnight at the
14 outside. That is what I would have been working with.

15 Q. Midnight at the outside?

16 A. Yeah, I was working with that.

17 Q. But, I mean, realistically, I mean, that would have been, what,
18 nine hours after the event?

19 A. Yeah.

20 Q. I mean—

21 A. Of course, working with hopes.

22 Q. Sorry?

23 A. Well, you're expecting—okay. Realistically in my mind maybe
24 four, five hours, realistically maybe six at the outside, Sir.

25 Q. Six from Boodram emerging from the pipe?

26 A. Well, with Mr. Boodram emerging from the pipe, of course, we
27 would have had a renewed hope. Right?

1 Q. Well, that's what I said. But, I mean, realistically—you see, the
2 only reason why I'm asking it, and it follows on from what Mr.
3 Maharaj was asking about a timeline, is that surely a timeline
4 informs you about how to approach any potential rescue.

5 A. Correct.

6 Q. In the sense that—well, let's assume you say, as I gathered
7 from your evidence, we need to know more about the pipelines
8 so we're going to get a camera?

9 A. Correct.

10 Q. That was a policy decision. Right? We're going to get a
11 camera. If the man tells you who has the camera, "It's going to
12 take me five hours to get the camera in there", that informs
13 whether it's too late to actually do anything by way of a rescue
14 relying on any camera. So you have to think of plan B, don't
15 you?

16 A. Yes, Sir.

17 Q. That I think is where we're at.

18 A. Okay.

19 Q. The timeline as to the realistic prospects of successfully
20 rescuing anyone has to be at the forefront of any decision made
21 about what you're going to do; cameras, equipment, people, et
22 cetera. Yes?

23 A. Right. Yes, Sir.

24 Q. Was it at the forefront?

25 A. Of course, of course, Sir, it has to be. It can't be any other way.
26 But we simply did—we simply did not know how long. We
27 simply did not know at that point in time. We were guessing at

1 that point in time. We could only estimate, as I said.

2 **Continued Cross-Examination By Maharaj SC:**

3 Q. Mr. Piper, I read in your Command System that the first priority
4 is to save human lives.

5 A. Uh-huh.

6 Q. And when I look at the—

7 **Mr. Chairman:** I'm sorry. We're going to have to rise for a
8 couple minutes right now. Thank you.

9 **10.10 a.m.:** *Enquiry suspended.*

10 **10.30 a.m.:** *Enquiry resumed.*

11 **Mr. Chairman:** Thank you very much. I'm sorry for that
12 interruption. I think we've managed to kill two birds with one
13 stone, though, both addressing the air-conditioning in this room
14 and Mr. Wilson's condition, both of which seemed to have
15 improved. So we will be able to press on. Thank you very
16 much. Before we do that, can I just ask everyone how long
17 they think we might need Mr. Piper for today?

18 First of all, do come in, Mr. Piper? Take a seat.

19 **Mr. Maharaj SC:** About an hour and a half.

20 **Mr. Chairman:** Well, that would take us up to midday. Can I
21 have some sets from others how long they're likely to be? Ms.
22 Alfonso, what do you think?

23 **Ms. Alfonso:** Maybe 20, 25 minutes, Sir.

24 **Mr. Chairman:** Half an hour. Mr. Pegus, do you have any?

25 **Mr. Pegus:** I have no questions.

26 **Mr. Chairman:** No questions. All right. Mr. Ramadhar?

27 **Mr. Ramadhar:** Thank you very much. Well, appreciating

1 time is of the essence here, I will try to contain it within half an
2 hour.

3 **Mr. Chairman:** Half an hour; that's midday. Well, that's
4 lunchtime. What do you think, Ms. Persaud-Maraj?

5 **Ms. Persaud-Maraj:** I may be 30 minutes to half an hour.
6 But, of course, the caveat is, from my end, it depends if my
7 questions have been covered already.

8 **Mr. Chairman:** No, no, I appreciate that. And, of course, I
9 understand others may cover, before he gets to you, the
10 questions you might have wanted to ask. What do you think,
11 Mr. Peterson?

12 **Mr. Peterson SC:** So far, Sir, we only have one question and
13 it may be extinguished by the time Mr. Maharaj finishes with
14 90 minutes of—

15 **Mr. Chairman:** All right. So the question realistically is
16 whether if we're finished with Mr. Piper by, say, three o'clock
17 today, whether we start with Mr. Mushtaq Mohammed. Any
18 submissions about that? What I wouldn't want to do is to leave
19 Mr. Mushtaq Mohammed half-heard, as it were, over the
20 Christmas break. It wouldn't be fair on him.

21 **Mr. Peterson SC:** We were suggesting a part-heard, but, yes,
22 that's—

23 **Mr. Chairman:** You were suggesting?

24 **Mr. Peterson SC:** No, we were thinking about maybe doing
25 the summary and probably Counsel to the Commission could
26 do their cross, but then that would leave it part-heard and
27 hanging. So it may seem that we have an early day today, Sir.

1 **Mr. Chairman:** Yes, I think we have a little bit of reading to
2 do. We could use up some of the time with that. My
3 inclination at the moment is to rise once we've dealt with Mr.
4 Piper. He's an important witness. People should be permitted
5 to ask questions, and I know my interruptions are always
6 making it last longer than it would otherwise be. But I think
7 that's what we'll do. In which case, we will release Mr.
8 Mushtaq Mohammed for today.

9 **Mr. Peterson SC:** Yes, Sir, because he will be on his way
10 from—

11 **Mr. Chairman:** Well, that's why I thought we'd venture it
12 now rather than him making his way here only to be told go
13 home again or go back to work, whichever he prefers. But it
14 seems to me that the sensible thing to do would be to release
15 him now, and during the course of this afternoon we'll
16 determine exactly what the order of the remaining witnesses
17 will be. I see you have a hand up? Mr. Pegus.

18 **Mr. Pegus:** Yes, Mr. Chairman. On second thought, I would
19 only question this witness if for the remainder of his evidence
20 he says something that concerns my client.

21 **Mr. Chairman:** Of course.

22 **Mr. Pegus:** But up to this point, I don't have any questions for
23 him. I just wanted to make that clear.

24 **Mr. Chairman:** I'm not holding anybody to this. I understand
25 that it's a little fluid at the moment. So if you have questions
26 then you'll be permitted.

27 **Mr. Pegus:** Thank you very much.

1 **Mr. Chairman:** All right. Then let's do that. We will release
2 Mr. Mushtaq Mohammed. Somebody can tell him, please, that
3 he's released, and we'll notify everybody by, certainly by
4 tomorrow, what the position will be in relation to all the
5 remaining witnesses and the eight days or so that we have left
6 earmarked for this Enquiry's public hearings. All right, we'll
7 do that then.

8 Thank you very much. Back to you, Mr. Piper.

9 **Continued Cross-Examination By Mr. Maharaj SC:**

10 Q. Yes, Mr. Piper. When the adjournment was taken I was telling
11 you that when I looked at the evidence of the timeline, I want to
12 suggest to you, it did not seem as though you and the IMT acted
13 with urgency to save human lives.

14 A. Okay, Sir.

15 Q. No, I'm going to put the timeline to you. So I'm going to,
16 okay?

17 A. Okay.

18 Q. Because according to you, Mitchell—I will read. Mitchell was
19 contacted and they were on standby from 8.40 p.m. We went
20 through that this morning. Right?

21 A. That's not in my statement. I don't think that's in my
22 statement.

23 Q. But I read the evidence to you?

24 A. Yes, you did. Okay, yes.

25 Q. Eastern Emergency Response Services were not contacted until
26 11.40 p.m. on Friday. OTSL was there from 8.00 p.m. and
27 remained on standby until 5.30 a.m.

1 Hull Support Services received a call at 4.30 p.m. and
2 they did not go to the site. Hummingbird was contacted at
3 10.50 p.m. on Friday. And Catherine Balkissoon said that the
4 crawler went in at 3.00 a.m. on the Saturday. Now, if it is as
5 you said that you were acting urgently to save human lives,
6 could you tell us why it is that you could not contact these
7 people to get whatever advice you wanted earlier?

8 A. Right. So I'm sure looking through the evidence you would
9 have seen that we had a camera. We had contacted PISL,
10 Professional Inspection Services Limited. They were on site, I
11 think, by about 7.30, right. So we had them on site very
12 quickly.

13 **Examination By Mr. Chairman:**

14 Q. Sorry, I missed that.

15 A. Yes. Professional Inspection Services Limited, PISL. Right?
16 They were on site. Right? Now, we don't have this equipment
17 on hand, of course, so we have to source this equipment.
18 Right? So we had PISL on site; that would be IMT, the
19 members of the IMT Logistics, and so on; they were trying to
20 source equipment. So they were on site at about 7.30 p.m. on
21 Friday. Right? So we did start actioning very quickly. Once
22 they got on site, unfortunately, there was an issue with the light
23 on the camera and we were not able to use the PISL. We also
24 had on site via OTSL, we had a—

25 Q. Sorry, sorry. I want to keep an accurate note of this. It's quite
26 a long answer to the question you were asked. So I just want to
27 keep it recorded. So you're saying that they had the camera on

1 site at 7.30?

2 A. Yes, Sir.

3 Q. But you couldn't use it because it didn't have a light?

4 A. Yes, there was an issue with the light on the camera. Yes, Sir.

5 Q. You mean it had a light? It didn't work?

6 A. It wasn't bright enough. It wasn't bright enough, or didn't
7 work, yes.

8 Q. Not working or not bright enough?

9 A. Yeah.

10 Q. So it couldn't be used?

11 A. So it could not be used.

12 Q. So you're back to square one?

13 A. Right. Yes, Sir. We also had a remote operated vehicle that
14 came up on site with OTSL.

15 Q. An ROV?

16 A. An ROV, yes, Sir. And that was with when OTSL came up, I
17 believe, and that was about maybe 8.30, 8.40.

18 Q. I think it arrived at 8.37.

19 A. Okay, yes, Sir, somewhere around there.

20 Q. When were they called up, please?

21 A. Right. So OTSL, through Heritage, right—because I did not
22 make those calls, we had contacted Heritage, that is Mr.
23 Mohammed.

24 Q. It doesn't matter how, but—

25 A. So we had contact—they contacted their Dive Supervisor, Mr.
26 Seales, Rolph Seales, and he started putting these things in
27 place. He started mobilizing these people—Mitchell, OTSL,

1 Hull Support, and so on. Right? So they, of course, had to
2 transit from Point Fortin, I believe. So they came up on site.

3 Q. All right. It hasn't answered my question, which is when were
4 they contacted? I don't care who by, but when?

5 A. They would be some time after four, between four and five,
6 right. I don't have the exact time that Mr. Seales contacted
7 them, Sir.

8 Q. Right. And that doesn't appear, does it, in any of your logs?

9 A. No, that wouldn't be in the log. Those contacts would have
10 been made before Mr. Seales arrived. I believe it was Mr.
11 Seales who made those contacts.

12 Q. And Mr. Seales did it at whose behest?

13 A. At Heritage's behest on behalf Paria.

14 Q. On behalf of Paria?

15 A. Yes, Sir, and that was early on. That's to the best of my
16 knowledge.

17 Q. Thank you. So sometime between 4.00 and 5.00?

18 A. Yes.

19 Q. So you mobilized an ROV between 4.00 and 5.00 that
20 afternoon?

21 A. To the best of my knowledge.

22 Q. Before, therefore, before Mr. Boodram came out of the pipe?

23 A. Right. So, again, to the best of my knowledge, I believe that
24 was around the time when Mr. Seales had spoken to OTSL and
25 the diving companies, right, when he was called.

26 Q. But, presumably, you were ordering the ROV to examine the
27 pipe?

1 A. Ordering the R—well, I don't know if they had it on board, but
2 we just wanted as much equipment as we could, because we did
3 not know what was happening at the time.

4 Q. No, no, no. I'm only trying to understand your answer. Is it the
5 case that you understand Mr. Seales contacted OTSL for an
6 ROV sometime between four o'clock and five o'clock that
7 afternoon with a view to using that ROV to go into the pipe?

8 A. Right. I don't know if Mr. Seales specifically asked for an
9 ROV, but I know he would have spoken to those dive
10 companies and OTSL had an ROV when they arrived. I don't
11 know the specifics if he asked. I don't know. But we had an
12 ROV on site which we attempted to use.

13 Q. So it might have been just good fortune that there happen to be
14 one?

15 A. Right. And when—I assumed—this is just an assumption—
16 whatever equipment because at that time we weren't sure.

17 Q. We'll ask Mr. Seales. Anyway, you believe that the assistance
18 was being sought between four and five o'clock?

19 A. When Mr. Seales—to the best of my knowledge.

20 Q. Yes. And OTSL arrived at about 8.37?

21 **Mr. Chairman:** All right. Thank you.

22 **Examination By Commissioner Wilson:**

23 Q. Good day, Mr. Piper. I just have one question here. Yesterday
24 I heard you said that you were part of the Management Tenders
25 Committee?

26 A. Yes, Sir.

27 Q. All right. So, and you've identified diving as a specialist type

1 of scope of work on your facilities or in your assets. Being part
2 of that committee, you would have some idea of the
3 commercial diver capabilities within country. So with that
4 knowledge—well, do you have?

5 A. No, Sir, I'm not very familiar. This was more like construction,
6 and so on. So I can't say I—not very familiar.

7 Q. Well, a dive company or a commercial dive company would be
8 a commercial dive company with the capabilities of which
9 you're expecting. Now, you said the expertise are there. So
10 how many companies in the tender process, just to go back a
11 bit, that you are aware of that you selected LMCS from?

12 A. I can't say offhand, Sir. I don't remember offhand.

13 Q. Okay. Because I was kind of going with Paria's awareness of
14 commercial dive capabilities. Why you would have to depend
15 on another company? It could be a bit time consuming.

16 A. Right. Because we have really used mainly LMCS to do our
17 works. In the past we had Master Services agreement with
18 them. So we have not used OTSL—we did not use OTSL or
19 Hull, but we know that Heritage was using these companies.
20 So we depended on Heritage in this case to assist us.

21 Q. Okay. But I heard you said that it was Heritage recommended
22 it to you. But if you were aware of them, you would be aware
23 that they have commercial diving capability?

24 A. Of course.

25 Q. Yeah, okay.

26 A. Right. But we sought the assistance from Heritage. It will be
27 quicker, we thought.

1 Q. Okay. Thank you.

2 **Mr. Chairman:** Right. Yes, Mr. Maharaj.

3 **Examination By Mr. Chairman:**

4 Q. As I understand, your answer to Mr. Maharaj is that the
5 Professional Inspection Services arrived on site at 7.30, but
6 their light wasn't working, so you couldn't use it. There was an
7 ROV which arrived on site around 8.37 that evening?

8 A. Correct.

9 Q. Was it deployed?

10 A. Right. So we—Catherine did speak with Andrew Farah as Dive
11 Supervisor, about using the ROV, and she advised that Mr.
12 Farah said the ROV couldn't work; it was too big to get into the
13 pipeline. So we were not able to use the ROV.

14 Q. You mean the dimensions of the ROV were too great to fit
15 inside the 30-inch pipe?

16 A. Yes.

17 Q. And the first you knew of that was when it arrived on site?

18 A. Yes, that's when Catherine told me she spoke to Andrew.

19 Q. Right. So that couldn't be used either?

20 A. Yes. So we had to look at options. Right?

21 Q. Well, it's now 8.37. Given the timeline that you told me about
22 before our break, this is some hours after the event, Mr.
23 Boodram having come out of the pipeline about 5.30 or so,
24 we're now three hours on.

25 A. Right.

26 Q. We're coming to the critical time, are we?

27 A. Right.

1 Q. Go on then.

2 A. Right. So our logistics persons, the logistics group, continued
3 trying to source because we still—we needed to—we needed to
4 understand what we were up against. So the logistics continued
5 trying to source with the assistance of Heritage. I was working
6 with Heritage as well. We had Mr. Osei Flemming-Holder
7 there. So I continued to work with him to get in contact to help
8 us as well. Mr. Wei logistics was working to get equipment,
9 and that is when we decide, okay, we were able to get Atlantic
10 LNG equipment and we were able to get HHSL with the
11 borescope. So they were working feverishly to get these people
12 on site so that we can assess the pipeline.

13 Q. Atlantic LMG?

14 A. Atlantic LNG.

15 Q. Yes. What were they doing?

16 A. Say again?

17 Q. What were they going to achieve for you?

18 A. Yes. They came with a pipe crawler—what we call a crawler.

19 Q. Right. Did you speak to—

20 A. Sorry. They came in with a borescope, I think, and HHSL had
21 the pipe crawler. Atlantic LNG came with a borescope.

22 Q. Borescope?

23 A. Yes.

24 Q. That's some other form of camera, is it?

25 A. Yes, Sir.

26 Q. Did you speak to them or somebody else?

27 A. To call them in?

1 Q. Yes.

2 A. No, that was our logistics.

3 Q. Right. So Mr. Wei or Mr. Seales. Is that right?

4 A. Mr. Wei or Mr. Holder; I believe, might have been Mr. Wei.

5 Q. All right. And then we're going to get a borescope?

6 A. Yes, Sir.

7 Q. Did they tell you what the ETA for that borescope was?

8 A. Yes. Mr. Wei would have mentioned to me what the ETA of
9 the borescope was, yes.

10 Q. What was it?

11 A. It would have been some time, I think, around maybe after nine
12 he said the borescope would be there.

13 Q. After nine?

14 A. Yes.

15 Q. That evening?

16 A. Yes, Sir.

17 Q. Yeah?

18 A. Yes, Sir.

19 Q. Did it arrive after nine?

20 A. It would be on the timeline, Sir, when it arrived.

21 **Mr. Maharaj SC:** If I may intervene?

22 **Mr. Chairman:** Please.

23 **Mr. Maharaj SC:** At paragraph 104 of Mr. Michael Wei's
24 statement at page 1289 he said at around 9.00 p.m. a pushed
25 camera with operating crew from Atlantic LNG arrived on site.
26 They were briefed and dispatched to berth 6.

27 **Mr. Chairman:** Thank you very much. That was very helpful.

1 And when did they actually put the borescope in?

2 **Mr. Maharaj SC:** It was put in around—

3 **Mr. Chairman:** About three hours later, yes?

4 **Mr. Maharaj SC:** Yes, from midnight.

5 **Mr. Chairman:** So the borescope arrived at 9.00 and it entered
6 the pipe—

7 **Mr. Maharaj SC:** Around midnight.

8 **Examination By Mr. Chairman:**

9 Q. Do you know why that was?

10 A. Yes, Sir.

11 Q. Can you tell us, please?

12 A. I'll explain. Okay, right.

13 Q. Go ahead.

14 A. So we had, of course—the situation at that time was we had the
15 riser coming up and we had the hyperbaric chamber over the
16 riser, right, in the initial condition at the time of the incident.
17 Mr.—if I may, Mr. Kazim Ali contacted me around nine
18 o'clock. He contacted me and he indicated that he wanted to
19 install the extension piece on the riser which was to be installed
20 that day. His explanation was that he—with the hyperbaric
21 chamber there, if he had any failing with the compressor then
22 the chamber would flood, right, you know, then it would cause
23 more problems for us. So he wanted to—he requested to insert
24 the new riser. He also indicated, well, when the cameras come,
25 the insertion of the new riser would help us because with the
26 hyperbaric chamber in place, pressed down, what we would
27 have to do is to drop the camera, the borescope, into the water

1 from the barge, bring it under the hyperbaric chamber, and then
2 into the pipe. So we would have some difficulty with that.

3 So he asked that we install the riser pipe. We agreed to
4 install the riser pipe. They then—he utilized the guys who were
5 there diving. He utilized them to install the riser pipe. I think
6 they had it completed sometime, maybe a little after 10. Then
7 what they had to do was they needed now to access from the
8 top of the hyperbaric chamber. So we had to install some
9 scaffolding quickly to get the borescope up there, and he also
10 had to take off the top of the hyperbaric chamber—the top
11 cover. So all of that took some time. Right? So that is why the
12 Atlantic LNG camera only went in a little bit later, but it would
13 have made it very simpler for him.

14 Q. Can I ask just in relation to that, why this wasn't done hours
15 before? You knew you wanted a camera in there. Why didn't
16 you do it hours before?

17 A. Right. So while we were pushing for the cameras, I actually
18 didn't think about installing it and bringing it from there. I was
19 working on going through the hyperbaric chamber. It's only
20 when Mr. Ali brought it to our attention we thought, well, okay,
21 let's see what we could do, and to make it easier.

22 Q. Sorry. I'm struggling a little to understand why, given that the
23 idea of a camera was yours, to put a camera in the pipe to see
24 what the conditions of the pipe were, why wasn't this all sorted
25 out in advance of any camera arriving?

26 A. Well, at the time it was just to get the camera down into the
27 pipe the standard way.

1 Q. I understand all about getting the camera into the pipe. If there
2 was going to be a problem in taking the camera down into the
3 water, up into the hyperbaric chamber, then down into the pipe,
4 that must have been apparent to the IMT and you before you
5 even ordered a camera.

6 A. Well, not that it was a problem, it could have been done. We
7 could have done it, right. That was not—it is not that it could
8 not be done, yes.

9 Q. Well, given that time was the essence—forgive me, but given
10 that time was of the essence, why did you wait three hours?
11 You had the camera; it was important. You're now up against
12 your timeline that you described to me earlier today. Right?
13 You've used up three of your five hours that you think you've
14 got; you're now going to take three hours past the timeline that
15 you've got to put a camera in there. Why wouldn't you just
16 say, well, look, we don't have time to do this, Mr. Ali, or
17 whoever else was suggesting it; we just got to get that camera
18 in there now? Why not?

19 A. Well, um—

20 Q. Sorry. I know—I'm trying to give you the opportunity to
21 answer, but I am struggling a little to understand why if you
22 thought—if the IMT at your command thought that it was
23 important before we effect a rescue to put a camera in there,
24 why were not the conditions for putting the camera in there not
25 created before the camera even arrives? You don't have to wait
26 for the camera to arrive before you could start doing those jobs,
27 do you?

1 A. I just—it just wasn't—I suppose it wasn't thought of at the
2 time, right. When Mr. Ali came to me I said, okay, it's going to
3 be easier.

4 Q. Pause for a minute. Pause for a minute. All right. That's your
5 answer: that it hadn't been thought out at the time by you or
6 anyone else in the IMT that this might need to be done before
7 the camera even arrives?

8 A. Right. Because it—that is correct, because Mr. Ali came to us
9 about nine o'clock with the indication that—he called me
10 around nine o'clock.

11 Q. You spoke to Mr. Ali. You spoke to Mr. Ali for three and a
12 half minutes at quarter to eight that evening?

13 A. Right.

14 Q. Why didn't you raise it then?

15 A. No. At that point in time, I was just operating with the
16 hyperbaric chamber. Yes.

17 Q. No, no, I understand that, but you were the one who wanted the
18 camera?

19 A. Yes.

20 Q. Did Mr. Ali want the camera?

21 A. Yes, Sir, of course, to assess.

22 Q. Did he say that as a prerequisite to sending any diver into that
23 pipe, I want a camera in there?

24 A. No, he did not.

25 Q. No. So he would have been prepared to have sent divers in
26 there or divers might have been prepared to go in there without
27 having seen what the conditions inside that you wanted were?

1 I'm not criticizing you for wanting to have observation of what
2 was in the pipe. I just want to understand the timeline, how it
3 works. Do you follow?

4 A. Yeah.

5 Q. And once you know that you had a camera at nine o'clock, and
6 at the earliest it was going to take you three hours to create the
7 environment in which you could insert that camera, you've
8 passed your own deadline.

9 A. No, I did not realize at the time, Sir, it was going to take that
10 time. He told me within about half an hour to an hour he's
11 going to have that riser in. I did not know that at the time,
12 right, from in my discussions with him.

13 Q. All right, okay. All right.

14 A. I did not know.

15 Q. Sorry. Mr. Wilson has a question for you.

16 **Examination By Commissioner Wilson:**

17 Q. Yes. Just taking off from where the Chairman left, but I'm
18 going to try and bring it in as an IC. Once you had your
19 situational awareness, speaking to the same thing as the
20 Chairman. So you had the initial incident response; you had the
21 objective settings. I heard some verbiage around priorities,
22 assumptions, and constraints. But what I'm trying to find out
23 now from an IMT, ISC, and an IC, Incident Commander, what
24 were your operational periods that you set to put a tactical plan
25 in place? So just to bring it more in place if it could help the
26 Chair in terms of bringing timelines into your plan, if there was
27 a plan?

1 A. Right. So at the time of the incident on Friday evening, right, at
2 that time we were pushing hard, really, to see what was
3 available, how quickly we could get it available. And—

4 Q. I understand, and let me interrupt again. What I'm asking is, as
5 an Incident Commander, did you set out operational periods
6 which would speak into your tactical plan? Meaning, we'll go
7 away for 45 minutes and we'll come back with an action plan.
8 Was anything like that established in your IMT?

9 A. No, certainly not on the Friday evening, Sir.

10 Q. Okay. Thank you.

11 A. Yes, yes.

12 **Mr. Chairman:** Thank you. Mr. Maharaj, thank you—

13 **Mr. Maharaj SC:** Much obliged.

14 **Mr. Chairman:**—for directing me in that direction. Thank
15 you.

16 **Continued Cross-Examination By Mr. Maharaj SC:**

17 Q. But you had available during—all this delay was because you
18 wanted cameras to go and see the condition in the pipe?

19 A. I wanted to assess what was in the pipeline.

20 Q. Yes. And that was important for you?

21 A. Yes, Sir.

22 Q. But you had available divers who were prepared to go into the
23 pipeline without cameras—without having a camera?

24 A. Yes, Sir.

25 Q. But during the delay period, did it occur to you that you could
26 consider using the divers if they want to go in? The question is
27 simple, Mr.—did you consider it?

1 A. Yes, Sir, if I may explain?

2 Q. You considered it?

3 A. Yes, Sir, if I may explain?

4 Q. And you decided against it?

5 A. Yes, Sir, because I did not, at the time, have information as to
6 what was happening in that pipeline and I know I have said this
7 before.

8 Q. Yes, you have said that several times?

9 A. Right? Several times, right. So I could not, at that time, just
10 send somebody—sanction—Paria could not sanction at that
11 time just sending somebody into that pipeline.

12 Q. But you knew? Boodram had come out of the pipeline and
13 Kurban had gone in the pipeline and that was not sufficient for
14 you?

15 A. Right. So I knew Mr. Boodram had come out of the pipeline,
16 right. I knew Mr. Kurban had gone in 10 to 15 feet into the
17 horizontal, right, so that didn't give me any information.
18 Right? However, I still didn't understand the conditions. Now,
19 you would appreciate as the Incident Commander, I have a
20 priority; the safety of the responder is a very high priority for
21 me. So before I could send any responder, any rescuer into that
22 line, I had to ensure or be reasonably certain that it was safe for
23 him to do so. I could not just send somebody into that pipeline.

24 Q. Okay. You have said that, and I'll come to what you have said
25 in your witness statement.

26 **Mr. Chairman:** I just want to record that, please.

27 **Examination By Mr. Chairman:**

1 Q. You said the safety of the responder is a very high priority, and
2 I can understand that, and so it should be.

3 A. That is correct. Yes.

4 Q. But you said that before you could send anyone to go in the
5 pipeline—have I got this right—you needed to be either sure or
6 reasonably certain before as to the conditions?

7 A. And of the safety that he could go in and come back out safely.

8 Q. You feel certain of their safety before you could do so?

9 A. Yes, Sir.

10 Q. And is the effect of that, to say that until you had a camera
11 inside that pipe, you were never going to sanction a rescue?

12 A. Until I could have an assessment of that pipe that would have
13 been very difficult.

14 Q. You've made that clear, and I absolutely have your evidence on
15 that. But the effect, the way in which you were going to do that
16 was by having a camera of some kind in that pipeline?

17 A. Correct.

18 Q. So up until that point in time that you've got footage of what
19 was inside pipeline—

20 A. Correct.

21 Q. —you were never going to sanction a rescuer going into the
22 pipeline?

23 A. I could not sanction it, and I would, of course, have to seek
24 expert advice as well to do that, yes.

25 Q. We're looking back at it now, aren't we?

26 A. Yes.

27 Q. I mean, obviously, as things were unfolding at the time

1 different factors played. But looking back on it now and your
2 analysis of what you did in the IMT, your position was “I’m not
3 sending”— “I’m not going to sanction”, I think, to use your
4 word, “I’m not going to sanction anyone going into that pipe to
5 effect any kind of rescue until I knew the conditions of the
6 pipe;” that’s the first thing. And you add to that by saying, “I
7 won’t know the conditions of the pipe until I send a camera in
8 to have a look.”

9 A. Yes. Yes, Sir.

10 Q. So the net result of that is, until a camera went in the pipe there
11 was no prospect of my sanctioning anyone diving into that
12 pipe?

13 A. It would be very difficult for me so to do, Sir.

14 Q. Very difficult? Were there any circumstances in which you
15 would be prepared to sanction it?

16 A. I could not, Sir. I could not sanction it.

17 Q. No, I understand it. I just want to be clear. I really do
18 understand what you’re saying. That was the criteria for you. I
19 needed to know what was the conditions in that pipe and I
20 needed to get a camera in there?

21 A. Yes, Sir.

22 Q. Thank you very much. One matter arising from that. I just
23 want to make a note of that. Were you aware of a GoPro that
24 had been retrieved from the pipe?

25 A. I heard something that they had some GoPro. Catherine was
26 trying to look at it and she suspected it was a GoPro, right, and
27 with LMCS, and they couldn’t—and they were not showing her

1 anything. She wasn't certain it was a GoPro. We were not
2 certain.

3 Q. I think in your statement you referred to it, don't you?
4 Someone direct me to that passage. All right. Anyway, you
5 were unsure it was a GoPro or—

6 A. Yes. Catherine said she saw them looking at something. She
7 wasn't sure what it was, right. It may or may not have been a
8 GoPro.

9 **11.10 a.m.:**

10 Q. And did you make an inquiry of that of Mr. Ali?

11 A. No, no, I did not make an inquiry, no.

12 Q. I mean, quite important isn't it, if it was a GoPro, it might have
13 met your needs?

14 A. Well, any GoPro—nothing came out of the pipe so it would not
15 have been in the pipe.

16 Q. Well, we don't know.

17 A. Yeah.

18 Q. Do you, Mr. um—wasn't it suggested the GoPro was retrieved
19 from the pipe?

20 A. No. All, all Catherine told me it was, they were looking at
21 something she thought maybe a GoPro.

22 Q. But Mr. Kurban hadn't retrieved this from the pipe?

23 A. I can't recall if she said Mr.—she didn't—I don't—I can't
24 recall her telling me that. I recall her telling me she saw them
25 looking at something, when she tried to look at it, when she
26 tried to go across they moved away and they—you were not
27 getting any information from them.

1 Q. Just a minute. All right, well I won't hold up proceedings. I'll
2 have a look to see if I find it.

3 **Mr. Chairman:** Thank you very much.

4 **Mr. Maharaj SC:** Much obliged, Chair.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. Well since you were very anxious to see what is in the pipe,
7 you know at some stage a crawler went in to get a recording of
8 what is in the pipe, a photo, um, a video of what was in the
9 pipe.

10 A. Right, so, Sir, if—

11 Q. Would you just try to answer my question? Do you know
12 whether a crawler went into the pipe to get a video?

13 A. Yes, Sir.

14 Q. Do you know what time it went in?

15 A. It would have went in sometime after midnight, Sir.

16 Q. Would it be correct to say it went in at around 3.00 a.m.? I'm
17 referring to the witness statement of Catherine Balkissoon at
18 paragraph 31, it's 3.00 a.m. at page 1333?

19 A. Right.

20 Q. Would you, would you agree to that?

21 A. Yes, that is what she said, Sir.

22 Q. Yes. At 3.00 a.m., where were you?

23 A. I would have been in the incident command post.

24 Q. Did you go home for three hours?

25 A. Right.

26 Q. At paragraph one five five—

27 A. Uh-huh.

1 Q. —page 1372—

2 A. Right.

3 Q. —while you were the incident commander—

4 A. Uh-huh.

5 Q. —managing an emergency, men in the pipe—

6 A. Uh-huh.

7 Q. —you went home. At what, at what time you went home?

8 A. I'm—sometime maybe after 4.00, Sir.

9 Q. Sometime after 4.00?

10 A. Yeah. Yes, Sir.

11 Q. And you spent three hours?

12 A. Maybe two, maybe three hours I was back.

13 Q. According to your statement at paragraph one five five, after
14 you said what happened at paragraph 153 and 154, you said:

15 “Sometime thereafter I left the ICP for home. I returned
16 to the ICP about three hours later.”

17 A. Yes.

18 Q. And at paragraph one five seven of your witness statement, you
19 said:

20 “Upon my return to the ICP, I was advised by Catherine
21 or another person, I cannot now recall, that the crawler
22 was sent down at berth 5 but there was too much oil so it
23 wasn't able to get too far. I was told that it had to be
24 retracted and the lens cleaned, which was difficult to do.”

25 A. Right. So, if I, if I may back up, if I may back up please and
26 explain?

27 Q. Yes.

1 A. Right, so we got the camera footage, right, what little camera
2 footage we were able to get I believe from, from Atlantic LNG.
3 That would have been around midnight. Right? Once we got
4 that camera footage, I contacted Mr. Rolph Seales. Well, he
5 was in the incident command, right, with Mr. Osei Holder.
6 Good? I spoke to Mr. Seales and I instructed him, listen, we
7 have this video footage, right, this would have been, this is
8 something right around midnight when we first got it. I told
9 Mr. Seales, go on—go to the berth with the dive companies,
10 Mitchell and OTSL, go with them, get their supervisors, have a
11 look at the video footage, let them examine what video footage
12 we had, however little it was, and discuss with them if they
13 would be prepared to enter the pipeline to do a rescue.

14 Q. Rescue?

15 A. Yes, Sir.

16 Q. But on your timeline, at 3.00 a.m. in the morning—

17 A. No, Sir, this was like around midnight.

18 Q. Or, that was around midnight?

19 A. [*Inaudible*] Yes, Sir.

20 Q. Yes.

21 A. All right? So I asked him, speak with them. Mr. Seales
22 returned, Mr. Seales returned about an hour after. He had gone
23 to berth 6 with the divers, with the dive supervisors. He
24 advised me, in the presence of Mr. Osei Flemming-Holder, he
25 advised me that he reviewed the video footage with the two
26 dive supervisors and the dive supervisors both agreed that they
27 will—it was too risky and they will not allow their personnel to

1 go into that pipeline. They simply did not have the information.
2 I subsequently asked Mr. Seales what was his view. I asked
3 Mr. Seales what was his view. Mr. Seales advised me that he
4 simply did not have the information. It was too risky. So he
5 as—so he, he was of like mind. Right. Right.

6 **Examination BY Mr. Chairman:**

7 Q. What time are we talking about when this—when you were
8 being advised of this?

9 A. This, this was shortly after one o'clock. I instructed him to go
10 shortly after midnight to speak with the divers, just as soon as
11 we got the video footage, and then this was about one o'clock.

12 Q. So this is seven and a half hours after Mr. Boodram has
13 emerged from the pipe?

14 A. Yes, Sir, yes.

15 Q. Seven and a half hours?

16 A. Yes, Sir, we were still trying, right?

17 Q. No, no, help me in this way. On your own timeline, what were
18 the prospects of any of them being alive seven and a half hours
19 after Mr. Boodram came out of the pipe?

20 A. The prospects were getting slim, Sir, very slim.

21 Q. But what you told me before I had our break was that probably
22 zero.

23 A. had been very slim, Sir.

24 Q. See, there's a, as I said to you I think before, it's diminishing
25 returns, isn't it? If you are a rescuer and there is a good
26 prospect of saving people who are alive—

27 A. Uh-huh.

1 Q. —you might take a greater risk than if you wait and there is a
2 very, very slim chance of anyone being alive—

3 A. Uh-huh.

4 Q. —to risk you, you or your colleague divers.

5 A. Right.

6 Q. That is an equation which anyone would calculate, isn't it?

7 A. Right, correct.

8 Q. Good sense. The slimmer the chance of anyone being alive, the
9 less likelihood you're going to risk your own and others' lives
10 in trying to rescue them?

11 A. Okay. Sir, if I may, may I explain?

12 Q. You may.

13 A. Right, okay. I am confronted on the night, let's go to the night,
14 right, we are confronted with a situation, I have four men in a
15 pipe, right? I don't—I did not know the conditions in the pipe.
16 I understood it is a confined space. It is a dangerous space. I
17 had a decision to make. Let's look at, say, Ms.—I know Mr.
18 Kurban was prepared to go in the pipe, right? Mr. Kurban is a
19 courageous young man. His, his father was in the pipe. I get
20 that. I get he would want to go—

21 *[Interruption]*

22 **Mr. Chairman:** Carry on.

23 **Mr. Piper:** Yes, Sir.

24 *[Interruption]*

25 **Mr. Chairman:** No, we, we won't have any shouting out from
26 the back of the courtroom, please? You address my question,
27 please?

1 **Examination By Mr. Chairman:**

2 A. Yes, Sir. Right. I have a decision to make, a difficult decision.

3 Q. Yes.

4 A. If I allow somebody, if I—if Paria sanctions somebody who is
5 strongly emotional, emotionally attached, at that time he would
6 be angry.

7 Q. Right.

8 A. And he was angry at that time. I am putting that young man's
9 life in danger. I'm sanctioning something to put that young
10 man's life in danger. I have a responsibility for that young
11 man.

12 Q. Uh-huh.

13 A. Right?

14 Q. Well you had a responsibility for his father as well, didn't you?

15 A. Yes, Sir.

16 Q. Yes.

17 A. Right? So, I had a responsibility to that young man. what
18 happens—I also had to think through what happens if Mr.
19 Kurban gets in difficulty—

20 Q. Yes.

21 A. —in that pipeline? Then, I had another courageous young man,
22 Mr. Conan Beddoe who would want to go in to rescue Mr.—
23 rescue Mr. Michael Kurban. Right? I could have two, I could
24 have two people in difficulty. I'm adding numbers. I
25 understand Mr. Beddoe's brother was there. Mr. Beddoe gets
26 into difficulty or if I send them in first or if he goes in first, he
27 gets into difficulty, what would his brother do? His brother

1 would go in.

2 Q. No, his brother was going to pull him out because he would be
3 attached by a line.

4 A. Well, Sir, it's—would you—pull him out in what condition,
5 Sir? I don't know. I, I, I couldn't tell.

6 Q. Well, he might have been injured.

7 A. I don't know.

8 Q. He might have been.

9 A. He may have been dead, Sir, I don't know.

10 Q. He might have been.

11 A. Right? Do I take that risk to send somebody in there?

12 Q. Uh-huh.

13 A. In that, that, that is—that was not a simple decision, right, I—

14 Q. No one suggests it is, that's why you got that job.

15 A. Yeah, yeah, and, and I believe it was the right decision—

16 Q. Right.

17 A. —at the time. As difficult as it was, it was not a simple
18 decision.

19 Q. All right.

20 A. Okay, Sir? So I'm, I'm, I'm in that position on that night, that
21 situation.

22 Q. The note results, though, is that because you took the stance
23 you had, and, as I say I, I, I can assure you I've not made up my
24 mind one way or the other about any of this yet, I'm hearing the
25 evidence, all right, I have an open mind as to whether what you
26 were doing was right or wrong and I don't think actually
27 anybody can second guess that. What is true is, is that there

1 was no timeline as what you told us today, and, therefore, the
2 decisions that you were making, difficult though they were,
3 were effectively being determined by the fact that you insisted
4 on having details of the inside of that pipeline by virtue of a
5 camera and that that was going to take you outside of your own
6 timeline as to whether they could survive or not. So, the
7 decision was actually made for you once you decided, “I must
8 have that camera footage.”

9 A. I, I—and as I said I have, I had a responsibility—

10 Q. Yes.

11 A. —to the responder, Sir.

12 Q. All right. Did you, um, did you actually discuss the particular
13 plan with Mr. Beddoe or with Mr. Kurban at the time?

14 A. No, Sir. I was liaising with Mr. Ali. I did not discuss with
15 them.

16 Q. Did he discuss it with you?

17 A. No, Sir, he never discussed any plan with me.

18 Q. Did anyone discuss—I mean you, you discovered Mr. Beddoe’s
19 willingness after the event, have you?

20 A. No, I knew he was on site and I knew, um, divers were going
21 in, they were willing, yes, Sir.

22 Q. Yeah, well, you just told us about him being willing to go into
23 the pipe. Did you know that at the time or did you know that
24 only after the event?

25 A. I didn’t know it was Mr. Beddoe himself but I knew at the time
26 people were willing to go in the pipe.

27 Q. Right. And so—and did you—in knowing that, did you obtain

1 from them any plan that might mitigate your concerns about not
2 knowing what the condition of the pipeline was?

3 A. No, Sir. All I knew, all I knew from them that they would—
4 people said they were just going in, into the pipe. They were—
5 they had no plan.

6 Q. Who told you they had no plan?

7 A. Nobody came forward with any plan, Sir.

8 Q. No one came forward.

9 A. Right? No one knew, no one knew the con—we did not know
10 the conditions.

11 Q. No one came forward with any plan, and am I right in saying
12 you didn't ask any of these divers, what, what plan they had?

13 A. I was liaising with Mr. Kazim Ali. I was trying to get in touch
14 with Mr. Kazim Ali and I could not. Right? I spoke to him and
15 then I even—when he eventually called me it was to put on the
16 riser.

17 Q. So Kazim Ali gave you no plan?

18 A. Yes.

19 Q. Did you speak with Ms. Balkissoon who was your onsite
20 liaison?

21 A. Yes, I was in constant contact with Ms. Balkissoon.

22 Q. And did she tell you of any plan that she'd been informed of?

23 A. She did not tell me of any plan that she would have been
24 informed of.

25 Q. Right.

26 A. And—

27 Q. Thank you.

1 A. Okay?

2 Q. Thank you very much.

3 A. And if Ms., if Ms.—if Ms. Balkissoon had been informed of
4 any plan, she would have told me.

5 Q. Well she's spoken for herself.

6 **Continued Examination By Mr. Maharaj SC:**

7 Q. Mr. Piper, there are two aspects of my questioning I want to ask
8 you on further. One is the IMT notes that have been given to us
9 and the first item, the next item I want to talk to you about is
10 the factors which you considered in your statement to refuse to
11 permit diving into the pipeline.

12 A. Uh-huh.

13 Q. So, I will take you to it, right? At paragraph 98—

14 A. Could you tell me what page, please, Sir?

15 Q. Page 1363. It starts at 1363 but it's—the factors start at 1364.
16 Now, these are the factors when you wrote your witness
17 statement that you wanted the Commission to consider as to the
18 basis of your decision—

19 A. Uh-huh.

20 Q. —to prevent diving in the pipeline.

21 A. Uh-huh.

22 Q. So let us go to paragraph 98(1), "The event which caused the
23 divers to be taken into the pipeline was unknown." But you
24 knew that it was a Delta P that caused the accident, a Delta P,
25 an active Delta—an active—a latent Delta P became active that
26 caused the accident. You knew by 3.23 p.m. on the Friday
27 when you spoke to Mr. Kazim Ali you got an account of how

1 the accident occurred?

2 A. Uh-huh.

3 Q. Not so?

4 A. Right.

5 Q. And you told us today that you had thoughts, it could have been
6 where the men were sucked into the pipeline?

7 A. Right.

8 Q. Correct?

9 A. Correct.

10 Q. So that, the event which caused the divers to be taken into the
11 pipeline was known, not unknown?

12 A. No, Sir.

13 Q. It was unknown?

14 A. No, Sir. So at that time, right, all I got from Mr. Ali is that they
15 had removed the first plug and they were removing the second
16 plug. Right? What happened, what I mean here is what
17 happened with the plug, I did not know.

18 Q. You did not know?

19 A. I didn't know if the plug—I did not know if the plug was, was
20 ruptured, I didn't know if the plug was pulled in, that is what I
21 mean. I, I didn't know what actually happened to cause it.

22 Q. But you knew it was—you knew that the event which caused
23 the divers to be taken into the pipeline was a Delta P hazard?

24 A. Right.

25 Q. Did you know that—

26 A. Yes, Sir.

27 Q. —at the time when you—

1 A. Yes, I'm, yes I'm trying to explain.

2 Q. —when you—did you know that at the time when you make
3 your witness statement?

4 A. I was not fully—or at the time I made the witness statement,
5 this is, this is at the time of—this here is at the time of the night.

6 Q. Yes.

7 A. Right? It's at the time of the night I'm writing here.

8 Q. And at the time you made your witness statement this is what
9 you were saying which influenced you in not sending a diver?
10 These are one of—these are the factors that you stated in your
11 witness statement and this is one factor?

12 A. Right. Sir, in my witness statement those are the factors on the
13 night.

14 Q. Yes.

15 A. It's not after the fact.

16 Q. I know, and it's one of the factor what is stated in one—

17 A. Yeah.

18 Q. —98(1), not so?

19 A. Correct.

20 Q. So what I'm asking you—

21 A. Yeah.

22 Q. —on that night—

23 A. Uh-huh.

24 Q. —at that night or that day you knew that it was a Delta P
25 hazard. What are you saying to that, that's not correct?

26 A. Right. I'm saying yes, Sir, I knew at that time the men were
27 drawn into the pipe but I did not know if it—what caused it, if it

1 was they deflated the plug, I didn't know if the plug was
2 ruptured, I did not know—

3 Q. So, in other words—

4 A. —what it resulted.

5 Q. In other words, you didn't know the position of the plug?

6 A. That is correct, Sir.

7 Q. But you knew that the men was—you knew that the men were
8 sucked into the pipe?

9 A. Yes. Mr. Boodram came out and he said the men were—

10 Q. Were in the pipe?

11 A. Yes, Sir.

12 Q. So you knew it was a Delta P hazard—

13 A. Yes.

14 Q. —that caused it?

15 A. But what actually, the actual cause I was uncertain of. Just to
16 repeat—

17 **Examination By Mr. Chairman:**

18 Q. [*Inaudible*] that again, Sir?

19 A. Well, I—yes, Sir.

20 Q. The Delta P was Delta P?

21 A. No. Sir, it mattered, because, if the plug was not ruptured, then
22 I'm not sure if there's going to be a secondary Delta P. I didn't
23 know. If the plug was ruptured, then it would be different. The
24 conditions would be different. Right? So it—I—so I did not
25 know.

26 Q. Ruptured, what do you mean?

27 A. Well, I don't know if the plug had burst. I don't know, right, or

1 if the plug was just drawn in, was just drawn in.

2 **Continued Examination By Mr. Maharaj SC:**

3 Q. All right, but—sorry. Well, if you had fears about another
4 Delta P, you wouldn't a be looking for camera, you woulda be
5 looking for an expert to tell you whether another Delta P could
6 have occurred? But you were looking for cameras. Would
7 that—would cameras show you whether another Delta P would
8 take place?

9 A. Right, and we spoke to—we spoke—Mr. Wei spoke to, spoke
10 to, um, OTSL, right, Antonio, a gentleman by the name of
11 Antonio, we spoke with him, he—during the night. He was
12 explaining us to that it—about the Delta P occurrence and he
13 also indicated that we need to, we need to try to, you know,
14 until that—until we could be sure that there's not a second
15 Delta P, then it would be very dangerous to send those divers
16 in. So that was an uncertainty for us, Sir.

17 Q. But, Mr. Piper—

18 A. Uh-huh.

19 Q. —in San Fernando and other places in Trinidad, you could have
20 contacted an expert to get that opinion, whether another Delta P
21 could have occurred, instead of looking for cameras.

22 A. Yes, but Sir, if I, if I could get a camera in there, right, the
23 camera would be able to tell me if we could pick up the plug.
24 The camera—if the—when the camera goes in, if it could
25 identify the plug, right, we could see if the plug was, in fact,
26 intact—

27 **Examination BY Mr. Chairman:**

1 Q. Well, hang, hang on a minute.

2 A. Yes, Sir.

3 Q. You're going to go past numerous tanks and four bodies—

4 A. Yeah.

5 Q. —before you got to the—before you got to a plug, surely?

6 A. Right. So, so, there are a couple scenarios here. If the plug
7 intact—if the plug was intact, yes, correct, but I did not know if
8 the plug was intact. The plug could have been ruptured inside
9 there, in which case, I might have been able to get to the plug
10 first. I don't know. I sim—that is what I was trying to find out.

11 Q. Pretty remote possibility, wasn't it?

12 A. Sir, I, I, I, I simply didn't know what caused the incident at the
13 time.

14 Q. I understand nobody knew—

15 A. Right?

16 Q. —for sure?

17 A. Yeah.

18 Q. What your—your job presumably was to try and weigh up the
19 odds?

20 A. Yes, correct.

21 Q. What were the realistic prospects—

22 A. Yeah.

23 Q. —of that plug being ruptured in such a way that you would be
24 able to send a camera in, get to the plug before you got to the
25 people?

26 A. Right.

27 Q. What was the realistic prospect? Do it now. Exercise your

1 mind—

2 A. Yeah.

3 Q. —on it now.

4 A. Well, it, it, it's a maybe a low prospect, but what the camera
5 would also tell me, while it wouldn't tell me about the Delta P,
6 right, in that case the camera would also tell me where the
7 bodies are, where are these—where the men are located, where
8 the peel are located, right? I needed to get a distance, I needed
9 to know what I was dealing with, so the camera, the camera
10 footage will also help me with that. This is not just one
11 [*Inaudible*]—

12 Q. Did it ever occur to you that you were seeking perfection, you
13 know, a degree of knowledge that could only come with
14 perfection?

15 A. No, Sir.

16 Q. No.

17 A. I was trying to get what, what the best or realistic assessment I
18 could make so I could get somebody in there.

19 Q. Within the time frame available? That's—

20 A. Yeah.

21 Q. —where you keep missing that out don't you, it's within the
22 time frame available?

23 A. Yes, right. And I—yes, Sir, and I come back to at the decision
24 I had to make—

25 Q. Yes.

26 A. —to send. Right.

27 **Continued Examination By Mr. Maharaj SC:**

1 Q. You see, Mr. Piper, if you had contacted an expert you would
2 have got the answer on that Delta P if it could recur?

3 A. Yes, yes, Sir, I—and I—

4 Q. And, and I referred you, I'm not too sure but I referred you to
5 the expert report of In-Corr-Tech based in San Fernando. In-
6 Corr-Tech is based in San Fernando.

7 A. Uh-huh.

8 Q. And they said—they answered that question.

9 A. Uh-huh.

10 Q. Prior to Mr. Christopher, at page 1534, prior, in the
11 supplemental core bundle, at paragraph four point—four and
12 five.

13 “Prior to Mr. Christopher Boodram’s rescue, the entire
14 system stabilized and equalized itself at both ends of
15 SL36 and thus allowed Mr. Boodram to negotiate the
16 pipe without any disruptions, as the system was static.
17 This condition was the best opportunity to attempt a
18 rescue as removing the blank at berth 5 or shutting down
19 the compressor would have released the stored potential
20 energy from the compressed air and thus disturb the
21 equilibrium and thereby imperil any divers in the air
22 pockets.”

23 If you had contacted an expert and did not look for cameras,
24 you would have been able to know that the pipeline was safe
25 for diving.

26 A. Right, and, Sir, just to repeat, right, I don't know what that is
27 based from. Right? But I don't know what that expert is based

1 on. Right? But just to repeat, we did contact an expert, right,
2 Mr. Michael Wei, and we did speak to him on the night.

3 Q. Who was that expert?

4 A. From OTSL.

5 **Mr. Mootoo:** Sir, it's also—Sir, if I can object, this is also, in
6 my respectful submission, an unfair question. Right? In-Corr-
7 Tech has taken a long time to produce a report. It's unfair to
8 put to the witness that that information could have been
9 obtained at that time. No one has suggested that.

10 **Mr. Chairman:** Well, I mean, I think he's answering the
11 question because he's saying—telling us that he did consult
12 someone locally—

13 **Mr. Piper:** Correct.

14 **Mr. Chairman:**—um, to provide the answer to that question.

15 **Mr. Piper:** Correct, yes, Sir.

16 **Mr. Chairman:** So, why don't we let him tell us that?

17 **Mr. Mootoo:** Very well, Sir. I just wasn't on the question of
18 consultation I was just on the question of how long it would
19 take to develop the advice.

20 **Mr. Chairman:** Well, let's find out if we got the advice.

21 **Examination By Mr. Chairman:**

22 A. Right?

23 Q. Yeah.

24 A. So, we did speak to the expert from OTSL, through Mr. Wei,
25 and he did tell us about the Delta P and he did tell us, you
26 know, you couldn't be certain. That was our information on the
27 night.

1 Q. Couldn't be certain that there was not—

2 A. That was—

3 Q. —the possibility of a second.

4 A. Yes. Correct. And, until such time, you know, we should not
5 send somebody in.

6 Q. Do you know who that was, the person?

7 A. Um, I cannot remember his second name. It was Antonio I
8 think was his first name.

9 Q. Antonio?

10 A. Yes, yes from OTSL.

11 Q. Donawa?

12 A. Donawa, Donawa, thank you..

13 Q. And your recollection of that is that he was telling you in effect
14 that a second Delta P could not be eliminated?

15 A. Correct, Sir.

16 Q. And that therefore there was a risk associated with that?

17 A. Yes, Sir.

18 Q. If any diver went into the pipe?

19 A. Yes, Sir. That was my understanding.

20 **Continued Examination By Mr. Maharaj SC:**

21 Q. Did he give you an opinion, a written opinion? Because we
22 haven't got anything in the record that Mr. Donawa gave a
23 written opinion to that effect.

24 A. I believe there is something on the record to that effect, yeah.

25 Q. Well I have a statement from Mr. Donawa, it's in the record, at
26 page two seven eight five and at paragraph 12 in respect of
27 what was said that night, he said later that night Michael Wei

1 telephoned me, he told me that he wanted me to speak to his
2 incident team and I agreed for him to put me on speakerphone.
3 I was introduced to his team but I cannot recall him now. They
4 asked me what could have happened to the divers and I believe
5 what I said was that they encountered a Delta P incident. They
6 did not appear to understand what a Delta P incident was, so I
7 explained it and in fact my explanation I sent a video to
8 Michael Wei showing a crab being sucked into a pipeline
9 because of a Delta P incident and another giving a detailed
10 scientific explanation. Then, “A few days later”, at paragraph
11 17—

12 A. Uh-huh.

13 Q. “A few days later, before the retrieval of the bodies, I
14 was asked by OTSL CEO Mr. Bertrand to join in a
15 telephone conversation he was having with Heritage. I
16 did join although I do not recall the exact date. It was
17 me, Mr. Bertrand and Mr. Osei Fleming, Heritage lead,
18 and several others whose names I do not recall. The
19 purpose of the call was to discuss the possibility of doing
20 a penetration dive into the pipeline to search for
21 survivor’s benefit. I advised of the safety issues as there
22 was no way to confirm that the pipeline was totally
23 equalized and flooded and free of the possibility of a
24 delta event.”

25 So, on the date in question, when Mr. Donawa spoke to you in
26 the night—

27 A. Um.

1 Q. —that opinion was not sought as to whether another Delta P
2 could have based on his statement? A few days later—

3 A. Yes.

4 Q. —then he was asked that.

5 A. Right. I have to say, Sir, I cannot fully recollect, but, that was
6 my view because we were still—we still even after the
7 discussions, I know we still were concerned about the second
8 Delta P, so, there's no evidence.

9 Q. All right. Now the next reason: “It was also unknown what
10 caused that event to subside.” Well, in respect of that, you, you
11 knew that Christopher Boodram and Michael Kurban—
12 Christopher Boodram came at of the pipeline and Michael
13 Kurban went in and you knew that the hyperbaric chamber was
14 flooded—I'm sorry, it was not flooded?

15 A. Uh-huh.

16 Q. Not so?

17 A. Correct.

18 Q. Right. “The conditions inside the pipeline were unknown.”
19 Well, Mr. Piper, I've put this to you already but, um, you could
20 have, you could have known the condition of the pipeline from
21 Mr. Boodram and from Mr. Kurban. Then your next, your next
22 condition, your next factor: “The LMCS divers were diving into
23 the pipeline in an unplanned manner” and then you went on to
24 say you produce—without having a method statement, a risk
25 assessment, a job hazard analysis, et cetera, et cetera. You
26 really expected in order to make that decision you wanted a
27 written risk assessment, job hazard and how long that would

1 have taken?

2 A. Right. Sir, I'm not saying—right. I am not saying written.
3 Right? One needs to at least, right, one needs to at least
4 understand what one is coming up against. One needs to at
5 least sort a try to identify—right, one needs to at least try to
6 identify, one needs to try to risk assess, one needs to try to
7 mitigate how you're going in, how you're coming back out,
8 right, so there are a number of factors you have to deal with
9 before you could say, "Ey, listen, we believe, yes, this can be
10 done." But, it has to, it has to be done, Sir. We cannot just go
11 into the pipeline and say, I'll pull you out with a rope. Right?
12 So I am not saying it had to be written but we need to have
13 some idea of what we're in, right?

14 **Examination By Mr. Chairman:**

15 Q. I know you're saying you had no idea.

16 A. Say again, Sir?

17 Q. Yes. You've identified in your statement, or you've just been
18 asked by Mr. Maharaj as item number four—

19 A. Uh-huh.

20 Q. —of the, um, perhaps we could put it back on the screen, page
21 1364, you've identified that as being one of the reasons why
22 you were concerned about sending any divers into the pipeline?

23 A. Correct.

24 Q. And you say that the LMCS divers were diving into the pipeline
25 in an entirely unplanned manner—

26 A. Correct.

27 Q. —without having produced any kind of method statement, risk

1 assessment or job hazard analysis?

2 A. Uh-huh.

3 Q. And you're saying that didn't need to be in writing, so long as
4 you understood what it was?

5 A. Yes, Sir.

6 Q. Is that what you're saying?

7 A. Yeah.

8 Q. Right, okay. Well what I want to understand from you is this,
9 you see, is that you spoke, did you not, with Mr. Dexter
10 Guerra—

11 A. Yes, Sir.

12 Q. —on more than one occasion?

13 A. Yes.

14 Q. Certainly at 1832 then at 1845?

15 A. Uh-huh.

16 Q. Did you not ask him, "Well why are these people—what's the
17 plan? How is this going to work? What contingencies are you
18 taking?"

19 A. Yes.

20 Q. Did you ask him that?

21 A. We, we spoke—I don't think I asked him in, in so many words.
22 I asked him—he said, listen, "The guys just wanted to go into
23 the pipe", right—and, but, he didn't dis—we didn't discuss any
24 plan. He didn't have any plan because we still did not know
25 what existed.

26 Q. Really? You spoke to him for what, I think a total about 5
27 minutes—

1 A. Yes, Sir.

2 Q. —in those two phone calls and he gave you no idea of what the
3 plan would look like?

4 A. No, Sir, no idea.

5 Q. And you didn't ask him?

6 A. At the time, at the time I spoke with, with Dexter, right, um,
7 there were some hostilities, there were some hostilities on the
8 berth, and I called Dexter to see how—you know, to settle the
9 berth down. No, I didn't speak with him on it.

10 Q. So, is it that the calls to Dexter Guerra were nothing to do with
11 rescuing but to settle down hostilities?

12 A. The first call was to settle down hostilities.

13 Q. Right.

14 A. Right?

15 Q. Why were there hostilities?

16 A. There were hostilities when, when we said halt on the diving,
17 Sir.

18 Q. Right. I don't suppose that surprised you particularly, did it?

19 A. No, Sir. No, Sir.

20 Q. In any event, there were such hostilities, but, given that we're
21 about an hour—

22 A. Uh-huh.

23 Q. —with you having these calls with Dexter Guerra—

24 A. Uh-huh.

25 Q. —about an hour or so after Mr. Boodram has emerged from the
26 pipe, did you not think that, you know, they, they were at least
27 seeing if there were ways in which the rescue might be effected

1 within the time scale that permitted them to be rescued alive?

2 A. Right.

3 Q. Yes? So, what I'm a little concerned to understand from you is,
4 is if you were genuinely concerned that they were diving, as
5 you put it in your statement, as, in an entirely unplanned
6 manner, why wouldn't you have said to them, to him anyway,
7 "Look, I can't permit this. I'm not going to lift this, this
8 diving—restriction on diving, which is causing the hostility—

9 A. Uh-huh.

10 Q. —between us. I'm not going to lift that until I know what kind
11 of plan you have to effect. Tell me. Persuade me, Mr. Dexter
12 Guerra, persuade me that I should permit this." Did you say
13 that to him?

14 A. No, I didn't say that to him, Sir. I—

15 Q. Do you think it would have been a good idea, one way to quell
16 the hostility—

17 A. Yeah.

18 Q. —that existed? One way for you to be satisfied at least of some
19 kind of plan, even if you disagreed with it, do you follow?

20 A. Yeah.

21 Q. Did you, did you, did you not think it would have been prudent
22 to have asked him? How long have you known this man?

23 A. I have known Dexter for a while.

24 Q. Fifteen years?

25 A. Maybe more.

26 Q. Maybe more?

27 A. Yeah.

1 Q. So, and you knew him to be a responsible sort of a fella?

2 A. Re—um, reasonably.

3 Q. Reasonably. I mean I think there was an incident when he took
4 the barge—

5 A. Yeah.

6 Q. —off without permission—

7 A. Yeah.

8 Q. —some months before?

9 A. Yeah.

10 Q. It was hardly a major event. He took the barge away from the,
11 from the edge of the dock without permission.

12 A. Uh-huh.

13 Q. Ultimately and there was permission. We've heard from him
14 about that. That aside, I mean, you've known him for a long
15 time and he works for LMCS, didn't he?

16 A. Yes. Yes, yes, Sir.

17 Q. You were employing them as being a good company to do all
18 of these works, so presumably you had some confidence in
19 him?

20 A. Well yes, Sir, I have to say some confidence, yes.

21 Q. All right, well, with that—

22 A. Yeah.

23 Q. —some confidence did you not think it worthwhile saying to
24 him, since you were talking to him—

25 A. Uh-huh.

26 Q. —you called him, didn't you?

27 A. I called him yes Sir, I called him.

1 Q. Yeah, you called him twice?

2 A. Yeah.

3 Q. So, given that you felt the need to do that, did it not strike you
4 as being appropriate to say that, “Well look, Dexter, I need to
5 know what it is that you have by way of a plan? Tell me what
6 it is” so that you yourself could make an assessment?

7 A. Yeah.

8 Q. Did you?

9 A. No, no, I didn't, no, Sir, I did not.

10 Q. Do you think you should have?

11 A. Right, but, at the time, Sir, right—

12 Q. Well, answer my question first and then you can add your right,
13 all right? But you—

14 A. Yes. No, I did not. No, I did not.

15 Q. You said that?

16 A. Yeah.

17 Q. My question is, do you think you should have?

18 A. Maybe I should have, but the reason at the time, the, the, with
19 the hostilities, I know that people were very emotional, right? I
20 did not think them to be the best people, the best group to, to, to
21 go into the pipeline. All right?

22 Q. That was an assessment made by you which I—

23 A. Yes, Sir.

24 Q. —I can entirely understand.

25 A. Yes.

26 Q. What I'm asking you is whether or not you had—you thought it
27 would have been prudent that you should have asked him,

1 “What is your plan? What is the plan? You’ve got to tell me,
2 Mr. Guerra, what is the plan?”

3 A. Yeah.

4 Q. Help me understand how I can sanction this.

5 A. Yes. Maybe in hindsight maybe I should have, yes, Sir, despite
6 all that was going on.

7 **Mr. Chairman:** Thank you.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Mr. Piper, you were engaged in communicating with diving
10 companies to get opinions, not so?

11 A. Yes, Sir.

12 Q. You were consulting with them, you were waiting on their
13 answers, correct?

14 A. Yes, Sir.

15 Q. You had the LMCS divers who were experienced, commercial
16 divers, experienced in diving, they had all equipment, can do a
17 rescue. Why you didn’t consult with them?

18 A. Sir, nobody, right, nobody, right—those—that team was
19 emotionally charged. Right? Right? My assessment of that is
20 you cannot—it would not be a prudent position to take or a
21 decision to make, right, with a group who are emotionally
22 charged who have never done anything like this before, who
23 have no training to do anything like this. Nobody has done this
24 to the best of my knowledge, gone into a pipeline.

25 Q. Did you find out from them?

26 A. Sir, nobody has ever done this.

27 Q. Did you find out from them?

1 A. No, I did not find out, but I knew nobody had done this.

2 Q. You, you assumed—

3 A. Yes, Sir.

4 Q. —that they never—

5 A. Yes, Sir.

6 Q. You assumed that they didn't have the requisite—

7 A. Yes.

8 Q. —experience and training and competence—

9 A. Yes, Sir.

10 Q. —to go in the pipeline?

11 A. Yes, Sir. This is a 30-inch pipeline with oil. This is a 30-inch
12 pipeline with oil running for about—running for quarter mile.
13 Right? We had no idea. Nobody had ever had—did—had any
14 training in this, right, to go into this pipeline. They were
15 emotionally charged and at the time was—it was not the best
16 group to send in that pipeline.

17 Q. I am suggesting to you that—you would agree with me that in
18 this statement you gave as to the factors which influenced your
19 decision, not to allow anyone to go into the pipeline to dive to
20 do a rescue, at no stage you mentioned that the LMCS divers
21 were too emotional and you didn't consult them? Look at the
22 grounds. Look at the factors you considered.

23 A. No, no I didn't mention it, but, they were very—they—I knew
24 they were very emotional.

25 Q. But when you gave—

26 A. It was clear.

27 Q. When you gave this statement—

1 A. Yeah.

2 Q. —you knew that you were giving the factors to the Commission
3 to consider as to the grounds you considered to prevent you
4 from allowing that dive?

5 A. So, okay, so, admittedly I did not have it here but that was one
6 of the considerations.

7 Q. Okay. And yesterday you told us—

8 A. It was clear.

9 Q. —you spend a lot of time telling us about persons who were
10 involved in accidents, in maritime accidents and sometimes
11 when there are rescues, those who are the rescuers die and that
12 the accident victims are not saved. You remember you told
13 us—you gave us—

14 A. Correct, Sir.

15 Q. Right. Nowhere you have put that in this witness statement.
16 That is not in the witness statement as to the factors you
17 considered.

18 A. I—well, sorry but I didn't—

19 Q. Right. Look at it.

20 A. No, no, I'm agreeing with you, Sir.

21 Q. That you didn't?

22 A. But that is knowledge I've had in this industry. I've been in
23 the, I've been in the marine industry for, for four decades so
24 that is knowledge I have in the industry.

25 Q. And that is knowledge that you had at the time when you did
26 this witness statement?

27 A. Yes, Sir.

1 Q. And that is knowledge that you had at the time which you are
2 saying influenced your decision?

3 A. Yes, Sir.

4 Q. Yeah. Okay. Okay. Let's go to another area and the final area
5 of my questioning to you, Mr. Piper. I want you to look at the
6 IMT notes. That is in the supplemental, supplemental core
7 bundle.

8 **Mr. Chairman:** One five seventy-two.

9 **Mr. Maharaj SC:** Yes, one five seven two.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. And I want to start off at one five four one, and before I start
12 off at one five four one, I want to, I want to re—for you to
13 refresh your memory what you've said that Mr. Christopher
14 Boodram told you at paragraphs 130 and 131 of your witness
15 statement page 1368—130—1368. At paragraph—that's page
16 1368 and 1369, and, um, you see that you, among the things
17 you said in your statement there, that:

18 "I asked Boodram how he was doing. Mr. Boodram
19 responded by saying, 'Mr. Piper I want to say upfront I
20 ain't think dem fellas make it' or words to that effect.
21 And then the phone was placed on speaker"—um, um—
22 "on speaker mode. Mr. Boodram's words are audible to
23 persons round. Mr. Boodram then indicated that he
24 crossed two welded seams on the way out of the pipeline.
25 He said he then crossed Blacks who was unresponsive.
26 He indicated that four of them were making their way out
27 of the pipeline and they were helping Kazim Ali Jr. who

1 had a broken leg and arm. He then said they came across
2 an air pocket which there was one person less—after
3 which there was one person less,. He then said they
4 came across a second air pocket after which they lost
5 Kazim Jr. He further stated that Fyzie was with him until
6 he reached the elbow and then Fyzie said he couldn't
7 make it. Mr. Boodram did not ask during that
8 conversation whether anyone else was rescued from the
9 pipeline.”

10 Q. I want you to look at 1547 and see what the IMT recorded Mr.
11 Boodram said 1541—

12 **Mr. Maharaj SC:** One five four one, sorry.

13 **Mr. Chairman:** One five four?

14 **Mr. Maharaj SC:** Four one.

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. Look at the top of the page.

17 A. Sir, um, what page, Sir?

18 Q. One five four one. Read it carefully and then I'll ask you the
19 question.

20 A. Uh-huh, yes, Sir.

21 Q. You read it?

22 A. Read it.

23 Q. Right. I have not seen in this note that was taken by the scribe
24 at the IMT that Mr. Boodram said or Mr. Boodram indicated
25 that he didn't think the divers made it. Could you show me in
26 this note where he said that? Mr. Boodram indicated that he
27 didn't think the divers made it, or that Mr. Boodram said that he

1 didn't.

2 A. No, Sir, it's not there.

3 Q. And I also did not see that he crossed over Blacks who was
4 unresponsive.

5 A. No, Sir, it's not there.

6 Q. And I also do not see in these notes which were made at the
7 time that when he came across an air pocket there was one
8 person less.

9 A. No, Sir.

10 Q. When you wrote your witness statement, when you prepare
11 your witness statement, what, you wrote it from memory or you
12 wrote it from contemporaneous notes?

13 A. Right. No, I did not take notes, Sir.

14 Q. Did you—

15 A. There's some—um, I did not take notes, Sir, so I'm going to
16 answer if I may, please?

17 Q. Sure.

18 A. There are some things that stick with you. This was one of the
19 things I—that stuck with me and I kept repeating this, right?
20 This we also—this was also recorded in the IMT in the log, I
21 believe, similar to what I said here, this was recorded in, in that
22 log. It was not in that note but I believe it was in the log
23 somewhere.

24 Q. Well, I, um, I'd be glad if you could show us it because I want
25 to tell you, Mr. Mushtaq Mohammed gave a written
26 statement—

27 **Mr. Chairman:** Page 1574

1 **Mr. Piper:** Four at the top.

2 **Mr. Chairman:** Page 1574.

3 **Mr. Maharaj SC:** One five seven four. Yes one five seven
4 four, I got it.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. But this log would have been prepared after?

7 A. No, Sir, this was prepared on the night.

8 Q. Well help us. This at 1541, was someone writing this at the
9 time?

10 A. Well, it's clearly—it's written, Sir.

11 Q. Yeah. But, you are the commander?

12 A. Yes, Sir.

13 Q. Did you have someone writing this at the time that—

14 A. No, Sir. At the time, at the time, er, we were in the incident
15 command post. The scribe at the time documented it in the log
16 immediately and I confirmed that. I looked at the log and I
17 confirmed that.

18 Q. But, but the log is typewritten?

19 A. Yes, Sir. The log was being—this log was being typed as, um,
20 on a spreadsheet in the incident command—at the incident
21 command post, so the entries were being made immediately.

22 Q. So you agree with me, then, because I'm now seeing this, I now
23 noticed it—

24 A. Okay, that's fair.

25 Q. So you would agree with me that what is stated on 1541—

26 A. Uh-huh.

27 Q. —or what Mr. Boodram said is inconsistent with what is

1 stated—what you pointed me out, it's inconsistent in the sense
2 that there are things—

3 **Examination By Mr. Chairman:**

4 Q. Well, let's take them one at a time. First of all, you say in your
5 statement at paragraph 131 that the first thing that Mr. Boodram
6 said to you is, "Mr. Piper, I want to say upfront I ain't think
7 dem fellas make it".

8 A. Yes, Sir.

9 Q. That's what you've recorded in your statement.

10 A. Yes, Sir.

11 Q. That does not appear, does it, on the diary memo note at page
12 1541?

13 A. Right. So—

14 Q. No, one thing at a time.

15 A. Sorry.

16 Q. It doesn't appear there, does it?

17 A. Correct.

18 Q. And it doesn't appear in the log at one five seven four?

19 A. Correct.

20 Q. Right. But it's something that you told us is stuck in your
21 mind?

22 A. Yes, Sir.

23 Q. Right, okay. We're agreed, at any rate, that this is—when
24 you're writing this statement it's from memory?

25 A. Right. And I did refer to this log as well because in the one five
26 seven—one five seven four, right, because at the time we
27 were—I was right at this log standing right there in this area

1 and what I heard, when Mr. Boodram spoke, when Mr.
2 Boodram says, “I, I don’t think they made it”, the phone was
3 given to me. Immediately after I put the phone on speaker and
4 I had other parties joining like Mr. Wei, Mr. Mohammed, I
5 believe Narissa Feveck, I believe Mr. Flemming-Holder was
6 there and Mr. Paul Yearwood, right, so I then put the phone—
7 Paul had brought the phone to me. I then put the phone on
8 speaker as people were coming in, right? So I heard—the first
9 bit, I was the person who heard that, it was addressed to me and
10 I heard that. Right? And I’m aware that nobody else heard it.

11 Q. Let’s go first when you were connected with Mr. Boodram at
12 the hospital, who made that arrangement?

13 A. Mr. Ramkissoon who went to the hospital and via Mr. Paul
14 Yearwood.

15 Q. Right. So, Mr. Ramkissoon, what do you say his name?

16 A. I think it’s Shane, I think.

17 Q. Shane.

18 A. Yes.

19 Q. Right. I’m going to call him Shane. So Shane, Shane makes
20 the—goes to the hospital?

21 A. Yes, Sir.

22 Q. And he obviously speaks to Mr. Boodram?

23 A. Yes, Sir.

24 Q. Before he makes a phone call to you?

25 A. Of course, yes.

26 Q. Yes, so do you know what he said to Mr. Boodram?

27 A. Well, I, I think, I think once he got there he just, um, had the

1 phone to Mr. Boodram, say, listen we need to talk because he
2 had a very, very limited time, a minute or two.

3 Q. Sure.

4 A. So I don't know if he had much conversation.

5 Q. He must at least introduced himself—

6 A. Of course, of course.

7 Q. —and told him why he was there and things like that.

8 A. Of course.

9 Q. Exactly. You don't know what he said to him, do you?

10 A. No, Sir.

11 Q. You don't know if he told him, for example, that they still
12 hadn't got anybody out of the pipe?

13 A. Yes, I don't know if he told him.

14 Q. All right, but anyway the first thing he said you to is, "Mr.
15 Piper, I want to say upfront, I ain't think them fellas make it"?"

16 A. Correct.

17 Q. This was at ten o'clock that night?

18 A. Yes, that is what he said to me.

19 Q. Yeah, but this is at ten o'clock that night?

20 A. Yes, Sir.

21 Q. According to your own timeline that you told me before we had
22 our break, you ain't thinking them fellas make it either, have
23 you?

24 A. Well, again, Sir, we, we—at this point, there were no way to
25 tell. There simply was no way to tell.

26 Q. Well on your own calculation—

27 A. Yes, Sir.

1 Q. —it was an extremely slim—

2 A. Yes.

3 Q. —chance that five hours after the event they would still be
4 alive?

5 A. Yes, Sir. Yes, Sir.

6 Q. You agree with that, don't you?

7 A. Yes.

8 Q. I mean, I put the word extremely in but you don't disagree with
9 me do you, do you? Do you?

10 A. It, it, it would have been difficult to, you know, assess they
11 would last much longer.

12 Q. His sentiments coincided with your own.

13 A. Yes, Sir.

14 Q. All right?

15 **Mr. Chairman:** Yes, thank you.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. So we get that—we got that in the second note had some of the
18 things that are recorded but—

19 A. Okay, Sir.

20 Q. —one of the things that neither in the scribe note or in the
21 typewritten note it has the statement you say from memory, “I
22 want to say—Mr. Piper, I want to say in front, I ain't think
23 them fellas make it”?

24 A. Correct, Sir, and I'm very well aware of that.

25 Q. Okay.

26 A. I—that—I included that in my statement because that is
27 something that stuck with me, right? I am aware that it was not

1 in the—it was not in this note here, this log, but that statement
2 stuck with me and I thought it—I thought I should include it.

3 Q. Okay. Look at, look again at page 1541 and there is a notation
4 which states at—you see 202—

5 A. Yes, Sir.

6 Q. —which states: “Clear water. No signs of oil. No air space.
7 Difficult to tell if any air space because of the position of the
8 camera.” So at 202, according to the notes that the IMT had,
9 would it not be that the pipeline had clear waters, no sign of oil,
10 no air space?

11 A. Right. So this—right. This, Sir, is a very short distance into
12 the pipeline. All right? Maybe less than a hundred feet.

13 Q. I’m just asking what is recorded. Weren’t you, weren’t you—
14 the IMT had this information at that time?

15 A. Yes, Sir.

16 Q. Okay.

17 A. And that information was shared prior to that. That information
18 was shared with the dive experts through Mr. Rolph Seales to
19 do an assessment, which they still came back and said they
20 were not willing to send their persons into the pipeline. So it
21 was shared with them.

22 Q. Okay. Just underneath that, if you see on that night there—it
23 seems as though the IMT knew of differen—you see differential
24 pressure?

25 A. Yes, Sir.

26 Q. “Plug rupture or removal, will equalize”?

27 A. Yes, Sir.

1 Q. Yes. So the IMT had that information?

2 A. Yes, as I said, we had spoken to Mr. Donawa earlier.

3 **Mr. Chairman:** Will equalize?

4 **Mr. Maharaj SC:** Will equalize.

5 **Continued Examination By Mr. Maharaj SC:**

6 A. Yes, if the plug is ruptured, Sir, or removed, it will equalize.

7 Q. Yes. Good. And let's go to page 1542 where it is stated that
8 "Crawler", you see that at about the middle of the page,
9 "Crawler put down"?

10 A. Yes, Sir.

11 Q. "220 feet into pipe with tanks and plug from berth 6, side
12 yellow, round and white". You see that?

13 A. Yes, Sir. Yes, Sir.

14 Q. Yes.

15 A. Right, can I explain that?

16 Q. Yes. What you understood it to mean?

17 A. Right. So, what actually happened is the—as they were
18 feeding, as they were feeding it, apparently they had, um, some
19 rotation on—as they were feeding it they actually did not get to
20 the 220 feet. The hose, the line, the connection, was actually
21 turning on itself. So the crawler didn't actually go in 220 feet.
22 That is my understanding. It was recorded in the travel but the
23 crawler didn't travel. That was my understanding on the time.

24 Q. Okay. Let's go to 1544. This is a very interesting page. You
25 see about four lines down it says "Business Continuity 2.30
26 p.m." You see that?

27 A. Yes, Sir.

1 Q. And then you see it says: “Recovery not rescue.”

2 A. Yes, Sir.

3 **Mr. Chairman:** I can’t see it.

4 **Mr. Maharaj SC:** 1544, if you go one, two, three, four, five,
5 there’s a heading “Business Continuity”. And you have 2.30
6 p.m. It’s at the top of the page, 1544.

7 **Mr. Chairman:** All right, yes.

8 **Mr. Piper:** Uh-huh.

9 **Mr. Maharaj SC:** “Business Continuity”.

10 **Mr. Chairman:** Yes.

11 **Continued Examination By Mr. Maharaj SC:**

12 Q. —2.30 p.m., Recovery, not rescue. Eastern divers not willing
13 to go on.” You see that?

14 A. Yes, Sir.

15 Q. And I think that means riser 6 berth. Something—“Site to be
16 secured eight days before loading.” So—

17 A. Yes, Sir.

18 Q. —wouldn’t be something of business you all were expecting,
19 Paria was expecting and it was to be in eight days or something
20 like that?

21 A. Right. Yes, Sir, right, um, let me explain. The configuration of
22 the port, the configuration of the port is such that the location of
23 berths 5 and 6 are on the northern side of the port and the
24 location of—that’s the where we do our black oils, fuel oil and
25 crude. On the southern side of the port about maybe 6,000 feet,
26 six, maybe about five to 6,000 feet away, on the southern side
27 or the port is where we have our main viaduct, right, so that

1 main viaduct is where we do all are clean products.

2 So, in discussions with commercial, right, because part of, part of the
3 incident command is to, to—is for business continuity to get—
4 to stabilize the incident and, of course, to continue on, as and
5 when appropriate, so on the southern side of the port, which is
6 where we handle all our clean products, right, we separated, we
7 isolated, I had one group working there, and we said we will
8 not involve that group, the OTSs and the operators. We didn't
9 need to involve them in the, in the res—in the incident
10 response. So that is what that deals with there. So they could
11 operate on that side of the port. Right?

12 Q. But you'd also agree with me it shows that the IMT was
13 considering recovery and not rescue?

14 A. Right. Okay. So, that note—

15 Q. And that was 2.30 p.m. on—sorry, 2.30 a.m. on Saturday?

16 A. right.

17 Q. Sorry, 2.30 p.m. on—

18 A. Right.

19 Q. —Saturday?

20 A. Right. So, the note says: "Rescue not recovery. Eastern Divers
21 not willing to go on." In fact, eastern divers had indicated that
22 they are, sometime in the maybe about four, five o'clock in the
23 morning, Eastern Divers, Saturday morning, they had
24 considered that they would not send their people in. We were
25 looking at a dry rescue, right, because they were not divers
26 although the company is Eastern Divers. They are confined
27 space entry specialists. They had indicated that they will not go

1 in and they also indicated, as far as they were concerned, it was
2 a recovery and not a rescue. So that note, in my mind, is what
3 treats with that. That is not the IMT making that decision at
4 that time.

5 Q. So Eastern Divers took the position that at that stage it would
6 have been a recovery and not rescue?

7 A. That is the position they took, Sir.

8 Q. Yes.

9 **Examination By Mr. Chairman:**

10 Q. I mean, I mean, surely that was your position as well? This is a
11 day later. How long did you think—I mean, it must have been
12 your position too?

13 A. Sir, we were still, we were still hoping—I mean, it—in—

14 Q. This is—okay, carry on?

15 A. Sir, yes. Um, I personally was moving that—to that position
16 but it was still difficult for me to move to that position. I was
17 still, you know, hoping for some way so we were still
18 considering some way that we could get to those men, Sir. I did
19 not at that point in time make that transition yet.

20 **Continued Examination By Mr. Maharaj SC:**

21 Q. But, but—

22 A. All right?

23 Q. But if you look at the discussions, look at what is happening
24 underneath, after that, won't you say that that is what was being
25 thought about, recovery, in order to get—

26 A. Exactly where, Sir?

27 Q. In order to get to know where the persons were, said:

1 “Possible 3 to 4 feet, cameras can go in, cut a test hole, et
2 cetera, crawler with aim, utilize the diver that got to the
3 tank yesterday.”

4 So you were thinking of Michael Kurban?

5 A. Right. So—

6 Q. And you were thinking of Michael Kurban in a different
7 context, not to rescue?

8 A. No, say again, Sir?

9 Q. “Utilize the diver that got to the tank yesterday”.

10 A. Uh-huh. Uh-huh.

11 Q. Isn't that Michael Kurban?

12 A. Yes. I don't know why that is there but if I, if I may, on
13 Saturday, while we were still, while we were still looking at
14 rescue, we had to be—we had to start considering other options,
15 right?

16 Q. The other option of a recovery?

17 A. We had to consider recovery, Sir, and we had to—and we also
18 were considering—we were still considering pumping out of
19 the pipeline. Right? So we were mobilizing pumps and so on.
20 But we also had—we also had in parallel to look at altur—to
21 look at if it is we needed to go into recovery which—

22 Q. So—

23 A. —this was later on. We also had to start looking at those
24 options.

25 Q. Well I got that impression from the notes and I'll show you
26 later down—

27 A. Uh-huh.

1 Q. —that on Saturday the IMT was considering, as you say rescue,
2 but also making plans for recovery, considering plans for
3 recovery?

4 A. Yes, Sir and we had to consider plans in parallel.

5 Q. And in the plans for recovery, you were thinking of sending
6 in—further—you could—you could answer me now but I'll
7 show you something in the notes after. You were considering
8 sending in Michael Kurban into the pipe?

9 A. No, Sir. At no point in time—

10 Q. At no point?

11 A. —was I considering Michael Kurban into the pipe.

12 Q. Okay. I'll take your answer. We'll get to that.

13 A. Yes.

14 Q. All right? So, let's go to the next page, 1545. And we go to
15 1547. You see you listed there Rolph Seales, Mitchell, Eastern,
16 OTSL? Are these the persons you had on standby, not so?

17 A. Yes, Sir. Yes, Sir.

18 Q. And you also—and there's also listed Michael Kurban.

19 A. Uh-huh. Yes, Sir. I don't know who made these notes and I
20 don't know what was the—I don't know why they would have
21 put that note there.

22 Q. Well—

23 A. But at no point in time was I ever considering Michael Kurban.

24 Q. Well these are the IMT notes disclosed by Paria and it shows
25 the name Michael Kurban.

26 A. So I—

27 Q. After, after you have admitted that the IMT was considering

1 both rescue and recovery?

2 A. Yes, Sir.

3 Q. You have told us Michael Kurban was not considered for
4 rescue in your evidence.

5 A. Uh-huh.

6 Q. So, could you explain to us how is—you are the head of the
7 IMT?

8 A. Yes, Sir. I don't know, I don't know who put that note there
9 and for what purpose, Sir. Right? It's just—in that, that name,
10 that name is just written there on its own. I don't know what
11 for.

12 Q. It's written on its own?

13 A. Yes, Sir. I apologize. It's just standing there on the page, right,
14 with no explanation. I don't know why that name is there.

15 Q. At 1572, that is your time—that's Paria timeline, correct?

16 A. Yes, correct Sir.

17 Q. And you see at 1549, "S. Ramkissoon informed from A. Farah
18 that additional LMCS divers were called in"?

19 A. Yes, Sir.

20 Q. You see that?

21 A. Yes, Sir.

22 Q. And at 1800, 1800, you see, "Diver Michael Kurban recovered
23 the GoPro camera and cylinder from the pipe", which I think
24 that would mean the tank?

25 A. Yes, Sir.

26 Q. So you were, you were aware, you were aware at that time that
27 Michael Kurban had entered the pipe and there was recovery of

1 a GoPro camera from the pipe?

2 A. Right, so I, I don't know—as I said, when I spoke to Catherine,
3 right, I don't know who give that information there but as I—
4 when I spoke to Catherine, right, she could not confirm so I
5 don't know who called in that information, Sir.

6 Q. But according to this note of Paria—

7 A. Uh-huh.

8 Q. —this information was given to the IMT that a GoPro camera
9 was recovered—

10 A. Yes, Sir.

11 Q. —from the pipe?

12 A. Yes, Sir.

13 Q. And you could have used that GoPro camera if you wanted to
14 see the condition in the pipe?

15 A. Sir, honestly, um—

16 Q. Well let me put it this way.

17 A. Yeah.

18 Q. That GoPro camera could have been used, not you, but it could
19 have been used to see the condition in the pipeline?

20 A. Yes, Sir.

21 Q. Yes.

22 A. Right? Right, but as I said, just explain again—

23 Q. And that—

24 A. Right.

25 Q. —and that GoPro camera was of—was known to the IMT at
26 6.00 p.m.?

27 A. Right. So I don't know if it is Catherine who called this in but

1 she could not confirm, we could not confirm. Right? This is
2 just her saying, right, we tried, she, um, we spoke with LMCS,
3 they would not—they moved away so we couldn't get it but we
4 could not confirm that.

5 **Examination By Mr. Chairman:**

6 Q. Can I understand this, please? Because you spoke to Mr.
7 Dexter Guerra—

8 A. Yes.

9 Q. —half an hour later?

10 A. Yes.

11 Q. You asked him?

12 A. No, Sir, I—with all that was going on, no, Sir I didn't ask him,
13 right? So I—and I—

14 Q. Let's be clear about this.

15 A. Yeah.

16 Q. You regarded video footage of the inside of that pipe—

17 A. Yes, Sir.

18 Q. —as being the sole determining factor—

19 A. Yeah.

20 Q. —as to whether or not you were going to permit a rescue?

21 A. Yes, Sir.

22 Q. The mere whiff can I suggest, of a camera that might have been
23 retrieved from that pipe would have been something that would
24 have exercised your mind immediately?

25 A. Yes, Sir.

26 Q. So you see, really you answered, that when you spoke to Mr.
27 Guerra half an hour later—

1 A. Yeah.

2 Q. —you did not ask him about the GoPro.

3 A. Yeah.

4 Q. Is that, is that your answer?

5 A. Yes, Sir. There was just so much happening on that time, I—

6 Q. Yes.

7 A. —don't—I can't even remember when this was recorded. No,
8 Sir, I did not ask him.

9 Q. So you did not ask him then?

10 A. And I, I, I don't—

11 Q. When you—no, I understand.

12 A. Yes.

13 Q. You say—

14 A. Yes.

15 Q. —it was an oversight on your part.

16 A. Yes.

17 Q. Right?

18 A. Right? And I am not sure actually when, at what time I actually
19 learned from Catherine. I am not sure what time I learned that
20 from Catherine.

21 Q. Well it's in the log—

22 A. Right?

23 Q. —at 1800 hours.

24 A. Yeah.

25 Q. This is contemporaneously being made, isn't it?

26 A. Yes. But I don't know what time that came to my attention.

27 It's in the log but whether anybody told me at the time, my only

1 recollection is when I spoke to Catherine and what she told me.

2 Q. You mean it's—

3 A. As I didn't pick it up at that time.

4 Q. You mean it's possible that something as important as a camera
5 from inside the pipe could have been recorded in the log and
6 you'd been unaware of it?

7 A. Yes, Sir.

8 Q. For half an hour?

9 A. Right, so I spoke, I spoke at—yes, Sir. No, I cannot recall
10 honestly. I cannot recall what time I would have seen that.

11 Q. In any event, you spoke to Mr. Guerra 15 minutes later?

12 A. Yes, Sir.

13 Q. Was it an oversight then as well?

14 A. It was an oversight, Sir. It would have been.

15 Q. You spoke to—

16 A. As I said, I didn't pick it up.

17 Q. You spoke to him 15 minutes after that as well?

18 A. Yes, Sir.

19 Q. Was that an oversight as well?

20 A. Yes, yes, Sir, I

21 Q. And you spoke to him seven minutes, eight minutes—

22 A. Yes, Sir.

23 Q. —later again. Was that also an oversight?

24 A. Yes, Sir. Sir, there was a lot happening at that point in time
25 and, as I said, as I said, I don't recall when I actually got the
26 information. I don't recall, right? Now, I would have—I
27 would certainly have thought, right, LMCS having this

1 information, right, I would certainly have thought if they had
2 any salient information, knowing, right that they wanted to go
3 in that pipeline and we were stopping them, surely, surely
4 LMCS would have come forward with that information. Right?
5 Even if, even if it was an, was an oversight on my part, surely
6 they should have come forward with the information. Surely
7 when, when we tried—Catherine tried to, to re—to look at it,
8 right, they would not have walked away. As I said, she
9 couldn't even—she wasn't even sure it was a camera, it was a
10 GoPro, right, but they never came forward with it.

11 Q. I follow all of that and an entirely fair point to make, if I may
12 say so, if they had that in their hands why wouldn't they share
13 it?

14 A. Correct.

15 Q. I get that. But I'm asking you—

16 A. Yes.

17 Q. —at the moment, all right? What I want to understand is, is
18 that the last time you made a call to Mr. Guerra, was at seven
19 minutes past 7.00 that evening and you spoke to him for over
20 three minutes?

21 A. Correct.

22 Q. So that, on any view, is over an hour after the log has recorded
23 a GoPro as being recovered—

24 A. Yes, Sir.

25 Q. —by Mr. Kurban, right?

26 A. Yes.

27 Q. Are you saying it's entirely possible that for that hour or so you

1 would have been wholly unaware of the existence of that
2 GoPro?

3 A. I, honestly cannot remember what time I found out about the
4 GoPro, Sir, and, and I only found out from Catherine and I
5 don't—I cannot remember the time.

6 Q. And in answer to questioning from Mr. Maharaj, is it your
7 evidence that you never demanded sight of that GoPro?

8 A. Yes, Sir. I never demanded sight of the GoPro.

9 Q. You could have, couldn't you?

10 A. Yes, Sir, I could have.

11 Q. Was that also an oversight?

12 A. Well, I, I would have thought—yes I, I should have demanded,
13 I should have demanded it. Maybe it was an oversight, but, as I
14 said if there was anything on that GoPro, LMCS would have
15 come forward with that GoPro, Sir.

16 Q. Well they certainly should have.

17 A. Yes, Sir, yes, Sir. Right? They should have shared that GoPro.

18 **Mr. Chairman:** Thank you.

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. I now want to show you some entries which will show that you
21 had enough to know—the IMT had enough to know that this
22 was Delta P, the men were in the pipe at an early stage, even
23 before Boodram came up. Okay?

24 A. Okay.

25 Q. So, can I take you to page 1572?

26 A. Uh-huh.

27 Q. And if you look at 1415, you would see, “Five divers entered

1 the chamber”, et cetera, right? They give the names.

2 A. Uh-huh.

3 Q. Then if you look at 1455, sorry, 15—sorry, 1455, sorry, 1455, it
4 says: “A. Farah informed no signs of divers or cylinders in the
5 chamber.’ Then you go to 1523—I’m sorry, I really want to go
6 to 15—page 1523 at your witness statement and I think this is
7 where you would have said that Mr. Kazim Ali spoke to you
8 and told you that the inflatable plug was removed and it’s at
9 page 1352 at paragraph 30 of your witness statement. Okay?
10 So that is—I’m working out the timeline. Then further, at page
11 2008—

12 **Mr. Chairman:** Just one at, one, one at a time, let me just
13 catch up with you.

14 **Mr. Maharaj SC:** Sorry, I’m going too fast.

15 **Mr. Chairman:** So I’ve got available to me page 1572 which
16 is the log—

17 **Mr. Maharaj SC:** Yes.

18 **Mr. Chairman:**—to which you’ve referred.

19 **Mr. Maharaj SC:** So—and I, I have referred to—the last entry
20 on the log I referred to was 1455.

21 **Mr. Chairman:** Yes. Mr. Farah informing him—

22 **Mr. Maharaj SC:** Right.

23 **Mr. Chairman:**—of no, no sign of any divers.

24 **Mr. Maharaj SC:** And then I wanted to show that in the
25 chronology I want to show that at paragraph 30 of Mr. Piper’s
26 witness statement—

27 **Mr. Chairman:** Right.

1 **Mr. Maharaj SC:**—and he, he spoke at paragraph 30 at page
2 1352 he spoke at 1523 to Mr. Kazim Ali and Mr. Kazim Ali
3 told him that the accident occurred with the removal of the
4 plug.

5 **Mr. Chairman:** Yes.

6 **Mr. Maharaj SC:** Add then I wanted to show that in the
7 sequence at page 2008—

8 **Mr. Chairman:** Of?

9 **Mr. Maharaj SC:**—of the supplemental core bundle Volume
10 III—

11 **Mr. Chairman:** Just a minute.

12 **Mr. Maharaj SC:** Page 2008.

13 **Mr. Chairman:** Twenty-one fifty-five in my bundle, right,
14 dive operation at berth No. 6?

15 **Mr. Maharaj SC:** Yes. At 1508 hours, at 1508, “Offshore
16 operator K. Scott reported to OTS J. Ramadan that five divers
17 entered the chamber, a splash was seen on the camera during an
18 operation after which the divers could not be seen.” And
19 then—

20 **Examination By Mr. Chairman:**

21 Q. All right, have you—are you keeping up with this?

22 A. Um, I—yeah, I, I don’t have it here but I—

23 Q. The easier way—

24 A. —I understand what you’re saying.

25 Q. —to do this is for you to see it on the screen so that you can
26 answer the question that Mr. Maharaj will have put. You’ve
27 seen the log where he points out at 1445—

1 Q. Yes, Sir.

2 A. —Mr. Farah is informed of the visual cameras not functioning,
3 then he's taken you to a statement where you spoke to Mr.
4 Kazim Ali at 1523—

5 A. Uh-huh.

6 Q. —where he described how the removal of the plug, and now
7 he's taken you to the dive operation document, my 1021—
8 sorry, at 2155 which shows that at eight minutes past 3.00 the
9 offshore operator, Mr. Scott, reported to Mr. Ramdhan that five
10 of the divers had entered the chamber, there was a splash and
11 they—

12 A. Correct.

13 Q. All right? So we're with you so far.

14 A. Uh-huh.

15 Q. We're with you.

16 **Mr. Maharaj SC:** Well, one more. At page 2008, Volume III
17 of the supplemental—sorry, same page, at 1530.

18 **Mr. Chairman:** Fifteen thirty hours?

19 **Mr. Maharaj SC:** Yeah, but at page 2008 of the same bundle.

20 **Mr. Chairman:** Basis information received.

21 **Mr. Maharaj SC:** “Basis information received from OTS. It
22 was reported that there was a rush of liquid—

23 **Mr. Chairman:** Into the—

24 **Mr. Maharaj SC:**—into the pipe.

25 **Mr. Chairman:** Right. Right.

26 **Mr. Piper:** So, can you just say again please?

27 **Mr. Chairman:** Yes. At 1530, “Basis information received

1 from OTS. It was reported that there was a rush of liquid into
2 the pipe.”

3 **Mr. Piper:** Okay.

4 **Mr. Chairman:** All right? That’s in that log?

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. So, based on what I’ve read to you, I am suggesting to you by
7 3.30 p.m. the IMT had the following information available to it.
8 One, the men were working on an open pipeline in the
9 hyperbaric chamber. Two, the men were removing the
10 inflatable plug. Three, a splash was seen on the screen. Four,
11 the men were not in the chamber.

12 A. Uh-huh.

13 Q. Five, there was rush of liquid into the pipeline?

14 A. Uh-huh.

15 Q. So wouldn’t that be information for you to conclude reasonably
16 that the men was in the pipeline, were in the pipeline?

17 A. Right. Sir, I don’t know where the OTS got that information
18 that there was a rush of liquid into the pipeline. He—nobody
19 was able to see what was going on. He was not on site, right?
20 So he never give me that information at that time. The
21 information I got from Mr. Ali when I spoke to him, right, the
22 information I got from Mr. Ali when I spoke to him was that
23 they moved the first plug, they were moving the second plug
24 and he did not know what happened.

25 Q. Okay.

26 A. I was speaking—if I may finish please?

27 Q. Okay.

1 A. I was speaking with Mr. Harrichan and Mr. Ramdhan who was
2 the OTS and he never gave that information to me that there
3 was any rush of liquid. He just told me, er, they were doing the
4 sea searches, he told me he was talking to Mr. Farah who was
5 just lying on the barge holding his head.

6 Q. Okay. Mr. Piper, if you had that information, would you have
7 started from around 3.30 p.m. to consider the plan to rescue the
8 men from the pipeline?

9 A. Yes, Sir. And, all that time on the way we were through
10 Heritage, Mr. Mohammed through Heritage, we were already
11 mobilizing, we were already mobilizing the best equipment we
12 could get, Sir.

13 Q. But unless I have it wrong, isn't this Paria's timeline? This is
14 part of Paria's record that was disclosed to us.

15 A. Yes, Sir, but at the time I did not have that information at all.
16 Right?

17 Q. You got it at any time?

18 A. No, Sir. That that really could—of that rush of liquid, right?
19 That was never wrought to my attention.

20 Q. But that was very important information?

21 A. Yes, Sir.

22 Q. Because if you had got that information—

23 A. That was not brought to my attention.

24 Q. —that would have led you to the conclusion that the men would
25 have been in the pipe?

26 A. Of course.

27 Q. Yes.

1 **Examination By Mr. Chairman:**

2 Q. In fairness to Mr. Piper, can I—can we have that document?

3 You see it says at the top, “Incident: five divers went missing.

4 One was retrieved”?

5 A. Yes.

6 Q. Do you see that at the top of the document? Is it not on the

7 screen in front of you?

8 A. Oh sorry. I’m sorry, yes.

9 Q. Is it on that screen?

10 A. Yes, Sir.

11 Q. You see right at the very top where it says, “Dive Operation”?

12 A. Yes.

13 Q. That rather suggests that this is not contemporaneous, doesn’t
14 it?

15 A. Correct, yes.

16 Q. Right? So it’s written after the event?

17 A. Yeah. Yes, Sir.

18 Q. Because if they writing up their time one was retrieved—

19 A. Uh-huh.

20 Q. —that was after—

21 A. Right.

22 Q. —1530?

23 A. Correct.

24 Q. All right? So it can’t have been—and can you go to the second

25 page, please where it says, er, at the bottom of the second page,

26 two one, er, two one—ah yes, mine is a different presentation

27 [*Phonetic*], so scroll up a little further, please? Next. Keep

1 going. Keep going. Keep going. No, no, you're going the
2 wrong way. Keep going please to the next page? Now I want
3 the foot of the page, please, that Mr. Piper can see it. There's
4 been some confusion about putting these documents in the right
5 order, but never mind. All right. Tell you what we're going to
6 do. Have a look at mine. [*Mr. Chairman hands documents to*
7 *Enquiry orderly who shows same to Mr. Piper*] At the bottom
8 of that page, my page 2156, what does it say? Who's written
9 it?

10 A. Yes, OTS, "OTS J. Ramadan received information from coast
11 guard dive team on site".

12 Q. No, no, below that.

13 A. Um, 2156, I'm looking at, page 2156?

14 Q. Yes. Right at the bottom—

15 A. Right. Or, or.

16 Q. —somebody's name there.

17 A. Yes, or, Leandra Singh.

18 Q. PC Leandra Singh?

19 A. Yes, Sir.

20 Q. Who's that?

21 A. Or, port coordinator.

22 Q. Sorry?

23 A. The port coordinator.

24 Q. The port coordinator?

25 A. Yes, Sir.

26 Q. Works for you?

27 A. Yes, Sir.

1 Q. Right and he's written—er, he's put his name to this?

2 A. Yes.

3 Q. Right? And then he says 0700 to 1900?

4 A. Yes.

5 Q. So is this document intended to provide the information of the
6 events that took place between those times?

7 A. Yes.

8 Q. I think it's wrong because he does have 2010 in there as well,
9 but, never mind. Mr. Leandra Singh is writing this. Where
10 would he have got the information?

11 A. Miss. Right. So Ms. Leandra Singh, the port coordinator, was
12 documenting this, right? Now, I spoke with Ms. Leandra Singh
13 during—on my way there. I was also speaking to Johnathan
14 Ramadan, right—

15 Q. Yes.

16 A. —all the time and that was not brought to my attention at that
17 time. When I arrived on site, so I'm looking at this timeline
18 now, when I arrived on site, at 16—at 4.55, I called for Mr.
19 Farah, right, to come in. So this is at 5.00 o'clock now when I
20 arrived. Immediately after I arrived at five to five, I called for
21 Mr. Farah at five o'clock. He was on the way and at about ten
22 past 5.00 people were hearing the knocking, right? And—

23 Q. I—can we get back to the position—

24 A. Yes.

25 Q. —because you weren't on site until around five o'clock.

26 A. Correct.

27 Q. Right? But you'd, you'd assigned Mr., um—

1 A. Mr.—Johnathan, Johnathan Ramadan.

2 Q. No.

3 A. Or Visham, Visham Harrichan.

4 Q. Who was in charge of the IMT before you arrived?

5 A. That will be Paul Yearwood.

6 Q. Yearwood. That's it.

7 A. Right.

8 Q. Thank you. So Mr. Yearwood was in charge—

9 A. Yes, Sir.

10 Q. —before you arrived. The first thing you would have wanted to
11 do upon arrival is to be updated by Mr. Yearwood?

12 A. Yes, Sir.

13 Q. Did that not include the information that you've had pointed out
14 to you by Mr. Maharaj, that there was a report from OTS that
15 there was a rush of liquid into the pipe?

16 A. No. I don't know if we had that information. He did not pass
17 that information to me.

18 Q. So, let's, let's, let's be clear. It is of course important
19 information?

20 A. Yes, Sir.

21 Q. From wherever it came, it should have been passed to the IMT?

22 A. Correct.

23 Q. And, had it been, it would have come to your attention when
24 you arrived, if not before?

25 A. Correct.

26 Q. And if you'd been provided with that information, you would
27 have been able to conclude that there was every prospect of a

1 Delta P—

2 A. Yes, Sir.

3 Q. —that dragged these men into the pipe?

4 A. Yes, yes, Sir.

5 Q. And had you been informed if you'd come to that conclusion at
6 half past 3.00 that afternoon, you would have actioned it from
7 then?

8 A. Of course.

9 **Mr. Chairman:** I think that's where you wanted to get to.

10 **Mr. Maharaj SC:** Yes.

11 **Mr. Piper:** Yes, Sir.

12 **Mr. Chairman:** Can I have that back please? Because that's
13 mine. [*Enquiry orderly retrieves document from Mr. Piper and*
14 *returns same to Mr. Chairman*]

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. I'm coming to the end, I'm coming to the end, Mr. Piper. I'm
17 coming to the—just few more, right? You have told us that at
18 the—around eleven o'clock or for the period eleven o'clock,
19 twelve o'clock on Friday night—

20 A. Uh-huh.

21 Q. —the IMT was making plans or discussing plans for a rescue
22 operation, correct?

23 A. On Friday night, Sir?

24 Q. Yes.

25 A. Yes, Sir, we were in rescue.

26 Q. The IMT was not making plans for a recovery operation on
27 Friday night?

1 A. No, Sir. We were in res—we were in rescue mode.

2 Q. Rescue mode. I want to show you 1574 at—and that's in his
3 supplemental core bundle.

4 **Mr. Chairman:** I'm sorry, we're going to have to—
5 immediately. Thank you.

6 [*Commissioner Wilson leaves Enquiry room*]

7 [*Off the record discussion*]

8 **Mr. Chairman:** We'll just stop for a moment and see if he can
9 come back.

10 [*Commissioner Wilson re-enters Enquiry room*]

11 **Mr. Chairman:** All right. I think we can, we can—

12 **Mr. Maharaj SC:** Much obliged.

13 **Mr. Chairman:**—make some progress.

14 **Mr. Maharaj SC:** Much obliged.

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. Okay you had given us the answer that at Friday at eleven
17 o'clock, twelve o'clock, IMT was not considering recovery, it
18 was considering a rescue?

19 A. We were still in the rescue mode. Just let me explain. We were
20 still trying to rescue at that time, all right? That is correct, Sir.

21 Q. Okay.

22 A. We were still trying to rescue.

23 Q. Okay. Look at 1574.

24 A. Yes, Sir.

25 Q. At 2304 hours?

26 A. Uh-huh.

27 Q. It states here according to—"IC recovery plans to be drafted."

1 A. Uh-huh.

2 Q. “Scenario one, all four persons non-responsive. Scenario
3 number two, found responsive. Scenario number three
4 non-responsive and submerged.”

5 A. Uh-huh.

6 Q. “Scenario number four, non-responsive air pocket.”
7 This to me tells me that there were plans being made, drafted,
8 for recovery?

9 A. Right. Yes, Sir, that is what it says, if I may explain?

10 Q. Uh-huh.

11 A. Of course, we are at midnight, right? We—I—the IMT still
12 making efforts to rescue, however, we had to start considering
13 if we were unable to rescue, right, at this time, so we had to
14 consider we had to start considering the different options, so
15 that is what that speaks to.

16 Q. So—

17 A. It did not—it does not speak us to moving from rescue to
18 recovery at that point.

19 Q. So on Friday, men were in the pipe, it was urgent to rescue
20 them but the IMT was considering rescue and recovery?
21 Recovery would only arise if they did not survive?

22 A. That is correct, Sir. We had to run it in—you have to run it in
23 parallel. You can’t run in series where you come to that point
24 and then you start. So we had to start considering it.

25 Q. If you look—um, I want to refer to the supplemental core
26 bundle one at page 1515. This is on the—page 1515. [*Enquiry*
27 *orderly assists Mr. Piper. Commission Secretary hands*

1 *document to Mr. Piper]* Well I see this, this now, I want to
2 show you something on the Saturday morning. I just showed
3 you Friday night.

4 A. Okay Sir.

5 Q. So Saturday morning the 26th, look at the bottom of page 1515.
6 Twenty-six slash two, the time is 2.54 a.m.

7 “Two working drafts for press releases.”

8 On the next page:

9 “Two working drafts for press releases. Moving from
10 rescue to recovery effort. Condolences once bodies are
11 recovered.”

12 That is accurate?

13 A. Right. This, this document I’m seeing here at the top, I’m
14 seeing “Temporary” um, this is “Paria incident Temp, Andy,
15 Anil, Arlene Chow”, this, I don’t know if—what
16 correspondence this is, right but this, they were not members of
17 the IMT.

18 Q. Oh, no, but they were, they were part of the IMT on that day?

19 A. Yes, Sir.

20 Q. So they were all—as a matter of fact—

21 A. Yeah.

22 Q. —they were all communicating with each other?

23 A. Yes, Sir.

24 Q. As a matter—

25 A. Uh-huh.

26 Q. —as I understand it from the evidence—

27 A. Yes.

1 Q. —the—Paria's IMT was combined with persons from
2 Heritage—

3 A. Yes.

4 Q. —to constitute the IMT for this event?

5 A. Yes, Sir. And I—Sir, I was not part of this communication,
6 right, so these would be, if you see, they are draft press
7 releases. Normally in incidents like these, right, you always do
8 draft press releases for different, different scenarios,.

9 Q. Yes, but this—

10 A. So that's all that is, Sir.

11 Q. But this communication came to everyone in the IMT including
12 Paria IMT?

13 A. I was not in this—I was not in this group, Sir, right?

14 Q. You were not in this group?

15 A. No, Sir I don't recall—

16 Q. So, today is the first day you're knowing about this? You're
17 now—

18 A. Yes, but these are just draft—in any event these are just draft
19 press releases. Any time you have an incident you always do
20 draft press releases. You don't just wait up to the last moment.
21 So that is all that is, Sir. That does not mean, that does not
22 mean at all that you go from—that you have moved or
23 transitioned from one point to the other. It simply means you
24 do a holding statement. That's standard practice.

25 Q. Mr. Piper, I want to suggest to you that the evidence shows that
26 the IMT at Paria was moving slow, very slow, to rescue the
27 persons in the pipeline.

1 A. I understand your suggestion, Sir, but I want to say—I want to
2 state to you, right, that that is not correct. We—given under
3 those circumstances, I am declaring to you that the IMT was
4 making every effort to rescue those men and to protect the lives
5 of the responders.

6 Q. And I'm suggesting to you that the evidence shows that there
7 was available to the IMT other divers, LMCS divers,
8 experienced with all the equipment, to effect a rescue, during
9 the period of time the divers most likely would have been alive.

10 A. I understand your suggestion, Sir, and I am stating to you, right,
11 that I had a duty, right, to those responders and I, I had a duty
12 for, for, for their lives as well, right, to make sure that their
13 lives were saved, right?

14 Q. Can I just, before I sit, refer you to what you stated at paragraph
15 seven of your affidavit, or, sorry, of your witness statement at
16 page 1345?

17 A. Yes, Sir.

18 Q. “As on-scene commander, it was my responsibility to
19 respond urgently to the emergency, assess the incident
20 scene, conditions and circumstances, gather valuable
21 information from the incident scene, act as the on-scene
22 liaison between other responders and the incident
23 command team and otherwise feed the incident command
24 team with relevant information to arrive at possible
25 mitigation options and methods, and to participate in the
26 planning and execution of the emergency response. In
27 some instances, I was required to lead the execution

1 process with the support of a team.”

2 Would you not agree with me that since you have to assess the
3 conditions and the circumstances and consider all the relevant
4 matters, you had to consider whether you could have got
5 alternative divers, apart from the divers that you contacted, to
6 rescue these men from the pipe?

7 A. Yes, Sir. And we did that. We got alternative divers, we got
8 the dive experts, right, and they, they said, right, when whatever
9 information we gathered that it was too risky to send somebody
10 into that pipe, Sir. Right? And again, part of my duty, right, is
11 to, is to the responder. It's his life. That was part of my duty,
12 Sir.

13 Q. I know you could say that now but you didn't say that in your,
14 in your witness statement.

15 A. No, Sir, but that is part of my duty, Sir, as the incident
16 commander and it's written in there in the incident command
17 system.

18 **Mr. Maharaj SC:** No further questions.

19 **Mr. Chairman:** Thank you, Mr. Maharaj.

20 **Examination By Mr. Chairman:**

21 Q. Just before we rise for lunch, can I just ask you to help me out
22 with something, please? The log that you provided to us is in
23 our Volume II at page 1573 to 1576. This is, as I understand it,
24 a contemporaneous log.

25 A. Yes, Sir. Yes, Sir.

26 Q. When did the IMT stand down?

27 A. The IMT stood down on the Thursday morning after the

1 recovery of the last bodies, when we would have stood down,
2 so when I would have stood down the IMT.

3 Q. Can you help me please as to why the log ends, apparently quite
4 abruptly, at 1410, page 1576? Is there some part of the log
5 that's somewhere else? Because I am—

6 A. Yes, there has to be some part of the log somewhere else, Sir.

7 Q. Well, um, just for my satisfaction, please, can someone find out
8 what the position is? We've got four pages of the log, five.
9 Sorry, one, two, there, four, five, yes, five. It appears to stop at
10 ten past 2.00 on Saturday afternoon. Do you see what I mean?

11 A. Yes, yes, but, um, I, I know for a fact the log was being
12 continued.

13 Q. Right.

14 A. I think what happened here was this was doing on one
15 spreadsheet and then they went over to another spreadsheet,
16 so—yeah, but, but it is there.

17 Q. It exists somewhere?

18 A. It exists. It does exist.

19 **Mr. Chairman:** All right, thank you very much. We'll
20 adjourn now for lunch. Two o'clock please? Two o'clock.

21 **1.59 p.m.:** *Enquiry suspended.*

22 **1.58 p.m.:** *Enquiry resumed.*

23 **Mr. Chairman:** All right, good afternoon. We have our
24 witness, Mr. Piper, please?

25 [*Mr. Collin Piper enters enquiry room and sits at witness table*]

26 **Mr. Chairman:** Good afternoon.

27 **Mr. Piper:** Good afternoon.

1 **Examination By Mr. Chairman:**

2 Q. Good. Before I hand it over, as it were, to others who may have
3 questions for you, can I just ask you one matter, please? It's to
4 do with your statement at page 1361 and it's paragraph 81. I
5 want to start at 80, if I may?

6 A. Yes.

7 Q. Do you see it there, Mr. Piper?

8 A. Yes, Sir.

9 Q. Do you have it?

10 A. Yes.

11 Q. Yes. Just, I'll read it aloud.

12 "Kazim Ali and Dexter also never made any request to
13 me during our conversations or at all for any LMCS
14 representative to join the ICT and never actually sent a
15 representative as LMCS was invited to do by Paul—"

16 That's Yearwood, isn't it.

17 A. Correct.

18 Q. Right:

19 "—prior to my arrival on site."

20 And we've heard the evidence about, um—

21 A. Yes, Sir.

22 Q. —Mr. Faizal—not Faizal, forgive me, he's—

23 A. Mr. Farah?

24 Q. Mr. Farah, thank you very much. Mr. Farah, as it were, being
25 invited to come and attend and you just at that moment in time
26 Mr. Boodram was coming out of the pipe, so he turned round
27 and went back?

1 A. Correct.

2 Q. Right. So that's where we are and that's the bit—that's what
3 you're dealing with here. You then go on to say this.

4 "In any event, LMCS, through Kazim Ali Sr., and Paria,
5 the ICT through me, were able to collaborate on the
6 following measures taken in anticipation of attempting to
7 rescue the divers."

8 All right? So this paragraph is seeking, as I understand it by
9 you, to say well, what did you do with their cooperation to
10 achieve the conditions for a rescue.

11 A. Correct.

12 Q. That's what you're saying here?

13 A. Yes, Sir.

14 Q. Isn't it? So can we look at those briefly, please, and put some
15 timelines on them so that I understand, all right? The first thing
16 you identify is this. You made arrangements for the provision,
17 I say you. I don't necessarily mean you personally but the ICT
18 or the—

19 A. Understood, Sir, yes.

20 Q. —making arrangements for the provision of a police escort
21 because of the outrageous traffic in this country—which I have
22 suffered by—for LMCS additional divers from "Carnage"
23 [*Phonetic*]?

24 A. Carenage.

25 Q. Carenage—I was about to get that wrong—to Port of Spain, all
26 right?

27 A. Correct.

1 Q. So you—somebody made a call and said to the police, “Look,
2 can you—we’ve got an emergency situation. Bring those
3 divers up super fast.”

4 A. Correct.

5 Q. Right? So you did that. And that would have been, um—well
6 we know the incident took place at 2.45. We know that Mr.
7 Boodram came out of the pipe at 5.30ish so what sort of time
8 we’re talking about, after Boodram or pre-Boodram?

9 A. Um, it’s somewhere on—I’m not sure if it was on the timeline
10 but it was on somebody’s statement.

11 Q. It probably doesn’t matter in your [*Inaudible*]?

12 A. Yeah, it would be—it would, I think, be pre-Boodram, I
13 believe, because I think one of those divers was, um—

14 Q. All right.

15 A. —might have been Conan Beddoe.

16 Q. So we can, we can chalk that up as something that you were
17 able to achieve as it were—

18 A. Yes.

19 Q. —on behalf of affecting the right conditions for a—

20 A. Right.

21 A. —er, a rescue, yes? The second thing that you identify is this.
22 The refilling by Paria of LMCS scuba tanks, their diving tanks,
23 with air?

24 A. Correct.

25 Q. All right? Now I can tell you that we know that that’s at 6.30
26 that evening, all right?

27 A. Okay.

1 Q. So it's post Boodram but it's about 6.30—

2 A. Uh-huh.

3 Q. —on the Friday evening. So you were able to fill up their tanks
4 with air for them, all right? Then the third thing is this. The
5 installation of the topside riser at berth 6. This is putting on the
6 piece that takes it above the water line, doesn't it?

7 A. That's correct, Sir.

8 Q. Right. That wasn't done until ten o'clock on the Friday
9 evening, all right?

10 A. Yes, correct.

11 Q. Right, so just to put that into our timeline as it were, ten
12 o'clock, that is about—it's approaching the five-hour mark,
13 isn't it, from when Mr. Boodram came out of the pipe?

14 A. Yes, Sir.

15 Q. It's certainly four and a half hours or thereabouts, all right?

16 A. Correct.

17 Q. So that was, um, the sort of window that you were thinking,
18 realistically that's about as far as we can go and rescue people
19 alive, isn't it? I know you've put your caveat on that.

20 A. Ten [*Inaudible*].

21 Q. We all sit there in hope rather than in despair, yes?

22 A. [*Nodding*]

23 Q. The fourth thing that you were able to identify was the removal
24 by LMCS of the blind flange from berth 5.

25 A. Correct.

26 Q. I personally at the moment regard it as a rather dubious thing to
27 do, and, that's been identified by number of people already and

1 there was some hours between the request being made for that
2 to happen and it happening because of how it might affect the
3 equilibrium in the pipe, all right, so I—but let's proceed on the
4 basis that you regarded that was one of the preconditions to
5 effecting a rescue. All right? That did not happen, did it, until
6 4.30 in the morning on Saturday?

7 A. Uh-huh.

8 Q. So well past any realistic timeline that we discussed earlier
9 today, correct?

10 A. Correct.

11 Q. And then the fifth thing and final thing that you identify as
12 being of relevance in making preparations for attempting a
13 rescue was this. The removal by LMCS of the hyperbaric
14 chamber, albeit they dropped it in the ocean or somebody did,
15 and that didn't happen until six o'clock on Saturday evening?

16 A. Correct.

17 Q. By any view they were likely dead?

18 A. Uh-huh, okay.

19 Q. Right. So all I want you to understand is, was—is there
20 anything else that would like to add to that list of five things
21 that you can say that you, together with LMCS, did in order to
22 create the right environment for you to carry out a rescue?

23 A. Okay. So, um, I think I need to explain this, this um, item here
24 right.

25 Q. Yes. That's why I'm asking you about it.

26 A. Right. So, here really what I, um—what I'm speaking to is the
27 collaborative effort, right? All, um— and of course, they

1 didn't—not all to come together. For instance, number four,
2 the removal of the blind flange at berth No. 5, we, we delayed
3 that because we were still working with the crawler. The blind
4 flange removal was to really get the crawler in to—into the
5 pipeline. Now, we were making all attempts from berth No. 6
6 in—to find out what, as best as we could so that's why we
7 delayed that, right?

8 Q. Mr. Piper, forgive me. We've got that.

9 A. Right.

10 Q. What I want to know is, you put a list of five things together in
11 your statement—

12 A. Right.

13 Q. —in your very lengthy statement—

14 A. Correct, yes.

15 Q. —covering many, many aspects of this matter, only some of
16 which we've touched on in the live evidence, all right?

17 A. Correct.

18 Q. I just want to understand, is this paragraph intended by you to
19 reflect what you believe was the entirety of the things that you
20 were able to put into place in a collaborative way with LMCS
21 in anticipation of attempting a rescue? Because that's what
22 you're saying there, isn't it?

23 A. Right. I'm saying those are some of the things we collaborated
24 on, yes.

25 Q. No, not what you're saying, not some of the things.

26 A. Uh-huh.

27 Q. You're saying that's what you achieved. I want to know if at

1 this stage you want to add anything to that list.

2 A. [Pause] No. I think those are the things we were able—I think
3 those are the things we were able to get through at that point in
4 time.

5 Q. Reflecting on that—

6 A. Uh-huh.

7 Q. —do you think that that was adequate?

8 A. I'm not, er, I'm not quite sure your question where you're
9 leading to, um—

10 Q. Don't worry about where it leads.

11 A. Please, forgive me. Forgive me.

12 Q. Worry not where it leads. Can you answer it? Do you think
13 that in the time that you were giving yourself for the, what you
14 call in anticipation of attempting to rescue the divers—

15 A. Uh-huh, yeah.

16 Q. —do you think that this was sufficient, with the benefit of
17 hindsight, I accept, but do you think this was sufficient effort by
18 both of you, that is you and LMCS—

19 A. Uh-huh.

20 Q. —working together, to create the environment in order to
21 rescue these divers?

22 A. These are some—these are the physical things, right, we were
23 able to do, right, together. Other than that, and in between here,
24 we were—I—the IMT, we were focusing on assessing, on
25 assessing the pipeline as I keep saying. We were focusing on
26 assessing. Once we had gotten any information, if there was
27 anything else we could have done, we would have done. It was

1 not that we just wanted to get these things and shut down but
2 anything that had come along at any point in time to aid in that
3 rescue effort, we would have done.

4 Q. Can I make some suggestions as what you might have done?

5 A. Okay, thank you, Sir.

6 Q. The first thing that you might have done would have been—you
7 see that board up there, imagine that that wasn't on that board.

8 A. Uh-huh.

9 Q. You might have put a timeline starting from when the accident
10 happened to the time when Mr. Boodram came out—

11 A. Uh-huh.

12 Q. —to the time that you estimated you said three and then you
13 added four and then it became five but whatever it is, whatever
14 you might have thought was the reasonable timeline to save—

15 A. Uh-huh.

16 Q. —these men and you might have been working together with
17 Mr. Kazim Ali and/or Mr. Dexter Guerra or anyone else that
18 you could get hold of from LMCS that this is the timeline to
19 which we are working. Get their agreement that that is the
20 timeline to which you're working. Do you think that might
21 have been something you could have done?

22 A. Um, yes. That could have been something we could have done
23 in time—in hindsight but, again, we all knew it was a tight
24 timeline and we were working towards that.

25 Q. Yes, but having, having it up—

26 A. Yes, having it up—

27 Q. —literally on the board, I mean you've given us some

1 documents—

2 A. Yes, Sir.

3 Q. —photographs of the board—

4 A. Yeah.

5 Q. —that you had, we put various things on the board, the point
6 about an IMT, as I understand it—

7 A. Uh-huh.

8 Q. —you know far more than I do I'm sure, but, as I understand it,
9 is to get the people—the right people together in that room, you
10 stay in that room, working on what needs to be done in a short
11 space of time that you've given yourselves—

12 A. Huh.

13 Q. —realistically, you had but hours, not days, we're agreed about
14 that, are we not?

15 A. Yes, Sir.

16 Q. Right. So, once you've got that, once you had that timeline and
17 you have the agreement, particularly in this case, where LMCS
18 had divers who they were directly related to, these are not some
19 remote individuals, they were people that were related to them.
20 You knew, man you've known for 30 years, his son was in that
21 pipe, another man whose father was in that pipe, given those
22 circumstances, working with LMCS, on a time scale to see
23 what could be achieved within that time scale, is something that
24 I suggest you could have done with LMCS.

25 A. Right, and, Sir, when I, I did make attempts, when Mr.
26 Boodram came out of the pipe as well, I did make attempts to
27 get in touch with Kazim Ali. It's in my statement.

1 Q. Well, it is, but, you see—

2 A. And I was unable to get in touch with him.

3 Q. Well, well, forgive me, your own statement at paragraph 74 sets
4 out, no doubt from you examining your telephone, the number
5 of times you called Mr. Kazim Ali or tried to.

6 A. Yes, Sir.

7 Q. We know, don't we, that Mr. Boodram came out of the pipe at
8 about 5.30ish.

9 A. Yes.

10 Q. It's 6.30 before you even tie and call Mr. Kazim Ali.

11 A. Right, and during that time, during that time we were oc—we
12 were occupied. I was certainly occupied in trying to—in
13 working with my—with my group, right, on how to approach it
14 at that time, yes, Sir.

15 Q. I, I, I, I know. I know. But, you know—

16 A. Yeah.

17 Q. —it's his son who's in the pipe, isn't it?

18 A. Yeah. Yes, Sir.

19 Q. And I, I just want you to—I, I'm trying to place myself in the
20 situation that you would have been in, okay?

21 A. Uh-huh.

22 Q. This is a man you know for 30 years. Okay?

23 A. Yeah.

24 Q. His son is in that pipe, renewed hope, renewed hope given to
25 you all because Boodram comes out of the pipe.

26 A. Of course.

27 Q. And it's an hour before you call him?

1 A. Yes. Right, so, um, I, I understand that, but, please understand
2 there would—there were any number of things happening,
3 talking with people, trying to find out, get information—

4 Q. Of course.

5 A. —so there was all of that happening at that point in time.

6 Q. Well get somebody else to call him, then. You've got a whole
7 team of staff—

8 A. Yeah.

9 Q. —to call him. All I'm, all I'm trying to do is to understand, you
10 see, whether what you're saying in the statement at paragraph
11 81—

12 A. Yeah.

13 Q. —is a fair representation of what might have been achieved
14 between you and LMCS. I'm not blaming you or them. I just
15 want to understand—

16 A. Yeah.

17 Q. —the degree of collaboration that needed to be—

18 A. Yeah.

19 Q. —achieved in order to try and effect a proper rescue.

20 A. Yeah.

21 Q. All right? And you've set out, not at our behest but yourself—

22 A. Uh-huh.

23 Q. —in a statement what you say was the—were—

24 A. Yeah.

25 Q. —the five things that you managed to achieve.

26 A. Yes.

27 Q. I'm simply trying to understand whether now, with the

1 benefit—

2 A. Uh-huh.

3 Q. —of hindsight obviously, you could reflect on whether actually
4 more might have been done, one of which is this timeline that
5 you might have agreed between the two of you, so that you both
6 understood—

7 A. Yes.

8 Q. —where we were.

9 A. And that would have helped, Sir.

10 Q. It would have, wouldn't it?

11 A. Yes.

12 Q. Right. And the other thing I thought that you might have
13 considered would have been to have pressed either Mr. Guerra
14 or Kazim Ali, or anyone else frankly for that matter at the
15 LMCS or divers that were expressing a willingness at an early
16 stage to dive into the pipeline, "Give me a scheme", like I think
17 I asked you earlier, and I don't want to rehearse it but I did ask
18 you whether or not you had pressed anyone for a scheme,
19 whether you pressed Mr. Guerra or anything else, and you dealt
20 with that then.

21 A. Right.

22 Q. But, the point I want to try and raise with you now, is, in
23 looking at the things that you did collaboratively—

24 A. Uh-huh.

25 Q. —do you not think that it would have been helpful for you as
26 the head of the IMT to have pressed those at LMCS to come up
27 with a plan that you could properly consider? Because, as I

1 understand it, you say you never had such a plan or it was never
2 conveyed to you.

3 A. Uh-huh. Right. So, the, the, the rationale for me was the—we
4 simply, and again, I'm going to repeat this, in my mind, I
5 needed to—we needed, whether it's—we needed to really
6 assess. Now, we did not know the dangers in that pipe but we
7 knew, we knew certain things in that pipe, right? So, not
8 having that information, even if we came up with a simple plan,
9 we—there were things in there that we, because we didn't
10 know, we were not—we would not have been able to mitigate
11 in any event, right. I cannot mitigate against what I don't
12 know. So—

13 Q. Pausing there for a moment—

14 A. Yes, Sir.

15 Q. —I think that must be right mustn't it? Can't mitigate about
16 what you don't know.

17 A. Yeah.

18 Q. On the other hand, there were only a number of potential
19 scenarios—

20 A. Yeah.

21 Q. —weren't there? You could presumably have a plan that would
22 mitigate against each of those potential scenarios.

23 A. And, Sir, for instance, I, I would not have known how far the
24 men in, how much oil. Those things are very difficult to
25 mitigate against, right? This is—this really was just guesswork,
26 right?

27 Q. No, no, I follow that.

1 A. Right, so—

2 Q. I mean—I, I—look, I—

3 A. That would have been very, very difficult for me.

4 Q. Right, I accept entirely, right, that you did not know the
5 conditions—

6 A. Yes.

7 Q. —in the pipe.

8 A. Yes.

9 Q. I accept that. Whether you could have informed yourself is
10 another matter, which Mr. Maharaj has addressed and others
11 will no doubt do so also, but I accept your assertion that you did
12 not know the conditions in the pipe, all right? The point I am
13 simply making is this. There are a number of potential issues
14 that you have raise—yourself raised. Was there a possibility of
15 a second Delta P? What if the fluids were toxic in some way,
16 or a number of potential scenarios, all of which might have
17 been mitigated. You might have said, well, “If it’s this, can we
18 do that? Does it help?”

19 A. Uh-huh.

20 Q. If it’s that, can we do something else? Do you follow what I
21 mean? Isn’t that part of your job in the IMT where there are—

22 A. Yeah.

23 Q. —unknowns—

24 A. Yeah.

25 Q. —to make a rational—take a rational view about what they—
26 what it could be and then have a plan to deal with what could
27 be?

1 A. Yeah.

2 Q. Well did you regard that as your role?

3 A. Yes, Sir.

4 Q. Did you do that?

5 A. Um, I, I did that to the extent not, not with LMC S but I would
6 have done that—we would have discussed with the IMT
7 some—some what were—we would have discussed, er, really
8 is assessing, getting the information, right? We went to the, we
9 went to the specialists, they said no, right? We, whether we put
10 it down, er—

11 Q. What I suppose I'm asking you, and I know you're trying to
12 work it through in your own mind—

13 A. Yes.

14 Q. —is this, is that, you see, if, for example, as you've told Mr.
15 Maharaj, if for example you thought there was the existence of
16 a second Delta—

17 A. Uh-huh.

18 Q. —P, as an issue—

19 A. Right.

20 Q. That's just an example, right? There are other issues I've
21 raised—

22 A. Yeah.

23 Q. —but if that was the case you write that on your board don't
24 you—

25 A. Yes.

26 Q. —onto your white board, second Delta P.

27 A. Yeah.

1 Q. Right? And then another issue arises, you say, um, toxic fumes,
2 put that on the board.

3 A. Yeah.

4 Q. Um, another issue arises, um, communication or, um,
5 something like that, you put that on the board.

6 A. Yeah.

7 Q. So you identify all the potential hazards.

8 A. Yeah.

9 Q. You put them all up on your board and then you look to see,
10 well how can I fix that one? What can I do about that one?
11 Right, so for example with Delta P you might say, “Now, if
12 there’s a second Delta P they’re tethered and they’ve got
13 communications and they’re in there for probably maybe no
14 more than 15 minutes or something like that, is that, can we
15 assess that then as a risk ameliorated to this extent?” Do—you
16 follow that?

17 A. Oh, yeah, understood, Sir.

18 Q. And—but, I mean, what, what I want to know, I suppose, and I
19 know Mr. Wilson wants to know as well, is, whether or not that
20 exercise was entertained by you in collaboration with LMCS to
21 say, this is the way forward for us in the time frame that we
22 have?

23 A. No, I didn’t do that with LMCS, Sir.

24 Q. Did you do it at all?

25 A. Well, yeah, we would have discussed it in the IMT, Sir.

26 Q. And now I understand—

27 A. And they didn’t put it down, yes. Didn’t put it down.

1 Q. —this part. I mean, there's nowhere that I—

2 A. Yes.

3 Q. —could where, you know, that issue is identified as an issue—

4 A. Yeah.

5 Q. —contemporaneously, and here are the ways of dealing with it.

6 A. Yeah.

7 Q. There isn't, is there?

8 A. No, no, Sir.

9 Q. Right, okay. So, moving forward, because our job is not just to
10 analyze what happens but what are we going to recommend for
11 the future—

12 A. Yeah.

13 Q. —do you think that that would be the right sort of approach in
14 any scenario—

15 A. Yes, Sir.

16 Q. —like this?

17 A. Yes, Sir.

18 Q. Right. And so, any recommendations that we might want to
19 make in regard to this should reflect that kind of approach?

20 A. Correct.

21 Q. Thank you.

22 **Mr. Chairman:** Yes sorry, I've taken a little time doing—er, I
23 just need to understand it from our point of view. Right, so,
24 who would like to ask Mr. Piper some questions? Don't all put
25 your hands up at once. Right. Well, what we'll hear from is
26 Ms. Alfonso first of all. She will have some questions for you.
27 She is from the trade union. She'll introduce herself.

1 **Ms. Alfonso:** Thank you, Mr. Chairman.

2 **Cross-Examination By Ms. Alfonso:**

3 Q. Good afternoon, Mr. Piper. My name is Nyree Alfonso.

4 A. Good afternoon.

5 Q. And I represent the interest of the Seamen and Waterfront
6 Trade Union. Mr. Piper, just to take you back to something
7 before we had the lunch break, in particular paragraph 131 of
8 your witness statement which was at 1368, that is a
9 conversation—I'll let you get to it but that is a conversation that
10 you say, or an exchange that happened with Mr. Boodram from
11 the hospital. You recall it?

12 A. Yes, Ma'am.

13 Q. Okay. Now, aside from saying, "I don't think them fellas make
14 it and so on", right, Mr. Boodram says he crossed Blacks who
15 was unresponsive.

16 A. Uh-huh.

17 Q. Would that mean to you that Mr. Boodram—would that equate
18 in your mind that Mr. Boodram was able to swim past Blacks?
19 I think that's Mr. Nagassar.

20 A. Yes, Ma'am.

21 Q. Okay. And then he says they left behind Kazim Jr. You say,
22 you say that he left—

23 A. Yes, Ma'am.

24 Q. Okay. Right. So, let me take you to 1541 of the supplemental
25 core bundle and Mr. Chairman the ITT bundle, I beg your
26 pardon, and this is the corrected version?

27 **Mr. Chairman:** Volume I of IV—

1 **Ms. Alfonso:** Oh dear. We don't—how it was downloaded we
2 don't have volumes but it is 1541.

3 **Mr. Chairman:** Fifteen forty-one? Yes.

4 **Ms. Alfonso:** And that's in the corrected download.

5 **Mr. Chairman:** Yes, I have it.

6 **Ms. Alfonso:** Right.

7 **Continued Cross-Examination By Ms. Alfonso:**

8 Q. Now, I think because the handwriting is kinda like mine, quite
9 bad, that that is 9.58 at the top circled, yes, p.m.?

10 A. Yes.

11 Q. On Friday, on Friday the 25th. Now, I don't see there anything
12 about leaving people in, you know, persons not making it,
13 they're not making it, they haven't made it and so on, and I
14 want you to—but, more importantly, I want to take you to
15 something that you say is also—this is a contemporaneous note.
16 I should have asked you that first, made by the scribe, yes?

17 A. Right Ma'am and I—we discussed this morning—

18 Q. Okay.

19 A. —that there was also contemporaneous notes in the log.

20 Q. And I'm taking you to the log next, Mr. Piper. So the log in
21 relation to, um—too many tags. Right, the log in relation to
22 that conversation at 2158 is at—sorry the time is 2158, the page
23 number is 1574. In that same ITT bundle.

24 A. Yes, Ma'am.

25 Q. So you say that this, for my clarification, that this is now a
26 contemporaneous typed version of—this is being typed
27 contemporaneously, that was your evidence this morning?

1 A. Yes.

2 Q. Did I get it right?

3 A. Yes, Ma'am, that is correct.

4 Q. Okay. Thank you for that. So if I go to 1576, two pages on,
5 where the note mysteriously stops at 2.10 in the afternoon, and I
6 look at the bottom below that, is there a date there, Mr. Piper,
7 on the right-hand side, I beg your pardon?

8 A. Yes, Ma'am.

9 Q. And a signature above it?

10 A. Yes.

11 Q. Okay. And what that—what date is that, Mr. Piper?

12 A. It says 2022, March 21st.

13 Q. Okay, so if this is a contemporaneous note—

14 A. Uh-huh.

15 Q. —how it is that it is dated in March?

16 A. Yeah, I just signed it then, Ma'am. So I just dated it when I
17 signed it.

18 Q. That is your signa—that is your signature there?

19 A. Yes, Sir. Yes, Ma'am.

20 Q. Okay.

21 A. But this, this is contemporaneous. I can guarantee that.

22 Q. You can guarantee that this is contemporaneous?

23 A. Yes, Ma'am, this—

24 Q. Okay.

25 A. —these notes were being typed at the time of the incident live
26 in this.

27 Q. Okay, and the handwritten note that I referred you to a little

1 while ago—

2 A. Yes.

3 Q. —at 958, that is contemporaneous as well?

4 A. I don't know who wrote that note, Ma'am. I, I was—I, I don't
5 know who wrote that note. I—so I cannot assume.

6 Q. Okay.

7 A. But I know this is contemporaneous.

8 Q. Okay. These are the documents belatedly supplied by Paria.
9 You don't know whose handwriting that is?

10 A. No, Ma'am. I focused on this log, yeah.

11 Q. Okay. But what you're saying is Ms., Ms., I think it's Ms.
12 Maharaj too, Shelly Ann Maharaj, is the one who typed these
13 documents?

14 A. At that time, Ma'am, Ms. Maharaj was the person, yes, typing
15 this, typing this document on 1576.

16 Q. Okay. Now, the—on 1537, if you go to 1537, you see that, you
17 see the first item, "Notes taken by ICT scribe Shelly Ann
18 Maharaj Kenson", presumably she's a Kenson employee?

19 A. Yes, Ma'am.

20 Q. On the 25th of February?

21 A. Yes.

22 Q. So when you say notes you mean the typewritten notes or you
23 mean the handwritten notes?

24 A. I can only tell you, Ma'am, that Ms. Shelly Ann Maharaj was in
25 the ICT at the time taking these notes, right, at the time of that,
26 um, the conversation with Mr. Boodram, and she was typing
27 these notes contemporaneous, as it happened.

1 Q. Mr. Piper, you know, I'll put to you that this note was
2 developed after the fact. This note, and I beg your pardon, this
3 typewritten note, this typewritten note was developed after the
4 fact.

5 **Mr. Peterson SC:** Mr. Chairman, we are all lawyers. I mean,
6 I, not objecting but I just would like to cross-examine the
7 source of those instructions.

8 **Mr. Chairman:** I understand exactly you can wait till the end
9 of the question and prevent Mr. Piper from answering it so
10 please frame your question?

11 **Ms. Alfonso:** Thank you, Mr. Chairman.

12 **Continued Cross-Examination By Ms. Alfonso:**

13 Q. So, Mr. Piper, I'll put to you that the handwritten note is the
14 contemporaneous note taken by Ms. Maharaj, a Kenson
15 employee and that the document which is the typewritten
16 version or part—the document which is partially a recording
17 and stops at 2.15, 2.10 I think—is, is, was developed at a later
18 stage.

19 A. Right. And I would tell you—

20 **Mr. Chairman:** Right, just before you answer that question,
21 first of all let's just take one at time, all right? The first
22 question is whether you know whose handwriting appears on
23 the pages between 1538 and 1549. Is that your question, the
24 whole of that or just the memo notes?

25 **Ms. Alfonso:** The handwritten memo notes, Sir.

26 **Examination By Mr. Chairman:**

27 Q. The memo notes. So 1541, please? One five four one through

1 to 1547. Are those memo notes—do you know who wrote
2 those notes?

3 A. No, Sir, I don't know.

4 Q. Can I ask you before you move on to the second part of Ms.
5 Alfonso's question, would you, just flicking through that, tell
6 me if in your view that's written by the same hand or that
7 different people contributed to it?

8 A. The first section, the top of 1541—

9 Q. Yes.

10 A. —seems to be different from the bottom.

11 Q. Yes. Then the next page?

12 A. The next page seems to be different again.

13 Q. Next page?

14 A. The next page may be the—1542 may be similar to 1543.

15 Q. Yes. And then—

16 A. May be similar to 1544.

17 Q. —45?

18 A. Forty-five may be, 46 may be different.

19 Q. Well 45 looks like it's got three or four different contributors?.

20 A. Yes.

21 Q. Forty-six, right.

22 A. Yeah.

23 Q. So, and concomitant to what Ms. Alfonso is asking you, these
24 are clearly handwritten notes.

25 A. Yes.

26 Q. Did you see anyone making handwritten notes on a memo pad
27 in the IMT?

1 A. No. I, I—

2 Q. At any time?

3 A. No, not, not on—not, not, not the scribe. And—

4 Q. Well someone's scribbling down?

5 A. Yes. Yeah.

6 Q. If it's contemporaneous they're either in there or someone's
7 giving them this information at some other point?

8 A. Yes, correct. I—no. I didn't see people writing taking these
9 notes here.

10 Q. Right.

11 A. Right.

12 Q. So you're not able to help us or Ms.—

13 A. Correct.

14 Q. —Alfonso as to who this was or however many it might have
15 been?

16 A. Right, no, Sir.

17 Q. Or whether they were in the IMT at the same time as the
18 information was being passed?

19 A. That's correct.

20 Q. Neither are you able to identify the provenance of this memo
21 pad?

22 A. No. I can't.

23 **Mr. Chairman:** Okay, well that was not very helpful I'm
24 afraid?

25 **Ms. Alfonso:** Unfortunately.

26 **Mr. Chairman:** But that's where we are.

27 **Examination Mr. Chairman:**

1 Q. The second part is whether or not the typewritten note, that is
2 apparently ascribed to Ms. Shelly Ann Maharaj, is a
3 contemporaneous record as it was happening.

4 A. Yes.

5 Q. Right. First of all, I don't suppose you did check every entry,
6 because you already told me you didn't know certain entries,
7 but was there a person in the IMT keeping a record?

8 A. Right. So—and are we speaking, are we speaking of this
9 specific entry

10 Q. No, we're talking about this whole record that's been
11 provided—

12 A. Oh yes, yes.

13 **Mr. Chairman:** I take it that's what you asked after Ms.
14 Alfonso?

15 **Ms. Alfonso:** Indeed.

16 **Examination By Mr. Chairman:**

17 Q. Yes, the whole of this typewritten record.

18 A. Right. In the IMT we had somebody stationed at their laptop
19 continuously taking records and typing. Right?

20 Q. Do you believe this to be that document?

21 A. Yes, Sir, I believe this to be that document.

22 Q. And was it a Ms. Shelly Ann Maharaj who was doing the
23 typing?

24 A. Yes, she had—she was doing the typing for not all of the time
25 of course, right, they were, um, rotating but at the time it was
26 Ms. Shelly Ann Maharaj. At the time when Mr. Boodram
27 called she had taken that note.

1 Q. Right. And—

2 A. Made that entry.

3 Q. I'm sorry, Ms. Alfonso, I've just—because I'm dealing with
4 this now I asked you before the lunch whether or not that was
5 the entirety of the record and you said clearly it was not?

6 A. It was not.

7 Q. No. What is clear, though, from it, is that you signed it on the
8 21st of March as being the record—

9 A. Yes, Sir.

10 Q. —those five pages. There clearly are more pages?

11 A. Yes, there are more pages, Sir. Um, and they should have been
12 submitted.

13 Q. Right.

14 A. But they're not.

15 Q. They're not in our bundles and I don't believe they are but I'm
16 certainly hoping to be disabused of that thought, but if they're
17 not, can you ensure that we have them, please—

18 A. Yes, Sir, I will.

19 Q. —before you leave that witness box?

20 A. Yes.

21 Q. Thank you. And so I pass you back to Ms. Alfonso who was
22 asking you specifically about this.

23 **Mr. Chairman:** Now, um, you, I think at some stage, are
24 seeking to put that this was not contemporaneous. Before you
25 can put such a suggestion, you'd need the source of that
26 assertion. You can suggest it. Is it true that you're saying this
27 was made contemporaneously, but in the absence of having any

1 other independent evidence that it was not contemporaneous,
2 you cannot put it as a positive assertion?

3 **Ms. Alfonso:** Thank you, Sir.

4 **Continued Cross-Examination By Ms. Alfonso:**

5 Q. Before I leave this point, Mr. Piper, you said that there were
6 different persons at different times at—stationed at a laptop or
7 their laptop as the case may be making these notes?

8 A. Yes, Ma'am.

9 Q. Because we start off on Friday of course and we end on
10 Saturday afternoon, as far as we have?

11 A. Yes, Sir and, Yes, Ma'am, and as I said I know for a fact people
12 were taking notes, so I know for a fact there is the document.

13 Q. So, could I ask you to explain, Mr. Piper, if different people are
14 making the note, why does it end, as far as we have, why does
15 the note end on 1576 saying "Prepared by Shelly Ann
16 Maharaj"? It's only one name there. I take it that's your
17 signature on the right-hand side above the date?

18 A. Yes, Ma'am.

19 Q. Okay. So why does it say prepared only by this person?

20 A. I, I, I don't know why only by this person, Ma'am, but Shelly
21 Ann, Shelly Ann is the person who started it off, right, and she
22 just, um, sent off the documents for signature, right, but she was
23 not—she was not writing this document.

24 Q. Okay. You're typing the document if I follow you, yes?

25 A. No. This document was done by somebody sitting in the ICT,
26 right, and typing as the information was coming in. The
27 person—they were rotating the people, right, Shelly Ann may

1 have just put her name there and sent it off for my signature,
2 but the document was done as the ICT was—as the incident
3 unfolded.

4 Q. So, as I'm corrected by the honourable Chairman, I could only
5 suggest to you that there's one name there as having prepared
6 the document because this document was prepared at a later
7 date.

8 A. Right, Ma'am, and I am suggesting to you and I'm saying the
9 same thing to you.

10 **Examination By Mr. Chairman:**

11 Q. Just a moment, just a moment. She's asking you to—the way
12 that you're being asked this is not an appropriate way. What I
13 think she's asking is, whether or not you can be satisfied so that
14 you are sure or confident that this is an accurate representation
15 of the contemporaneous note that was being made at the time
16 and it was being made at the time?

17 A. Yes, Sir.

18 Q. There's no evidence to suggest that it is not so?

19 A. Correct.

20 Q. But you're satisfied that it is so?

21 A. I'm satisfied that it is so.

22 **Mr. Chairman:** Right, I don't think you can take it any
23 further.

24 **Ms. Alfonso:** I, I—and I'm not going to take it any further, Sir.

25 **Continued Cross-Examination By Ms. Alfonso:**

26 Q. Just to carry it back to 1541, that handwritten note that we don't
27 know who made it, it ends with something which, as far as I can

1 tell saying, “Felt two weld seams”, yes?

2 A. Yes Ma’am.

3 Q. Okay. Is that Mr.—from—okay. I don’t know anything about
4 pipelines. Does that suggest to you, Mr. Piper, something about
5 distance?

6 A. Yes, yes Ma’am.

7 Q. If Mr. Boodram says I passed two weld seams—

8 A. Yes.

9 Q. —is there something that you can take away from this with
10 respect to the distance that he travelled?

11 A. Right. Yes. Well the pipes are normally, the pipes are
12 normally about 40 feet length, right? Now, 40 feet length right?
13 So there you’re looking maybe 120 feet, but bear in mind, bear
14 in mind that Mr. Boodram—there are several weld seams Mr.
15 Boodram would have missed or could have missed, so that
16 doesn’t really give me that indication. So he may have just
17 come—he may have just touched two weld seams.

18 Q. Mr. Piper—

19 A. Weld seams are very, weld seams are very thin.

20 Q. So, I take it from your answer that perhaps every 40 feet or so
21 in the pipe—

22 A. Yes.

23 Q. —there will be a weld seam so that two—

24 A. Uh-huh.

25 Q. —well, various components of the pipe are welded together.

26 A. Yes, Ma’am.

27 Q. Yes? So that’s what a weld seam means, yes?

1 A. Yes, Ma'am.

2 Q. Good. So that Mr. Boodram doesn't have any light—

3 A. Uh-huh.

4 Q. —and is feeling his way through this water filled—

5 A. Uh-huh.

6 Q. —some oil, um—

7 A. Yes.

8 Q. —pipe, and one of the ways that he is estimating his, his
9 passage is two weld seams. So you would say—you said
10 that's—if it's every 40 feet wouldn't that be 80 feet?

11 A. Well, you'll have to add three pipe lengths a pipe, so that's 120
12 feet.

13 Q. Okay. So I accept that, 120 feet.

14 A. Yeah.

15 Q. So Mr. Boodram in relaying this information to whomsoever
16 this particular scribe is, is attempting to give something about
17 distance, yes?

18 A. Yes.

19 Q. Okay. So, I want to bring you back to where we were this
20 morning. So that the persons who could tell you something,
21 you were—it was vitally important to the ICT team—

22 A. Uh-huh.

23 Q. —which you head, you headed, to understand something or
24 everything for that matter about the pipe conditions, about
25 what—the location of the divers. Wouldn't that important
26 information that you knew he, at least even if he missed one, he
27 was estimating, as you say 120 feet, that he had traversed in the

1 pipe. Right or wrong, missed some, picked up some?

2 A. Could have been 500 feet.

3 Q. Okay, Mr. Piper. I would just put it to you that I say he was
4 providing this information so that you get an idea of the
5 location of his, his, his brothers, his fellow divers.

6 A. No Ma'am. I didn't interpret that that way.

7 Q. Might I enquire, Mr. Piper, how you interpreted it?

8 A. He just, he just said, "I touched two welded seams", right? I—
9 it could have been closer, when he was close out, I don't know.

10 Q. But—

11 A. Right? There are a number—right? He's going along the pipe.
12 There'll be several weld, several welded seams, right? When
13 we did get the camera in there was—we didn't see anything.

14 Q. Meaning anything what, any welded seams?

15 A. We didn't see anything at that—no, we won't pick up the
16 welded seams there, but when we got the cameras we didn't
17 see—we got in about maybe 80 feet and we didn't see anything.

18 Q. So, Mr. Piper, you have this conversation which you detailed,
19 well, somebody details in handwritten notes and you detail in
20 your witness statement at 1.31. Did anybody—the people in
21 the room who you say were on the speakerphone would be
22 people who understand pipes and distances and all manner of
23 things. Did anybody ask Mr. Boodram if he could estimate the
24 distance that he swam in order to come out to the top of the
25 riser?

26 A. Ma'am, we didn't.

27 Q. Or the bottom of the riser to be fair, the bottom of the riser.

1 A. Our conversation with Mr. Boodram, Ma'am, was very short,
2 right? And the EMT who was with him had to quickly shut
3 down the conversation. It was very—we had a very, very
4 limited time.

5 Q. Okay. So my question, Mr. Piper, is, did you ask Mr. Boodram,
6 before the very brief conversation, I not too sure why the
7 conversation is brief but, in the brief exchange, did you ask him
8 could he estimate where he had come from, where his fellow
9 divers—he left his fellow divers.

10 A. Right.

11 Q. And where he had come from.

12 A. Right, so, Ma'am, Miss, the way the conversation started, I
13 documented how the conversation started and we were trying to
14 find out the condition of the divers, right, at that time. By the
15 time we got there, Mr. Boodram—they had to cut the
16 conversation with Mr. Boodram so we were not be—able to get
17 any further.

18 Q. Well let me ask you that, Mr. Piper, why did you have to cut
19 short your conversation with Mr. Boodram?

20 A. That was all the time the EMT was allowed and he had to
21 quickly leave. They had, in fact, told him I believe one minute,
22 all right, and we spoke for a little more than a minute. The
23 EMT said, "Listen, I need to go immediately", right? And that
24 is—has to do with the medical, the medical side.

25 Q. Okay. Well, I imagine Mr. Boodram was injured and he would
26 be receiving treatment in the hospital, yes?

27 A. Yes, Ma'am, and we had to be guided by the medical fraternity.

1 Q. Okay. But you, Mr. Piper, as head of the ICT, did—when is the
2 first time—let me ask you the question. When is the first time
3 that you instructed somebody from Paria, Kenson, anybody,
4 anybody under your control, to go to the hospital to talk to Mr.
5 Boodram?

6 A. Right.

7 **Mr. Chairman:** We've dealt with this. It's at page 1573. At
8 2035, Mr. Shan Balkissoon was dispatched to the hospital by
9 Mr. Piper. He told me that when I asked him about it.

10 **Ms. Alfonso:** Thank you, and I have that in my note. I was
11 just asking Mr. Piper.

12 **Continued Cross-Examination By Ms. Alfonso:**

13 Q. But Mr. Piper, so it's not until two hours after Mr. Boodram,
14 two hours and a little bit, after Mr. Boodram is rescued that
15 you—it—that it, it dawned on somebody, including yourself, to
16 send somebody to the hospital?

17 A. Right, so, again—

18 **Mr. Chairman:** Roughly three hours.

19 **Ms. Alfonso:** Three hours, yes. My bad mathematics. That's
20 terrible mathematics.

21 **Mr. Piper:** Yeah.

22 **Mr. Chairman:** So at 5.35, roughly half past 5.00.

23 **Ms. Alfonso:** And this is now 8.35, by their [*Inaudible*] three
24 hours, so three hours.

25 **Continued Cross-Examination By Ms. Alfonso:**

26 Q. I'm not talking about when you actually spoke to him and the
27 phone was used and so on, it is, from what I read in the log, it is

1 three hours before you dispatched, not reached, not the people
2 reached the hospital, three hours before you instruct somebody
3 or somebody is instructed to go and to speak to Mr. Boodram.

4 A. Right. So, I mean, as an IM—as the incident commander I
5 depend on people, I—it should not—I don't have to make every
6 instruction. I depend on a team, right? I was busy, as the
7 incident commander, with a lot of things trying to get, trying to
8 get assessments, there was a lot of conversation going on, there
9 were a lot of things happening at the same time. As I got back
10 around, um, they—were we able to contact Mr. Boodram, right,
11 I would have asked? Did anybody send Mr. Boodram—I had a
12 team to help me with these things, right, because by then I
13 would, hopefully would have been able to talk to Mr. Boodram.
14 Once I understood no, we had not dispatched Mr. Boodram, I
15 passed those instructions immediately, right, but I have a—

16 **Mr. Chairman:** I think we've covered this ground now.

17 **Ms. Alfonso:** Okay.

18 **Mr. Chairman:** We've covered this ground.

19 **Continued Cross-Examination By Ms. Alfonso:**

20 Q. Would you consider, Mr. Piper, you were depending on
21 members of your team. Would you, would you—you just said
22 that, you were depending on—

23 A. Yes, Ma'am.

24 Q. —members of your team to do things like go to the hospital and
25 so on. Would you—in your view, would that be a, I want to be
26 very kind, a shortcoming on the team not to have done that at
27 an earlier stage?

1 A. Well—

2 Q. I didn't say you. You said you're depending on other members
3 of the team.

4 A. Yes, maybe they should have had somebody there earlier. In
5 any event, when Mr., when Mr. Ramkissoo got there, it took
6 more than an hour, hour and a half before we were given—in
7 fact, yeah, it took about an hour to an hour and a half before we
8 were able to speak to Mr. Boodram. He was not allowed to.
9 They were attending to Mr. Boodram and he was not allowed
10 to. Right? I, I would imagine when, when Mr. Boodram came
11 out of the pipe, we—one of the focus was we're trying to see if
12 there was anybody else coming out of the pipe, we're trying to
13 focus on that, among other things, so—and, you know, within
14 the first hour offer or so, maybe, right, they would have been
15 attending to Mr. Boodram, they had to stabilize him, right, so
16 and again, as I said, took about another hour before we were
17 able to speak to him.

18 Q. Okay. Mr. Piper may I ask you something from what you just
19 said there? You would be aware that when Mr.—I don't know,
20 that's a terrible mistake. You would be aware that when Mr.
21 Boodram came at of the pipe, swam out of the, the, the, the, the,
22 well swam out of the pipes, swam into the water and so on, he
23 was brought up on to the barge, on to LMCS' barge—

24 A. Right.

25 Q. —and you had personnel there, yes?

26 A. Yes, Ma'am.

27 Q. Okay. And—so another opportunity was missed there that Mr.

1 Boodram was lying down, I presume there, being attended to by
2 one of your own personnel, yes?

3 A. Yes.

4 Q. And that certain information about what was going on in the
5 pipe could be elicited at that point in time?

6 A. Mr., Mr. Boodram, you have to—I—Mr. Boodram came out of
7 a pipeline that he had been in for some time. Mr. Boodram, as
8 far as my information was, was not oriented with time and
9 place. Mr. Boodram was in a traumatic condition. He had to
10 be. Right? You had to attend to Mr. Boodram. You had to
11 attend to his safety. You had to attend to his well-being.
12 Right? That was a priority. During that time, we would, we
13 would have had an EMT there. I understand that Mr. Boodram
14 just kept repeating, “The guys behind, the guys behind mih, the
15 guys behind mih”, right? They had to quickly get him onto the
16 launch but they were—that was all they were able to get from
17 Mr. Boodram, that—to the best of my understanding.

18 Q. Okay.

19 A. When Mr. Boodram came to the, the—when he came ashore,
20 right, I had the safety officer, Mr. Paul Yearwood, there.
21 Again, right, Mr. Yearwood tried to get information from Mr.
22 Boodram once again. Mr. Yearwood advised me that all Mr.
23 Booed am kept saying is, “They’re right behind me, go and get
24 them. They behind, the men there, the men there, go and get
25 them.” And within a minute or so Mr. Boodram was off in the
26 ambulance by the GMRTT. They quickly grabbed him and
27 took him off to attend to Mr. Boodram. So there was only that

1 opportunity, right, which he was not very coherent.

2 Q. Okay. Mr. Piper—

3 **Mr. Chairman:** Who was the—just a moment please—who
4 was the HSE gentleman who assisted him when he came out of
5 the pipe?

6 **Mr. Peterson SC:** Mr. Dopson.

7 **Mr. Chairman:** Mr. Dopson, is it? Thank you, yes, because
8 he had something to say about this. Just a moment, please?

9 [*Mr. Chairman peruses documents*] Where do I find Mr.
10 Dopson's statement? Ah yes, it's in the supplemental
11 statement. [*Mr. Bissessar assists Mr. Chairman*] Yes, they're
12 two different matters.

13 **Examination By Mr. Chairman:**

14 Q. Mr. Dopson was the man who was present when he came out of
15 the pipe. He says at, um, statement 3024 in the supplemental
16 bundle, he says the following. It's only fair that you should
17 know this all right? This is what he said.

18 "I observed Mr. Boodram was pulled from the chamber
19 by Cody and Ramoutar. I assisted getting Mr. Boodram
20 safely on to the deck, performed a rapid body scan
21 assessment on him to determine if he sustained any
22 trauma. I used a knife to expose his body suit. I
23 observed trauma to the left side of his face, left arm, left
24 torso and right ankle. There were no exposed bones or
25 bleeding. I used a rag to clean his mouth, eyes and ears
26 due to the presence of hydrocarbon on his entire suit and
27 body. Mr. Boodram was moaning and appeared to be in

1 pain.” Unsurprising. “In my presence, Mr. Boodram
2 was transported back to shore, and, upon reaching the
3 launch I handed him over to ambulance staff.”

4 And that’s what he said. I know I asked him some questions
5 about that as well, but then in your incident timeline, your
6 contemporaneous document which you were being given
7 information about, that is contained—I’ll get my copy on it—at
8 page 1091. Yes, actually it’s 1572 of the new supplemental
9 core bundle which is the one that’s up there. [*Indicating*
10 *screen*] Yes. You’ve got that I think in front of you. It’s at
11 page 1572. Ten past 6.00. “Mr. Boodram attended by EMTs,
12 treated for muscular injury, patient was alert and conscious.”
13 You see that?

14 A. Yes, Sir.

15 Q. “Complained of pain in his right shoulder.” That I would think
16 was probably the least of his problems having managed to get
17 out of that pipe, but the fact is he was described to you and
18 therefore entered into the log, I don’t mean you personally, the
19 EMT, “treated for muscular injury, patient was alert and
20 conscious.”

21 A. Uh-huh.

22 Q. So that’s the information that we had and I know I certainly
23 asked the witness about it when he was giving his evidence, and
24 I shall turn that note up later, I can’t find it now because I
25 haven’t got that pad with me, but, um—so that was the position
26 he took. Was it your understanding then that he was both alert
27 and conscious?

1 A. Yes. And, when I spoke to Mr. Yearwood, right, he told me
2 Mr. Boodram just kept repeating, um, “Go for them. Go for
3 them.”

4 Q. Yes.

5 A. And he had very limited time. He wasn’t able to, to really
6 speak to Mr. Boodram as he—

7 Q. Well we’ll ask Mr. Yearwood about it when he gives evidence.

8 A. Okay.

9 **Mr. Chairman:** All right, well that’s where we are. So I think
10 it’s only fair that he has a full picture if you’re going to be
11 asking him about that, all right?

12 **Ms. Alfonso:** Thank you, Mr. Chairman, and I think it’s only
13 fair to the witness that he be showing the witness statement of
14 Mr. Paul Yearwood at 1307, paragraph 30 in particular.

15 **Mr. Chairman:** Yearwood statement, that’s in bundle four.

16 **Ms. Alfonso:** Thirteen oh seven, paragraph 30.

17 **Mr. Chairman:** Just a minute.

18 **Ms. Alfonso:** Okay, I beg your pardon I should really say for
19 narrative purposes it starts at 29—

20 **Mr. Chairman:** Yes.

21 **Ms. Alfonso:**—and goes on to 30 at the top of the next page.

22 **Mr. Chairman:** Paragraph 39?

23 **Ms. Alfonso:** No, no, no, no start starts at 29—

24 **Mr. Chairman:** Twenty-nine, sorry.

25 **Ms. Alfonso:** And, and, and the, and the more relevant section
26 or part is paragraph 30 which starts at the top of the next page.

27 Could I—

1 **Mr. Chairman:** Please put it to him, yes.

2 **Ms. Alfonso:** Okay.

3 **Mr. Chairman:** Paraphrase it again.

4 **Ms. Alfonso:** Okay.

5 **Continued Cross-Examination By Ms. Alfonso:**

6 Q. So, Mr. Piper, have you read paragraph 30 of Mr.
7 Yearwood's—

8 A. Yes, yes, Ma'am.

9 Q. Okay. So, Mr. Yearwood, who is your eyes and ears on the
10 berth at that time, you sent—you said you sent, you sent Mr.
11 Yearwood down to meet Mr. Boodram, yes?

12 A. No. I didn't send him.

13 Q. Okay, they said he was there?

14 A. He, he was there, yes.

15 Q. He was there. Okay, my apologies. So Mr. Boodram was able
16 to communicate with people on site and used a cell phone to
17 contact a person whom he identified as his wife.

18 A. Uh-huh.

19 Q. Mr. Boodram gave evidence of that when he was, well, I think
20 he was the first witness if I recall?

21 A. Uh-huh.

22 Q. So, what do you say now? Mr.—I'm not saying Mr. Boodram
23 was not traumatized, but Mr. Boodram was lucid, Mr. Boodram
24 was speaking. Mr. Boodram was not just saying over and over,
25 "Go and get the guys. Go and get the guys." So, all of this
26 happened here, so do you still say, is that still your position,
27 Mr. Piper, that, that Mr., that Mr. Boodram was not able to be

1 communicated with to get information that could assist in a
2 rescue?

3 A. Yes, Ma'am. I'm still saying—well, I can tell you what I was,
4 um—when I spoke to Mr. Paul Yearwood, right, Mr. Boodram
5 just kept repeating, right, he told me Mr. Boodram just kept
6 repeating that, “Go get them guys. Go get them guys”, right,
7 and they whisked him away very quickly in the ambulance.
8 That was my conversation with him.

9 Q. Does that accord, that version—what you've just said there,
10 does that accord at all with Mr. Yearwood's own words in
11 paragraph 30?

12 A. No, Ma'am, that doesn't align but that is what I—that is what
13 he told me.

14 Q. I like that term “align”, I like—okay, I like that term. So, it
15 doesn't align because Mr. Boodram in his own evidence, and I
16 can't say that you would have heard Mr. Boodram's evidence
17 but we here heard his evidence, that he was asking to speak to
18 his wife, asking to call his wife who I believe is a nurse. He
19 was asking for a hyperbaric chamber. He was asking for people
20 to go back and rescue his, his colleagues, his fellow divers, not
21 just saying, “Go back, go back, go back.”

22 A. In, in my conversation with my team, that was the information I
23 had at the time.

24 Q. Okay. When Mr. Yearwood—

25 A. Okay.

26 Q. —comes, um, to give evidence, Mr. Piper, we will certainly ask
27 him that but—so all I can tell you, I believe Mr. Yearwood

1 who's the person on the scene that you've admitted is on the
2 scene, is giving a true account of what he witnessed, heard, you
3 know, what he witnessed, what he heard, what he saw, when
4 Mr. Boodram was on the land and what you are saying, and I
5 use your term, does not align with that narrative.

6 A. Yes, Ma'am. That is what Mr.—that—in the discussions that is
7 what I was told, yes.

8 Q. Okay. I'll leave that alone. I'll leave that alone. Mr.
9 Yearwood will come and we will—

10 A. Okay, Ma'am.

11 Q. —ask him the appropriate questions. Now, Mr. Piper, again I'll
12 go back to the ICT team of which you were the head, were very
13 concerned about the conditions in the pipe, so you had two
14 people who knew something about the conditions in the pipe,
15 Mr. Michael Kurban, Mr. Boodram. Yes?

16 A. Yes, Ma'am.

17 Q. Okay. So you already—I wouldn't take you back through Mr.
18 Kurban because no real questioning of Mr. Kurban took place.
19 Yeah, is that correct?

20 A. That's correct.

21 Q. Okay. So, you—in your mind you wanted to know the
22 conditions of the pipeline and you felt that the only route to that
23 would be to get some sort of camera, however design, whether
24 on an ROV, whether on a borescope, some kind of camera
25 footage of the area but—

26 **Mr. Chairman:** Ms. Alfonso, we—

27 **Ms. Alfonso:** Okay and I'm—

1 **Mr. Chairman:** Some length.

2 **Ms. Alfonso:** Okay, yes.

3 **Mr. Chairman:** Both by me and by Mr. Maharaj, so, please, if
4 you have a specific question about his area just ask that
5 question.

6 **Ms. Alfonso:** I will, I will, I will.

7 **Continued Cross-Examination By Ms. Alfonso:**

8 Q. And Mr. Piper, did it occur to you at all that all that you were
9 trying to achieve and you're not getting those cameras in a
10 quick time, did it occur to you that a diver, sending a diver with
11 the appropriate camera equipment, the video, audio, and this is
12 what Mr., I think Mr. Seeterram, Alvin Seeterram would have
13 said that the equipment that they had on the Waterworld,
14 Waterworld, would allow them to have video, audio, as well as
15 the air of course, all bundled in one thing, did it occur to you
16 you could send a diver to get that information, that same
17 information, the conditions of the pipe, where the plug was
18 where the divers were? Did it occur to you?

19 A. Ma'am—

20 Q. I didn't even use the word rescue. Did it occur to you you
21 could, you could send a diver, tethered, with surface air, with
22 video, audio and everything to go down into the pipe to see if
23 he could locate the divers?

24 A. You are asking me, and I have said repeatedly, you are asking
25 me to send a man in a pipe 30-inch diameter, I don't know the
26 conditions in that pipe. Right?

27 **Mr. Chairman:** Okay, so, er, the answer is the same as you've

1 given already.

2 **Mr. Piper:** Yes, Sir.

3 **Ms. Alfonso:** And I, I—

4 **Mr. Piper:** I had a decision to make. This was no simple time.

5 This was no—you see, we sit here in this room and we believe

6 that this was just something that was not stressful, right? We

7 believe in this room here that this was not something that we

8 were under, we were under strain, we were under pressure,

9 right? That is the furthest thing from the truth. And we can sit

10 in this room and believe what we want to believe but put

11 yourself in that position on that night. Put yourself in that

12 position on that evening, when you have to make a decision to

13 send a man into a pipeline, a quarter of a mile long. You have

14 no idea where this man is going, you have no idea what this

15 man is going to face, you have no idea. You are accountable

16 for this man. You have that accountability.

17 Once you sanction sending that man in that pipe, you are

18 accountable for that man's life, and if you believe in this room

19 that that was a simple thing—because we had four men in that

20 pipe—if you believe that I just sat there and decided I'm just

21 not sending a man in a pipe, right, you simply do not

22 understand what we went through that night. That is not

23 something I want anybody in this room or anybody at all to

24 have to go through and to make a decision. That is not a simple

25 decision as we feel to believe you just send a man and pull him

26 out with a rope. That is not a decision like that.

27 That is the—that man's life. I had four men in that pipe, four

1 men. I had husbands in that pipe, I had fathers in that pipe, I
2 had sons in that pipe. Whose father should I have allowed and
3 sanctioned to go down in that pipe? Again, whose son should I
4 have allowed to go down in that pipe. Right? Whose husband
5 should I have sanctioned to go down in that pipe and perish?

6 I have run this through my mind on many occasions and I still
7 do. And let me tell you something. I understand Mr. Kurban
8 because somebody is in the back is talking about whose son. I
9 understand Mr. Kurban's courage because his father was in the
10 pipe. I understand why Mr. Kurban will want to go into that
11 pipe and if I was a son, yes.

12 But I've also looked at this on the reverse. If I was the father in
13 that pipe, would I want somebody to send my son into that pipe
14 after me in a reckless manner where he could perish? And
15 every time I ask myself that question, my answer was no. I will
16 not want anybody to be so reckless with my son's life. So if
17 you believe in this room that that was simple for me, and simple
18 for the IMT, what, what would I have done? Would I have
19 done said, "Well, listen, I can't get the information just send
20 somebody in the pipe?" That would be totally reckless, totally
21 reckless. And then—do you, do you understand what I'm
22 saying? Do you understand what we were faced with?

23 **Mr. Chairman:** All right I, I, I, I, I, I—you are entitled to have
24 your say. You were asked a question and you've given a very
25 comprehensive answer and, um, I'm sure everyone understands
26 that it was not easy for you either, but, um, coming back to, er,
27 er, where we are now, Ms. Alfonso, do you have any other

1 questions to ask?

2 **Ms. Alfonso:** Yes, yes, um—

3 **Mr. Chairman:** Right.

4 **Ms. Alfonso:**—Mr. Chairman, I do, but I will um, I under—I
5 don't think you had an easy job, Mr. Piper, so it's not— I'm not
6 sitting down here as the arms chair critic of your—

7 **Mr. Chairman:** Right. Could you just ask the question?

8 **Ms. Alfonso:** Right?

9 **Mr. Piper:** I don't think you understand.

10 **Ms. Alfonso:** Okay, fair enough.

11 **Mr. Chairman:** Mr. Piper—

12 **Mr. Piper:** Okay.

13 **Mr. Chairman:**—I've allowed you to have your say.

14 **Mr. Piper:** Sorry, Sir.

15 **Mr. Chairman:** No, that's all right. You're entitled to your
16 say. You were asked a question and I didn't stop you because
17 you were entitled to have what you want to say. All of us here
18 will assess that to in addition to everything else we've heard.
19 All right? If there are questions, please ask the question.

20 **Ms. Alfonso:** I, I will do so. Thank you, Sir.

21 **Continued Cross-Examination By Ms. Alfonso:**

22 Q. Mr. Piper, as I understand it, I understand. You felt a had a
23 duty to protect the would-be rescuers, yes?

24 A. Yes.

25 Q. The people who wanted to effect a rescue, you had a duty to
26 protect those people?

27 A. Yes.

1 Q. I understand that. That is understandable. Did you feel also,
2 Mr. Piper, that you had a duty to the four workmen, the four
3 divers, who were—

4 **Mr. Chairman:** He's already said he felt that. He's taken
5 some time to make it clear that he felt for them too and the
6 reasons why he approached it the way he did. He spoke about
7 the way in which he would feel if he was one of the people in
8 the pipe and it was his son on the outside. He's done all of that,
9 so unless there's something else that you want to ask—

10 **Ms. Alfonso:** Okay, yes, let me please get on Sir.

11 **Mr. Chairman:** Please?

12 **Ms. Alfonso:** Yesterday—thank you Sir.

13 **Continued Cross-Examination By Ms. Alfonso:**

14 Q. Yesterday, Mr. Piper, you would have referred us to—so let me
15 be a little more clinical. Yesterday you would have referred us
16 to something from the 1980s. You referred us to something
17 about rescuers who find themselves in difficulties and you said
18 something about if I recall your figures, if they—your 16
19 people dead in a rescue, ten was the rescuers. You recall that?

20 A. Yes, Ma'am, I said there were eight cases then, and of the eight
21 cases, 16 died, 10 were rescuers.

22 Q. Okay. So I also, when I—I was quite alarmed when I saw that
23 myself so I had a little look through some OSH reports and so
24 on with respect to rescuers and so on. And, in fact, there was
25 quite a big study in 2018 I think, about a hundred deaths that
26 had occurred while persons were going into confined spaces to
27 effect rescues. What I—my takeaway from that, from that

1 study, was that the persons who perished, the rescuers who
2 perished were what they referred to as would-be rescuers which
3 I understand to be, Mr. Piper, persons who on the spur of the
4 moment rushing to an area where maybe there's carbon
5 monoxide or some other toxic fumes which is by and large what
6 those deaths occurred, you know, took it, with no training, no
7 equipment, just spur on the moment. That is my understanding
8 from the study, which is study, by the way that is in 2018, not
9 the 1980s but it referred to a 1980s study. So I assume they're
10 linked somehow.

11 So, would you agree, Mr. Piper, there would be a difference between
12 the would-be rescuer, the ones who rush in without a plan,
13 without equipment, without proper, in this case, tendering and
14 equipment to do the dive, is it not a difference between, say,
15 what you thought of Michael Kurban's attempt to rescue his
16 father? Is it not a difference when Mr. Beddoe and Mr.
17 Ramoutar and these other people came and the other equipped
18 dive ships came with equipment, is it not a difference between
19 that kind of rescue operation?

20 A. To—

21 **Mr. Chairman:** Can you try to keep the answer shorter than
22 the question?

23 A. I don't—I'm not sure if we're understanding. You are, you are
24 sending a man into a pipeline for—hydrocarbon spaces, oil, he
25 has no training, you are sending the man, it is not different. He
26 may have equipment. It is not different. He doesn't know what
27 he's going to face, how he is going to deal with it. This is not

1 simple. This was never simple.

2 **Examination BY Mr. Chairman:** No, I don't think anyone—

3 A. It's a quarter mile long.

4 Q. Mr. Piper, I think we get that sentiment. I don't think anyone
5 has suggested for one moment that the task was a simple one.
6 No one has made that suggestion. If they did I would have
7 stopped them. All right? No one's suggesting the task was
8 easy. These tasks are never easy. That's why they pick
9 hopefully the right people to do them. The question ultimately
10 is whether, on reflection now, you think you got it right.

11 A. Yes, Sir.

12 Q. Right. Well I got that—

13 A. Yeah.

14 Q. —because you've told us. You don't think that, well, apart
15 from the things you've identified where you think you might
16 have done things differently, the fact is, you don't think you
17 made the wrong decision in deciding not to send anybody into
18 that pipe until you had a video footage of what the conditions in
19 that pipe were like. That's where we got to as I understood it,
20 right?

21 A. Yes, Sir.

22 Q. Right. I don't think we're—no one's trying to shift you from
23 that position. We're simply exploring it, all right? And your
24 position remains the same?

25 A. Yes, Sir.

26 Q. The same as it was when you walked into that witness box as it
27 is now as you shortly will hopefully leave it. All right?

1 **Mr. Chairman:** So, I'm not sure that there's much to be
2 gained from asking the questions which seem to me to just elicit
3 the same answer.

4 **Ms. Alfonso:** Okay, I'm moving on, Mr. Chairman. I'm
5 moving on, Mr. Chairman.

6 **Continued Cross-Examination By Ms. Alfonso:**

7 Q. Mr. Piper, are you aware—you know Andrew Farah, the diver,
8 Andrew Farah?

9 A. Yes, I do.

10 Q. Okay. Are you aware that Mr. Farah has experience in diving
11 into pipes?

12 A. No, Ma'am. You want to elaborate? When you say diving into
13 pipes, what do you mean?

14 Q. Pipes at, well I have to say Petrotrin. If we go to 44—

15 A. Yes, I, I am. Yes, if—may I?

16 Q. Yes, go ahead.

17 A. Yes, right. So I am aware, right, that, er, we were doing a job at
18 berth No. 6, right, I am aware of we doing a job at berth No. 6
19 where someone, I don't know if it is Andrew Farah, right,
20 would have entered a riser, right. This riser would have been, I
21 think it would have been a 50-inch—well, No. 6 is 50-inch and
22 48 inches in some areas. Right? This would have been a 50-
23 inch riser. This, they were renewing this riser at berth No. 6 on
24 66 Sealine. I vaguely remember, um, some discussions with
25 Mr. Kazim Ali, as you mentioned Pointe-a-Pierre. I vaguely
26 remembered some discussions with Mr. Kazim Ali where they
27 were putting on this riser and it had an elbow about maybe

1 about 10 feet long, the elbow, and they were having some
2 problems with the joint. This was a new riser, it was a 50-inch
3 riser diameter riser, there was no oil in this riser. This line was
4 flushed so there was, there was no oil in the line, right, and he
5 was just going to slip in this, um—he was just going to align
6 this, er—

7 **Mr. Chairman:** The flange.

8 **Continued Cross-Examination By Ms. Alfonso:**

9 A. The flange, the flange gasket, right? Right, in this case they
10 would have had, um, as the flange is coming together they
11 would have had divers on the other side, so he was just going
12 down into this clean 50-inch diameter riser and back up, right?
13 If we, if we want to say that is experience in diving in a pipe, I
14 cannot argue with that. That is experience.

15 Q. Okay, well, thank you for that, Mr. Piper. Mr. Piper, I just have
16 one or two more questions for you. I want to go to—the
17 Chairman would have referred you to a short window in which
18 the divers were likely to be alive, yes?

19 A. Yes, Ma'am.

20 Q. Okay, so whether it's four, five, six hours as the case may be, at
21 what point in time, Mr. Piper as the head of the ICT, would you
22 say that Paria moved to—from res—you know, a plan or took a
23 decision to move to recovery effort rather than a rescue effort?

24 **Mr. Chairman:** Haven't we dealt with this already?

25 **Ms. Alfonso:** Could I just ask kindly that Mr. Piper just give
26 me the timeline? Because I'm seeing some conflicting, er,
27 information elsewhere.

1 **Mr. Piper:** Right.

2 **Examination By Mr. Chairman:**

3 Q. Did there come a particular time when you made the decision
4 they are no longer alive?

5 A. Right. There were—again this was—as a person, right, I
6 wasn't just an incident commander. I'm a person. Right? This
7 was another very difficult thing for me to say suddenly accept,
8 so this was a transition in my mind, right? So, there were a
9 number of things happening here. Somewhere on, somewhere
10 around 4.00, 4.30 on Saturday, the General Manager, Mr.
11 Mohammed, Mr. Michael Wei and myself, we attended a
12 meeting outside of the ICT room and we attended a meeting
13 with Heritage. During that meeting, and this was on Saturday
14 afternoon somewhere between 4.00, 4.30, all that time, because
15 this is important, we were still in the rescue mode trying,
16 making arrangement to get to pump out this riser, right? We
17 were arranging pumps and so on. We were still talking about
18 rescue with the incident command.

19 At that meeting, we discussed moving from rescue to recovery.
20 Right? And what are some of the, what are some of the ways—
21 if we moved from rescue to recovery what are some of the
22 things we're going to have to do, put in place. When I left that
23 meeting, I left that meeting with Mr. Mohammed. On the way
24 back to the ICT, we discussed what had just—we went over the
25 discussions with Heritage. We came to the place, Mr.
26 Mohammed and I, that, listen, we think we've, we, we, we're
27 losing hope here now, right, the chances here are slim to none.

1 So, together, we came to that place where, listen, we're going to
2 have to move to recovery.

3 I repeat, that was on Saturday, this may be around half past 4.00, 5.00,
4 now, maybe half past 4.00. We kept that decision to ourselves.
5 Right? The reason being we wanted to speak to the families
6 first. Right? So we didn't want to—we didn't want the
7 information—we didn't—we wanted—we had to treat very
8 respectfully. So we didn't say anything at that point in time to
9 anybody for that reason. So that would be around the time,
10 right? Mr. Mohammed contacted Mr. Ali and we met with Mr.
11 Ali, okay? So that would have been around the time to discuss
12 recovery. That would have been around the time.

13 Q. Thank you, Mr. Piper.

14 **Ms. Alfonso:** That would be all. Thank you very much for
15 your time and attention.

16 **Examination By Mr. Chairman:**

17 Q. And that's contained at paragraph 177 of his statement. So, the
18 position is, is that, um, by Saturday afternoon, could we say at
19 the very latest, you had to reconcile in your own mind that they
20 were almost certainly dead?

21 A. Yes, Sir. I had to reconcile in my mind, yes.

22 Q. Yes. And, you already made it clear that realistically and
23 objectively they probably only had a timeline of a few hours?

24 A. Yes, Sir.

25 Q. All right.

26 **Mr. Chairman:** Yes, Mr. Ramadhar? How long do you think
27 you're going to be, Mr. Ramadhar?

1 **Mr. Ramadhar:** I think half hour.

2 **Mr. Chairman:** You said about half an hour? That would take
3 us to—getting on to four o'clock. Mr. Pegus, do you have any
4 questions at the moment?

5 **Mr. Ramadhar:** If I do—sorry, I beg your pardon.

6 **Mr. Chairman:** Mr. Pegus. [*To Mr. Ramadhar*] You need to
7 turn your microphone off.

8 **Mr. Pegus:** No, Mr. Chairman, I don't have any questions for
9 this witness.

10 **Mr. Chairman:** So that will leave the front bench for
11 afterwards. All right. So we'll have, we'll have your questions.
12 Do the best you can, please?

13 **Mr. Ramadhar:** I, I, I will, of course.

14 **Mr. Chairman:** So, um, the sooner we finish here the sooner
15 we can all go home, but, what I may do, depending on what the
16 others say is to have a short five-minute break after you all
17 right, so—

18 **Mr. Ramadhar:** Of course. I'm so grateful.

19 **Mr. Chairman:** Mr. Ramadhar will introduce himself, Mr.
20 Piper.

21 **Cross-Examination By Mr. Ramadhar:**

22 Q. My name is Prakash Ramadhar. I represent the Aliyah Henry,
23 the daughter of Yusuf Henry, and the family of Faizal Kurban,
24 okay?

25 A. Good afternoon, Sir.

26 Q. Good afternoon to you. Now, Mr. Piper we have had no
27 interaction before today, is that accurate?

1 A. That is correct, Sir.

2 Q. So I want you to know that whatever shall come now is not
3 personal, okay? And equally, I sympathize with the position
4 that you would have put yourself in as commander. Okay? It's
5 not easy as we all appreciate, yes? However, you were not the
6 average citizen of Trinidad and Tobago that day. You're not
7 the average citizen, you're the commander of an incident
8 management team. Isn't that true?

9 A. That's correct, Sir.

10 Q. And therefore, one would expect that you're made of very
11 hardy stuff in terms of dealing with catastrophes and very
12 difficult decisions. Isn't that correct?

13 A. I'm very human.

14 Q. Human, yes, but I am a lawyer, I'm a human first but when I
15 stand here I don't represent me. I represent my clients, and,
16 whether you like it or not, I have to do so. Whether I enjoy
17 doing what I have to do with you today is irrelevant. So, you
18 are human first, we get that. You are the commander of the
19 incident command team. You agree with that?

20 A. Yes, Sir, I, I—

21 Q. And therefore that takes you to a high status of responsibility,
22 yes?

23 A. Yes, Sir.

24 Q. Yes. Now, what special training did you have to obtain such a
25 lofty position as commander of the incident command team?

26 A. Yes, Sir, I was under—under Petrotrin I was trained, ICS
27 trained.

1 Q. I don't understand what does ICS training mean?

2 A. Incident command system trained.

3 Q. Right. Tell us what does that mean? Are you formally trained
4 to deal with incidents of such a violent and horrific nature at the
5 outcome?

6 A. You are trained to deal with incidents—you are trained, it's the
7 system.

8 Q. Yes.

9 A. Right? Um, the incident command system can apply to many,
10 many things.

11 Q. Yes.

12 A. Right? Um, this was a real highly unusual system, um,
13 incident, but the system applies.

14 Q. The system applies. When did you undergo that training?

15 A. This was under Petrotrin, Sir.

16 Q. That is not a when. That's a where.

17 A. Sir, I cannot remember the exact—the year.

18 Q. When was your refresher, the last refresher you had, because, as
19 Ms. Alfonso put in a way but I think we should get it clear, the
20 technology and training of 1980 is not the technology and
21 training of 2022. You appreciate that, yes?

22 A. Of course.

23 Q. Yes. When was the last bit of refresher training you had in
24 incident management?

25 A. I haven't had any refresher recently but we have managed
26 incidents.

27 Q. Of course. And how many died in those incidents?

1 A. Fortunately, we've had—not had any of those deaths.

2 Q. Since when?

3 A. This is the first time in this type of incidents we've had deaths.

4 Q. In the years that you were at Petrotrin?

5 A. Yes, Sir, me personal, yes.

6 Q. Congratulations.

7 A. Thank you.

8 Q. So therefore this would be a most significant moment in terms
9 of your management, isn't it?

10 A. This is significant, Sir.

11 Q. Yes.

12 A. But the system, the system remains.

13 Q. Listen, we could have the best system and you put rubbish in it
14 you get a rubbish outcome. You agree with that? You're a
15 technical man. Garbage in, garbage out, yes?

16 Q. I'm tending to take offence at that, Sir.

17 A. No, don't take offence. Men died. Don't be so thin-skinned.
18 Are you a crybaby too? Do you intend to cry here today?

19 A. Sir—

20 **Mr. Chairman:** Just a minute, Mr. Piper. Just a minute. First
21 of all, the expression, "garbage in garbage out" is probably
22 unnecessary. There are other ways of putting that question.
23 And certainly I don't need any suggestion that he's a crybaby.

24 **Mr. Ramadhar:** Yes.

25 **Mr. Chairman:** All right? Please?

26 **Mr. Ramadhar:** Of course. I'm just being preventative.

27 **Mr. Chairman:** We're going to be here for an awful long time

1 if I have to interrupt you, and I'd rather not.

2 **Mr. Ramadhar:** I hope you don't interrupt and I shall not do
3 anything to endeavour—

4 **Mr. Chairman:** I, I'd rather have no reason to do so.

5 **Mr. Ramadhar:** If you do, of course.

6 **Continued Cross-Examination By Mr. Ramadhar:**

7 Q. So, garbage in garbage out is not an insult to you, Sir. It is—

8 A. I take it as an insult.

9 Q. I'll—tell you what it is if you don't know. It is a technical
10 terms in terms of computer science. You put in garbage, you
11 get garbage out.

12 **Mr. Piper:** Chairman, please, I mean, it is a long day, I, I, I
13 don't think I should be subjected to this. I honestly sorry. I
14 don't think I should be subjected to this.

15 **Mr. Chairman:** Just, just a moment. I, I don't know how
16 plain I can make it, um, but I don't think it's necessary to use
17 that expression.

18 **Mr. Ramadhar:** Of course.

19 **Mr. Chairman:** Please don't use it again.

20 **Mr. Ramadhar:** I shan't. I was just apologizing—

21 **Mr. Chairman:** I don't want to hear any explanation about. I
22 don't want to hear any apology about it.

23 **Mr. Ramadhar:** Thank you.

24 **Mr. Chairman:** Just don't use it, all right?

25 **Mr. Ramadhar:** Thank you very much. Of course.

26 **Mr. Chairman:** You could make the same point in a different
27 way.

1 **Mr. Ramadhar:** Thank you. I appreciate that.

2 **Continued Cross-Examination By Mr. Ramadhar:**

3 Q. Now, in terms of the information you get, you make decisions
4 based on it. You get good information you are better able to
5 make better decisions. You agree with that?

6 A. Yes, Sir.

7 Q. And if you get bad information, the likelihood of you making a
8 bad decision is more likely, isn't it?

9 A. You will make the best decision based on the information you
10 have.

11 Q. And if it's bad information, what kind a decision you expect?

12 A. You will make the best decision based on the information you
13 have.

14 Q. Now from what you described here today, you made the best
15 decisions? Difficult as it would have been, in your mind you
16 made the best decision?

17 A. Yes, Sir, based on the information I had, yes, Sir, I made that
18 Sir.

19 Q. So what you have, no dead rescuers but four dead divers,
20 correct? That's the decision you made?

21 A. And were I to make a different decision—

22 Q. Yeah we could—

23 A. —I could have had four dead divers—

24 Q. Uh-huh.

25 A. —and I could have had three, four, five dead rescuers.

26 Q. Right, coulda shoulda woulda. Now you made no decision for
27 rescue, isn't that accurate?

1 A. We did not—

2 Q. Listen to my question so that we could move along nicely and
3 not be told that we're running out of time. You made no
4 decision for rescue?

5 A. I consulted—

6 Q. Listen to my question, Sir. It's very clear. You, Sir, and your
7 team, made no decision to rescue?

8 A. Um, can I answer the question?

9 Q. Yes. It's a yes or no.

10 A. No, I don't believe it's a yes or no.

11 Q. Well whether you believe it or not I'm asking you yes or no.

12 A. Well I am saying no that is not a yes or no answer.

13 Q. Well give me your answer.

14 A. We consulted—

15 Q. Uh-huh.

16 A. —right, based on the limited information we were able to get—

17 Q. Yes.

18 A. —we consulted, we consulted with the, with the dive
19 specialists, dive supervisor—

20 Q. Right.

21 A. —right, and they were not willing to go into the pipeline. They
22 thought it was—

23 **Examination By Mr. Chairman:**

24 Q. Mr. Piper, with respect, those are the reasons why you decided
25 not to authorize—

26 A. Yes.

27 Q. —a rescue. They're not the answer to the question. In

1 fairness—

2 A. Yes.

3 Q. —to Mr. Ramadhar he's asking you did you ever, in effect, did
4 you ever authorize a rescue? And the answer to that is clearly
5 no.

6 A. No.

7 Q. Exactly. The reason why you didn't may be a perfectly good
8 reason, it may be a bad reason, but that's different to the
9 question he's asking you.

10 A. Okay. Understood.

11 Q. Right? So he's asking you a question, did you ever authorize a
12 rescue?

13 A. No I did not.

14 **Mr. Ramadhar:** No.

15 **Mr. Chairman:** If you feel it necessary to add a but or—

16 **Mr. Piper:** Yes.

17 **Mr. Chairman:**—a however—

18 **Mr. Piper:** Okay.

19 **Mr. Chairman:**—please answer the question first and then I
20 will allow you to make a but or however, providing it's not
21 repeating anything you've already said. All right?

22 **Continued Cross-Examination By Mr. Ramadhar:**

23 Q. You appreciate that these men were in extraordinarily perilous
24 condition in that pipe?

25 A. Yes, Sir.

26 Q. Yes. Oxygen, air, would have been limited, first of all, correct?

27 A. Yes, Sir.

1 Q. Two, you did not know the physical condition in terms of the
2 hat ring of their bodies, correct?

3 A. Correct.

4 Q. Three, in terms of drowning because either too much oil or too
5 much water, correct?

6 A. Correct.

7 Q. Right. And as we have all established and believe, that time
8 was the most critical, what shall I say, asset or value that you
9 had, time, time, time, isn't it the most important thing?

10 A. And life, go ahead.

11 Q. Yeah, right.

12 A. And responders' lives,. yes.

13 Q. Well we're coming to that. We have two lives to this and I'm
14 very fair contrary to what many may say. You have two sides.
15 You have the rescuers on the one end and the men who, we
16 have a countdown, you agree there was a countdown to when
17 we believe they would perish if they hadn't already, you agree
18 with that?

19 A. Yes, Sir.

20 Q. Yeah.

21 A. It must have been a countdown.

22 Q. Huh?

23 A. Must have been a countdown as to where exactly—

24 Q. A countdown. And as the moments pass by, the anxiety to get
25 things done would have been increased, yes?

26 A. The anxiety was always there from, from very—the very early.

27 Q. And it didn't increase as time was passing and nothing was

1 happening to save them?

2 A. It must increase, Sir.

3 Q. Thank you. Well that's the point. So—but you, what was the
4 decision you made that was communicated? Stop the dive, isn't
5 it? That's the one decision you've taken in terms of diving, to
6 stop it, isn't it?

7 A. I, I went through this yesterday, Sir.

8 Q. Oh gosh, I am here now—

9 A. Yes, yes.

10 Q. —you are here now just tell me, very quickly. Don't tell me
11 about yesterday. We're dealing with now.

12 A. Right.

13 Q. Was it the only decision you took that you communicated in
14 relation to dive or rescue is to stop the dive?

15 A. Yes, Sir.

16 Q. Thank you.

17 A. But, if I may—

18 Q. But, but—

19 A. —explain, as I would like to please? As I said yesterday, I,
20 when I took that decision, right, people were just—I was
21 advised people were just diving into the pipe. We did not know
22 what we were facing, right, people were going in there on, on
23 emotion.

24 Q. Uh-huh.

25 A. Right? People were going in there on, on instinct, right? It
26 was, as far as I'm aware, just a sort of chaotic situation, so
27 somebody had to step in, somebody had to make a hard

1 decision and, yes, Sir, I took that decision.

2 Q. Thank you. Now, you would have wanted to know, as you've
3 told us painfully, to get cameras to go in to see what was inside
4 there, correct? You already knew water, the possibility of oil
5 was real, correct? You also wanted to see if there were physical
6 objects within the pipe?

7 A. Was that a question, Sir?

8 Q. Yes it is.

9 A. Yes, Sir.

10 Q. Right. Logic will tell us that if you needed to know what was
11 in the pipe, apart from the men and the plug, that all you needed
12 to know what was in the chamber before the catastrophe, the
13 accident, isn't it?

14 A. Yes, Sir. We wanted to know where the divers were.

15 Q. Yes.

16 A. We wanted to know what sort a distance we were going in. We
17 needed to know.

18 Q. I'm coming to that. I've asked you about the physical items. If
19 you wanted to know what physical items would most likely
20 be—

21 A. Yes.

22 Q. —within the pipe, you needed to know what was in the
23 chamber before the vortex of the Delta P, isn't it?

24 A. Yes, I—

25 Q. Right. So did you establish what would have been there so
26 you'd have an idea as to what physical items were there, apart
27 from the divers and the plug?

1 A. Yes, Sir. We knew all the tanks and so on—

2 Q. Right.

3 A. —and possibly chain blocks, right, spanners and so on.

4 Q. Yes.

5 A. But we also needed to know—

6 Q. Uh-huh.

7 A. —where the divers were—

8 Q. Yes.

9 A. —we needed to know oil, distances, all—we need—several
10 things we needed to know.

11 Q. And this brings me to the point, and you fed into it. when
12 Christopher took these very precious moments on the hospital
13 bed to speak with you for the shortest period, you thought he
14 were just old talking to tell you that he felt two welding seams?
15 You thought that that was loose talk, or this is a trained diver
16 who knows, because he was more interested in getting his
17 colleagues out? You appreciate that?

18 A. Yes, Sir, so—

19 Q. So you discounted, did you, the fact that he counted, and it may
20 have been a very deliberate action on his part, to measure out
21 one, two, so therefore, you would have a clearer idea, if not an
22 identical accurate one, a clearer idea as to where in the pipe the
23 men may be? You thought when he told you this, that was in
24 loose conversation? You laugh.

25 A. No, Sir, I, I'm not laughing, Sir.

26 Q. Well I saw you.

27 A. Right?

1 **Mr. Peterson SC:** Mr. Chairman, I mean—yeah.

2 **Mr. Ramadhar:** Mr. Peterson, thank you very much Mr.
3 Peterson.

4 **Continued Cross-Examination By Mr. Ramadhar:**

5 Q. Yeah. You didn't think that he was trying to get to you very
6 important information?

7 A. Yes, Sir and as I said—

8 Q. Thank you.

9 A. And as I said when we got the camera down to that distance,
10 we—there were—did not see anything.

11 Q. Well blame your camera, but a live person, Christopher, is
12 telling you he want, he say—listen and you know we're hearing
13 this thing about, "Go get the men, go get the"—is that what you
14 heard that is all that he said, "Go get the men, go get the men"?

15 A. No, Sir.

16 Q. No. There's more. He says to Michael, "Go get your father.
17 He right behind me. Don't be no—what, what—hearing that,
18 what do you believe that would a meant, he was a quarter mile
19 away?

20 A. Yes, and Mr. Kurban did go down into the pipe.

21 Q. Right.

22 A. And he did not see—there was no sign of his father.

23 Q. How far in?

24 A. As far as we know, he went in about 10 to 15 feet.

25 Q. Right.

26 A. We also sent the camera in some 80 feet and we were not able
27 to find anyone.

1 Q. What time did you send the camera in?

2 A. When we got the camera he was not there.

3 Q. What time?

4 A. I think we discussed the times already right.

5 Q. Well, I am not interested in discussion. Tell me now. Is mano
6 to mano here. What time?

7 **Mr. Peterson SC:** Man, I mean, in a court of law we usually
8 say asked and answered, but I wouldn't say that here, but I
9 think asked and answered about 10 times, and I know I can't
10 count well, but I know I had crossed 10, Sir.

11 **Mr. Chairman:** Um—

12 **Mr. Ramadhar:** All I'm asking is at what time the camera
13 went.

14 **Mr. Chairman:** Well, again, Mr. Ramadhar, I don't mind you
15 asking the question even though we've had this evidence
16 already.

17 **Mr. Ramadhar:** Yes.

18 **Mr. Chairman:** I don't mind you asking the question and I'll
19 permit it to a degree, but you've got to let him answer it.

20 **Mr. Ramadhar:** Of course.

21 **Mr. Chairman:** Let him answer it. And there's not a long
22 point unless you want to make a speech, and I've had my say.

23 **Mr. Ramadhar:** You told me I could make one later.

24 **Mr. Chairman:** Yes.

25 **Mr. Ramadhar:** So I reserve that position.

26 **Mr. Chairman:** Exactly. Not now. Right?

27 **Mr. Ramadhar:** I may decide not to.

1 **Mr. Chairman:** All right.

2 **Mr. Ramadhar:** But all I wanted to get from him, Sir, as we
3 refocus is what time did the camera go in so you could know it
4 went to—

5 **Mr. Chairman:** Well there were a number of cameras that
6 were attempted. So, let, let, let's be clear.

7 **Mr. Ramadhar:** And thank you much.

8 **Mr. Chairman:** I think the earliest one was some time after
9 midnight.

10 **Mr. Ramadhar:** There you go.

11 **Continued Cross-Examination By Mr. Ramadhar:**

12 Q. So your camera did not see anybody after 12.00, yeah, when
13 around 5.30 is when you were told the man was right there.

14 A. Sir, and Mr.—and Mr. Kurban went in the pipe and he was not
15 right there.

16 Q. Exactly the point, and you find this funny. The reason, of
17 course, is he's there his oxygen probably going so he tried to go
18 back to get more air in a air pocket. Is that not logical?

19 A. Sir, that's, that's speculation, I—

20 Q. Of course it is, but you didn't even bother to speculate about the
21 proof of life and the possibility of rescue? You wanted
22 certainty and you talk about us in this room, you write your
23 reports. It required immediate response to the facts that you
24 knew them and then educated—

25 **Mr. Peterson SC:** Is there a question—is there a question in
26 all of this, Mr. Chairman?

27 **Mr. Ramadhar:** Yes there is. There is and I'll, I'll—

1 **Mr. Chairman:** I'm hoping we get to one eventually.

2 **Mr. Ramadhar:** Yeah; and you see if I don't do it they'll say
3 I'm unfair.

4 **Continued Cross-Examination By Mr. Ramadhar:**

5 Q. In all of it, do you know what an educated guess is? You're
6 talking about speculation. What is an educated guess?

7 A. Um, please share with me?

8 Q. All right, an educated guess is when you know all that you do
9 and you use your experience and your intelligence and try and
10 figure out what is the more probably situation and you act upon
11 it.

12 A. Okay, thank you.

13 Q. Did you use any educated guess in this effort or you wanted
14 perfect information?

15 A. [*Inaudible*]

16 Q. The Chairman can't help you. You have to give evidence.

17 **Mr. Chairman:** I'm assuming you're going to say you didn't
18 want perfect information but you got to say something to it.

19 **Mr. Piper:** Okay. Yes, Sir. Um, thank you, Mr. Chairman.

20 **Continued Cross-Examination By Mr. Ramadhar:**

21 A. No, Sir I did not want perfect information but, as I said before,
22 this was no easy decision. I'm still having to send—

23 Q. We know.

24 A. —a man in the pipe

25 Q. We know.

26 A. —with no—you know—

27 **Mr. Chairman:** Well, I think what we can say, Mr. Piper, is

1 this, isn't it? If you believed Mr. Boodram when he said he felt
2 two welds and each weld represents 40 feet, then the one thing
3 you could say about that was that he was at least 120 feet into
4 the pipe.

5 A. That was my—

6 Q. At least?

7 A. Yes, Sir.

8 Q. Right? Assuming—

9 A. That was my thought.

10 Q. —assuming he was correct in his feeling of these welds, so, his
11 assertion that it was that distance as a bare minimum that he
12 was inside this pipe and the others with him, all right, you
13 knew, in addition to that that there were air pockets because he
14 told you that.

15 A. Yes, Sir.

16 Q. Correct? Um, and, er, two, at least?

17 A. Yes, he had mentioned.

18 Q. You knew from the other information you had that he was at
19 least asserting that Fyzie was right behind him, whether that's
20 within the few feet that we're talking about or not, um, fact is,
21 he was saying he was behind him. The camera, as I understand
22 it, only went in about 80 feet.

23 A. Yes, Sir.

24 Q. Is that right?

25 A. Yes.

26 Q. Right, so that the furthest that you were able to observe was
27 about 80 feet?

1 A. Correct.

2 Q. Which is obviously a good deal shorter than the 120. You had
3 had at least that information, didn't you, as to the condition of
4 men and the pipe—

5 A. Uh-huh.

6 Q. —as a bare minimum—

7 A. Yes.

8 Q. —you had that, didn't you? All right. So, I suppose what
9 you're being asked is, did that feature in your assessment?

10 A. Yes. Right. So, him touching, again, this—he is coming
11 through this pipeline, all right? Several welded seams. If
12 you're coming through the pipeline you will miss seams.
13 Right?

14 **Continued Cross-Examination By Mr. Ramadhar:**

15 Q. Listen, Sir, Christopher is a trained diver. You ever went in a
16 pipe diving?

17 A. No, Sir.

18 Q. So what you talking about he would miss seams? If he's
19 looking for them, you don't think that he would also know that
20 there will be seams every 40 feet and therefore do a
21 measurement, like Hansel and Gretel you know you throw your
22 little, um, bread, so you have a marker? You don't think that's
23 what he was trying to communicate to you in this supposed
24 conversation at ten o'clock from the hospital bed? Yes or no?

25 A. Sir, when he spoke to us, right—

26 Q. Uh-huh.

27 A. —how I interpreted, “Listen, when I was coming through, right,

1 I know I touch two seams”, right?

2 Q. Yeah.

3 A. So when we put together, we say, listen, two seams that will be
4 at least 120 feet.

5 Q. Beautiful.

6 A. Right? But, right, I know this is when he was coming closer.
7 My interpretation is, “When I was coming closer out I touched
8 the two seams.” That was my position.

9 Q. So you took a God-like position that your interpretation would
10 be correct and his would be wrong?

11 A. And, Sir, again, he said again his father—“Fyzie was behind
12 mih”, Mr. Kurban went down he did not find Fyzie, right?
13 Remember this, this gentleman was in this pipe. Distance—
14 it’s, it’s very difficult—

15 Q. You ever went—all right—

16 A. —for this gentleman to give any idea of distance.

17 Q. We heard this. We heard this.

18 A. Yes.

19 Q. But this is a live witness who’s telling you because you wanted
20 to talk to him from early. You get a few moments and this is
21 the thing he told you. You discounted that because he could be
22 wrong, right? Let’s go on. Did anybody take a audio recording
23 of what he is supposedly to have said—is supposed to have said
24 in that telephone conversation, a audio recording?

25 A. No, Sir.

26 Q. You had—

27 A. We had several people listening. I didn’t take an audio.

1 Q. I tell you—we will deal with—we'll deal with that in a
2 moment. You have told this court that as information came in it
3 was put by ICT into a chart? Is that correct?

4 A. They were documenting it yes, Sir.

5 Q. They were documenting it?

6 A. Yes, Sir.

7 Q. You had a white board up?

8 A. Yes, we had a white board.

9 Q. Document? You'll be surprised that we have photographs of it?

10 A. No, Sir.

11 Q. No? Do you still stand by your word—I will come to that in a
12 few moments. Remember you're under oath, eh. Yeah. Who
13 wrote on that white board?

14 A. Er, a number of people wrote on the white board.

15 Q. Number, a number, give me the names. This is important stuff.

16 A. So as people were coming through the incident command
17 system a number of people wrote on the white board, Sir.

18 Q. Give me the names of those who may have written on that
19 board. It's not an open thing that anybody could just walk in
20 and say, "Ey, let me put a note here."

21 A. No. I may have written on the board, Mr. Randolph Ramou—
22 um—

23 Q. Uh-huh.

24 A. —Archbald may have written, Mr. Flemming-Holder may have
25 written on the board.

26 Q. Right. Tell me—tell the—tell all of us here that that was the
27 first location that information is put, isn't it, and then later

1 transcribed, isn't that correct?

2 A. No, some of the information and—but during we—as I said, we
3 had, we had a scribe at the laptop in—entering information.

4 Q. You're getting me—you're getting a little fuzzy there. You're
5 talking about some, some, some. Are you saying that not all the
6 information was put on that white board?

7 A. Not all the information was put on that white board.

8 Q. No? Was all the information put for the scribe, with the scribe
9 putting it on the computer?

10 A. Maybe not all the—as the information—

11 Q. Or, I see.

12 A. —came to the scribe the scribe was putting it in.

13 Q. And who determined what information the scribe should put?

14 A. I would have spoken with the scribe and—

15 Q. You had control?

16 A. Yes, Sir.

17 Q. That's it?

18 A. I would have spoken to the scribe, other people would have
19 spoken to the scribe—

20 Q. I hear you.

21 A. —as information came in.

22 Q. You're the boss man, boss, boss man there, right? You're the
23 commander. What a lovely, powerful name, authority, okay,
24 and responsibility? Did you observe on that board that from
25 very early in the evening that Paria—there are other issues but
26 I'll deal with this one now—that Paria had formed the view that
27 the likelihood of, um, of rescue, well, they being alive, was

1 very slim?

2 A. Which board are we speaking of, Sir?

3 Q. White board that everybody writing on, including you.

4 A. All right, so, yeah there was a white board, there was a white
5 barred in the conference room—

6 Q. Uh-huh.

7 A. —of the shipping office which was downstairs. That was the
8 initial incident command post, right?

9 Q. Thank you.

10 A. As—when I, when I got into the incident command centre,
11 when I got into the incident command centre—

12 Q. Yeah.

13 A. —when I arrived initially.

14 Q. Uh-huh. You took the board upstairs with you? I'm asking you
15 because we don't have all evening, you know? I have a
16 timeline to work with, countdown.

17 A. No, Sir, I did not take the board upstairs with me.

18 Q. So—

19 A. May I continue with the answer?

20 Q. No, I—I want specifics. Were there a second set of boards
21 upstairs?

22 A. Yes, we had a white board upstairs.

23 Q. And where was the scribe, upstairs or downstairs?

24 A. When—well, there—the incident command post when it was
25 first set up—

26 Q. Uh-huh.

27 A. —the incident command post was downstairs and as

1 information came in they were just jotting the information on
2 the, on the white board.

3 Q. All right.

4 A. As, as we went upstairs—

5 Q. Yes.

6 A. —there was a scribe upstairs and they were jotting it down on
7 their computer.

8 Q. Jotting it down. Good.

9 A. Writing it.

10 Q. Right, we will deal with that probably in another even location,
11 but let's deal with very important matters here today. Who
12 gave you authority to make decisions about dives or to prevent
13 dives? Who gave you, Mr. Piper, the authority to decide who
14 should dive and who shouldn't dive and consequently who
15 should die and who should not?

16 A. Sir, I had no authority to say who should die and who should
17 not. Right? I—

18 Q. I started with dives. We'll come to the dying later. Who gave
19 you the authority to say who should dive and who should not?

20 A. Right, so, as the incident commander—

21 Q. Uh-huh.

22 A. —right, the incident is under my control, right, so I had to
23 manage the incident and there are certain decisions that I had to
24 take. Right?

25 Q. Where, where in the, where in the law did you get exclusive
26 right or authority?

27 **Mr. Chairman:** Well, I'm not sure it's a law.

1 **Mr. Ramadhar:** Let me rephrase that. Thank you very much.

2 **Continued Cross-Examination By Mr. Ramadhar:**

3 Q. Did you make contact with the Trinidad and Tobago Police
4 Service, as an example, as to what was happening? I'll give
5 you that to start.

6 A. I didn't make contact. I know we made contact with the TTFS
7 and so on. I know we made contact with the coast guard and
8 the coast guard are the people who deal with diving matters.

9 Q. Yeah. So the fire services were alerted, correct?

10 A. Yes, Sir. That would be all emergency response and so on.

11 Q. All right, thank you so much.

12 A. Right? And the Trinidad and Tobago Coast Guard—those—
13 that is the authority we look to for diving.

14 Q. Yeah. And who was coordinating among the national assets?
15 Who was coordinating among the national assets to—for—as
16 first responders?

17 A. Well, who, we were coordinating, the incident command.

18 Q. Right.

19 A. We had people coming in, coming in to the thing.

20 Q. Thank you for that. So you took command of the coast guard?

21 A. No, Sir. I did not take command of the—we were coordinating
22 with the coast guard.

23 Q. And who do you—

24 A. I cannot take command of the coast guard.

25 Q. I see. So, did the coast guard work together with you in terms
26 of decisions you would have taken?

27 A. Yes, the coast guard worked with me, Sir.

1 Q. I think—now—

2 A. Rig? But, but the decision—but I took the decisions, Sir.

3 Q. Of course. And it was conveyed and executed by others, isn't
4 that correct?

5 A. What, what exactly you are speaking of?

6 Q. Whatever decisions you made, you conveyed it to others and
7 they took—they execute them?

8 A. I told—I spoke to, er, I spoke to my people on site about the—
9 about not diving, yes, and they conveyed it.

10 Q. Or, much obliged. Now, you kept repeating that you were
11 accountable. You remember you said that in answer to my
12 friend that you would have been accountable?

13 A. Yes, Sir.

14 Q. Yeah. You, Sir, were more interested in lives or liability?

15 A. Sir, I of course was more interested in life, including the lives
16 of the responders.

17 Q. Yeah.

18 A. Right?

19 Q. But you said accountable.

20 A. And my priority was the safety of the responder, yes, Sir.

21 Q. Yes. Accountable. That has a meaning to you. What does that
22 mean?

23 A. There must be accountability, Sir.

24 Q. Thank you. Of course. And you would have been held
25 accountable either way, for instance, if a rescuer perishes, you
26 agree with that?

27 A. Yes, Sir.

1 Q. You agree you're accountable now for the divers having died?

2 A. Well, that's for the Commission to decide.

3 Q. And a court, possibly?

4 A. Okay, Sir.

5 Q. Yes. Now, you took a decision, when I say you I mean you and
6 your—all the assets, your team, whatever, to have, um, what's
7 the word for it, where you put, you blocked off the top of a
8 certain riser at any time?

9 **Mr. Peterson SC:** A flange.

10 **Mr. Ramadhar:** A flange. Thank you, Mr. Peterson.

11 **Mr. Chairman:** Or a cap.

12 **Mr. Ramadhar:** A cap.

13 **Mr. Chairman:** A lid on top.

14 **Mr. Ramadhar:** A lid.

15 **Mr. Piper:** Sir can you repeat, please?

16 **Continued Cross-Examination By Mr. Ramadhar:**

17 Q. Yes. You took a decision to cap off, to lid, to enlid [*Phonetic*],
18 or to flange, right, the top of one of the risers, isn't it?

19 A. No, Sir, I have no idea what you are speaking of.

20 **Mr. Chairman:** Neither do I. I, I, I—

21 **Mr. Ramadhar:** Let me help.

22 **Mr. Chairman:** The lid was already on the riser at No. 5.

23 **Mr. Ramadhar:** Yes. At any stage—

24 **Mr. Chairman:** And there was a, and there was a, and there
25 was a, a, a habitat with a downward pressure on 6.

26 **Mr. Ramadhar:** Absolutely.

27 **Mr. Chairman:** What is it you want to ask?

1 **Continued Cross-Examination By Mr. Ramadhar:**

2 Q. I'm going to ask now on 6 was there at any time a flange put on
3 the top of that pipe after the accident?

4 A. No, Sir. There is, there's, there's no—this is the first I'm
5 hearing about this except on social media.

6 Q. No, I'm asking.

7 A. No, Sir. No.

8 Q. No. Good.

9 A. At no point in time.

10 Q. Right. But, there was an extension of the riser?

11 A. Yes, Sir.

12 Q. To what height?

13 A. We extended it to above water.

14 Q. Yes. To what height from the sea bottom?

15 A. I, I'm—

16 Q. From the top of the riser to the seabed?

17 **Mr. Chairman:** Just a minute. How high was it above sea
18 level?

19 **Mr. Piper:** It was about five, five, six, seven feet above sea
20 level, yes.

21 **Mr. Ramadhar:** Sea level. I'm asking you now about seabed.

22 **Mr. Chairman:** From, from the bottom of the ocean?

23 **Mr. Ramadhar:** Yes.

24 **Mr. Piper:** Well it would have been about maybe 50—maybe
25 between 50 to 60 feet above.

26 **Continued Cross-Examination By Mr. Ramadhar:**

27 Q. Fifty to 60 feet.

1 A. Yes.

2 Q. You know that young Christopher, it was from that pipe he was
3 saved, that, that area, correct?

4 A. Yes, Sir.

5 Q. Fifty to 60 feet, it's a formidable height.

6 A. Yes, Sir.

7 Q. Good. Sir, you know yesterday you were at pains to tell us that
8 your experience of 45 years and you had never experienced
9 anything like this, that meaning people getting sucked into a
10 pipe. You remember you told us that?

11 A. That's correct.

12 Q. Yes. And you were quite and rightly concerned, as we all agree
13 with you, that it will not be the most prudent thing for a person
14 who is emotional or instinctual to dive in?

15 **Mr. Chairman:** Instinctive I think you—

16 **Mr. Ramadhar:** Whatever, whatever word—thank you. I'm
17 so grateful. The British language is, you know, um, not as
18 respected here in some cases.

19 **Mr. Chairman:** Well, we're all using it.

20 **Mr. Ramadhar:** Eh.

21 **Mr. Chairman:** I quite like the vernacular. but never mind.

22 **Mr. Ramadhar:** Thank you. Thank you. I appreciate that so
23 much, Mr. Chairman.

24 **Mr. Peterson SC:** [*Inaudible*]

25 **Mr. Ramadhar:** So look it up, Mr. Peterson. Look it up, Mr.
26 Peterson. You're never too old to learn.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. Yes, so, you didn't want person who was—let me get this clear
2 now. Mr. Peterson, is it instinctive—am I permitted—
3 instinctive or emotional to enter the pipe, you agree with that?

4 A. Yes, Sir.

5 Q. Yes. You know the name Conan Beddoe?

6 A. Yes.

7 Q. Highly trained, highly qualified, deeply motivated diver,
8 correct?

9 A. Correct.

10 Q. He was willing, right, I just want you—that you knew, he was
11 willing, knowing all that he did from the years of experience
12 that he had and the training that he had acquired to go into this
13 pipe. You knew that, yes?

14 A. I don't how many years of training. I don't know he had ever
15 done anything like this.

16 Q. Beautiful. So the person who was presenting himself, did you
17 make any inquiry as to his expertise that would be far greater
18 than yours?

19 A. Yes, Sir, but again—

20 Q. No, no, no, no. Just stop with the yes. So yes you make
21 inquiries. Did you then ascertain how many years' experience
22 he had?

23 A. Sir—

24 Q. Would that have been important?

25 A. Sir, Sir—

26 Q. Yes, yes or no?

27 A. Sir, you are still—I'm still sending somebody into this

1 pipeline—

2 Q. Wait, wait, wait, wait, wait.

3 A. —who would never have done anything like this.

4 Q. You're didn't—you're not sending anybody. You're assessing
5 now. Remember you are the A-S-S-E-S-S-O-R-S—assessors,
6 right? You are assessing the risk factor. You are needed
7 now—this man is saying—he's not related, he's not blood
8 related to any of the divers, you appreciate that?

9 A. Yes, Sir.

10 Q. So therefore the emotive issue is diminished. You agree with
11 that?

12 A. Okay.

13 Q. He didn't just jump off Oa board and dive in. He didn't—he
14 was not acting instinctively. You agree with that?

15 A. I don't necessarily agree with that.

16 Q. So you'd heard that he had jumped off a boat and tried to dive
17 in the pipe?

18 A. No, Sir. We were, we were just going into the pipe without
19 assessing.

20 Q. Who, you? You didn't assess. Did you know what assessment
21 he made?

22 A. There's no—what, what assessment he, he would make, Sir,
23 that—

24 Q. Did you—that's the point I'm asking you. Did you speak to
25 him to enquire what he knew that you may not have known?

26 A. Sir, we, we knew very little in the—we knew very little about
27 the pipeline.

1 Q. You—

2 A. He would not have known.

3 Q. You knew very little.

4 A. Yeah.

5 Q. And you took no action. You agree with that?

6 A. No, I don't agree with that.

7 Q. You took action to rescue the men?

8 A. Sir we took—yes we took—we were taking action to rescue the
9 men.

10 Q. Taking, taking and when did you take it?

11 A. Oh—

12 **Mr. Peterson SC:** Sir, we could avoid all of this. We could
13 avoid all if at some stage, Sir, with the greatest respect to my
14 friend Mr. Ra—Mr. Ja—Mr.

15 **Mr. Ramadhar:** You forget your partner name. You see?

16 **Mr. Peterson SC:** Mr. Jamadar—Ramadhar, sorry. This has
17 to stop.

18 **Mr. Ramadhar:** Mr. Gilson, I am doing what I have to do and
19 my friend may be uncomfortable but I think we're on a very
20 important track here.

21 **Mr. Chairman:** Now, I'll tell you what we're going to. We're
22 going to take 5 minutes.

23 **Mr. Ramadhar:** Thank you very much.

24 **Mr. Chairman:** We're going to take 5 minutes now. I would
25 like you to confine the remainder of your cross-examination to
26 15. So think about it in the next 5 minutes please. All right?

27 **Mr. Ramadhar:** Thank you.

1 **Mr. Chairman:** And, and you, you know, you do need to calm
2 down a little bit, all right? I get the emotion of it but you do
3 need you to calm down a little. All right? Please?

4 **Mr. Ramadhar:** Since I was a teenager they've been telling
5 me that, but—

6 **Mr. Chairman:** Five minutes, please, 5 minutes.

7 **Mr. Ramadhar:** Thank you.

8 **3.59 p.m.:** *Enquiry suspended.*

9 **4.05 p.m.:** *Enquiry resumed.*

10 **Mr. Chairman:** I am in a hearing in the Court of Appeal at
11 five o'clock on a matter for a client, so I need to be out of here
12 by five to 5.00. I do not want this witness to be held over, so if
13 we are not concluded by five to 5.00, you'll all have to wait
14 until I've finished in the Court of Appeal and come back. All
15 right? So let's try and concentrate on that. Thank you. Please
16 do sit down, Mr. Piper.

17 **Mr. Ramadhar:** Thank you, Mr. Chairman.

18 **Continued Cross-Examination By Mr. Ramadhar:**

19 Q. Mr. Piper, when we took the break I was making inquiry of you
20 about Conan Beddoe. You remember this?

21 A. Yes, Sir.

22 Q. Yes. This is the person who was presented as a potential
23 lifesaving rescuer, you agree?

24 A. This is the person they—this is the person at this point in
25 time—

26 Q. Yeah.

27 A. —right, I'm aware—

1 Q. And what time was this? Don't forget we have an appeal at
2 5.00 so do, do hurry up.

3 A. Yes, Sir, well if you'll allow me to answer the question.

4 Q. Yeah. What time—

5 A. Right?

6 Q. —did you become come aware that Conan was willing to go
7 into the pipe?

8 A. I became aware that people were diving into the pipe at about
9 6.25 on Friday evening.

10 Q. Mr. Conan Beddoe, when did you become aware that he was
11 willing to go into the pipe?

12 A. I did not get the name of the person on that night at—who,
13 right? All I know that people were willing to go into the pipe.

14 Q. People, people saying like—

15 A. They had a couple divers willing to go. One was Michael
16 Kurban.

17 Q. One was Michael Kurban. You had Catherine Balkissoon, your
18 eyes and ears at the scene, you agree?

19 A. Yes, Sir.

20 Q. So at no stage did you know that there was a professional diver
21 willing to go into the pipe? You say all kind a people. Let we
22 talk about professional divers, commercial professional divers.

23 A. Yes, Sir. We had other commercial divers there that night who
24 told me no.

25 Q. Yeah, yeah.

26 A. You shouldn't go in the pipe.

27 Q. You listen to the noes. Let we hear about the yes, yes to life.

1 A. Sir we've coming back to the same position where—

2 Q. Sir, you didn't do my job. You answer and we will get through
3 and His Lordship will go to his appeal for 5.00, okay? So,
4 question: you did not know through your eyes and ears, whether
5 it's Catherine or whomever at the scene, that there was a
6 commercial professional diver ready, willing, able and
7 equipped to go into the pipe?

8 A. I don't know that there was anybody. I know somebody was
9 willing, right, I know they had the equipment. They're able to
10 go in that pipe? No, Sir under—the conditions were unknown.
11 No, Sir. I didn't know they were able.

12 Q. You didn't know. Did you care to know what they knew?

13 A. Yes, Sir.

14 Q. Good. What inquiries—

15 A. Right?

16 Q. —did you make?

17 A. Sir—

18 Q. What inquiries did you make?

19 A. Sir, we—I keep coming back to the same thing.

20 Q. You can keep going where you want to go. Answer the
21 question.

22 A. No.

23 Q. Did you make an inquiry?

24 A. No, Sir.

25 Q. Thank you very much.

26 A. Right? At that time I was trying to find out what was
27 happening in the pipe.

1 Q. You remember what you told us—

2 A. Right? Because I still could not send anybody in that pipe.

3 Q. You remember what you told us about the time countdown
4 yeah, every minute becoming more and more—

5 A. Yes, Sir. I still didn't have the information—

6 Q. Right.

7 A. —about the inside of the pipe.

8 Q. And when did you expect to get your information?

9 A. I needed to assess, Sir. I still—

10 Q. When?

11 A. —could—I was still—I still could not send anybody in that
12 pipe until I get that information.

13 Q. When did you expect to obtain the necessary information to
14 give you the—

15 A. I was trying my best, Sir.

16 Q. I didn't ask you that.

17 A. I, I, I—

18 Q. What was your timing that you were—

19 **Mr. Chairman:** No, no, no, no. We can't—

20 **Mr. Ramadhar:** My Lord, could you ask him—

21 **Mr. Chairman:** Stop, stop, both of you, please?

22 **Mr. Ramadhar:** Yes.

23 **Mr. Chairman:** One person at a time. You ask the question,
24 you pause. You answer the question, then you pause.

25 **Mr. Piper:** Thank you.

26 **Mr. Chairman:** Try and keep it brief, both of you, please.

27 **Mr. Ramadhar:** Thank you. Could we, while we—

1 **Mr. Chairman:** Or I'll bring it to an end.

2 **Mr. Ramadhar:** Let's—while we have this moment to please
3 advise the witness to answer what he's asked and nothing else?
4 I am not here for a speech, okay?

5 **Continued Cross-Examination By Mr. Ramadhar:**

6 Q. When did you expect to get the necessary information to give
7 you the comfort to press the button go, to get those men?

8 A. As soon as I could get my cameras down, Sir.

9 Q. Camera, right?

10 A. Right? And I could get the information.

11 Q. And we've been through that before you knew that there were
12 hours away, the cameras, correct?

13 A. Yes, Sir.

14 Q. And you knew that at the time when you had a live, willing,
15 able diver?

16 A. Sir, if, I may, are you suggesting then without the information I
17 should just take the decision to be reckless? No, Sir I was not
18 prepared to do that.

19 Q. Yeah. You used the word, "reckless". You used the word,
20 "reckless".

21 A. Yes, Sir.

22 Q. The lack of recklessness led to what?

23 A. What would have—what would recklessness lead to, Sir?

24 Q. Yeah, the death of four?

25 A. So should I be reckless?

26 Q. No, but you are using the word, "reckless". I coming to that in
27 a minute. Do you know, because you had taken the authority

1 and you are the decider, and you're the one who said no dive,
2 that your decision to not decide or to stop the diving ultimately
3 led to no rescue? You agree with that?

4 A. Sir, can you repeat that?

5 Q. Certainly. Your decision to stop the dive ultimately led to no
6 rescue. You agree with that?

7 A. No, Sir.

8 Q. So you did cause a rescue?

9 A. No, Sir. In consultation, that was not what stopped—that was
10 not why we ended up with no rescue.

11 Q. No.

12 A. We spoke with the rescuers and nobody was willing to go into
13 the pipeline, the professionals—

14 Q. Yeah.

15 A. —right, those professional divers, they were not willing to go
16 into the pipeline. My dive supervisor advised me the same and
17 all those things combined—

18 Q. And what time—sorry.

19 A. led to no rescue.

20 Q. I beg your pardon. I don't want to interrupt your—

21 A. Yes.

22 Q. —your, your, your—

23 A. That was later on, Sir.

24 Q. What time? What time?

25 A. That was later on around midnight when—

26 Q. Around midnight?

27 A. Yes.

1 Q. What was your timeline for death?

2 A. Sir—

3 Q. What was your timeline for death?

4 A. We were saying maybe five hours or so.

5 Q. From what time?

6 A. Yes? From—

7 Q. Five hours from when?

8 A. We were saying from about the time Mr. Boodram came out.

9 Q. Right? You're talking ten?

10 A. Yes, Sir.

11 Q. Right.

12 A. But I still—

13 Q. Did you—

14 A. —could not send anybody in that pipeline.

15 Q. Right, right, because—

16 **Mr. Chairman:** We're going over the same territory.

17 **Mr. Piper:** Yes, Sir.

18 **Mr. Ramadhar:** I know we're going over.

19 **Mr. Chairman:** We've covered all of this.

20 **Examination By Mr. Chairman:**

21 Q. Can I, apropos your question, it might be helpful if you have
22 your timeline in front of you. If you go to one five seven three,
23 please? One five seven three Volume II of our corrected
24 version of the material supplied over the weekend. Do you see
25 at 1855, "Divers and diving equipment arrived on site"?

26 A. Yes, Sir.

27 Q. Right. Did you know who that was?

1 A. Yes, Sir. It was, um—at this time here that would have been,
2 er, the SGS, Sub Global.

3 Q. Who?

4 A. This here was, um, Sub Global, to the best of my information.

5 Q. Sub Global?

6 A. Yeah. Subsea Global.

7 Q. Subsea Global?

8 A. Yes.

9 Q. Seeterram, yes, thank you. Prior to that, had you heard the
10 name Beddoe.

11 A. I don't know that I heard the name Beddoe.

12 Q. What's the company again for Beddoe? He's a freelancer.
13 Yeah, and, and his brother it's Conan Beddoe and Colin,
14 Conrad.

15 A. Conrad.

16 Q. Yes. Had you heard about those two?

17 A. No, Sir.

18 Q. Did—no one told you about those two?

19 A. I don't think anybody called that name.

20 Q. Ms. Balkissoon?

21 A. I—

22 Q. Mentioned anything about them?

23 A. I'm not saying she, she didn't but I'm not recalling that if she
24 did.

25 Q. It's not recorded in this log. You know about them now?

26 A. Yes, Sir.

27 Q. You know them to be experienced divers, don't you, very

1 experienced divers?

2 A. I know them to be experienced divers, yes.

3 Q. Yes. Right.

4 A. In, fact, Mr. Beddoe was, Mr. Beddoe was the diver on Sunday
5 when—who came with Mr. Ali, right, and when we asked him
6 about his experience, his experience did not include this—any
7 dive like this. He said he has actually just—

8 Q. I'm not sure that anybody's—

9 A. Yes.

10 Q. —experience would include a dive like this.

11 A. What he said—

12 Q. That is inevitable—

13 A. Yeah.

14 Q. —in some sort of—

15 A. Right, okay.

16 Q. —accident type or emergency—

17 A. Yeah.

18 Q. —situations.

19 A. Yeah.

20 Q. That's inevitable, isn't it?

21 A. Yes.

22 Q. You can't have someone who's done it before. Somebody has
23 to do it for the first time.

24 A. Yeah. What he did say he had experience in was, um, going
25 like in, um, just pump cases which is, like, I think about 12-foot
26 I think pump cases, that is what he had but not—

27 Q. Some confined space—

1 A. —going in pipe.

2 Q. Some confined—

3 A. Yeah.

4 Q. —spaces experience?

5 A. Right, but nothing, nothing remotely similar to this.

6 Q. And I think what Mr. Ramadhar is asking, if I may say so, not
7 unreasonably, is, did you know that he was on site from quite
8 early that evening?

9 A. Yes. I know they were on site from about when Mr. Boodram
10 came up, we had people on site, yes.

11 Q. Shortly after that.

12 A. Yes, shortly after that.

13 Q. Right. There or thereabouts. And did you know that they had
14 equipment with them?

15 A. I know they had the equipment with—when Subsea Global
16 arrived.

17 Q. All right.

18 A. They had that.

19 **Mr. Chairman:** All right, yes.

20 **Mr. Ramadhar:** Thank you so much, Commissioner.

21 **Continued Cross-Examination By Mr. Ramadhar:**

22 Q. And you made no enquiry as to capacity of those who had
23 presented within the timeline of life?

24 A. Sir, again, we are coming back to I had to assess the pipeline
25 before and so no, Sir. Right?

26 Q. You did—no, hold on. We—I'm not on your pipeline
27 assessment, you know, about the quality of the personnel who

1 had arrived,

2 A. No, no, Sir.

3 Q. No.

4 **Mr. Chairman:** I think we've arrived—

5 **Mr. Ramadhar:** Yes.

6 **Mr. Chairman:**—at the position—again, Mr. Ramadhar, I
7 don't want to stop you unnecessarily, but, have we not arrived
8 at the position that this witness has made clear, that,
9 irrespective of whatever else there might have been, he was not
10 going to authorize a search of that pipe until he had a camera?
11 Which rightly or wrongly that was his position.

12 **Mr. Ramadhar:** Thank you.

13 **Mr. Chairman:** So going over it again is not really going to
14 improve it, is it? I mean, he's made that clear. Doesn't matter
15 how experienced the diver was, doesn't matter what equipment
16 he had—

17 **Mr. Ramadhar:** Yeah.

18 **Mr. Chairman:**—he was not prepared to take the decision for
19 someone to go into that pipe without cameras, footage.

20 **Mr. Ramadhar:** Thank you so much. And I'm about to
21 complete, yeah?

22 **Continued Cross-Examination By Mr. Ramadhar:**

23 Q. In the similar circumstances as you sit here today, looking back,
24 you would do the same thing, wouldn't you?

25 A. When you say same, when you say do the same thing, can you
26 elaborate?

27 Q. Of course. Do nothing to save the lives, because you assessed

1 and assessed. Well, let me help you a little bit. Did you ever
2 assess that it was safe enough to go in?

3 A. No, Sir. Once we spoke with the—we spoke with the dive
4 experts and they indicated no it is not safe to go in the—

5 Q. To go in for a rescue or a retrieval?

6 A. To go in for a rescue. They simply said they were not sending
7 their divers in for rescue.

8 Q. Who, who—

9 A. We—I was—I asked Mr. Seales to go to them and talk about—

10 Q. Yeah, yeah.

11 A. —going in for a rescue and they—I was told when Mr. Seales
12 came back—

13 Q. Right.

14 A. —he said no.

15 Q. Right. And forgive me if I have to—

16 **Mr. Chairman:** That, that is in the early hours of the morning,
17 isn't it?

18 **Mr. Piper:** Yes, Sir.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 Q. Long after your timeline for life had extinguished, isn't it?

21 A. Yes, Sir, but we were still talking rescue.

22 Q. And you would expect that these men would know, for the
23 length of time, since three o'clock, to, let's—even if it's twelve
24 o'clock in the night, the likelihood was rescue as minimal at
25 best if not zero? You agree?

26 A. It was no not eliminated, Sir.

27 Q. No, in your mind.

1 A. We were still trying to rescue.

2 Q. No, of course.

3 **Examination By Mr. Chairman:**

4 Q. Again, to be fair, you hadn't eliminated it?

5 A. I had not eliminated it, Sir.

6 Q. No. But you don't know what the individual diving teams
7 had—

8 A. No, Sir.

9 Q. —decided in their own mind?

10 A. No, Sir.

11 Q. With all their experience—

12 A. Correct.

13 Q. —they may very well have eliminated it?

14 A. Correct.

15 Q. And that may well have played into the reason why they were
16 not prepared to dive?

17 A. That is possible, Sir, but even earlier when I spoke to Mr.
18 Seales when he first came on I showed him what was going on.
19 With his experience he said, Collin, you know, this is too, this
20 is too risky. You simply don't have the information. I factored
21 all of that into and plus—

22 Q. You've told, you've told us that. I have that very well in mind.

23 **Continued Cross-Examination By Mr. Ramadhar:**

24 Q. remember I asked you whether you were more interested in
25 lives or liability? Remember you told us—I asked you that,
26 yes?

27 A. Yes, Sir, you did.

1 Q. Right. Do you know what a disclaimer is?

2 A. No. If you—go ahead you—if you'll care to explain.

3 Q. No, no. I want to know if you know what a disclaimer is.

4 A. Yes, Sir.

5 Q. What is it?

6 A. Well, you say something to disclaim any, um [*Inaudible*] claim.

7 Q. Liability?

8 A. Yes, Sir.

9 Q. Did you raise that issue with anyone that, “Look, people are
10 willing—there are men who are certainly going to dive, I don't
11 take action—that you want to go I am telling you there is
12 tremendous risk. I do not advise this but you can choose to and
13 sign off a disclaimer”?

14 **Mr. Peterson SC:** All right, I said I would intervene and but
15 this is law and I don't know if you could have a disclaimer to
16 that—to—in those circumstances legally. That is a matter
17 which my friend can make submissions on if he could find law
18 to support that at the end of the day.

19 **Mr. Chairman:** That's true, on the other hand, I don't see
20 harm in ask—in being asked if he was—er, if he considered a
21 disclaimer or if he was asked to sign a disclaimer. Whether or
22 not it had any efficacy in law is a separate matter.

23 **Mr. Piper:** No, Sir, I, I wouldn't ask—I, I don't think that
24 really is a fair position to put anybody in. I, I don't think so for
25 a disclaimer. No.

26 **Continued Cross-Examination By Mr. Ramadhar:**

27 Q. Hold on. You're not putting anybody in a position, you know.

1 People are volunteering to go. You are saying, “No, I need to
2 assess.” Right? You had access to Kenson, you had access to a
3 number of—well, you had the resources of the State available
4 to you to get advice, isn’t it?

5 A. Sir, I, I wouldn’t ask anybody to sign any disclaimer in a
6 situation like this.

7 Q. I didn’t ask you whether you would. I asked you if you had
8 access to advice.

9 A. Yes I, I could have sought advice. I didn’t think of asking for
10 any disclaimer.

11 Q. You didn’t think?

12 A. I don’t think that is a—I don’t think that is a position somebody
13 should take in something like this.

14 Q. So that you accept responsibility one way or the other for
15 anything that happens on Paria’s estate. Is that accurate?

16 A. Sir, I will have to get my counsel to advise me on that. I don’t
17 know.

18 Q. Oh?

19 **Examination By Mr. Chairman:**

20 Q. just a minute. Let me ask you this question. I think it gets to
21 where Mr. Ramadhar wants to be. There is a difference
22 between your saying to someone, “Please enter the pipe and
23 rescue these men”, all right?

24 A. Uh-huh.

25 Q. There’s a difference between that and saying to someone, “I
26 cannot authorize this. If you want to go ahead and do it, that’s
27 your business, but I cannot and my advice to you and

1 everything I've heard, is, this is completely wrong. You
2 shouldn't do it, but I'm not going to physically stop you if you
3 want to do it." There's a distinction between those two, isn't it?

4 A. Understood.

5 Q. I'm not preaching one or the other. I'm simply saying there is a
6 distinction between those two, and I think Mr. Ramadhar is
7 asking you whether or not, in effect, you ever considered the
8 latter.

9 A. Well we actually did, um, we actually did consider a disclaimer
10 to OTSL.

11 Q. Right.

12 A. Right? Yes. Indemnity.

13 **Continued Cross-Examination By Mr. Ramadhar:**

14 Q. The guys who tell you, "No we not going—

15 A. Yes.

16 Q. —after midnight"?

17 A. Yes.

18 Q. Is that accurate? Yeah?

19 A. Yes, Sir, that was later on, yes.

20 Q. Right? When, in reality, I mean let's be real, the likelihood that
21 the men were alive or, in fact, the likelihood that they were
22 dead was almost certain—

23 A. Yeah.

24 Q. —isn't it?

25 A. Yes, Sir.

26 Q. Yeah. So, you appreciate that part of the contract, eh, you're
27 talking lawyer and thing, right, part of the contract was in the

1 event of an emergency or so, LMCS was to provide what?

2 A. Say again, Sir?

3 Q. Are you aware, as you sit there today, in this room, that part of
4 the contract that Paria entered into with LMCS in relation to
5 any emergency or accident is that they were to provide what?

6 A. Emergency response, Sir.

7 Q. And including you?

8 A. For credible, for credible scenarios.

9 Q. Yes. And—

10 A. And this was not listed.

11 Q. There is a—

12 A. This was not listed by LMCS—

13 Q. Sitting as—yeah.

14 A. —as a credible scenario.

15 Q. Sitting as you are today, the reality is not credible? The reality
16 was of a Delta P. Is that not credible?

17 A. It was not presented—

18 Q. Yeah.

19 A. —by LMCS as a credible scenario—

20 Q. Yeah.

21 A. —right, in the contract. It was not presented and it was not
22 catered for.

23 Q. So therefore it was not catered for, let the men die? Is that it?
24 That's the effect of it. Now, Sir—

25 A. No, Sir.

26 Q. No. Well that's why I'm coming to it.

27 A. That's not what I'm saying.

1 Q. Well let me help you and tell me if you agree or not. LMCS,
2 for whom I do not appear, came prepared at some stage with
3 able, competent, willing and equipped divers to do a rescue.
4 You agree with that?

5 A. They came with—they had equipment and they had divers.

6 Q. Right.

7 A. Right?

8 Q. And it was your decision to not allow them to do, to dive, is
9 that accurate?

10 A. Sir, it was my decision to stop the diving at that point in time
11 when they were just diving, as far as I'm concerned, it was a
12 instinct, it was emotion, I understand Mr. Kurban was diving. I
13 said stop the diving at this time let us assess.

14 Q. All right, let's—

15 A. I never said we were not diving.

16 Q. Okay, you, around seven o'clock, issued an edict that all—an
17 instruction there shall be no further dive. You agree with that?

18 A. Yes, we should not dive into the pipeline.

19 Q. And you know it was around that time that Mr. Conan and other
20 divers, their brotherhood had come there, the coalition of the
21 willing, ready and able, and it is your instruction that prevented
22 any effort to go into that pipe, right?

23 A. Yes, Sir, because willing doesn't—

24 Q. That is all.

25 A. —willing does not change the conditions in the pipeline.

26 Q. Well, I will stand again. Did you ever know what the
27 conditions were ultimately in that pipeline? Did you ever know

1 what the conditions were ultimately?

2 A. No, Sir, we—no, we did not know—

3 Q. Well thank you very much.

4 **Examination By Mr. Chairman:**

5 Q. All right. Thank you. Can I just, apropos what Mr. Ramadhar
6 was asking you, can you have, please, page 1549 of the
7 supplemental core bundle? It's one of the documents that we
8 received over the weekend from your office. Do you have that
9 in front of you?

10 A. Yes, Sir.

11 Q. You can see from the top it comes from someone Called
12 Nerissa Feveck.

13 A. Yes, Sir.

14 Q. And who is she?

15 A. She was our communications clerk.

16 Q. And I think what she's done here is to record a meeting
17 between a number of people, Mr. Mushtaq Mohammed,
18 yourself—

19 A. Uh-huh.

20 Q. —Arlene Chow, I think was head of Heritage, is that right?

21 A. That's correct, yes.

22 Q. And then, um, a number of copied in people and it says”

23 “Subject matter: meeting with LMCS 10.51 a.m.”

24 And that's on the Sunday morning, the 27th?

25 A. Correct.

26 Q. Right. And on this day, you can see that there are—it describes
27 a number of attendees, all right, the venue is downstairs

1 conference room and the time between 10.51 and 11.38, so, um,
2 three-quarters of an hour or so?

3 A. Correct.

4 Q. All right? Do you see then it has a subheading: “Mushtaq and
5 Paria”?

6 A. Yes, Sir.

7 Q. And then after that, um, a few of the bullet points say a—10 or
8 so bullet points down there’s a line which says this. “Any
9 approval”, can you see that, “Any approval”?

10 A. Yes, Sir.

11 Q. “Any approval provided for the diver to enter, then a liability
12 waiver will need to be signed.” Do you see that?

13 A. Yes, Sir.

14 Q. Well, Mr. Ramadhar was asking you whether or not there was
15 ever any issue about signing any waiver.

16 A. Yes.

17 Q. He didn’t put it like that, but that’s what it, I suppose, amounts
18 to?

19 A. Uh-huh.

20 Q. Was that discussed at that meeting on Sunday?

21 A. I, I imagine it would have been discussed. I don’t fully recall. I
22 don’t recall but if it’s there it would have been discussed. I
23 don’t know if it was.

24 Q. Because, at that meeting was both Andrew Farah and Conan
25 Beddoe?

26 A. Yes.

27 Q. And so I’m assuming if it’s there it must have been discussed?

1 A. Yes, I'm assuming it was discussed, yeah.

2 Q. I mean, and I drew that distinction between the two potential
3 scenarios—

4 A. Yeah.

5 Q. —where, on the one hand you were saying, yes please send a
6 diver in to the pipe to rescue these men, or on the other hand—

7 A. Yeah.

8 Q. —saying, “Look, I’m, I’m against the idea of that”?

9 A. Yes.

10 Q. “I think it’s wrong, I think it’s dangerous. We don’t have
11 enough information, but I am not going to stand in your way as
12 it were”, there’s a—that’s the distinction I sought to draw.

13 A. Yes.

14 Q. In the latter situation—

15 A. Uh-huh.

16 Q. —is it that scenario in which you were seeking some sort of
17 liability waiver so that you wouldn’t be held responsible or you
18 the firm wouldn’t be held responsible for what you would have
19 regarded as an irresponsible act trying to save somebody?

20 A. Right. So, um—

21 Q. Is that what you understand by it or is it something else?

22 A. Well, um, um, so I, I suppose as maybe as things settled people
23 were sort of thinking this as—but at the time, no, I didn’t
24 consider that.

25 [Mr. Chairman confers with Mr. Bissessar]

26 **Mr. Chairman:** Just a moment. Yes.

27 **Examination By Mr. Chairman:**

1 Q. You know somebody by the name of Ian Bertrand?

2 A. Ian Bertrand? The name is familiar.

3 Q. He's, um, Chief Executive Officer of Offshore Technology
4 Solutions?

5 A. Yeah, I know the name, yes.

6 Q. Yes, OTSL?

7 A. OTSL.

8 Q. One of the companies you consulted with?

9 A. Yeah.

10 Q. Did he, at any stage, as far as you're aware, indicated that he
11 would want from Paria or from your legal counsel a standard
12 indemnity in the event of any loss?

13 A. I don't know—I don't know any discussion that would have
14 gone on.

15 Q. Can I ask, did it ever enter into your consideration that you
16 might permit someone to go into the pipe, I mean permit in the
17 sense of not stopping them from entering it—

18 A. Uh-huh.

19 Q. —without your approval on the basis that they provided some
20 sort of indemnity?

21 A. No, Sir, because my, my primary concern was the responder
22 safety so I did not—that—I did not consider that at that point in
23 time.

24 Q. All right.

25 A. I was just concerned with the person's safety.

26 Q. All right, thank you very much.

27 **Mr. Chairman:** Mr. Ramadhar, is there anything that rises

1 from that question that you'd want to ask?

2 **Mr. Ramadhar:** *[No indicated]*

3 **Mr. Chairman:** No. Thank you. All right. In that case, then,
4 I'm going to ask Ms. Persaud Maraj if she has any questions.

5 **Mrs. Persaud Maraj:** Thank you, Mr. Chairman.

6 **Cross-Examination By Mrs. Persaud Maraj:**

7 Q. Good afternoon, Mr. Piper. My name is Kamini Persaud Maraj
8 and I'm representing LMCS Limited.

9 A. Right, good afternoon.

10 Q. Earlier in your questioning you mentioned that Kazim Ali was
11 contacted around 9.00 p.m. and where there was discussions in
12 relation to the installation of the riser extension. You recall
13 that? You recall seeing that?

14 A. Yes, Kazim Ali called me at that time.

15 Q. Kazim Ali called you at that time. Now, I'd like to take you to
16 page 1573 of the ICT records bundle, the fourth time slot from
17 the bottom, 2106 hours.

18 A. Uh-huh.

19 Q. You have there—well, the ICT records show that:

20 "In discussion with Kazim Ali Sr. LMCS, Catherine
21 Balkissoon on site and the PFTC team, C. Piper, Mushtaq
22 Mohammed, Michael Wei, Randy Archbald. A decision
23 was taken to install riser spool at berth No. 6 to bring the
24 end above water at atmosphere and thereafter to remove
25 the flange on the riser at berth 6."

26 **Mr. Chairman:** Berth 5.

27 **Mrs. Persaud Maraj:** Berth 5, sorry.

1 **Continued Cross-Examination By Mrs. Persaud Maraj:**

2 Q. Information from Kazim Ali, LMCS, according to LMCS
3 personnel on site they were hearing knocking on the line below
4 in response to knocking on the line above water.”

5 A. Yes.

6 Q. Right.

7 A. I see it, uh-huh.

8 Q. So, I take it from this note that you would be in agreement that
9 the information or the request for the installation of the riser
10 was directly related to the noise that was being heard, the proof
11 of life that was being had, as it is, from berth No. 5?

12 A. Right.

13 Q. Yes.

14 A. Good, yes, and if I may, I did instruct, I did instruct my
15 personnel to go at berth No. 5, right, um, I think it was Mr.
16 Visham Harrichan and it may have been Mr. Beckles, right, I
17 instructed him to go to berth No. 5, right, they were there with
18 the LMCS personnel and they were listening out and there was,
19 and there was no—

20 Q. And what time was that?

21 A. That was immediately, that was immediately after this, this
22 conversation.

23 Q. All right. Can I take you to—and this conversation is around
24 9.00 p.m. in the night?

25 A. Yes, Ma'am. Right? And they reported back to me there no
26 knocking, they were there for about an hour. I told them to just
27 stand by, right, and con—but there was no sign of any

1 knocking.

2 Q. Thank you. Can I take you to paragraph 74 of your witness
3 statement at page 1360?

4 A. One three six zero?

5 Q. One three six zero.

6 A. Paragraph 74, yes Ma'am.

7 Q. All right. You have in this paragraph listed the number of—
8 nine conversations or nine telephone calls with respect to
9 Kazim Ali Sr. You see that?

10 A. Yes.

11 Q. Right. Twenty-one oh six or thereabout, you would notice that
12 there is no log for that timing?

13 A. Correct.

14 Q. All right.

15 A. These are, if I may, if I may, these are the, these are the times
16 from my call log. These had calls that I made so those are
17 recorded, right? Um, that was from Bmobile. The calls
18 received would not have been there so that is why that call is
19 not there.

20 **Mr. Chairman:** Paragraph 75 says, "Kazim Ali Sr. also called
21 me on more than one occasion."

22 **Mrs. Persaud Maraj:** Accepted.

23 **Continued Cross-Examination By Mrs. Persaud Maraj:**

24 Q. So I would ask you to turn to please show the witness statement
25 of Kazim Ali at paragraph 98? This is the—at page 2872 of the
26 supplemental witness statement bundle.

27 **Mr. Chairman:** Paragraph?

1 **Mrs. Persaud Maraj:** Paragraph 98.

2 **Mr. Piper:** I'm not sure which one it is.

3 **Mr. Chairman:** I think it's on the screen.

4 **Mr. Piper:** Okay.

5 **Mr. Chairman:** It's a short paragraph.

6 **Continued Cross-Examination By Mrs. Persaud Maraj:**

7 Q. You have that in front of you, Mr. Piper?

8 A. Yes, Ma'am.

9 Q. All right. So this is Kazim Ali's statement—

10 A. Uh-huh.

11 Q. —in relation to the knocking. And what he says here is that he
12 was informed by Dexter that there were report of knocking at
13 berth 5. Yeah? This is at paragraph 98.

14 A. Correct.

15 Q. Then at 99 he continues.

16 “At this stage it would have been after 6.00 p.m. I called
17 Piper and Mushtaq Mohammed. I don't know who I
18 spoke to at first. I requested that we bolt the riser
19 extension in order to do two things. One was to remove
20 the chamber in order to more easily access the pipeline.
21 The other was to be able to open the riser at berth 5.
22 Mushtaq agreed. He said he would go ahead and make-
23 up the riser. Dexter, however, informed me that
24 Catherine Balkissoon who was at berth 6 said that
25 nobody told her about this and I assume they never
26 relayed this message to her.”

27 So what he is saying essentially is that this conversation

1 happened a lot earlier than you are saying in your statement and
2 to this Commission.

3 A. Yeah, right, so, this—

4 Q. Do you accept same?

5 A. I accept, I accept that he is saying it happened earlier but that
6 conversation happen around nine o'clock.

7 Q. All right. How long can you say did it take to have the riser
8 installed?

9 A. We give, we give the authorization straight away and it took
10 them about maybe, maybe less than an hour because the riser
11 was already inside the chamber.

12 Q. And you have that recorded in your, in your ICT?

13 A. Yes.

14 Q. So, straight away at 9.00 p.m., let's just, just take this back a
15 little bit, essentially, there were works that LMCS was being
16 requested to be performed, correct?

17 A. No, LMCS made that request.

18 Q. Right. And at 9.00 p.m. they made that request and at 9.00 p.m.
19 that permission was granted?

20 A. Yes. We discussed it quickly and we granted the permission.

21 Q. All right. But, in relation to all other requests for diving, and
22 all other aspects of a rescue, there was no immediate response?

23 A. Because every situation is different.

24 Q. All right. So now, the, the blank at—the flange at berth No. 5
25 was requested to be removed. The installation of the riser was
26 to be done at 6?

27 A. Correct.

1 Q. Can you tell us or tell this Commission that without the removal
2 of the blank at 5 as requested by Mr. Ali and the installation of
3 the new riser, whether or not there would have been access to
4 any diving or rescue operations at all?

5 A. All right. So when we spoke to, when Mr. Ali spoke to—

6 Q. It's, it's a simple question. Would there be access to the—to
7 any—any rescue within the pipeline?

8 A. There will be access at berth 6 once we—when we removed
9 the—the intention was to install the riser and remove the top
10 flange on the hyperbaric chamber, and the discussion was with
11 Mr. Ali that we will lower somebody down in the crane. If we
12 needed to, that was the discussion we had the berth No. 5—at
13 berth No. 6, so there would be access.

14 Q. But wasn't there a bar across the top?

15 A. Mr. Ali mentioned that bar to us on Saturday morning.

16 Q. So you were not aware that there was a bar—

17 A. No, Ma'am.

18 Q. —on top of that?

19 A. No. He never mentioned that bar until Saturday morning.

20 Q. Mr. Piper, I'm going to put to you that the intention in relation
21 to the installation of the riser was to open the—whether or not
22 it's right or wrong, was to open the berth at 5, the blank at berth
23 No. 5 because of the knocking that was being heard, the
24 intention being that hopefully the men would have been seen or
25 there would have been some prospect of life to be had in a
26 rescue mission at that end.

27 A. Right. So, that was not the discussion. Mr. Ali said—in the

1 discussion with me he said he wanted to put on the riser at berth
2 No. 6 in case the compressor failed. In the same discussion, he
3 said to me, he—the men said they heard knocking at berth No.
4 5, right, and they wanted to remove the flange. I sent my
5 people at berth No. 5 to, to listen out, right? I sent two people
6 there. They spent an hour there. We also had discussions at the
7 time with our technical people—

8 Q. So, so—

9 A. —on—

10 Q. —they spent one hour at berth No. 5—

11 A. Remember, we—

12 Q. —after you would have had the conversation with Mr. Ali
13 about hearing the noise and the—the knocking, sorry?

14 A. I sent them at berth No. 5. When they went to berth No. 5 they
15 were listening out for the knocking. They were also knocking
16 and they were not getting any response.

17 Q. This is at 9.00 p.m. in the night?

18 A. This is when the request was made, right?

19 Q. Right.

20 A. I immediately dispatched them there, right? In conjunction
21 with that we told Mr. Ali we'll get back to him on the blank. I
22 told Mr. Ali we would get back to him on the blank because we
23 did have some concerns in concerns in removing that blank
24 what would happen, so we spoke to our process people and at
25 the time they said they had too little information, right? And
26 there was, and there was no sign, there was no knocking we
27 were hearing, so at that time they said to us—

1 Q. Mr. Piper, you heard there was no report from Paria's personnel
2 that there was any knocking or confirmation of the knocking
3 being heard by LMCS' agents and personnel, but—

4 A. They were together with LMCS personnel.

5 Q. —but you have permitted the, the secondary plan that Mr. Ali
6 had proposed to you?

7 A. Which, which is—

8 Q. The secondary plan in order to install the riser and to open the
9 blank at berth 5?

10 A. Right. We permitted the riser to be installed, right, at 6. Good?
11 When we spoke we continued listening out, we were knocking
12 the pipe, if I may, we were knocking, there were there was no
13 knocking at berth No. 5. Our guys were at that point with the
14 LMCS guys at berth No. 5.

15 **Mr. Chairman:** We're going around in circles now.

16 **Mrs. Persaud Maraj:** Okay, so the last—the—

17 **Mr. Chairman:** We're going round in circles.

18 **Mrs. Persaud Maraj:**—the last question.

19 **Mr. Chairman:** Please?

20 **Continued Cross-Examination By Mrs. Persaud Maraj:**

21 Q. The last question is that at that point in time did you understand
22 the condition of the pipeline before allowing that? Because that
23 has been the theme of what you have been saying to the
24 Commission, that you didn't understand the condition of the
25 pipeline within the pipeline if there was going to be a second
26 Delta P, et cetera et cetera, right? Did you understand it at the
27 time that you gave that permission what effect that would have

1 had?

2 A. On the—

3 Q. —having been very considered?

4 A. Yes we had—at that point in time we had to make some
5 decision and we thought, listen, this would be minor, okay?

6 Q. Minor, okay.

7 **Mr. Chairman:** Is that—

8 **Mr. Piper:** We had to make a decision.

9 **Examination By Mr. Chairman:**

10 Q. Is that, is that right, Mr. Piper, that removing the downward
11 force on the riser at 6 would have only a minor effect?

12 A. Right, so, we knew—the pipe was full and at that point in time,
13 Sir, we had to take some decisions.

14 Q. So, so you knew the pipe was full?

15 A. Well the pipe was up to the riser in the chamber which was not
16 the full riser.

17 Q. You knew it wasn't full?

18 A. It was about 4 feet or 5 feet below.

19 Q. No, no, no that's where the water level was but you knew it
20 wasn't full?

21 A. It wasn't full.

22 Q. You'd been told there were air pockets.

23 A. Yes, Sir.

24 Q. So it wasn't full, was it?

25 A. Right.

26 Q. Well I suppose it's full if you include air—

27 A. Yes.

1 Q. —with the fuel that was there?

2 A. Yes, Sir.

3 Q. But I, I mean, as it stood at that time, before you agreed to put
4 in this riser in—

5 A. Yes, Sir.

6 Q. —you understood, didn't you, that there was a plug somewhere
7 potentially stuck—

8 A. Yes, Sir.

9 Q. —in this pipe?

10 A. Yes.

11 Q. That it may have been pressure on the other side of that plug up
12 to—

13 A. Correct.

14 Q. —riser No. 5? And that's indeed why you didn't want to open
15 the lid—

16 A. Correct.

17 Q. —at No. 5?

18 A. Correct.

19 Q. Right? But equally, there was a pressure, the other side,
20 between riser No. 6 and where the plug was?

21 A. Correct.

22 Q. Which included where the men were?

23 A. Yes, Sir.

24 Q. And there was a downward force of the, the compressor—

25 A. Correct.

26 Q. —on that, on that liquid, wasn't there?

27 A. Yes.

1 Q. And if you stopped that downward force—

2 A. Uh-huh.

3 Q. —did you think that that would make a difference to the—to, to
4 what was in the pipe?

5 A. Right, yes. We thought it would make a difference. We also
6 thought opening at berth No. 5 would make a difference.

7 Q. Yes.

8 A. We had to come to some decision so we thought, let us put on
9 the riser at berth No. 6, continue at berth No. 6. Once we
10 weren't successful, we also had to come to a point at berth No.
11 5 and we had to take that decision to move forward. So there
12 was some decisions to make.

13 Q. Did anyone consider whether stopping the compressor at berth
14 6 was likely to generate a difference in the pressure in the
15 remaining part of the pipe between the plug and the top of the
16 riser?

17 A. Yes, Sir.

18 Q. And that that might mean that whatever air pockets were in
19 there were going to be compromised?

20 A. Yes. So we had to consider that, yes, we did consider that and
21 we had to, we had to move forward, right, so it was a
22 consideration, right, at that point in time.

23 Q. I mean one alternative was if your concern was as expressed by
24 Mr. Ali that the, um—they were concerned that the compressor
25 might fail because—

26 A. Yes.

27 Q. —it had been going for so long, one alternative was to get

1 another compressor, wasn't it?

2 A. Yes, Sir.

3 Q. You didn't do that?

4 A. No. He actually had a compressor on the barge.

5 Q. Right.

6 A. Right? He made the request, right, to us. Right? We discussed
7 the request and we decided, okay, because he didn't want it—if
8 it failed on him he would lose the chamber.

9 Q. Right.

10 **Mr. Chairman:** Yes.

11 **Continued Cross-Examination By Mrs. Persaud Maraj:**

12 Q. But there was also a back-up compressor?

13 A. Yes, Ma'am he had it, right?

14 **Mr. Chairman:** All right.

15 **Mrs. Persaud Maraj:** Al right.

16 **Mr. Chairman:** Thank you. Yes.

17 **Continued Cross-Examination By Mrs. Persaud Maraj:**

18 Q. Mr. Piper, I'd like to ask you to switch your mind a little bit to
19 address the issue of the contract between Paria and LMCS.

20 A. Uh-huh.

21 Q. Your position is that LMCS had a specialist contract, that's
22 what you're saying?

23 A. Yes, they were the specialist contractor.

24 Q. Right. And in having the specialist contract, they were to
25 design and advise Paria in relation to methodology and how the
26 work is to, to progress and be executed as well as progress and
27 execute the work, that's correct?

1 A. Correct.

2 Q. All right. Would you accept that there is a difference between
3 service contract and advisory contract? Because essentially
4 what you're saying is that they're performing dual function.
5 They're advising and performing the service contract to Paria?

6 A. No. This, this was a turnkey contract where the contractor was
7 supposed to do all his method statement and execute. This was
8 a turnkey contract.

9 Q. So, I've heard this turnkey contract before but a turnkey
10 concept, is it relevant or does it pertain to contracts in the oil
11 and gas industry?

12 A. Yes, Ma'am. They have turnkeys—many turnkey contracts in
13 the oil and gas industry.

14 Q. Was turnkey—okay. So turnkey contract, that concept is that
15 there is full control to the contractor, is that true?

16 A. Yes. He comes up with his method statement as well.

17 Q. Did—LMCS had full contract—full control over this contract?

18 A. Yes. They had to do all their method statements. We were, we
19 were permitting—doing—thus permitting so to coordinate with
20 our operations.

21 Q. No. But a turnkey contract does—gives full control. There is
22 no permit in a turnkey contract.

23 A. Yes but they are within our operations department so they were,
24 they were supposed to do all their method statements with all
25 the works, all their job steps—

26 Q. But doing—

27 A. —execute those job steps within our operations.

1 Q. Mr. Piper, you would appreciate that a concept of doing a
2 method statement is entirely different from having total
3 control?

4 A. Yes, Ma'am. They did all their method statement and they
5 were executing the contract. We had no part of that execution
6 of that contract.

7 Q. Will I appreciate you had no part in the execution, but certainly,
8 in relation to the actual development of scope, from the
9 development of scope and the monitoring that was part and
10 parcel of Paria's responsibilities?

11 A. Paria just told them what we needed to do which was to change
12 the riser. They had to develop their method statement, right,
13 and then execute the job, Ma'am.

14 Q. All right. So you will not accept that there's a difference
15 between a service and advisory contract?

16 A. I will accept that this is a turnkey contract.

17 Q. So it has no component—

18 A. And they would execute it.

19 Q. It has no compliment of advisory and service aspect to it?

20 A. Well if it—

21 Q. When you're developing the method statement?

22 A. Yes. I did—Ma'am, that would be—you would, I would say
23 deal with technical and maintenance. I had no part of that
24 contract—

25 Q. Oh you—

26 A. So please, I just—

27 Q. So I will take that to you and I will not go further with this

1 witness on this point but it is certainly a point. And whom may
2 I ask will he presented in relation to the contract, the
3 specifications under—

4 A. That contract comes under the technical and maintenance.

5 Q. Okay, so we will speak with technical and maintenance.
6 Forgive me for switching and switching but I have the tail end
7 of the questioning, so, I'd like to take you to your experts that
8 you had advising in relation to the dive, in relation to the
9 rescue, and I'd like to take you to paragraph 53 of your witness
10 statement. Right. So at your paragraph 53, you say:

11 "Paria did not have the required knowledge of or access
12 to competent, experienced divers, diving contractors
13 and/or confined space entry specialists. This expertise
14 was required to assist the ICT in assessing the feasibility
15 of attempting to rescue the divers from inside the pipeline
16 and to advise the ICT on the most appropriate rescue
17 options and methods and risks and precautions associated
18 with the said options and methods."

19 This is your statement. Right? So there were four things that
20 you were looking for from your experts, that's correct? This is
21 your statement.

22 A. Yes, Ma'am.

23 Q. Right. And I'll just repeat it again. Appropriate rescue options,
24 methods, risk, precautions associated with the said options.
25 Yes?

26 A. Yes.

27 Q. Did any of your experts provided any of those four things to the

1 ICT?

2 A. Yes. They—one second. [*Perusing document*] No, Ma'am.
3 Um, I cannot say they provided, right—what—when we went
4 to them, right, they would have assessed it and they came back
5 to us and said it was too risky.

6 Q. Thank you.

7 **Mrs. Persaud Maraj:** That would be all.

8 **Mr. Chairman:** Thank you very much.

9 **Mr. Peterson SC:** I have two quick questions, Sir. We'll
10 clearly be able to finish—

11 **Mr. Chairman:** I've managed to secure a few more minutes—

12 **Mr. Peterson SC:** Yes.

13 **Mr. Chairman:**—and so your—

14 **Mr. Peterson SC:** Only two questions.

15 **Examination BY Mr. Peterson SC:**

16 Q. Mr. Piper, we heard that you gave the instruction not to dive to
17 Ms. Catherine Balkissoon to pass on?

18 A. Yes, Sir.

19 Q. Not to dive into the pipe. Do you know if, notwithstanding
20 your instruction, I think Mr. Ramadhar referred to it as your
21 edict—

22 A. Uh-huh.

23 Q. —that diving continued?

24 A. Yes, Sir, diving continued after that instruction.

25 Q. Yeah. So you were ignored basically?

26 A. Yes, Sir.

27 Q. All right.

1 A. The instruction was ignored.

2 Q. And just one more point. I was attracted to the issue raised by
3 Mr. Ramadhar about waiving and waiver and giving indemnity
4 for civil liability. That must be civil liability he was referring
5 to?

6 A. Well I could only assume, Sir.

7 Q. Did anybody discuss with you that you were exposed to
8 criminal liability if you send people into an area where they
9 die?

10 A. Well I would imagine that I would be exposed sending
11 somebody in there.

12 Q. And you know the DPP in Trinidad don't pause?

13 A. Yes, Sir.

14 Q. Thank you.

15 **Mr. Peterson SC:** Thank you very much, Sir. That's all.

16 **Examination By Commissioner Wilson:**

17 Q. Good afternoon, Mr. Piper.

18 A. Good afternoon.

19 Q. I'll try to be quick. I just want some clarity on your response to
20 the incident. Yesterday I heard from you on-scene commander,
21 that's the title of her—or on-site?

22 A. Yes, she was more—she was—well, she was more operations
23 section chief, yeah.

24 Q. Operations section chief on site?

25 A. Yes, [*Inaudible*].

26 Q. One thing that didn't come out powerfully, she said that she
27 was on site from 1800 to 0600.

1 A. Uh-huh.

2 Q. As the incident commander was she relieved? Did she hand
3 over or her duties were finished on site managing the incident at
4 0600 on Saturday?

5 A. No, Sir. Catherine actually stayed onsite until about six o'clock
6 on Saturday evening.

7 Q. Well, according to her she said yesterday she finished up at
8 0600 Saturday morning.

9 A. No, no, she was on site up to—she was, she was at the incident
10 command on site, she may not have been fully on site at that
11 time, right, she, but she left Paria compound at six o'clock on
12 the evening.

13 Q. Okay. So, who did you have managing the incident or an
14 extension of the IMT on site?

15 A. I don't—

16 Q. —at 0600?

17 A. I can't recall that at this time—

18 Q. Okay, Sir.

19 A. —who she—um, when she left I can't re—I don't know who
20 she would have asked to, to hold on for her at the time. I don't
21 know at this time.

22 Q. Okay. I hope you would have an appreciation of having ICS
23 training—

24 A. Yes, Sir.

25 Q. —someone on site, they left site without any handover, so, how
26 was information on Saturday morning feeding back into the
27 IMT?

1 A. Yes, I—well, I know she was also still liaising but at this point
2 in time I can't say who she—who was on site.

3 Q. I'll just push it a little further. How was information from
4 onsite berth 5, berth 6, feeding back into the IMT in service of
5 tactical plans, situational updates, awareness or a rescue plan,
6 from 0600 on Saturday morning?

7 A. Right. So at that time, um, I can't say at this point in time how
8 that was being fed back, but I know Catherine Balkissoon
9 continued to send people there and so on.

10 Q. Okay. So having ICS training, that sort of information needs to
11 come in to you as the IC?

12 A. Yes, yes I'd say.

13 Q. Okay, so, for a whole flush of the day on Saturday what you're
14 saying is you don't have no information from on the site or
15 updates?

16 A. Well we had—no, we had people back and forth on the site.
17 I'm not saying we didn't have any information from the site.

18 Q. Okay. All right. One last thing is, um, in the interest of being
19 quick about it, I saw in paragraph 16 under your roles and
20 responsibilities—

21 A. Uh-huh.

22 Q. —that you have to implement HSEQ standards and facilities
23 adherence to same.

24 A. Yes.

25 Q. Yes? In your experience of doing that, have you ever heard
26 about bridging documents or have you utilized bridging
27 documents at Paria?

1 A. No, not really.

2 Q. You know the concept of bridging documents?

3 A. Well, if you explain I might—

4 Q. So essentially you have your—

5 A. —along—

6 Q. —safety, safety philosophy or—

7 A. Yes, right.

8 Q. —your safety management philosophy or your management
9 system, the contractor has theirs?

10 A. Yes.

11 Q. So as per my friend, whether it's a turnkey contract or what—

12 A. Yeah.

13 Q. —the philosophies need to be understood and one unified
14 philosophy of executing the work—

15 A. Right.

16 Q. —needs to be understood under a robust—

17 A. Yeah.

18 Q. —safety management system?

19 A. Right, so what we do—

20 Q. Uh-huh.

21 A. —what we do, when, when the contractor provides—

22 Q. In the interest of time, sorry to cut you.

23 A. Yeah, I'll be very quick.

24 Q. Okay.

25 A. What we do is the contractor provides his risk assessment, all
26 his credible risks, his emergency response plan and then the
27 HSE department marries those two, with Paria's emergency

1 response.

2 Q. Okay, so in the interest of time I'm going to move on. Under
3 the emergency response plan, LMCS' response plan, you
4 indicated that you review and accept when you've given the
5 turnkey contract or given the contractor full control?

6 A. The HSE department does, yes.

7 Q. Right. But in reviewing and, and how do you constitute
8 acceptance of something that you don't have competence in?

9 A. Well, the HSE department, they look as I mentioned, at the
10 obvious risk, right, on all—they look at the obvious risk and
11 that would have been mentioned and that's how they review the
12 contract.

13 Q. Well would you, would you accept that part of that is auditing?
14 How do you test the system? So they presented you with an
15 emergency response plan?

16 A. Yes.

17 Q. Did the HSE department test that emergency response plan to
18 see how effective it is?

19 A. I don't know if they tested the plan at that time. I don't know if
20 they tested the plan at that time.

21 Q. And I'll finish here. Since you have the responsibility for HSE
22 and reviewing it and ensuring that those standards are
23 implemented, have you reviewed the incident reports, any
24 lessons learned and anything going forward out of this incident
25 that has already been documented—

26 A. Yes, Sir.

27 Q. —and implemented, such as?

1 A. Right. So what we've done is we've improved the contractor,
2 the contractor management when he submits with his
3 contract—

4 Q. Uh-huh.

5 A. —we improved that. We started looking at the last three years',
6 um, documentation, not, not only his management plan.

7 Q. Okay.

8 A. Right? Et cetera.

9 Q. Let me get right direct to it. Did you see any gaps in your IMT
10 that needed addressing [*Inaudible*]

11 A. Yes, there are gaps to be addressed.

12 Q. To be addressed or being addressed?

13 A. Well, being addressed, yes.

14 **Commissioner Wilson:** Okay, thank you.

15 **Examination BY Mr. Chairman:**

16 Q. Yes, I'm sorry that we're pressed. I've managed to secure a
17 few more minutes but can I? There's just one more thing I need
18 to ask you which arises from what I asked you at the end of
19 yesterday. You remember—

20 A. Yes, Sir.

21 Q. —I, I—we adjourned yesterday when you were standing in
22 front of the screen trying to explain to us, or explain to me at
23 any rate, how it's possible to put one pint in at one end and get
24 two pints out at the other?

25 A. Yes. Right so—

26 Q. Have you been able to give any thought to that?

27 A. Have I been able to give any thought to that? I have thought

1 about it. Um, I don't know if I'll be successful in the
2 explanation. The—you're moving from one pipe into another
3 pipe. If, if you have a full plug, if you have a full plug then you
4 should—if you move one barrel here you move one barrel
5 there, but if you have in any way any—you're moving from,
6 different sizes a—different line sizes.

7 Q. All right. You see this is where I struggle. I don't see how it
8 can make any difference at all.

9 A. Yeah.

10 Q. You might start off with a little pipe this big and—

11 A. Yeah.

12 Q. —end up with something that's 20 feet wide.

13 A. Yeah.

14 Q. It seems to me not to make any difference. You pour one pint
15 in at one end, how can you get more out of the other?

16 A. Yes.

17 Q. Because I'd like to know that because I will, I will put a bar of
18 gold in that and then try and get two bars of gold out of the
19 other.

20 A. A liquid, Sir. Yeah, once—if you—if for any—perchance you
21 get any blow by in that liquid, right, you could maybe pickup
22 liquid in the other pipe. It's just—this is difficult to explain.

23 Q. Well, I mean, I can get it, some—

24 A. Yeah.

25 Q. —marginal difference—

26 A. Yeah.

27 Q. —might exist for any number of reasons.

1 A. Yeah.

2 Q. I struggle to understand get more.

3 A. Yeah.

4 Q. I could readily understand getting less.

5 A. Yes.

6 Q. I do struggle to understand more, and I struggle even more
7 when I think of the amount more that we're talking about.

8 A. Yes.

9 Q. You know, moving from the sort of 18 barrels that we were
10 speaking of yesterday—

11 A. Yeah.

12 Q. —to the sort of 400 potentially at the other end.

13 A. Yeah.

14 Q. I really do struggle to understand.

15 A. And that is why it was always the dip on the line that we were
16 considering.

17 Q. All right well, I hear what you say, thank you very much. Mr.
18 Piper, I appreciate you've been in the witness box for a very
19 long time. Thank you very much indeed for coming.

20 **Mr. Chairman:** We are now adjourned until the 4th of
21 January.

22 **Mr. Peterson SC:** Ten a.m.?

23 **Mr. Chairman:** At 10.00 a.m., yes. The best suggestion
24 you've made all day, if I may say so. So ten o'clock on
25 Wednesday the 4th of January, please? You will have probably
26 later today or tomorrow morning at the latest the schedule of
27 witnesses for that Wednesday. Yes, Mohammed, I think, who's

1 going to be here on that Wednesday and Mr. Yearwood, but
2 anyway, it will come up on the screen. You will have it all
3 available to you if not by today by tomorrow. Thank you all
4 very much.

5 **5.05 p.m.:** Enquiry adjourned.

6 **Mr. Chairman:** Merry Christmas.

1 **EVIDENTIARY HEARING DAY 11**

2 **10.19 a.m.: Enquiry Commenced.**

3 **Mr. Chairman:** Good morning, and welcome to 2023. A few
4 things I just need to cover this morning before we hear the
5 evidence, Mr. Maharaj. Yes. First of all, witnesses. The
6 position, I think, is now clear on the website which witnesses
7 we will be hearing from, the course of this—the remainder of
8 this week and next week. I've made the position, I think, fairly
9 clear about which order they'll be heard in. Mr. Donawa is now
10 going to give evidence on Monday rather than Friday to
11 accommodate him. He's out of the country at the moment.

12 The witness statements from a couple of people from
13 HHSL who deal with the crawler are not required by us, and I
14 don't propose—we got their statements. We got the material
15 they've provided, and I don't propose to have them called
16 unless someone can persuade me otherwise. That's where we
17 will be with them.

18 The pathology, you asked—I think particularly Mr.
19 Peterson asked about the two pathology reports on each of the
20 victims in this incident. We've had photographs from Dr.
21 Pramanik—I hope I've pronounced his name right—but
22 anyway, we have a number of photographs from him. And as I
23 indicated to you, Mr. Peterson and Mr. Mootoo, we will make
24 them available to you both on the understanding that that's to
25 be confined to you for the moment, at any rate, unless you
26 make such application as you think appropriate, to see if that
27 provides you with any additional help. If not, then I would

1 expect that you will just destroy them in the usual way. So
2 those photographs, we'll make available to you. They will not,
3 I make clear, appear on the website. They will not be made
4 available to anybody else unless they make specific application
5 to me.

6 There is, as you know, a second pathology report that
7 was obtained on behalf of the families provided by Professor
8 Daisley, I believe. He has not responded to all our missives,
9 and I'm not persuaded of the need to pursue it beyond that. So
10 anything you want, Mr. Peterson, I'm afraid you're going to
11 have to get it yourself. All right? So I can't provide you with
12 anything further from that.

13 Still dealing with witnesses. Mr. Fuentes has provided
14 additional material that appears in the supplementary bundle. I
15 am told it now is on the site. He's giving evidence, I believe,
16 tomorrow.

17 OSHA—can I remind you all that at the moment they are
18 not scheduled, save that I have informed the witnesses for
19 OSHA that we require them to attend on Monday of next week
20 subject to being told otherwise. I make clear that we are in
21 some discussion about the necessity to have them give
22 evidence. I can't tell you beyond that, but at the moment they
23 are scheduled, subject to anything further that we as a
24 Commission determine, to come on Monday.

25 Which brings me, finally, to the Tuesday which will be
26 the last day upon which we will hear evidence in this session
27 and maybe completely. Mr. Zaid Khan from In-Corr-Tech will

1 be giving evidence and a small video demonstration on that
2 Tuesday. I have scheduled in a number of family members
3 who have indicated that they wish to give evidence live.

4 May I make this—in particular, I address this to Mr.
5 Ramadhar, because I understand you represent and have made it
6 clear you represent a number of different family members. At
7 present, I'm not informed as to whether any of those that you
8 represent would wish to give evidence. Can I say this; I
9 encourage those who are directly affected by the outcome of
10 this Enquiry and those who are the relatives, close relatives of
11 the victims of this tragedy to consider giving evidence. I want
12 them to understand that we, the Commission, would regard that
13 as important evidence.

14 We will not, I make it absolutely clear, permit anyone to
15 be cross-examined. They should feel completely at ease to say
16 that which they want to say. What weight we give it is a matter
17 for us, you'll appreciate. But I will not—and I don't want them
18 to feel that they don't wish to give evidence simply because the
19 prospect of facing a phalanx of lawyers who might ask a
20 number of questions which they might find difficult to
21 answer—that will not happen.

22 I will not permit it to happen. So they can write out what
23 they want to say; they can go in the witness box over there, and
24 they can read it. We will treat them with the degree of
25 sympathy that they deserve and they'll be allowed to leave.
26 And that's the extent to which they will be taking part if they
27 wish. I don't want anyone to feel compelled to do so, but,

1 anyone who wants to, should. At the moment, we have two
2 people who've indicated they wish to do so, and, if they do on
3 the day, then they'll be permitted to do so. That's the
4 arrangement it's going to be in relation to those people.

5 **Mr. Ramadhar:** Chairman, first of all, thank you very much
6 for that. I think it's an excellent opportunity for the families to
7 have a centre of ventilation. And, indeed, young Aaliyah Henry
8 has already produced a statement. It ought to have been
9 forwarded to your Commission already. I'm still in
10 conversation with other members of the Kurban family as to
11 whether they wish to do equally.

12 **Mr. Chairman:** Yes. I'll make it equally clear. It's not an
13 opportunity for them to have a rant about who they think is
14 responsible one way or the other or anything like that. I want to
15 understand what they had to suffer and the circumstances in
16 which, in particular, they awaited the outcome of what they
17 believe to have been a rescue attempt.

18 **Mr. Ramadhar:** Absolutely.

19 **Mr. Chairman:** And that's what I'm particularly interested in
20 hearing. As I say, it's not an opportunity to have some rant
21 about, well, it's his fault or that person's fault. I won't permit
22 that either.

23 **Mr. Ramadhar:** Absolutely. And we are grateful for that
24 opportunity.

25 **Mr. Chairman:** All right.

26 **Mr. Ramadhar:** Thank you so much.

27 **Mr. Chairman:** Right. That deals with witnesses and the

1 timetable. You would have seen from the timetable that we
2 intend to conclude the evidence on Tuesday 10th January. That
3 will leave three days for potential closing statements.

4 As I indicated at the outset of this Enquiry, I will permit
5 those who were not permitted to make statements at the
6 beginning to do so at the end. At the present time, I am minded
7 to allow everyone to go before the two principal parties; that is
8 to say LMCS and Paria. Anybody who has anything to say will
9 be permitted to do so. I will need from you an estimate, please,
10 between now and Friday of how long each person or each team
11 anticipates they are likely to be so that we can timetable it in.
12 At the conclusion of all of what anyone has had to say, Mr.
13 Maharaj will then address this Commission as a final address
14 on behalf of the Commission.

15 So that is the current timetable as we see it. Can I add to
16 that, this? We, as you know, have been quite anxious to see the
17 habitat itself, and with the cooperation of Paria and LMCS, we
18 understand it is to be removed from the seabed. Unfortunately,
19 for reasons I needn't bother everybody else with, that's not
20 likely to happen until the end of January; so not during this
21 period, which is a little unfortunate, since we've indicated we
22 wanted to do it some time ago. Be that as it may, it is being
23 done, as I understand.

24 So what I'm minded to do is to schedule two days in
25 February for us to return to see the habitat and to have one day,
26 I put very much as a tentative day, in the event than we felt it
27 was necessary to hear any further evidence, either arising from

1 the habitat itself, related to that, or as a result of our
2 consideration between now and that date to recall any particular
3 witness. I'm hoping that that will be wholly unnecessary. But I
4 am anxious that we should not lose the opportunity if we
5 thought it appropriate or, indeed, if principal parties thought it
6 was appropriate. Those days are the 23rd and 24th February; so
7 after Carnival and after you've had a day to recover from
8 Carnival.

9 **Mr. Peterson SC:** Sir, you may not be aware; a day is not
10 enough to recover from Carnival.

11 *[Laughter]*

12 **Mr. Chairman:** Well, you might have to do your best.

13 **Mr. Peterson SC:** I don't know of anyone who has recovered
14 within 24 hours of participating in Carnival.

15 **Mr. Chairman:** I appreciate your frankness, Mr. Peterson, but
16 Ash Wednesday will have to be it, I'm afraid. Can I make
17 clear, this is tentative and I will hear representations if it is
18 particularly difficult for any particular party, other than
19 recovery. And at the moment, I'm minded to say the 23rd,
20 which is a Thursday, 23rd February, to view the habitat. That
21 would be an easy day, if I can put it like that, with those who
22 have hangovers. We can view the habitat.

23 And then on the 24th, as I say, a tentative day, that's
24 Friday 24th, to hear evidence if necessary. And I will make
25 sure that if we thought it necessary, people will have ample
26 notice, that is what is going to happen. So that is a tentative
27 timetable which we've scheduled in so that everyone can make

1 their arrangements around it. As I say, I'll hear any
2 submissions there are, as to the impossibility of those days.

3 All right. I believe that covers all of the issues I wanted
4 to raise this morning, save the application by Counsel for Paria
5 for disclosure from LMCS. Can I invite you to—I've seen the
6 correspondence provided by Ms. Baird, I believe, on behalf of
7 Paria. Can I ask, first of all, if that has been circulated to the
8 parties? If everybody has seen the application that's been
9 made. In particular, have you seen it, Ms. Persaud?

10 **Mrs. Persaud Maraj:** Good morning, Mr. Chairman. Yes,
11 indeed, I have seen that correspondence and application.

12 **Mr. Chairman:** Right. Well, unless you've got something to
13 add, Mr. Peterson, to the letter that we've received, can I take it
14 as that's your—

15 **Mr. Peterson SC:** No, Mr. Chairman. We just thought that in
16 the procedure or the process of assisting the Commission, we
17 thought that since we are focused around the incident and the
18 management of the incident thereafter within that 48, 72 hours,
19 we thought that all communication, including—and since we
20 have recognized that LMCS is a party with standing, and as you
21 had indicated, even on the closing statements that they are the
22 two focus parties that how they dealt and communicated with
23 respect to the communication of what they had—because
24 there's a big issue in this Commission as to whether they had a
25 formulated plan and what they did with it, and all of that.

26 **Mr. Chairman:** It is—

27 **Mr. Peterson SC:** So I think the communication between

1 them, not the position that they may have taken at the
2 Commission, but the communication between them at the real-
3 time, which would have been the 48 to 72 hours after the
4 incident, I think that will be helpful to the Commission to
5 determine how things were actually dealt with.

6 **Mr. Chairman:** Yes. Well, so that everyone else understands
7 what's being asked for, I mean, the application was orally made
8 in brief by you before we broke off last year. And the follow-
9 up correspondence from Ms. Baird who instructs you, asked for
10 all records and/or documents produced by LMCS personnel
11 involved in the rescue and/or recovery efforts from Friday 25th
12 to Thursday 3rd March, 2022, and identified specific emails and
13 other correspondence. And then (b) all records and/or
14 documents received by LMCS personnel from third parties in
15 relation to aforesaid rescue and/or recovery efforts; and then
16 any emergency response plan.

17 And then it sets out: It's important to properly
18 interrogate this allegation that they were prepared to have
19 divers enter the pipe and to understand the circumstances
20 surrounding the decision so to do.

21 Pausing there for a moment, it seems to me that this was
22 a matter that could well have been identified at a much earlier
23 stage, and I simply wonder why this application is being made
24 now, following the oral application at the end of the Enquiry
25 last year rather than at an earlier stage. And I see the
26 identification of particular material, and why it's decided that it
27 be important to this Enquiry to have it for the purpose of

1 interrogating that allegation. But given that those witnesses
2 have now already given evidence, I don't know how you're
3 going to interrogate at all without looking at the material. I
4 mean, assuming the material threw up some issue that you
5 thought was relevant or important, Mr. Peterson, you haven't
6 got a witness now to cross-examine about.

7 **Mr. Peterson SC:** We don't have the material, Sir. But if that
8 material does exist, I think under your edict earlier in these
9 proceedings with respect to disclosure of all in their possession
10 that reasonably would have been of assistance to the Terms of
11 Reference of the Commission, that that would have been
12 forthcoming, and should not have even give cause for us to
13 generate this request. So I think that if it does exist that that is
14 something that should have been voluntarily given to your
15 Commission.

16 **Mr. Chairman:** All right. Well, let's hear from Ms. Persaud
17 Maraj then, please.

18 **Mrs. Persaud Maraj:** So, Mr. Commissioner, as has been just
19 indicated by you, LMCS' personnel have already given
20 evidence in this proceeding in the live evidential hearing. But
21 in addition to this live evidential hearing, all the parties, and
22 particular persons who have not been called, were interrogated
23 and went through that process of dealing with all of the issues
24 in relation to plans and everything that would have coincided
25 with plans, decisions, discussions.

26 Now, the evidence is already on record—

27 **Mr. Chairman:** Pause, please, for a moment, so that I

1 understand where we're going. First of all, do you concede any
2 of this exists?

3 **Mrs. Persaud Maraj:** It doesn't, and that's why I was now
4 going to go into the evidence, because—

5 **Mr. Chairman:** Right. Pause for a moment. First of all, if it
6 doesn't exist, it doesn't exist.

7 **Mrs. Persaud Maraj:** It doesn't exist.

8 **Mr. Chairman:** So there's not a lot of point in us debating
9 whether it should be disclosed, or not disclosed, or why, or any
10 of those things. That either is in existence or it is not.

11 **Mrs. Persaud Maraj:** There are a few documents which were
12 emailed and those are already part and parcel of these
13 proceedings. So whatever could have been disclosed have
14 already been disclosed and whatever could have been
15 interrogated, have already been interrogated both at this live
16 evidential hearing and at the interview interrogations, which
17 would have taken place between October to November.

18 **Mr. Chairman:** Yes. So that I'm clear—

19 **Mrs. Persaud Maraj:** Yes.

20 **Mr. Chairman:**—all right, your instructions are having
21 considered the specific requests that have been made, is that if
22 anything existed it has already been disclosed.

23 **Mrs. Persaud Maraj:** Yes, please.

24 **Mr. Chairman:** And if it's not been disclosed, it simply does
25 not exist.

26 **Mrs. Persaud Maraj:** That's correct.

27 **Mr. Chairman:** All right. Yes. Well, I don't think we need to

1 take it any further.

2 **Mrs. Persaud Maraj:** I concede. I'm grateful.

3 **Mr. Chairman:** Mr. Peterson, you will make such
4 observations of that fact as you seek to choose to do so.

5 **Mr. Peterson SC:** Yes, Sir. That's exactly the focal point, Sir.
6 We requested this; if it doesn't exist, it doesn't exist. The only
7 way it falls to be disclosed—and the earlier point I made is that
8 if it existed then it ought to have been disclosed at your earlier
9 invitation. So if the instructions from Counsel is that it doesn't
10 exist, then it doesn't exist, because we only requested what
11 exist. And if it didn't exist, then, it falls by the way.

12 **Mr. Chairman:** All right. Well, we needn't have any further
13 discussion about it. As I say, you will make such observation
14 of that as you choose. Yes.

15 **Mr. Peterson SC:** As I will. Thank you, Sir.

16 **Mr. Chairman:** All right. Thank you very much, everybody.
17 Does anybody else want to say anything about that? No, all
18 right, good. Well, then why don't we get to the evidence? Mr.
19 Maharaj?

20 **Mr. Maharaj SC:** Mr. Chairman, the witness would be Mr.
21 Mushtaq Mohammed, and Ms. Vijaya Maharaj will read the
22 summary of that evidence.

23 *[Mr. Mushtaq Mohammed sworn]*

24 **Mr. Mohammed:** I, Mushtaq Mohammed, solemnly swear
25 that the evidence I shall give to this Commission in this case
26 shall be the truth, the whole truth, and nothing but the truth.

27 **Mr. Chairman:** Good morning.

1 **Mr. Mohammed:** Good morning, Sir.

2 **Mr. Chairman:** Thank you for coming. The water is there for
3 you. You've done the right thing, brought yourself into the
4 desk and brought the microphone closer to you. What's going
5 to happen now is this: You, through lawyers, Ms. Baird, I
6 believe, prepared a statement on the 7th October of this year.
7 That statement has been summarized and Ms. Maharaj is going
8 to read a summary of that statement. All right?

9 **Mr. Mohammed:** Good.

10 **Mr. Chairman:** So, please, listen to her summary. If you
11 agree it at the end, and hopefully you do, we can then proceed
12 to any further questions. If not, you'll point it out to me. All
13 right?

14 **Mr. Mohammed:** Great.

15 **Mr. Chairman:** Any issues that arise, please raise your hand,
16 let me know, and we can proceed from there. Whenever a
17 document is referred to including your statement, I hope you
18 will be given it from our team that sits behind me here. All
19 right?

20 **Mr. Mohammed:** Great.

21 **Mr. Chairman:** As I say, if you need anything just let me
22 know.

23 **Mr. Mohammed:** Thank you.

24 **Mr. Chairman:** All right, Ms. Maharaj. Thank you very
25 much.

26 **Ms. Maharaj:** Thank you.

27 Mr. Mohammed provided a witness statement to the

1 Commission dated 7th October, 2022. It's in the witness
2 statement bundle at page 1440. Mr. Mohammed had declined
3 to be interviewed by the Commission.

4 Since August 2019, Mr. Mohammed had been the
5 Terminal and Trading General Manager of Paria. Paria's day-
6 to-day operations are carried out by its employees as well as
7 employees of Kenson who are deployed by Paria in its HSEQ
8 Department which is the Health, Safety, Security, and Quality
9 Department, as well as its Maintenance and Operation
10 Departments as subordinates of Paria officials.

11 Paria has engaged Kenson by way of contracts. Paria's
12 workforce as at the 25th February, 2022, comprise 95
13 employees of Paria and 183 employees of Kenson. The HSEQ
14 Maintenance and Operations Departments were the main
15 departments involved in facilitating and overseeing the
16 execution of the project by LMCS. Paria did not possess the
17 specialist skills and expertise to perform subsea maintenance
18 works and, therefore, it was necessary to outsource the works to
19 a competent, experienced specialist contractor.

20 LMCS was hired for the 2021 project after undergoing a
21 process of selective tendering in accordance with the State
22 Enterprise Performance Monitoring Manual and Paria's
23 Procurement Policies and Procedures.

24 LMCS was the sole bidder who was found after
25 evaluation to have submitted a technically compliant and
26 suitable bid. Its commercial submissions were evaluated and
27 also found to be compliant and suitable. A recommendation

1 was made by Paria's Technical and Maintenance Department to
2 Paria's Management Tenders Committee for LMCS to be
3 awarded the contract for the 2021 project—and that
4 recommendation is at the core bundle of documents, page 928.

5 Mr. Mohammed is a member of that committee which
6 reviewed, discussed, and approved the recommendation and
7 awarded the contract to LMCS. Between 2015 to 2018, LMCS
8 carried out at least 17 jobs in respect of which LMCS was rated
9 by Petrotrin as acceptable.

10 Between 2019 and 2021, LMCS was engaged by Paria
11 for approximately seven jobs, which they successfully
12 completed, including a 2020 project involving repairs to No. 36
13 Sealine Riser at Berth No. 5, which was similar to that of the
14 2021 project. LMCS' performance in that 2021 job was
15 evaluated by Paria in several categories as being very good or
16 excellent.

17 Mr. Mohammed states that LMCS was, therefore, not
18 only a competent and experienced specialist contractor, but they
19 ought to have been very familiar with Paria's policies,
20 procedures, and practices.

21 On July 2, 2021, during the course of prework at Paria's
22 offshore services dock, critical injury was sustained by one of
23 LMCS' workers. This led to OSHA issuing a Prohibition
24 Notice on the 6th July, 2021, and that notice is at the core
25 bundle of documents, page 1173. *Pending Paria's Compliance*
26 *with OSHA's Requirements for Work to Resume*

27 Mr. Mohammed appointed an investigative team on July

1 7th to investigate the matter. The investigators concluded that
2 the incident was caused, among other things, by certain
3 breaches of Paria's permit to work procedure, and made several
4 recommendations for actions.

5 Paria's investigation report into this incident is at the
6 bundle of submissions, page 5126. Mr. Mohammed states that
7 the recommendation were accepted and implemented or in the
8 course of being implemented by Paria.

9 Mr. Mohammed learnt about the incident on 25th
10 February, 2022, at around 3.15 p.m. from Mr. Collin Piper. His
11 involvement in the aftermath of the incident included
12 performance of his duties as General Manager, liaising with the
13 incident commander, Mr. Collin Piper, and requesting and
14 facilitating access by the Incidents Management Team to the
15 resources required to assist in an emergency response, and
16 liaising with the divers' families, Paria's Chairman, and other
17 stakeholders with a view to keeping them apprised of material
18 developments.

19 On his way to Paria, Mr. Mohammed requested Paria's
20 Communication Lead, Nerissa Feveck, to join him at Paria as
21 he wanted to start communication with the divers' family and
22 the public. He also informed Paria's Chairman, Mr. Paul
23 Newman, the Chief Executive Officer of Heritage, Arlene
24 Chow, of the incident. He also had a number of exchanges with
25 Mr. Piper on his way to Paria. Mr. Piper informed him, among
26 other things, that a diver was recovered from within the
27 chamber.

1 Mr. Mohammed arrived at Paria at about 5.00 p.m. He
2 was informed that rescue divers were entering the pipeline in
3 search of the missing divers. At that time, there were several
4 unknowns, and therefore Mr. Piper held the position that it was
5 unsafe to dive into the pipeline. Mr. Mohammed supported this
6 view.

7 Mr. Mohammed was also informed that LMCS' persons
8 at the site were becoming anxious, emotional, and hostile and
9 he became concerned that persons supporting the rescue
10 operations may be in harm's way and that search and rescue
11 operations could be disrupted. Mr. Mohammed indicated to
12 Mr. Piper that the coast guard were the best persons to protect
13 Paria and Kenson's personnel to assist with a search and rescue
14 efforts and to control the site with a view to ensuring that the
15 search and rescue efforts proceeded safely and efficiently.

16 At approximately 6.24 p.m., Mr. Mohammed made a
17 request to Mr. Piper for the coast guard to take control of the
18 site at Berth No. 6 and Mr. Piper agreed to his request. His
19 expectation was that the coast guard would work with Mr. Piper
20 to plan, develop, and implement plans to attempt to rescue the
21 divers. He also expected that they would have made their
22 presence felt on the LMCS' Crane Barge so that there would be
23 some respected authority on site and they would prevent divers
24 from entering into the pipeline in an unsafe manner as no
25 specialist advice had been received that it was safe to enter the
26 pipeline. However, Mr. Mohammed states that he could not
27 recall whether he actually spoke to the coast guard and

1 requested them to assist.

2 Mr. Mohammed said that in the wake of Christopher
3 Boodram's retrieval from the pipeline, the main focus was to
4 inspect the internal conditions of the line with the assistance of
5 video footage and as night-time approached, the divers stopped
6 diving on their own accord.

7 At around 7.45 p.m. Mr. Mohammed heard Mr. Piper
8 speaking to Kazim Ali Sr. on the phone. Mr. Piper asked
9 whether the divers' families were informed of the incident and
10 Mr. Ali Sr. confirmed that they were. Mr. Ali Sr. requested of
11 Mr. Piper for the topside riser to be installed at Berth No. 6 in
12 order to mitigate the risk of compressor failure and facilitate the
13 use of tools like the crawler inside the pipeline. He also
14 requested that the blind flange be removed from the Berth No. 5
15 as he had heard reports of knocking at Berth No. 5 and wanted
16 to enter from that Berth to attempt a rescue.

17 Mr. Piper agreed for LMCS to install the topside riser but
18 indicated that he would get back to Mr. Ali Sr. in relation to the
19 removal of blind flange. Around 9.15 p.m. Mr. Mohammed
20 was advised by Shantal Ramdeo, Senior Process Engineer at
21 Heritage, that the removal of the blind flange at Berth No. 5
22 could cause any existing air pockets in the pipeline to move or
23 be extinguished, but she could not answer the question
24 definitively as she did not have all the necessary information.
25 Based on this information, Mr. Piper decided that it was too
26 risky to the missing divers to remove the blind flange at that
27 stage. Mr. Mohammed agreed with this position.

1 At around 9.30 p.m. Mr. Mohammed stated that he called
2 Dr. Maryam Richards to assist with the Incident Management
3 Team having an interview with Mr. Boodram so that more
4 information on the incident and the condition of the pipeline
5 could be obtained.

6 At around 9.43 p.m. the Incident Commander had a
7 discussion with Mr. Piper wherein Mr. Boodram provided
8 information in regard to the state of the other divers and the
9 pipeline.

10 At around 10.30 p.m. to around midnight the coast guard
11 concluded that it was too risky to dive into the pipeline. By
12 midnight there were a number of specialist diving companies;
13 companies with confined space rescue capability as well as the
14 coast guard representatives on site. The Incident Management
15 Team was also having discussion with the Heritage team who
16 was providing support.

17 At around 1.30 a.m. on Saturday, Mr. Piper reported to
18 Mr. Mohammed that the data received from the push rod
19 camera borescope footage was viewed with the coast guard and
20 two rescue diving contractors, and they all indicated that they
21 would not enter the pipeline to perform a rescue due to the risks
22 involved.

23 At approximately 4.00 a.m. Mr. Mohammed was
24 informed by Mr. Piper that attempts by a crawler to get past the
25 blockage was unsuccessful. Mr. Mohammed left Paria at about
26 5.00 a.m. and returned about 7.00 a.m. on Saturday. Mr.
27 Mohammed was informed that after reviewing the information

1 from the borescope and crawler footage, none of the rescue
2 companies were willing to enter the pipeline to attempt the
3 rescue.

4 As such, Mr. Piper indicated that further opportunities for
5 rescue were being developed by the Incident Management
6 Team. However, those options including the cutting of the
7 horizontal section of the pipeline to create an escape hatch for
8 the divers, was deemed to be too risky and not feasible. Also,
9 Eastern Emergency Response Services indicated that a dry
10 rescue option by pumping was too risky and they now consider
11 the operation to be a recovery and would, therefore, not enter
12 the pipeline.

13 The Incident Management Team, however, agreed to
14 continue with pumping out the line option in the event that
15 Eastern or another company could be persuaded to execute a
16 confined space dry rescue.

17 From around twelve noon to about 1.00 p.m., Mr.
18 Mohammed and other members of Paria Management Team
19 held a meeting with the divers' families. The purpose of this
20 meeting was to give the families an update on the situation and
21 ongoing operations. Mr. Stuart Young was present, and at that
22 meeting Nerissa Feveck, Paria Communications Lead, was also
23 present at the meeting and obtained the contact information for
24 the relative of each diver, and by 3.00 p.m. on Saturday she
25 formed a WhatsApp group to provide the families with timely
26 updates. She offered the divers' families assistance including
27 free counselling services and the purchase of groceries which

1 was accepted by some of the families, but not all.

2 From around 4.00 p.m. to 4.45 p.m. Mr. Mohammed
3 attended a meeting with Mr. Piper, Mr. Michael Wei, as well as
4 Heritage officials. Mr. Mohammed addressed the meeting by
5 providing an update of where the efforts were and indicated that
6 they were working with the option to pump down the lines so
7 that a dry rescue could be performed.

8 In addition, the likelihood of the divers not being alive
9 and the potential transition from rescue to recovery were also
10 discussed. After the conclusion of the meeting Mr. Mohammed
11 and Mr. Piper discussed whether time had come for Paria to
12 make the decision to transition from rescue to recovery based
13 on all the information received.

14 At paragraph 97 of his witness statement Mr. Mohammed
15 outlined the relevant factors which they considered. A joint
16 decision was made by Mr. Mohammed and Mr. Piper at about
17 5.15 p.m. to transition Paria's response from rescue to recovery.
18 However, Mr. Mohammed indicated that they agreed to speak
19 with the families first before informing the public.

20 Mr. Mohammed met with Mr. Kazim Ali Sr. at 5.30 p.m.
21 at the shipping building. He told Mr. Ali Sr. that the likelihood
22 of the survival of the divers was low and that they should talk to
23 the families and advise them of this. Mr. Ali Sr. said that that
24 was a message he could not deliver and that he didn't know
25 how to tell them the chances of survival were slim.

26 Mr. Mohammed says he asked Mr. Ali Sr. to accompany
27 him to the families and Mr. Kazim Ali Sr. suggested that they

1 meet with Kazim Jr's one wife, and they did so. At around 6.00
2 p.m. to 6.30 p.m., Mr. Mohammed went to the house of Kazim
3 Jr's wife and informed her of the decision. It was a difficult
4 meeting. However, after the meeting with the Ali family,
5 neither Mr. Kazim Ali Sr. nor any other representative of
6 LMCS was willing to accompany Mr. Mohammed to visit the
7 other families.

8 Mr. Mohammed was informed that the divers' families
9 were gathered outside Paria's gates. He returned to Paria's
10 main building to attempt to get the families to come inside one
11 by one in an orderly fashion. However, they refused.

12 Mr. Mohammed says, therefore, that at approximately
13 8.00 p.m. he held a WhatsApp call to inform the other families
14 of the decision to transition to recovery and the reasons for that
15 decision.

16 Mr. Mohammed states that around 9.00 a.m. on Sunday,
17 27th February, he met with Paria's Chairman, Newman George,
18 and then he and Mr. Piper met with Minister Young and the
19 CEO of Heritage, Arlene Chow, and informed them that Paria
20 was transitioning to recovery.

21 Mr. Mohammed and other Paria representatives held a
22 meeting on Sunday morning with Kazim Ali Sr. and other
23 LMCS representatives. During the session Mr. Ali Sr. stated,
24 among other things, that he knew his son had already passed,
25 and that he was thinking about recovery of his body and those
26 of the other families, and he expressed concern that the way
27 Paria intended to recover the bodies may cause them to become

1 mangled and indicated that this is why he wanted to send a
2 diver into the pipeline to bring them out.

3 Mr. Mohammed states that he requested a method
4 statement for the proposed LMCS plan to recover bodies with a
5 risk assessment and emergency response plan and the diving
6 certification of a diver whom they proposed to deploy so that
7 Paria's experts could review the documents and assess the
8 procedures, its risks, and mitigation measures before making a
9 decision.

10 Paria received LMCS' documents around 2.20 p.m. on
11 Sunday, after which a meeting was convened with LMCS to
12 discuss the rescue plan. Mr. Krishna Fuentes, Independent
13 Dive Expert, Mr. Rolph Seales, Dive Expert on behalf of
14 Heritage, and Lt Hargreaves of the coast guard did not agree
15 with the proposed dive into the pipeline and indicated that the
16 plan was too vague and risky. Mr. Mohammed and Paria held a
17 conference at about 8.00 p.m. on Sunday to inform the public of
18 transition to recovery.

19 Mr. Mohammed, is this an accurate summary of your
20 evidence?

21 **Mr. Mohammed:** Yes.

22 **Ms. Maharaj:** Thank you.

23 **Mr. Chairman:** Thank you for that.

24 **Examination By Mr. Chairman:**

25 Q. Can I just ask you one thing before Mr. Maharaj ask you any
26 questions? You declined to be interviewed by the Commission
27 of Enquiry in advance of this hearing. Are you able to say

1 why?

2 A. I think the logic behind it is that, you know, I wanted to be
3 interviewed, have one clear, concise statement around the
4 activities around the incident, and I thought that this would be
5 the best avenue to have that done. And that was the simple
6 reason why we declined to have the interview earlier. So I'm
7 prepared today to go through the extent of the interview as the
8 Commission required to give all the evidence that I could give.

9 Q. I mean, you understood that the purpose of that particular
10 approach to this Enquiry was to try and save time in a public
11 hearing going through the sort of questions that might have
12 been established in advance?

13 A. I gave it some thought and, you know, I kind of resolved myself
14 that this was probably the best way to do it.

15 Q. Was that an independent decision made by you in relation to
16 your own position?

17 A. I think it was in consultation with the legal team also. So there
18 was both consultation and independent decision.

19 Q. I don't want to hear what they might have advised you.

20 A. I'm just saying—yes.

21 Q. But it was—having taken advice, you decided that it was an
22 appropriate course to take?

23 A. Correct, correct.

24 Q. And was that one which you, given your role in Paria, advised
25 other members of staff of Paria to also adopt?

26 A. I would say generally, yes, we all agree that, you know, we'd
27 give the evidence once; give it as clearly and concisely as we

1 can, and we would respond in writing to any questions that the
2 Commission had.

3 **Mr. Chairman:** All right. Thank you. Yes. Thank you. Mr.
4 Maharaj.

5 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

6 **Examination By Mr. Maharaj SC:**

7 Q. Mr. Mohammed, I want to ask you some questions.

8 A. Yes.

9 Q. According to your statement that you gave as you stated at
10 paragraphs 4 and 5 that as General Manager of Paria, your
11 duties included an overall sort of responsibility for safety—

12 A. Yes.

13 Q. —and secure operations. Am I correct?

14 A. That is correct.

15 Q. And according to paragraph 5.2 of your statement, the words
16 you use is “Driving a safety first culture” was the sort of motto
17 that you operated on?

18 A. Yes.

19 Q. And then at paragraph 15 of your witness statement you
20 stated—and I’m a bit concerned about this, and I want to get
21 some answers from you, because I think it’s very important.
22 You stated that, “Paria did not own the necessary equipment
23 nor did it have the specialist skills and expertise required to
24 perform such a job.”

25 A. That is accurate.

26 Q. And you maintain that today?

27 A. And I maintain that today.

1 Q. And then at paragraph 17, you stated that LMCS was hired and
2 there was an evaluation process and Paria was involved in that
3 evaluation?

4 A. That is correct.

5 Q. And Paria found that the bid submitted by LMCS was
6 technically compliant and a suitable bid?

7 A. Yes.

8 Q. Well, I'm concerned, and I want you to help us. If Paria did not
9 have the expertise required to perform such a job, it also
10 undertook to evaluate the bid in order to determine whether
11 LMCS should be awarded the contract?

12 A. That's the question, if—

13 Q. Yes.

14 A. So I agree with the statement above that Paria did not have the
15 skills. I'd start by saying that I don't believe any organization
16 has all the skills to execute every bit of work that it is going to
17 do. Paria is no different to any other organization from that
18 respect. We'd have gone out with a process where we would
19 have identified the scope, we would have identified the
20 challenges around doing the job, and we would have gotten
21 returns from contractors.

22 In the evaluation process, what would we have looked
23 for? We would have looked that the company had certain
24 management systems in place; that they had an HSE
25 management system in place; that they were certified and
26 deemed competent in this case. One of our key expectations
27 from people who do high-risk work is that they were STOW

1 certified, which is an indication that they have met a certain
2 standard on the performance of work with regard to safety. We
3 would have looked at the general competence of the people and
4 the people supplied to do the job. We would have looked at the
5 ability of the company to do the job. We would have looked—

6 **Mr. Chairman:** Sorry, I'm trying to write this down. Just a
7 bit too—

8 **Mr. Mohammed:** Sorry about that; sorry about that.

9 **Continued Examination By Mr. Maharaj SC:**

10 A. And we would have looked at the company's track record
11 in being able to execute this type of job. And in all cases,
12 particularly there's no—in my view there's no better proof of
13 competence than having done a similar job successfully, and
14 LMCS met those criteria. In each case they were able to meet
15 the criteria. They had done a very similar job on the same
16 section of line only a year ago—I think it's 2020. So they
17 would have met, I would say, the general requirement for being
18 able to execute a job of this type.

19 Q. Okay. I'll come back to this similar job matter in a short while.

20 A. Great, okay.

21 Q. But you will appreciate, tell me if you agree, that the contracted
22 works in this case that we are concerned about involve a
23 dangerous operation, in that there could have been a Delta P
24 hazard and persons could have got injured and persons could
25 have been in difficulties. It was a dangerous operation.

26 A. My understanding of the job that was done in 2020, that
27 possibility also existed: That there were plugs inserted in the

1 line; there was likely to be a Delta P activity. So, you know, in
2 terms of—the differences in the job would have been the depth
3 under water; I guess the length of pipeline, but there were no
4 major material differences with regard to the type of job and the
5 risk associated with the job.

6 Q. So, Mr. Mohammed, you recognize that in this job that had to
7 be done there was the possibility of a Delta P hazard?

8 A. I would say at the time of investigating the tender, no.

9 Q. No. So having Paria not having the expertise as you said to do
10 this kind of job, Paria, according to the permit to work
11 procedure of Paria, was required to determine whether to accept
12 or reject LMCS' method statement for these works?

13 A. That's the question?

14 Q. Yes. Paria had to determine whether to accept it or not to
15 accept it?

16 A. From the perspective of the permit to work system, all right,
17 every contractor that we hire to do specialist task is expected to
18 bring to the table the specialist risk involved in doing that job.
19 Paria's permit to work system would take into consideration
20 both the obvious risk that Paria has to manage based on the
21 things that we do day-to-day and it would also combine that
22 together with the specialist risk that is brought to the table by a
23 specialist contractor. As I indicated before, I don't think there's
24 any company in the world who understands every bit of risk for
25 every job that they do. So there's an expectation that a
26 specialist contractor will bring forward special risk associated
27 with the execution of that job.

1 Q. I accept that.

2 A. Okay.

3 Q. But the fact is that whatever the contractor does, whatever
4 LMCS put forward in this matter, Paria had to determine
5 whether to accept the method statement or to reject it.

6 A. Paria had a role in terms of doing two things, according to the
7 permit to work system. We had a role to ensure that there was
8 process set up where the risks were discussed between the
9 contractor and the operator for doing that particular job, that a
10 risk assessment was developed where the knowledge of the
11 contractor and the knowledge of the operator is brought to bear
12 onto the risk assessment. Paria, obviously, would consider the
13 risk that is evident to them and they could clearly identify, and
14 there has to be an expectation that the contractor would bring
15 those specialized risks to the table.

16 Q. Yes. But do you agree that in this matter Paria accepted the
17 method statement LMCS did in respect of this work?

18 A. I won't agree with that in the manner that you are presenting the
19 question.

20 Q. Well, it's accept—it's either accept or reject?

21 A. I'll reject.

22 Q. Did Paria reject it?

23 A. I'll reject it, but I'll also want to add—

24 Q. No. The question is, did Paria reject the method statement?

25 A. I would add context to the answer. It's not as simple as
26 accepting or rejecting without understanding context.

27 **Mr. Chairman:** Well, you're perfectly entitled to add context,

1 and I'll permit you to do that, of course, and you must. But it's
2 a straightforward question, isn't it? Either you accepted the
3 method statement or you didn't—

4 **Mr. Mohammed:** Well, well—

5 **Mr. Chairman:** Just a minute.

6 **Mr. Mohammed:** Sorry.

7 **Mr. Chairman:** If you say you didn't, then I need to know
8 why you say that you didn't, when all the evidence points to the
9 fact that you did. Secondly, if you accept that you did accept
10 the method statement, and you wish to add a rider to that, then
11 you have to accept that you had accepted it, if you see what I
12 mean.

13 **Mr. Mohammed:** Yes.

14 **Mr. Chairman:** And then you get your opportunity to add the
15 rider.

16 **Mr. Mohammed:** Fair enough.

17 **Mr. Chairman:** All right. So that I get a clear note of what
18 you're saying, please answer the question first then give us your
19 rider. All right?

20 **Mr. Mohammed:** Great. So we accepted the method
21 statement. LMCS was hired to do the job. All right?

22 **Continued Examination By Mr. Maharaj SC:**

23 Q. Sorry?

24 A. We accepted the method statement. LMCS was hired to do the
25 job. That's the fact.

26 Q. Okay.

27 A. Right. However, the acceptance of the method statement and

1 other pre-activity before the job started required that a process
2 of understanding the risk that would come with this specialized
3 work would have been brought to the table. That would have
4 been the expectation on the acceptance of the method statement.
5 And I want to make that clear.

6 Q. Next question.

7 **Mr. Chairman:** Before you do. Brought to the table by
8 whom?

9 **Mr. Mohammed:** By the specialist contractor.

10 **Mr. Chairman:** Right. Thank you. Got it.

11 **Continued Examination By Mr. Maharaj SC:**

12 Q. Did Paria accept the risk assessment done by LMCS in respect
13 of these works?

14 A. The answer would be Paria would have accepted the risk
15 assessment. But I would also caveat to say that in that risk
16 assessment done by a specialist contractor, the expectation is
17 that that contractor would have brought the relevant risk to the
18 table, the risk that Paria would not have been—that would not
19 have been obvious to Paria, so that a discussion could be had,
20 and mitigations against that risk would be put in place. Let me
21 also add that there was mitigation against that risk. There were
22 three. There were two solid barriers and an administrative
23 barrier to help to manage that risk. So I just want to make sure
24 we add that, so we're very clear.

25 Q. Yeah. I'll come—we'll come to some of that.

26 A. Yeah. All right. All right.

27 Q. Okay. Did Paria accept the job Safety analysis done by LMCS

1 in respect of these works?

2 A. Paria would have accepted on the condition that the specialist
3 contractor would have you brought specialist knowledge to the
4 execution of the job.

5 Q. Okay. Did Paria also accept the emergency response plan
6 submitted by LMCS for these works?

7 A. Paria would have accepted the emergency response plans based
8 on the credible risk that was identified by the contractor as part
9 of the job. And let me explain what credible risk is. Right?
10 Credible risk is a term that we use in industry to identify the
11 risk that the contractor and the operator see as credible.
12 Without understanding the concept of a credible risk, you
13 know, it would almost be saying that—let me use a little bit of
14 an example that might be way out; should Paria have been
15 pre—we work in the sea, so would we have planned for a
16 tsunami on that day? That would not have been a credible risk.
17 This was not identified as a credible risk by the specialist
18 contractor.

19 Q. Okay. Would you agree with me that in all of the documents
20 relating to the method statement, the risk assessment, the job
21 safety analysis and the emergency response plan which Paria
22 reviewed, LMCS did not identify in those documents a Delta P
23 hazard?

24 A. I agree with that.

25 Q. And Paria accepted those documents?

26 A. Yes, Paria accepted those documents on the condition that we
27 hired a specialist contractor who would bring specialist

1 knowledge both on safety and the execution of this particular
2 type of job.

3 Q. We'll come to that. Because you are saying that and I accept
4 what you are saying.

5 A. Great.

6 Q. We'll come to that. I'll show you the permit to work rules and
7 what—

8 A. Fine.

9 Q. Okay. So Paria, in doing its review, did not also identify for
10 these works a Delta P hazard?

11 A. That is correct.

12 Q. You would accept that, from your knowledge from what you
13 know now that there was a Delta P hazard, a latent Delta P
14 hazard from the 13th February?

15 A. I would accept that we had a Delta P event, and there was a
16 hazard of Delta P with a—with this project.

17 Q. You would be familiar with the—

18 **Examination By Mr. Chairman:**

19 Q. Again, sorry. I do need to be clear.

20 A. Yes.

21 Q. Are you accepting that there was a—whether you identified it
22 or whether LMCS did or not, irrespective of that, do you accept
23 now that on the evidence there was a latent Delta P hazard from
24 the 13th February?

25 A. I would accept that there was a potential for a Delta P incident
26 or a Delta P hazard at this time; yes.

27 Q. From the 13th?

1 A. From the 13th?

2 Q. Yes. The 13th is the day upon which the first works took place
3 in relation to this piece of pipeline. In other words, did the
4 works on Berth No. 6—once the works had started there was in
5 existence a potential Delta P hazard. Do you accept that as a
6 fact now?

7 A. I would accept that as a fact with a caveat, though, if you don't
8 mind that I explain a little bit. Right?

9 Q. Whatever caveat you like.

10 A. All right. Good. The fact that we would have had differential
11 pressures because of hyperbaric chamber and the pipeline
12 would have—in hindsight would have created the potential for
13 a differential pressure—for a differential pressure condition
14 within the pipeline. I accept that.

15 Q. From the 13th?

16 A. From the time the hyperbaric chamber—

17 Q. Not before the hyperbaric chamber—

18 A. No. If the hyperbaric chamber was never pressured—
19 remember the Delta P was created only during the pressurized
20 period of the hyperbaric chamber. Once the hyperbaric was not
21 in place, then the pressure above the plugs and below the plugs
22 was the same. The pressure potential that created the DP came
23 about with the pressurization of the hyperbaric chamber.

24 Q. I understand what you're saying. So for my note—

25 A. Yes.

26 Q. —your position is this: that with the benefit of hindsight there
27 was a Delta P issue from the time that the hyperbaric chamber

1 was put in place.

2 A. And pressurized.

3 Q. And pressurized.

4 A. Yes.

5 **Mr. Chairman:** Thank you.

6 **Examination By Commissioner Wilson:**

7 Q. I'd just like to intervene here. I would like to offer you the
8 Delta P existed when the pipeline was empty, not necessarily
9 when the habitat was put on.

10 A. I, um, I don't accept it. Right? And I don't accept it because
11 both sides would have been at atmospheric pressure. And if
12 both sides were at atmospheric pressure, then where was the
13 pressure differential?

14 Q. Yeah, I understand where you're going, and I'm not going to
15 argue it, but, um, once a pipeline is dry—

16 A. Uh-huh.

17 Q. Right—you would have that differential pressure with all the
18 water wanting to rush into the pipelines, really, the basic, so
19 I'm not going to argue with it—

20 A. All right. Good, good, good.

21 Q. But pipeline empty; Delta P exists.

22 A. I don't accept it a hundred percent, but—

23 **Examination By Mr. Chairman:**

24 Q. I understand your position. I'm going to leave it to Mr.
25 Maharaj to ask the questions about [*Inaudible*] but he's going
26 there. But so that we are clear, your position is that there was a
27 latent Delta Pressure issue, but that only arose once the

1 hyperbaric chamber was placed over the open end of the pipe
2 and pressurized.

3 A. And pressurized.

4 **Mr. Chairman:** I got you. Right.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. Mr. Mohammed, I want to take you to the permit to work rules
7 of Paria.

8 A. Yeah.

9 Q. And that is in core bundle one. It starts as page 26, but I want
10 to take you to page 30. You would agree with me that the site
11 authority under the rules was Paria.

12 A. Just now, eh, leh me just get mih bearing in the document here.
13 Yes.

14 Q. You would agree with me that the site authority in respect of
15 these works was Paria?

16 A. Yes.

17 Q. Correct? If you go to 5.3: The Site Authority shall. You see it
18 says:

19 "The Site Authority shall ensure that a suitable and
20 sufficient JHA has been prepared for the job."

21 A. Site authority shall; okay. Good. Yes.

22 Q. The site authority shall ensure that a suitable and sufficient job
23 hazard analysis (JHA) has been prepared for the job.

24 A. Yes.

25 Q. Correct? You agree with that?

26 A. I agree with that.

27 Q. And a sufficient job hazard analysis for this job would include

1 stating that there was a risk of a Delta P hazard?

2 A. I agree with that.

3 Q. You agree with that.

4 A. Could I add context, though?

5 Q. Yes.

6 A. Now, I want to bring what a permit to work system is. Right?

7 A permit to work system is not simply documents that you fill

8 out. It is a process by which an operator engages the person or

9 the company that is going to execute work to develop these

10 exact documents that you speak about. The JSA—the

11 supporting necessary certificates. This is a process, Mr.

12 Maharaj. This is not somebody sitting down by the desk and

13 say Paria is going to do the JSA. In that process the specialist

14 contractor is expected to bring the specialist risk and the

15 challenges that has—to be able to execute that job.

16 Q. Could you show me in these rules where what you're saying is
17 stated?

18 A. Like everything else, Mr. Maharaj, the rules are the rules; the

19 way—the execution of process is also important to how the

20 rules are operated.

21 Q. Would you agree with me that what you're telling us not stated
22 in the rules?

23 A. I don't think it has to be stated in the rules, Mr. Maharaj. I

24 think there has to be a distinction between the rules and the way

25 the process is organized to have the benefit of the rules make

26 sense.

27 Q. Okay.

1 A. I think it is unreasonable not to think about the process.

2 Q. Okay. Look at 5.2 on page 29. You see the rules define a
3 competent person?

4 A. 5.2.

5 Q. On page 29?

6 A. On page 29. I am seeing page 14. Is it 29 at the—or, 29; yes,
7 0029.

8 Q. Yes.

9 A. Okay.

10 Q. 5.2. You see a heading “Competent Person”?

11 A. Yes.

12 Q. “A competent person in Paria’s permit to work system is
13 an individual who has the required training, knowledge,
14 experience, qualifications to identify the hazards and to
15 develop effective precautions for high hazard activities
16 such as...”

17 Et cetera, et cetera. Now, Paria decided that LMCS was a
18 competent contractor?

19 A. Yes.

20 Q. Correct?

21 A. Yes.

22 Q. A competent contractor would be expected to identify, as it
23 states here, the hazards, and develop effective precautions?

24 A. Yes.

25 Q. Would you agree with me that based on the works which were
26 done in this matter, and the documents which were submitted,
27 the hazard of Delta P was not identified and precautions for that

1 activity was not also identified?

2 A. Well, I want to deal with the two things separately.

3 Q. Okay.

4 A. The competent person. And then I want to deal with whether
5 these documents were supplied or not. I think they are two
6 different questions.

7 Q. Okay.

8 A. Right? So LMCS was identified as the competent contractor to
9 be able to execute that job. Why? Simply there was no better
10 proof of competence than having done it before. LMC had
11 safely executed this job not more than a year ago or around a
12 year ago on the same pipeline, bearing the same risk, using the
13 hyperbaric chamber, using the same barge, using most of the
14 same people. That, to me, help to define that the competent
15 person was LMCS. Now, as part of whether that competent
16 person in this job would have identified that risk, it was not
17 identified. So I don't want to confuse the two.

18 Q. Okay. But let's take what you say about a competent person.

19 A. Yes.

20 Q. And you are relying on the fact that LMCS did these works
21 before. Right?

22 A. Yes. And dah is a fact.

23 Q. Okay. Okay.

24 A. Right.

25 Q. But we do not know from the evidence that is before us, we do
26 not know the exact—what were the exact amount of liquid in
27 the pipe at the time in those works. We do not know whether

1 those works had liquid in the pipe to a certain extent that a
2 Delta P could not have occurred. So we do not know from the
3 evidence that Paria has produced what those works—even
4 though there was a hyperbaric chamber and there was a similar
5 pipeline works, we do not know the details of those works. So
6 what I'm asking you, you would agree with me that the fact that
7 a contractor would have done work like this on a pipeline using
8 a hyperbaric chamber, that in itself is not sufficient to determine
9 whether a contractor was competent, according to these rules, to
10 do a particular job?

11 A. I disagree with that.

12 Q. You disagree with that.

13 A. And let me tell you why I disagree with it. Right? I know we
14 don't have the exact facts, and I wouldn't pretend to know them
15 exactly, but what I could say in principle there are a few things
16 at play here. One, there is the use of the hyperbaric chamber.
17 Two, there is liquids in the pipeline that we needed to empty to
18 be able to get to the point in the riser where we had to cut. So
19 that pipeline also had to be drained to some extent. Three, that
20 the potential for DP would have existed in that job no
21 differently than it existed for this job, once that hyperbaric
22 chamber was pressurized. Four, very similar people worked on
23 that job who worked on this job. So there may be details that
24 are different, but broadly the job require the same skill set and
25 the same thought processes to be executed.

26 **Examination By Mr. Chairman:**

27 Q. Before you move on, can I just be clear, please. You have

1 identified four reasons. Use of the hyperbaric—reasons why
2 you say it's not a matter for Paria but a matter for the contractor
3 LMCS.

4 A. Yes.

5 Q. The use of the hyperbaric chamber being something which is
6 unique to them—

7 A. Correct.

8 Q. —the removal of liquid from the pipeline; the draining or
9 partial draining from the pipeline.

10 A. Yes.

11 Q. Something which you were responsible for.

12 A. Keep on going. I'll come back to that.

13 Q. No, no. I'd like the answer now, please.

14 A. I would say that—

15 Q. Was your company responsible for the removal of the liquid
16 from the pipeline?

17 A. I would say our company was responsible for the process and
18 the system by which the liquid would have been removed from
19 the pipeline.

20 Q. Well, I don't understand that.

21 A. All right.

22 Q. Either you're taking the oil out or you're not.

23 A. No, no, no. That's it; that's it. And I think you hit the nail on
24 the head.

25 Q. Good.

26 A. Because we are going to be able—think about it this way, right?
27 We have a pipeline that is the system that is going to be worked

1 on. The pipeline is the system that we are going to work on.

2 Q. Yes. I just want an answer, if I may, please. All of this, I
3 anticipate, is going to be gone into with some detail by Mr.
4 Maharaj.

5 A. Paria had a—

6 Q. I simply want to know—when I make this note of what you've
7 said, I need to understand it when I go back over it.

8 A. No; fair enough.

9 Q. So I need to understand. You are saying that the reason why it
10 was necessary to rely on LMCS' specialty—special abilities
11 was because of the use of the hyperbaric chamber. I get that
12 straightaway.

13 A. Right.

14 Q. The second point you raised was the removal of the liquid from
15 the pipeline or partial removal of liquid from the pipeline,
16 which, as I understand it, is your responsibility?

17 A. Paria had a role in ensuring that liquid [*Crosstalk*].

18 Q. No, no, no; not a role. Was it your responsibility to remove the
19 liquid from the pipeline or not?

20 A. Let me say yes to that.

21 Q. Thank you. Right. And then the third point you made is
22 potential from—the potential for Delta P existed—

23 A. Yes.

24 Q. —as an issue. And that, presumably, was an issue in the
25 previous job as well.

26 A. Yes.

27 Q. And was no [*Inaudible*] in that job either.

1 A. Well, we'll have to go back to check. Maybe. I am not sure. I
2 haven't looked at it. So that's something we could test.

3 Q. All the evidence suggests that is the position. So neither LMCS
4 nor you, Paria—I don't mean you personally, but Paria,
5 recognized a Delta P issue in either job.

6 A. I would say that's probably true.

7 Q. And the fourth reason you gave for it, I think it's sort of allied
8 to the others is that similar people worked on a similar job.

9 A. That's correct.

10 Q. Right. So that I understand those are the reasons why it's
11 important, you say, to rely on the expertise that they were
12 bringing to bear?

13 A. Correct.

14 **Mr. Chairman:** All right. I'll leave it to Mr. Maharaj.
15 Proceed.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. Let's go back to the permit to work rules a bit.

18 **Mr. Chairman:** Sorry, Mr. Maharaj. There was a further
19 question. I made a note of it. I didn't ask it.

20 **Examination By Mr. Chairman:**

21 Q. So who do you say the competent person under your own rules
22 was?

23 A. The competent person would have been the expert contractor
24 that they brought in or the specialist contractor.

25 Q. Not anyone employed by you?

26 A. Not anyone employed by us.

27 Q. So to name an individual, the competent person was who?

1 A. LMCS.

2 Q. As a company?

3 A. As a company.

4 Q. They were the competent person.

5 A. Yes.

6 **Mr. Chairman:** All right. Thank you very much. Thank you,
7 Mr. Maharaj.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Mr. Mohammed, I take you to page 28 of the rules; core bundle
10 one. You see the heading “Applicant”?

11 A. Yes.

12 Q. Would you agree that the applicant for these works under these
13 rules was Paria?

14 A. Yes.

15 Q. And it says: “The applicant is the person who initiates the job
16 activity by completing Section A”, et cetera, et cetera. The
17 applicant must have the necessary competence to execute the
18 job or to supervise the execution of the job.

19 A. Uh-huh.

20 Q. He shall be knowledgeable of the hazards associated with the
21 job, and the necessary controls for these hazards. He shall be
22 responsible for the job and for the safety of the people who
23 work on the job. Those were the responsibilities of Paria in
24 respect of these works.

25 A. But let us—I agree. But let us understand how the hazards are
26 identified. The applicant—the hazards are identified through
27 the process where the experience or the competent contractor

1 and the operator work together to identify the hazard. There is
2 a process by which this system works. That allows both the
3 knowledge of the competent contractor or the competent
4 person, the applicant or the operator to be able to identify the
5 hazards. It is unreasonable to have any company understand
6 every single hazard, every single day of the job. Ah mean, that
7 is just not a request that—that's just not something that makes
8 sense.

9 Q. Mr. Mohammed, there may be a process, and there probably is
10 a process. But I cannot find anything in these rules which talks
11 about these duties that I just referred to you as. Two, these
12 duties—anything that you are saying are contained in these
13 rules—and I'm going to give you the opportunity.

14 A. Go ahead, go ahead.

15 Q. What you—the explanations you are giving us today, could you
16 point to any of these rules which say so?

17 A. I can't point to it specifically in the rule book, but as I said,
18 with any rules that you have there would be a process by which
19 those rules were executed. I don't think rules stand on its own.
20 And I think dah is just a fact of how things operate. There is a
21 process by which things are executed and work is done. Now,
22 whether that should be detailed in the permit to work system—

23 Q. Well, you have told us that Paria didn't have the necessary
24 expertise for this work.

25 A. Yes.

26 Q. So would you agree then that it did not have the necessary
27 expertise to assess whether the documents submitted by LMCS

1 were adequate for the work?

2 A. I would argue that—or I would say on its own, Paria would not
3 have had the competence to be able to do that. And that's just
4 the fact. I would also say that Paria has a permit to work
5 system and a permit to work process and encourages and
6 facilitates discussion between the competent contractor and the
7 operating company whereby those risks are identified and
8 mitigated.

9 Q. So according to what you're saying then, you're saying that in
10 this matter, notwithstanding the permit to work rules and
11 whatever it says, that Paria depended upon the expertise of
12 LMCS in respect of the risk assessment, the job safety analysis,
13 because it did not have any expertise to do that, and it relied
14 entirely on LMCS' assessment?

15 A. I would say that Paria would have expected a competent
16 contractor to bring forward the specific risk that was associated
17 with execution of that scope of work.

18 Q. Okay. Let me ask you this question. As general manager on
19 reflection and what happened with these documents for these
20 works, do you regard LMCS as a competent contractor?

21 A. I mean the—

22 Q. A competent contractor for these purposes?

23 A. We hired LMCS based on their track record and the
24 competence they demonstrated to do a very similar job on the
25 very same system a short while ago. They were—hold on; give
26 me a chance. Right? We hired them based on that, and the
27 documents that they submitted.

1 Now, the root cause of the incident and why the incident
2 occurred, I think it's more than just the competence of the
3 contractor. I think there needs to be a little more understanding
4 of what was the critical factor that caused the incident to occur
5 before I answer that question. What was the critical thing that
6 changed that caused this incident to occur, and why did that
7 change take place.

8 Q. Okay.

9 **Examination By Mr. Chairman:**

10 Q. We are going to determine that in due course. But I do want to,
11 if I may, please, pursue that a little further. You see what Mr.
12 Maharaj has been asking you about is the applicant.

13 A. Yes.

14 Q. Now, the applicant is described in your own document—the
15 document that is the permit to work procedure.

16 A. Yes.

17 Q. That your firm effectively put in place.

18 A. Yes.

19 Q. And it assigns various different roles to different people and
20 different responsibilities to different people?

21 A. Correct.

22 Q. Yes. And the purpose of that is so that everybody understands
23 what their competencies are and what their responsibilities are.

24 A. Yes.

25 Q. So in paragraph 5.1 it describes who the applicant is, doesn't it?

26 A. Yes.

27 Q. It says, so that we're clear about it: The applicant is the person

1 who initiates the job activity by completing Section A of the
2 work permit. Right?

3 A. Yes.

4 Q. Or the certificate. End of—that's the first sentence. The
5 second sentence: The applicant must have the necessary
6 competence to execute the job or to supervise the execution of
7 the job. That's one sentence.

8 A. Right.

9 Q. So the applicant himself in this case was who? It was, can I, if
10 you can't remember, Mr. Houston Marjadsingh.

11 A. Yes.

12 Q. Yes. He is the person described in this rule book, if you like—
13 your rule book—as the applicant.

14 A. Yes.

15 Q. And it follows that any ordinary reading of that sentence, that
16 the applicant Mr. Marjadsingh is that he must have the
17 necessary competence to execute the job.

18 A. Yes.

19 Q. Or supervise the execution of the job.

20 A. Yes.

21 Q. Right? Now, given that is the position, is it not, in its ordinary
22 and plain reading, his responsibility to ensure that such hazards
23 as might exist are identified?

24 A. Right. And it's all right if I take you to the next statement—the
25 next sentence?

26 Q. Yes. Well, I'm going to read the next sentence. Because the
27 next sentence which is equally important—

1 A. Right.

2 Q. He shall be knowledgeable of the hazards associated with the
3 job and the necessary controls for these hazards?

4 A. Right.

5 Q. And he should be responsible for the job and safety of people
6 working on them. Now, is it your position that he only gains
7 that knowledge from the contractor?

8 A. It is my position that knowledge of the hazards in a specialist
9 type job is gained through the process of engagement with the
10 contractor who would bring specialized knowledge and
11 specialized understanding of the risk and hazards associated
12 with that job.

13 Q. I think—I understand you then. So what you're saying is his
14 knowledge is not independent of the contractor.

15 A. That is correct.

16 Q. It is linked to the contractor?

17 A. That is correct.

18 Q. So if the contractor is wrong, he's going to be wrong

19 A. If the contractor is wrong and the specialist relies on it, there is
20 a chance that he could be wrong, yes.

21 Q. Almost inevitable, if that is where he gains his knowledge from.

22 A. Yes.

23 Q. So the sentence which says the applicant must have the
24 necessary competence to execute the job, clearly he didn't—
25 your Mr. Marjadsingh is not your—he is your employee, isn't
26 he?

27 A. He's Paria through Kenson, yes.

1 Q. Yes. Kenson employed him. He was for Kenson, but Kenson
2 are employed by you to do those jobs. Right?

3 A. Yes.

4 Q. So to all intents and purposes, he's Paria. Correct?

5 A. All right. Well, I wouldn't argue that.

6 Q. Good. So he being the applicant must have the necessary—I
7 mean these are your words—must have the necessary
8 competence to execute the job. The fact is he didn't have the
9 necessary competence to execute the job, did he? He didn't.

10 A. He didn't on his own, I would say, without the experience and
11 the knowledge of the contractor would have complete
12 experience.

13 Q. I'm struggling a little. I'm being frank with you. I'm
14 struggling a little to understand this whole concept of an
15 applicant. If he doesn't have the competence to execute the job
16 himself, or to supervise that execution of that job because he
17 doesn't know how to do the job, what role does he actually do?
18 If he's just depending on the knowledge from the contractor,
19 then what is he actually doing?

20 A. So what—the practical world that we live in, in the execution of
21 work, Chairman, is as I said there is no company, no applicant
22 that will be able to identify every single risk that is associated—

23 Q. Of course not.

24 A. So what is done—and that is why we have a permit to work
25 process—is that a system of engagement with the contractor
26 and with the applicant or the company is set up to be able to
27 identify and be able to work these risks.

1 Q. Mr. Mohammed, you've said that several times in answer to
2 Mr. Maharaj and to me. What I want to understand is what is
3 his actual role. If he can't do the job and he can't supervise the
4 execution of the job because he can't do the job, I want to
5 understand what the applicant's role actually is. What is he
6 actually doing? If he's totally depending on information
7 provided by the contractor himself, what is he doing?

8 A. I never said that he was totally dependent. Right? So
9 remember there are two types of risk and there is the
10 supervision of the job. The two types of risks are the obvious
11 risk. So LMCS is coming to work on our facility.

12 Q. Yes.

13 A. We transport cargo. We use ships. We have high volumes of
14 inventory of hydrocarbons. We have all of that—

15 Q. Pause for a minute. I follow all of that.

16 A. Right.

17 Q. Why would you make the applicant in a work permit system
18 this individual, Mr. Ken—somebody from Kenson or employed
19 by Paria. Why not make the applicant the contractor?

20 A. That's a good point; very good point.

21 Q. I mean, if it's his responsibility, if you're relying on him as
22 you've been at pains to tell us and Mr. Maharaj, why are you
23 making this other person do anything?

24 A. Good point.

25 Q. I simply don't understand it. I mean, at best, would you not
26 agree it is ambiguous, to me, at any rate, reading that?

27 A. Yeah. I think it creates some ambiguity so, you know, I think

1 you made a very good point.

2 Q. I simply don't understand the point of having an applicant
3 unless that person—I could see it in other circumstances, but
4 where you are wholly reliant on the contractor being able to
5 identify the problems that might exist, why not make that
6 person the applicant?

7 A. It's a very good point, Sir.

8 **Mr. Chairman:** Okay. Thank you very much. I'm sorry, Mr.
9 Maharaj. Just needed to understand.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. Mr. Mohammed, as general manager of this company, if as you
12 said, Paria did not have the competence to do this job or to
13 supervise this job, why Paria did not employ an expert to advise
14 it in respect of these documents which were submitted by
15 LMCS as a sort of client representative, an expert, to assist
16 Paria in discharging these responsibilities?

17 A. Mr. Maharaj, there are a number of options that are available.
18 The option we choose to execute this job was to bring that
19 expertise through the contractor that we hired. I'm not saying
20 that what you're saying is not an alternative, but what Paria did,
21 and the expectation, is that that competence and that expertise
22 would have come through the contractor who had experience in
23 executing a similar job before.

24 Q. But, Mr. Mohammed, I want you to try and understand my
25 question.

26 A. I understand your question very clearly.

27 Q. If, according to the permit to work rules, the applicant here is

1 Paria, and Paria had the responsibility of ensuring that
2 necessary competence to execute the job or to supervise the
3 execution of the job, and you as the general manager know
4 Paria did not have the competence to do that, why Paria did not
5 consider having an expert to advise it in respect of the
6 documents which were submitted for these works?

7 A. That would also be a consideration, Mr. Maharaj. In this case,
8 as I explained, Paria choose to go with a contractor who had a
9 track record of executing this very same work not longer than a
10 year ago.

11 Q. But you would agree with me—I think you agreed with me
12 before, but tell me, you would agree with me that these works
13 had serious hazards which could have caused persons to be
14 injured, and in this case four persons lost their lives. So this
15 was dangerous operation. Won't you say that?

16 A. Mr. Maharaj, it's very unfortunate and regrettable that four
17 people lost their lives. I can't explain to you how it feels to be
18 sitting on this end of microphone in a situation like that. All
19 right? And I have been in this industry for all my life, since
20 1985. But I also want to add that we do dangerous work every
21 day. Today while we sit here, I have guys who are standing on
22 top of a tank that is 90 feet high doing welding. That is
23 dangerous work. I have guys who are working on 12,000 volts
24 systems. That is dangerous work. So there was no—I would
25 say this was specialist work requiring specialist risk. But we
26 conduct dangerous work every day.

27 Q. I agree with that.

1 A. Okay.

2 Q. But, Mr. Mohammed, all that I'm asking you, if you know that
3 Paria is doing dangerous works, which could cause injury to
4 persons or even death, would you not think that in the exercise
5 of your duty of care to persons, you would have an expert to
6 advise it in respect of these documents which were submitted
7 by LMCS?

8 A. Paria has adopted a system for work that includes the hiring of
9 competent contractor and a permit to work system through a
10 process where those risks are expected to be identified. I am
11 not discounting what you said, Mr. Maharaj. I mean, this is
12 very good consideration, but I am saying it is not the only
13 consideration. We have a process by which we manage those
14 risks. Now, if that's something for consideration, then that's
15 fine, but there is a process. What ah doh want to leave on the
16 table that has to be said is that there is a process that Paria has
17 in place to allow these risks to identify and a particular
18 approach. If in this case—

19 **Examination By Mr. Chairman:**

20 Q. I'm not sure that's right, Mr—you see, I'm not sure that that's
21 right. Is it? Because if we just go back to what I was asking
22 you and what Mr. Maharaj asked you before, I mean, if you
23 read paragraph 5.1 on what the applicant is supposed to do, if
24 that person is somebody from your firm or someone you
25 employ through Kenson, is not the contractor entitled to think,
26 well, if we miss something, they will pick it up. It's a two-way
27 street as you put it yourself.

1 Why would it be that you are entitled to be completely
2 reliant on the contractor, abrogating any responsibility yourself
3 for something that might be not an unreasonable risk when one
4 reads what the applicant's job responsibility is? Why wouldn't
5 you think, if you were the contractor: Well, they are taking on
6 some responsibility too. They are saying we will employ an
7 applicant who must have the necessary competence to execute
8 the job or to supervise the execution of the job, and he should
9 be knowledgeable in the hazards associated with such a job. I
10 mean, wouldn't the ordinary reader think, well, I got some
11 cover here.

12 A. As I said, the perspective is not lost, Chairman, or the
13 perspective is not lost from Mr. Maharaj.

14 Q. All right.

15 A. The perspective is not lost.

16 **Mr. Chairman:** Well, thank you for that. I think we'll take a
17 short break now. Thank you very much. We'll take 15
18 minutes.

19 **11.52 a.m.:** *Enquiry suspended.*

20 **12.06 p.m.:** *Enquiry resumed.*

21 **Mr. Chairman:** Yes, thank you. Mr. Maharaj.

22 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

23 **Continued Examination By Mr. Maharaj SC:**

24 Q. Mr. Mohammed, I want to pass on to another issue, but before I
25 do that I just want to ask you a little few more questions.

26 A. All right, yes.

27 Q. As General Manager and having regard to what you stated as

1 you have a motto of safety first culture—

2 A. Yes.

3 Q. —in respect of safety—

4 A. Yes.

5 Q. —on hindsight, would you say—or on reflection and on
6 hindsight, would you agree with me that it would have been
7 prudent for you to get an expert to advise Paria in respect of
8 these documents submitted by LMCS for these [*Inaudible*]?

9 A. Mr. Maharaj, as I said, that perspective is not lost. You know,
10 right. That's something that we would have to give deep
11 consideration to.

12 Q. All right. Let's, um, let, let me just, let me just refer you, um,
13 in respect of some of the things you told us this morning. In
14 paragraph 13 of the witness statement of Mr. Marjadsingh—

15 A. Yes.

16 Q. —he was the applicant for Paria in the work permit. At page
17 3051, 3051.

18 A. That's in this document in front of me?

19 Q. No. It's in the supplemental witness bundle. It's on the screen.

20 A. It's on the screen?

21 Q. Yes.

22 A. Okay.

23 **Mr. Chairman:** Behind Tab 79.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. I refer you to what he said at paragraph 13.

26 “It was not my job to a proof LMCS’ method statement
27 and job safety analysis nor do I have the expertise to do

1 so. Documents such as method statement and the job
2 safety analysis were approved before they were handed
3 over to me. And I recall Mr. Rampersadsingh told me
4 verbally that the documents attached to the work permit
5 were approved.”

6 So, according do what Mr. Marjadsingh, who is the applicant,
7 was saying that he really did not have the expertise and you are
8 saying that he didn't have the expertise and Paria did not have
9 the expertise.

10 A. I—yeah, I—the expertise is expected to come from the
11 competent contractor.

12 Q. Now, I want to read to you what Mr. Michael Wei said in his
13 witness statement in respect of the removal of the migration
14 barriers.

15 A. All right.

16 Q. That would be at pages 1286 and 1287.

17 A. That is in this?

18 Q. In the supplemental bundle, so—

19 **Mr. Chairman:** No.

20 **Continued Examination By Mr. Maharaj SC:**

21 Q. Sorry, witness bundle Volume IV at page 1286, 1287,
22 paragraph 85 and 86. You can read it and then I'll put to you
23 what is the summary of what he says.

24 **Mr. Chairman:** Which paragraph we're looking at?

25 **Mr. Maharaj SC:** Paragraph 85 and 86.

26 **Mr. Chairman:** Eighty-five and six.

27 **Mr. Mohammed:** Eighty-six, right?

1 **Mr. Maharaj SC:** Yes, 85 and 86.

2 **Mr. Mohammed:** You have it up on the board?

3 **Mr. Maharaj SC:** It's on the board, on the screen.

4 **Mr. Mohammed:** All right.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. Eighty-five it said:

7 "More importantly the removal of the migration barriers
8 would have caused a dangerous disturbance of the
9 atmospheric conditions inside the hyperbaric chamber
10 and the differential pressure between inside the pipe and
11 inside the chamber."

12 A. Yes.

13 Q. And then in paragraph 86:

14 "The removal of the migration barriers by LMCS also
15 opened the differential pressure between the pipeline and
16 the chamber which is likely to have caused a powerful
17 and immediate suction effect which pulled and entrapped
18 the divers inside the pipeline and ultimately caused the
19 death of the four of them."

20 A. Yes.

21 Q. So, the identification of differential pressure, Delta P hazard,
22 for these works was critical and very important in assessing the
23 risk for these works. Would you agree with me?

24 A. I agree with that, yes.

25 Q. Well let's go to another aspect of your evidence. I want to go
26 to the rescue efforts.

27 A. All right.

1 Q. Now, would you agree that when you got the information about
2 the men trapped in the, in this pipeline—

3 A. Yes.

4 Q. —and you had to liaise with the IMT, and, as General Manager
5 had to be informed and give suggestions and advice, that you
6 would have regarded that any rescue of the men from the
7 pipeline had to be done with speed and urgency?

8 A. Yes.

9 Q. As General Manager, were you aware at any time that evening,
10 after you got this information, that there was any timeline set by
11 the IMT to effect the rescue of the men? In other words, it was
12 urgent so they fix a timeline that the rescue should be done
13 within a certain—all efforts should be done to have a rescue
14 within a certain timeline?

15 A. The question is around the timeline?

16 Q. Uh-huh.

17 A. I wouldn't say that we, we established a specific timeline.
18 What I would say, though, is that we were working very—the
19 team was working very assiduously to have a rescue plan in as
20 quick time as possible and, you know, we—probably thinking
21 between, you know, within the first six to 12 hours.

22 Q. Six to 12 hours?

23 A. Yes.

24 Q. To have a rescue plan?

25 A. To be able to, to be able to, to engage in some, in some type of
26 rescue.

27 **Mr. Chairman:** Pause there, I want to make a note.

1 **Mr. Maharaj SC:** Right.

2 **Continued Examination By Mr. Maharaj SC:**

3 Q. According to your evidence, during the period of time you said
4 that a rescue had to be effected, look at from paragraph 52. I
5 have read it with interest, Mr. Mohammed, and would you
6 agree with me that when you look at paragraph—you have it
7 before you?

8 A. No.

9 Q. Your witness statement?

10 A. No, I don't have the witness statement. But I could read it off
11 the, um, off the screen.

12 **Mr. Chairman:** No, it's probably easier for you if you have it
13 in front of you because then you can look at it contextually as
14 well.

15 **Mr. Mohammed:** Okay.

16 **Mr. Chairman:** Because if you're just looking at the
17 paragraph that's on the screen, it's perhaps a little unfair on
18 you, all right? You can see what it says in the previous
19 paragraph and so on. So if you look from page 1451—

20 **Mr. Mohammed:** Yes.

21 **Mr. Chairman:**—right, you'll see paragraph 52 at the foot of
22 that page.

23 **Continued Examination By Mr. Maharaj SC:**

24 Q. Right, you'll see that you received the update from Collin and
25 Catherine?

26 A. Yes.

27 Q. And Visham Harrichan?

1 **Mr. Chairman:** This is Friday evening.

2 **Mr. Maharaj SC:** Friday evening.

3 **Continued Examination By Mr. Maharaj SC:**

4 A. Just now, eh.

5 Q. Paragraph 52. Fifty-one that is after Boodram's retrieval, right?

6 A. Yes, I have it.

7 Q. Right. At paragraph 52 you got updates?

8 A. Yes.

9 Q. Right? And then at paragraph 53 at approximately 1824 hours
10 you made a request to Collin for the TTCG to take control of
11 the site.

12 A. Right.

13 Q. So, so would you agree with me that at 6.24 p.m.—

14 A. Yeah.

15 Q. —you gave instructions to the—well you gave instructions for
16 the coast guard to take control of the site, that meant to prevent
17 diving—

18 A. Yes.

19 Q. —by persons unless—

20 A. Yes.

21 Q. —unless you approved it?

22 A. Yes.

23 Q. Correct.

24 A. So if it was approved by the incident command team and
25 supported by myself. Just to be clear.

26 Q. Okay.

27 **Mr. Chairman:** Sorry, I didn't quite—I didn't hear you.

1 Would you say that again, please?

2 **Mr. Mohammed:** Unless it was approved by the incident
3 command team and supported by myself.

4 **Examination By Mr. Chairman:**

5 Q. Approved meaning, we're dealing with whether anyone was
6 allowed to dive in the water at all, to dive in the hyperbaric
7 chamber or to dive into the pipeline? Can I be clear please
8 which of the—

9 A. Specifically speaking about diving into the pipeline.

10 Q. Pipeline. So you did not prevent anyone from diving into the
11 hyperbaric chamber?

12 A. [*Shaking head*]

13 Q. Or diving in the water generally?

14 A. No. Because I think I was very clear that diving in the pipeline
15 was there the big concern and the risk was.

16 Q. Right. So your position is, and what you meant by paragraph
17 53 at approximately 1824—

18 A. Yeah.

19 Q. —“I made the request to Collin for the coast guard to take
20 control of the site at berth number 6—

21 A. All right.

22 Q. —and he agreed to my request” and what you mean by that is,
23 is that you were preventing anyone from entering the pipeline
24 without your express authority?

25 A. And, and I think I've clarified that in 54 by saying my
26 expectation would be—

27 Q. Right.

1 A. —they would prevent divers—

2 Q. You did.

3 A. —from entering the pipeline, right?

4 Q. You do.

5 A. So I was quite clear on what my request was at the time.

6 Q. Not to enter pipeline. Just let me—[Writing] Without the IMT
7 and, and your express authority?

8 A. Yes.

9 Q. Do you mean by that that the buck stops here?

10 A. The buck stops with me, I guess, yes. I'm the General Manager
11 the company and—

12 Q. Yeah.

13 A. —I—my responsibility is to oversee the safety of both the
14 organizational rescue as I said, so yes, the buck stopped at me.

15 Q. Stops with you?

16 A. Yes.

17 Q. Thank you very much.

18 **Mr. Chairman:** Thank you, Mr. Maharaj.

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. Now, at that time you knew that the four men, you knew four
21 men were in the pipeline?

22 A. Yes. By this time, yes. I think we [*Inaudible*]

23 Q. And you knew from the information you would have gotten that
24 they were wai—that the men, based on what Boodram said, the
25 men were waiting to be rescued?

26 A. Yes, based on the knowledge coming from Boodram, yes.

27 Q. At that time, when you gave those instructions, Paria did not

1 have a rescue plan?

2 A. It was not a credible risk and a rescue plan at that time wasn't
3 fully developed, that is correct. We never anticipated that
4 people would be in the pipeline.

5 Q. So let me, let me go a little before that. Paria did not have a
6 rescue plan even before 6.24 that if anyone was sucked into the
7 pipeline it had a rescue plan for that?

8 A. Let me, let me go—let me start a little bit before that, all right?
9 So I think all these things have to be in context, Mr. Maharaj,
10 and I would ask to have some patience with me while I explain.

11 Q. No, certainly.

12 A. Okay.

13 Q. I have a lot of patience.

14 A. Okay, good. Thank you. I really appreciate that. The credible
15 risks were identified and an emergency response plan was
16 developed for the credible risk that we thought possible.
17 Remember, to get into that pipeline two physical barriers had to
18 be removed and an administrative barrier had to be broken to
19 get into that pipeline. So to believe that it was credible that we
20 would have people sucked into that pipeline and have an
21 emergency response plan prepared ahead of that incident, you
22 know, I think it's unreasonable.

23 Q. Okay. So the—

24 **Mr. Chairman:** No, I don't understand that.

25 **Examination By Mr. Chairman:**

26 Q. Are you saying that if Delta P had been identified that there
27 was—you would have not have had a credible plan to deal with

1 it?

2 A. If Delta P, if Delta P had been identified—

3 Q. Yes.

4 A. —the best option and the risk of Delta P of guys being sucked
5 into that pipeline, the option would not have—would be to have
6 a rescue plan. The option would have been to look for a
7 different method of execution for that job.

8 Q. Right. So what you're—so that I'm clear again, if Delta P had
9 been a recognized risk, you simply wouldn't have done the job?

10 A. I simply would not have done the job in the way that we
11 executed it. I would have evaluated different technical means
12 of achieving the same objective.

13 Q. All right, I got you.

14 **Mr. Chairman:** Yes. Thank you, Mr. Maharaj.

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. And I wouldn't go through everything that you said but you
17 would agree with me that your main focus was on getting
18 reports from Collin in respect of the internal conditions of the
19 pipeline?

20 A. Yes.

21 Q. With the assistance of a video footage?

22 A. Yes.

23 Q. And that, up until 4.00 a.m. on Saturday morning—

24 A. Yes.

25 Q. —some 13 hours after the men were sucked into the pipeline,
26 and some 11 hours after Christopher Boodram was rescued,
27 Paria was still getting video footage?

1 A. Again, I would say—and the answer to that is yes, but, the
2 context is this. Let's look at the activities that took place from
3 the time the guys were sucked into the pipeline. So based on
4 the emergency response plan we had with LMCS, LMCS were
5 the first responders to the—to any diving incident because they
6 had divers that were available, not Paria. Paria didn't have any
7 divers. LMCS dived into the pipeline. Paria began searches
8 into the water. Paria also called in expertise to be able to
9 analyze whether a dive was possible, including the coast guard
10 and expert diving.

11 So to say that Paria was only waiting for video footage, if you look at
12 the, at the, at the series of parallel activities that were taking
13 place, Paria was trying to bring expertise and information to
14 ensure the safety of a rescue diver who would have to enter that
15 pipeline. So to simply say that Paria was waiting for video
16 footage I think is—is not, is not totally accurate.

17 Q. I'm just telling you what the evidence shows.

18 A. Okay, good.

19 Q. Okay? The evidence shows that until 4.00 a.m. on the Saturday
20 morning, Paria was still looking for video footage. That is 11
21 hours—

22 A. Well Mr. Maharaj, the evidence also says that, you know, by
23 1.30—by, by, by, by 12.30 on Friday night that that video
24 footage were looked at by expert divers, it was also regarded by
25 the Trinidad and Tobago coast guard as a dive that they were
26 not willing to risk, so it was not just the video footage, it was
27 also the use of professional opinion to be able to guide us.

1 Q. But we have evidence that the coast guard said they were not
2 experienced in that kind of operation.

3 A. Coast guard said they weren't experienced but they were
4 brought to, to, to, to test.

5 Q. But I'll come to—

6 A. Okay.

7 Q. —I'll come, I'll come to what Paria had available from LMCS,
8 but just follow me and answer my questions, okay?

9 A. I following you.

10 Q. Right. Now, according—I just put to you the length of time.

11 A. Yes.

12 Q. Now, Mr. Piper when he gave evidence here—

13 A. Yeah.

14 Q. —he said that the timeline that he thought a rescue was
15 required—

16 A. Yeah.

17 Q. —and I'm referring to the transcript of the 15th of December,
18 2022—

19 A. Yes.

20 Q. —at page 33 lines 1 to 4—

21 A. Yes.

22 Q. —it's on the screen, he said three to five hours from when
23 Boodram came out but they simply didn't know but understand
24 they had to work quickly. So, according to Mr. Piper, from the
25 time when Boodram came out, the timeline was approximately
26 three to five hours in order to be safe to have a rescue. So, by
27 Saturday at, Saturday at 4.00 a.m.—

1 A. Uh-huh.

2 Q. —was too late, according to Mr. Piper.

3 A. That, that, that, that's a perspective but I would say that rescue
4 activities were being attempted way before that by the LMCS
5 crew who were the first responders.

6 Q. Now, at paragraph 51—

7 A. Yes.

8 Q. —you stated that you wanted to have a risk assessment—

9 A. Yes.

10 Q. —a method statement—

11 A. Yes.

12 Q. —a job hazard analysis—

13 A. Yes.

14 Q. —in respect of any rescue plan.

15 A. Yes.

16 Q. What you wanted, a written plan? A written, written method
17 statement, a written job hazard analysis and a written rescue
18 plan?

19 A. I would say, I would say, Mr. Maharaj, more like a well-
20 thought-out plan than actually a written plan. If there was some
21 writing, something to test, yes. that would have been
22 acceptable.

23 Q. Okay. But you would agree with me—

24 A. Uh-huh.

25 Q. —that up to that time—

26 A. Uh-huh.

27 Q. —up to that time Paria did not have a rescue plan?

1 A. Up till?

2 Q. Up to, let's say up to about midnight on Friday, Paria did not
3 have a rescue plan.

4 A. Up until midnight on Friday Paria continued to assess to be able
5 to develop a rescue plan.

6 Q. Assess to be able to develop. And, even up to 4.00 a.m. on
7 Saturday morning, Paria did not have a rescue plan?

8 A. No. I would say that—

9 Q. If—

10 A. Hold on, hold on. Hold on. Up until four o'clock Friday
11 morning—

12 Q. Friday?

13 A. —Paria had developed—

14 Q. You mean Saturday morning?

15 A. Saturday, Saturday morning, sorry, I'm sorry, Saturday
16 morning, Paria had evaluated or was working with a number of
17 different rescue agencies to be able to have a workable rescue
18 plan. What Paria did not have was a workable rescue plan.

19 Q. Were you aware—

20 A. Uh-huh.

21 Q. —that LMCS had a rescue plan?

22 A. I was aware that LMCS had a rescue—I wouldn't know—I
23 don't know if to call it a rescue plan. What was—I—how—let
24 me just think a little bit.

25 Q. Okay well—

26 A. LMCS—the information that we had at the time, and just bear
27 with me, I trying to recall, right, the information we had at the

1 time was there was a, a method that LMCS was suggesting. I
2 wouldn't call that a plan.

3 Q. Okay. Well let me suggest to you what it had and tell me if you
4 had that information.

5 A. Go ahead.

6 Q. Okay. I am suggesting to you that according to the evidence
7 that Andrew Farah gave—

8 A. Uh-huh.

9 Q. —he was going to enter the pipeline with scuba—

10 A. Uh-huh.

11 Q. —and that is at paragraph 26 of Farah's witness statement—

12 A. Yeah.

13 Q. —page 446—

14 A. Yeah.

15 Q. —at Volume I.

16 A. Uh-huh.

17 Q. But were you aware of that plan?

18 A. Enter the line with—yes, I believe so.

19 Q. Yeah. And that were you also aware that he could not do it
20 because Paria did not approve him doing so?

21 A. That's the part that I have a concern with. It is a fact that
22 diving continued by the LMCS crew way past the—into the
23 evening, both Mr.—

24 Q. Diving into the pipeline?

25 A. Mr., Mr.—did Mr. Kur—I believe Mr. Kurban entered the
26 pipeline, right, not Mr.—

27 Q. I'm coming to Mr. Kurban.

1 A. All right.

2 Q. I'm talking about before Mr. Kurban.

3 A. And, and, and when—Paria in—Paria never—let me repeat the
4 question so I could give it a proper answer. I trying to, I trying
5 to figure out where you're going with this.

6 Q. I'm coming to Kurban. I'm talking about Kurban I'm trying to
7 talking how the first rescue plan—

8 A. Right.

9 **Examination By Mr. Chairman:**

10 Q. Let, let's not worry about where trying to go with it. If you can
11 address your mind to the question that's being asked?

12 A. What—that's what I trying to figure out. What you asked the
13 wrong question.

14 Q. What is being asked—

15 A. Yes.

16 Q. —first of all, going back a little way from what Mr. Maharaj
17 was asking you, he asked you, were you aware that LMCS had
18 a plan?

19 A. I was aware that LMCS had a method of wanting to enter the
20 pipeline.

21 Q. Right.

22 A. I wouldn't call it plan.

23 Q. All right. Well what you're saying, if I read between the lines,
24 is that whatever they might have called it, you did not—you
25 didn't like their plan?

26 A. I didn't see it as a plan.

27 Q. Right. Fair enough. So whilst you were aware of what they

1 were proposing—

2 A. Yes.

3 Q. —you didn't see it as a, as a—

4 A. No.

5 Q. —viable plan?

6 A. No.

7 Q. Would that be fair?

8 A. That's fair. That's fair.

9 Q. Right.

10 A. Thank you. I appreciate that, Chairman.

11 Q. Okay, right? Not a viable plan, right? Then the next question
12 was that Mr.—that plan involved Mr. Farah entering the pipe
13 with scuba equipment?

14 A. Yes.

15 Q. You said you knew that?

16 A. Yes.

17 Q. And then that, um, Paria had not—you were then asked if Paria
18 had approved him doing it and you said well that's where you
19 have a problem about Paria not approving anything.

20 A. Well, well—

21 Q. And you asked—then you said—I want to go back a little and
22 you said then this: the fact is that diving continued into the
23 evening.

24 A. Yes.

25 Q. All right. Now first of all, were you aware that Mr. Farah
26 wanted to enter the pipe using scuba equipment?

27 A. Yes, I believe so yes.

1 Q. You gave an answer to that, yes.

2 A. Yes.

3 Q. Right. Were you seeking to prevent him from doing so? Listen
4 to the question.

5 A. Yes.

6 Q. Were you seeking to prevent him from doing so?

7 A. I was—I think the objective we had on our minds that evening,
8 I had on my mind that evening, is I wanted to ensure that if Mr.
9 Farah had entered that pipeline he would have been able to
10 safely achieve his objective and be able to, he himself, not be
11 caught in or be trapped in that pipeline.

12 Q. Right. I'm going to ask the question again and regard what you
13 just answered as a rider to the question. So the question is:
14 were you seeking to prevent him from going in the pipeline?

15 A. I was seeking to prevent Mr. Farah from entering the pipeline
16 with a, with a plan that in my mind didn't consider the risk of
17 going into that pipeline to execute a rescue.

18 Q. Does it follow from that that you sought at that time to prevent
19 him from going in the pipeline?

20 A. Well I think saying yes or no to that question without context is,
21 you know, I just, I just don't know how I answer that question
22 without context.

23 Q. Well you've given the context. I want to know the answer. Did
24 you seek to stop him from going in the pipeline, for perfectly
25 good reasons from what you're saying, but is that what you
26 wanted to a chief?

27 A. I'd probably say yes.

1 Q. Good. I'll write down the yes. And I've taken into account
2 what you've added by way of rider to that, all right?

3 A. So thanks. Thanks very much. I think that's important.

4 Q. No, no, of course. As I've made clear to you, Mr. Mohammed,
5 you can—it helps me if you answer the question, where it is
6 possible to do so, with a yes or no, and then you can add
7 whatever you like afterwards in order to put it into context or to
8 give it what I referred to others as a but or a however, right?

9 A. Okay.

10 Q. You're more than welcome to do that but it does help if you
11 answer the question first.

12 A. Yes.

13 Q. Do you follow?

14 A. Fair enough.

15 Q. All right.

16 **Mr. Chairman:** Thank you. Yes.

17 **Continued Examination By Mr. Maharaj SC:**

18 Q. Were you aware that there was a second attempt by LMCS to
19 implement a rescue plan by Michael Kurban going into the
20 pipeline with scuba and an umbilical?

21 A. Scuba, not umbilical.

22 Q. Scuba and an umbilical.

23 A. I wasn't aware of umbilical at the time.

24 Q. You were not aware of umbilical at the time?

25 A. Yes.

26 Q. And—but were you aware that he went as far as he could have
27 gone that—on that occasion?

1 A. That is the information that we had.

2 Q. Yes. And what is in Farah, just for the record, Farah's witness
3 statement at paragraph 36 page 448. The next question. Were
4 you aware that there was a third rescue plan when Conrad
5 Beddoe arrived with commercial equipment at 6.30 p.m.? The
6 plan was revised so that Conan Beddoe, supported by other
7 experienced divers, could enter the pipeline with commercial
8 diving equipment. That is at paragraph 40 of Andrew Farah
9 witness statement. Were you aware of that?

10 A. I haven't seen that plan.

11 Q. You haven't? It wasn't a written plan?

12 A. Where—what, what was that plan, Mr. Maharaj? Where,
13 where—how, how is—how, how—where was that plan
14 outlined?

15 Q. Well—

16 A. Let me hear what Mr. Farah plan was.

17 Q. Well, I, I, I will, I will show to—I'll point out to you that it was
18 communicated to Catherine Balkissoon who was Paria's
19 representative—

20 A. Yeah.

21 Q. —at berth 6.

22 A. What was the plan? Help me. Help me.

23 Q. That's just the plan was—

24 A. Uh-huh.

25 Q. —to send—

26 **Examination By Mr. Chairman:**

27 Q. Just a minute, just a minute, to be fair, I don't think she entirely

1 accepted that the detail of that plan was communicated to her
2 but, just one step at a time, please.

3 A. Okay.

4 Q. What's being suggested to you is that Mr. Farah had
5 communicated such a plan to Ms. Balkissoon. All right? Now
6 she does not accept that the detail of that plan was conveyed to
7 her.

8 A. All right.

9 Q. She was aware of the equipment arriving.

10 A. Right.

11 Q. She was aware of—

12 A. Correct.

13 Q. —aware of Mr. Beddoe's presence.

14 A. Correct.

15 Q. And commercial equipment.

16 A. Correct.

17 Q. But she does not accept—

18 A. Correct.

19 Q. —and my correction is if I record this wrongly but my
20 recollection is—

21 **Mr. Maharaj SC:** I think that's correct, Sir.

22 **Examination By Mr. Chairman:**

23 Q. —that she did not accept that she was given the detail, even in
24 outline, of a particular plan.

25 A. Thank you, Chairman.

26 Q. Whether that is true or not will have to be determined.

27 A. Correct.

1 Q. The question is, that's what she said, all right?

2 A. Correct.

3 Q. But Mr. Farah says he told her, and the question that Mr.
4 Maharaj is asking is whether it was ever communicated to you
5 that such a plan was in place.

6 A. No, no.

7 Q. Or that Mr. Beddoe had arrived with commercial equipment.

8 A. No clear plan for dive with commercial equipment.

9 Q. Sorry, can you lean forward just a bit?

10 A. Sorry, so I'm sorry. I'm sorry. No clear plan on the rescue
11 with commercial equipment was communicated to me.

12 Q. Right. Of any kind by anybody—

13 A. [*Shaking head*]

14 Q. —who was at that berth at that time?

15 A. No, no clear plan. We know that there were additional
16 equipment there but no clear dive plan was communicated.

17 Q. So you knew commercial equipment had arrived?

18 A. Correct.

19 Q. You knew additional divers in the shape of Mr. Beddoe, or
20 whatever their names were—

21 A. Yeah, yeah.

22 Q. —commercial divers—

23 A. Yeah, yeah.

24 Q. —had arrived?

25 A. Yes.

26 Q. You were aware of that?

27 A. Yes. They told—

1 Q. Yes.

2 A. to just—and just to add to that, Paria would have provided
3 transportation for those divers to arrive at the facility.

4 **Mr. Chairman:** Yes, all right. Thank you.

5 **Continued Examination By Mr. Maharaj SC:**

6 Q. But you don't know of a plan but you—but were you aware that
7 there were offers for them to go into the pipeline?

8 A. There were offers, yes but no plan.

9 Q. No plan?

10 **Mr. Chairman:** All right, thank you.

11 **Mr. Maharaj SC:** Sorry.

12 **Examination By Commissioner Wilson:**

13 Q. Hi, Mr. Mushtaq. Hearing that there was no defined plan, how
14 did Paria and the specialists determine that it was too dangers to
15 go in without a defined plan? What process or what risk
16 assessment tools you guys used—

17 A. All right.

18 Q. —and how did you align it to a plan if it didn't exist?

19 A. You mean for Paria to develop a plan? Let me just—just to be
20 clear?

21 Q. No, no, no. You're indicating that you was never aware of a
22 robust plan.

23 A. Yes.

24 Q. Right? But, I'm hearing that there were specialists and you
25 were taking advice from specialists.

26 A. Yes.

27 Q. The specialists gave a resounding not willing to make a rescue.

1 A. Right.

2 Q. But if there wasn't a defined plan, what did Paria, Paria officers
3 the ICT—

4 A. Uh-huh.

5 Q. —together with the specialists, how did you determine it wasn't
6 safe to go and enact a rescue or attempt a rescue if there wasn't
7 any defined plan?

8 A. The approach that, that Paria took, right, as, as you said Paria
9 didn't have the expertise so we, we, we called who we think
10 were the experts, right? We called the coast guard and we
11 called professional diving companies. Paria presented all the
12 information it had at that time to these professional companies.
13 Right? And none of these professional experienced diving
14 companies agreed that they were sufficiently comfortable to be
15 able to go into that pipeline to execute a rescue.

16 Q. I understand that. But what I'm hearing, and I really—let's go
17 back a bit.

18 A. Right.

19 Q. In the absence of a defined plan, what—again, I'm sorry to be
20 repetitive—

21 A. No, that's all right.

22 Q. —what did Paria and your specialists use to determine to, let's
23 do, say, a task risk assessment? How did you assess that it's
24 not safe to at least attempt in the absence of no defined or
25 communicated plan?

26 A. It's a good question. To the extent, to the extent that the
27 experience of the professional dive companies, as well as all the

1 information that Paria had at the time that was passed on to
2 these dive companies, including two dive companies and I
3 guess the coast guard who would have had footage of what the
4 pipeline looked like to be able to get to the point where we
5 developed that task risk assessment, both the coast guard and
6 these professional diving companies agreed that it was too risky
7 to enter the pipeline.

8 Q. Was a task risk based assessment or any risk assessment ever
9 done or documented or was this just a conversation in the ICT?

10 A. I wouldn't say it was only a conversation. I think it was a
11 conversation where the information we had at the time was
12 presented to the expert diving companies and the coast guard.

13 Q. Well then, you're saying that there was no defined plan, so
14 what was presented? My question now would turn to, what was
15 presented to the specialists to be considered?

16 A. The information that we had at the time and that is where we
17 would have expect that plan to be developed.

18 Q. Okay, understood. Thank you.

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. Okay, you have agreed with me that LMCS had experienced
21 divers who were prepared to enter the pipeline?

22 A. Experienced had—LMCS had experienced divers who were
23 prepared to enter the pipeline. I want to be careful with that
24 and say that ex—that LMCS had experienced divers. Whether
25 they had experienced divers who had entered a pipeline before
26 to do a rescue is arguable.

27 Q. Okay. All right. But you were aware that they had commercial

1 divers?

2 A. Commercial diving and experience in doing a rescue inside a
3 pipeline is two different things.

4 Q. Okay.

5 A. Yes they had commercial divers.

6 Q. Okay. And you—were you aware that support vessels arrived
7 with commercial equipment by 7.14 p.m.?

8 A. I was aware that commercial vessels arrived, yes.

9 Q. That is in Alvin Seetaram's witness statement at paragraph 10.

10 A. Yes.

11 Q. At page 396.

12 **Mr. Chairman:** Seeterram works for who?

13 **Mr. Maharaj SC:** Seeterram was the Subsea Global.

14 **Mr. Chairman:** Subsea Global.

15 **Mr. Maharaj SC:** Global, Volume I at page 395 at—
16 specifically at page 396 at paragraph 10. He was the gentleman
17 who said he arrived with the boat and he had all the necessary
18 equipment and they arrived at 7.14 p.m. to assist in a rescue by
19 providing the equipment.

20 **Mr. Mohammed:** Yeah.

21 **Mr. Chairman:** Was he, was he the one that was unable to
22 provide divers because they'd been diving all day long and they
23 couldn't then dive again—

24 **Mr. Maharaj SC:** Correct.

25 **Mr. Chairman:**—because of the potential for damage to them?

26 **Mr. Maharaj SC:** Yes.

27 **Mr. Chairman:** Thank you very much.

1 **Mr. Maharaj SC:** But he had all the commercial equipment
2 on board.

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. Were you aware of that?

5 A. I know that there was commercial equipment.

6 Q. Yes. Now, knowing that these men, that, that, that, that there
7 were divers who were prepared to go into the pipeline, did you
8 or the IMT had any discussions with them to find out about
9 their plan and to assess whether they could go and do this
10 operation?

11 A. The IMT and myself were assessing the plan through the
12 resources that we had brought in.

13 Q. Through who?

14 A. That was through the dive companies that was brought in
15 through Paria.

16 Q. Yes. Those are the dive companies?

17 A. Yes.

18 Q. And they were saying they wouldn't go?

19 A. Yes.

20 Q. It was unsafe to go?

21 A. Yes.

22 Q. But you had other divers—

23 A. Yeah.

24 Q. —who were prepared to go in. Did the IMT or you decide that
25 you wanted to talk to them to find out whether you would agree
26 with them or disagree with them?

27 A. No, we did not speak with them.

1 Q. Why?

2 A. We did not speak with them because we—no, we had, we had,
3 we had called the coast guard and we had called our specialist
4 diving companies to be able to discuss the potential for a
5 rescue. All right? Both of these companies, including the coast
6 guard, by one o'clock that night say that it was too risky—

7 Q. Okay.

8 A. —to be able to get into that pipeline to be able to do that rescue.

9 Q. Yeah, you have said that.

10 A. Right? So, so that was the approach that we had.

11 Q. Okay. So you are telling us that the IMT did not call them or
12 go to meet them to discuss this plan?

13 A. Whatever plan was discussed was discussed either in full or in
14 part at the site and those plans never reached the IMT as
15 complete plans for being able to execute a rescue of the nature
16 that was required.

17 Q. Mr. Mohammed, I'm asking you a simple question.

18 A. And I—

19 Q. You have men in the pipeline. You all are working to do a
20 rescue. You are talking to other divers, professional divers,
21 professional companies.

22 A. Yes.

23 Q. You know there are persons who are divers, they have
24 commercial equipment, they're prepared to go in the pipeline to
25 try and save the lives of the men.

26 A. Yes.

27 Q. Didn't you think it advisable or it is fair or that it should be in

1 the interest of the men in the pipeline or in the interest of Paria
2 to go and at least talk to them to find out what their plan is and
3 to assess it and to get advice on it?

4 A. Mr. Maharaj, in any event, going into that pipeline was a very
5 complex thing and I will start by saying one of the key things to
6 that was the unknown conditions that existed within that
7 pipeline. We were not clear whether, even with commercial
8 equipment, sending people in that, into that pipeline where we
9 had no idea of what had taken place in that pipeline would have
10 provided an opportunity for a safe rescue and for the rescuer, so
11 it was always part of the consideration that we had to
12 understand and assess the condition of that pipeline before that
13 decision was made.

14 Q. Mr. Mohammed, I want to pass on to another issue.

15 A. Okay.

16 **Mr. Chairman:** Before you do, I'd like to ask some questions
17 please?

18 **Mr. Maharaj SC:** Yes.

19 **Examination By Mr. Chairman:**

20 Q. Does it come to this, Mr. Mohammed, that in the absence of
21 having the detailed knowledge of the conditions in the pipeline,
22 you, Paria, ultimately you, because the buck stops with you,
23 were not prepared to countenance anyone entering that
24 pipeline?

25 A. I would say it like this. That was one of the fundamental
26 reasons for not wanting anybody to enter the pipeline.

27 Q. Were there any circumstances in which you would have

1 countenanced anyone entering into the pipeline to effect a
2 rescue without having video footage of the conditions inside
3 that pipeline?

4 A. Here's what I would say to that, Chairman. All right? Going
5 into that pipeline there were risks—

6 Q. Is it possible to give a yes or no answer and then give you your
7 rider rather than the rider first, because I'll only come back to it
8 again?

9 A. Is there any condition that we would have allowed people to go
10 in?

11 Q. I'll repeat the question.

12 A. Yes.

13 Q. Hopefully not in exactly the same terms.

14 A. Right.

15 Q. I'll do my best. Were there any circumstances in which you
16 were prepared to countenance people entering that pipeline in
17 the absence of having any video footage of what the conditions
18 were?

19 A. I'd probably say—

20 Q. It's an important question so please take your time.

21 A. No, no I, er—and it is an important question for me too. And I
22 would probably say the answer is no. I needed to have
23 information for that—

24 Q. Let me write that down and then you can add your rider.

25 A. Yeah.

26 Q. [*Writing*] Thank you, yes. You want to add something?

27 A. Yeah I, I, I think, you know, other than having some

1 information or having into that pipeline, I would have been
2 sending people into a hazardous situation that I didn't
3 understand, couldn't quantify, had no real way of determining
4 and, and, and, just to, just to add one or two things, without that
5 information, what would have been the rescue plan for the
6 rescuers? Is it possible that the rescuers could have also been
7 trapped?

8 Q. Sure.

9 A. What, what, what was the res—what would have been the
10 rescue plan for those rescuers?

11 Q. Now, all perfectly reasonable questions if I may say so, and I'm
12 certainly not criticizing you for having that in your mind. A
13 couple of things arise from that.

14 A. Go ahead.

15 Q. First of all, there is a distinction, do you agree, between sending
16 someone into a pipeline and permitting it?

17 A. Between sending someone into a pipeline—

18 Q. Yes, and ordering it?

19 A. —and permitting it.

20 Q. I'm employing you to go into that pipeline to do this job.
21 Please go in there and do it. There's a difference between that
22 and saying to somebody, "Look, if you want to go in this
23 pipeline, I think it's a bad, bad idea, I do not countenance it, I
24 do not agree but I understand your position and if you want to
25 go, go ahead." Do you see a difference between those two?

26 A. Not, not clear in my mind, Sir.

27 Q. You don't see a difference?

1 A. No, I'm not, not clear in my mind at all.

2 Q. Do you think it makes any difference that the persons who
3 might have been prepared to go into the pipeline were either
4 relatives of those that were in there and/or close associates of
5 those who were in there and/or have an understanding of the
6 hazardous nature of the work that they do and would want
7 people to do what they were prepared to do to rescue them if
8 they were in that situation?

9 A. Chairman, I have a real deep understanding for why family,
10 relatives, close friends, would have want to go into that
11 pipeline. But, in my view, whether permitting or sending
12 somebody into a situation where I had no information or
13 complete, incomplete, almost no information of what was in
14 that pipeline into a hazardous situation that I could not quantify,
15 I don't see a difference. To me I'd still be sending people into a
16 situation that I just didn't—I had no information on.

17 Q. I understand. I understand that.

18 A. And I had to protect the life of the rescuers also.

19 Q. A perfectly reasonable approach if I may say so?

20 A. Yeah.

21 Q. I'm not criticizing that. I just want to understand whether you
22 saw a difference between the two. The second part of what I
23 wanted to ask you about then is this. Is, um, you've been asked
24 already about a timeline and you've—

25 A. Yes.

26 Q. —given some evidence about that.

27 A. Yes.

1 Q. You would appreciate, wouldn't you, that the longer the period
2 of time between Mr. Boodram coming out—

3 A. Yes.

4 Q. —of that pipe and you effecting any kind of rescue—

5 A. Uh-huh.

6 Q. —was going to be affected by the likelihood of them being
7 alive—

8 A. Yes.

9 Q. —continuing to be alive. So, in other words, if there were a
10 clear plan that you could have approved—

11 A. Yeah.

12 Q. —the, minute Mr. Boodram came out of the pipe—

13 A. Yeah.

14 Q. —the likelihood of rescuing people who were still alive was
15 high, yes?

16 A. Yes. It was probably higher than more time passed, yes.

17 Q. As each hour passed by—

18 A. Yeah, h-huh.

19 Q. —that changed, didn't you?

20 A. Yes.

21 Q. You'd agree?

22 A. Yes.

23 Q. Right. And there comes a point in time, whatever that point
24 is—

25 A. Yes.

26 Q. —when, frankly, to send somebody into a pipe or to invite them
27 or permit them even—

1 A. Yeah.

2 Q. —into a pipe was going to be an unnecessary risk because the
3 likelihood is they were already dead, isn't it?

4 A. Yes.

5 Q. Right. So what I want to ask you is this. If you had, as Mr.
6 Maharaj has suggested, some sort of timeline, did you on your
7 board, a bit like the white board we have behind us here, and as
8 you had in your IMT, put up a sort of timeline and say, "Right,
9 hour one, this needs to happen. Hour two this needs to happen
10 so that you could measure the things that were being proposed
11 in the IMT against the likelihood of them still being alive?"

12 A. Chairman, I would say that, that is one element of the rescue
13 plan. Right?

14 Q. Quite an important one though isn't it?

15 A. An important element but there's also an element there's also
16 an ethical element here that had to be a considered.

17 Q. Ethical?

18 A. Yes. Because, as I said, sending people into an unknown
19 situation where the risks were unknown, all right, we never had
20 an incident before, none of these people had practice in diving
21 into pipelines in situations like this, we still at some point in
22 time was not clear on the incident, we didn't have a rescue plan
23 to rescue the rescuer, the ethical decision is how much risk do I
24 take with the life of the rescuer?

25 Q. Umm.

26 A. How do I sit and make that decision? How much risk do I take
27 with that? That is a ethical question that, that, I think, you

1 know the—I want to force the committee to think about. I think
2 it's a serious question.

3 Q. It is.

4 A. And it's not simply about time and pipeline and—there's a
5 serious ethical issue.

6 Q. Well it is, isn't it?

7 A. It is.

8 Q. It must be about time.

9 A. Well, it has to be about time, but not only that. There's a—it
10 was risky.

11 Q. Well, the risk assessment you're talking about with rescuer
12 himself must be governed by time?

13 A. And, and, and Sir and information and data.

14 Q. Yes.

15 A. To be able to be confident—

16 Q. I follow that. But one follows from the other, doesn't it? You
17 see if, if the reality is, as has been pointed out to you By Mr.
18 Maharaj, that you didn't have the information about the
19 conditions in the pipeline until the early hours of Saturday
20 morning—

21 A. Yeah.

22 Q. —frankly it was too late, wasn't it?

23 A. Well I—you know, look—

24 Q. Wasn't it?

25 A. That's, that's—

26 Q. Realistically.

27 A. That's a pos—even realistically yes.

1 Q. It was too late.

2 A. But, but I would also argue—

3 Q. So, if, if the—forgive me for interrupting you, but, I mean, I am
4 anxious to understand this from you, you see, because, if it's
5 not driven by time, you are inevitably going to be saying to
6 yourself, "Look, if I can't have details of the—of what's inside
7 that pipe by virtue of putting in a camera of one kind or another
8 until the early hours of Saturday morning, then there's not
9 going to be a rescue. Let's stop now. There's not going to be a
10 rescue. I'm not prepared to risk anybody going in that pipeline
11 six hours after Mr. Boodram has come out because the
12 likelihood is they're dead and there's no point in sending
13 anybody else to their death or potential death to try and rescue
14 them."

15 A. Well I am—and then I could argue on the opposite side, huh.

16 Q. Um, go ahead.

17 A. Without the information, it's also difficult to make that decision
18 and put the rescuer's life at risk.

19 Q. No, no well I—we're all—we're on the same page.

20 A. Okay, good, good.

21 Q. We're all exactly on the same page.

22 A. I just want to make sure we're clear.

23 Q. No, no, we are on the same page.

24 A. All right, good, good. Thank you.

25 Q. If, if the—if the assessment is—

26 A. Yeah.

27 Q. —that I can't get a camera into that pipe until the early hours of

1 the morning, then—and I'm not prepared to let anybody go in
2 the pipe until I have the—have the evidence, then there is not
3 going to be a rescue?

4 A. And, and I would say information to ensure that there's a safe
5 rescue, there's safety for the rescuer.

6 Q. Of course.

7 A. Okay.

8 Q. But, you see, it comes back to what Mr. Maharaj is saying.
9 You had commercial divers on the scene with a whole range of
10 equipment.

11 A. Yeah.

12 Q. Right? Pause for a moment.

13 A. Yeah. I'm listening.

14 Q. With a whole range of equipment, you agree with him that you
15 didn't actually ask them, well what is a credible plan? We are
16 not going to be able to get a camera in that pipe in a time that
17 makes it work, so you tell me what is the credible plan? What
18 is an alternative?

19 A. Right.

20 Q. You didn't do that?

21 A. No, I—so—but I also spoke to other commercial divers.

22 Q. Yeah, but, you see, the other commercial divers, Hull Support,
23 Offshore Technology, Mitchell's Professional Diving Service,
24 Eastern Emergency Response Services, these are all companies
25 you contacted, or your—

26 A. Yes.

27 Q. —company contacted.

1 A. Yes.

2 Q. They didn't arrive on the scene until much later.

3 A. Even in the event that we had spoken to the companies that
4 were on site, and they were there by, I think, about eight
5 o'clock or something like that, something around 1930, the
6 ethical decision would have still been there, whether we knew
7 enough about that pipeline and what was happening in that
8 pipeline to send people into that pipeline. That remained a
9 compelling question.

10 Q. All right, well we're coming back to the same position. We
11 had, I think, agreed that you ultimately were not prepared to
12 permit anyone in that pipeline without having video footage,
13 and the truth is the video footage was never available until the
14 early hours of the morning.

15 A. Having information to do—to derisk the—information to derisk
16 the dive, Chairman, video footage with information to derisk
17 the dive. That's the objective. I, I, I—you know, I don't want
18 to be—I don't want it to be trivialized.

19 Q. No, no.

20 A. Informa—please.

21 Q. Rest assured.

22 A. Information—go ahead.

23 Q. Rest assured it's not being trivialized. The only other thing I
24 would say to that is—

25 A. Yeah.

26 Q. —is that, um, as we've put to a number of other witnesses, is
27 that you had perhaps some information that was even better

1 than having a video camera. You had somebody who'd
2 actually been in there for several hours.

3 A. Chairman, and I would argue differently. Right? And I would
4 argue with—

5 Q. Oh, I see what you're saying.

6 A. —with two facts, right?

7 Q. Go ahead, yes.

8 A. So, the key fact that, that, you know, came out is that we were
9 able to get the cameras in eventually and that camera went 600
10 and—over 600 feet, right, and we were not able to see any
11 persons in that pipeline—600 feet. Right? Sending somebody
12 into that pipeline with incomplete information going in and
13 expecting to find somebody at 120 feet, 130 feet, 200 feet, a
14 family member, somebody who has emotional connection to
15 somebody what they would have done, logically? They
16 probably would have tried to go the extra mile. We had
17 information of somebody who come out of the pipeline but the
18 rescuer had to make a two-way trip. He had to go in and he had
19 to come back out. There were too many questions. Would one
20 tank have been able to do it? Would two? Would three?

21 Q. Do you know the answer to that?

22 A. I don't.

23 Q. Did you ask?

24 A. In hindsight, I'm asking. But those are—

25 Q. Yeah, well, did you ask at the time?

26 A. At the time it was more thinking through the, the ethical
27 question of how do I find myself at a place where I—we get

1 comfortable with that dive rescue and the approach we took
2 was consultation with professional dive companies.

3 Q. All right. Yes, thank you very much.

4 **Mr. Chairman:** Mr. Maharaj, I'm sorry I took so long.

5 **Mr. Maharaj SC:** That's all right.

6 **Continued Examination By Mr. Maharaj SC:**

7 Q. Consultation with professional divers but not consultation with
8 LMCS commercial divers?

9 A. Well, professional commercial divers. Both those companies
10 are commercial diving companies.

11 Q. Anyhow, let's go to the other issue. That other issue has to do
12 with the communication with the family.

13 A. Yes.

14 Q. Okay? Did Paria make arrangements to accommodate the
15 families of the men to keep them updated as to what was
16 happening?

17 A. Yes. Paria offered that the families would stay at the, er, the
18 staff complex, all right, where we—

19 Q. At what time you offered that?

20 A. That was offered I believe on Saturday, Saturday afternoon.

21 Q. Saturday afternoon. So between Friday to Saturday afternoon,
22 between Friday afternoon to Saturday afternoon, is it correct
23 that Paria did not make any arrangements to accommodate the
24 families during that period?

25 A. During Friday to Saturday afternoon, no. We'd asked LMCS if
26 they had communicate with the families. We had planned a
27 meeting for ten o'clock with the families on Saturday morning

1 and is at that meeting discussions were had with
2 accommodation and what future communications would look
3 like.

4 Q. Right. At paragraph 91 of your witness statement, you stated
5 that there was a meeting with the family members at the Pointe-
6 a-Pierre staff club was—that was a meeting arranged by Paria?

7 A. Yes.

8 Q. And that staff club was the venue for that meeting that Paria
9 fixed?

10 A. Yes.

11 Q. So, the meeting with the families at the Petrotrin Sports Club on
12 Saturday was the first time that Paria met with the families?

13 A. That is correct.

14 Q. Before this meeting, did you know where the families were
15 when they were trying to get information from Paria?

16 A. I want to make something kind a—

17 Q. But did you know—

18 A. No, no.

19 Q. —where the families—

20 A. I don't know where the families were.

21 Q. Right.

22 A. But we enquired from Mr. Ali whether he had communicated
23 with the families. Now on Friday night, if you mind if I add
24 some context here, Mr. Maharaj, Paria would not have had next
25 of kin numbers for the guys who were, who were in the
26 pipeline. All those contact information would have been with
27 the contractor, with the LMCS contractor. We wouldn't have

1 had all that information at that time and we had specifically
2 requested that the contractor or we had tested with the
3 contractor whether he had spoken to his employees and the
4 families of his employees. Paria stepped in on Saturday to be
5 able to meet the families and have that discussion with them.

6 Q. Mr. Mohammed, I accept that—

7 A. Okay.

8 Q. —what you say, as to getting information, but are you aware
9 that the families were in the car park from Friday afternoon?

10 A. No. I'm not aware of that.

11 Q. You're not aware of that?

12 A. No. From Friday afternoon?

13 Q. Yes. From Friday afternoon throughout Friday evening
14 throughout Friday night.

15 A. No.

16 **Examination By Mr. Chairman:**

17 Q. Or that they tried to get into Paria and were denied entry?

18 A. The families were denied entry into Paria?

19 Q. Yes, families denied entry from entering the Paria, um, er,
20 premises. When they came to the gate and asked to speak to
21 someone they were denied. You're aware of that?

22 A. On Friday afternoon?

23 Q. Friday afternoon, evening certainly.

24 A. I'm not aware of that, Sir.

25 **Continued Examination By Mr. Maharaj SC:**

26 Q. I want to go through the witness statement of Vanessa Kussie?

27 A. Uh-huh.

1 Q. It's at Volume IV of the witness statement bundle at page 1585.

2 A. What page, sorry?

3 Q. Fifteen eighty-five.

4 A. Fifteen eighty-five.

5 Q. It's Vanessa Kussie.

6 A. Witness statement bundle nine to 474.

7 **Mr. Chairman:** It's Tab 53.

8 Q. Volume IV.

9 A. Tab 53. Right. I have it, Tab 53, good. I've got it, thank you.

10 Yes.

11 Q. At paragraph five she referred to as getting the information.

12 Then at paragraph six.

13 "Within about—

14 A. Paragraph six.

15 Q. —half an hour or so we were there at Paria in Pointe-a-

16 Pierre. This was about 6.30 p.m. going to 7.00 p.m.

17 When I got there, I was still shaking. My Uncle Alan

18 went up to the secure tight the entrance. There were four

19 of them. He told them he understood there was an

20 accident and we came to find out. He told them that I

21 was the wife of Rishi. The reply from the security was

22 that this is the first time they are learning"—I'm sorry—

23 "they are hearing about an accident and they didn't

24 know."

25 And then she went on in her statement at paragraph seven that

26 the uncle went and asked the security, et cetera, and then at

27 paragraph eight:

1 “By this time we saw vehicles coming in and out of the
2 compound. We were right outside by the security booth
3 on the road. My uncle stopped a few vehicles and asked
4 if there was an accident inside. One person who said he
5 works for Paria said that he understood that there was an
6 accident and the guys are trapped in the pipeline but they
7 are hearing knocking, so don’t worry. He said they,
8 Paria, was helping to rescue them. I then relaxed a little
9 bit based on what I heard.

10 My uncle told him that Rishi Nagassar is my husband.
11 The man then said, ‘Don’t worry, Ma’am. We are going
12 to get them out. Help is on the way.’”

13 At paragraph nine:

14 “About, five or 10 minutes I saw a few of LMCS workers
15 going into the compound. I stop them. One of them I
16 know as Brown. He is one of the Ryan’s friends”—and
17 then, um, I’ll go to paragraph 10.

18 “I less than half an hour we saw an ambulance coming
19 out from Paria. When they were halfway through my
20 uncle Alan stopped the driver and asked the driver if
21 there was any accident that took place inside there and if
22 the ambulance was here concerning the accident. He said
23 he didn’t know exactly what was going out but he can
24 say they took out someone and took him to the San
25 Fernando Hospital. We asked him if the person they took
26 was Rishi or what was his name. He said if we want to
27 know we should go to San Fernando because they took

1 him about half an hour ago. My uncle asked if there was
2 someone in the ambulance at the time. He said no. My
3 uncle asked if he knew someone we could call. He said
4 hold on a minute and he made a few phone calls and then
5 told us that it was Christopher Boodram who came out.
6 My uncle went back to the security and said all of these
7 vehicles going in and out. This is the second time an
8 ambulance is coming out of the compound and they still
9 saying no accident and they don't know anything about it
10 and didn't have a phone number to call a secretary. He
11 said a big company like this and you don't have a
12 member, a number to give to call someone and there was
13 one to help us and give us information. One of the
14 security ladies came out and then two others came out
15 and said if we wish we can park inside the compound and
16 hold on there in the car park as there are two vehicles
17 inside there. She then said that she didn't know if they
18 are families of the victims.”

19 And then she went on at paragraph 13.

20 “We stayed in the car park until about 4.00 a.m. on the
21 26th of February. No one from Paria came out and spoke
22 to me. No one from LMCS called me and told me what
23 happened.”

24 Then she said she went home to shower, et cetera, et cetera,
25 that's on Saturday the 26th of February.

26 **Mr. Chairman:** Pause there for a moment.

27 **Mr. Maharaj:** Yes.

1 **Examination By Mr. Chairman:**

2 Q. Were you aware of any of this?

3 A. No. What, what I am aware of is that on Friday night we had
4 asked Mr. Ali if he was communicating with the families on the
5 incident, Mr. Kazim Ali. And Mr. Kazim Ali told us yes that
6 he had been communicating with the families on the incident
7 and on the updates. So this, this detail, you know, I—this is the
8 first time I'm seeing this detail.

9 Q. I mean, whether or not Mr. Ali was or was not communicating
10 with some or all of the members of the families—

11 A. I, I, I, I would not have known that.

12 Q. No.

13 A. I mean it was a straight question to Mr. Ali on that night.

14 Q. But, but, just reflecting for a moment—

15 A. Yes.

16 Q. —on what this lady is saying, um, she's at Paria attempting to
17 find out what's going on and apparently no one's telling
18 anybody anything.

19 A. Yeah.

20 Q. They're resorting to have to stopping cars—

21 A. Yeah.

22 Q. —entering and/or leaving the premises to find out what's
23 happening.

24 A. Yeah, well—

25 Q. I mean, it—on any view, not an acceptable position, is it?

26 A. No. That's not—that was not a—that's unacceptable.

27 Q. Can I ask you this?

1 A. Yeah.

2 Q. And I don't wish to short-cut—

3 A. Yeah.

4 Q. —Mr. Maharaj from relaying the narrative of this lady, but,
5 once you knew, as you did, that there was a major incident
6 which potentially involved the death of anything up to five
7 divers—

8 A. Yes

9 Q. —um, did you, as the Managing Director, make any facility
10 available at Paria to accommodate the immediate relatives and
11 to keep them informed on a step by step basis?

12 A. Those arrangements were made on Saturday morning but not on
13 Friday afternoon.

14 Q. I mean, 24 hours after the event is not an acceptable approach,
15 is it? Come on, Mr. Mohammed.

16 A. No, no, no, it's not acceptable.

17 Q. These, these are the victims' families.

18 A. And I would, I would argue—I would—I wouldn't, I wouldn't
19 argue the point—

20 Q. Right.

21 A. —Chairman.

22 Q. You agree with that?

23 A. I wouldn't argue the point. I wouldn't argue the point.

24 Q. Right. I mean—

25 A. I wouldn't argue the point.

26 Q. —something should have been done—

27 A. I wouldn't argue the point.

1 Q. —[Inaudible]

2 **Mr. Chairman:** Right. Thank you. Mr. Maharaj, is there any
3 value in putting any more of the—

4 **Mr. Maharaj SC:** No, no—

5 **Mr. Chairman:**—tragic circumstance of this to—

6 **Mr. Maharaj SC:** No I don't think so, because it's there on
7 the record.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Do you know—

10 **Mr. Chairman:** If you're moving on to a completely different
11 topic, I wondered if we should take our lunch break.

12 **Mr. Maharaj SC:** Yeah, I'll be glad and I'll just be about half
13 an hour when we come back.

14 **Mr. Chairman:** All right. Well, let's take our lunch break
15 now.

16 **Mr. Maharaj SC:** Okay.

17 **Mr. Chairman:** One way or the other, Mr. Mohammed, I can
18 give you this reassurance. I don't care what time it is but we
19 are going to conclude your evidence today. All right?

20 **Mr. Mohammed:** Oh, thank you. And I'm willing to spend
21 the day.

22 **Mr. Chairman:** Sorry?

23 **Mr. Mohammed:** I'm willing to spend the day. I'm going to
24 spend day, giving to the best of my ability.

25 **Mr. Chairman:** All right. Well, thank you very much.

26 **Mr. Mohammed:** Giving—

27 **Mr. Chairman:** We will conclude you at some point today.

1 **Mr. Peterson SC:** Mr. Chairman, we—

2 **Mr. Chairman:** Yes, of course.

3 **Mr. Peterson SC:** Sorry. Mr. Chairman, we have Mr.
4 Yearwood in the wings. Do we keep him or—

5 **Mr. Chairman:** I was going to, I was going to discuss that
6 with the team and see how much longer. I'm assuming that
7 there are going to be some questions from a number of people
8 of Mr. Mohammed this afternoon. Can I see a show of hands of
9 those who would wish to ask questions? [*Hands raised*] Do
10 you all think you're going to be more than 10, 15 minutes?
11 One, two.

12 **Mr. Pegus:** I'll be less than 10 minutes.

13 **Mr. Chairman:** Less than 10.

14 **Mr. Hosein-Shah:** Chair, I estimate to be around 30 to 45.

15 **Mr. Chairman:** Thirty to 45, if I let you. And, um—

16 **Mr. Hosein-Shah:** I will restrain to 30, Sir.

17 **Mr. Chairman:** You will be. Yes, thank you very much. And
18 what do you think Ms. Persaud Maraj?

19 **Mrs. Persaud Maraj:** Mr. Chairman, I perhaps have about 45
20 minutes. Of course, that might be reduced by the time—

21 **Mr. Chairman:** All right, well, I think we can safely say Mr.
22 Yearwood can go.

23 **Mr. Peterson SC:** Thank you very much, Sir.

24 **Mr. Chairman:** Because we're not going to get past that. So
25 what we're going to do, given that timetable, Mr. Maharaj will
26 conclude at—can we, can we resume at two o'clock? That's a
27 45-minute lunch break? Is that sufficient for everyone?

1 **Mr. Peterson SC:** Yes.

2 **Mr. Chairman:** Good. We'll resume at two o'clock, Mr.
3 Maharaj will conclude his questions, and then we will hear in
4 the order I determine and we'll get it done today, but I think
5 we'll stop here. So thank you very much indeed.

6 **1.15 p.m.:** *Enquiry suspended.*

7 **2.04 p.m.:** *Enquiry resumed.*

8 **Mr. Chairman:** Good afternoon. Mr. Maharaj.

9 **Mr. Maharaj SC:** The witness.

10 **Mr. Chairman:** And then our witness—ah, here he is.

11 [*Mr. Mushtaq Mohammed re-enters enquiry room and sits at*
12 *witness table*]

13 **Mr. Chairman:** You're still on oath, Mr. Mohammed.

14 [*Off the record discussion*]

15 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. Mr. Mohammed, I just want to ask you a few more questions in
18 respect of the families.

19 A. Right.

20 Q. Would you agree that at the time of the meeting that you had
21 with the families at the Pointe-a-Pierre Staff Club, Paria was
22 considering recovery?

23 A. I would say that recovery had been discussions that started to
24 emerge by that time but we were still moving ahead full-
25 fledged with the attempted dry rescue, in terms of getting the
26 pumps and—

27 Q. As a matter of fact, on that Saturday at around 5.15 p.m.—

1 A. Yes.

2 Q. —you and Mr. Piper made a decision to move to recovery?

3 A. Yes.

4 Q. How did you inform the family of Rishi Nagassar about the
5 decision to move to recovery?

6 A. Rishi?—

7 Q. Do you know?

8 A. —Nagassar. Yes. So Friday we informed them by—

9 Q. I'm talking about Rishi Nagassar.

10 A. Rishi Nagassar?

11 Q. Yeah, the family of Rishi Nagassar.

12 A. We informed them through a WhatsApp call.

13 Q. WhatsApp?

14 A. Yes.

15 Q. And how did you inform the family of Yusuf Henry?

16 A. Same, same method.

17 Q. And the family of Faizal Kurban?

18 A. Same method.

19 Q. I'm suggesting to you that the Rishi Nagassar's family were
20 informed of the decision to move to recovery—

21 A. Uh-huh.

22 Q. —at Paria's media conference.

23 A. No.

24 Q. Which was on Sunday.

25 A. No. So, just let me be—no and I want to provide an
26 explanation, right?

27 Q. Yeah, okay.

1 A. When we met on Saturday, the families were there. Right? We
2 asked the families what would be the best method to continue
3 the communications if they opted not to stay at the complex.

4 **Mr. Chairman:** Can you reach a little closer to the mike
5 please?

6 **Mr. Mohammed:** Sorry. I'm sorry, yes.

7 **Continued Examination By Mr. Maharaj SC:**

8 A. And they said that WhatsApp, WhatsApp calls would work best
9 for them, right? On Saturday afternoon, after we made the
10 decision to move from rescue to recovery, we had a discussion
11 with Mr. Ali and the plan on Saturday afternoon was to go to
12 visit each one of those families on Saturday afternoon at their
13 homes to be able to communicate that message. Mr. Ali agreed
14 that we go to his daughter-in-law's home firstly to be able to
15 deliver that message. And myself, Mr. Ali and one or two other
16 people on my team went to the home of Mr. Ali's daughter-in-
17 law to be able to deliver that message. The plan was for myself
18 and Mr. Ali to continue to visit the rest of the families that
19 afternoon.

20 Mr. Ali said that he would, you know, he wasn't going to visit the rest
21 of the families and I said, okay, well, Mr. Ali not going, we
22 have to find other ways to communicate. On the way back to
23 the Paria's office at Pointe-a-Pierre, we were informed that the
24 families were waiting, were, um, were at the, were at the car
25 park. When I got to the office on Saturday evening, we called
26 all the families individually and asked them to come into the
27 office so we could have a discussion with them on what was the

1 next move with regard to the incident. Families refused to enter
2 the office and that is where we opted for the WhatsApp call
3 using the numbers that was provided for us by those families as
4 the means of contact.

5 Q. Okay. At paragraph 10 of your witness statement, you said that
6 in February 2022 Paria employed 95 persons and retained 183
7 Kenson employees.

8 A. Yes.

9 Q. So, in February 2022, Kenson employees almost doubled the
10 amount of Paria employees?

11 A. As of that date, eh.

12 Q. Yes.

13 A. As of that date, yes.

14 Q. Right. Yeah. And, um, and at paragraph 13 you explained that
15 Paria deployed Kenson employees primarily in Paria's HSEQ
16 maintenance and operations department—

17 A. Yes.

18 Q. —where they were most required and as subordinates to Paria
19 officials?

20 A. Yes.

21 Q. That's correct?

22 A. That's correct.

23 Q. Now, you have been saying today that—and in your evidence,
24 that because LMCS did work for Petrotrin on several occasions,
25 similar work, that was an influencing factor that Paria regarded
26 them as being a competent contractor?

27 A. I want to be careful about what I said. For this particular job, I

1 said that, that LMCS did a similar job in 2020. Now they
2 have—and LMCS also had a track record of working with
3 Petrotrin, but I want to be careful that we don't mix up two
4 things.

5 Q. Okay but in—am I correct that in your witness statement—

6 A. Yes, yes, there—I have listed a number of jobs that they would
7 have worked on at Petrotrin.

8 Q. Yeah, yeah and both in respect of the work that was done for
9 Paria—

10 A. Correct.

11 Q. —and in respect of the work that was done for Petrotrin?

12 A. Yes, yes but I want to make that distinction also, yes.

13 Q. Okay. But you would agree with me—

14 A. Uh-huh.

15 Q. —that the, the, the institutional knowledge—

16 A. Uh-huh.

17 Q. —which the staff of Paria had—

18 A. Yes.

19 Q. —at the time in February 22—

20 A. Yes.

21 Q. —2022—

22 A. Yeah.

23 Q. —in respect of these kind of works—

24 A. Uh-huh.

25 Q. —were not comparable with the institutional knowledge that
26 the staff that Petrotrin had?

27 A. Well that is arguable because 80 per cent of the Kenson staff

1 were past Petrotrin employees. Right? There is a very high
2 percentage—

3 Q. At a—but of lower level workers?

4 A. I wouldn't say of lower levels. They occupy roles that are
5 fairly—they performed roles that are fairly senior in the
6 organization. In addition to that, the people at senior roles in
7 Paria are also Heritage/Petrotrin.

8 Q. But, am I correct that you did not work at Petrotrin?

9 A. I did not work at Petrotrin.

10 Q. As a matter of fact, your first appointment is with Paria?

11 A. That is correct.

12 Q. Correct. And what year was that?

13 A. Twenty nineteen.

14 Q. Twenty nineteen?

15 A. Yes.

16 Q. And prior to Paria what was your—what, what, what, what was
17 your occupation, if I may ask?

18 A. Prior to Paria I worked at Heritage for a short time. Before that
19 I was CEO at National Quarries and for all the years before that
20 I worked 24 years at BP and seven years at Methanex.

21 Q. Okay. Now, do you know a man called Imtiaz Ali who used to
22 work at Petrotrin?

23 A. Imtiaz Ali. Are you referring to Mr.—

24 Q. Kazim Ali's—

25 A. —Kazim Ali brother?

26 Q. —brother, yes.

27 A. I know of him, yes.

1 Q. And do you know he—well he was a former employee of
2 Petrotrin?

3 A. Yes.

4 Q. And, um, would you—according to him in his witness
5 statement he said he worked for Petrotrin for over 37 years?
6 Would you—

7 A. Well, probably. I wouldn't know the facts around that.

8 Q. You wouldn't know that?

9 A. No.

10 Q. But he retired in February 2018?

11 A. Yeah.

12 Q. And he was Petrotrin's Senior Manager Strategy and Business
13 Development and Advisor to Arlene Chow. Are you aware of
14 that?

15 A. To Arlene Chow?

16 Q. Uh-huh. Petrotrin's then CEO.

17 A. Arlene Chow?

18 Q. Yes.

19 A. He was sen—to Arl—I don't know that.

20 Q. You didn't know that?

21 A. No.

22 Q. Okay.

23 A. To Arlene Chow you're saying, eh? I, I—

24 Q. Yeah, yeah.

25 A. Okay. Possibly.

26 Q. Okay. Now, in his witness statement, which is at page 2926 of
27 the supplemental witness bundle—

1 A. Is it tabbed?

2 **Mr. Chairman:** Sixty-six.

3 **Mr. Mohammed:** Sixty-six. Okay, good. Thank you.

4 **Mr. Maharaj SC:** Paragraphs 17 and 18.

5 **Mr. Chairman:** Which paragraphs?

6 **Mr. Maharaj SC:** Paragraphs 17 and 18.

7 **Mr. Chairman:** Seventeen and 18.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Before I take you to—go ahead, just find it for me.

10 A. Okay.

11 Q. Paragraphs 17 and 18

12 A. Seventeen and 18?

13 Q. Yeah, one seven and one eight.

14 A. Okay, good.

15 Q. Um, are you aware that he accompanied Kazim Ali Sr. to
16 Paria's meeting on Sunday morning to discuss LMCS' rescue
17 plans?

18 A. Yes. Yes.

19 Q. Yes. Now, I want you to look at his paragraph 17 and 18—

20 A. Right.

21 Q. —which is at page 2929. And he was saying—I should start at
22 paragraph 16.

23 A. Paragraph 16.

24 Q. At 2928.

25 "It was now about midday and it was clear to me that
26 Paria was very reluctant to convene a rescue. After more
27 discussions, Paria said they wanted a written proposal of

1 the rescue plan that they could share with their subject
2 matter experts.”

3 And I want to refer you to this.

4 “All of this could have been done on Saturday the 26th of
5 February or even on Friday the 25th of February when
6 the rescue plan was developed so that Paria could have
7 come to a quick decision. Paria had the responsibility
8 and authority to assemble whatever resources they
9 needed urgently to review LMCS’ rescue plan. They did
10 nothing. Paria was presented with a viable rescue plan,
11 developed by LMCS and Conan Beddoe who was an
12 experienced and competent diver who was prepared to
13 enter the pipe. Rather than responding decisively Paria
14 did nothing. They vacillated even though lives were
15 imperilled.”

16 Would you agree with those statements or you disagree?

17 A. No. I disagree with those statements.

18 Q. Okay.

19 A. Let me tell you, I disagree with it in part. The fact is that we
20 did ask LMCS to come back with a plan on, on Sunday, and the
21 fact is LMCS—

22 **Examination By Mr. Chairman:**

23 Q. Which day, sorry?

24 A. On Sunday.

25 Q. On Sunday?

26 A. Yes, with a written plan. Right? That was when the request
27 was made.

1 Q. Sorry, I just want to be clear. You asked LMCS to provide you
2 with a written plan on Sunday?

3 A. Yes.

4 Q. Had you asked them to provide one before then?

5 A. We were always asking for a plan, Chairman. This was, this
6 was LMCS' second attempt at providing a plan that makes
7 sense.

8 Q. Right.

9 A. Not the first.

10 Q. All right.

11 A. Or not—maybe not the second maybe the third or fourth plan.

12 Q. It's important to me this.

13 A. Yes.

14 Q. So I want to understand. You're saying that you asked LMCS
15 to provide a written plan on Sunday?

16 A. Let me go back.

17 Q. You said—just a minute.

18 A. Yeah.

19 Q. You then said that was not the first one or that the—

20 A. Yes.

21 Q. —this was another plan.

22 A. Let me, let me go back.

23 Q. When was the first plan that you got from LMCS?

24 A. Well, outside of a few words, I have no plan—there's no—is
25 there a plan in evidence that I have not seen that LMCS has
26 presented?

27 Q. Right.

1 A. Is there a written plan or something I could say that LMCS
2 presented this plan? And in the absence of have—not having a
3 plan, written, articulated, drawn or any other imaginary, outside
4 of a few words, and a request to dive, the obvious thing to do
5 was—be to ask for a plan.

6 Q. Yes.

7 A. I didn't—I don't know how—

8 Q. All I'm asking—there's no need to get that—most of—I just
9 want to understand.

10 A. Yeah.

11 Q. When did you first ask LMCS to provide you with a plan?

12 A. I think from Friday afternoon we were asking for a plan.

13 Q. Friday afternoon?

14 A. Yes.

15 Q. Yeah. And who asked, please?

16 A. I guess that that would have been Collin at some stage or
17 Catherine at some stage. I personally didn't ask for a specific
18 plan until on Sunday.

19 Q. But is it your understanding and therefore your evidence—

20 A. It is my understanding, yes.

21 Q. Is it your understanding and therefore your evidence that Paria
22 or someone at Paria asked LMCS for a plan on—

23 A. That is my, that is—

24 Q. —on Friday afternoon?

25 A. That is my understanding.

26 Q. Yeah. All right, thank you. LMCS asked—so LMCS were
27 asked for a plan on Friday afternoon by Paria and you're not

1 able to say who it was that asked that, whether it's Ms.
2 Balkissoon—

3 A. It would either be Collin, Collin or Catherine would be one of
4 the—

5 Q. One or the other?

6 A. One or the other, all right?

7 Q. Either Collin Piper or Catherine Balkissoon. And is it your
8 case then that you were not provided with such a plan?

9 A. No plan ever reached to me—

10 Q. “No plan ever reached me.”

11 A. —from, from LMCS written—there were a few verbal
12 mutterings but no real plan.

13 Q. “No, no plan reached IMT or me”, is that right?

14 A. So far as I know that, that, that—those are the facts.

15 Q. And, and you said earlier not written, articulated or drawn
16 outside of a few words?

17 A. Yes.

18 Q. All right. Thank you very much.

19 **Mr. Chairman:** Yes, thank you, Mr. Maharaj. Sorry, I, I
20 interrupted you. You were asking—I've finished, thank you.

21 **Mr. Maharaj SC:** Much obliged.

22 **Mr. Chairman:** You were asking him whether or not he asked
23 for a plan.

24 **Mr. Maharaj SC:** Yes, there's one more thing I want to put to
25 him from what Mr. Ali said in his—

26 **Mr. Mohammed:** Yes.

27 **Mr. Maharaj SC:**—witness statement.

1 **Continued Examination By Mr. Maharaj SC:**

2 Q. Look at paragraph 28.

3 A. Paragraph 28?

4 Q. Twenty-eight at page 2930. He said:

5 "From my experience Paria did not treat the divers and
6 their families fairly in that Paria did not act quickly and
7 decisively when presented with a viable rescue plan with
8 a competent and experienced diver who was prepared to
9 undertake the rescue. In my experience, Petrotrin would
10 have never acted like Paria did."

11 You do not agree with that?

12 A. That's an opinion.

13 Q. Yeah, but you do not agree with that?

14 A. No.

15 Q. Okay.

16 **Mr. Maharaj SC:** I have no further questions for this witness.

17 **Mr. Chairman:** Thank you very much. Right. So some hands
18 went up. Do I take it that Mr. Hosein-Shah—have I got your
19 name right?

20 **Mr. Hosein-Shah:** Yes, Chair.

21 **Mr. Chairman:** I have? Well, that's a first. I can't hear
22 you—yes it's me because and/or Mr. Maharaj, right. Mr.
23 Hosein-Shah, yes, you have some questions, all right.

24 **Mr. Hosein-Shah:** Yes I do, Chair.

25 **Mr. Chairman:** Can I invite you to restrain yourself to such
26 that you're concluded within the half an hour please?

27 **Mr. Hosein-Shah:** Yes. I've been trying.

1 **Mr. Mohammed:** Chairman, is it okay if I face Mr. Shah?

2 **Mr. Chairman:** Entirely appropriate for you to face him.

3 **Mr. Mohammed:** Thank you.

4 **Mr. Chairman:** It's not a problem.

5 **Cross-Examination By Mr. Hosein-Shah:**

6 Q. Good afternoon, Mr. Mohammed.

7 A. Good afternoon, Sir.

8 Q. My name is Asif Hosein-Shah and I represent the Seamen and
9 Waterfront Workers Trade Union. I have a few questions for
10 you. I'm going to be as short as possible. Hopefully we can
11 have a good rapport together.

12 A. For sure.

13 Q. Now you are the head of the Management Committee at Paria?

14 A. Yes, yes.

15 Q. And in answer to certain questions from Mr. Maharaj—

16 A. Yes.

17 Q. —you said you did not find it necessary to seek expert
18 assistance in evaluating the tender of LMCS. I believe your
19 words were that you trusted their expert competence as a
20 contractor to bring forward the specific risks.

21 A. Yes.

22 Q. And you also said that you trusted them to bring their
23 expertise—to bring all the expertise through the contractor?

24 A. I want to be careful.

25 Q. Yes.

26 A. I not sure I said trusted. What I said was based on their track
27 record of having done the job safely a year—about a year ago.

1 So I don't want to bring the word trust into it because—you run
2 a business, right, so we work with track record, competence,
3 display of objectives, achieving objectives, so I just want to be
4 clear—

5 Q. Yes.

6 A. —make sure that that—

7 Q. Well, let me be—

8 A. —you're not paraphrasing me wrongly.

9 Q. Yeah. Let me be fair to you.

10 A. Right.

11 Q. So I'm specifically talking about the evaluation of LMCS'
12 tender.

13 A. Okay.

14 Q. Specifically the safety, the job safety analysis—

15 A. Yes.

16 Q. —and the emergency response plan.

17 A. Yes.

18 Q. And you said that you trust—well not trusted but you relied
19 upon—

20 A. Correct.

21 Q. —their competence?

22 A. Yes.

23 Q. Yeah? Now you also said that there are rules at Paria, and I
24 believe Mr. Maharaj took you through some of them, and that
25 there's also the practical application of those rules.

26 A. Yeah.

27 Q. Now I want to take you to the witness statement bundle—

1 A. Uh-huh.

2 Q. —this is the invitation to tender, at page 560.

3 A. Which, which, which one?

4 **Mr. Chairman:** You may not have it. It's core bundle
5 Volume—it's going to be provided to you. Maybe we'll clear
6 away some of the—that you have there.

7 **Mr. Mohammed:** Thank you.

8 **Mr. Chairman:** Keep your witness statement.

9 **Mr. Mohammed:** Yes.

10 **Mr. Chairman:** This is the scope of work that you're referring
11 to is it, Mr. Hosein-Shah?

12 **Mr. Hosein-Shah:** Yes. So within—

13 **Mr. Chairman:** Yes. Just a moment, just a moment, Mr.
14 Hosein-Shah. Let's just give an opportunity for some space to
15 be cleared.

16 **Mr. Hosein-Shah:** Sure.

17 **Mr. Chairman:** Right, lovely. Thank you very much. Yes.
18 Your question.

19 **Continued Cross-Examination By Hosein-Shah:**

20 Q. Yes so fair going to heading 6.3—

21 A. Six point three?

22 Q. —which deals with safety. And in particular we're looking at
23 3.3.8 and it reads: "The contractor". You're with me?

24 A. Just now; 6.3.8, yes.

25 Q. "The contractor is responsible for provision of the job
26 safety method statement, job hazard analysis and risk
27 assessment which will be reviewed by Paria's

1 representatives.”

2 So you agree that’s the rule?

3 A. That’s the rule.

4 Q. But that’s not necessarily how it was applied in that Paria did
5 not necessarily conduct a detailed review in trusting LMCS’
6 competence in drafting those documents?

7 A. I lost somewhere. Help me, sorry, if you could repeat, sorry?

8 Q. Sure.

9 A. I got lost somewhere.

10 Q. Sure. So the end of that clause—

11 A. Right.

12 Q. —ends with those documents that you see there listed—

13 A. Yes.

14 Q. —will be reviewed by Paria’s representatives?

15 A. Yes.

16 Q. And in terms of the review, that review you say did not include
17 any expert advice, correct?

18 A. What, what—all right give me a little—

19 Q. In terms of identifying the hazards, Sir.

20 A. Right. So, as I said, the way, the way we built the system or we
21 fashioned it, is that we would go for the contractor who would
22 bring specialized services to the facility. The development in
23 particular, the method statement would belong to the contractor
24 because they were the specialists and they would know what
25 are the job steps for executing that job.

26 Q. Right.

27 A. However, the risk assessment and the hazard analysis would be

1 joint between the Paria team and the contract team but at the,
2 at—remember at a—at the point of procurement, at the point of
3 the tenders committee, the full development of the risk analysis
4 and the hazard assessment is done once the contractor is
5 selected, they do a site visit, that's a process that continues to
6 run, right?

7 Q. Yes. But you, you trusted LMCS to identify all the hazards in
8 that—

9 A. We, we believe, we believe, based on the track record that
10 LMCS had that they were competent enough to identify the
11 hazards, yes.

12 Q. Good.

13 A. They had done the job, a very similar job not too long ago.

14 Q. Correct. So Paria did not undertake to identify the hazards, is
15 that correct?

16 A. Para did not undertake—Paria together, working with the
17 contractor over the period of the development of the project,
18 would have engaged with contractor—

19 Q. No I'm not talking about the tender, Sir.

20 A. Would have engaged—with the tender?

21 Q. Yeah. LMCS would not, would not be involved in evaluating
22 the tender. That's Paria.

23 A. But then the method statement, et cetera, would come fully
24 developed by the contractor at the tender stage, so Paria
25 wouldn't have a role at the tender stage.

26 Q. Correct. So you're saying that in evaluating the risk identified
27 by LMCS, Paria would not have done its own independent or it

1 would not have tried to identify those risks on its own accord?

2 A. In the method statement that was provided at the tender is what
3 you're saying?

4 Q. Well, the job safety analysis, the emergency response plan, all
5 the safety documents, Sir. The risk assessment.

6 A. At the, at the tender stage, at the tender stage, LMCS would
7 have presented Paria with a set of documents that would have
8 formed part of the package. Paria would have assessed those
9 documents based on what the pre-qualification was for that, for
10 that tender. I can't remember exactly what the pre-qualification
11 was, and that would be the assessment done at the tender stage.

12 Q. Correct.

13 A. Right?

14 Q. So that they would not have—and we're on the same page
15 here—

16 A. Okay.

17 Q. —so they would not have identified or sought to identify
18 independently the risks associated with the job? They would
19 have trusted the competence of LMCS. Is that true?

20 A. I would say that Paria would have assessed the package
21 presented to it at the tenders committee based, based on the
22 criteria that was set out by Paria.

23 Q. I see, based on the criteria?

24 A. Yes.

25 Q. Now, I want to take you to the witness statement of Mr.
26 Balkaran at page 1432 of the witness statement bundle.

27 A. This is the same witness statement bundle I'm looking at here?

1 Q. I'm not quite sure.

2 A. Is it tabbed?

3 **Mr. Chairman:** What page number are you asking for?

4 **Mr. Hosein-Shah:** One four three two.

5 **Mr. Mohammed:** Is it, is it tabbed?

6 **Mr. Chairman:** It's Volume IV of the witness statement
7 bundle. You probably had that removed. No it should be in the
8 same bundle as the one you're in, yes.

9 **Mr. Mohammed:** I see Volume II—

10 **Mr. Chairman:** One four three—

11 **Mr. Mohammed:** Nah this goes up to one zero two seven.

12 **Mr. Hosein-Shah:** Sorry? One four three two.

13 **Mr. Mohammed:** Nah this wouldn't be it. This has one zero
14 two seven.

15 **Mr. Hosein-Shah:** The tab should be 43, I believe.

16 **Mr. Mohammed:** The tab should be 43. No.

17 **Mr. Hosein-Shah:** Sorry, 42.

18 **Mr. Chairman:** No, I think 42 is what you mean, yes. It's the
19 statement, it's the statement immediately before your own in, in
20 your bundle. In the bundle.

21 **Mr. Mohammed:** Forty-three. Right.

22 **Mr. Hosein-Shah:** And we're looking at paragraph 28.

23 **Mr. Mohammed:** Twenty-eight? "Upon receipt"?

24 **Mr. Hosein-Shah:** Yes.

25 **Continued Cross-Examination By Mr. Hosein-Shah:**

26 Q. Now you see among other thing in that paragraph—

27 A. Uh-huh.

1 Q. —Mr. Balkaran in talking about evaluating the tender says that
2 he evaluated the suitability of the documents provided by
3 LMCS?

4 A. Uh-huh.

5 Q. You see that?

6 A. Yeah.

7 Q. Right. And now I want to take you to Mr. Archbald's witness
8 statement at page 1317 of the witness statement bundle.

9 A. One three one seven.

10 Q. Yes,

11 A. Is it tabbed?

12 Q. My version is tabbed. I'll try to see if I could tell you what—
13 36—

14 A. Thirty-six.

15 Q. —on my version.

16 A. Good.

17 **Mr. Chairman:** I'm sorry, you've lost me. I need to, um—

18 **Mr. Hosein-Shah:** Sure.

19 **Mr. Chairman:** I'm just looking at paragraph 28 of Mr.
20 Balkaran's statement, I've read that. Where else to do you
21 want me to go?

22 **Mr. Hosein-Shah:** Page 1317, the witness statement of
23 Randolph Archbald. Almost said Archbold.

24 **Mr. Mohammed:** Yes, 1317 I'm here.

25 **Continued Cross-Examination By Mr. Hosein-Shah:**

26 Q. Yes, so you're looking at paragraph 17.

27 A. Paragraph 17, yeah.

1 Q. Yes. So in assessing the tender submission by LMCS—

2 A. Uh-huh.

3 Q. —this is what Mr. Archbald says.

4 “In the instant case the department assessed the HSE
5 documents namely the ERP, risk assessment, job hazard
6 analysis, site specific safety plan, et cetera, which were
7 submitted by LMCS to Paria in relation to the 36 Sealine
8 riser repairs at berth number 6.”

9 A. Uh-huh.

10 Q. And then we go to the next page, paragraph 18. The
11 department’s objectives—

12 A. Hold on, hold on, hold on paragraph 18—17, 18 okay, yeah.

13 Q. With me?

14 A. Yes.

15 Q. “The department’s objectives in assessing said
16 documents were to ensure the following.”

17 So you see there you’re saying that they were assessing the
18 documents, yes? Before we go further.

19 A. Go ahead.

20 Q. “(1) That LMCS captured and properly identified all
21 credible scenarios, potential risks and hazards.”

22 You see that?

23 A. Yes.

24 Q. But they did not have the competence to do that?

25 A. That, that Paria’s what?

26 Q. Paria did not have the competence—from what you said earlier
27 to Mr. Maharaj—

1 A. Uh-huh.

2 Q. —they did not have the competence to ensure that LMCS
3 captured and properly identified all credible scenarios, potential
4 risks and hazards. Is that correct?

5 A. Just now.

6 Q. Sorry?

7 A. No I'm just reading it over one more time. [*Perusing*
8 *documents*] I mean, I just have to go back to the, to the process
9 that we worked, right? The credible scenario so that's specific
10 work, we would have—

11 Q. No, no we're looking at what Mr. Archibald said.

12 A. Uh-huh.

13 Q. I don't want you to put words in his mouth.

14 A. Uh-huh. He is saying he assessed those documents and in
15 assessing those documents first—

16 A. Uh-huh.

17 Q. —he tried to ensure, or the department, rather, tried to ensure
18 that LMCS captured and properly identified all credible
19 scenarios, potential risks and hazards, and my question to you is
20 they were not—your, your evidence is that they were not
21 competent to do so.

22 A. All credible risk scenarios. Well I don't think that the—the
23 issue we're talking about was a credible scenario that either us
24 or LMCS identified.

25 Q. But did they have the competence, Sir?

26 A. I think the credible scenarios is that the scenarios that we would
27 have all kind a spoken about earlier in the discussion. It was

1 not, it was not seen as a credible scenario by either us or
2 LMCS.

3 **Examination By Mr. Chairman:**

4 Q. Well, it wasn't seen at all, was it?

5 A. It wasn't seen at all.

6 Q. No, right. So the question of credibility doesn't come into it,
7 really? It wasn't spotted at all?

8 A. It wasn't spotted at all.

9 Q. That, with the benefit of hindsight—

10 A. Yes.

11 Q. —was a mistake—

12 A. Yes, it wasn't spotted.

13 Q. —on anyone's view—

14 A. Right.

15 Q. —that it was not identified as a credible risk?

16 A. It was not.

17 Q. And the only question that Mr. Hosein-Shah is asking you is,
18 um, as a matter of fact—

19 A. Uh-huh.

20 Q. —your company didn't, through its HSE department, did not
21 have the competence to have identified a credible risk outside
22 of what LMCS themselves had identified, they didn't, did they?

23 A. We didn't, we didn't identify a DP, yes, so I can't disagree.

24 Q. No. But if this is to have value, if what Mr. Archbald says is to
25 have value, the fact is they didn't have the competence to look
26 at LMCS' assessment of risk and say, "You're wrong. You've
27 missed something important." You didn't have the competence

1 to do that, did you?

2 A. I can't argue against that, okay.

3 Q. Sorry?

4 A. Yeah, yeah.

5 Q. That's right isn't it?

6 A. I will have to accept.

7 **Mr. Chairman:** All right. Does that identify your—

8 **Mr. Hosein-Shah:** Yes, yes, Chair, thank you.

9 **Continued Cross-Examination By Mr. Hosein-Shah:**

10 Q. And then he also says he had to ensure, the department had to
11 ensure that LMCS properly assessed those credible scenarios,
12 risks and hazards. But again, they did not have the competence
13 to do so, yes?

14 A. I can't argue against it.

15 Q. And then we don't necessarily need to go through the rest
16 because those are the two main ones.

17 A. Okay.

18 Q. I'm trying to save some time.

19 A. Okay.

20 Q. But you'll see paragraph 19 says that, upon that assessment
21 they found that the documents were satisfactory but they could
22 not, correct?

23 A. Based on the logic of the question, I can't argue against it.

24 Q. Thank you. Now do you think, during that assessment Mr.
25 Archbald talks about, that expert assistance or input would have
26 been invaluable?

27 A. I think I covered that already this morning and saying that's

1 something for consideration.

2 Q. Fair enough. And in your witness statement at paragraph 19—
3 so that's at page one four four five—

4 A. Yeah.

5 Q. —you talk about LMCS' past experience working for Paria.

6 A. Yes.

7 Q. And you identify that they worked two similar jobs—

8 A. Yes.

9 Q. —to the one that is the subject of this Enquiry?

10 A. Yes.

11 Q. Now, those jobs would have been performed in compliance
12 with Paria's permit to work system, yes?

13 A. Yes.

14 Q. And for those jobs, permits to work would have been issued?

15 A. Yes.

16 Q. It would have been issued from the start of the job and up to the
17 completion of the job, yes?

18 A. You mean different permits, right? Various permits would
19 have been issued—

20 Q. Yes.

21 A. —during that time?

22 Q. For the similar jobs.

23 A. Yes. Various permits would have been issued.

24 Q. Now, in those similar jobs, would, would they have also
25 involved the installation of a migration barrier?

26 A. I'm certain that the job in 2020 involved the installation of a
27 migration barrier, yeah.

1 Q. It would have been—and the job would have also involved the
2 removal of a migration barrier?

3 A. Correct.

4 Q. And that ought to have been captured in the permits to work for
5 that job or those jobs?

6 A. Correct.

7 Q. And in this Enquiry—

8 A. Uh-huh.

9 Q. —Paria says that LMCS breached the permit to work system
10 for this job?

11 A. Yes.

12 Q. Now, in evaluating the breach, did you consider how the former
13 jobs were completed, the methodology employed?

14 A. We didn't go—well, to be honest, I didn't go back to the former
15 job. What I went back to is the permits to install the plug. So
16 for this job specific permits were given for installation of the
17 plugs.

18 Q. Yes.

19 A. And on the particular permit for the job on that day, there was a
20 specific statement that said that those plugs were to remain in
21 place. That, that's absolutely clear.

22 **Examination By Mr. Chairman:**

23 Q. Where does it say that?

24 A. On, on the permit.

25 Q. No it doesn't.

26 **Mr. Hosein-Shah:** No it doesn't.

27 **Examination By Mr. Chairman:**

1 Q. Could we have the permit up, please, so, you know, you're not
2 expected to remember the exact wording of this.

3 A. Yes.

4 Q. You should have it in front of you.

5 A. Well, let's, let's put it—

6 Q. I agree it doesn't say anything about—

7 A. It mentioned migration barrier, eh, not plugs.

8 Q. Well, just a minute. I agree it doesn't say anything about the
9 plugs specifically. What I want to understand is, you're saying
10 that it specifically said not to remove them?

11 A. Come up, come up, come up. "Migration barriers to be used."

12 Q. Yes. Well they were being used. They were being used.
13 They'd been put in weeks before, or at least some days before,
14 so, what is it you're trying to say? I just need to follow what
15 you're saying.

16 A. When I, when I read this—

17 Q. Yes.

18 A. —let me tell you what my interpretation is—

19 Q. Yes.

20 A. —that during the execution of those activities outlined on the
21 permit—

22 Q. Yes.

23 A. —that that migration barrier was to remain in place until that
24 job was completed. That is what I read that—

25 Q. Right. That's what you read into it, is it?

26 A. Yes.

27 Q. You agree it doesn't say that?

1 A. It doesn't say it specifically.

2 Q. Well, when were they put in?

3 A. Er, I—

4 Q. Well I don't need the exact date from you. I don't expect you
5 to remember the exact date.

6 A. Yeah, about a—about a couple days before.

7 Q. It's some time before?

8 A. Yeah, yeah.

9 Q. So they were already in place?

10 A. Yes.

11 Q. Right. Once that hyperbaric chamber was in operation and
12 people was in that hyperbaric chamber—

13 Q. Yeah.

14 A. —those barriers were to be used.

15 Q. For what reason?

16 A. Remember, remember the reason that we did—the reason that
17 we would have discussed was two important things, right? One
18 is the issue of, um, fuel, er, the gas from the fuel or poisonous
19 or potential harmful gases from the fuel getting in into the
20 hyperbaric chamber. Two, that while they were welding or
21 welding were taking place, that we didn't have sparks or any
22 kind of hot liquid getting into the pipeline which probably still
23 had hydrocarbon. Three, like everything else you wouldn't
24 want pe—remember this is an open space, eh, a 30-inch open
25 space. You'd also have the migration to prevent tools people,
26 anything from tripping and falling into the space.

27 Once people was inside of that hyperbaric chamber and you had an

1 open 30-inch space, typically in industry all of those places are
2 closed, surrounded, barred. That's normal industry practice.
3 They don't leave a open 30-inch space where there's a
4 possibility for people to fall into while they working in an area.
5 That's, that's just standard industry practice.

6 Q. Right, I got you.

7 A. It is almost like leaving—Sir, it's almost like leaving a manhole
8 without a cover. You wouldn't, you wouldn't do it.

9 Q. No, I understand. So the migration barrier to be used, you
10 understand that sentence, if it is a sentence, you understand that
11 to mean that the migration barrier had to be put in place in order
12 to carry out works that were to take place on that—

13 A. Inside the same hyperbaric chamber, yes.

14 Q. Yes. But just so that I'm clear—

15 A. Yes.

16 Q. —on the 25th of February—

17 A. Yeah.

18 Q. —it was already in place?

19 A. Yes.

20 Q. Right. So it doesn't say anything about removing them or
21 putting them in place. They were already there. Is that right?

22 A. They were already there. That is correct.

23 Q. The, the—I mean, it's not as though—I just thought you were
24 trying to suggest for a moment, in answer to a question from
25 Mr. Hosein-Shah, that these migration barrier was not to be
26 removed and it specifically said that. It doesn't say that, does
27 it?

1 A. Doesn't specifically say that.

2 Q. No it doesn't. But so you say—

3 A. In those, in those specific words.

4 Q. No, it doesn't use those words. What it says is, "Migration
5 barrier to be used" under the heading "Requirements for
6 equipment isolation and clearance", and then the subheading,
7 "Cleared of process/hazardous materials. Answer: yes
8 migration barrier—

9 A. Yes.

10 Q. —to be used." Now I follow all of that.

11 A. Yes.

12 Q. And, I mean, and, you know, we've looked at this some
13 considerable length over the past few weeks.

14 A. Yes.

15 Q. What I understand from you is, is that you understood that to
16 mean that it should not be removed?

17 A. Correct. Once I had men—once I had—once there were men
18 inside of that chamber working and that chamber was
19 pressurized, and the potential for gases coming up into that
20 chamber, those migration barriers would be in place and the
21 second thing that was in place was the gas testing to ensure that
22 that environment remained breathable and free of contaminants.
23 So the migration barrier was the actual solid barrier and the gas
24 testing was the confirmation that that area was clear of
25 hazardous gases.

26 Q. You agree, don't you, that this document, this, this work permit,
27 says that the, that the chamber, as we understood it the

1 hyperbaric chamber, is to be removed?

2 A. The hyperbaric chamber is to be removed.

3 Q. Yes?.

4 A. At some point, yes.

5 Q. It says removed. Not about at some point this is the—

6 A. Right.

7 Q. —application for work—

8 A. Yeah, yeah, remove the Chamber.

9 Q. —on the 25th of February?

10 A. Right. “Remove chamber and blank top of the new riser”, yes.

11 Q. Right, so conduct—so that what it says is, is to remove and
12 install a 50-inch flange.

13 A. Yes.

14 Q. Remove and install a 30-inch riser pipe.

15 A. Yes.

16 Q. Remove a 30-inch solid blank.

17 A. Yeah.

18 Q. Conduct pressure test on flange weld.

19 A. Yes.

20 Q. Remove chamber and blank top of new riser.

21 A. That is correct.

22 Q. Now of all of those things weren't done on that day, were they?

23 A. No. The riser—the ri—we didn't get to the point where the
24 riser was removed. So the rise—sorry the, um, the chamber.
25 I'm sorry. Let me just recollect myself a bit. The chamber was
26 not removed on that day.

27 Q. No, it was removed the next day, but never mind about that.

1 The point is, what I'm asking is the specific tasks that were
2 appointed—

3 A. Right.

4 Q. —and completed by the applicant—

5 A. So what was supposed to happen—

6 Q. —is—

7 A. —based on the permit, is the chamber was supposed to be
8 depressured.

9 Q. Yes.

10 A. Men out of the chamber now. It's depressured, nobody's in the
11 chamber.

12 Q. You know, I understand how derigging the chamber would
13 work.

14 A. And then—

15 Q. What, what I want to understand from you—

16 A. Yes.

17 Q. —though, is that the migration barriers—

18 A. Yes.

19 Q. —that you've identified as being mentioned in this document,
20 which there are—

21 A. Yes.

22 Q. —those migration barriers to be used were to be used for the
23 purposes which you described?

24 A. Yes.

25 Q. Gases from the fuel, sparks getting into the pipe and other bits
26 and pieces from falling into the pipe which you didn't want to
27 happen, right?

1 A. Correct.

2 Q. I get that.

3 A. Right.

4 Q. Once that is no longer an issue, once that was no longer an
5 issue, there was no question of removal of the barrier, was
6 there?

7 A. Well—

8 Q. There was no issue because nobody had identified Delta P.

9 A. But—they didn't identify Delta P, however, the barrier was
10 supposed to remain in place until the chamber was removed
11 right,

12 Q. Why?

13 A. If—why?

14 Q. Yeah, why?

15 A. All right. So think about it like this, right? So we have men
16 working in that chamber, right, as I said the potential of gasses
17 coming up into the chamber. So once we have men working in
18 that chamber—

19 Q. No, no, once you've taken the chamber off, right, you—

20 A. Right. So once, once you take the chamber off, the Delta P
21 goes away. There's no pressure, pressure.

22 Q. No, no, no you're misunderstanding me.

23 A. Sorry.

24 Q. It's probably my fault. Once you've finished the job of work so
25 as to remove the chamber—

26 A. Right.

27 Q. —right, once,—whatever else needed to be done—

1 A. Right.

2 Q. —was done—

3 A. Right.

4 Q. —and you're going to remove the chamber—

5 A. Right.

6 Q. —why did you need to leave the plugs in?

7 A. The plugs—once the—once nobody was working inside the
8 chamber and the work was completed—

9 Q. Uh-huh.

10 A. —there would have been no reason to keep the plugs in, but the
11 plugs were to remain in until the chamber and the—and—was
12 removed.

13 Q. All right.

14 A. Why?

15 Q. Uh-huh, why?

16 A. Right.. And the reason why, the reason for that is, once the
17 chamber was removed, the potential for anybody working in an
18 enclosed environment, well the potential for gas ingress into
19 that environment would have now completely gone away.

20 Q. So you're saying that the plugs should not be removed because
21 of the potential for gas coming from the pipe into the chamber
22 while they were doing the plug removal?

23 A. Correct.

24 Q. I'm with you. All right.

25 A. And that gone, right.

26 Q. Umm.

27 A. And, and, okay. So I'd leave it there.

1 Q. So, when it says migration barrier to be used, that, in your mind
2 at any rate, meant in order to prevent any gas from—

3 A. That, that is correct.

4 Q. Umm.

5 A. And that, that was the risk that we identified.

6 Q. Okay. And would there have been any reason why you
7 couldn't, for example, remove the mechanical plug before
8 removing the pressure plug?

9 A. Typically I would say that those plugs we would move them
10 together. You wouldn't want to move the mechanical and leave
11 the only—in industry there's a standard called double block
12 complete, right, which part you always try to have two blocks
13 for gas ingress. So the mechanical block was a partial block
14 and your, your, your expanding block or your inflatable plug
15 was the solid seal.

16 Q. Got you.

17 A. Right? So once that remained there we had to have a double
18 block. That is the system the industry used—

19 Q. Uh-huh.

20 A. —to ensure people are not exposed to—

21 Q. All right.

22 A. —these risks.

23 Q. So when you see this on the work permit—

24 A. Yes.

25 Q. —under the heading “Cleared of process hazardous materials.
26 Answer yes. Migration barrier to be used”, that relates entirely
27 to the question of gas—

1 A. Gas and, yeah—

2 Q. —escaping from the—

3 A. —correct, and things falling into the pipeline.

4 Q. Not for the purposes of the safety of the people working in the
5 chamber?

6 A. Correct.

7 Q. And the fact that it says “Migration barrier to be used is not to
8 be—is not to mean anything other than that it is to be there for
9 the entirety of the time that the men are inside that chamber.

10 A. It means—

11 Q. The chamber—in your mind the chamber must come off first?

12 A. Yes. Chamber must come off first.

13 Q. Not because of a Delta P hazard?

14 A. Correct.

15 Q. But because of a gas hazard?

16 A. That is the—that is the risk that we identified, yes.

17 Q. Right. I see.

18 **Mr. Chairman:** Right. Er, I don’t know whether you’re going
19 to deal, Mr. Hosein-Shah, with the method of—

20 **Mr. Hosein-Shah:** Yeah.

21 **Mr. Chairman:**—work.

22 **Continued Cross-Examination By Mr. Hosein-Shah:**

23 Q. Now, previously to the Chair’s questions, we were talking
24 about the previous works conducted by LMCS.

25 A. Yes.

26 Q. And we were talking about whether you compared how those
27 works were done to this job?

1 A. Yeah.

2 Q. And what would have been—what was your response?

3 A. No, I said that, that I haven't done a detailed study of how the
4 previous jobs were done. I personally haven't done it.

5 Q. But you would agree that Paria's position is that LMCS in
6 executing this job or in executing the removal of the migration
7 barrier and the inflatable plug in the wrong order ultimately
8 resulted in the incident, the Delta P incident?

9 A. Yes. The chamber should have been depressurized and
10 removed—

11 Q. Yes.

12 A. —before those plugs were removed.

13 Q. Yes. Now, in looking at the previous scope of works or looking
14 at the previous permit to work—

15 A. Uh-huh.

16 Q. —were you able to identify how LMCS conducted the job
17 whether the—

18 A. No. As I said, I didn't look at that detail on the last jobs. I
19 didn't go into that level of inquiry—

20 Q. Okay.

21 A. —into the permits and the, and the exact work statements, et
22 cetera, of the last job.

23 Q. Do you think it would be important to compare how LMCS
24 conducted the previous jobs to this job in identifying exactly
25 how, where, or whether they got lucky in the past?

26 A. Yeah. I think there's value in doing that.

27 Q. It would show the differences—

1 A. Yeah.

2 Q. —especially if they removed the migration barrier at some later
3 time?

4 A. Yeah. Yes. There's some value in doing that, I would agree.

5 Q. Now, would you be in a position to share those previous
6 permits to work with the Commission?

7 A. If it is a request from the Commission, we will comply.

8 Q. Well, certainly, certainly we will, we will ask the Chair or the
9 Commission to consider, because there is some value in looking
10 at the previous completion of the jobs, similar jobs, and in
11 looking at this job, especially where an important aspect is
12 Paria's position—

13 A. Yes.

14 Q. —and LMCS essentially went into the wrong order.

15 A. Fair enough.

16 Q. Yeah? Are you able to tell me what is the relationship between
17 Paria and Heritage?

18 A. The relationship between Paria and Heritage?

19 Q. Yes.

20 A. Structurally, Paria and Heritage are both subsidiaries of TPHL,
21 so let's say we have a connection by being subsidiary of a
22 overarching governing body which is the TPHL Board.

23 Q. And does Heritage share certain expertise with Paria when
24 required?

25 A. If requested, I, I—there would be no hesitation with Heritage
26 sharing expertise with the Paria organization.

27 Q. And are you aware that Mr. Rolph Seales, a Kenson employee,

1 is attached to Heritage?

2 A. Yes.

3 Q. And he assisted Paria—

4 A. Yes.

5 Q. —with respect to the rescue and recovery?

6 A. Yes.

7 Q. Would you agree that if it is that Paria had a dearth or had a
8 vacuum of competence that they could reach out to Heritage
9 essentially and request assistance in the future?

10 A. Yeah. I think that's something that we, um, we have to
11 consider.

12 Q. Well there's a lot of things to consider. I want to take you to
13 paragraph 51 of your witness statement. That's at page 1451,
14 one four five one.

15 A. One four five one?

16 Q. Yeah. And I don't need you to read the entire paragraph.
17 Among other things, you say that diving into the pipeline was
18 unsafe.

19 A. Yes.

20 Q. And then you list various reasons why.

21 A. Yes.

22 Q. Yeah? And you base this on not knowing the condition of the
23 pipeline.

24 A. Yes.

25 Q. And that there was no plan or risk analysis. Now I'm not going
26 to go into the risk analysis part because learned Senior has, you
27 know, dealt with that but what I'm curious about, what were the

1 conditions that you were trying to ascertain.

2 A. The conditions?

3 Q. Yes.

4 A. The conditions really was—the number—what was in the
5 pipeline. Right? We know that that—we know that the
6 hyperbaric chamber would have had tools, chain blocks, knives,
7 construction equipment inside of the hyperbaric chamber. We
8 don't know exactly all that was inside the hyperbaric chamber.

9 A. Yes.

10 Q. We know—we, we know that the pipe at—you know, at that
11 time we believe that the pipe was filled with oil and we know
12 that there were sections of that pipe for sure that there were—
13 that it was completed—was completely I would say filled with,
14 with oil and hazardous material. We didn't, we didn't know at
15 the time whether the potential for a subsequent DP event could
16 take place. We had no idea whether the pipe was completely
17 filled, whether we had difference in levels at the various
18 vertical pieces, um, we didn't know exactly where the
19 blockages were and how people would navigate around them,
20 so those were some of the big issues that we were contem—we
21 didn't know exactly where the men were, how far they were in
22 the pipeline. We don't know exactly what was the condition of
23 the plug, where, where the plug was in the pipeline; a number
24 of, a number of things that we just didn't know.

25 Q. Would inside the pipeline contain other hazardous materials
26 besides oil?

27 A. We don't know. Remember that pipeline has not been in use

1 for a number of years so we just don't—

2 Q. Yeah.

3 A. —we just didn't know. We just didn't have that information.

4 Q. But you have the information that Christopher Boodram came
5 out and I want to take you to the ICT, ICT bundle—

6 A. Uh-huh.

7 Q. —of documents at page 1541.

8 A. Page 1541, this is bundle what?

9 Q. Not the witness statement bundle, the ICT bundle.

10 A. Core bundle.

11 Q. Too far. Yeah. So we're looking at the top of the page.
12 You're seeing 9.58 p.m.

13 A. Just now, hold on.

14 Q. Sorry.

15 **Mr. Chairman:** Just a minute.

16 **Continued Cross-Examination By Mr. Hosein-Shah:**

17 Q. Now you recall—sorry.

18 **Mr. Chairman:** Just a minute, please? [*Perusing documents*]
19 Page?

20 **Mr. Hosein-Shah:** One five four one.

21 **Mr. Chairman:** Yeah.

22 **Continued Cross-Examination By Mr. Hosein-Shah:**

23 Q. Now you recall a conversation which occurred in your presence
24 between the incident command team and Mr. Boodram?

25 A. Yes.

26 Q. And do you identify these scribbles, so you could read through
27 them, do you identify these scribbles as the contemporaneous

1 notes taken of that conversation so I can help you read it.

2 “Forty feet from the riser, I think. Two air pockets and
3 went down. Faizal couldn’t be found. Broken hand and
4 foot. Everyone tried to pull. Reach in an air pocket.
5 Only Fyzie answer. Another part with water. Fyzie had
6 tank on him. Couldn’t climb out the water at the top of
7 the flange. Felt two weld seams.”

8 A. Yeah.

9 Q. Does that accurately summarize the conversation that occurred
10 in your presence?

11 A. I can’t recall each and every point but, yes, some, some of it
12 resonates with me, yes, some of it resonates with me.

13 Q. And I want you to look at paragraph 66 of your witness
14 statement and that’s at page one four five four.

15 A. One four five four. Paragraph 66?

16 Q. Yes.

17 A. Uh-huh.

18 Q. You accept—now I’m looking at sub point four.

19 A. Yeah.

20 Q. “He crossed Blacks who was unresponsive.”

21 A. Yes.

22 Q. You accept that that statement appears nowhere in the
23 handwritten note, do you?

24 A. Yeah, well, it’s not there so it’s not there.

25 Q. Thank you. You would have had the information that both Mr.
26 Boodram and Mr. Kurban, M Boodram coming out of the
27 pipeline—

1 A. Uh-huh.

2 Q. —um, the information ought to have reached you that he said,
3 “The boys right behind me.” You recall that?

4 A. Yes, go ahead.

5 Q. And Mr. Kurban would have also come out of the pipeline.

6 A. Uh-huh.

7 Q. So that at least at that time with proper equipment—

8 A. Uh-huh.

9 Q. —a rescue may have been possible? Because when you speak
10 about what the camera is supposed to see, oil, knives, tanks,
11 gear, all those things would have either been navigated through
12 by Mr. Boodram or Mr. Kurban whatever limited space he went
13 into or whatever limited depth he went into, he would have
14 either come across it, but either way you had information that
15 Mr. Boodram would have crossed all of those obstacles if—
16 should they exist?

17 A. And probably also may have left some behind.

18 Q. Like what?

19 A. I don't know. Mr. Boodram, how did he come out? Did he
20 have tanks that he used? Did those tanks became deposited
21 along the line? I don't know. How—I don't know how many
22 tanks Mr. Boodram would have used to come out and what he
23 would have left in his wake coming out of the, of the pipeline.

24 Q. But you didn't seek to find out?

25 A. I disagree with that. I seek to find out using a method that was
26 safe without putting people lives at risk.

27 Q. And you think a camera would tell you whether a tank could

1 move?

2 A. I don't understand the question.

3 Q. You're saying that there may have been obstacles which would
4 have prevented movement. So I'm asking whether you're
5 suggesting or whether it is your position that a camera would
6 have identified unmovable obstacles like a tank or be able to
7 prove that it's unmovable or unnavigatable [*sic*].

8 A. What we had expected is that we would have been able to move
9 around the tanks, be able to identify exactly where they were
10 located, at least as a minimum identify where they were
11 located, identify where we had oil, where we had water,
12 identify where the men were so that we could have properly
13 risk assessed and understand the perils or the hazards that a
14 diver would meet entering that pipeline.

15 We know that the diver couldn't turn into the pipeline so you either
16 have to go headfirst or foot first. Not sure what direction he
17 would choose. Typically headfirst would always be pointing on
18 the way out, so how that diver would be going into the pipeline,
19 he would be backing into the pipeline. Wouldn't be—wouldn't
20 it be prudent for that diver who's going in without eyes into that
21 pipeline to have an idea where these obstacles were and what,
22 what—how he would likely deal with them when he meet
23 them?

24 Q. Any—

25 A. Wouldn't it be prudent—

26 Q. Hold on.

27 A. —for that diver who's owing into that pipeline—yeah.

1 Q. Hold on, hold on. And what are your diving qualifications, Sir?

2 A. I, I—look, listen, that’s just, that’s just thinking through it and
3 if you think through it you’ll probably come to the same
4 conclusion. It’s just thinking through.

5 Q. Well I’m not a diver so I wouldn’t try to.

6 A. Okay.

7 Q. Now I want to take you to Mr. Archbold’s statement again.

8 A. Yeah.

9 Q. Page one three two zero. Now this is Mr. Archbold seeking to
10 talk about a safe dive maintain—

11 A. What page, Sir?

12 Q. One three two zero at paragraph 37.

13 A. Par gaffe 37. One three two zero. Uh-huh, paragraph, 37 right?

14 Q. Yes. So he says:

15 “I believe it was unsafe to dive within the pipeline at that
16 time without a continuous air supply with a tank and a
17 tether. The rescue divers would at least needed a rope
18 with them and a supply of air. They would have needed
19 a tank to be on them as an emergency air supply in case
20 their regular air supply was interrupted. Air and a means
21 of communication and extraction were the three things
22 they needed for any rescue dive inside the pipeline to be
23 safe.”

24 Now what say you?

25 A. I say they probably needed that and also an understanding of
26 the risk that they would face going into the pipeline.

27 Q. Sure. And now, can we bring up the, er, I’m not sure whether it

1 made its way to a bundle but I believe Mr. Piper would have
2 supplied us with the standard operating procedures for confined
3 space rescue. I'm not quite sure whether it's in a bundle. It is?
4 So I want to go to 3.2.

5 A. Do I have it here?

6 Q. I'm not quite sure.

7 Q. Now we're looking at the confined—oh, sorry. [*Document*
8 *handed to Mr. Mohammed*] Let me know when you're with
9 me.

10 A. Yeah, I'm here. I'm with you.

11 Q. Now we're looking at the confined space entrant.

12 A. Uh-huh.

13 Q. Yeah? Now a suitably qualified diver—

14 A. Uh-huh.

15 Q. —ought to know the hazards associated with entering a
16 confined space?

17 A. Depends what his experience is. He could be suitably qualified
18 and never dive into a pipeline or a confined space.

19 Q. And are you aware what the training is in order to become a
20 commercial diver?

21 A. No.

22 Q. So you're not in a position to say?

23 A. Well I didn't say yes or no. I said it's a possibility that he
24 would not—would have never dived into a pipeline.

25 Q. Yeah. But these are Paria's—this is Paria's document.

26 A. About confined space.

27 Q. Well it's the closest thing we have. So we have, know the

1 hazards, and know how to use all required equipment. Do you
2 believe a commercial diver would know how to use the
3 required equipment?

4 A. [Pause]

5 Q. You can answer.

6 A. Just now. We have a situation—

7 Q. Wait, the question starts with, do you believe? I'd appreciate
8 whether you can answer the question then maybe—

9 A. Ask the question again, sorry?

10 Q. Sure. Would you agree that a commercial diver or commercial
11 divers would know how to use the required equipment for a
12 confined space?

13 A. Not necessarily.

14 Q. All right. And do you believe that they would be able to have a
15 means of communication with the attendant?

16 A. Do I?

17 Q. The attendant being the person tethering them or that person?

18 A. That they should have that to do anything in a confined space?

19 Q. Yeah; that they would be—they would be suitably trained in
20 how to communicate with the attendant.

21 A. It's probably part of their training, yes.

22 Q. And they would know how to be alert to hazardous conditions?

23 A. Not to—

24 Q. So if they go into the pipeline?

25 A. Not to ones that they were completely unaware of.

26 Q. Well, if they came up against something that they could not—
27 they decided they couldn't go further I'm sure they would

1 communicate, which is the point of the—

2 A. I want to be respectful, eh.

3 Q. Yes.

4 A. So the ifs and the mays—

5 Q. No I'm just taking you through the—

6 A. I'm just saying, I'm just saying that the ifs and the mays and the
7 should and the could and all that, and what you, what—the
8 objective is this, is putting a man into a pipeline where we are
9 unclear of all the hazards. Should I make that decision on he
10 may, he might? Is that a decision—those—are those the things
11 that I make a decision on to put a man's life at risk?

12 Q. And the—

13 A. Or do I, or do I have specific and clear understanding of the risk
14 under which I am going to subject this man to? Just give it
15 some thought.

16 Q. I mean the thought you need to give as well is that there were
17 commercial divers present.

18 A. Commercial—

19 Q. Hold, hold—

20 A. All right, let me stay quiet.

21 Q. There were commercial divers present, at least close to seven
22 o'clock. They were supported by two vessels with unlimited
23 supply of air. They were supported with the equipment, the
24 qualifications, the supervision. They would have been able,
25 had Paria maybe—

26 **Mr. Mootoo:** Is there a question?

27 **Mr. Hosein-Shah:** Fair enough.

1 **Continued Cross-Examination By Mr. Hosein-Shah:**

2 Q. But they were supported, do you agree? They had the
3 equipment.

4 A. Listen—

5 Q. No, no, did they have the equipment? It's either you know or
6 you don't know.

7 A. No a dive plan is more than the equipment.

8 Q. Did you try to get a dive plan from them?

9 A. I think I answered that earlier.

10 Q. No, you said LMCS. Did you try to get a dive plan from—

11 A. We attempted to get a dive plan—

12 Q. Hull?

13 A. —from other professional diving companies that were present
14 at Paria.

15 Q. Yeah, that was on Saturday. I talking about Friday. On Friday
16 7.00 p.m. or 8.00 p.m., did you attempt to get a dive plan from
17 the divers on site?

18 A. A dive plan, a dive plan, whatever dive plan was presented was
19 unacceptable.

20 Q. Was a dive plan presented?

21 A. All we had was some verbal mutterings of what that might look
22 like, but no clear plan.

23 Q. Did you communicate—I'm not talking about LMCS. I'm
24 talking about the other divers. Did you communicate with
25 them?

26 A. I personally did not communicate with them. I thought I'd
27 answer that already.

1 Q. Did anyone from the ICT communicate with them and seek to
2 get a plan from them on Friday?

3 A. My, my, my, my understanding—

4 **Mr. Chairman:** We have actually been through this. Pause
5 there.

6 **Mr. Mohammed:** Yeah, thanks.

7 **Mr. Chairman:** In fairness to you, we have actually covered
8 this ground already.

9 **Mr. Mohammed:** Yeah.

10 **Mr. Chairman:** I don't think we need to cover it again.

11 **Mr. Hosein-Shah:** Fair enough.

12 **Continued Cross-Examination By Mr. Hosein-Shah:**

13 Q. Now, when did Paria first consider the use of a waiver of
14 liability for persons who may want to dive into the pipeline?

15 A. I don't recall, um, maybe on Saturday. I'm not sure.

16 Q. And did Paria communicate to any of the other divers their
17 willingness to accept a waiver of liability?

18 A. No.

19 Q. Why?

20 A. You see, I thought I addressed that earlier on by saying this was
21 not only a question of liability, this was also a question of the
22 decision point in terms of what information do we need to have
23 so that we could send a man in and get him out safely with a
24 rescue plan.

25 **Mr. Chairman:** He put it as an ethical question. He suggested
26 it was a question not just of liability but of ethics.

27 **Continued Cross-Examination By Mr. Hosein-Shah:**

1 Q. Now, when did Paria consider the use of non-disclosure
2 agreements?

3 A. Non-disclosure agreements?

4 Q. Yes. If, if you need some help to refresh—I believe it's the—

5 **Mr. Chairman:** I need some help to understand the relevance.

6 **Mr. Hosein-Shah:** In Mr. Fuentes' new statement or the email
7 that was disclosed—

8 **Mr. Chairman:** Yes.

9 **Mr. Hosein-Shah:**—he makes reference to a non-disclosure
10 agreement.

11 **Mr. Chairman:** So—

12 **Mr. Hosein-Shah:** I just wanted to know when was that
13 considered and why was it considered.

14 **Mr. Chairman:** Why is it relevant to anything? Just tell me,
15 explain the relevance and I'll let you answer it.

16 **Mr. Hosein-Shah:** Sure; in terms, in terms of the ability for
17 persons to communicate freely and the limits of that non-
18 disclosure agreement.

19 **Mr. Chairman:** Relating to?

20 **Mr. Hosein-Shah:** The incident, in discussing it with others.

21 **Mr. Chairman:** Right. Non-disclosure as in preventing
22 anyone from being able to say anything about it after the event?

23 **Mr. Hosein-Shah:** Correct.

24 **Mr. Chairman:** All right, yes.

25 **Mr. Mohammed:** I, I can't, I can't recall.

26 **Examination By Mr. Chairman:**

27 Q. Did, first of all, Paria consider the question of non-disclosure

1 agreements to prevent people from being able to say anything
2 about what happened on this occasion? Was there any such
3 consideration by Paria?

4 A. There was some, there was consideration of non-disclosure
5 agreement and the use of cell phones at the recovery. What we
6 didn't want is to have—we wanted to respect the families and
7 that was the reason for it at that time.

8 Q. You didn't wanted to what.

9 A. We didn't want people to have cell phones and be free to
10 communicate information around the recovery and things—so
11 that would, that would have been somewhere around Monday
12 or Tuesday. That's why there was a recollection of the use of
13 non-disclosure agreements by Paria. That was—

14 Q. On staff or of everyone else?

15 A. Everyone else. Everyone. Staff, people who were attendants at
16 the, um—

17 Q. Because you used WhatsApp, didn't you, or some other text
18 communication between you?

19 A. It had to be authorized by the, by the ICT.

20 Q. All right.

21 **Mr. Chairman:** Yes.

22 **Continued Cross-Examination By Mr. Hosein-Shah:**

23 Q. Now I want to go to the supplemental witness statement bundle
24 at page three one five seven.

25 A. Three one five seven.

26 Q. This is Mr. Fuentes' new statement or email statement. You're
27 going to—

1 A. You have a, a have a tab on it?

2 Q. No, unfortunately. Eighty-four.

3 **Mr. Chairman:** Supplemental statement, are you? Which
4 one? Witness bundle? Page what?

5 **Mr. Hosein-Shah:** Three one five seven.

6 **Mr. Chairman:** Yes.

7 **Mr. Mohammed:** I have it here?

8 **Mr. Chairman:** It's behind Tab 83. It is Tab 84.

9 **Mr. Mohammed:** Tab 84?

10 **Mr. Chairman:** Yeah. You have the supplemental statement
11 there?

12 **Mr. Mohammed:** Yes, yes I have Tab 84.

13 **Mr. Chairman:** It's an email. Is that what you're referring to?

14 **Mr. Hosein-Shah:** Yes.

15 **Mr. Chairman:** The email?

16 **Mr. Hosein-Shah:** Yes. I believe this is the only statement we
17 have from Mr. Fuentes.

18 **Mr. Chairman:** Yes.

19 **Continued Cross-Examination By Mr. Hosein-Shah:**

20 Q. So look some ways down you'll see a sentence saying:

21 "I was asked to fill out the NDA document which I
22 complied with."

23 But there was no issue of cell phones this—

24 A. I told you what I could have recalled. I haven't seen this
25 statement until now.

26 Q. So you're unable to assist us with the purpose of requiring an
27 NDA from Mr. Fuentes or from anyone else?

1 A. I mean, well I think typically, typically, you know, incidents
2 like these you'd always want to make sure that information
3 isn't—or there's some— there is somehow what would I call it,
4 there is some caution with how, with how information is
5 shared.

6 Q. How many persons signed NDA agreements, are you able to
7 say?

8 A. I, I can't recall.

9 Q. Do you have a general number or you just don't know?

10 A. No I, I don't have a general number and I wouldn't hazard a
11 guess.

12 Q. Fair enough. Now I want to take you back to your witness
13 statement at paragraph 1441.

14 A. Just tab me along, nah, so, so I could be quick.

15 Q. Sorry?

16 A. You have the tab?

17 Q. Oh, um, it's your witness statement, er, you might have to help
18 me find the tab.

19 A. All right.

20 Q. I can't, I can't find it.

21 **Mr. Chairman:** Forty-three.

22 **Mr. Mohammed:** Forty-three, yes.

23 **Continued Cross-Examination By Mr. Hosein-Shah:**

24 Q. Right, so it's paragraph five.

25 A. Paragraph five.

26 Q. But I'm specifically going to page 1442. And you say as part
27 of your roles and responsibilities—

1 A. Establish clear—which one exactly, four, five, six?

2 Q. Yeah, I'm going to get there.

3 A. Okay.

4 Q. But you list out your roles and responsibilities.

5 A. Yes.

6 Q. And as part of your roles and responsibilities, you say you
7 champion a culture of continuous performance improvement
8 and learning environment.

9 A. Yeah.

10 Q. That's number 11. And at number seven—

11 A. Right.

12 Q. —you say you drive major transformations to increase safety,
13 environmental performance, reliability, quality, delivery and/or
14 financial performance. Yes?

15 A. Yes.

16 Q. Now did Paria prepare an investigation report, an incident
17 investigation report?

18 A. Paria prepared an investigation report, yes, an internal
19 investigation.

20 Q. Did you have a role in that—in the preparation of the report?

21 A. No.

22 Q. Did you review the contents of that report?

23 A. Yes.

24 Q. So I want to go to page one seven six five of the witness
25 statement bundle. But the report starts one seven four three.
26 Yeah?

27 A. One seven four three, right?

1 Q. That's where the report starts but we're going to firstly one
2 seven six three.

3 A. You don't have the tab number?

4 Q. Er, 59.

5 A. Fifty-nine, all right, thanks. Fifty-nine, okay, hold on. Tab 59 I
6 have here "Removal of top side cut off".

7 Q. So you should be seeing a number at the bottom there saying
8 1743.

9 A. Now—

10 Q. That would help you—

11 A. On 59 I have—

12 Q. This is Tab 59.

13 A. Nah, Tab 59, it don't have that on mine.

14 Q. Witness statement of Mark Rudder. You're seeing that when
15 you open Tab 59?

16 A. I—no, no I don't have the—I doh—I not seeing the
17 investigation.

18 Q. So perhaps someone could assist you.

19 **Mr. Chairman:** It's on screen.

20 **Continued Cross-Examination By Mr. Hosein-Shah:**

21 A. Okay, okay, okay, thanks.

22 Q. All right, so I just want to go quickly to page one seven four
23 three. And you recognize this as the incident report. Does it
24 look familiar?

25 A. Yeah, go ahead.

26 Q. Right, so we're going to one seven six three now. It starts off
27 with conclusion so you may have to go one further page. Yeah,

1 so you see the heading “Immediate/Direct Cause” and this is
2 Paria’s conclusions—

3 A. Yeah.

4 Q. —that the incident was caused by the unauthorized removal of
5 the mechanical plug and the inflatable plug.

6 A. Yeah.

7 Q. And you agreed with me earlier that it’s a useful exercise to see
8 how LMCS performed these services in the past. Now I want
9 to go to page one seven six five.

10 A. Same report?

11 Q. One seven six five. Yes. These are the recommendations.
12 After the entire investigative process by Paria, these are the
13 recommendations going forward. Do you agree with that?

14 A. These are the recommendations we listed, yes.

15 Q. So out of everything that happened, the recommendations that
16 Paria has is that Paria must conduct retraining for all
17 contractors in the permit to work procedure.

18 A. Sorry, sorry, yes.

19 Q. You see that?

20 A. Yeah.

21 Q. Do you agree with that?

22 A. Well, if you look at the, if we look at the core, what really
23 caused this incident to happen the single thing, the single thing
24 that happened that set this activity into motion, the critical
25 factor in this investigation was really the removal of the plugs.
26 If those plugs had remained in place and removed at the
27 appropriate time, this event would not have taken place.

1 **Examination By Mr. Chairman:**

2 Q. But that would have been by luck, wouldn't it?

3 A. Sorry?

4 Q. The point is is that no one identified Delta P as the issue. The
5 fact that the plugs remained in place, had they remained in
6 place, would have been by luck.

7 A. I wouldn't say it would have been by luck. It, it would—it did
8 not identify Delta P as a risk but it also—the plugs were in there
9 to also prevent other latent risk as probably described, which is
10 the ingress of gas [*Inaudible*]

11 Q. No, no I understand that.

12 A. You understand?

13 Q. I understand. You make—you made that clear.

14 A. No but you're right—in a way, yes.

15 Q. But the point is, is—and the point that's being made as I
16 understand it here is this, is that after all that has happened and
17 your own internal enquiry, but two recommendations as a result
18 emerge from that. I dare say that even during the course of
19 cross-examination today you would regard those two
20 recommendations as perhaps a little short of what might be
21 recommended in the future? Leave aside the question of any
22 thoroughness of your own internal enquiry, the question being
23 addressed here is that is the totality of what you identified or
24 what your firm identified as by way of recommendation and the
25 point I'm simply asking you is this, is that, had those plugs not
26 been removed of course it wouldn't have happened?

27 A. Yes.

1 Q. But the fact that they weren't removed was nothing to do with
2 identifying Delta P.

3 A. And that's correct.

4 Q. One of the recommendations that might have appeared on there
5 is recognizing Delta P.

6 A. I can't argue with that, Chairman.

7 Q. Right. So on any view there is at least one short of the
8 recommendations from your own report?

9 A. That's—I would accept that.

10 Q. Right.

11 **Mr. Chairman:** Mr.—

12 **Mr. Hosein-Shah:** I'm almost finished.

13 **Mr. Chairman:** Mr. Hosein-Shah, how much longer have you
14 got, can I ask please?

15 **Mr. Hosein-Shah:** Four more questions.

16 **Mr. Chairman:** Four more.

17 **Mr. Hosein-Shah:** Not including this one.

18 **Mr. Chairman:** All right, let's move along, then.

19 **Continued Cross-Examination By Mr. Hosein-Shah:**

20 Q. Yeah. Did Paria conduct an investigation into the recovery
21 aspect or the rescue aspect of this incident?

22 A. That, that process is, is ongoing. We haven't conducted a full
23 investigation into the rescue and recovery effort.

24 Q. And don't you consider that to be important in—

25 A. We, we know, we know that, we know that it is important.

26 Q. And is there a timeframe for the completion of that
27 investigation?

1 A. I haven't put a timeframe on it to date and a lot of the time and
2 effort was being spent preparing for this Commission of
3 Enquiry [*Inaudible*]

4 Q. And preparing that report?

5 A. And preparing what report?

6 Q. This incident report just stops to say this is liability. It doesn't
7 go on further to say anything else. Do you agree that you solely
8 investigate the incident but you have not looked, or at least in
9 terms of preparing this report, Paria has not even looked at their
10 own response and "how we could be better"?

11 A. And what I said is that those things would be looked at
12 thoroughly and a lot of effort went into preparing for this—for
13 the COE which we also have some lessons to learn from.

14 Q. Can you commit to a time frame for completing that exercise?

15 A. Well I can't commit to it today but if the, if the, if the
16 Commission so would like it in writing I will do that.

17 Q. Well I'll leave that—

18 **Mr. Chairman:** I suspect we'll have our report before you
19 have yours.

20 **Mr. Hosein-Shah:** I didn't want to say it.

21 **Continued Cross-Examination By Mr. Hosein-Shah:**

22 Q. Now what systems does Paria have in place to support the
23 families of these divers?

24 A. Paria was written by the attorneys for these families on the 21st
25 of March indicating that Paria desist and stop all
26 communications with the families.

27 Q. And is it that Paria was desirous of continuing the support to

1 families?

2 A. Paria is desirous of supporting the families, yes.

3 Q. And Mr. Boodram?

4 A. Paria supported Mr. Boodram with a, with, with a, with
5 counselling. We also—we also supported Mr. Boodram, was
6 going to support Mr. Boodram with an alternative to what he
7 suggested as the requirement for help, Sir, yes.

8 Q. And do you think the support provided by Paria was sufficient?

9 A. Do we think—do I think the support provided by Paria was
10 sufficient?

11 Q. Yes.

12 A. I would say yes. Paria was open to providing all the support
13 that it could have provided.

14 Q. And what was that support provided?

15 A. I mentioned some of it in the report. The, the—we thought that
16 immediately the issue of counselling would have been
17 important to get people through what would have been a very,
18 very tough time for the families.

19 Q. What about financial support?

20 A. We talked, we talked about providing people with a supply of
21 the necessities that they would need until they were able to
22 stand on their feet.

23 Q. That's not what you say in your statement.

24 A. What I said in the statement?

25 Q. Your statement at paragraph 93—

26 A. Uh-huh.

27 Q. —One four five nine on to one four six zero—

1 A. Uh-huh.

2 Q. —essentially says that you offered them support in the form of
3 purchase of groceries and Massy gift cards.

4 A. Those are the things that, those are the things that they would
5 need to keep them going.

6 Q. And do you think that's sufficient?

7 A. Huh?

8 Q. Do you think that would be sufficient?

9 A. Do I think that would be sufficient?

10 Q. Yes. Do you think—

11 A. Look I think, I think, I think it was, I think it was a start and we
12 were further—we were willing to engage with the families
13 further until we were put to a stop.

14 Q. Are you still going to engage the—

15 **Mr. Chairman:** I'm going to put an end to this now.

16 **Mr. Hosein-Shah:** Yeah.

17 **Mr. Chairman:** Thank you very much.

18 **Mr. Hosein-Shah:** Fair enough. Those are my questions.

19 **Mr. Chairman:** Interesting though it is, the fact is that's not
20 within the ambit of this Enquiry.

21 **Mr. Hosein-Shah:** Fair enough.

22 **Mr. Chairman:** And I think that's as far as I'm prepared to
23 permit you to ask questions.

24 **Mr. Hosein-Shah:** Those are my questions, Chair.

25 **Mr. Chairman:** Yes. Before you ask any questions, can I—
26 just one thing I wanted to correct.

27 **Examination By Mr. Chairman:**

1 Q. You had answered a question of mine a little while ago by
2 telling me that you understood the camera to go as far as 600
3 feet—

4 A. Yes.

5 Q. —into the pipeline.

6 A. Yes.

7 Q. And that in fact a total of 616 feet into the pipeline and that you
8 regarded as being, I'm paraphrasing what you said here but—so
9 please feel free to correct me—that the camera having gone that
10 far into the pipe it's difficult to imagine how any diver who
11 might have gone into the pipe could have gone any further and
12 found anything, all right? That I think is what you were saying
13 to me. Is that—am I—

14 A. I think it's a long distance for a diver to go into a pipe—

15 Q. That's halfway down the length of the pipe isn't it?

16 A. Yes.

17 Q. The difficulty with that is, I'm afraid, is that that length of
18 distance in which the camera went in was on the Wednesday
19 which was after three of the men had already been rescued, one
20 had come at of the pipe and three others had been recovered
21 from the pipe—

22 A. Yes.

23 Q. —dead?

24 A. Yes.

25 Q. So that doesn't really address the question that I was asking
26 you, and I've checked back in the records or at least I've had it
27 pointed out to me, which is what I thought at the time but didn't

1 have my finger on it, the depth to which the camera went prior
2 to anybody coming out of the pipe after Mr. Boodram was no
3 more than 200 feet into the pipe.

4 A. It couldn't get past the barriers, yes.

5 Q. Sorry?

6 A. Yes, that's correct.

7 Q. Yeah. Well 200 feet into the barrier is 70 feet down—

8 A. Uh-huh.

9 Q. —and 130 feet along isn't it? So only of the twelve hundred
10 feet—

11 A. Yeah.

12 Q. —that was underwater—

13 A. Yes.

14 Q. —and in a horizontal plane—

15 A. Yeah.

16 Q. —was in fact only about 130 feet that the camera went in—

17 A. Yeah.

18 Q. —prior to—

19 A. Yes.

20 Q. —the men being, as it were, extracted from the pipe?

21 A. That's, that's, that's about correct, yeah.

22 Q. That's the position, isn't it?

23 A. Yes.

24 Q. So even when you did finally get the total—get a camera into it
25 to be able to make an assessment, which I point out was at
26 quarter past 3.00 in the morning of the 26th—

27 A. Yeah.

1 Q. —of February, the next day, so the Saturday, early hours of
2 Saturday morning, it's a quarter past 3.00 that you first were
3 able to see no more than 130 feet along the length of the pipe?

4 A. Yes.

5 Q. Not 600 feet.

6 A. Well, that's correct.

7 Q. So that, so that the question as to the distance to which these
8 men might have been or what other objects might have been in
9 is only to the extent of 130 feet.

10 A. Yeah. The point I was trying to make, Chairman—

11 Q. Yes.

12 A. —is that the distance that the diver had to cover, that 600 and
13 whatever feet it was, right—

14 Q. Uh-huh.

15 A. —we wouldn't have known that from any other information
16 that we had prior.

17 Q. Well, you see, that's not quite right, is it?

18 A. Why?

19 Q. Because we've heard evidence that there was equipment on
20 board supply vessels and divers with the appropriate training, I
21 say appropriate training in commercial diving. I don't suppose
22 anybody's actually trained to dive in a pipe, but in any event,
23 divers who were prepared to go into pipe who had, um, airline
24 that would take them beyond 600 feet if joined together, and
25 had communications and had lights that were in a position to be
26 able to go into the pipeline.

27 Now, all I'm saying is this, that in your making the

1 assessment that you did, an unenviable task I'm sure but
2 nonetheless one which was your responsibility, the best that
3 you were able to achieve was seeing into the pipeline by a 130
4 feet at four or five o'clock in the morning.

5 A. Right.

6 Q. They were dead anyway, weren't they?

7 A. It's possible.

8 Q. Almost inevitable. We've already heard nobody undertook an
9 exercise to try and find out how much air might have been in
10 the pipe. Did you?

11 A. We haven't done a detailed exercise to be able to determine
12 what if any—

13 Q. Did you do a detailed exercise to work out how much fluid was
14 in the pipe?

15 A. No.

16 Q. Yet you knew, as a matter of fact, that there were at least two
17 places in that pipe with air?

18 A. We know that there were two places we find, I wouldn't say
19 with air but there were vapour spaces.

20 Q. Well they were able to breathe it?

21 A. For some time they would have a certain amount of oxygen for
22 some time—

23 Q. Yeah

24 A. —but those—but that space would be filled with H₂S and
25 other—

26 Q. All kinds of toxic gases, yeah.

27 A. —all kinds of toxic gases.

1 Q. Of course. Of course. But at best air, at worst some kind of
2 toxic gas but breathable.

3 A. At best, yeah.

4 Q. Correct?

5 A. Yes.

6 Q. No attempt was made to try and identify how much would be
7 needed per man per hour that sort of thing, was it?

8 A. No; and we didn't have the information to say how big those air
9 pockets were, what were the size of the air pockets.

10 Q. What you did have information of, though, was how much fluid
11 had been pumped out of the pipe?

12 A. Yeah, but remember the pipe was reflooded.

13 Q. No, of course, but you knew what had been taken out, didn't
14 you?

15 A. Yeah, but we didn't know how much actually went back in.
16 The pipe could have been completely flooded.

17 Q. Well, from what we know for sure is a considerable amount of
18 seawater must have got in—

19 A. Correct.

20 Q. —because it sucked these men in as well?

21 A. Correct.

22 Q. So, it must have sucked in seawater and you knew that they
23 were able—you could see into the pipe?

24 A. Yeah, well we know the pipe was filled to some point with
25 seawater.

26 Q. Yeah. It wasn't pure oil, was it?

27 A. No it wasn't pure oil at that time.

1 **Mr. Chairman:** All right, thank you. I just wanted to establish
2 that because I didn't want anyone to think that you had made
3 your decision on the basis that you'd sent a camera in 600 feet
4 because you hadn't. All right, thank you very much for that.
5 Now, Mr. Ramadhar. Yes. Now I understand your daughter's
6 here with you.

7 **Mr. Ramadhar:** Well first of all let me say thank you so much
8 for that kind indulgence.

9 **Mr. Chairman:** No, no, no. I'm please she's here. Maybe
10 she'll exercise some control of you. She's closer to you.

11 *[Laughter]*

12 **Mr. Ramadhar:** I think her mom sent her for that purpose
13 today.

14 **Mr. Peterson SC:** *[Inaudible]*

15 **Mr. Ramadhar:** Oh, thank you very much and I really do
16 believe her mom sent her today to, to try and, um—

17 **Mr. Chairman:** All right.

18 **Mr. Ramadhar:**—you know—

19 **Mr. Chairman:** I'm relying on, Mr. Ramadhar, for you to be
20 as swift as you can.

21 **Mr. Ramadhar:** As I always am, Sir.

22 **Mr. Chairman:** Yes.

23 **Mr. Ramadhar:** And this late in the evening I always have to
24 pay the penalty of the price—er, of time, so, I'm very painfully
25 aware of that, Sir.

26 **Cross-Examination By Mr. Ramadhar:**

27 Q. Good afternoon Sir, Mr. Mohammed.

1 A. Good afternoon, Mr. Ramadhar.

2 Q. Of course, on that day when you received this horrible news at
3 Paria you were on the way to a funeral, were you?

4 A. Yes.

5 Q. And you ultimately ended up presiding over four, isn't that
6 correct?

7 A. I won't answer that, Sir.

8 Q. You won't? No problem. You appreciate that you had the
9 authority and the resources not just of Paria but of the State, if
10 you chose to give a permission for rescue? You appreciate you
11 had that authority?

12 A. Yes.

13 Q. Right. And you, for whatever reason good or bad or
14 indifferent, chose not to give permission to do the rescue. You
15 agree with that?

16 A. Well let's get one fact straight.

17 Q. Let's get the answer.

18 A. No, I want to get a fact straight.

19 Q. Well you go right ahead, Sir. You're not in Paria. Understand
20 you're in the Commission of Enquiry, and, as God-like as you
21 believe you are you will answer the question, Sir.

22 **Mr. Peterson SC:** No, Sir; no, Sir. He started too early with
23 that. I tell you the burden you placed on his daughter is too
24 much to bear. No child should be given that burden, Sir.

25 **Mr. Ramadhar:** Well, as the children of the deceased of
26 course.

27 **Mr. Chairman:** Mr., Mr. Ramadhar.

1 **Mr. Ramadhar:** Yes. I withdraw and I shall move on for the
2 sake of time.

3 **Mr. Chairman:** It's only going to take longer if you do that.

4 **Mr. Ramadhar:** Mr. Peterson if he would interrupt less, of
5 course. Thank you.

6 **Continued Cross-Examination By Mr. Ramadhar:**

7 Q. So you appreciate that you did not give permission for rescue?
8 You agree with that?

9 A. I want to clear one fact up first.

10 **Mr. Chairman:** It works much better if you answer the
11 question first and then add your rider.

12 **Mr. Mohammed:** Okay. So

13 **Mr. Chairman:** Please. You would address yourself to the
14 question.

15 **Mr. Mohammed:** I'm sorry I'm sorry, Chairman, I'm sorry.

16 **Mr. Chairman:** Right.

17 **Continued Cross-Examination By Mr. Ramadhar:**

18 A. Good. No we did not give per—well, permission or we didn't
19 allow diving into the pipeline.

20 Q. In fact you prevented efforts?

21 A. I wouldn't say we prevented efforts. We didn't prevent efforts.
22 People continued to dive.

23 Q. Oh.

24 A. And let me get one thing straight.

25 Q. And don't point at me, you know, Sir, please.

26 A. All right. That's all right.

27 Q. Just leave that to others but I—

1 A. All right.

2 Q. —I knew from Mr. Maharaj you ever do that in a court or
3 anywhere else.

4 A. Okay.

5 Q. Yes. Yes. [*Crosstalk*] Carry on, please? We're waiting for
6 you.

7 A. I just want to address the first, the first question. That we bring,
8 we did bring bear to the incident the State through the coast
9 guard.

10 Q. Uh-huh. Yes.

11 A. All right? And the coast guard through their assessment also
12 agreed that—

13 Q. Listen—

14 A. —not to—

15 Q. I appreciate that. The coast guard will answer for themselves.
16 We're asking about you. You are the ultimate authority, the
17 General Manager. You had the authority and responsibility to
18 make decisions. Isn't that correct?

19 A. Yes.

20 Q. And the decision was made that no one should go into the pipe.
21 We've heard that many times before. You want to change that?

22 A. No.

23 Q. No? So, let us just move for one moment we're hearing about
24 recovery and we're hearing about rescue.

25 A. Uh-huh.

26 Q. And I'm grateful to my friend Mr. Small, Gerard Small, who
27 was so obvious and we dealt with before but I shall ask you

1 now. What efforts were made to sustain the lives of those who
2 were in the pipe while you came up with your plan for rescue?

3 A. [*Pause*]

4 Q. Zero, isn't it? Isn't it? Zero effort to sustain the lives while
5 you, while you got your cameras in and all the information you
6 could possibly want, no effort was made to sustain the lives of
7 the men. Isn't that accurate?

8 A. [*Pause*]

9 Q. It's a yes no or a big rider a big but. Which is it?

10 A. Look, I would answer that by saying that we were working as
11 quickly as we can to be able to develop a rescue plan—

12 Q. Uh-huh.

13 A. —to be able to rescue these—

14 Q. And could you tell us ad nauseam now what was the rescue
15 plan you ultimately had?

16 A. At the end of the day—

17 Q. Uh-huh.

18 A. —we were not—

19 Q. On which day? Which day we're talking about? We're talking
20 Friday.

21 A. All right at the end of—

22 Q. Which day?

23 A. All right, at the, at the end of Friday—

24 Q. Yeah.

25 A. —we were not able to significantly have the information to be
26 able to derisk but—

27 Q. Beautiful.

1 A. —so that we could have gotten—

2 Q. Right.

3 A. —a rescuer in and out of that pipeline.

4 Q. Excellent. Got you. Got you. Now remember His Ludship, the
5 Chairman—

6 A. Yes.

7 Q. —asked and you answered—

8 A. Yes.

9 Q. —the timeline which you anticipated that life will end—

10 A. Yeah.

11 Q. —for those who were in the pipe. Remind us what number
12 we're talking about?

13 A. I said at best probably six to 12 hours. That's a—

14 Q. Six to 12 hours. And that came about from what experience of
15 yours to determine six to 12 hours of life? What is your
16 experience that you had and your training to come up with that
17 six to 12 hours?

18 A. I mean the knowledge we were working with basically was that
19 there were possible air pockets within the line.

20 Q. Uh-huh.

21 A. Some air pockets in the line.

22 Q. A hope? A wish?

23 A. No, I think that's evidence from Mr. Boodram.

24 Q. A knowledge, beautiful. Uh-huh,

25 A. All right, that, that, that those existed.

26 Q. What was the size of air pocket?

27 A. We know—we, we didn't know. We also knew that there were

1 tanks—

2 Q. Uh-huh.

3 A. —inside of the, of the pipeline. We don't know exactly where
4 the tanks were.

5 Q. Right.

6 A. So if the tanks were close to the men they would have had
7 breathing air for some period of time.

8 Q. And you appreciate that tanks—the, the—at a maximum a
9 tank's air—and I'm no expert but, let—no more than two
10 hours?

11 A. Well it depends whether, whether the tanks were close to one
12 man—

13 Q. No, no I'm not on that.

14 A. —or they were separated.

15 Q. Forgive me. So that we may not understand—misunderstand
16 the questions, you'll give the answer to the question.

17 A. All right.

18 Q. Right. A tank at its maximum will, will, will endure life for
19 how long?

20 A. Well I don't know specifically, maybe two hours.

21 Q. Let's give it two.

22 A. Maybe less than that in an environment like that.

23 Q. Right. And what time this accident occurred?

24 A. The accident occurred at 1445 I believe.

25 Q. Give me in Trinidad time, nah man?

26 A. Two forty-five, 2.45.

27 Q. Two forty-five. Let's go to that so that the country will hear it;

1 2.45.

2 A. Yes.

3 Q. Yeah? And the six hours you started to think about started
4 from what time?

5 A. From the time the incident happened.

6 Q. Right, so that takes us to 8.45, starting with a six-hour lifeline,
7 correct?

8 A. Yeah.

9 Q. And that was of course with you knowing all that you could
10 have and not knowing what you did not know, so that a
11 timeline, so we say by nine o'clock you had great anxiety to
12 ensure either a rescue or sustenance, isn't it? At best?

13 A. Go ahead.

14 Q. No, no. Did you have anxiety to have a rescue or sustenance?

15 A. But, I mean—yes.

16 Q. Thank you. So, I'm hearing you speak with utter disrespect of
17 persons who had come and put their lives on the line possibly
18 about mutterings of a rescue mission? What does muttering
19 mean to you?

20 **Mr. Peterson SC:** Sir, that is not correct.

21 **Mr. Ramadhar:** Well let me correct it.

22 **Mr. Peterson SC:** No—

23 **Mr. Ramadhar:** You had mutterings—

24 **Mr. Peterson SC:** May I answer it, Mr. Ramadhar, please?

25 **Mr. Ramadhar:** I beg your pardon, Sir.

26 **Mr. Peterson SC:** The mutterings that the witness I
27 understand was speaking about was earlier with respect to the

1 LMCS people, not the persons who came and were putting their
2 life on the line. Mr. Ramadhar may want to address you in the
3 closing statement.

4 **Mr. Chairman:** I think that is true, that the ref—an
5 unfortunate use of the word I suspect but—

6 **Mr. Ramadhar:** Yeah.

7 **Mr. Chairman:**—the mutterings, as he put it, were in respect
8 of LMCS rather than anybody else.

9 **Mr. Ramadhar:** Of course.

10 **Continued Cross-Examination By Mr. Ramadhar:**

11 Q. And LMCS was speaking in those mutterings about exploring a
12 rescue effort, isn't it? As far as you are concerned, the little
13 regard you had for it, the mutterings was in relation to a rescue,
14 wasn't it?

15 A. A rescue that would endanger the lives of the rescuer because—

16 Q. We're coming to that because you had said the mutterings, you
17 didn't have in writing, correct? You didn't have a, a written
18 plan with risk assessment and so, isn't that correct?

19 A. That's correct.

20 Q. And you disregarded it because you wanted paper over—you
21 wanted form over substance?

22 A. I think, I think what I said is that—

23 Q. We heard what you said.

24 A. Okay good, so I don't need to repeat it.

25 Q. No you don't.

26 A. Okay, right.

27 Q. So we will hear you that you would have preferred by far to

1 have it in paper, on paper rather than to have it articulated like
2 we all do, and this is a matter of urgency but you want paper,
3 isn't it?

4 A. If I recall what I said properly I didn't say paper I said paper, a
5 plan, something that made sense.

6 Q. Yes.

7 A. Something that was verbalized in a way that had some kind
8 of—

9 Q. Verbalized. Now you move to verbalized.

10 A. And, or—but I said that.

11 **Mr. Peterson SC:** Sir I don't want to delay the, the, the—
12 because we all want to leave here this afternoon but if Mr.
13 Rajkumar, um, Mr. Ramadhar continues, we will be here for a
14 long, long time, once you want to finish this witness today.

15 **Mr. Ramadhar:** I shall move on, um—I shall move on.

16 **Mr. Peterson SC:** He never said he wanted everything in
17 paper. He said or a verbally articulated plan.

18 **Continued Cross-Examination By Mr. Ramadhar:**

19 Q. You wanted form over substance. Let's get that clear.

20 A. I didn't say that.

21 Q. I'm asking you whether you wanted form over substance.

22 **Mr. Chairman:** Mr. Ramadhar, by all means ask that question
23 in that way. What you can't do is describe it as though it were
24 what he had said because it isn't what he'd said.

25 **Mr. Ramadhar:** And I'm asking him. That's why I—

26 **Mr. Chairman:** Please—

27 **Mr. Ramadhar:**—keep it open.

1 **Mr. Chairman:**—when you frame your question you've got to
2 frame it in such a way—

3 **Mr. Ramadhar:** Of course.

4 **Mr. Chairman:**—you don't need me to tell you this.

5 **Mr. Ramadhar:** No.

6 **Mr. Chairman:** You know.

7 **Mr. Ramadhar:** Of course.

8 **Mr. Chairman:** Right. So please.

9 **Mr. Ramadhar:** Thank you.

10 **Mr. Chairman:** All right.

11 **Continued Cross-Examination By Mr. Ramadhar:**

12 Q. Now you've heard—once again you delegated a lot, a lot of, er,
13 the responsibilities to contractor and to applicants and so. You
14 agree with that, yeah?

15 A. Yes.

16 Q. You appreciate at the supreme commander, the General
17 Manager, you could delegate but you cannot abdicate? You
18 know the difference?

19 A. Yes.

20 Q. And you of course delegated the supervisory role for that day to
21 Kenson?

22 A. On the day of the incident?

23 Q. Yes.

24 A. Yes.

25 Q. Did you have any qualification check on the person that would
26 have been the supervisor?

27 A. Every person that we hire through Kenson we—it goes through

1 a process where that qualification is assessed by the people, the
2 technical and maintenance team as applicable for the role that
3 they would want—that they would have to undertake.

4 Q. Right. Right, we hear about the process. In the particular case
5 sitting as you are today, was any check made either before or
6 either from them to now as to the qualification of the supervisor
7 for that piece of work that Kenson had provided?

8 A. I can't say specifically that I did that but our process would
9 have allowed that to be—

10 Q. Forget about the process. You appreciate a supervisor must be
11 superior in knowledge?

12 A. I appreciate that a supervisor must be superior in knowledge?

13 Q. He could say what to do, what not to do, stop this, do this, yes?

14 A. I—

15 Q. He's imbued with authority?

16 A. But I thought we said that on the permit. I—

17 Q. You thought it was on the permit. I'm asking about the specific
18 supervisor on that day. He gave evidence here and we have the
19 record.

20 A. Uh-huh.

21 Q. Do you know whether that person was amply qualified to
22 supervise this work, yes or no?

23 A. I would say that if you are asking if the, if the supervisor had
24 specific experience with working on subsea pipeline, I would
25 say probably no to that.

26 Q. Thank you.

27 A. What I would say is the supervisor has experience in executing

1 mechanical works of a similar nature.

2 Q. Do you even know the name, do you even know the name of
3 the supervisor who was overseeing that you gave that
4 responsibility to on that day, yes or no?

5 A. I would say I can't recall it now but I'll recall before the—
6 before your session is out.

7 Q. But you appreciate that you had a catastrophic failure of all
8 your systems and procedures on that day?

9 A. What I know—

10 Q. Listen to my question—

11 A. —what—no, Sir.

12 Q. —and answer it so we could get moving. Do you appreciate
13 you had a catastrophic failure of your procedures—

14 A. No. No, the answer is, the answer is no.

15 Q. Oh thank you.

16 A. What, what I know—

17 Q. I heard you.

18 A. No, no, no.

19 Q. You had no failure—

20 **Mr. Chairman:** No, he's going to be allowed to an—if he
21 answers the question with a yes or no he is going to be
22 permitted to give his rider.

23 **Continued Cross-Examination By Mr. Ramadhar:**

24 Q. Of course. Give your rider, Sir.

25 A. The rider is simple that on the permit there were specific
26 instructions to work to.

27 Q. Yes.

1 A. So the system didn't fail. People didn't adhere to what, the
2 work that was authorized in the way that it was authorized.

3 **Examination By Mr. Chairman:**

4 Q. In that regard, can I just ask you this, please?

5 A. Yes.

6 Q. As far as you are concerned—

7 A. Yes.

8 Q. —irrespective of whether there was Delta P or for whatever
9 other reason these barriers were in place—

10 A. Yes.

11 Q. —what should not have happened was either of these barriers
12 being removed—

13 A. Correct.

14 Q. —before the chamber—

15 A. Correct.

16 Q. —was, was decommissioned as it were?

17 A. Correct.

18 Q. As to—let me finish the question.

19 A. Correct.

20 Q. Because I'm just stating what—or we understand your evidence
21 to be. So it flows from that, doesn't it—

22 A. Yes.

23 Q. —that if the supervisor to which Mr. Ramadhar is referring
24 knew that for whatever reason those plugs should not be
25 removed prior to the removal of the hyperbaric chamber, he
26 would and should have stopped—

27 A. Stopped.

1 Q. —all work?

2 A. Yes.

3 Q. Is that right?

4 A. Yes.

5 Q. Do you recognize then that whatever level of supervision there
6 was, it was woefully inadequate in that they had failed to stop
7 the removal of those pipes, those plugs?

8 A. They would, they would not—so, in the course of work, all
9 right, there is a clear barrier that is written onto the permit,
10 right.

11 Q. There's a what, sorry?

12 A. A barrier. There's a, there's a specific request that the plugs to
13 be remained in use.

14 Q. Yes.

15 A. Correct?

16 Q. No, no you've pointed that out to me before?

17 A. Right, good, good, good. So if that—consider that these people
18 in hyperbaric chamber, they're working, they're not open, not
19 visible to everyone.

20 Q. But there's a camera, isn't there?

21 A. There's a camera, yes.

22 Q. And somebody's supposed to be monitoring their work?

23 A. The way that the work is conducted is that work is being
24 monitored by the LMCS and their supervisors and our people
25 would from time to time check in. But the fact is, if that plug
26 was to be removed against what was written on the permit, our
27 supervisor should be informed. Our supervisor should have

1 been informed that, “We are going to remove this plug.” It is
2 written in the permit that the plug is to be used. There is a
3 responsibility on the worker to work safe and I don’t want to
4 abdicate him from that responsibility.

5 Q. Explain to me because—I get that entirely, but clearly they
6 thought that they were entitled to remove it. They didn’t do it
7 for the fun of it. They did it because they thought it was—
8 whoever did it must have done it because they thought it was
9 appropriate to do, rightly or wrongly, right? We know that to
10 be the case?

11 A. Yeah.

12 Q. The fact is that you have a degree of supervision and a
13 responsibility of supervision over the works being conducted.
14 Do you agree with that or not?

15 A. I agree with that.

16 Q. Or do we have to go to the top?

17 A. I, no, no, no. I agree. You don’t have to go with it.

18 Q. You agree? Right. So—

19 A. I agree with it.

20 Q. —what Mr. Ramadhar is asking you in effect is this, isn’t it?

21 A. Yes.

22 Q. Is that given there is a responsibility to supervise—

23 A. Yeah.

24 Q. —I don’t agree with him that a supervisor needs to have more
25 experience that the person who is being supervised—

26 A. Right.

27 Q. —so long as he has the same amount of experience or at least

1 an experience of dealing with that particular—

2 A. Right.

3 Q. —issue, right? So, working on that premise so that the
4 supervisor understands what must and must not be done on a
5 particular occasion, um, help me about this, do you know how
6 long it would take to remove those two plugs?

7 A. I think the top plug, I mean, 20 minutes, there's a number of
8 bolts. It's just a matter of slackening some bolts and pulling it
9 out. Right?

10 Q. I will go with your 20 minutes. It might be a little more than
11 that.

12 A. Well, let's say—all right.

13 Q. We've heard other evidence, but never mind, you think 20
14 minutes.

15 A. And it's, it's—

16 Q. And then, and then the, um, the other plug?

17 A. The inflatable plug, I mean, I would have to hazard a guess
18 because we would be bleeding that through a small insect.

19 Q. Uh-huh.

20 A. Right? So, I don't know, maybe, maybe 15, 20 minutes for the
21 plug to lose enough friction if you want to slip.

22 Q. Which you [*Inaudible*]. Got you. All right. So either way
23 we're talking about a period of time, according to you, to
24 remove both plugs without hazard about 40 minutes?

25 A. I would say reasonably, yeah.

26 Q. Right. Would you be happy with your supervisor not observing
27 the work being conducted, bearing in mind how hazardous

1 you've told us it is, for a whole period of 40 minutes? Would
2 you be satisfied with that?

3 A. Would I be satisfied with that? [*Pause*] I'd probably I'd say
4 no.

5 Q. All right. So, um, if that is the case, one of the things that you
6 might have recommended at the end of your own report, other
7 than the two that you did, not you personally but your inquiry
8 might have said that the period of supervision where this sort of
9 hazardous work is being carried out should be no more than 10
10 minutes or 15 minutes or whatever period you think
11 appropriate, so that you're keeping an eye on the work that's
12 being done? Because the fact is, is that had that been done—

13 A. Yeah.

14 Q. —it would have been stopped, wouldn't it, should have been?

15 A. That, yeah, I think it would have been stopped.

16 Q. Right. That I think addresses Mr. Ramadhar's question about
17 the supervision that was being conducted of the men who were
18 carrying out this work who obviously thought that what they
19 were doing was okay, rightly or wrongly, we know wrongly but
20 fact is that that's what the position was. You've seen, haven't
21 you the, um, I hope we don't need to go to it, but you've seen
22 the method statement—

23 A. Yes.

24 Q. —that they prepared, haven't you? You know all about that. I
25 don't want to go over it again—

26 A. Yeah.

27 Q. —because we've already covered all of this—

1 A. Yes.

2 Q. —and the order of works that they say need to be done.

3 A. Yes.

4 Q. But the fact is that the degree of supervision was—fell short of
5 what you yourself would have expected.

6 A. Yeah. I'll argue that we could probably have been closer, yeah.
7 All right.

8 Q. Yes.

9 **Mr. Chairman:** Yes, thank you Mr. Ramadhar.

10 **Mr. Ramadhar:** Much obliged, Sir.

11 **Continued Cross-Examination By Mr. Ramadhar:**

12 Q. Now, could you tell Mr. Chairman and all of us between the
13 13th of February and the 25th of February, what other work
14 would have been conducted in or around the area of the riser 5
15 and 6?

16 A. I'm sorry, I don't—I wouldn't have that detail.

17 Q. Would you be able to ascertain that because it could be crucial
18 if there was other work that could have impacted upon the
19 conditions within the pipe between 5 and 6? You appreciate
20 that?

21 A. Once the Commission request it, we will, we will work towards
22 it.

23 Q. Thank you. Now, Sir, you gave an instruction for the coast
24 guard to basically take control—

25 A. Yes.

26 Q. —at the site.

27 A. Yes.

1 Q. And part of that taking of control was to protect Paria and
2 Kenson personnel?

3 A. Yes.

4 Q. From whom?

5 A. Well the reports we had, I mean, I could understand that the—

6 Q. Sir, I didn't ask for an essay. From whom? From whom?

7 A. What we thought were the LMCS employees at the time—

8 Q. Yes.

9 A. —because they were emotional and they were behaving, I
10 guess, in ways that the guys felt uncomfortable.

11 Q. Uncomfortable?

12 A. Yes.

13 Q. You think it was comfortable to have four men in a pipe and the
14 possibility of rescue was at hand?

15 A. Gosh, I—I already said that. I already said that.

16 Q. Yeah.

17 A. They would have been in a—I could understand, they were,
18 they were in a, in a really tough place. I could understand that.

19 Q. And also, you wanted the coast guard to basically execute your
20 instructions?

21 A. Yes.

22 Q. Right. And part of your instructions was to prevent diving into
23 the pipe, isn't it?

24 A. Yes.

25 **Mr. Ramadhar:** But at paragraph 55, My Lord, at 001452 and
26 I shall—

27 **Mr. Chairman:** I may be many things. One thing I—

1 **Mr. Ramadhar:** Sir, I beg your pardon.

2 **Mr. Chairman:**—I may not be is a Lord.

3 **Mr. Ramadhar:** Well I know the peerage is under scrutiny
4 now, um, anyhow—

5 **Continued Cross-Examination By Mr. Ramadhar:**

6 Q. You, at that last line, indicated that the main focus was to
7 inspect the internal conditions of the line with assistance of the
8 video footage as night approaches. The divers stop diving on
9 their own accord.

10 A. Yes.

11 Q. This is your statement.

12 A. Well they would—

13 Q. Hold on—

14 A. Yeah.

15 Q. —so we'll get the question.

16 A. Yeah.

17 Q. Which diver told you that they stopped on their own accord?

18 A. Well, the fact is that the, the, er, the coast guard didn't stop
19 anybody.

20 Q. Or, you were there? You were present?

21 A. The information reaching—

22 Q. Listen to my—were you there?

23 A. I was at the—I was not on berth 6.

24 Q. Right.

25 A. But I was advised.

26 Q. So did you hear and see everything the coast guard did?

27 A. No. Is that a reasonable expectation that I would hear and see

1 every—

2 Q. Certainly not.

3 **Mr. Chairman:** It's not a reasonable expectation.

4 **Mr. Ramadhar:** And that is why I asked.

5 **Mr. Chairman:** That's not how the IMT works—

6 **Mr. Ramadhar:** No.

7 **Mr. Chairman:**—if it works at all, but the fact is that the, er—
8 he's entitled to receive report from whoever.

9 **Mr. Ramadhar:** Exactly.

10 **Mr. Chairman:** And your question is entirely apposite, to be
11 able to ask him, well, who did you hear it from? You weren't
12 there.

13 **Mr. Ramadhar:** Yes.

14 **Mr. Chairman:** We know you weren't there. So we can
15 ignore that bit, but we can—we, we are entitled to know from
16 whom you got heard that report.

17 **Mr. Mohammed:** That report came from Ms. Catherine at the
18 site and through Collin to myself.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 Q. Right. And you—so she spoke to the divers and confirmed that
21 they did so stop voluntarily? Is that what you're telling us?

22 A. That's the information that I have.

23 Q. That she spoke and they said, okay, we're voluntarily not going
24 in?

25 A. I don't know if they said in those exact words.

26 Q. Well what words? Because we have different, we have
27 different evidence.

1 A. All right.

2 Q. Okay. Now, Conan, you know the name Conan?

3 A. Yeah.

4 Q. He didn't belong to a diving company?

5 A. I, I don't know.

6 Q. No. You wanted to deal with companies?

7 A. I wanted to deal with professional organizations—

8 Q. Professional organizations?

9 A. —that have a track record of diving and operating across the
10 country doing jobs that resembled this in nature.

11 Q. And when did the first company arrived that was able and
12 willing?

13 A. I—sometime after 8.00, 9.00, I guess, somewhere round that
14 time.

15 Q. And which company was that?

16 A. I can't recall exactly which company it was.

17 Q. Wouldn't that be very important? Because you were waiting on
18 one of them to have arrived to facilitate a rescue?

19 A. Well I know, I know at least two were discussed and that was,
20 er—

21 Q. No, not about discussed. I'm talking about being on site.

22 A. Well I wouldn't know the exact time that they arrived, but—

23 Q. Well no I'm asking the name, Sir.

24 A. It was OTSL and Mitchell were the two companies that we had
25 discussions with.

26 Q. Right. Let's deal with OTSL.

27 A. Uh-huh.

1 Q. Approximately what time did they arrive?

2 A. I can't recall.

3 Q. And what was their position upon arrival?

4 A. When you say upon arrival?

5 Q. In terms of doing the rescue.

6 A. They, they met with our, they met with our, with the diving
7 supervisor we had at the time, Mr. Seales, and they were—they
8 shared the information that we had, including the video footage,
9 and they determined that the dive was too risky for them to
10 send their men in.

11 Q. So you had video footage around nineish?

12 A. We had some footage I believe around nineish, yes.

13 Q. Oh, oh—

14 A. Sorry at the time when they arrived, whether it was 9.00 or later
15 in the night I can't remember, but there was video footage that
16 they would have viewed on the site.

17 Q. Thank you. Now you spoke a lot about and you used the term,
18 you had used a term of art of the unknowns?

19 A. Unknowns.

20 Q. No according to your statement, U-N-K-N-O-W-S—unknowns.

21 A. Okay.

22 Q. Yeah? So you didn't know the conditions in the pipe—

23 A. Yeah.

24 Q. —In terms of whether there might have been another Delta P,
25 you agree?

26 A. Yeah. yes.

27 Q. You didn't know how much air there was. We've been through

1 this, so—

2 A. All right.

3 Q. —I want to speed it up, right?

4 A. Yeah, yeah, yes, yes.

5 Q. You didn't know a lot?

6 A. Yes.

7 Q. But what you did know after Christopher Boodram came out,
8 after having spent how many hours, two three hours in the pipe,
9 that he had survived, correct?

10 A. Yes.

11 Q. So the issue of vapour and toxins was mitigated that there was
12 air, men were breathing, correct.

13 A. Well Christopher Boodram survived and came through the pipe
14 with air tanks or with air in the pipeline? I'm not sure.

15 Q. You as the General Manager not sure that he came out with air
16 tanks or what with what? Sir, I am shocked and I'm giving you
17 the opportunity to revisit your answer. You are not sure
18 whether Christopher Boodram came out how?

19 A. They he would have had—he would have had to use air tanks to
20 come up out of the pipeline. That's the fact. He would have
21 had to use to be able to come through the flooded pipe of the
22 pipeline.

23 Q. Would have had. To this day, you paid any attention to the
24 public statements of Christopher Boodram? Yes or no?

25 A. Yes, I did pay attention to the public statements.

26 Q. Do you also learn that he had made a promise to his brothers in
27 the pipe to return for them?

1 A. I think that's public knowledge.

2 Q. Thank you. Now, you, shockingly and maybe I have it all
3 wrong, did not anticipate a Delta P in the works that would be
4 done?

5 A. No.

6 Q. But you yourself through your own words spoke about the air
7 chamber having a pressurized—and I'm paraphrasing here.

8 A. Yeah.

9 Q. —and that is what would keep the water out of the chamber,
10 isn't that correct?

11 A. Yes.

12 Q. What is that—what is this thing about Delta P? Isn't it a
13 differential of pressure?

14 A. Yes.

15 Q. And if you were, for instance, to cut off the compressor leading
16 into the chamber, what would happen?

17 A. The chamber would flood.

18 Q. And as a result of what, what's the scientific term for that Delta
19 P, huh?

20 A. It's a change in pressure, yeah.

21 Q. Yeah? Isn't that an obvious risk when one is underwater and
22 you have a pressurized chamber that Delta P was a live, in fact
23 not live but a death threat?

24 A. But there were also barriers to prevent.

25 Q. Yes we hear all of that.

26 A. Yes. But those are facts.

27 Q. But do you appreciate a hose, a compressor hose could burst

1 and cause a differential pressure and cause flooding and killing?

2 A. A compressor hose could burst, yes.

3 Q. Yes. So when you tell all of us that it was not even
4 contemplated that a Delta P, looking upon it now you realize
5 that that makes very little sense? Eh? Yes? I'll take it as yes.

6 A. All right, go ahead.

7 Q. Right. No, I'm going ahead of course. You talk about a plug.

8 A. Uh-huh.

9 Q. Correct?

10 A. Uh-huh.

11 Q. And a, what is the other barrier they put?

12 A. There were two plugs.

13 Q. Two plugs. That pipe, was there a draining of that pipe before
14 the work began?

15 A. I think that that—yeah.

16 Q. Right? You drain it and then you, what, you seal it at the other
17 end, correct?

18 A. At which end?

19 Q. Well there are two ends. It's a U-pipe, isn't it?

20 A. Yeah, but which end, which end you're talking about?

21 Q. You tell me. You're the boss. Was it sealed at both ends or no
22 end?

23 A. [*Pause*]

24 Q. Rock back and answer.

25 A. It was sealed at berth 5, uh-huh, with a flange and it was sealed
26 at berth 6 with the, with the, er—with, with both barriers, the—

27 Q. Beautiful.

1 A. —Inflatable plug and the mechanical plug.

2 Q. Right. So in that pipe what did you expect where both sides
3 were sealed? What was the contents within it, anything?

4 A. When you say the contents within, I don't understand.

5 Q. Contents, the contents of the pipe.

6 A. The contents of the pipe would have been the liquids that would
7 be in the pipeline.

8 Q. Right. Well so, so was it filled—was it an equilibrium reached
9 on both ends or was there not a vacuum in that pipe?

10 A. I don't know that there was a vacuum in the pipe.

11 Q. You don't know. Would that be part and parcel of pumping out
12 the pipe?

13 A. That pipe, a vacuum was created in the pipe?

14 Q. Yeah. I'm asking you. You're the expert.

15 A. It was pumped out. I'm not the expert, but, I mean, we could
16 think a lil bit.

17 Q. I beg your pardon.

18 A. It was a—the pipe would have been emptied at atmospheric
19 pressure, so, I don't see a vacuum being created at atmospheric
20 pressure. The pipe was emptied at—both sides opened at
21 atmospheric pressure. So, er, er—

22 Q. So as far as you were concerned—

23 A. —I can't, I can't, I can't rationalize a vacuum being created.

24 Q. Let's rationalize a bit more. As far as you were concerned that
25 pipe contained only water and possibly some oil?

26 A. Probably con—yeah, water and oil.

27 Q. Beautiful.

1 A. The pipe was [*Inaudible*], yeah.

2 Q. Could you tell us all of us—

3 A. Uh-huh.

4 Q. —that when you began the pumping out, the flushing out after
5 the men unfortunately had perished—

6 A. Uh-huh.

7 Q. —what was the volume of water and/or oil that you all pumped
8 out of that pipe to get the men's bodies?

9 A. Er—

10 Q. You didn't check that either?

11 A. if I have it correct I think it's 150, a hundred—over a hundred
12 barrels of oil.

13 Q. Uh-huh. And water?

14 A. And—well the water would have been the rest.

15 Q. Yeah, how much?

16 A. How much water came out?

17 Q. Yes. You wouldn't be interested in oil.

18 A. I, I don't think we measured the water.

19 Q. Well you see we, we, we would have thought any logical
20 scientific approach would have required us to know, after the
21 fact even—

22 A. Uh-huh.

23 Q. —what was in there. You agree with that? Yeah?

24 A. It's a perspective.

25 Q. Not a perspective.

26 **Examination By Mr. Chairman:**

27 Q. Excuse me, can I understand please? Are you saying that you

1 can say with a degree of certainty that a hundred barrels of oil
2 or thereabouts came out of the pipe but you don't know how
3 much water came out of the pipe? Is that right?

4 A. Well, we—yeah, yeah, yeah.

5 Q. So, do I understand you to say then that you separated the two?

6 A. Well what we would have done is that we would have started to
7 pump and the oil and water would have come first but once—
8 what we—

9 Q. No, what—sorry, the water would have come first?

10 A. Yeah. Once the oil started to come we would have captured it.

11 Q. Which, which end was the water coming out of berth 5 or 6?

12 A. Berth 6.

13 Q. So pumping in at 5?

14 A. Yeah.

15 Q. Out at 6?

16 A. Yes.

17 Q. So the same way out as they had come—

18 A. Yes.

19 Q. —gone in?

20 A. Yes.

21 Q. And so that the pumping is going on from 5?

22 A. Yes.

23 Q. Pushing the fluid in the pipe.

24 A. Yes.

25 Q. So first of all water, presumably mixed with all and other—

26 A. Yeah, it would always have a—

27 Q. —contaminants?

1 A. Yeah.

2 Q. Yes. And is it—am I to understand that that was—that wasn't
3 being pumped into the ocean was it?

4 A. No, no, no.

5 Q. So it must have been pumped into some place where you could
6 measure it?

7 A. It would have been pump back—it would have been pumped
8 back I believe into the pipeline. No, it wouldn't be pumped
9 back into the pipeline.

10 Q. Really? I mean, I would have thought the sooner you got
11 seawater out of the pipeline—

12 A. Yeah.

13 Q. —the better, isn't it?

14 A. Yeah, yeah.

15 Q. For obvious reasons.

16 A. Yeah.

17 Q. You got steel pipes. You don't want rusting, do you?

18 A. Some of that water would have gone into the sea and what
19 would have been—

20 Q. Some of that would have gone into the sea?

21 A. Yeah. What would have been contaminated—

22 Q. This water that was coming out of the pipe, that had been
23 sucked in—

24 A. Yeah.

25 Q. —was now being dumped in the ocean?

26 A. No, look, listen, they would—it, it would go back not as oil
27 film or—it wouldn't go back as dirty oil into the ocean. There

1 would be some assessment as what was possible and what we
2 had to collect what—

3 Q. Yes I understand that. But forgive me. You weren't making
4 that assessment while you were trying to pump bodies out of
5 that pipe? Surely you were just pumping this, this into some
6 sort of—

7 A. The fact is that if we had contaminants going into the sea we
8 would have had a spill and we didn't have—

9 Q. You'd have had a what?

10 A. A spill, an oil spill.

11 Q. No. All right. So, I—

12 A. Right? We didn't have an oil spill.

13 Q. So it must have gone into something? What Mr. Ramadhar is
14 asking you is—

15 A. Yeah.

16 Q. —could you measure how much was pumped out of the pipe?
17 And you said well a hundred barrels of oil but I just want to
18 understand—

19 A. Yeah.

20 Q. —what you're saying about this. I'm not sure where it's
21 actually leading, to be honest, but, I mean, I—it just concerned
22 me that you said a hundred barrels of oil came out and you
23 don't know how much water came out.

24 A. Yeah.

25 Q. All I want to try and understand is how did you get this stuff
26 out of there?

27 A. Well, maybe, maybe somebody knows but I don't know.

1 Q. Right. Well it—that's the answer to it—

2 A. Right.

3 Q. —isn't it, really? "I don't know"?

4 A. I really don't know.

5 **Mr. Chairman:** So there's your answer, Mr. Ramadhar.

6 **Mr. Ramadhar:** Thank you so much. He doesn't see about—
7 right.

8 **Continued Cross-Examination By Mr. Ramadhar:**

9 Q. But the buck stops with you? You appreciate you've said that?

10 A. Yes.

11 Q. Meaning that whatever happened on Paria's property—

12 A. Yes.

13 Q. —the responsibility rests with you?

14 A. I'll simply say yes.

15 Q. Right? Whether the failure of LMCS—

16 A. Yeah.

17 Q. —whether the failure of Kenson, whatever, the failure rests
18 with you?

19 A. Yes.

20 Q. Good. The responsibility is yours, correct, huh?

21 A. Yes. I, I think—

22 Q. That notwithstanding—

23 A. I think I said that earlier.

24 Q. Right, yeah. I just want to so that we're at idem. So that you
25 have indicated us to that there was a WhatsApp group created
26 with the families of the deceased. I'm asking.

27 **Mr. Chairman:** Sorry, I didn't hear what you—

1 **Continued Cross-Examination By Mr. Ramadhar:**

2 Q. A WhatsApp, a WhatsApp group, a group chat if I may call it
3 that.

4 **Mr. Peterson SC:** No, no, and Mr. Ramadhar has this ability
5 where he would say to the witness, um, you said so and so and
6 so and when he realize that there's some distortion I said, I am
7 asking, but he's not asking he's stating it hoping to get
8 acceptance and when he doesn't, he say I'm asking.

9 **Mr. Ramadhar:** You know, with all due—

10 **Mr. Peterson SC:** What he can do is to recall accurately the
11 evidence or closely to—close to accuracy and then put it to the
12 witness.

13 **Mr. Ramadhar:** Well, Mr. Peterson, I'm grateful for your
14 great guidance.

15 **Continued Cross-Examination By Mr. Ramadhar:**

16 Q. But was there a WhatsApp group chat created with the
17 deceased's families yes or no?

18 A. Yes there was a WhatsApp—

19 Q. Thank you.

20 A. —communication.

21 Q. So all the murkiness Mr. Gill—Mr. Peterson has, has been
22 cleared up.

23 **Mr. Peterson SC:** No, no. Mr. Ramadhar would have to
24 respect me even though it may be a challenge for him.

25 **Mr. Chairman:** [*Inaudible*]

26 **Mr. Peterson SC:** Yeah, but I never said—

27 **Mr. Chairman:** I know. I know.

1 **Mr. Peterson SC:** Yeah, but he can't do that, otherwise I
2 could respond in kind and then we'll have an open season
3 which I know you would not allow.

4 **Mr. Chairman:** Mr. Peterson, you understand with your great
5 experience that sometimes it's easier to let things go than it is to
6 challenge each and every one, simply because we'll be here
7 forever. Mr. Ramadhar has a certain style about him which
8 some like, some don't. I'm not going to pull him up every time
9 hay makes something which might be objectionable.

10 **Mr. Peterson SC:** [*Inaudible*] and he wouldn't like it, Sir.

11 **Mr. Chairman:** Well, all right, well that's a little harsh, but
12 never mind. He wouldn't have any clients if that were the case,
13 would he.

14 **Mr. Ramadhar:** Well, well, Sir—

15 **Mr. Chairman:** So, er, let's be clear. He does, so—

16 **Mr. Ramadhar:** I need to respond that the clients that Mr.
17 Peterson has, I could understand why—

18 **Mr. Chairman:** No, let's stop this now Mr. Ramadhar.

19 **Mr. Ramadhar:** Yes.

20 **Mr. Chairman:** You can carry on, but please.

21 **Mr. Ramadhar:** All the big boys—

22 **Mr. Chairman:** Just, just, just, please be—

23 **Mr. Ramadhar:** Big money.

24 **Mr. Chairman:**—circumspect—please be circumspect about
25 the way in which—

26 **Continued Cross-Examination By Mr. Ramadhar:**

27 Q. So, we move forward, we move forward Sir. We're talking

1 about the WhatsApp group chat or whatever you want to call it.
2 WhatsApp, to communicate with the families. They have a
3 record of the communication issued by Paria through the
4 WhatsApp group chat.

5 A. If there is a record.

6 Q. Yes.

7 A. I don't know if we have a record. I know that all the WhatsApp
8 messages related were submitted to the Commission.

9 Q. All of it?

10 **Mr. Chairman:** Well certainly I don't think I have seen
11 anything that resembles a group chat on WhatsApp with any of
12 the family whom you say that such a chat was created. I have
13 seen WhatsApp messages but nothing with—and I invite
14 correction but I certainly don't recall seeing any.

15 **Continued Cross-Examination By Mr. Ramadhar:**

16 Q. Would you endeavour to make available to all, the Commission
17 and all of us?

18 A. Whatever is there that we could make available we'll make
19 available, Mr. Ramadhar.

20 Q. You were at a press conference where reporters asked about
21 the—about—queried, queried whether the family had been
22 properly informed about the move from rescue to retrieval and
23 of course they were saying that nobody had told them. You've
24 heard that report, yeah?

25 A. Yes.

26 Q. And your Chairman said that that is not true. You heard that
27 coming from your Chairman?

1 A. Yeah. Look, what the commitment is, is I will recheck and if
2 there's any information that we need to—

3 Q. No, no you see because, because I want to know that the
4 families are saying one thing and your Chairman is saying that
5 what they're saying is not true. You know that's a serious
6 thing? You appreciate that, correct? So let's get that record
7 moving forward.

8 A. All right.

9 Q. Beautiful. Now, you spoke about you were the boss man, right,
10 the General Manager and you wanted to create a culture of
11 health and safety and so, isn't that accurate?

12 A. That's correct.

13 Q. And you appreciate when one falls ill or there's an accident on
14 your compound that obtaining as quick as possible medical
15 assistance is the highest priority, yeah?

16 A. Yes.

17 Q. Yes?

18 A. Yes.

19 Q. And not one of, of, er, keeping the status quo so that you could
20 make proper records and so for the sake of documenting it.
21 You appreciate that, correct?

22 A. Well, you need both.

23 Q. So what?

24 A. You need both. You need both.

25 Q. Yeah. Well which is the highest priority?

26 A. Well you want to take care of the person.

27 Q. Which will you sacrifice?

1 A. You want to take care of the—

2 Q. The first or the second?

3 A. You want to take care of the person first.

4 Q. Thank you. The name Shaquille Douglas rings a bell to you?

5 A. Yes.

6 Q. He died on the compound?

7 A. Yes.

8 Q. What time did he fall ill?

9 A. I mean—

10 Q. The culture, let's say the culture of Paria.

11 **Mr. Peterson SC:** Sir, what's the relevance of this?

12 **Mr. Ramadhar:** I will show the relevance, Mr. Chairman.

13 This is a young person and if he should answer the question the
14 culture would be obvious.

15 **Mr. Chairman:** I'm going to give a little more latitude to see
16 where it goes and then I'll stop it if I—

17 **Mr. Ramadhar:** Or, thank you very much.

18 **Continued Cross-Examination By Mr. Ramadhar:**

19 Q. Yeah. And let me remind you the 21st of October, 2022. Not
20 far ago, yeah? What time did this young man fall ill on your
21 compound?

22 A. Mr. Ramadhar, I did not come prepared with information to
23 answer questions.

24 Q. Well let me help you, around before ten o'clock. You want to
25 disagree with that? Because you, you participated in this,
26 didn't you? Yes? What time was he removed for medical
27 attention? [*Crosstalk*] Well, we're talking culture of HSE.

1 What time was he removed for medical attention?

2 A. As I said, Mr. Ramadhar, I am not prepared to answer those
3 questions.

4 Q. He was pronounced dead on site after one o'clock. You
5 remember that, though?

6 A. I know I was pronounced dead.

7 Q. Oh, thank you very much. Let's talk how the culture of health,
8 safety for workers. You appreciate every working man, woman
9 and whomever in this country that goes to work expect of their
10 employers some level offer care? Yes or no?

11 A. Yes I expect that.

12 Q. And immediate medical assistance if required should be
13 rendered?

14 A. But why you're making the assumption that immediate—

15 Q. Well, if he—we'll probably deal with that in another case
16 against you.

17 A. Well, well, so, so let's deal with that then.

18 Q. Yeah I'm asking you now as a matter of your culture that you
19 wish to—

20 **Mr. Peterson SC:** Mr. Chair, if Mr. Ramadhar is seeking to
21 use this opportunity to lay some groundwork for some action he
22 has up his sleeve—

23 **Mr. Ramadhar:** You see that sleezy approach that Mr.
24 Peterson is speaking to—

25 **Mr. Chairman:** All right, no, no, no. That's enough.

26 **Mr. Ramadhar:** Thank you. And I hope he knows that too.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. Yeah. So, there we go. That Conan, I'm bringing you back to
2 Conan, whom you had no interest in in terms of finding out,
3 you told my learned friend, as to his qualifications and/or
4 expertise, presented himself as a saviour, a rescuer, you know
5 that now, don't you, around 7.00 that evening?

6 A. Go ahead.

7 Q. No, I'm asking if you know that.

8 A. That what, that Mr. Conan presented himself as a potential
9 rescuer at 7.00?

10 Q. Yes.

11 A. I'm not sure about the time but I know that he did present
12 himself.

13 Q. Right. You also knew, from what you told us already on your
14 oath, that equipment was available from several sources at that
15 time?

16 A. Yes.

17 Q. Yes. You made no inquiry or caused any one of your agents or
18 servants to make enquiry as to the man's qualification and/or
19 expertise and his ability? Remembering there was a countdown
20 time now with men's lives literally on the line. Correct?

21 A. We had two elements here, Mr. Ramadhar.

22 Q. We got you.

23 A. We had—

24 Q. I'm asking a specific question whether you made any enquiry
25 or caused an enquiry to be made as to his capacity to save the
26 lives to paraphrase it.

27 A. I didn't specifically make an inquiry.

1 Q. Did you cause one to be made? You're the, you're the, the, the,
2 the, the, the General Manager. You had the authority. The
3 buck stops with you.

4 A. The information coming from the IMT at that time was the plan
5 wasn't a credible one and we were investigating alternative dive
6 options with other reliable companies.

7 Q. Yeah. Reliable companies that came late into the night, isn't it?
8 You remember you told us that?

9 A. Come later on, yes.

10 Q. Yeah. Now, how would one rescue those persons ultimately to
11 make sure that they were alive and well? Wouldn't it be to
12 retrieve them from within the pipe while they were still alive?
13 Seeing that you did no sustenance effort, it was retrieval of the
14 men while they were alive, isn't it?

15 A. It was always considered to retrieve the men. The issue had
16 always been the risk of the—

17 **Mr. Chairman:** Go closer to the microphone please?

18 **Mr. Mohammed:** Yeah.

19 **Mr. Chairman:** Just a little closer to the mike.

20 **Mr. Mohammed:** Sorry. I'm sorry.

21 **Mr. Chairman:** No, that's all right. Just couldn't quite hear
22 what you say.

23 **Mr. Mohammed:** Yeah.

24 **Mr. Chairman:** Especially when you turned away, which I
25 don't mind. I've got a bit—

26 **Mr. Mohammed:** Okay, I'm sorry.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 A. It was always about maintaining the, the life of the rescuer as he
2 went in to do this.

3 Q. Correct. As distinct from the certainty of death where there is
4 no rescue. You appreciate that? As you told us already, there
5 were toxic gases in there, right? You were fearful of knives?
6 You were fearful of pulleys and tanks, were you?

7 A. Yeah.

8 Q. Were you? Were you also fearful of crocodiles in there?

9 A. I was fearful of—

10 **Mr. Chairman:** Please.

11 **Continued Cross-Examination By Mr. Ramadhar:**

12 A. All right.

13 Q. No, the unknowns, the unknowns.

14 A. All right, let me just stay quiet. Okay.

15 Q. Yeah.

16 A. I don't think I need to answer that, Mr. Ramadhar.

17 Q. Well, you don't know.

18 **Mr. Chairman:** You don't need to answer that.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 Q. Yeah. We've seen some tears before, you see? So, the
21 unknowns, right, and the fear for the rescuer basically paralyzed
22 you until you had camera footage. You've told us that a
23 hundred times, correct?

24 A. Until we could have derisked—information to derisk the dive
25 into the pipeline.

26 Q. Right. Derisk.

27 A. Yes.

1 Q. What does that mean, to remove risk, mitigate risk?

2 A. Yes.

3 Q. Assuming you had your camera and it showed oil in the
4 pipeline—

5 A. Uh-huh.

6 Q. —and it showed water—

7 A. Uh-huh.

8 Q. —and it showed a tank—

9 A. Uh-huh.

10 Q. —would you have permitted a rescue? Yes or no?

11 A. I, I think understanding where the oil was, the tank was, the
12 method for rescuing the rescuer should the rescuer get into
13 trouble—

14 Q. Right.

15 A. —the approach that the rescuer would have on, on meeting the
16 men, where the men were in the pipeline—

17 Q. Uh-huh.

18 A. —there are a number of questions that needed to be answered
19 before we put somebody else life at risk.

20 Q. Excellent. Having got the information even at ten o'clock from
21 Christopher that he that he had passed two weld seams, we had
22 a better idea that maybe it's about within 150 feet of the bend,
23 yeah? Or you disregarded that without—as not credible,?

24 A. We didn't disregard it as not credible. Okay?

25 Q. So, not having disregarded it, he survived. He came out. He
26 said that at least Fyzie was right behind him. You appreciate
27 that?

1 A. Yes, he said that.

2 Q. Right? And your big fear then was that if you, if you permitted
3 or against your advice men went in there, that that would not
4 have been the ethical thing to do because you brought ethics
5 into this, so let's explore your level of ethics.

6 A. I don't understand the question.

7 Q. It's a very simple one.

8 A. What's the question?

9 Q. Ethically, you couldn't allow anybody to go into that pipe
10 because you didn't know all the risk factors. Is that accurate?

11 A. I, I think that's about correct, yes.

12 Q. You think every human being is entitled to your level of ethics?

13 A. If I think every human being is entitled to that level of ethics?

14 Q. To their own level of ethics?

15 A. Their own level of—I, I—

16 Q. Yeah. In other words, I as a man could make decisions for me.
17 It may be illegal, I pay the price for it, or it may be, as a good
18 Samaritan, do unto others as they do unto you and if it should
19 happen to you, I will, I will, I will come to your rescue.

20 A. Mr. Ramadhar—

21 Q. Yes, Sir.

22 A. —I have spent the day here listening, eh.

23 Q. You want to go home now?

24 A. No I don't want to go home. I, I—

25 Q. Mr. Kurban wished to have gone home.

26 A. I could go—I could go for as long as you'd like me to.

27 Q. And so will I, but the Chairman will not permit that so let's get

1 your answer.

2 A. Okay. Good. It's, it's passing strange—

3 Q. No, nothing is strange, you know.

4 A. No, hold on.

5 Q. All right. Give me your story.

6 A. It's, it's, it's passing strange that the level of documentation and
7 requirements for the job, the work permit, et cetera, to make a
8 determination so usefully and well presented, and then all on a
9 sudden I am supposed to be prepared to make a decision with
10 somebody saying, "I will dive in that pipeline with a piece a
11 rope and save a man", and I am—I have to make a decision
12 based on a plan that resembles that? Into a pipeline that we
13 don't know? We have no idea of what happened? How does
14 that, how does that, how does that—without a rescue plan for
15 the rescuer, I mean, it, how, how does that make any—I, I just,
16 I just don't understand.

17 Q. Clearly you don't, and that's the point. The rescuers know
18 more than you because you've told my learned friend you have
19 no diving experience or expertise. You agree with that?

20 A. Well I think if the rescuer—so if the rescuers had known more
21 than me they should have resented a very articulate plan.

22 Q. Or, so, they should come to you, correct? They're muttering it
23 to you and therefore you re—you didn't take it on. You wanted
24 it in, um, not to offend Mr. Peterson in some form of formality,
25 correct? We're waiting.

26 A. Obviously I would have liked to see something—

27 Q. You liked.

1 A. —that was accessible that makes sense and—

2 Q. And if you don't like it, let them die. Is that it? That's the
3 effect of the consequence of what you didn't do. Your ethics of
4 not permitting, in fact preventing someone like Conan,
5 unrelated, a brother in the water, willing to do because of his
6 experience, and as the young counsel on my left well put, if
7 they met a hindrance that they couldn't overcome it was open to
8 them to tug and be pulled back out. You appreciate that?

9 A. I, I, I would, I would continue to hold—I will continue to
10 remain where no credible rescue plan was bought for the
11 retrieval of those guys that allowed us to be able to do that
12 guaranteeing or knowing the safety of the rescuer would be
13 intact, regardless of how willing they were.

14 Q. You appreciate the ethics that you speak to is almost God-like
15 in its power?

16 A. They needed to have, they needed—we needed to have—

17 Q. Do you appreciate the ethics that you exercised is almost God-
18 like in its power in that you made a determination—

19 **Mr. Peterson SC:** Mr. Chairman, we have been over this.

20 Q. —for the death of four men?

21 **Mr. Peterson SC:** Mr. Chairman, I'm objecting.

22 **Mr. Ramadhar:** Let me hear you on this.

23 **Mr. Peterson SC:** No you wouldn't. The Chairman will hear
24 me. Mr. Chairman, we have ben over—we have been through
25 this over and over and over and it's 4.30. My friend is still to
26 go for 45 minutes. Are we going to restrain Mr. Ramadhar if
27 not curtail him? We have been through all of this over and over

1 and over.

2 **Mr. Chairman:** Mr. Ramadhar, he has a point.

3 **Mr. Ramadhar:** He has a point.

4 **Mr. Chairman:** How much longer?

5 **Mr. Ramadhar:** Not much.

6 **Mr. Chairman:** What's that?

7 **Mr. Ramadhar:** I too have a countdown timer.

8 **Mr. Chairman:** What's that mean?

9 **Mr. Ramadhar:** I shall—within the 10 minutes and it could be
10 less.

11 **Mr. Chairman:** Thank you.

12 **Continued Cross-Examination By Mr. Ramadhar:**

13 Q. You are still General Manager?

14 A. I—

15 Q. You're still the General Manager?

16 A. As of today, yes.

17 Q. You consider your handling of this incident excellent?

18 A. I consider that we handled the incident in a way that was
19 organized around the principle of minimizing risk to the
20 rescuers who would have had to go into that pipeline.

21 Q. Right, we, to offend Mr. Peterson we've heard that a thousand
22 times.

23 A. Well that's the fact. I mean—

24 Q. Right? I'm asking you now, do you consider that that was an
25 excellent approach?

26 A. I, I have already given my answer.

27 Q. No, I want your answer as whether it's excellent, poor, in need

1 of work or something along that grading.

2 **Mr. Mohammed:** Chairman, can I choose not to answer that
3 question?

4 **Mr. Ramadhar:** Of course.

5 **Mr. Mohammed:** Well, I'm not going to answer that question.

6 **Mr. Ramadhar:** Beautiful.

7 **Mr. Chairman:** I shall decide whether you answer a question
8 or not, but I think we have actually covered this ground, so—

9 **Mr. Ramadhar:** Yeah.

10 **Mr. Chairman:**—we can move on.

11 **Continued Cross-Examination By Mr. Ramadhar:**

12 Q. Right you—of course we've heard you now, you do not wish to
13 answer that question as to how you will grade yourself. Your
14 incident management team, who you clearly relied upon. how
15 do you grade them? You're the General Manager. You have to
16 grade and you have to know who has to go who has to stay,
17 what fixes we need and what we shall retain, who we shall
18 retain. How do you grade your IMT, your team?

19 A. Another question I am not prepared to answer at this time.

20 Q. Thank you.

21 **Mr. Chairman:** I'm going to ask you to answer it, please.

22 **Mr. Mohammed:** You'll ask me to answer the question,
23 Chairman?

24 **Mr. Chairman:** I think it's a reasonable question. You are the
25 Managing Director.

26 **Mr. Mohammed:** Well I would say that—

27 **Mr. Chairman:** You are in charge.

1 **Mr. Mohammed:** I would say that the—

2 **Mr. Chairman:** You sat there through the IMT.

3 **Mr. Ramadhar:** Have respect.

4 **Mr. Chairman:** Just—and I am going to ask you to answer
5 that question, please?

6 **Continued Cross-Examination By Mr. Ramadhar:**

7 A. Well, a request was made so I'll answer the question. I think
8 the incident command team did the best that they could have
9 done with the circumstances that was presented to them and in
10 fact I look at it from the perspective that they may have
11 preserved a life or two.

12 Q. Yeah? Give me the names.

13 A. Potential divers into that—

14 Q. Give me the names.

15 **Mr. Chairman:** We know who the names are, so—

16 **Mr. Ramadhar:** No, no, no of the lives he preserved.

17 **Mr. Chairman:** No, no the rescuer he said.

18 **Mr. Ramadhar:** Yes.

19 **Mr. Chairman:** Preserve the name of the rescuer whoever that
20 might have been. That is sufficient for my purposes.

21 **Mr. Ramadhar:** Unknown. We move forward a little bit.

22 **Examination By Mr. Chairman:**

23 Q. But what I do want to know is why there was a reluctance to
24 answer the question in the way that you did.

25 A. I just thought that—I mean, I don't know if it was appropriate
26 but I answered the question anyway.

27 Q. No, I appreciate that, but you said you didn't want to answer

1 the question, then after some thought you said you—they did
2 the best they could have done and you regarded them as having
3 saved the life of a rescuer.

4 A. Yes.

5 Q. Well, what was wrong with answering that question in the first
6 place?

7 A. Nothing, nothing. It's—

8 Q. Right, okay.

9 A. —there—nothing was wrong with answering the question.

10 Q. Mr. Ramadhar, yes.

11 A. And that's the truth.

12 **Continued Cross-Examination By Mr. Ramadhar:**

13 Q. Yeah, well, we'll deal with the truth. Now, your IMT team,
14 you came in to Paria in 2019. You met that team there or you
15 formed it?

16 A. Part of it I met and part of it we formed.

17 Q. Which part you, you, you met, Mr. Piper?

18 A. The incident commander, the HSE Manager.

19 Q. Of course.

20 A. Yes.

21 Q. Yeah. Did you, as the new incoming General Manager
22 ascertained the qualifications and competence for that role?

23 A. Well we all know that these guys had gone through—

24 Q. I didn't ask you that.

25 A. —training.

26 Q. I am asking you—

27 A. Yes.

1 Q. —whether as General Manager you confirmed—

2 A. Yes. We, we, we—

3 Q. —the qualifications and—yeah, you did?

4 A. We know that they had training in incident command situations,
5 yes.

6 Q. And when was the last training you ensued that your team had
7 to deal with incidents?

8 A. We haven't had training since I was there.

9 Q. And did you confirm when was the last training that any of
10 them had?

11 A. No.

12 Q. Did you ever have a psychometric or psychological test done of
13 these persons? You appreciate they need to be of very hardy
14 stuff to deal with crisis, yeah or no?

15 A. No, but I didn't know that that is a standard in the industry that
16 people who are put on an IMT need to have a psychometric test
17 done.

18 Q. So, how they get the job?

19 A. I don't know that that's a standard—

20 Q. So anybody who working there says me, me I want to be part of
21 it is good enough?

22 A. They would have gone through this in the training and
23 demonstrate their competence.

24 Q. Demonstrated competence, to you?

25 A. To the assessors who would have assessed them.

26 Q. And who were they?

27 A. I, I, I don't know the names of the—

1 Q. So in other words you made no effort to ascertain the
2 qualifications and competence of your team? Men and women
3 who will not wilt under pressure? That is what you require,
4 isn't it, with a sort of military approach that—decisive, risk
5 assessment in the moment and not a documentary procedure.
6 You appreciate that.

7 A. I'm listening.

8 Q. I'm not asking you if you appreciate that.

9 **Examination By Mr. Chairman:**

10 Q. No, no, no, no, no, no. You're going to answer the questions,
11 please? He's asked a perfectly reasonable question. You've
12 told us that none of these men or women had had any training
13 since you were there.

14 A. Yes.

15 Q. You joined, just remind us, the firm in 2019, is it?

16 A. Yes, 2019, yes.

17 Q. So in three years or so—

18 A. Yes.

19 Q. —no particular training had been conducted?

20 A. Yes.

21 Q. And you didn't check when they had previously been trained?

22 A. No, no.

23 Q. So you've no idea when was the last—have you asked since?

24 A. When last they were trained?

25 Q. Yes. Since this has happened, did you enquire of those who
26 were part of the IMT, "Look guys, when were you last trained?
27 When did you last go through a training exercise?"

1 A. I haven't enquired specifically, no. I asked if they were trained
2 but I didn't ask specifically when they were trained.

3 Q. Well, all right, well, I was trained in the law maybe 40 years
4 ago but that doesn't really help if you're simply asking the
5 question. You presumably weren't really interested just in their
6 training but when?

7 A. Yeah. No, I didn't ask when.

8 Q. So you don't ask at the time?

9 A. No.

10 Q. And you haven't asked since?

11 A. No, I haven't asked.

12 Q. And so can I ask you next, then, please, have you instigated any
13 additional training since?

14 A. Yes. We are reviewing a number of training sessions to be able
15 to select what we think is the best one for the IMT team.

16 Q. Do I take it that that means although you've looked at the
17 various different options, you haven't done it yet?

18 A. No, we haven't done it as yet, no.

19 Q. All right, okay. And can you tell us when it is planned that you
20 might do it?

21 A. It will be done before the first half of this year.

22 Q. All right.

23 **Continued Cross-Examination By Mr. Ramadhar:**

24 Q. You'll appreciate it's almost a year since this incident, yeah?

25 A. Yes.

26 Q. And as you told us today you have men on a high voltage work
27 right now today, correct?

1 A. Yes.

2 Q. And on a daily basis high danger endeavours?

3 A. Yes, but the IMT is practised.

4 Q. Yeah; and what happened on the 25th of February. They were
5 practised and four men died. Right? So that we understand
6 what you're saying, they're practised. Do you consider what
7 happened on the 25th a success for your IMT team? Whatever
8 your reasons?

9 A. Yeah.

10 Q. Good, bad or indifferent, do you consider it a success of your
11 IMT team in the execution of their sacred duty?

12 A. I would argue that—

13 Q. Don't argue, answer.

14 A. I said, as I said before, the IMT team did the best that they
15 could have done and I'm looking at it from the perspective that
16 they prevented what could have been more loss of lives by
17 sending people into that pipeline, and anyone say that people
18 would have been able to go into that pipeline and conduct that
19 rescue safely?

20 Q. Listen, you repeat that they did the best that they could do.
21 Was that the best that was available?

22 A. I think everybody's standing in that decision would probably
23 end up in the same—with the same decisions that we made.

24 Q. Really? What arrogance?

25 **Mr. Chairman:** Well, keep the comments for later, please?

26 **Mr. Ramadhar:** Thank you. Of course.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. So that you, not having assessed the true experience, the true
2 qualifications of your team, believed that others may have made
3 the same decisions? Is that accurate?

4 A. I believe so.

5 Q. You know the statement, do unto others as they have them do
6 unto you? Do you know that statement?

7 A. Yes.

8 Q. If the same circumstances were to arrive today—

9 A. Yes.

10 Q. —with your same team, would you allow what happened on the
11 25th of February, 2021 to recur—2022, to recur?

12 A. If, if you are asking me—

13 Q. I have asked—

14 A. Just to be clear, Mr. Ramadhar.

15 Q. Yes, certainly.

16 A. If you are asking me if today I would be prepared to send
17 people into a situation where I couldn't quantify the hazards
18 and I wasn't clear on them, my answer would probably still be
19 no.

20 *[Interruption]*

21 **Mr. Chairman:** Whoever that belongs to, please either leave
22 or switch it off.

23 **Mr. Ramadhar:** I think they're giving directions for him to
24 leave.

25 **Continued Cross-Examination By Mr. Ramadhar:**

26 Q. Sir, with all due respect, with all due respect, you understand
27 that there are mitigating factors for risk-taking, correct?

1 A. Go ahead, yes.

2 Q. Yes. And your fear was noxious gases, oil, yes? Tell me—I
3 will need to know quickly. I want to finish. Noxious gases in
4 the pipe, oil, water, possible—

5 A. Blockages.

6 Q. Huh?

7 A. Blockages, et cetera.

8 Q. Yeah, blockages.

9 A. Right.

10 Q. And the human being as you know, one, has the capacity to
11 assess situations and if it's too dangerous to back off, huh?

12 A. Human beings like you and I sit here probably watching the
13 tables at the desk but human beings going foot first in a dark
14 environment—

15 Q. Uh-huh.

16 A. —that is claustrophobic, that is filled with oil—

17 Q. Yeah.

18 A. —that they don't know what they're going to meet next—

19 Q. Uh-huh.

20 A. —that's a whole different scenario.

21 Q. And—

22 A. Going through, going through a bend in a pipe at 90 degrees—

23 Q. Uh-huh.

24 A. —to get into a horizontal section, crawling backwards into that
25 pipeline—

26 Q. Yeah.

27 A. —not knowing where the next person might be, that's a, that's a

1 whole different, that's a whole different—

2 Q. But Christopher—

3 **Examination By Mr. Chairman:**

4 Q. That, that is right isn't it, of course it is, a whole different
5 thing? But, you know I, I can't help but ask myself, as I'm sure
6 everybody has, of themselves, if it was my father or son in that
7 pipe I could not live with myself afterwards if I didn't try and
8 rescue them, and you would have had to shoot me to prevent
9 me. That, I suspect, is the sentiment of many people.

10 So that the question here really is ultimately was it—
11 were you, do you think, entitled to prevent someone from
12 seeking to rescue either someone who was very close to as a
13 close personal friend or a relative? Did that, at any stage, come
14 into the equation in your thinking before deciding whether to
15 bar anyone from entering the pipe?

16 A. It came into our thinking and the question was, in the same way
17 that you asked that question, would I be willing to send
18 somebody into a situation where you clearly have no idea what
19 the hazards are, because they don't have idea of how they
20 would be rescued if they were caught in that pipeline, would I
21 be, would I be willing to put another life at risk, knowing from
22 everything we know in the industry that most people who die in
23 confined spaces are the rescuers, would I be willing to take
24 that—would I, would I take that risk? That is at the heart of the
25 issue. That is at the heart of the issue.

26 **Continued Cross-Examination By Mr. Ramadhar:**

27 Q. Yeah. And you, you heard, maybe with some level of

1 condemnation when I used the word arrogant but let me ask you
2 this, that is your position, correct? As the boss man, the
3 General Manager, that was your position?

4 A. Well, you know, in, in some ways, in some ways, in some ways
5 coming out of this incident there probably is the need for some
6 standard, for some recognized code that the industry would
7 operate at. For this time in this instance we decided that we
8 wouldn't allow diving into the pipeline or we didn't want it
9 because of the risk. There may be another instance where
10 somebody is allowed to go into a hazardous situation and that
11 person dies and we could be sitting here already.

12 Q. Yeah.

13 A. But without—and, and Chairman, this is, this is at the heart of
14 the incident—without some code to be able to guide that
15 judgment.

16 **Examination By Mr. Chairman:**

17 Q. Yeah I, I follow that. I mean I—

18 A. Yes, as—

19 Q. —I mean, I obviously have been asking myself these questions
20 and ultimately we're going to have to make recommendations
21 and such like.

22 A. Yes.

23 Q. But I'm not sure that a code or a specific set of rules can cover
24 every situation that might arise where a hard decision has to be
25 made and, you know, you could be sitting here giving evidence
26 about why five people died in the pipe.

27 A. Correct.

1 Q. Because you allowed a rescuer to go in?

2 A. Correct.

3 Q. I get that. I do understand that. I also understand that it is
4 sometimes easier to say no.

5 A. I think the easier answer in this case was to say yes.

6 Q. Well—

7 A. I really believe that.

8 Q. Well I'm asking it.

9 A. I really believe the easy answer here was to say yes. Saying no
10 was the hardest thing that we could have done. Saying no was
11 the hardest thing that we could have done. The easy answer
12 was to say yes.

13 Q. Well I can see that too.

14 A. You know?

15 Q. Anyway, I mean, as I say I'm not sure that a set of rules or
16 procedures are necessarily going to help make the ultimate
17 decision about whether a person should or should not risk their
18 life to try and save others. The natural instinct of humankind is
19 to do just that, isn't it? Sometimes they die trying to save
20 someone's life and sometimes they don't.

21 A. I have, I have some more investigative work to do but there is
22 the OPITO system, I believe, in the UK—

23 Q. Yes.

24 A. —that addresses emergency response and the behaviour of
25 emergency responders, et cetera.

26 Q. Yes.

27 A. I think I'd like to spend some time looking at—

1 Q. I think that's to do with professional responders, first line
2 defenders, something like that.

3 A. Well, it's something, something that can provide some kind of
4 guideline.

5 Q. It's, it's, it's, it's something that we're going to have to wrestle
6 with in due course.

7 A. Yeah.

8 Q. Yes.

9 A. Ten months, I beg your pardon.

10 **Mr. Chairman:** I've passed the final questions to Mr.
11 Ramadhar because I've stopped for 5 minutes isn't it?

12 **Mr. Ramadhar:** Thank you, yes.

13 **Continued Cross-Examination By Mr. Ramadhar:**

14 Q. You saw a white board when you arrived at Paria, an update
15 board?

16 A. Yes.

17 Q. You know what confirmation bias is as a man who's widely
18 read?

19 A. Yes.

20 Q. What does it mean?

21 A. Well it means that you say something and you believe it—
22 you're biased to believing that that is an outcome.

23 Q. You saw a notation very early in the evening at 3.38 or
24 thereabout that the likelihood of survival effectively was very
25 slim? From early in the day Paria made that determination?
26 You saw that, didn't you?

27 A. Yes, yeah.

1 Q. That influenced you?

2 A. No.

3 Q. No. You didn't believe it?

4 A. No.

5 Q. But you moved as if the men dead already, until, until
6 Christopher came out?

7 A. I, um, I don't agree with that.

8 Q. That could help explain the failure of any meaningful effort
9 because even though Christopher came out you all were already
10 in the mindset that the men dead or could be written off as
11 dead?

12 A. I, I, I, I, I could—I would not—I would never say yes to that.

13 Q. Sir, I want to thank you for the time you've spent with us and I
14 heard you say something very interesting that you wished to
15 assist the families but that you were basically prevented from so
16 doing by, by, by lawyers?

17 A. Written notification, yes, by written notification.

18 Q. By written notification?

19 A. Yes.

20 Q. And did you make any effort to ascertain the conditions of these
21 families notwithstanding you couldn't communicate with them
22 or help them as to, you know, whether they had to put a
23 barbecue before Christmas to raise money for the children and
24 so?

25 A. I mean—

26 **Mr. Chairman:** I, I, I'm sorry. Sympathetic though I am to all
27 of those issues, I do not think that they are part of the remit of

1 this Enquiry.

2 **Mr. Ramadhar:** Thank you.

3 **Continued Cross-Examination By Mr. Ramadhar:**

4 Q. So, Mr. Mohammed, the coast guard, were you ever informed
5 that they were there with guns?

6 A. No.

7 Q. You never knew that they had guns?

8 A. The coast guard, outside of what they would have come with as
9 normal I guess what would be their outfit, I, I, I didn't know the
10 coast guard came specifically with guns to—we invited the
11 coast guard to a rescue operation.

12 Q. Yeah, I didn't ask you whether they came specifically with
13 guns, but were you ever aware that they were there with
14 machine guns at all, or is it the first time you're hearing that
15 today?

16 A. I wasn't aware that they were there specifically armed with
17 machine guns.

18 Q. Yes.

19 A. But I would have expect them to be armed in some way.

20 Q. You expected them—

21 A. But not with—

22 Q. Hold on. You then—you're right, you expected them to be
23 armed in some way?

24 A. Yeah. They are coast guard. I expect them that they would
25 move with some amount of ammunition I expect.

26 Q. Oh, beautiful. And you knew that even before they arrived, that
27 coastguardsmen will be armed?

1 A. Yes, I expect that, yes.

2 Q. Yes. So that when you issued the edict that you wanted the
3 coast guard to protect Paria and Kenson personnel, you would
4 anticipate that they would do so bearing arms?

5 A. No. That was never an anticipation. A traffic cop in Trinidad
6 has an arm.

7 Q. Yeah.

8 A. I don't expect him to pull his arm out for somebody who break
9 a traffic light. I mean, that's just stretching it too far.

10 Q. So when you asked for the protection, to give protection to
11 personnels—listen to me. I'm not finished with my question,
12 Sir.

13 A. Go ahead.

14 Q. Yes. When you issued your edict, your instruction—

15 A. Go ahead, go ahead.

16 Q. Of course; not with your leave but with leave of the Chairman
17 yes, that they were to provide protection for Paria and Kenson
18 personnel you thought they were going to, um, throw water on
19 people or something or that they would use—and they're a
20 military arm of the State?

21 A. The presence, the authoritative figure is what I expected, that's
22 all. That is all.

23 Q. Trinidad and Tobago Police were called in at all in this matter?

24 A. No.

25 Q. Thank you. Paria had its own private security?

26 A. Yes.

27 Q. Provided by Kenson I understand?

1 A. No.

2 Q. No, not—sorry, sorry, sorry not Kenson.

3 A. Right.

4 Q. It's an internal force, is it?

5 A. We have a, we have a outsource source that we use.

6 Q. Outsource?

7 A. Yes.

8 Q. Did you require them to exercise protection over the—

9 A. No, we, we, we agree—

10 Q. Listen to my question. I haven't finished. I'm almost done.

11 A. I'm sorry.

12 Q. I'm almost done.

13 A. Okay.

14 Q. The line is just there.

15 A. I'm sorry.

16 Q. Yeah. Did you engage them, that is Paria security, to protect
17 personnel from Paria and Kenson?

18 A. No.

19 Q. You relied on the coast guard, yeah?

20 A. Yes.

21 **Mr. Ramadhar:** Mr. Chairman, if you'll just give me a few
22 seconds—

23 **Mr. Chairman:** Of course.

24 **Mr. Ramadhar:**—I think I will bring relief to Mr. Peterson
25 and others by taking my seat.

26 **Mr. Peterson SC:** [*Inaudible*]

27 **Mr. Chairman:** Is he upset at you, Mr. Peterson?

1 **Mr. Peterson SC:** They have many more names besides
2 Gilbert Peterson. It have Maharaj—

3 **Mr. Chairman:** Did you nearly say Gilbertson?

4 **Mr. Ramadhar:** Even my friend is confused in his own name.

5 **Continued Cross-Examination By Mr. Ramadhar:**

6 Q. Yeah. So let's see what we have now. From what your
7 procedure, as you painfully told us all today, is that you allowed
8 the contractors to basically police themselves in the execution
9 of their jobs relying on their expertise?

10 A. In this particular case, what we were looking to hire is a
11 specialist contractor with the specialized expertise to be able to
12 execute this job. This contractor in particular had the
13 experience and they had executed very similar jobs very well in
14 the past.

15 Q. Right. And that they too, after this accident occurred, made
16 effort to rescue but you prevented them. Isn't that correct?

17 A. Prevented them?

18 Q. Yeah.

19 A. What we did was—

20 Q. Listen to my question. You prevented them. You say nobody
21 to dive again. You want to change that?

22 A. Listen—

23 Q. Yeah I'm listening.

24 A. —we never said nobody to dive again because we continued to
25 explore dive options to the, to the point where we brought in
26 additional divers. We got escort for additional divers to come
27 to support the LMCS efforts to the point where we supplied

1 oxygen to—for dives to take place. What has been the
2 continuous issue is that a credible dive plan never came forth.
3 It's as simple as that.

4 Q. And as we have the opportunity in this last minute, what would
5 have been a credible diving plan?

6 A. A diving plan that would have dealt with the issues.

7 Q. No, no don't give me generalizations. Mechanics, how would
8 you effect this credible diving plan that you would have
9 approved?

10 A. Look, we, we have walked through a process where those dive
11 plans were tested with expert—

12 Q. Could you answer the question? I'm being looked at
13 unfavourably here.

14 A. No, I say—

15 Q. Tell us now—

16 A. I don't think so, Mr. Ramadhar.

17 **Mr. Chairman:** It's part of the territory really, you know. I
18 mean, we have covered this territory. He's made it absolutely
19 clear, to me at any rate, that he was not prepared to countenance
20 any plan until he'd had a camera in that pipeline that gave him
21 all the information he wanted.

22 **Mr. Ramadhar:** Excellent; and I'm moving just a little bit
23 further than that.

24 **Continued Cross-Examination By Mr. Ramadhar:**

25 Q. So having had, assuming you had camera footage of blockage
26 and so what would have been the plan? You had robots to go
27 in?

1 A. At some point in time or at, at, at—we would have, my belief is
2 that with the right level of information—

3 Q. Uh-huh.

4 A. —probably would have been able to conduct a proper risk
5 assessment that give us the confidence to allow somebody to
6 get in, rescue and get out of that pipe safely.

7 Q. Right. We've heard that many times.

8 A. Well that is just the fact, and, and, and—

9 Q. Yeah, the fact, I'm asking you now that there being blockage,
10 there being oil, what would have been your plan knowing that
11 with the camera, assuming the camera give you bad news what
12 would have been the plan to rescue?

13 A. Well we had a number—remember we had a number of, we had
14 a number of, er, divers on site including Paria's.

15 Q. Right.

16 A. Paria's from Heritage.

17 Q. Yeah, so now that—

18 A. And the plans that would have come forth that would have been
19 tested making sense. It had to make sense, Mr. Ramadhar.

20 Q. Yeah, I want to make sense of what you're saying. My
21 question remains?

22 A. Uh-huh.

23 Q. Had you the very bad news would there have been a rescue
24 plan?

25 A. We would have tested that rescue plan with our—with the
26 people who were there—

27 Q. Yeah.

1 A. —and have it, and have it tested as being safe to be able to use.

2 Q. What would that plan have been? I'm sorry.

3 A. Well I'm, well I'm not, I'm not the expert in what—

4 Q. Clearly not.

5 A. —that diving plan should be.

6 Q. Clearly not. Clearly not.

7 **Mr. Ramadhar:** Thank you so much.

8 **Mr. Chairman:** All right, we're going to, um, take 5 minutes.

9 There's a couple of things I'd like to address counsel about, but
10 what I'd like is if the witness could—Mr. Mohammed, do take
11 a break, a comfort break for yourself.

12 **Examination By Mr. Chairman:**

13 Q. But can I ask you, you were asked a number of times about the
14 other diving teams—

15 A. Yes.

16 Q. —that you've contacted—

17 A. Yes.

18 Q. —or that the IMT did and I've just been working my way
19 through the, um, what is, what is, er, a schedule of events as
20 they unfolded.

21 A. Sure.

22 Q. We've been told that that was contemporaneous. Would you
23 expect that document to show when the divers, the different
24 divers arrived on site?

25 A. I not sure whether it would have been there in detail but I could
26 always get that from the date the—

27 Q. I mean there's reference made to Eastern Divers for example.

1 A. Yeah.

2 Q. Things like that and showed when they came, but—

3 A. I'm not too sure if all the times were recorded that they entered
4 the gate, but that is information that we could provide to the
5 Commission.

6 Q. Well, whether they entered the gate or—I mean, I presume that
7 they had to enter the gate unless they came by boat. What I'm
8 interested to know is, you've identified for us four dive
9 companies—

10 A. Yes.

11 Q. —that you contacted. I say you, I mean with the IMT.

12 A. Yeah, yeah, yeah.

13 Q. Hull Support Services, Offshore Technology Solutions,
14 Mitchell's Professional Diving Services and Eastern
15 Emergency Response Services.

16 A. Yes.

17 Q. They would be different [*Inaudible*]

18 A. Different types of rescue.

19 Q. Different types, two were certainly dive experts, if not all three
20 four, but they have different functions as well and I'd just like
21 to know really from you whether this document would help you
22 in identifying when the first of those four arrived on the scene
23 and when they told you they would arrive on scene? Do you
24 see what I mean?

25 A. Yes.

26 Q. There's a different isn't there?

27 A. Yes.

1 Q. You called them up and say, right, we need you up here now,
2 we've got this emergency, oh we're going to be three hours
3 before we get there.

4 A. Okay.

5 Q. You might discount them and then go to somebody else. Do
6 you see what I mean?

7 A. I understand, Sir.

8 Q. So I'd like to know, if you're able to do it now, if not I'm happy
9 to have it at some later point in time.

10 A. I wouldn't be able to do it now.

11 Q. I'd like to know when they were contacted. When, if they told
12 you—

13 A. All right.

14 Q. —how long they were likely to be?

15 A. Okay.

16 Q. And, lastly, when they actually arrived.

17 A. Okay.

18 Q. All right? So far as you're aware.

19 A. Okay.

20 Q. Right? We've got some evidence of this already but I'd like to
21 know from your perspective what you understood the position
22 to be, all right?

23 A. Okay.

24 Q. So I think that's quite a lot to do and you might prefer to do it—
25 provide it to me later this week.

26 A. For sure.

27 Q. It's probably better to do it that way rather than you trying to

1 wade your way through this—

2 A. Yes.

3 Q. —I mean, trying to work out bits of information without
4 providing the whole picture.

5 A. Yeah.

6 Q. Do you think you could do that for me?

7 A. Yes, we could do that.

8 Q. All right. I'll let you go now and take your comfort break.

9 A. Okay, great.

10 Q. So if you go with this lady here, if you take him first to—out,
11 right.

12 *[Mr. Mushtaq Mohammed leaves Enquiry room]*

13 **Mr. Chairman:** A couple of things I wanted to address
14 counsel about. First of all Mrs. Persaud Maraj, you asked for
15 permit to work and method statement in relation to the previous
16 incidents. Have I got this right? Was it, was it Mr.—

17 **Mrs. Persaud Maraj:** That's Mr. Hosein.

18 **Mr. Chairman:** Ah, Mr. Hosein-Shah, wasn't it? Forgive me,
19 Mr. Hosein-Shah. It was you I think who raise it, was it not,
20 um, the question of whether you could have the method
21 statement—was it the method statement and the permit to
22 work?

23 **Mr. Hosein-Shah:** Yes.

24 **Mr. Chairman:** In relation to the previous incident?

25 **Mr. Hosein-Shah:** In relation to the two previous jobs.

26 **Mr. Chairman:** In relation to previous works that had taken
27 place?

1 **Mr. Hosein-Shah:** Yeah.

2 **Mr. Chairman:** One in 2021?

3 **Mr. Hosein-Shah:** Twenty-twenty, and I don't believe the
4 witness in his witness statement was able to identify when.

5 **Mr. Chairman:** No, he doesn't. I think there were two he
6 said.

7 **Mr. Hosein-Shah:** Yes, two similar jobs.

8 **Mr. Chairman:** Yes. Certainly the one from 2020 might be
9 relevant. Is there any objection to my making an Order? I
10 thought we had a, I thought we had something in relation to
11 this. Right. [*Crosstalk*]

12 **Mr. Hosein-Shah:** We have the 2022 permits to work.

13 **Mr. Chairman:** I don't think we have the permits. I definitely
14 I don't think we have the permits to work. We may have the
15 method statement or something similar. All right, look, we'll
16 get to the bottom of it but is it your position that you would like
17 a copy of that if at all possible?

18 **Mr. Hosein-Shah:** Yes, preferably for both jobs, just for
19 comparative purposes.

20 **Mr. Chairman:** All right. We'll see what we can do. Is
21 there—seems your witness didn't have any particular objection
22 to it but you might want to consider whether or not that's
23 something that can be—

24 **Mr. Peterson SC:** We'll try to track it down, Sir, but also I
25 think LMCS may also have records of that job.

26 **Mr. Chairman:** Well I was going to come to them in a
27 moment but, I mean, if you've got anything you've got

1 information—

2 **Mr. Peterson SC:** Yeah, we will—we will—

3 **Mr. Chairman:**—that might be helpful. Don't overwhelm me
4 with a number of files this late—

5 **Mr. Peterson SC:** We'll do our best, Sir. We'll do our best.
6 There may be.

7 **Mr. Chairman:**—but, um, the core document.

8 **Mr. Peterson SC:** Depending on the job it may be multiple
9 permits to work because it only last seven days.

10 **Mr. Chairman:** Yes. Quite so, quite so.

11 **Mr. Peterson SC:** But we will endeavour to—

12 **Mr. Chairman:** And, um, yes, Mrs. Persaud-Maharaj really
13 why I was confusing you. I was going to ask you whether or
14 not you had such documents.

15 **Mrs. Persaud Maraj:** I do believe we had given in a
16 document, I can't recall clearly but, as a result of the
17 interrogation that we would have undertaken during the
18 interviews, that was one of the things that counsel had inquired
19 into—

20 **Mr. Chairman:** Yeah, I—

21 **Mrs. Persaud Maraj:**—and I do believe we had given what we
22 had.

23 **Mr. Chairman:** I think I've a feeling a method statement
24 exists for one of them.

25 **Mrs. Persaud Maraj:** Yeah, and it was a method statement.

26 **Mr. Chairman:** Whether there's a permit, I'm pretty sure
27 there isn't a work—permit to work—

1 **Mrs. Persaud Maraj:** No, LM—

2 **Mr. Chairman:**—because I, I haven't seen it.

3 **Mrs. Persaud Maraj:** And—sorry. But LMCS would not
4 have the permit to work. That would all be in Paria's
5 possession.

6 **Mr. Chairman:** Well wouldn't you have been given a copy of
7 it at the time?

8 **Mrs. Persaud Maraj:** No, copies aren't given to the
9 contractor.

10 **Mr. Chairman:** All right. That's interesting. They take it
11 away afterwards?

12 **Mrs. Persaud Maraj:** That's correct. In fact, we—the first
13 time we would have seen this, I would have seen this is when
14 there would have been disclosure.

15 **Mr. Chairman:** Okay, all right. Well, um, I'm not going to
16 make any Order about it now but if somebody could make some
17 inquiry, please, including my own team as to what might have
18 been disclosed, that would be helpful, thank you. The other
19 thing is, er, Mr. Ramadhar you raised the question of WhatsApp
20 and family messages. That group, I do regard that as relevant
21 and I would like to see if there are any, that group messages and
22 I'm pretty sure there aren't any that have been supplied.

23 **Mr. Peterson SC:** We would search for it, Sir, but I think the
24 witness' evidence before Mr. Ramadhar's cross-examination I
25 think his evidence was that they made WhatsApp calls because
26 the witnesses in the—gave their numbers to call them on
27 WhatsApp and I think that—

1 **Mr. Chairman:** That's certainly what he says in his statement.

2 **Mr. Peterson SC:** Yes.

3 **Mr. Chairman:** Um, that's when—

4 **Mr. Peterson SC:** Um, he said it, he said it here too but we'll
5 endeavour to see if there were texts—

6 **Mr. Chairman:** Yes.

7 **Mr. Peterson SC:**—WhatsApp messages.

8 **Mr. Chairman:** If there were any—

9 **Mr. Peterson SC:** Yes.

10 **Mr. Chairman:**—then I'd appreciate that because there's some
11 evidence to suggest that they heard by way of WhatsApp.

12 **Mr. Maharaj SC:** In this statement of Mr. Mushtaq
13 Mohammed at paragraph 93 at page 1460, he referred to a
14 WhatsApp group was formed by 3.00 p.m. that day the
15 Saturday and she thereafter communicated with the divers'
16 relatives.

17 **Mr. Chairman:** Right. And I've been handed a method
18 statement, yes, relating to 2018, is it? Twenty-twenty, yes,
19 2020. Project execution plan for repairs to SL36 risers topside
20 piping, so that's at 2898 in the supplemental witness statement
21 bundle, so if you could find it there is a permit to work in
22 relation or permits to work in relation to that I'd be grateful.
23 All right, thank you very much. Mr. Hosein, yes.

24 **Mr. Hosein-Shah:** Thank you, Chairman. While we're on the
25 topic I believe in the ICT typewritten log we were supposed to
26 get the expanded version of it because it cut off at a certain
27 point. I'm not sure whether that was actually provided.

1 **Mr. Chairman:** All right, this is something I mentioned I
2 think to Mr. Piper wasn't it? [*Crosstalk*] I'm told it's arrived.

3 **Mr. Peterson SC:** It's been uploaded.

4 **Mr. Chairman:** Right, thank you. Thank you very much. I
5 haven't seen it yet. I confess I've not noticed. There are a
6 number of additional documents in the supplemental bundle
7 that had been uploaded today.

8 **Mr. Peterson SC:** Before, Sir, before today. Some of my
9 colleagues not doing their homework, Sir.

10 **Mr. Chairman:** This was—[*Mr. Chairman confers with Ms.*
11 *Sinanan*] Right, it didn't arrive before Christmas and I confess
12 straight away I've not done any work about preparing for today,
13 since Christmas, so—

14 **Mr. Peterson SC:** If the Christmas does this to you, Sir, think
15 of what carnival will do to you.

16 **Mr. Chairman:** No, no, well, I am because of what it clearly
17 does to you. [*Laughter*]

18 **Mr. Peterson SC:** It does, Sir, it does.

19 **Mr. Chairman:** All right. We'll take 5 minutes. Everyone,
20 please, have a look at what you've got to ask, rule out that
21 which we have already covered please? All right? Thank you.

22 **5.07 p.m.:** *Enquiry suspended.*

23 **5.18 p.m.:** *Enquiry resumed.*

24 **Mr. Chairman:** Yes, thank you. Can we have the witness
25 please?

26 [*Mr. Mushtaq Mohammed re-enters enquiry room and sits at*
27 *witness table*]

1 **Mr. Chairman:** Okay, Mr. Mohammed, you're still on oath.
2 The final furlong, I hope. All right. I think Mr. Pegus has
3 some questions, is that right, Mr. Pegus?

4 **Mr. Pegus:** Yes, Mr. Chairman.

5 **Cross-Examination By Mr. Pegus:**

6 Q. Good afternoon, Mr. Mohammed.

7 A. Good afternoon, Sir.

8 Q. My name is Chase Pegus and I represent the interest of Kenson.

9 A. All right.

10 Q. Right. Now in answer to my friend Mr. Ramadhar—

11 A. Uh-huh.

12 Q. —you made reference to Paria delegating a supervisory role to
13 Kenson as it relates to the work that was going on—

14 A. Yes.

15 Q. —on berth 6.

16 A. Yes.

17 Q. Yes?

18 A. Yes.

19 Q. Right. Now, implicit in that reference or statement is not only
20 that Paria had an obligation to supervise, agree?

21 A. Yeah.

22 Q. You are saying Kenson had an obligation to supervise?

23 A. Yes.

24 Q. Good. Now, you as the General Manager of course would be
25 familiar with the scope of works which would have outlined the
26 obligations of Paria and Kenson?

27 A. In the contract you're talking about now?

1 Q. Yes.

2 A. Right. Yes.

3 Q. Good. Now, it's in evidence so I won't take you through—

4 A. Yes.

5 Q. —every single provision but you are aware, Sir, under the
6 contract, LMCS was supposed to provide full-time supervision
7 for the works that were being conducted?

8 A. Correct.

9 Q. Good. Let me take it one step further. Under those provisions,
10 there is no—under that contract, my apologies, there is no
11 provision which says that Paria was to supervise?

12 A. No. Paria was around quality assurance, delivery and a few
13 things like that if I my memory is correct.

14 Q. Good. Now, when you made the statement that Paria through
15 Kenson had to supervise, do you now want to reconsider that
16 statement?

17 A. Well when I made the statement, and I probably didn't say it
18 right, it was in the context of the contract that was agreed
19 between LMCS and Paria that the contract outlined clear roles
20 and accountabilities for both parties, right, so, so the
21 supervision in the context of the contract was around the things
22 that Paria had to do as far as the contract is concerned.

23 Q. Okay. I'm not too sure I'm following you and I just want, I just
24 wanted to make it clear—

25 A. Yes.

26 Q. —for my clients.

27 A. Right.

1 Q. Let me suggest to you that the Kenson personnel that you had
2 on site, they had no obligation to supervise. Let me suggest
3 that to you. Agree?

4 A. I'd have to go back to the contract, I sorry.

5 **Mr. Chairman:** Yeah, I think that might be more useful, Mr.
6 Pegus.

7 **Mr. Pegus:** Okay.

8 **Mr. Mohammed:** I'm sorry, I'm sorry just to help, might clear
9 up a lil bit.

10 **Continued Cross-Examination By Mr. Pegus:**

11 Q. Right, um, the contract can be found I'm looking at page 544 of
12 the witness statement bundle?

13 A. Five four four of the witness statement bundle.

14 Q. The witness statement bundle and I believe this is referred to in
15 the statement of Kazim Ali Sr.

16 **Mr. Chairman:** Do you mean 544 of the witness statement?

17 **Mr. Pegus:** Yes, the witness statement bundle.

18 **Mr. Chairman:** Whose statement is it?

19 **Mr. Pegus:** It's attached to the statement of Kazim Ali, Sr.

20 **Mr. Chairman:** Ah right.

21 **Mr. Pegus:** Yes.

22 **Mr. Chairman:** Page? Sorry, page what?

23 **Mr. Pegus:** It's at—it could be found at page 544.

24 **Mr. Chairman:** The scope of work?

25 **Mr. Pegus:** Yes.

26 **Continued Cross-Examination By Mr. Pegus:**

27 Q. Right. Now, Mr. Mohammed, before you review it, I have seen

1 several provisions in that document which placed an obligation
2 on LMCS to provide full-time supervision.

3 A. Or, correct.

4 Q. Good. I have not seen any provision which placed an
5 obligation on Paria to supervise.

6 A. I don't believe that there's an obligation for, how to say it, er,
7 for full-time supervision by, by, by Paria in the document.

8 **Mr. Chairman:** You're speaking away from the microphone.

9 **Mr. Mohammed:** I'm sorry, I'm sorry, I'm sorry, I'm sorry.

10 **Continued Cross-Examination By Mr. Pegus:**

11 A. Just repeat the question for me again, please?

12 Q. Okay. Just an observation. What I'm saying is—

13 A. Correct.

14 Q. —that I have seen several provisions which placed an
15 obligation on LMCS—

16 A. LMCS to supervise.

17 Q. Full-time supervision, right?

18 A. Full-time supervision of the work is what I was looking for. So
19 I don't, I don't, I don't recollect from the contract that there's
20 an obligation for Paria for full-time supervision on the project.

21 Q. Good. And, so we could go with your recollection for now?

22 A. Right.

23 Q. There's also no contractual provision that you're aware of
24 which placed an obligation on Kenson to provide full-time
25 supervision?

26 A. No there is no, there is no contractual provision in the contract
27 that placed full-time supervision with Kenson.

1 Q. Okay. Thank you very much. Now I just want to turn your
2 attention briefly to the permit to work procedure.

3 A. Uh-huh.

4 Q. I'm not on the work permit for the day in question.

5 A. Right.

6 Q. I'm on the permit to work procedure.

7 A. Right.

8 Q. Good. Now, the permit to work procedure, my apologies, in
9 case you need to refer to it, page 24 of the core bundle.

10 **Mr. Chairman:** It is Tab 4. It's called core bundle one one
11 Tab 4. And your favourite bundle. Could we take away some
12 of the bundles, unless anyone's going to necessarily—but just
13 take some of them away as it becomes too confusing. Leave his
14 witness statement. [*Document handed to Mr. Mohammed*] All
15 right, thank you. Thank you very much. It's Tab 4.

16 **Mr. Mohammed:** Yes, I'm on it.

17 **Continued Cross-Examination By Mr. Pegus:**

18 Q. Yes, Sir. Now, on the cover of that document it speaks to the
19 custodian being Randolph Archbald?

20 A. Yes.

21 Q. And the approving authority one Ms. Lisa Ali?

22 A. Yes.

23 Q. Right. Who developed this procedure?

24 A. I believe that the procedure was developed by Mr. Archbald.

25 Q. Right. Now, this procedure, this permit to work procedure—

26 A. Yes.

27 Q. —was this procedure tailored to the works that were being

1 conducted on berth 6 and berth 5, or was it a general document?

2 A. This is a document that is a general guide for work at Paria.

3 Q. Good. Right. Now, so, it's a general—

4 **Examination By Mr. Chairman:**

5 Q. Right, so just so that I understand what you're saying, you had
6 to comply with it in order to get a permit to work.

7 A. Yes.

8 Q. Right?

9 A. Yes.

10 **Continued Cross-Examination By Mr. Pegus:**

11 Q. Just to build on what it is you are saying, you are saying that
12 it's a general guide to be followed when work is being
13 conducted on Paria compound?

14 A. Yes, I just—yes.

15 Q. Good. Now, in this document that we have before us, it
16 basically lists obligations—

17 A. Yes.

18 Q. —which were placed on the different players?

19 A. Yes.

20 Q. So the applicant would have obligations—

21 A. Yes.

22 Q. —site authority would have obligations, et cetera?

23 A. Yes.

24 Q. Right. Now, these obligations, Sir, they were intended as a
25 general guideline only, yes?

26 A. They were intended as a—yes, so that the different people with
27 different roles would have an idea or they would have

1 guidelines around what their roles were in the execution of
2 work.

3 Q. Right. And, because the permit to work procedure provided a
4 general guideline, you would agree that it would have to be
5 tailored to the specific work that was being undertaken?

6 A. So you have two things that play here, right? So let me just see
7 if I could help with that, right? We have a contract that we
8 would have signed with a company who was going to perform
9 work at the site.

10 Q. Yes.

11 A. That contract has specific roles and obligations for the company
12 and the contractor.

13 Q. Yes.

14 A. Right? You have a permit to work system that is a general
15 guide for work on the facility.

16 Q. Yes.

17 A. Regardless of—and it may have different elements of different
18 contracts and how we contract.

19 Q. Maybe I'm not making myself clear.

20 A. Right, sorry.

21 Q. So we agree that the permit to work procedure provided general
22 guidelines?

23 A. Yes.

24 Q. Yes? Good. Right. Now, in order for the permit to work
25 procedure—

26 A. Yes.

27 Q. —to make sense—

1 A. Yes.

2 Q. —for subsea works—

3 A. Yes.

4 Q. —right? Those general guidelines—

5 A. Right.

6 Q. —either through practice or some other mechanism would have
7 to adapt in order to be utilized for the works that would be
8 conducted on the day in question.

9 A. What I would say and I—this is, this is how I see it, right? This
10 is my understanding of it, the general guidelines would
11 continue to exist, however, it would be organized with a way to
12 be able to meet the obligations of the contractual agreement
13 between Paria and the contracting company.

14 Q. Fair enough. Now, earlier in the day, um, in answer, to the
15 learned Chairman, he was pointing out to you a particular
16 provision under the permit to work procedure.

17 A. Yes.

18 Q. Right? Which concerns the applicant—

19 A. Yes.

20 Q. —5.1?

21 A. Yes.

22 Q. Right. And he put to you that it was ambiguous at best. You
23 recall that? You recall that question being put to you?

24 A. I just want to be clear, what he, what the Chairman—what my
25 understanding is of what the Chairman put to me as ambiguous
26 was a specific statement around migration barriers to remain in
27 place—

1 Q. Okay.

2 A. —us what I understand that, what I understand that to be.

3 **Examination By Mr. Chairman:**

4 Q. Well I think I put ambiguity on more than one occasion but
5 certainly in relation to the barriers I put ambiguity, but I did
6 suggest that when one reads the plain wording of what the
7 applicant is—

8 A. Right.

9 Q. —I had suggested to you the better person to put in that role
10 was—

11 A. The contractor.

12 Q. —um, was, in fact, the contractor and you agreed?

13 A. Yes.

14 Q. I then said to you it is at best ambiguous?

15 A. Okay.

16 Q. I didn't add at worst misleading but it could be regarded in that
17 way but certainly at best ambiguous if one were to read this
18 plain wording of that provision of your, um, of your—of the
19 works.

20 A. Thanks, thanks for the correction.

21 Q. Permit to work procedure.

22 **Mr. Chairman:** So that's what I put to him and I think he
23 agreed to that.

24 **Mr. Pegus:** Right.

25 **Mr. Chairman:** If you want to pursue it, you carry on.

26 **Continued Cross-Examination By Mr. Pegus:**

27 Q. Right. Now, I could be wrong but I'm just asking for

1 clarification, I sensed from what it is you were trying to say to
2 the Chairman, is, notwithstanding what you are seeing here in
3 black and white, in practice, something else took place?

4 A. Let me answer the question the way that I understand it. Right?
5 In practice, what I would have expected is that the competent
6 contractor that we hired to do the job would provide the
7 supervision over the job. Right? And if there were questions or
8 things on that work permit or the risk assessment that required
9 addressing, that that contractor would address that with the
10 operating company or with the area authority as a minimum.

11 Q. Right. So what I'm trying to get at is this. Earlier you agreed
12 that the permit to work procedure provided a general guideline.

13 A. Yes.

14 Q. Yes? Good. Now, in a case where the permit to work
15 procedure was not adhered to—

16 A. All right.

17 Q. —to the letter—

18 A. Yes.

19 Q. —all right, because in practice something else would happen?

20 A. Yeah.

21 Q. In an instance where it wasn't followed to the letter well then
22 you can't place fault on anyone, agreed?

23 A. Well I think it's, it's, it's a distinction between what's written
24 and how work actually takes place on a day-to-day basis using
25 what is written as a guideline. I don't think every single—the
26 practicalities may be sometimes a lil bit different from what is
27 completely written in the permit because it's people working,

1 eh.

2 Q. Now, is there—this is my question.

3 A. Uh-huh.

4 Q. Is there anything other than what you would say or what you
5 would have to say, sorry, operated in practice, is there anything
6 that the Commission could refer to to determine what was the
7 intention behind the permit to work procedure?

8 A. In Paria, what was the intention?

9 Q. No. When, when, when you agreed with the Chairman—

10 A. Right.

11 Q. —that clause 5.1 of the permit to work procedure—

12 A. Right.

13 Q. —parts of it were ambiguous?

14 A. Right.

15 Q. Right, and you were trying to say to him, “Well listen this is
16 what is written here.”

17 A. Right.

18 Q. But in practice—

19 A. Well, it was.

20 Q. —it might be tailored to suit—

21 A. Yeah.

22 Q. —right. My question is this. Apart from what is written here—

23 A. Uh-huh.

24 Q. —is there anything, other than what is written here that the
25 Commission could use to determine what was the intention
26 behind the permit to work procedure?

27 A. No, not that I know of.

1 Q. And if such a document I think don't exist, one of the things
2 that would assist would be to hear from the people who utilized
3 the permit to work procedure?

4 A. Yes.

5 Q. Or who familiar with it like yourself?

6 A. Yes.

7 Q. Agreed?

8 A. Yes.

9 Q. Right. Now, the permit to work procedure is not a contractual
10 document?

11 A. No.

12 Q. Good. And nothing in the permit to work procedure would
13 displace a contractual obligation that LMCS had?

14 A. No, not to my understanding.

15 **Mr. Chairman:** Can I have that question again?

16 **Continued Cross-Examination By Mr. Pegus:**

17 Q. Nothing—just for the Chairman's benefit—none of these
18 obligations which are outlined in the permit to work procedure
19 would displace a contractual obligation that LMCS had?

20 A. No. The—no.

21 Q. Just one final area for me. The part of the work that was being
22 done on the 25th of February, we agreed it concerned subsea
23 works, yes?

24 A. Yes.

25 Q. Right. And the maintenance technician that you had on site,
26 one of the maintenance technicians was one Mr.—

27 A. Mr. Houston Marjadsingh.

1 Q. —Houston—right.

2 A. Yes.

3 Q. A name that featured prominently in these proceedings, yes?

4 Good.

5 A. Forget Houston, boy. He mightn't like that too bad.

6 Q. Right. Now you would agree that based on the roles that were
7 given to Mr. Marjadsingh—

8 A. Yeah.

9 Q. —he didn't have to be on berth 6 for the duration of the works?

10 A. No.

11 Q. Good.

12 A. I haven't heard that.

13 Q. Right. And of course, based on Mr. Majardsingh's
14 qualification he was a maintenance technician?

15 A. Yes.

16 Q. Yes?

17 A. Yes.

18 Q. Good. Now you accept that Mr. Marjadsingh couldn't
19 supervise subsea works. You agree with that?

20 A. Maybe not supervise but provide oversight.

21 Q. Lovely. So we could accept that. He was there to provide
22 oversight, yes?

23 A. Yes.

24 Q. Right. His role really was to act as a liaison between the
25 contractor and Paria, yes?

26 A. And, and, and to ensure that the scope of work was done as
27 outlined in the permit.

1 Q. As outlined in the permit?

2 A. And, and, you know, to make sure that the requisite, um, rules
3 around safety and operations at the, um, of the work itself was
4 done in conjunction with the contract and—

5 Q. Right. Focusing on the work that was going on in the chamber,
6 the procedure that was utilized on the day in question, it
7 depended heavily on the LMCS personnel keeping him abreast
8 as to what was going on inside the chamber?

9 A. Yeah, and that would be the, and that would be the expectation
10 foremost work that goes on, that the contractor would keep the
11 technician abreast of what is next.

12 Q. Good. And that was Paria's expectation of what LMCS was
13 supposed to do, yes?

14 A. Correct, and, and—yeah.

15 Q. Okay. Thank you very much, Sir.

16 A. Okay.

17 **Mr. Chairman:** Just a moment. [*Writing*]

18 **Examination By Mr. Chairman:**

19 Q. Can I ask you please—

20 A. Me?

21 Q. —to have a look at the scope of work described as technical,
22 which is in our bundle at core bundle Volume II at page five
23 five eight Tab 19?

24 A. Right, just now.

25 Q. Do you have core bundle two?

26 A. I have Volume I here.

27 Q. Right. You will be provided with it.

1 A. Yes. [*Document handed to Mr. Mohammed*] Oh yeah, I have it
2 here.

3 Q. Right. So just so that I'm clear on what's happening here—

4 A. Yes, go ahead.

5 Q. —this is a scope of work put out by Paria?

6 A. Yes.

7 Q. This is what we want done.

8 A. Yes.

9 Q. This is supposed to set out what we regard as being our
10 responsibilities—

11 A. Yes.

12 Q. —in the contract and what we regard as being the contractor's
13 responsibilities.

14 A. Correct.

15 Q. And it does so at some length and we've done a lot of this
16 already—

17 A. Yes.

18 Q. —all right, so I don't want to belabour it but can I just take you
19 to a few of the paragraphs please?

20 A. Yes.

21 Q. Paragraph two general?

22 A. Paragraph two.

23 Q. Yes, general. Do you see that?

24 A. What page?

25 Q. It's at five six oh.

26 A. Five six zero, okay.

27 Q. Five six zero. It's paragraph two.

1 A. I have it here, general, yes.

2 Q. Right. And this says: "The successful contractor shall supply
3 all labour—

4 A. Yes.

5 Q. —materials, equipment, project engineering, supervision—

6 A. Yes.

7 Q. —inspection services, transportation, consumables, et cetera?

8 A. Yes.

9 Q. Et cetera. So here you're making it clear that the contractor
10 will have a responsibility for supervising the work.

11 A. Yes.

12 Q. Right? Can I ask you this?

13 A. Uh-huh.

14 Q. Given the hazardous nature of the work that we're dealing with
15 here—

16 A. Yes.

17 Q. —do you regard supervision by the contractor themselves as
18 opposed to you or some independent body—

19 A. Yeah.

20 Q. —a suitable way of dealing with what might be regarded with,
21 as you've told us, hazardous work?

22 A. Yeah, no.

23 Q. Not at the time but on reflection now?

24 A. On reflection, on reflection I would say that, um, lessons
25 learned from this, you know, would point to having some level
26 of, some level of—

27 Q. Independence?

1 A. —independent supervision I would say.

2 Q. Yeah, rather than the contractor themselves?

3 A. Yeah.

4 Q. Because what, if nothing else has been learned, if the contractor
5 gets it wrong then everybody's going to get it wrong?

6 A. Yes.

7 Q. Aren't they?

8 A. So, yes.

9 Q. If you're so totally dependent, as you've told us you were, on
10 their expertise, if they get something wrong, then it's simply
11 going to be perpetuated throughout, isn't it?

12 A. Yeah and I think, I think something like that we could, we
13 could, you know, determine the jobs that are high risk and—

14 Q. Yes.

15 A. —you know, consider an alternative.

16 Q. I mean, obviously, if you're cutting the grass and you get a
17 contractor you don't need someone to monitor that, do you?

18 A. Yes.

19 Q. You know, you can tell whether grass has been cut properly or
20 not.

21 A. Yes.

22 Q. But it does seem to me—

23 A. Yes.

24 Q. —and I know it does to Mr. Wilson as well—

25 A. Yes.

26 Q. —of some importance—

27 A. Yes.

1 Q. —that, as it were, say, well, yeah you supervise yourselves,
2 guys, you know get on with it, you know that kind of just
3 ignores the potential danger that might exist, doesn't it?

4 A. Fair enough.

5 Q. All right. So that's the first thing I wanted to ask. In the same
6 document, yes, if you go please to page five six five—

7 A. Five six five.

8 Q. —five six five, yes, 3.1.12—

9 A. Yeah, I have it.

10 Q. —you see there it deals with there—they're dealing with, it's
11 under the, so that you understand, it's under the subheading of
12 renewal of section of the 36 riser piping modified tie in bent
13 and so on?

14 A. Yes.

15 Q. And it says there at 3.1.12, in italics, so identified by you Paria,
16 note—

17 A. Yeah, yeah.

18 Q. —a video stream—

19 A. Yes.

20 Q. —to be provided topside—

21 A. Yeah.

22 Q. —during work activity—

23 A. Yeah.

24 Q. —for Paria's representative.

25 A. Yeah.

26 Q. Can you just tell me what you understand that to mean?

27 A. Right. What, what we understand—so typically when you do

1 these works, right, you'll want to learn from them if we could
2 improve them so these—so this video will—

3 Q. If you could what, sorry? Just go closer—

4 A. Sorry, when you, when you, er, when you do works like this
5 you'd also want to look for ways to improve how you do these
6 works. So typically those videos would be captured, Paria
7 would retain them and we could always go back and look at
8 those videos, if you have other jobs to do, what were some of
9 the things that we could improve, what, what are areas that we
10 didn't perform as well in where are the deficiencies that we
11 may have missed because—around the process of continued
12 improvement.

13 Q. Well, I raised it because it deals specifically with issues in this
14 particular instance.

15 A. Yes.

16 Q. Because we look at the sentence before that—

17 A. Yes.

18 Q. —under the same heading, it's describing the work to be done
19 isn't it, cut?

20 A. Yes.

21 Q. Insert migration barrier.

22 A. Yes.

23 Q. And install a 30-inch flange—

24 A. Yes.

25 Q. —on to the existing line. Inspection required for the flange
26 including root passes—

27 A. Yeah.

1 Q. —VT and hydrotest. That's the integrity of the weld itself is it
2 not?

3 A. Yeah. In my—I mean, we could take two views of this, eh.
4 One view was that the video stream would be provided for
5 continuous monitoring as we discussed, and there is a view,
6 which is the view that I probably more subscribe to in that that
7 video stream is provided as a record of the job done so that
8 Paria has that videoing of the job as—

9 Q. I understand what you mean, and I can see why that might be
10 useful for you.

11 A. Yes.

12 Q. But where you the company have added in italics—

13 A. Uh-huh.

14 Q. —in relation to that specific part of the job—

15 A. Yeah, I could understand.

16 Q. —re the cutting and the inserting of a migration barrier—

17 A. Yeah.

18 Q. —and installing new flange—

19 A. Yeah.

20 Q. —you've decided to add that specific paragraph in, a sentence
21 in in which it said provided topside?

22 A. Yes.

23 Q. Which rather suggests, doesn't it, that somebody's watching
24 this?

25 A. Yes.

26 Q. Do you follow for what I mean? If it was just for training
27 services later or improvement services later—

1 A. Yeah.

2 Q. —a little bit like when we get the telephone call you're being
3 recorded for training purposes, you know, I mean, the truth is
4 here looking at that—

5 A. Yeah.

6 Q. —it does rather suggest, doesn't it, that it's, it's up topside for
7 Paria's representative?

8 A. It's not—Chairman I, I, I know I, I could easily see how it
9 could be interpreted that way.

10 Q. So it's another ambiguity, isn't it?

11 A. Yeah. Yeah.

12 Q. Is it?

13 A. If you look at 3.1.11—

14 Q. Yes.

15 A. —also in italics, right?

16 Q. Yes.

17 A. Paria representative to review video of area and YouTube
18 report prior to approved cutting point.

19 Q. Right. So that they can look at it?

20 A. So they could look at it for this particular, for this particular
21 piece of scope that is t? take place, right.

22 Q. Yeah.

23 A. So maybe it kind a falls into 3.1.12.

24 Q. Yes. Well, I, I—it just seemed to me that that might have
25 suggested to the contractor that they got to provide this so that
26 what they're doing is being monitored otherwise why do you
27 need it to be provided topside?

1 A. Yeah. Well, I—my—

2 Q. Just video and you can give it to us after?

3 A. Yeah.

4 Q. If it needs reviewing? Do you follow what I mean?

5 A. Yeah.

6 Q. There's a difference. It's like the phone call, as I say, you make
7 and somebody is saying, you know, the bank is saying we're
8 recording this for training and monitoring purposes or some
9 other nonsense that they claim they're using it for, but I, I—the
10 point it seems to me is that on the face of that it looks doesn't
11 it—

12 A. Yes.

13 Q. —if, actually—

14 A. Yeah.

15 Q. —you know, someone's keeping an eye on you here?

16 A. Yeah. Chair it's a fair comment to make.

17 Q. All right. All right. All right, leaving that side for a minute in
18 support of what you say—

19 A. Yes.

20 Q. —you'll see that at 3.1.21—

21 A. Yes.

22 Q. —we'll move on just a little bit to be fair to you to bring that to
23 your attention, there you go, right at the top there—

24 A. Yes.

25 Q. —you see the contractor shall?

26 A. Yes.

27 Q. —supply the video footage during the subsea works.

1 A. Correct.

2 Q. Right? And then after that, and this video must form part of a
3 handover package.

4 A. Form part of the handover package. Correct.

5 Q. All right, so, in fairness to you it may be that it's for both
6 purposes.

7 A. Yes.

8 Q. Because I'm right and you're right?

9 A. Yes.

10 Q. Yes? All right. And then lastly this, please? If you go, and I
11 say lastly, go please next to, um, five seven zero, page five
12 seven zero?

13 A. Yes.

14 Q. Paragraph four.

15 A. Yeah. Paria's responsibility?

16 Q. Paria's responsibility.

17 A. Yeah.

18 Q. It's not very much by the look of it, if you'll forgive me for
19 saying so. In a document that's this long it's only got five
20 subparagraphs and that's it, but anyway be that as it may, what
21 it does say is this. 4.1, supply personnel for organizing all work
22 permits.

23 A. Yes.

24 Q. Right, and certificates, monitoring contractor's performance—

25 A. Yeah.

26 Q. —and work standards, approving work done by the contractor
27 and carrying out quality assurance audits.

1 A. Yeah.

2 Q. And that rather suggests to me that you're keeping an eye on
3 what they're doing?

4 A. Now I, I read that and I—let me just say what I—for I too, I'll
5 give you my interpretation, right?

6 Q. Uh-huh.

7 A. Right. Supply personnel for organizing work permits, that is to
8 get the work started and having things organized to get things
9 moving, right?

10 Q. Uh-huh.

11 A. Certificates, monitoring of contractor's performance, that's
12 regard to scope, timeliness, getting the job done, ensuring that
13 the contractor is delivering on the scope that he is requested to
14 deliver on, right?

15 Q. Uh-huh.

16 A. The work standard, approving work done and carrying out the
17 quality assurance tests, the work standard and the approval of
18 the work done is related to the quality assurance testing of the
19 welds and the installation that the contractor did, so that once
20 the contractor is finished we don't have to do rework or we
21 don't end up with a leak on the pipeline, so it's kind of focused
22 on the, on the quality pieces of the job so that—

23 Q. Well how could you monitor the contractor's performance if
24 you're not watching them?

25 A. Well, and I think that goes back to what we discussed earlier,
26 right, on there were specific activities where the issue of video
27 footage was particularly listed under, right?

1 Q. I follow that. That's not everything, is it?

2 A. It's not everything.

3 Q. No. And the video footage is often provided in a place where it
4 would be impossible for your representative to be there in the
5 habitat—

6 A. Correct.

7 Q. —watching what they're doing that's why you need a video—

8 A. Yeah.

9 Q. —to see what they're doing, because they're under water, aren't
10 they?

11 A. That's correct.

12 Q. But, I mean, I have taken from this that there is at least some
13 monitoring of the contractor's performance and this comes at
14 the very earliest stage—

15 A. Yeah.

16 Q. —of this whole arrangement, doesn't it?

17 A. Yeah. No, I mean, I wouldn't, I wouldn't, er, argue with the
18 fact that some monitoring is required, Chairman, I mean, you
19 know, you wouldn't want to conduct work where you were
20 completely absent.

21 Q. Quite. Mr. Pegus was particular anxious, I think, to ensure that
22 it wasn't full-time and I don't think anyone suggested it should
23 be full-time?

24 A. No, it wasn't, it wasn't full-time.

25 Q. And you agreed with me, I think, earlier that 40 minutes was
26 probably too long in gaps?

27 A. Probably there's, there's a look at check-in times, that could be

1 improved.

2 Q. Yeah, all right. And then I just want to take you next please to
3 Tab 20?

4 A. Tab 20.

5 Q. Tab 20, yes. It's not particularly anything that's in there but it's
6 just that this is a system that was operating. At page 598—

7 A. Yes.

8 Q. —is what's described as Paria Fuel Trading Company Limited
9 miscellaneous repairs and refurbishment works at the berths,
10 Addendum I and then a number of queries are raised by
11 contractors, aren't they?

12 A. Yes.

13 Q. And then answers given by Paria?

14 A. Yes.

15 Q. Do you see that? That's—

16 A. Yes.

17 Q. And that becomes part of the deal.

18 A. A part of the process, yes.

19 Q. Yeah. So, as you say, the process?

20 A. Yes.

21 Q. So if there's a query it can be put here—

22 A. That is—

23 Q. —from the contractor?

24 A. That is correct.

25 Q. Can you tell me, is there one the other way around?

26 A. A query from Paria?

27 Q. Yes.

1 A. Yes.

2 Q. Right. Where's that?

3 A. If Paria had a query it should form part of—

4 Q. It should form part of this as well?

5 A. Yes.

6 Q. So they didn't have a query—

7 A. Yeah.

8 Q. —then you're assuming they wouldn't have asked anything
9 there?

10 A. It's possible, yes.

11 Q. Yeah. All right. And so that takes care of that. Can I, um, just
12 remind you—again, I don't want to go through it because we've
13 done so ad nauseam, but I just want to be clear about the
14 document that is—yes. Just a second, please? Page in our
15 bundle Volume, core bundle Volume III is the method
16 statement.

17 A. Right.

18 Q. All right, so I don't want to—

19 A. Right.

20 Q. Have it by all means. I'm certainly not going to deny it to you,
21 but that method statement is, in effect, the response, is it not, to
22 the, to the document we've just been looking at, so they, they
23 say yes, we'd like, we'd like to contract with you, here's our
24 method for how we're going to do so?

25 A. Yeah.

26 Q. Have I got that right?

27 A. Yeah.

1 Q. Right. So it sets out the work that they're going to do and the
2 process by which they're going to do it?

3 A. Yes.

4 Q. Because, when I look at it, it says in subheadings, to load
5 equipment and material on to the barge. So that's the first thing
6 they've got to do.

7 A. Yeah.

8 Q. This is how we're going to it. This is your [*Inaudible*] which is
9 going to take place?

10 A. Yeah.

11 Q. Then the next heading is, to prepare a line for works?

12 A. Yeah.

13 Q. Get rid of all the oil that's in there, all of this stuff, then the next
14 heading is the installing and preparing of the hyperbaric
15 chamber?

16 A. Yes.

17 Q. And so on.

18 A. Yes.

19 Q. And so on?

20 A. Yes.

21 Q. Yeah? Now, again, I don't want to belabour it.

22 A. Right.

23 Q. But it sets out that process?

24 A. Yes.

25 Q. And it seemingly has, on its face at any rate, an order in which
26 thing are going to be done?

27 A. Yes.

1 Q. What is clear from that and what we've identified in the
2 evidence hitherto—

3 A. Yes.

4 Q. —is that at paragraphs 56 and 57 of that document—

5 A. Yes.

6 Q. —it says, to manually remove the migration barrier from the
7 line—

8 A. Yes.

9 Q. —and then manually deflate the line plug and remove it from
10 the line?

11 A. Yes.

12 Q. All right? Now that, according to this—

13 A. Yeah.

14 Q. —looks as though it's supposed to take place before the
15 removal of the hyperbaric chamber—

16 A. Right.

17 Q. —which you've again pointed out to us—

18 A. Yeah.

19 Q. —irrespective of Delta P—

20 A. Yeah.

21 Q. —should not happen?

22 A. Correct.

23 Q. One, to protect the integrity of the line, and, two to protect the
24 people working—

25 A. Yes.

26 Q. —in the chamber, yes?

27 A. Yes, yes.

1 Q. So, when you, you the firm, not you necessarily but when the
2 company receive this—

3 A. Yes.

4 Q. —and you have this procedure for batting ideas back and
5 forth—

6 A. Yeah.

7 Q. —didn't someone pick up on this and say, look, this must not
8 happen—

9 A. Yeah.

10 Q. —before you've take taken the hyperbaric chamber away?

11 A. I, I, I would say, Chairman, that it probably don't happen on the
12 reading of the method statement, right, but the method
13 statement is also not cast in stone. Things—

14 Q. Well, of course not.

15 A. Right. Things change day-to-day.

16 Q. Yes.

17 A. Right? Things happen before, after, and in work on a, on a, on
18 a facility, on a production facility, there are a number of
19 barriers to preventing accidents. So you have your risk
20 assessment, you have the permit to work, you have the method
21 statement, right? So somewhere along if one barrier is missed,
22 for example it was missed in the method statement, it's
23 expected that somewhere along the line—

24 Q. I couldn't agree more—

25 A. —it, it—

26 Q. —if I may say so.

27 A. —it would get picked up.

1 Q. I couldn't agree more. My concern is—

2 A. Yes.

3 Q. —is that as you've seen, I wrestle with the papers that are
4 regarded as the central core papers in this case.

5 A. Yes.

6 Q. If you look at it online, there are tens of thousands of pages.

7 A. Yes, huge.

8 Q. Exactly. And I simply mean to understand, is there a document
9 somewhere that recognizes that that there is wrong, right, that
10 order of work—

11 A. Yes.

12 Q. —should never take place in that order of work—

13 A. No.

14 Q. —other than the work permit that we've been looking at—

15 A. Correct.

16 Q. —in which we have a what I regard as a somewhat ambiguous
17 statement to use the barrier, but there's nothing, is there, that
18 says—

19 A. Yes. There's nothing that addressed it at this level of the
20 method statement.

21 Q. There's no email, there's no, er, there's no document, there's
22 nothing that seemingly points to do not remove—

23 A. Yes.

24 Q. —those barriers from the line—

25 A. Yes.

26 Q. —until you've taken the hyperbaric chamber off.

27 A. Yes.

1 Q. There isn't, is there?

2 A. No, no, there isn't.

3 Q. I mean, somewhere somebody should have been saying that,
4 shouldn't they?

5 A. Yeah. No, and I, yeah, and I haven't found it either so I'm—so,
6 I—you know, it's—

7 Q. All right. Okay. Well that's all I wanted to ask you.

8 A. Okay.

9 Q. Again, so that I understand how it works, there is a procedure
10 for you, Paria, to have been able to add as an addendum—

11 A. Yes.

12 Q. —look, this is—this order is wrong. It might not be what you
13 intended—

14 A. That—

15 Q. —but let's be quite clear about it, you're not supposed to do it?

16 A. Correct. That, that's, that's the process for work—

17 Q. Yes.

18 A. —where that engagement should take place and things like
19 these should be identified.

20 Q. Are you disappointed that it didn't?

21 A. Yes.

22 Q. Yeah. I suppose that's putting to mild a point at this point, isn't
23 there? All right, thank you very much.

24 **Mr. Chairman:** Next please we have Ms. Maraj is going to
25 ask you questions on behalf of LMCS.

26 **Cross-Examination By Mrs. Persaud Maraj:**

27 Q. Good afternoon, Mr., um, Mohammed.

1 A. Good afternoon.

2 Q. Kamini Persaud Maraj for—

3 A. Ms. Maraj, yes.

4 Q. —for LMCS?

5 A. Right yes.

6 Q. So this morning in your answer to Senior you said that the 2020
7 contract—

8 A. Right.

9 Q. —that was performed by LMCS—

10 A. Right.

11 Q. —had no material difference in type of risk and work to what
12 was being done in this contract bundle.

13 A. Yeah. My understanding at this time is that there's no major
14 material difference between what was done now and I spoke to
15 a few things, one is that it was a lil bit shallower—

16 Q. Right.

17 A. —the pipe cut was a lil bit shallower and there are a few other
18 small things—

19 Q. But—

20 A. —according to my recollection.

21 Q. Right. Correct. And your evidence is there. But there was one
22 my material difference in the manner in which the work was
23 done. Would it be true that on that project, the 2020 project,
24 you had an engineer assigned with the planner?

25 A. Did I have an engineer assigned—

26 Q. Yes.

27 A. —to the planner on the 20—

1 Q. Twenty.

2 A. —project?

3 Q. Yes. So you meaning Paria, huh. So I have before the
4 statement of—it's not the statement it's an interview—

5 A. All right.

6 Q. —which was done by the Commission with Mr. Terrence
7 Rampersadsingh.

8 A. Okay.

9 Q. Yes?

10 **Mrs. Persaud Maraj:** Might he be shown that? It's a separate
11 document. Page 5, yes.

12 **Mr. Chairman:** It's in the supplemental bundle, isn't it?

13 **Mrs. Persaud Maraj:** It's a separate document online.

14 **Mr. Chairman:** Transcript, transcript.

15 **Mrs. Persaud Maraj:** Transcript, yes.

16 **Mr. Chairman:** Right. I kept that separately, I think.

17 **Mrs. Persaud Maraj:** Yes.

18 **Mr. Chairman:** Yes, I don't have that with me now. Well I'll
19 look at the screen. Is it a large extract or it's something you
20 want to point out to him?

21 **Continued Cross-Examination By Mrs. Persaud Maraj:**

22 Q. Oh, I, I, I just want to confirm that Mr. Terrence
23 Rampersadsingh, who was also the planner—

24 A. Yeah.

25 Q. —in this project has confirmed that there was an engineer who
26 worked along with him?

27 A. That, that is a possibility, Ms. Maraj. I will have to confirm.

1 Q. Right.

2 **Mr. Chairman:** Now, that's what he says in his statement—

3 **Mrs. Persaud Maraj:** That's what he says in his—

4 **Mr. Chairman:**—to the Commission of Enquiry.

5 **Continued Cross-Examination By Mrs. Persaud Maraj:**

6 Q. That's what he said in his interview.

7 A. Ms. Persaud, if Mr. Rampersadsingh said that, he's probably,
8 um, correct.

9 Q. And what I can show you is he repeats the statement further in
10 the transcript.

11 A. If Mr. Rampersadsingh said that I wouldn't go against what he
12 said in the transcript.

13 **Mr. Chairman:** Right. We can proceed from there.

14 **Continued Cross-Examination By Mrs. Persaud Maraj:**

15 Q. And part of the responsibility of that engineer would have been
16 to counterbalance and/or to deal with all of LMCS' method
17 statements and the methodology that was employed in relation
18 to the work that was performed. That's correct?

19 A. The role of the, the role of the project engineer—

20 Q. Engineer.

21 A. Once there was a project engineer involved, I would, er—yes,
22 you're probably right that they would probably oversee and
23 provide some evidence to Mr. Rampersadsingh.

24 Q. Right. And to Mr. Rampersadsingh in relation to what LMCS
25 is performing?

26 A. Very likely.

27 Q. Right. And so that would take him into the arena of looking at

1 all of the method statements that would have been provided,
2 whatever they may have been, describing and dealing with all
3 of the actual works done, correct?

4 A. As I say, you know, if, if there was a project engineer he would
5 perform the role of a project engineer which would include
6 some of the things that you've outlined.

7 Q. Right. And now you would agree that that was the major and
8 most significant difference in relation to the personnel between
9 the projects in 2020 and 2021—22?

10 A. What—if Mr. Rampersadsingh points to the project engineer,
11 the supervision of this project would have fallen with Mr.
12 Rampersadsingh who's the planner and then up to the technical,
13 technical manager, the technical manager who would have
14 provided the project support that the project that took place in
15 2021 would have required.

16 Q. So you're essentially saying that it would have been a different
17 system altogether, a system of monitoring, a system of how the
18 works were being performed?

19 A. I think what I'm saying is that the role of the project engineer,
20 if the role of the project engineer existed in 2020, that there
21 would have been some incremental supervision above Mr.
22 Rampersadsingh or some incremental testing of things beyond
23 Mr. Rampersadsingh.

24 Q. Testing of what? Testing of the works of—

25 A. Testing of the, testing of the, testing of the—I cannot say
26 specifically what whether project engineer would test the scope,
27 would test the schedule, would test the cost. You know, I'm

1 not clear whether the project engineer would actually go into
2 the detailed method statements, et cetera.

3 Q. So let me ask you this very clearly.

4 A. All right.

5 Q. Why was there not a project engineer in this 2021/22 contract?

6 A. Well we had—

7 Q. Because clearly it's the same person performing the
8 functions—

9 A. Well—

10 Q. the same contractor.

11 A. Yeah. I can't specifically but what I could proffer is that we
12 have Terrence who would have had the experience of doing the
13 job. Back in 2020, he would have gained that experience. We
14 had a contractor who demonstrated that they could do this job
15 safely and efficiently and, er, you know, based on the track
16 record of both Mr. Rampersadsingh and the contractor, a
17 decision was—probably could have been made to deploy the
18 project engineer to where we believed that we had more risk. I
19 can't answer specifically because I don't know all the details
20 but it's how I would, um, you know, it's, it's, it's what I would
21 offer that could have happened.

22 Q. So you were part and parcel of the tenders committee, that's
23 correct?

24 A. Yes.

25 Q. All right. And there is the note to management tenders
26 committee that you have signed?

27 A. Yes.

1 Q. That's at page nine two eight of the core bundle.

2 **Mr. Chairman:** Nine two eight?

3 **Mrs. Persaud Maraj:** Nine two eight.

4 **Mr. Mohammed:** Just now, huh. I haven't found it yet.

5 **Mr. Chairman:** Tab 22.

6 **Mr. Mohammed:** Tab 22. Tab 21. Tab 22, yes.

7 **Continued Cross-Examination By Mrs. Persaud Maraj:**

8 Q. Right. So I would like to take you quickly to just a few points.

9 A. All right.

10 Q. Right? At your summary at page nine two eight you say this.

11 "LMCS submitted the only technically compliant valid
12 proposal with a suitable method statement and schedule
13 which satisfies all the requirements of the scope of
14 work."

15 A. Uh-huh.

16 Q. "Also, LMCS has demonstrated in their prior
17 performance that they have the required—

18 A. Correct.

19 Q. —management and resources competencies to satisfy the
20 contract requirements."

21 A. Right.

22 Q. You see that?

23 A. Yes.

24 Q. Right. You would accept therefore that nowhere there in your
25 summary you've said or placed as an expression in black and
26 white that they were a specialized expert in the area so that they
27 were considered favourably. You would accept that? That is

1 not one of the considerations that you've placed there? You're
2 now saying that.

3 A. But I think, I think the words infer that they would have been
4 an expert and they were able to execute and have knowledge
5 and the ability to execute such a contract and they had
6 demonstrated performance track record.

7 Q. Required. Now these are your words. I'm going back to them.
8 Your words—

9 A. Uh-huh.

10 Q. —from the report, and if you go to page nine three two of that
11 document you will see your signature approved by Mushtaq
12 Mohammed?

13 A. Right.

14 Q. Yeah? And your words in this report says, "Prior performance
15 they have the required management and resource
16 competencies—

17 A. Yeah.

18 Q. —to satisfy the contract requirement."

19 A. So it's, I mean, I don't know—is that a difference, though, by
20 assessing that they're specialized? I mean this is what—

21 Q. You are saying to this Commission and you have put in your
22 evidence and you have repeated it on numerous occasions today
23 that they were specialized expertise.

24 A. I see them as specialized expertise. They've done the job, they
25 have a track record of getting the job done.

26 Q. And then so you will accept that—Sir, you will accept that
27 those words that you have put to the Commission for its

1 consideration does not form part and parcel of the document
2 that you've produced as to the basis on which they are hired or
3 has been awarded the contract?

4 A. Well, well, it isn't written here. I accept it isn't written here.

5 Q. Okay.

6 **Examination By Mr. Chairman:**

7 Q. I mean, the fact is you didn't have an option at that stage, did
8 you? You wanted the work done relatively urgently, as I think
9 the evidence suggests that you did, um, they were the only
10 people who were compliant?

11 A. But it didn't mean that I would hire an incompetent contractor
12 either. Right? So—

13 Q. No, I appreciate that—

14 A. So, so—

15 Q. —but you don't have anything to measure it against?

16 A. As I said, what, what we used as the basic measure was the
17 track record and the ability to be able to perform the job safely.

18 Q. Yes. But what you ended up with was the only compliant
19 applicant?

20 A. And sometimes that happens in the procurement process.

21 Q. So what would you have done if they weren't—they didn't
22 satisfy?

23 A. We wouldn't have done the job. We'd have—we put—we'll
24 probably have to go out and re-tender.

25 Q. Yeah. Thank you.

26 A. We wouldn't have done the job.

27 **Continued Cross-Examination By Mrs. Persaud Maraj:**

1 Q. I'd like to take you to Volume I of the core bundle.

2 A. Volume I of the core bundle.

3 Q. Yes. At page 29. And this is in respect of the permit to work
4 system that we have looked at.

5 A. Yes.

6 Q. Now this morning, and you can correct me but you've—when
7 Senior, Mr. Maharaj, questioned you in relation to 5.2 at page
8 29, you gave the impression that a competent person is equated
9 to or means the contractor. Do you recall that or is that
10 incorrect?

11 A. The, the competent person—

12 Q. You called LMCS the competent contractor if I recall the, the—

13 A. Yeah, yeah they are the competent contrac—in this case, yes,
14 they were the competent contractor, yes.

15 Q. Right. So what I'd like to do is to just take you through what
16 competent person means as per your document.

17 A. All right.

18 Q. Paria's document, right? It says:

19 "A competent person in Paria's permit to work system is
20 an individual who has the required training, knowledge,
21 experience and qualifications to identify the hazards and
22 to developed effective precautions for high hazard
23 activities such as hot work, confined space entry and
24 electrical works."

25 A. Yes.

26 Q. Now my question to you is—

27 A. Uh-huh.

1 Q. —is a competent person being described only in relation to—
2 well, it may not be an exhaustive list but a list of these kinds of
3 work, hot work, confined space entry and electrical works?

4 A. What, what these works would identify, some of the actual high
5 risk work that we do on the side site, right, so, on a site where
6 we store 2 million barrels of fuel, you know hot work is a very
7 critical thing, all right, so we want hot work to be effectively
8 managed. Confined spaces is a risk throughout the industry.
9 Electrical works is also high risk.

10 Maybe, maybe what, what could be added here, if I was
11 to take a second look at this, would be working from heights.
12 Those are the critical activities that we do where persons could
13 be seriously hurt or, or—

14 Q. Right.

15 A. Yes?

16 Q. And in other words a competent person is somebody who is
17 able to deal with these kinds of, of high risks?

18 A. Correct.

19 Q. All right. I—from the—so let's call this the philosophy upon
20 which your permit to work, the actual permit to work is based.
21 Would that be correct?

22 A. If the permit to work is designed to ensure that work is
23 conducted safely, so, all right let's take that from there
24 because—

25 Q. Right. I would like to take you to the actual permit, the hot
26 works certificate.

27 **Mr. Chairman:** Before you do that.

1 **Mrs. Persaud Maraj:** Yes.

2 **Examination By Mr. Chairman:**

3 Q. Can I just be clear about this?

4 A. Yes.

5 Q. Are you saying that the competent person who I understand to
6 be the area authority—

7 A. Uh-huh.

8 Q. —is LMCS?

9 A. The competent person is the person who is executing the job,
10 right? The competent person in Paria's permit to work system
11 is an individual who was the required training, knowledge—

12 Q. No, no. No, no. I need to be quite clear about this.

13 A. Uh-huh.

14 Q. Is the competent person LMCS or somebody from Paria?

15 A. The LM—the competent person is the person or the contracting
16 company or the entity that Paria determines to be competent to
17 execute that job. So, for example, if Paria was using one of its
18 technicians to execute a pump repair, all right, that person
19 would have to be the competent person, they would have to
20 know how to repair the pump. If Paria was using a contractor
21 to do electrical works—

22 Q. Yeah.

23 A. —right, then that—the competence would reside in the person
24 who is going to—the person or the entity who's going to
25 execute the work.

26 Q. All right. So, as far as you're concerned, the competent person
27 and the area authority for this particular project was LMCS?

1 A. The competent person—so we have the competent person, we
2 have the site authority and we have the, the site area authority
3 right?

4 Q. Well the area authority is, as I understand it, the competent
5 person?

6 A. All right. The area authority is responsible for ensuring that the
7 conditions required for safe conduct of the job are maintained
8 or that the permitted activities are promptly stopped if there are
9 any changes or violations of any of the prescribed conditions,
10 right? That is the area authority.

11 Q. No, no I understand. I can read it too. I, I, I—

12 A. Then I'm missing something there. Sorry.

13 Q. —forgive me if I'm sounding a little impatient. It's a long day.
14 But I just want to understand from you, please—

15 A. Uh-huh.

16 Q. —who you regarded as the competent person?

17 A. LMCS in this case.

18 Q. LMCS, right. And you think that's right, do you?

19 A. I believe that's right.

20 Q. That it should be LMCS?

21 A. It should be LMCS.

22 Q. All right. Well—

23 A. I already admitted that Paria didn't have the competence to
24 execute the job.

25 Q. No, no I follow that.

26 A. Yeah.

27 Q. But I'm going to leave it to Ms.—

1 **Examination By Commissioner Wilson:**

2 Q. Mr. Mohammed, just one second. I'd just to invite you to go
3 back to 5.2:

4 "Competent persons are appointed by the terminal
5 operations manager or technical and maintenance
6 manager after they've undergone the required training
7 and assessments."

8 With that narrative, you still view LMCS as the competent
9 people, persons or authority?

10 A. Just now, huh.

11 **Examination By Mr. Chairman:**

12 Q. Second paragraph of 5.2. Competent persons are appointed by.
13 The second sentence of paragraph two.

14 "Competent persons are appointed by terminal operations
15 manager or technical and maintenance manager after
16 they've undergone the required training and
17 assessments."

18 So are you saying that it is LMCS—

19 A. Just now, eh, just—so I'll be clear here. Just now. I too
20 starting to get a little bit tired. [*Perusing document*] And I
21 think this, this was specifically designed for competent persons
22 executing work within the Paria organization, so Paria or its
23 affiliate or Paria with the Kenson people who are performing,
24 so there are two types of work that we do, right? There's
25 routine maintenance work where we have a maintenance crew
26 or maintenance team that would do the routine work, repair the
27 pump, grease the valves, right?

1 Q. Cut the grass.

2 A. Cut the grass—well, no, we actually contract that out. Right?

3 But, let—there, there are people who—

4 Q. All I want to know is who you thought the—

5 A. LMCS.

6 Q. As far as you're concerned, LMCS, notwithstanding you've
7 been point—pointed out to you by—

8 A. Yes, LMCS would be the competent—

9 Q. You still regarded LMCS as the competent person?

10 A. I can't have it both ways. I can't say Paria has the competent
11 person and then hire a contractor.

12 Q. They actually weren't, because you've told us they weren't.

13 A. Yeah.

14 Q. But, um, they should have been.

15 A. Should have had some level of understand—well, yeah.

16 Q. I mean, this is written in such a way as to suggest that the
17 competent person—

18 A. Yes.

19 Q. —as Mr. Wilson's pointed out to you, is, is—should be from,
20 from Paria or Kenson or whoever else you want to appoint, but
21 it's not the contractor, is it?

22 A. I, I see it a little differently but I can't, I can't, er, walk away
23 from Mr. Wilson's point.

24 Q. Again, at best ambiguous?

25 A. Not in my, not in my mind.

26 Q. Not in your mind?

27 A. No.

1 Q. Well doing your best to apply your mind to it now, do you not
2 think that that is at best ambiguous? Reading that, isn't it
3 somebody from your organization?

4 A. Yeah, reading the letter of it, I would say yes.

5 **Continued Cross-Examination By Mrs. Persaud Maraj:**

6 Q. Well if I may—

7 A. Uh-huh.

8 Q. —right, I'll invite you to look at the bullet point number two
9 which comes just after what we just read, yeah? Right at 5.2.
10 We're looking at bullet point number two so it says:

11 "The competent person shall identify any deficiencies in
12 the equipment and method statement for the job and the
13 potential adverse consequences."

14 So essentially what you're saying is that LMCS is unto itself is
15 own monitoring agent?

16 A. Yes, I—I think we made that—

17 Q. Its own independent person unto itself if that makes sense?

18 A. I, I, yeah, think we covered that earlier and, you know, I think
19 there's a, there's a recognition of a second check or a third
20 check in the system that, would, er—

21 Q. So then this is somebody other than? Meaning—

22 A. Well I won't say somebody other than.

23 Q. Meaning—

24 A. There's, there's—

25 Q. Meaning a project manager—

26 A. There is—

27 Q. —a project engineer?

1 A. There is, there is some assurance that I would say that could be
2 done.

3 Q. Could it also mean a project engineer?

4 A. It could be a project engineer. Depends on what the work is,
5 right? Depends on what, what is the, the requirements of the
6 work at the time.

7 Q. Right.

8 **Mr. Chairman:** Sorry, I think Mr. Wilson has another
9 question but can I, can I just—

10 **Examination By Mr. Chairman:**

11 Q. Looking at this document as a whole, which is the permit to
12 work procedure—

13 A. Yeah.

14 Q. —that you said that is your procedure—

15 A. Yes.

16 Q. —this is not LMCS or anybody else this is your procedure.

17 A. Yes.

18 Q. This is what you expect—

19 A. Yes.

20 Q. —of those who are coming on site in order for them to be able
21 to be permitted to do the work—

22 A. Yes.

23 Q. —you set out purpose, scope, authority and then you set out
24 what the roles and responsibilities are, there's an applicant,
25 there is a competent person, there is a site authority, there is an
26 area authority—

27 A. Yes.

1 Q. —there is a senior area authority and there's a contractor
2 official.

3 A. Yes.

4 Q. The only person, can I suggest, that features in that that could
5 be the contractor is—

6 A. Is LMCS.

7 Q. —is the contractor official?

8 A. Yeah.

9 Q. All of the other roles are roles either you undertake or you
10 appoint someone else to undertake on your behalf. Do you
11 agree?

12 A. Yeah.

13 Q. I know you're not given to easily agreeing to anything that's
14 suggested to you, but please take a moment—

15 A. No, no, no.

16 Q. —have a look at it and being sure—

17 A. Yes.

18 Q. —because this is quite important as far as we're concerned.

19 A. No, I listening. I'm listening, yes.

20 Q. I for my part, as Mr. Maharaj ventured into this earlier in
21 dealing with the question of who were the contractor, the
22 competent person is, I asked you after Mr. Maharaj asked you
23 about the applicant again about that, and all of these different
24 authorities, these different responsibilities are said to be, are
25 they not, those persons who are part and parcel of Paria or its
26 appointees, other than the contractor official who's specifically
27 identified and given particular roles. That's right, isn't it?

1 A. Yeah, that's right.

2 Q. So in pursuing the point being made just a moment ago by Ms.
3 Persaud Maraj—

4 A. Maraj, yes.

5 Q. —she identifies, not unreasonably, the bullet points that are set
6 out underneath what the competent person is supposed to do.

7 A. Fair enough.

8 Q. Well, the one she's identified is that that person is supposed to
9 identify any deficiencies in equipment or method statement for
10 the job?

11 A. Yes.

12 Q. In other words, you can't have the fox looking after the
13 henhouse, could you?

14 A. Fair enough.

15 Q. You know? You need somebody who's going to be completely
16 independent.

17 A. Yeah.

18 Q. Who's going to look at the method statement for the job and the
19 potential adverse consequences, identify any deficiencies—

20 A. Yeah.

21 Q. —and so on, and, and that person's got to come from your firm,
22 hasn't it?

23 A. Yeah.

24 Q. Isn't it?

25 A. Okay. Yeah.

26 Q. There wasn't anyone, was there, doing that?

27 A. Well, as I said, the—as I said earlier the, the—there wasn't

1 anyone from a particular appointment, but the process of the
2 exchanges between the contractor and the company with
3 regards to developing the risk assessment and the method—
4 well not the method statement but the risk assessment
5 identifying the risk with the job is where we expected those
6 gaps to be filled.

7 Q. You see, what Ms. Persaud Maraj was asking you is whether in
8 the previous job there was an engineer—

9 A. And, and, and—

10 Q. —who might have had at least oversight of some of those
11 responsibilities.

12 A. And I, I—no I didn't argue with that position. If, if there was
13 there was.

14 Q. All right. Well I'm not going to belabour it either.

15 A. Yeah, okay.

16 Q. I'll leave it for Ms. Persaud Maraj.

17 **Mr. Chairman:** I think Mr. Wilson might have a question for
18 you.

19 **Examination By Commissioner Wilson:**

20 Q. Yeah, Mr. Mohammed, one other thing, under your line of
21 inquiry by Mr. Pegus, Pegasus—

22 A. Uh-huh.

23 **Mr. Chairman:** Pegus.

24 **Examination By Commissioner Wilson:**

25 Q. Pegus, sorry, apologies. I'm learning from you. *[Laughter]*
26 Um, if I understood it correctly, he was trying to make a
27 delineation from the contract—

1 A. Yeah.

2 Q. —from the permit to work procedure.

3 A. Yes.

4 Q. What I want to invite you to consider, because what I heard was
5 although looking at 5.2 I don't think—well, a delineation could
6 be made but not as I heard it, in terms of the contract is the
7 contract but the permit to work is really how you control the
8 work, so it is using words like shall and when you use words
9 like shall, it can stand alone from the contract so that people are
10 to adhere to it and it's not merely a guideline. Is that a fair
11 statement?

12 A. The permit to work is not a contractual document, yes, but the
13 objective of that permit to work is that people are guided and
14 shall follow the permit to work as it is outlined.

15 Q. Yes, and shall statements—

16 A. Yes.

17 Q. —are different from should.

18 A. Yes.

19 Q. But shall holds a lot of weight in terms of what personnel are
20 supposed to do or executing the work or controlled work?

21 A. Yeah. And, and—yeah.

22 **Commissioner Wilson:** Thank you.

23 **Continued Cross-Examination By Mrs. Persaud Maraj:**

24 Q. Mr. Piper, I'd like to ask you to turn to page—Mr. Mohammed,
25 my apologies. Might you turn to page 1452 of your witness
26 statement—

27 A. Fourteen.

1 Q. —at paragraphs 53 and 54.

2 A. Of my witness statement?

3 Q. Of your witness statement which you dealt with earlier today,
4 1452?

5 A. Which paragraph?

6 Q. Paragraphs 53 and 54.

7 A. Fifty-three and 54?

8 Q. Yes. This is where you spoke to the expectation of the
9 TTCG—

10 A. Yeah.

11 Q. —in relation to a development and implementation of a plan.

12 A. Yes.

13 Q. All right. Could you give us a time frame as to that
14 expectation?

15 A. You for, for what, 53, 54?

16 Q. For that statement, yes, for the statement that you've made
17 there.

18 A. I think the timeline that I mentioned before as, you know, that,
19 that would have had to happen within the first six hours of the
20 incident.

21 Q. No, not in relation to when it had to have happened, in relation
22 to your expectation that the TTCG would, in collaboration with
23 Paria, develop and implement a plan for rescue?

24 A. You mean reasonably taking—

25 **Mr. Chairman:** I think it would be helpful if you looked at
26 paragraph 67.

27 **Continued Cross-Examination By Mrs. Persaud Maraj:**

1 A. I also would say was supposed to be by midnight.

2 Q. By that night?

3 A. By midnight, by midnight.

4 Q. By midnight. So that would have been outside of the time
5 frame that you just said, the six hours?

6 A. Six hours from the time the incident occurred, it's—probably
7 be a bit outside that, yes. I said 6 to 12 hours if I remember
8 correctly.

9 Q. Yes, I did hear that.

10 A. Yes.

11 Q. Now, in relation to the request for the cameras—

12 A. Uh-huh.

13 Q. —I know the Chair has asked you to produce the timing of the
14 experts but in relation to the timing of the request for the
15 cameras—

16 A. Uh-huh.

17 Q. —did you at that point in time that you expected the TTCG to
18 assist you with the formulation of a planned rescue, did you at
19 that point in time contemplated the condition of the pipeline to
20 the extent that you have said here today whereas you needed
21 that camera footage?

22 A. Yeah I—it was, it was always part of the discussion. I think we
23 had the first push rod camera on site by about half past 7.00,
24 right? It was always the intention to be able to gather as much
25 information as we could have about the pipeline to inform an
26 effective rescue plan.

27 Q. And the incident happening at 2.00—2.00—

1 A. Quarter to 3.00.

2 Q. Quarter to—no, it's 2.00—

3 A. Fourteen forty-five is what I believe.

4 Q. Okay. The incident happening around that time—

5 A. Yeah.

6 Q. —er, when was the first time the personnel with camera, the
7 equipment on camera contacted? Could you tell?

8 A. Almost, almost, almost immediately. Just a—maybe within the
9 first hour, hour and a half of the, of the incident I believe that
10 we contacted PIPS I believe was the company to supply, um,
11 the push rod camera.

12 Q. And—

13 **Examination By Mr. Chairman:**

14 Q. Before or post Boodram? Sorry it was my show of hands.
15 Before Mr. Boodram emerged from the pipe or after Mr.
16 Boodram emerged from the pipe? Just so you have a timeline
17 in your mind—

18 A. Yeah, yeah.

19 Q. —2.45 approximately—

20 A. Two forty-five—

21 Q. —when the incident first happened.

22 A. —3.45, 4.45.

23 Q. Mr. Boodram didn't come out from the pipe until about 5.30.

24 A. Yeah.

25 Q. Your log—

26 A. Yeah.

27 Q. —is available.

1 A. Right.

2 Q. I'm not sure it helps particularly but—

3 A. Yes, yes, the log had the time that the camera arrived which
4 was 1930 which was 7.30, right?

5 Q. Yeah, um—

6 A. Seven thirty, 6.30, 5.30, I'll probably say maybe two hours
7 before the camera would have arrived that we would have made
8 that request reasonably thinking. Nineteen thirty is when the
9 camera arrived, right?

10 Q. Well at 1930—your log shows it's at page one five seven three,
11 which is the supplemental core bundle, ICT bundle Volume II.
12 One five seven three. And you can see there at 1937—

13 A. Right.

14 Q. —ROV Subsea Sevens boat with two ROVs was leaving
15 Chaguaramas, I've probably said that completely wrong, but
16 anyway Chaguaramas and can arrive on site in two hours. Is
17 that what you're referring to?

18 A. Just now, eh, hold on. Hold on. [*Pause*] Line crawlers
19 cameras on site and [*Inaudible*] 1937—

20 Q. Sorry, you've got to speak into the microphone.

21 A. I'm sorry. I'm sorry.

22 Q. Yeah, that's all right.

23 A. Nineteen thirty-seven, right?

24 Q. Nineteen thirty-seven, yeah.

25 A. Right. Line crawlers cameras already on site and deployed.

26 Q. Yeah?

27 A. All right? So I have the time that it was deployed so I am

1 making a judgment or giving a judgment that I feel that that
2 would have been ordered about two hours before it was actually
3 deployed. So that would be half past 6.00, half past 5.00 was
4 probably when that call was made to have the cameras on site.

5 Q. All right.

6 A. To have it mobilized and deployed would take about two hours.

7 Q. After Mr. Boodram came out of the pipe?

8 A. Mr. Boodram came out of the pipe at 1736, so somewhere just
9 around that time—

10 Q. Five, 5.30ish?

11 A. Yeah, some, something around—somewhere around that time.

12 Q. So it's after Mr. Boodram came out of the pipe that you made a
13 request for cameras?

14 A. If I—probably it will line up with something like that, yes.
15 Based on—and this is just, as I say, my back calculation, eh? It
16 would be—I could get the actual data.

17 Q. Yeah, well I've asked you to do a little exercise.

18 A. Yeah, yeah, so I'll do that exercise, right?

19 Q. I mean, you're going through it and I'm grateful for it.

20 A. So this is just my assessment. I could be wrong.

21 **Mr. Chairman:** There you go, Ms. Persaud Maraj.

22 **Mrs. Persaud Maraj:** Moving on.

23 **Continued Cross-Examination By Mrs. Persaud Maraj:**

24 Q. I'd like to ask you about the camera that was sent in at around
25 midnight—

26 A. All right.

27 Q. —and thereafter. You recall from the top of your head how far

1 into the horizontal it had—

2 A. From the top of my head I, I think it's—

3 Q. It's over a hundred feet?

4 A. I think it's probably, yeah, maybe over a hundred feet, yeah.

5 Q. All right. I'd like to take you to the transcript of Mr. Collin
6 Piper.

7 A. Okay.

8 Q. Yes? Because he gave an explanation before the Commission
9 at page 99 of the transcript of Mr. Piper, where he speaks about
10 the crawler. Right. So, he says here in relation to cross-
11 examination by Senior, he said:

12 "The crawler was put down?

13 Yes, Sir 220 feet into the pipe.

14 With tanks and plugs from berth 6 side yellow, round
15 white. You see that?

16 Yes, yes, yes, Sir."

17 And he goes on to where he was explaining that. Right.

18 "So what actually happened is this. As they were
19 feeding—and they were feeding it apparently they had
20 some rotation on and they were feeding it, they actually
21 did not go 220 feet. The hose, the line, the connection
22 was actually turning on itself. So the crawler didn't
23 actually go in 220 feet. That is my understanding."

24 A. If it's in Collin's statement Collin would be the best, the best
25 person to provide that information.

26 Q. All right. But my question to you is—

27 A. Uh-huh.

1 Q. —was there a calibration certificate from—in relation or
2 whatever may be the certificate in relation to the equipment that
3 was used, the crawler that was used, that Paria, um, received?

4 A. I'm sorry I don't have that level of detail. I can't, I can't
5 answer that question.

6 Q. So you won't be able to say what the—

7 A. No, no, no, no. It's something we could check but I can't
8 answer that off my memory or my recollection now.

9 Q. You would appreciate that the machinery, the equipment that
10 you're using must be able to give you proper information?

11 A. And I, I agree with—I wouldn't argue with that.

12 Q. Right, okay. I would like to take you to Mr. Collin's, um—
13 right on Mr. Collin's transcript at page 100. This is where he
14 was referred to by Senior once again to page 1544 of the ICT
15 record and we can go to the record itself. So there is a little
16 mark there if you can see it on screen?

17 A. Uh-huh.

18 Q. And it speaks to business continuity.

19 A. Right.

20 Q. You see that?

21 A. Yeah.

22 Q. Two twenty-two p.m.—2.30 p.m., sorry. And it says recovery
23 not rescued. Under, directly under. Do you see that?

24 A. 2.30 p.m. That's Collin's, that's Collin's, that's not—that's
25 Collin's statement, Collin's—

26 Q. No, no so this is the ICT record—

27 A. Uh-huh.

1 Q. —that was produced by Paria.

2 A. Uh-huh.

3 Q. And these are notes I wouldn't be able to tell, you should say or
4 you may be able to say who is the author of these notes.
5 They're supposed to be contemporaneous notes. Would that be
6 correct?

7 A. That's 2.30 p.m. on which day though?

8 Q. Again, I wouldn't be able to assist you. You need to assist us.

9 A. Look, I wouldn't.

10 **Mr. Chairman:** Right, that's not Friday so it's either Saturday
11 or Sunday.

12 **Mr. Mohammed:** Si it has to be Saturday—yeah.

13 **Mrs. Persaud Maraj:** Yeah.

14 **Continued Cross-Examination By Mrs. Persaud Maraj:**

15 Q. But in relation questioning in relation to this aspect—

16 A. A huh.

17 Q. —what Mr. Piper's responses were to Senior was that this is not
18 in respect of berth 6. This was continuity of work elsewhere.

19 A. I, like I lost. Forgive me. I, I—

20 Q. The word business continuity, yeah? We're looking at that
21 notation and trying to make sense and have an understanding of
22 it.

23 A. Business continuity.

24 Q. Right.

25 A. I mean, I probably would offer an explanation but I don't want
26 to go off what Collin was—

27 Q. Well that's fair.

1 A. —intending that to mean.

2 Q. You can give us an explanation to that if you may if you have
3 that knowledge to offer?

4 **Mr. Chairman:** If you can.

5 **Mr. Mohammed:** If I—

6 **Mr. Chairman:** If you can.

7 **Mr. Mohammed:** I would give you what my understanding is
8 rather than my explanation, right? My understanding is that
9 we, we would have had—Paria is, Paria is in the business of
10 keeping the country fuelled, right? That's, that's what we do.
11 And my understanding of something like business continuity
12 would be if there were, if there were—and I can't see how this
13 is part of Collin's statement because the business continuity
14 side was assigned to our commercial manager to be able to
15 ensure that we keep product coming in and we're able to keep
16 the country fuelled during the period of the incident, so, I mean
17 that's the only explanation. I have nothing else to offer on this
18 particular statement.

19 **Mrs. Persaud Maraj:** All right, that's fair.

20 **Continued Cross-Examination By Mrs. Persaud Maraj:**

21 Q. On Saturday—

22 A. Yeah.

23 Q. —the 26th of February, 2022—

24 A. All right.

25 Q. —could you just remind us of the time that you came onto
26 Paria's compound?

27 A. Saturday?

1 Q. Saturday 26th?

2 A. Probably sometime early in the morning between 7.00 and 8.00.

3 On Saturday morning right?

4 Q. Yes?

5 A. Saturday morning, the 26th, yeah.

6 Q. The evidence of Kazim Ali Sr.—

7 A. Right.

8 Q. —is that he was in front of Paria—

9 A. Uh-huh.

10 Q. —to gain entrance—

11 A. Uh-huh.

12 Q. —on to the shipping for the purposes of physically being
13 present for a meeting in relation to rescue efforts.

14 A. Uh-huh.

15 Q. Yeah. Were you aware of that?

16 A. I'm not, I'm not aware of Mr. Kazim Ali's evidence statement.

17 Q. You may not be aware of his statement but were you aware of
18 the fact that he was at the premises from about 6.00 a.m.
19 awaiting entry?

20 A. I don't know exactly when Mr. Kazim Ali came on Saturday
21 morning. I don't know exactly when Mr. Kazim Ali came on
22 Saturday morning.

23 Q. You were aware that he was on the compound that day?

24 A. But I saw him, I saw him when—shortly after I got there or
25 when I got there, I know I passed Mr. Kazim Ali on Saturday
26 morning. From what time he was there, I don't know.

27 Q. All right. And you're aware that he requested a meeting with

1 you?

2 A. On Saturday morning?

3 Q. On Saturday?

4 A. No.

5 Q. You're aware that he had and in fact had a meeting with Ms.
6 Catherine Balkissoon?

7 A. As I said I'm not aware of Kazim's statement but I know no
8 request—

9 Q. No I'm not asking about you about the statement now. I'm just
10 asking you if you're aware of the fact that he had a meeting
11 with Ms. Catherine Balkissoon on Saturday.

12 A. Yeah, I think I could vaguely remember that Catherine
13 mentioned that they had a discussion on Saturday morning.

14 Q. All right. And were you aware that the purpose of that meeting
15 was in relation to rescue efforts for these four workers?

16 A. I don't know what was the context of the meeting.

17 Q. So the context and the contents of that meeting was never
18 conveyed to you? Is that what you're saying?

19 A. Let me ask this simple question, right?

20 Q. I'm sorry, Sir.

21 A. So, I keep on hearing about this plan and there is nothing that,
22 that I have or have seen or has been presented to the committee
23 or the COE about this plan. Where, where, where is, where
24 is—so, Mr. Kazim Ali went home on Friday night, he came
25 back on Saturday morning with a plan to say Catherine we
26 should do this, that, or here is it, we've thought it out and this—
27 where is that? Where is that?

1 Q. You're asking—

2 A. That's, that's, that's that's—

3 Q. You're asking me a question in relation to—

4 A. Yeah, I am trying—

5 Q. —the integrity of the plan that LMCS—

6 A. I am trying—I am trying to—

7 Q. —would have had?

8 **Mr. Chairman:** All right.

9 **Mr. Mohammed:** I'm trying to understand where—

10 **Examination By Mr. Chairman:**

11 Q. I understand what you're saying. You've seen no plan?

12 A. No.

13 Q. It's not been presented to you?

14 A. No.

15 Q. That's your position. That's what you've said—

16 A. That is my position.

17 Q. —to Mr. Maharaj earlier on.

18 **Continued Cross-Examination By Mrs. Persaud Maraj:**

19 Q. And, and, perhaps, but, would you not agree that it was part and
20 parcel of your responsibility to be able to question whatever
21 plans and mutters that you—however you put them and
22 however you think it to be from the contractor that was present
23 at site from the time of the incident?

24 A. I would have tested whatever plans that would have come to me
25 through the ITC through the ICT, through the incident
26 command team. They, they—the incident command team is the
27 team that is in control of evaluating, testing, you know, and,

1 and I would say almost to the point where the ICT would
2 approve plans and would test with me. I, I wouldn't be in a
3 position to be going above the ICT to test plans specifically
4 with anybody who bought a plan. So the information that
5 would have come to me would have come through the ICT.

6 Q. Well I'm not asking you about the testing of a plan. I'm asking
7 about the fact that whatever you call them, if you don't want to
8 say that they're plans that's fine you can say they're not plans
9 they're mutters or they're simple whatever you would like to
10 call them, whatever the category whatever is the terminology
11 you wish to have, right? Would you accept that part and parcel
12 of the responsibility of the IMT, right, would have been to
13 investigate those mutters and utterances and plans that the
14 personnel would have formulated on site, competent personnel?

15 A. Look, those—any, any, any, any plans or any discussion of
16 plans for rescue that came through the IMT would have, Collin
17 would have probably discussed those with myself and there
18 were—there was no plan that came to the ICT or to myself that
19 gave us the confidence—

20 **Mr. Chairman:** Right, well, we're not getting any further.

21 **Mr. Mohammed:** And I, and I think I covered that already.

22 **Mr. Chairman:** Okay, I'm going to ask you to stop because,
23 um, we've been through this. You've been asked if there was a
24 plan. You told us there wasn't any plan.

25 **Continued Cross-Examination By Mrs. Persaud Maraj:**

26 A. Yeah.

27 Q. You've told us that you did not contact anybody from, er, er,

1 that we—at on the site LMCS?

2 A. Yeah.

3 Q. You've told us that you didn't pursue any particular plan with
4 Mr. Beddoe or anyone else. You've made that clear. The
5 witness its quite clear about it. He says he was never presented
6 with any kind of plan.

7 **Mrs. Persaud Maraj:** Certainly.

8 **Mr. Chairman:** The most he got was some mutterings as he
9 put it.

10 **Mrs. Persaud Maraj:** As he puts it.

11 **Mr. Chairman:** That's, that's what you—and that's what
12 you're saying, isn't it?

13 **Mr. Mohammed:** Yeah.

14 **Mr. Chairman:** Yeah, all right. That's where he is, so, I don't
15 think asking him the same question again bearing in mind we're
16 about quarter to 7.00 in the evening.

17 **Mrs. Persaud Maraj:** I accept same. It seems that brings me
18 to the end of my questioning, please. I don't believe I have any
19 other thing.

20 **Mr. Chairman:** So you can now, um—it's very late I made
21 clear that I would let this witness be concluded today. I don't
22 know what you've got—

23 **Mr. Peterson SC:** We'll be able to do that, Sir. I have—

24 **Mr. Chairman:** Now, I have all of four questions, it may be
25 three.

26 **Mr. Chairman:** Please proceed.

27 **Mr. Peterson SC:** Thank you, Sir.

1 **Examination By Mr. Peterson SC:**

2 Q. Mr. Mohammed, good after—good night. The, um—
3 [Laughter] The evidence before this Commission is that, um,
4 LMCS personnel, that's the evidence, had been uncooperative
5 when—at berth 6 when Mrs. Balkissoon was seeking to
6 communicate with them. Did that come to your attention?

7 A. Yes.

8 Q. All right. And if so, when?

9 A. It came—so, it came to my attention early in the night
10 somewhere I would say between 6.30, 7.30.

11 Q. Yes. Uncooperative was the description in the evidence.

12 A. Yes.

13 Q. All right. Secondly, in your testimony early this morning, you
14 said this, or words to the effect, that it was Paria's responsibility
15 to clear the line, to clear the line sufficiently to create an area
16 for the working on the pipe. Based on the evidence in this
17 Enquiry, is that an error? Is that an area of your evidence you
18 maintain that it was Paria's responsibility to blow out, to blow
19 down the line or clear the line?

20 **Mr. Peterson SC:** Mr. Chairman, you could—to help the
21 witness if we could go to page 000659 of the core bundle? That
22 sets out the responsibilities

23 **Mr. Chairman:** What is the document we're looking at? I
24 don't recognize that.

25 **Mr. Peterson SC:** The method statement in the—

26 **Mr. Chairman:** Right.

27 **Mr. Peterson SC:**—core bundle page six five nine.

1 **Mr. Mohammed:** You could put it up on the screen?

2 **Mr. Peterson SC:** Or another option is Addendum I page five
3 nine eight?

4 **Mr. Chairman:** Six five nine is fine and that's the procedure
5 for the removal of the line content between berths 5 and 6.

6 **Mr. Peterson SC:** Yes.

7 **Mr. Chairman:** That's the paragraph you're referring to, isn't
8 it?

9 **Mr. Peterson SC:** Yes.

10 **Mr. Chairman:** Do you see that, Mr. Mohammed?

11 **Mr. Mohammed:** Yes. Yes. And this is the contract between
12 LMCS and Paria.

13 **Mr. Chairman:** Yes.

14 **Mr. Peterson SC:** Yes.

15 **Continued Examination By Mr. Peterson SC:**

16 Q. So, whose responsibility it was to clear the line—

17 A. Yes.

18 Q. —of the contents?

19 A. Well then, well then it would be—if it is written in the contract
20 then the contractor would have the responsibility.

21 **Mr. Chairman:** It's uncontroversial that it was your
22 responsibility.

23 **Mr. Mohammed:** It was on the contract.

24 **Mr. Peterson SC:** Yes. And another reference to the record,
25 Mr. Chairman, is Addendum I, page five nine eight in response
26 to the query, the question by LMCS as to who.

27 **Mr. Chairman:** In the Addendum we referred to earlier?

1 **Mr. Peterson SC:** Yes. So that's clear. And finally, I wish to
2 just refer to the supplemental bundle page 3158 to 3159.

3 **Mr. Chairman:** Supplemental core bundle? What's the
4 document?

5 **Mr. Peterson SC:** It's with respect to the NDA. [*Crosstalk*]
6 Supplemental witness statement bundle, Sir, page 3158.

7 **Mr. Chairman:** I'm going to look at it on the screen and make
8 a note. Yes. Now I see it, I recognize it.

9 **Continued Examination By Mr. Peterson SC:**

10 Q. You were being asked earlier by Mr. Shah, Hosein-Shah, with
11 respect to the—only calling on Mr. Fuentes to sign a NDA and
12 the spirit of that question came over as if Paria was seeking to
13 suppress some evidence by requesting Mr. Fuentes to sign an
14 NDA which is a non-disclosed or non-disclosable agreement.

15 A. Yes.

16 Q. Could you look at 3160? Could you—3160? And it's an email
17 from Ms. Joanne Sinanansingh from Paria to Mr. Yearwood,
18 Mr. Paul Yearwood—

19 A. Yeah.

20 Q. —and it says this:

21 “Dear Paul, following your confirmation that LMCS
22 Limited granted permission to Paria to disclose their
23 information, please see attached NDA prepared for Mr.
24 Krishna Fuentes.”

25 A. Right.

26 Q. Do you understand this and its clear language—

27 A. Yes.

1 Q. —to be that Paria was requesting Mr. Fuentes to sign a non-
2 disclosed agreement because they were handing over—

3 A. Information.

4 Q. —information from LMCS—

5 A. Yes.

6 Q. —that was entrusted to Paria?

7 A. Yes.

8 Q. Not that Paria was trying to suppress—

9 A. Yes.

10 Q. —anything? Do you understand that and you agree with that—
11 my interpretation of that email?

12 A. Yes.

13 Q. Yes. I know it has been a long day.

14 **Mr. Peterson SC:** Thank you, Mr. Chairman. That's it.

15 **Mr. Chairman:** Thank you for your brevity.

16 **Mr. Peterson SC:** Yes, Mr. Chairman.

17 **Mr. Chairman:** I think Mr. Wilson has two questions. And
18 you have three so we'll let Mr. Wilson go first and then, um, I
19 don't know, you might cover one—

20 **Mr. Peterson SC:** My four were, in fact four, eh.

21 **Examination By Commissioner Wilson:**

22 Q. Mr. Mohammed, I'd be asking you two questions. I'm going to
23 try to be brief. Throughout the course of the day I've heard you
24 reference industry practice and stuff, and, based on that I
25 recognize that you hold an absolute position on the cause and/or
26 the responsibility for this unfortunate incident citing several
27 industry practices or best practices and stuff. Given that, can

1 you alert me to the root cause analysis methodology in industry
2 that you employed to come to that conclusion and/or any team
3 that put in a report to you?

4 A. The, er, er—sorry, sorry, the—if you go back to the incident
5 report I think the method used is on the incident report that was
6 done on the incident. I can't, I can't recall it now but we would
7 either use five whys or tap root or one of those methodologies.

8 Q. Uh-huh.

9 A. I, I don't have exactly in my mind what was the specific tool
10 used—

11 Q. No problem.

12 A. —in that report.

13 Q. And why I brought that up was, of course, because of the
14 findings and the recommendations of the report, it's a lil
15 lacklustre if you will, using a quality type root cause analysis
16 because I found that you, you know, you have some very tight
17 positions of which you're holding so I was kind a interested in
18 that.

19 A. Yes.

20 Q. So, wouldn't spend time on that. The second thing we spoke
21 about the track record in the procurement process.

22 A. The track record of the contractor?

23 Q. The contractor, track record of the contractor. So I wanted to
24 find out the track record being considered in the procurement
25 process if—let me back it up, sorry. Are you aware of an
26 incident that happened in Paria as it related to the contractor
27 five months previous where there was someone injured?

1 A. Yes.

2 Q. And OSHA, um—

3 A. Yes.

4 Q. Right. How is the weighting on safety culture or HSEQ—

5 A. Right.

6 Q. —in the procurement process given that there was a prohibition
7 put by a body just five months prior?

8 A. This, this, if I recollect, this contract was awarded before that
9 incident.

10 Q. Okay.

11 A. Right? It was awarded before the incident. The impact was
12 [Inaudible]—

13 Q. Yes.

14 A. —and we have made several changes coming out of the
15 prohibition notice and the request by the OSH. I think that's
16 submitted as evidence.

17 Q. Okay, thank you for that. I'll take that. But how much
18 weighting is based on safety culture and HSEQ?

19 A. So we have modified our procurement process that—

20 Q. Before the modification, how much weighting was put on the
21 culture—

22 A. Before the, before the modifications? I would say it would
23 always have weighting and the weighting would be heavy and
24 as the procurement process one of the things that we used was
25 the STOW verification for contractor because if you have
26 serious incidents then you could debarred—

27 Q. Yes.

1 A. —from being a member of STOW, right.

2 Q. Yes.

3 A. So we used the STOW accreditation, if I want to call it that.

4 Q. Which is a minimum standard.

5 A. Which is minimum standard, right. Since that now we have
6 moved on and said, look, you need to provide us with three as a
7 history.

8 Q. Yes, so I'm not on the—where you moved on.

9 A. Right. So that was what was used at the time of the—

10 Q. Yeah.

11 A. —of the incident to ensure the component of those safety
12 culture, high risk work, we thought STOW was an independent
13 verification of the contractor's safety culture and their
14 performance.

15 Q. But since you have an awareness of STOW and that
16 membership could be rescinded—

17 A. Yeah.

18 Q. —although the contractor was awarded—

19 A. Yeah.

20 Q. —prior to the incident—

21 A. Yeah.

22 Q. —you couldn't go back as an organization and revisit—

23 A. Yeah.

24 Q. —since, since that?

25 A. We, we could have gone back and revisited and this would
26 always be a question in my mind, right?

27 Q. Uh-huh.

1 A. We choose to work with the contractor.

2 Q. Right, fair enough.

3 A. We choose to work with the contractor and, I mean, that
4 evidence is not coming out here. The contractor is not saying it
5 but I personally spent a huge amount of time—

6 Q. No problem.

7 A. —working with that contractor around their safety
8 performance.

9 Q. And I hope I'm phrasing this question correctly but in listening
10 to all the enquiries—

11 A. Yes.

12 Q. —I didn't really hear anything that came out powerfully around
13 the commercials, so I'd ask the question directly. Was LMCS
14 the lowest bidder?

15 A. No well we didn't open the—once LMCS—once there were no
16 other technically compliant bidders—

17 Q. Uh-huh.

18 A. —the only commercials we would have opened would have
19 been LMCS.

20 Q. What determined technically compliant especially if you didn't
21 have the competence to determine that?

22 A. Based, based—look, based—whether we had the competence,
23 based on what we had at lined as the thing that would measure
24 were technical competence and the way that was assessed by
25 the technical team, if no, if no other company was able to cross
26 the technical hurdle, then we wouldn't look at, at the prices of
27 the other contractors.

1 Q. Yes. So—

2 A. Whether was—whether LMCS was—what was important for
3 the job was the competence not so much the price.

4 Q. Uh-huh. So I hope I'm not beating a dead horse here but, um,
5 since that you're on the committee—

6 A. Yeah.

7 Q. —what were the technical components that were you all were
8 looking at that just said LMCS you are the guys?

9 A. Right. So—all right. So, I mean, we had a debate on this on
10 the committee. Right? The main thing was they had done the
11 job before, they have a track record, they know the
12 infrastructure. LMCS has been working with Paria/Petrotrin for
13 a very long time. All right? And we would have expected that
14 they would have experience, understand the infrastructure, how
15 the infrastructure work. Remember this is a line that has been
16 dormant for a very long time, all right, so one, one of the
17 advantage was that they knew the systems, they knew the
18 pipelines, they worked on the pipeline before, right?

19 Q. Okay. All right, I'll take it as—because you—

20 A. Yes.

21 Q. —they had them as one, um—

22 A. Yeah.

23 Q. —one technical bidder, but I just want to go one more question.

24 A. Yeah.

25 Q. I heard also heard you mention ICS, incident command system.

26 A. Yeah.

27 Q. And under the inquiry by Mr. Ramadhar I know he asked you

1 how you team performed and stuff.

2 A. Yeah.

3 Q. But I'm not even going to ask you the question because what
4 I'm—my opinion from my experience with the ICS system, I
5 haven't seen the components of an ICS as ICS advertise really
6 executed, and where I want to go with that is, under your roles
7 and responsibilities of HSEQ—

8 A. Right.

9 Q. —and more into the events of Saturday morning, Mr. Piper
10 your incident commander—

11 A. Yes.

12 Q. —well, I'm, I'm getting from your testimony today you worked
13 closely with—

14 A. Yes.

15 Q. —during the incident, he left the command centre at about 0300
16 in the morning?

17 A. Yes.

18 Q. Your onsite commander, Catherine Balkissoon who Mr. Piper
19 indicated that was your OP section chief, I don't know how that
20 works under the ICS, left at 0600 Saturday morning and I was
21 unable to get from Mr. Piper powerfully—

22 A. Uh-huh.

23 Q. —any sort of handovers when—and you yourself departed
24 about 5.00 and came back at about 0700.

25 A. Yes.

26 Q. What I'm not getting powerfully coming out of this from 0300
27 to 0600, because I don't view you as a member of the ICT—

1 A. Good.

2 Q. —um, how was the incident being managed past that? Was it
3 that there was a mentality that we no longer have to manage the
4 incident?

5 A. The, the, the handover, the handover for incident commander
6 was done with Mr. Michael Wei on, on Saturday morning. Mr.
7 Michael Wei continued to hold the incident command role
8 while Collin Piper was out.

9 Q. According to Mr. Wei he was the logistics section chief.

10 A. He, he—that—when—so he, when Collin left, right this is my
11 recollection and understanding—

12 Q. Uh-huh.

13 A. —Collin would have passed the incident command role to
14 Michael Wei. Michael Wei would have passed the logistics
15 section chief to Mr. Prakash, um—

16 Q. No problem.

17 A. Right. I just said just the names kind a slipped with me a lil bit
18 but there was, there was—that was a discussion we had before
19 we left on Saturday morning, that we needed to rest and we
20 needed to get people who would hold that position—

21 Q. Uh-huh.

22 A. —until we returned to the, to the command centre.

23 Q. And under the ICS this handover was done using the ICS
24 forms?

25 A. It was done using the ICS forms in a verbal discussion on the
26 handover, so we had the ICS forms. These were the targets that
27 we were aiming for today. This is the equipment that we need.

1 Where we were with each objective and where the equipment
2 was and what the continuing action would be.

3 Q. But was it on a handover form?

4 A. It wasn't on a, it wasn't on a handover form.

5 Q. So it—again it didn't really function like an ICS then?

6 A. It was on the—the forms that we were continuing to fill out.

7 Q. And I'd end it here, so by the time you had your onsite
8 commander or your OPS section chief, whoever Ms.
9 Balkissoon was—

10 A. Yeah.

11 Q. —how was the site being managed for continual and/or a
12 protracted response?

13 A. Yeah, there would, there would have been a handover with
14 somebody as—on site commander of section chief.

15 Q. Okay.

16 A. Right? Who that person name is now I can't recall but there's
17 that—that—I know that the handovers went from one person to
18 the next and said, look, this is the team that we're going to
19 leave in place while we just get cleaned up and come back to
20 work.

21 Q. Well, well thus fast far at the Commission we can't see anyone
22 past 0600, so I'd end it here. What sort of activities, not the
23 handover—

24 A. Yes.

25 Q. —but once the handover was done—

26 A. Right.

27 Q. —what sort of activities were being carried out ensuring the

1 continuous—

2 A. The activities at that time was really around the dry, the dry, the
3 dry rescue option.

4 Q. Okay?.

5 A. Right? And we were mobilizing pumps, making decisions
6 around removing the hyperbaric chamber and things like that
7 during that period of time. So if you look through the log you
8 would see when the pumps arrived on site.

9 Q. Yes, I saw that, thank you.

10 **Commissioner Wilson:** Okay, thank you.

11 **Mr. Mohammed:** Okay.

12 **Mr. Maharaj SC:** Mr. Chairman, I'd be very quick. I just
13 want to point out to the witness and ask him about the
14 competent person.

15 **Further Examination By Mr. Maharaj SC:**

16 Q. If you look at 6.2 at page 33 of core bundle one under the
17 heading "Authorization Certification of PTW Signatories" you
18 would see that nominees for the position of a competent person
19 as submitted by the line manager of Paria.

20 A. Yeah.

21 Q. And there's a training course.

22 A. Yeah.

23 Q. Are you with me 6.2 page 33?

24 A. Just now, huh. Page 34.

25 Q. It's core bundle one. Page 33.

26 A. Yeah, yeah I'm getting there. I'm getting there. Page 33. I'm
27 on page—

1 Q. I think you're looking at the wrong bundle.

2 A. This is Volume II.

3 Q. It's core bundle—

4 **Mr. Chairman:** Could he look at it on the screen just so that
5 we move along.

6 **Mr. Mohammed:** Yeah, go ahead, go ahead. I'd look at it on
7 the screen. Yeah.

8 **Mr. Chairman:** Just for, just for this short part perhaps.

9 **Continued Further Examination By Mr. Maharaj SC:**

10 Q. Six point two?

11 A. Uh-huh.

12 Q. Read it. You see it?

13 A. Nominees for the role of applicant?

14 Q. Yes.

15 **Mr. Chairman:** Bring the microphone in front of you.

16 A. "Nominees for the role of applicant?"

17 Q. Yes.

18 A. "Competent person, site authority, area authority may be
19 submitted—

20 Q. By the—

21 A. —right. Training may be arranged and conducted for—that's,
22 that's the part you're referring to?

23 Q. Yes, yes.

24 A. Yes.

25 Q. So the, so the competent person—

26 A. Yeah.

27 Q. —is submitted—those nominees are submitted by this

1 department, the line manager—

2 A. Yes.

3 Q. —and they will have to undergo a training?

4 A. Yes.

5 Q. So—

6 A. My understanding of that training is—and Mr. Randy Archbald
7 will probably bring a lot more clarity to this. That would be
8 training in the use of the permit to work system and all the
9 processes—

10 Q. Yes, and it would be a Paria person?

11 A. Who is getting the training?

12 Q. Yes.

13 A. Well it would be both Paria person and the contractors as well.
14 Remember we take everybody through—

15 Q. No, no Mr. Mohammed.

16 A. I'm misunderstanding something?

17 Q. If you look down below, contractor official, there's a different
18 rule for contractor official to be trained?

19 A. But they our all trained in the permit to work system, right?

20 Q. Yes, but one is a contractor official who becomes a—

21 A. Right.

22 Q. —a, a competent person, but you have to go through a training.

23 A. Yes.

24 Q. LMCS didn't go through any training to become a competent
25 person and to get a certificate. Anyhow, can I take you also to
26 5.4?

27 A. Five point four.

1 Q. Page 31.

2 A. Yeah.

3 Q. “The area authority is a facility owner who audits the
4 precautions conditions laid out in the safety certificate by
5 the competent person to ensure that they are adequate for
6 job taking into consideration simultaneous activities on
7 the facility.”

8 So would you not agree that this shows that the competent
9 person is trained and is a Paria individual?

10 A. The area authority is the facility who audits
11 precautions/conditions laid out in the safety certificate by the
12 competent person to ensure that they are adequate for the job,
13 taking into consideration for permits—

14 Q. Because the area authority is Paria?

15 A. Yeah, the area authority is Paria, yes.

16 Q. Okay, can I also point you to—in respect of the answer to Mr.
17 Pegus—

18 A. Uh-huh.

19 Q. —you gave the impression that these permit to work rules are
20 like guidelines. Can you take you to 5.0 at page 28? And if
21 you look at the second paragraph, “Before the work can be
22 started, all the requirements—

23 A. Yes.

24 Q. —of the permit to work system—

25 A. Yes.

26 Q. —must be followed.”

27 A. Yes.

1 Q. So they're mandatory requirements?

2 A. Yes but not, but not contractual requirements.

3 Q. Yes, we know it's not contractual requirements.

4 A. Right. Yes.

5 Q. But anyhow, but under the, under the, under the, um—at page
6 557, under the contractor obligations—

7 A. All right, it had to come by the permit to work system, right?

8 Q. Sorry?

9 A. No, go ahead. Sorry, my mistake.

10 Q. Right. Let—no, you just answered about not contractual
11 requirements, right?

12 A. Yes.

13 Q. But under the—under the—look at witness bundle Volume II
14 page five five seven under the contractor's responsibility—

15 A. Uh-huh.

16 Q. —at 5.12, “to maintain permits to execute the entire job the
17 contractor shall become familiar and conform to Paria's permit
18 to work procedure—

19 A. Yes.

20 Q. —at his own expense, any limitations, provisions”, so the
21 contract require the contractor require the contractor to conform
22 to the permit to work rules, not so?

23 A. [*Nodding*]

24 Q. I have no further questions.

25 A. Yeah, all right, good. Thanks.

26 **Examination By Mr. Chairman:**

27 Q. I think we can safely say it's not part of the contract

1 itself.

2 A. Correct.

3 Q. But, in order to—

4 A. You have to follow the rules of the permit to work.

5 Q. In order to get, win the contract in the first place you have to
6 agree—

7 A. Correct.

8 Q. —to comply with the procedures?

9 A. All right, yes.

10 Q. All right. Fine.

11 **Mr. Chairman:** Well, look, I want to express my gratitude,
12 and I know Mr. Wilson's, for your fortitude this evening.
13 Thank you. We are now past seven o'clock. I shall not be so
14 rash as to, um, suggest that we all sit regardless next time. I
15 hope no one felt disadvantaged. If they do please let me know.

16 I want to thank you also, if I may, Mr. Mohammed, for
17 being with us all day. It's not easy, I'm sure, but I'm grateful
18 for that. Unfortunately we're starting at nine o'clock tomorrow
19 morning because we've got quite a lot to get through. I think
20 the quid pro quo is I expect us to finish around lunchtime on
21 Friday so I hope that that will meet people's natural inclination
22 not to be here by 9.00 but that's what we're going to do, nine
23 o'clock tomorrow, please, when I think we'll hear from Mr.
24 Archbald first of all. [*Crosstalk*] Yearwood sorry, not
25 Archbald. Mr. Yearwood, yes.

26 Thank you very much indeed. That's the business for
27 today. Please don't wait on me. I've got to collect up my

1 papers and sort them out, so thanks much. Thanks again, Mr.
2 Mohammed. You're free to go.

3 **7.12 p.m.:** *Enquiry adjourned.*

1 **EVIDENTIARY HEARING DAY 12**

2 **9.03 a.m.:** *Enquiry* Commenced.

3 **Mr. Chairman:** Good morning, everybody. So we had a
4 small issue this morning with electricity and water. I see we
5 now have the electrics back, but I'm afraid that the air-
6 conditioning hasn't quite kicked in yet. If it becomes stifling,
7 we'll see what can be done. I'm told that it's being sorted, so
8 hopefully the sooner, the better.

9 Can I raise two matters I mentioned yesterday, just so
10 that we are clear what's going to happen in the future. First of
11 all, Mr. Peterson, are you able to give me some sort of
12 assurance about the date upon which the hyperbaric chamber is
13 going to come out of the water? You'd appreciate that the week
14 that I've earmarked for the two days that we might need is a
15 week in which there is a great demand on services in this
16 country, certainly in Port of Spain, because of the reasons you
17 identified yesterday.

18 So I'm reluctant to put the country to expense and/or
19 myself out of having to leave wherever it is I happen to be to
20 come here if that is simply not going to happen. So I'd like—
21 I'm not asking you for the reassurance now, but for some point
22 to reassure us, please, that that is what's going to happen. At
23 the moment, we've got tentative bookings made, but I'd be
24 grateful if by, perhaps, tomorrow, you can let me know what
25 has or has not—

26 **Mr. Peterson SC:** By the break we should be able to confirm
27 it, Sir, because the contractor had reconfirmed, because we

1 were trying to get him to do it earlier.

2 **Mr. Chairman:** Right. Now, I understand that. I'd be
3 grateful for that. Thank you very much. The second thing is
4 this: Can I have from everybody, please—I see Mr. Ramadhar
5 is not here at the moment, but I'd like some sort of estimate of
6 how long you think you are going to take. How much time you
7 would like, should I say, to address this Commission on
8 Wednesday, Thursday, and Friday of next week. So can you
9 please—as I say, Mr. Ramadhar is not here but his assistant is.
10 Are you Mr. Roopnarine?

11 **Mr. Trebouhansingh:** Pleasant good morning, Mr. Chairman.
12 My name is Ved Trebouhansingh.

13 **Mr. Chairman:** Right, okay. And are you able to help me?

14 **Mr. Trebouhansingh:** Yes, please, if I may. Based on Mr.
15 Ramadhar's estimation, perhaps around one hour or less,
16 hopefully, for closing would be sufficient.

17 **Mr. Chairman:** Thank you. Who else? Mr. Pegus?

18 **Mr. Pegus:** Good morning, Mr. Chairman. My issues are very
19 narrow issues, so I don't think that it would exceed 25 minutes,
20 half an hour.

21 **Mr. Chairman:** Half an hour. Thank you very much. Who is
22 going to address me from the Seamen Workers' Waterfront
23 Trade Union? Will it be you, Ms. Alfonso?

24 **Ms. Alfonso:** Yes. Good morning, Chairman. Yes, indeed.

25 **Mr. Chairman:** Right. How long do you anticipate?

26 **Ms. Alfonso:** I'll say an hour and 10 minutes.

27 **Mr. Chairman:** I'll call that an hour. Cut the 10 minutes off,

1 if you would, please.

2 **Ms. Alfonso:** I will do my endeavour best, Mr. Chairman.

3 **Mr. Chairman:** Right. And then, is there anybody else who is
4 seeking to address the Commission? No. No. Good. All right.
5 Mr. Peterson?

6 **Mr. Peterson SC:** Mr. Chairman, could we give that to you by
7 in the morning, opening of business?

8 **Mr. Chairman:** Could you give it to me by the end of today?

9 **Mr. Peterson SC:** We'll try. If I am to address, it would be
10 shorter; if Mr. Mootoo, he tends to be very—

11 **Mr. Chairman:** Long do you say, or young?

12 **Mr. Peterson SC:** Very protracted.

13 **Mr. Chairman:** More protracted. Right. Well, I'll leave that
14 for you to work out between you. I had in mind that you might
15 each be—you and Ms. Kamini Persaud Maraj, an hour to two
16 each. I'm prepared to agree to that.

17 **Mr. Peterson SC:** That doesn't sound far off, Sir.

18 **Mr. Chairman:** But I would need some persuading as to why
19 you'd want more than two hours.

20 **Ms. Persaud Maraj:** I would have been indicating to Mr.
21 Chair that that is the time period I'm looking at as well.

22 **Mr. Chairman:** Couple of hours?

23 **Ms. Persaud Maraj:** Within one to two hours.

24 **Mr. Chairman:** Right. Do you think, Mr. Peterson, that that is
25 a realistic estimate, just so that we have some—

26 **Mr. Peterson SC:** It sounds realistic, Sir.

27 **Mr. Chairman:** Yes. I mean, if it's going to go way beyond

1 that—

2 **Mr. Peterson SC:** No, no, no.

3 **Mr. Chairman:** I would be surprised. All right. So I'm going
4 to give—if I make the allowance that each other party will have
5 up to an hour, I shan't seek to cut anybody off if they stick to
6 that. I might become a little unhappy if it goes beyond the hour
7 for everyone else, but for the two principal teams as I see them,
8 up to two hours. That will all give us plenty of time. I'm told
9 by counsel, Mr. Maharaj, that he's likely to be a couple of hours
10 as well. That does mean that we're likely to have a shorter day
11 on the final Friday of next week. So that would be very helpful
12 to know that that's his position.

13 Thank you very much. We are, I think, ready to start, are
14 we not, Mr. Maharaj? Good.

15 **Mr. Maharaj SC:** Our first witness this morning is Mr. Paul
16 Yearwood, and the summary of that witness would be done by
17 Mr. Ronnie Bissessar, Mr. Chairman.

18 **Mr. Chairman:** Thank you.

19 *[Mr. Paul Yearwood sworn]*

20 **Mr. Yearwood:** I, Paul Yearwood, solemnly swear that the
21 evidence I shall give to this Commission in this case shall be
22 the truth, the whole truth, and nothing but the truth.

23 **Mr. Chairman:** Yes. Do sit down, Mr. Yearwood. The water
24 is there for your benefit. You'll need to move a little closer to
25 that microphone so we can hear you clearly.

26 **Mr. Yearwood:** No problem.

27 **Mr. Chairman:** All right. Thank you for coming. Mr.

1 Bissessar is going to give a summary of your evidence. All
2 right?

3 **Mr. Yearwood:** Okay. No problem.

4 **Mr. Chairman:** You've provided us with a statement. He's
5 going to summarize it. Please listen carefully, and if it's an
6 accurate summary you'll tell us at the end. All right?

7 **Mr. Yearwood:** All right. No problem.

8 **Mr. Chairman:** That will serve as your evidence-in-chief, and
9 then we will have a number of questions. I think Mr. Maharaj
10 has a number of questions for you, and then the others may
11 also. All right?

12 **Mr. Yearwood:** Okay. No problem.

13 **Mr. Chairman:** So make yourself comfortable and listen
14 carefully to what Mr. Bissessar has to say. Thank you very
15 much.

16 **Mr. Bissessar:** Thank you, Chair.

17 Mr. Paul Yearwood was Paria's Health and Safety
18 Executive (HSE) Coordinator, reporting to Randolph Archbald.
19 Mr. Yearwood had upwards of 13 years' experience in HSE
20 Operations and has held the position at Paria since January
21 2019. He says that several Kenson HSE specialists reported to
22 him.

23 Mr. Yearwood provided a witness statement dated 16th
24 August, 2022, to the Commission, which is at WB1299, but
25 declined to be interviewed by Counsel to the Commission. Mr.
26 Yearwood's role as HSE Coordinator required him to develop
27 and coordinate the implementation of a company-wide health,

1 safety, security, and environment (HSSE) Management System.

2 In June 2021, prior to the award of the contract to LMCS,
3 Mr. Yearwood assigned Kenson's, Mr. Ryan Nanton, HSE
4 Specialist, to be part of an internal team to review LMCS'
5 method statement, risk assessment, and emergency response
6 plan. Mr. Yearwood said that the purpose of the review was to
7 ensure that LMCS understood what it was contracted to do, that
8 it had identified the safety risks associated with the job, and that
9 it had developed a plan to manage those risks.

10 Mr. Yearwood explains, however, that because the works
11 being executed by LMCS were highly specialized in nature and
12 were not of the kind which Paria had the competence or
13 experience to execute, Paria necessarily relied on LMCS'
14 specialist expertise to identify the relevant safety risks.

15 Mr. Yearwood underscored that he was not involved in
16 the review process and that Mr. Ryan Nanton from Kenson was
17 the HSE person designated for that purpose. He says that Mr.
18 Nanton did not raise any issues with him concerning LMCS'
19 documents warranting his, that is to say, Mr. Yearwood's,
20 intervention.

21 Mr. Yearwood further explained that during LMCS'
22 execution of the works, he also assigned Mr. Andrew Dopson,
23 HSE Technician, to make periodic visits to the site and to
24 provide HSE oversight. Mr. Dopson's role was to support the
25 maintenance technician assigned to the job to ensure that it was
26 being done in accordance with the permit to work (PTW)
27 documents, and the risk assessment.

1 Immediately following the incident on 25th February,
2 2022, Paria's ICS emergency response plan, the ERP, was
3 triggered, which Mr. Yearwood says was different from LMCS'
4 ERP, and Mr. Yearwood's role in the ICS was to act as HSE
5 Officer. So that until he handed over to Mr. Piper, Mr.
6 Yearwood activated and mobilized the ICS and convened the
7 ICT.

8 Mr. Yearwood then described the ICT activities and says
9 that the ICT's response from its experts on Friday 25th
10 December, 2022, was that they were reluctant to enter the
11 pipeline to attempt to rescue the divers due to safety concerns.

12 Mr. Yearwood said that in convening the ICT he
13 requested that a record be made of the events as and when they
14 were recurring, and that Mr. Nigel Sandiford, Kenson's HSE
15 Technician, was performing the role of scribe before the arrival
16 of Ms. Shelly Maharaj. He recalls receiving information that an
17 LMCS rescue team was on site and had entered the habitat but
18 saw no one inside.

19 Mr. Yearwood also said that prior to his arrival at the
20 Incident Command Post, the ICP, at about 3.59 p.m., he
21 requested certain persons to contact Kazim Ali Sr. to send a
22 representative from LMCS to join the ICT. He said he called
23 Kazim Ali Sr. himself at about 4.50 p.m. who told him that he
24 would arrange to have an LMCS representative at the ICP. Mr.
25 Yearwood says he never heard further from Mr. Kazim Ali Sr.
26 in that regard, and to his knowledge, no one from LMCS made
27 themselves available to join the ICT, or to assist the ICT, nor

1 did Kazim Ali Sr. at any time discuss the rescue plan.

2 At about 4.55 p.m. on Friday, 25th February, 2022, Mr.
3 Yearwood apprised Mr. Collin Piper, Incident Commander, of
4 his efforts in relation to the incident up to that point. Mr.
5 Yearwood said he observed Christopher Boodram being
6 brought onshore and Mr. Boodram was able to communicate
7 with people onsite.

8 Mr. Yearwood also describes the events on Sunday 27th
9 February, 2022, at two meetings convened with LMCS. The
10 first was a morning meeting with Collin Piper, Michael Wei,
11 Kazim Ali Sr., Andrew Farah, Conan Beddoe, and himself, that
12 is to say Paul Yearwood, when LMCS proposed that Conan
13 Beddoe be permitted to dive into the pipeline to remove three
14 scuba tanks which were obstructing the progress of the camera.
15 He said that LMCS presented no method statement, risk
16 assessment, dive plan, emergency response plan, or other
17 documents, nor could they provide specifics or details, and
18 Collin Piper requested LMCS to submit documents including
19 an emergency response plan in the event that Conan Beddoe got
20 into difficulty. The meeting was then postponed to later that
21 afternoon at 4.49 p.m.

22 Mr. Yearwood said he received documents from LMCS
23 in support of its proposal at about 2.20 p.m. and he submitted
24 LMCS' method statement, risk assessment, and emergency
25 response plan to the ICT, the dive experts, and Lt Hargreaves of
26 the TTCG for their assessment.

27 He recalls that at the 4.49 p.m. meeting, he, Collin Piper,

1 Mushtaq Mohammed were present for Paria; Imtiaz Ali and
2 Hasib Ali for LMCS; Arlene Chow, Patricia King, and Rawle
3 Arneaud for Heritage; together with Rolph Seales, Dive Expert,
4 Krishna Fuentes, another dive expert, and Lt Hargreaves of the
5 TTCG. Mr. Yearwood explains that at the meeting, all parties,
6 save for LMCS, raised questions and concerns about the
7 documents presented by LMCS and the experts advised that
8 LMCS still did not demonstrate that the proposed exercise
9 could be conducted safely. Finally, that Mushtaq Mohammed
10 then decided that Paria would urgently explore other options
11 having regard to the risks involved in LMCS' proposal.

12 Mr. Yearwood, do you agree that what I have presented
13 is a fair and accurate summary of your witness statement dated
14 16th August, 2022?

15 **Mr. Yearwood:** I agree that it is a fair and accurate statement.

16 **Mr. Bissessar:** Thank you.

17 **Mr. Chairman:** Thank you, Mr. Yearwood. What's going to
18 happen now is Mr. Maharaj is going to ask you some questions
19 on behalf of the Enquiry. All right?

20 **Examination By Mr. Maharaj SC:**

21 Q. Good morning, Mr. Yearwood.

22 A. Good morning.

23 Q. Would you agree, therefore, that before this contract was
24 awarded to LMCS, Paria employed a review process of the
25 method statement, the risk assessment, and the emergency
26 response plan which were submitted by LMCS?

27 A. No. The documents from LMCS would have been submitted as

1 part of the tender. And when it was awarded, then that review
2 process would have taken place.

3 Q. So the contract was awarded before the review was done?

4 A. Yes. The review that I am speaking of with my team would
5 have been involved, this was done after the contract was
6 awarded.

7 Q. So are you telling us that Paria awarded the contract without
8 first reviewing the method statement, risk assessment, and
9 emergency response plan?

10 A. I don't know if anybody in the tenders group would have
11 reviewed it, but this final review is before execution, so, um,
12 dah is what I am aware of.

13 Q. I just want to get it clear. So as far as you are concerned and as
14 far as you know, before the contract was signed by LMCS and
15 between LMCS and Paria, between Paria and LMCS, the risk
16 assessment, and the method statement, and the emergency
17 response plan was not reviewed by Paria?

18 A. So I wouldn't have been involved in that stage of any tender
19 process, so I wouldn't know if someone reviewed it.

20 Q. Oh, I see. But what you do know that Paria had a review
21 process of the method statement, risk assessment, and the
22 emergency response plan?

23 A. Yes, I do know that; and that is before execution.

24 Q. And you were part of that in the sense that you know that Mr.
25 Ryan Nanton was assigned by Paria to assist in that review?

26 A. Yes.

27 Q. Okay. And what was your position at Paria at the time?

1 A. So my position at the time would have been HSE Coordinator,
2 and I would have a team of people who I work with, one of
3 which is Mr. Ryan Nanton.

4 Q. Right. So the purpose of the review by Paria and in the process
5 you were involved in with Mr. Nanton, right, was for Paria to
6 determine whether the method statement, risk assessment, and
7 emergency response plan was acceptable to Paria?

8 A. Yes.

9 Q. Yes. And one of the purposes of that review was for Paria to be
10 satisfied that all the risk associated with the works were
11 identified?

12 A. Well, Paria would have to be satisfied that the contractor would
13 have presented the risk to us. So there are different people on
14 that team with different disciplines and they would all look at
15 what is presented with regard to their specific discipline.

16 Q. But as far as you know as the officer there involved with Paria,
17 and you were involved in having this review process done,
18 would you not agree with me that Paria wanted to be satisfied
19 that all the risks which were associated with the works were
20 identified?

21 A. Yes. The purpose of the review is to ensure that the risks are
22 highlighted.

23 Q. Would you speak a little louder?

24 A. A little louder? Sorry.

25 **Mr. Chairman:** Can you move a little bit closer to that mike?
26 Pull it towards you if that helps. Exactly—and speak into it so
27 that we can all hear you.

1 **Mr. Yearwood:** Okay. We're okay here now?

2 **Mr. Chairman:** Yes.

3 **Mr. Yearwood:** All right, no problem. Sorry about that.

4 So Paria would have wanted LMCS to do a few things in
5 that review. One of the things is they would have presented
6 their methodology as well as the risk that they would
7 understand as part of the execution of the job. The other
8 members of the team would be the HSE Department or
9 Operations Department and our Technical and Maintenance
10 Department. Each one of these members have a specific
11 function. So the HSE person on the team who would have been
12 Mr. Nanton, would look at the occupational safety and health
13 risk, and he would look for gaps in that respect. We also have
14 the technical team and operations team to bring forward
15 information within that review about the risk associated with
16 Paria.

17 So the parties work together in the team to come up with
18 a satisfactory document. So it's satisfactory to all the parties
19 there including the contractor.

20 **Examination By Mr. Chairman:**

21 Q. Right. Can I just understand that? These different teams all
22 have their own interest and expertise?

23 A. Right. So there's one team and the team has these people.

24 Q. Right. You said there's HSE?

25 A. There's HSE.

26 Q. There's technical?

27 A. Technical.

1 Q. And—

2 A. Operations.

3 Q. Operations. Right. Each bring different things to the table. All
4 right?

5 A. Each brings different competence. So it's analogous to doing a
6 risk assessment. But what would have happened, the meeting is
7 now virtual. Right. So there's that meeting of everybody to do
8 the—

9 Q. Yeah, yeah. It doesn't matter if you're sitting in a room like we
10 are now or whether you're doing it on a screen; and we all
11 experienced that with Covid, and so on.

12 A. Correct.

13 Q. But the representative of each of those teams are all present in
14 one meeting?

15 A. In one meeting.

16 Q. Right. And that's part of the review process—

17 A. That is part of the review process.

18 Q. —of the submission that has already been contracted with
19 Paria?

20 A. Yes. So what would happen is if any of the members of the
21 team are unsatisfied with regard to something specific to their
22 discipline, then the modification is made at that point before the
23 execution of the job.

24 Q. But I think what Mr. Maharaj was after, and what I want to
25 know is, are we at a point where the contract had already been
26 awarded?

27 A. Yes.

1 Q. Right. So this review with these different departments takes
2 place after the contract has been awarded?

3 A. Yes.

4 Q. To iron out issues that might arise from each different
5 department?

6 A. Correct.

7 Q. Ultimately, you as health and safety would presumably be able
8 to say, well, you know, whatever you want to do, Mr.
9 Technical, you can't have that because there is an issue here
10 with health and safety.

11 A. Yes.

12 Q. Let us sort that out first or last, yes?

13 A. Yes.

14 **Mr. Chairman:** Right. I'm with you. Thank you.

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. So after this review process was done, was Paria satisfied with
17 the review?

18 A. Well, the team would have been satisfied as a whole.

19 Q. The team would have been satisfied. And that team is the
20 Internal Multi-Departmental Team of Paria?

21 A. Well, the team includes the contractor as well.

22 Q. As well as the contractors?

23 A. As well as the contractor.

24 Q. So both Paria and LMCS worked together and they were
25 satisfied with the review?

26 A. And they were satisfied.

27 Q. And, therefore, the works could have then proceeded?

1 A. Yes. So then you proceed to the permitting process and the
2 works were allowed to go ahead.

3 **Examination By Mr. Chairman:**

4 Q. Right. Do you at that point, when you are having this meeting,
5 does each of these parties have in front of them the method
6 statement as put forward by LMCS?

7 A. Right. So what would happen they will usually send emails
8 with it prior to the meeting as well as the document will
9 actually be presented at the meeting and gone through step by
10 step.

11 Q. Right. One of the documents that you would be reviewing, that
12 the team would be reviewing, is the method statement.

13 A. Yes.

14 **Mr. Chairman:** Right. Yes, thank you.

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. The method statement, and the risk assessment, and the
17 emergency response plan?

18 A. Yes.

19 Q. And that was reviewed by the team which included both Paria
20 representatives and LMCS?

21 A. Yes.

22 Q. And at the end of the day, it was found acceptable and the
23 works could have proceeded?

24 A. Yes.

25 Q. Now—

26 **Examination By Mr. Chairman:**

27 Q. Sorry, again. Is this documented? Is this meeting minuted,

1 documented in any way? You say, right, you know, you're
2 HSE or one part of this, and you say, well, look, I'm unhappy
3 with X. So is that then documented? How you're then going to
4 deal with X?

5 A. Well, what would happen coming out of the meeting, if there
6 are any changes to be made, then the documents—there are no
7 minutes as such. However, the document would be amended
8 and resubmitted and persons would say that they are okay with
9 it.

10 Q. The document, let's say we're dealing with the method
11 statement at this stage—and I appreciate Mr. Maharaj asked
12 you about all three particular documents. Dealing with the
13 method statement at this stage, you got the method statement in
14 front of you, whether it's on screen or a physical copy of it, and
15 each of you are going through this and identifying issues that
16 might arise. Yes?

17 A. Yes.

18 Q. And if there are to be changes made, is there a new method
19 statement drafted which incorporates those changes?

20 A. Yes. It's basically an addendum.

21 Q. An addendum?

22 A. So the necessary changes would be made and the document is
23 resubmitted as per the discussion in the particular meeting.

24 **Mr. Chairman:** I don't know if you'll come to this, Mr.
25 Maharaj, but I just wanted to see—

26 **Mr. Maharaj SC:** Sure, sure.

27 **Examination By Mr. Chairman:**

1 Q. Because the method statement that I've got is described as
2 revi—116, Revision 0. Does that mean that is the original
3 document unamended or is there some further document?

4 A. So I am not sure if—

5 **Mr. Chairman:** Can we just have that up on the screen,
6 please, 1048?

7 **Mr. Yearwood:** I'm not sure if during that particular meeting
8 there was a requirement to make any changes to the original
9 method statement.

10 **Examination By Mr. Chairman:**

11 Q. You see the document on the screen?

12 A. Yes.

13 Q. It's LMCS' document. Right? So this is what they described
14 as their method statement for carrying out the works. All right?

15 A. Correct.

16 Q. And then it's given a number, 116. I'm assuming that that's a
17 particular job that they've allocated a number to, or you have.
18 It doesn't matter. But, you see, after that it says, "Revision 0"?

19 A. Yes.

20 Q. In such a document, if this had been revised, would it have
21 Revision 1, or 2, or something like that?

22 A. If proper document control is taking place, yes.

23 Q. If proper document control is there; obviously, subject to, you
24 know, typos or whatever.

25 A. Correct.

26 Q. But this—we've been proceeding on the basis that this
27 document is the final version of the method statement?

1 A. So it is possible that during the review none of the parties
2 would have suggested any change to the method statement.

3 Q. Right.

4 A. So if that happens it remains as—

5 Q. If there's no changes, everyone's happy?

6 A. If there are no changes, everybody is happy.

7 **Mr. Chairman:** Right, okay. Thank you.

8 Sorry, Mr. Maharaj.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. As a matter of fact, you said in your witness—

11 **Mr. Peterson SC:** Mr. Chairman, just by way of assistance—I
12 don't want this to go down as any objection, but with respect to
13 that area, you may want to recall Mr. Kazim Ali Sr.'s evidence
14 with respect to what is in the parenthesis. He did make a
15 comment about that. I don't know if you recall it, but you may
16 want to factor that in.

17 **Mr. Chairman:** He did, indeed. Yes. Thank you for that.
18 Yes.

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. As a matter of fact, you said at paragraph 9 of your witness
21 statement that:

22 "Mr. Nanton did not raise any queries with me
23 concerning the documents that warranted my intervention."

24 A. Correct.

25 Q. So as far as you can recall, there were no queries raised by Mr.
26 Nanton in respect of the documents?

27 A. No, he had no queries about the—

1 Q. And Mr. Nanton was the representative of Paria?

2 A. Yes.

3 Q. Now, this Mr. Nanton, Mr. Ryan Nanton, is he still employed at
4 Paria?

5 A. Yes, he is.

6 Q. Do you know what are his qualifications?

7 A. I can't say offhand.

8 Q. You said he's an HSE Specialist. You have stated that because
9 that is the designation he has?

10 A. That's his designation. So there's a job description and there
11 are requirements for the different positions.

12 Q. But you cannot assist us with his qualifications?

13 A. Well, I know he would have some—he would have at least a
14 Bachelor's in the health and safety discipline.

15 Q. You know that as a fact?

16 A. I didn't hire him.

17 Q. Sorry?

18 A. So he's employed through Kenson.

19 Q. Sorry?

20 A. He's employed through Kenson, so they may be able to give
21 you better details. But that is—

22 Q. No, I want to know whether from your personal knowledge if
23 you know that he has any Degree?

24 A. Yes, I know personally that he has a degree.

25 Q. Do you know in what—what degree?

26 A. I know it's in health and safety. I'm not exactly sure what's the
27 full name.

1 Q. Okay. And how long has he been working at Paria?

2 A. Probably a little more than two years.

3 Q. More than two years. Is there any reason why in your witness
4 statement you did not exhibit his qualifications or his—well,
5 anything to show that he's an HSE specialist?

6 A. I would have wrote the witness statement as best as I could.
7 I'm not familiar with writing many witness statements, but I'm
8 here to clarify anything that you would like to know.

9 Q. Okay, okay, okay. So did you satisfy yourself that Mr. Nanton
10 had the competence to identify the hazards in these documents?

11 A. Yes, I am satisfied that he has the competence to identify
12 apparent occupational, safety, and health hazards.

13 Q. What are your qualifications?

14 A. My qualifications; I also have a BSc in Environmental
15 Management, Chemistry, OSH, MBA, ICS trained.

16 Q. And your experience? How long you have been doing this
17 work?

18 A. Thirteen years.

19 Q. Thirteen years; okay. So—but you would agree with me that
20 nowhere in these documents, method statements or any of the
21 documents which he raised no queries about, was there a hazard
22 of Delta P identified?

23 A. No, it was not identified.

24 **Examination By Mr. Chairman:**

25 Q. Can I ask why was Mr. Nanton assigned this particular task?

26 A. It is a task assigned to him as part of his job function. So this
27 review is not only for this particular job. This is a regular part

1 of the process at Paria. So there are several views of several
2 jobs on a daily basis, and this is part of the job that he performs
3 normally.

4 Q. No, I follow that. But, I mean, on any view, this was an
5 unusual scope of work. How often do you replace risers under
6 the water?

7 A. Not very often.

8 Q. No. On any view, it was an unusual scope of work?

9 A. Correct.

10 Q. Right. It had with it inevitable hazards?

11 A. Yes.

12 Q. Because it was both unusual and dangerous?

13 A. Yes.

14 Q. Why was it thought necessary to assign somebody other than
15 the people that actually work for Paria to do that job? Mr.
16 Nanton I mean.

17 A. Well, Mr. Nanton works for Paria through Kenson.

18 Q. Yeah, but he's not a Paria employee, is he? Are you more
19 experienced than Mr. Nanton?

20 A. Yes, I'll be more experienced than Mr. Nanton.

21 Q. You are more experienced. You've been doing it longer?

22 A. I've been doing it longer.

23 Q. And you may well have better qualifications?

24 A. I would suppose so.

25 Q. He was operating under your authority?

26 A. Yes.

27 Q. Why didn't you do it?

1 A. At the time, I made the decision to assign the task to Mr.
2 Nanton based on my experience with working with him. So I
3 would have done several of these types of reviews with him and
4 I would have been satisfied that he would be able to play his
5 role on that team successfully.

6 Q. I'm not criticizing that. I just wanted to be clear that you didn't
7 appoint Mr. Nanton to do it because he had greater knowledge
8 of this type of work or was more experienced than you were.
9 You know? There was no reason, from what you're saying,
10 why you appointed him, because he had a greater ability to do
11 the job than you did?

12 A. No, I didn't appoint him—

13 Q. That's not the reason?

14 A. No.

15 Q. You just did it because, well, he's available so let's get him to
16 do it?

17 A. Well, it's part of his regular job duties and I assigned that task
18 to him.

19 **Mr. Chairman:** Thank you.

20 **Continued Examination By Mr. Maharaj SC:**

21 Q. But Mr. Nanton, although he was Kenson, supplied by Kenson,
22 he was working at Paria as a Paria employee?

23 A. Yes.

24 Q. So he was part of Paria's establishment or staff as you were a
25 part of Paria's establishment?

26 A. Yes.

27 Q. But if it is that Mr. Nanton had his expertise and you had the

1 expertise, how would you—I don't understand you saying in
2 your witness statement at paragraph 7 that Paria did not have
3 the competence or experience to execute the job. And if they
4 didn't have the competence and experience to execute the job,
5 how could they have the competence and experience to review
6 the works for the job?

7 A. So as I would have indicated before, the team comprises of
8 different persons. Mr. Nanton's role is—on that team, is to
9 identify the apparent occupational, and health and safety risks.
10 There are some specialist risks, as we would know, that he
11 would not be competent to review.

12 Q. But you also said here in your witness statement at paragraph 7:
13 “Paria necessarily relied on the specialist expertise of
14 contractors such as LMCS to identify the relevant safety
15 risks.”

16 If you are saying that you had the qualification, you had
17 experience, and you had more qualifications and experience
18 than Mr. Nanton, and Mr. Nanton had the qualification and
19 experience, then why would Paria have to rely on LMCS to
20 identify the relevant safety risks?

21 A. No problem. So let me try and clarify it for you. The
22 contractor understands the risk of the task he is going to
23 perform, but he is going to do it in Paria. So there will be risks
24 associated with Paria that may interact with his task. So the
25 reason for forming the team is so that the contractor brings his
26 knowledge about the task he is about to execute and the Paria
27 personnel could bring their knowledge about the hazards

1 associated with Paria to ensure that the document is completed
2 in that manner.

3 **Examination By Mr. Chairman:**

4 Q. So it's not really a review of what they say the risks are. What
5 you're doing is to look at it from Paria's point of view and say,
6 well, what are the risks to Paria and its employees?

7 A. Well, what the persons from Paria would generally bring is they
8 will say to the contractor these are the risks that we are
9 exposing you to, because you're going to work here. Right?
10 The contractor will bring their knowledge about the actual task
11 that is going to be executed. So when you combine it, the
12 intention is to get that document that covers all the risks
13 associated with the work.

14 Q. Well, all the risks that have been identified by either them or
15 you, and/or both?

16 A. Correct.

17 Q. Right. But because you say they're a specialist firm, you relied
18 on their specialism, and you're not in a position to review a risk
19 associated with that specialism?

20 A. So because they are a specialist firm, we would expect that they
21 would present the risk associated with the task.

22 Q. Yeah. But if they're wrong, you're going to be wrong too,
23 because you can't review it.

24 A. No.

25 Q. I understand that. Don't misunderstand me. I'm not criticizing
26 you. I'm just looking at it from a corporate point of view.

27 A. No problem.

1 Q. The policy is that where a specialist, as you characterized, firm
2 is being employed to do the job, they identify the risks and
3 you're not in a position to be able to review those risks because
4 you simply don't have the expertise?

5 A. That's a fair statement.

6 Q. Right. Sorry?

7 A. That's a fair statement.

8 Q. Right. It follows from that, that given the hazardous nature and
9 unusual nature of these works, there was an option to employ
10 someone who did have that expertise.

11 A. The option does exist.

12 Q. And I appreciate it's not within your remit, but nonetheless,
13 somebody must have considered or should have considered
14 whether or not to employ outside contractors to review it?

15 A. I mean, it wasn't considered at the time, and this is the process
16 which we have followed for this job and several other jobs.

17 Q. No, I follow that. I do understand that, and I could appreciate
18 that there are, inevitably, costs involved. But where you're
19 dealing with a particularly hazardous situation, and one which
20 you have little or no knowledge of, that would be one example
21 in which your firm might have employed some contractor to do
22 the task that you are unable to do.

23 A. As I said, it's something that could have been considered.

24 Q. Right. It wasn't?

25 A. It wasn't in this case.

26 **Mr. Chairman:** Thank you.

27 **Continued Examination By Mr. Maharaj SC:**

1 Q. All right, Mr. Yearwood. Let's go to another aspect of your
2 evidence—the incident itself. Right?

3 A. No problem.

4 Q. At paragraphs 22, 23, and 24 of your witness statement you
5 made the point that Kazim Ali Sr. and LMCS did not accept the
6 request for one of the representatives to join the ICT, and did
7 not provide Paria with any rescue plan for the missing divers.

8 You recall saying that?

9 A. Yeah, I'm seeing it. So this would be in the early phase of the
10 rescue.

11 Q. Yes, yes, yes.

12 A. That's correct.

13 Q. Were you aware that there were several of LMCS
14 representatives at berth 6 from the time the incident occurred up
15 to Sunday, 27th February?

16 A. Yes.

17 Q. Yes. And were you aware that Ms. Catherine Balkissoon, a
18 member of the ICT, were on site at berth 6 together with other
19 Paria personnel on Friday, 25th February?

20 A. All right. So just to clarify No. 22 on this statement, it's in
21 chronological order, so it doesn't refer to the entire day of the
22 25th. This is in the first three hours that this refers to, so I
23 would have tried to write it in a chronological order. So this is
24 me before handing over to Mr. Piper. So at that time, I made
25 the request, and before I handed over to Mr. Piper, no one from
26 LMCS made themselves available to the ICT.

27 Q. Okay. At paragraph 24 you said:

1 “At no point did Mr. Kazim Ali Sr. or LMCS discuss
2 with me or provide me with their rescue plan, if any, for
3 the missing divers.”

4 A. Right. So as I said, the statement is written in chronological
5 order. So—

6 Q. So you are saying up to what time, then?

7 A. So this is before I would have handed over to Mr. Collin Piper.

8 Q. And what time you handed over to Mr. Piper, around?

9 A. You could call on the statement. It’s in the statement.

10 Q. I’m not seeing it. Oh, at 4.55?

11 A. At 4.55.

12 Q. Yes, okay, okay.

13 A. So this is before 4.55.

14 Q. Okay. And what? You were not involved at all after that?

15 A. Yes, I would have been involved, but as I said, the statement is
16 written in a chronological order so that particular paragraph
17 refers to my request before the handover when I would have
18 been trying to get the correct people into the ICT.

19 Q. You were a member of the ICT?

20 A. Yes.

21 Q. Yes. And so, would you not agree that the ICT would have
22 known, and you would have known that Ms. Catherine
23 Balkissoon was at berth 6 in contact with LMCS personnel?

24 A. Yes.

25 Q. Yes. And you would have been aware that Ms. Balkissoon
26 would have obtained information from the LMCS personnel?

27 A. Ms. Balkissoon would have relayed any information to the

1 Incident Commander in her role. Well, after I handed over to
2 Mr. Piper, I would have reverted to the position of HSE Officer
3 on the Incident Command Team.

4 Q. But as a member of the ICT, you knew Ms. Balkissoon, as you
5 said, was there at berth 6. Okay?

6 A. Yes.

7 Q. And you would agree with me that the ICT had access, through
8 Ms. Balkissoon, to get any information they wanted to know
9 from the LMCS person at berth 6?

10 A. I really can't answer for Ms. Balkissoon. I could—

11 Q. No, I'm asking you to answer as a member of the ICT. You
12 were at the ICT meetings?

13 A. I would have been at ICT meetings.

14 Q. Sorry?

15 A. Yes.

16 Q. And you know that the ICT was in contact with persons trying
17 to get information?

18 A. Yes.

19 Q. And as a member of the ICT, you know Balkissoon was at berth
20 6. Didn't the members of the ICT would have known that
21 Catherine Balkissoon was at berth 6?

22 A. Yes.

23 Q. So the question I'm asking you, that the ICT would have had
24 available to it if it wanted information from Ms. Balkissoon as
25 to what was happening at berth 6 to get information from
26 Catherine Balkissoon?

27 A. They would have been able to get information from her.

1 Q. Yes, yes. And did you—did the ICT have information from
2 Catherine Balkissoon that the LMCS persons at berth 6 were
3 trying to implement a rescue plan?

4 A. On the evening of the 25th after the handover, I wouldn't know
5 that.

6 Q. But you hand over, but you were still a member of the ICT,
7 functioning as the ICT?

8 A. So as I said, my role would have been the role of the HSE or
9 the Safety Officer on the ICS structure. So my role is now
10 different from the operations or the planning section chief, or so
11 forth. My role is focused more on dealing with the safety
12 aspects around everything. So I would have been involved
13 more in ensuring that there would have been adequate medical
14 facilities at the triage area for anybody coming out of the
15 situation. So on that evening after my handover, that is where
16 my focus would have been.

17 Q. So you didn't know what was happening at the ICT?

18 A. I would have some information, but I wouldn't be privy to all
19 the information because of the task I would have been assigned.

20 Q. Were you at the ICT at any time when the ICT was making any
21 efforts to contact Catherine Balkissoon to find out what was
22 happening at berth 6 with the LMCS representatives?

23 A. No.

24 Q. No.

25 **Examination By Mr. Chairman:**

26 Q. Mr. Yearwood, were you in the same room at all times—

27 A. No, I wouldn't have been in the same room at all times. I

1 would have been assigned the responsibility just after the
2 handover and just after they would have heard the knocking. I
3 would have taken my team to the launch landing to ensure that
4 they were ready to receive persons.

5 Q. Your team?

6 A. My team.

7 Q. HSE personnel?

8 A. My HSE personnel.

9 Q. Right. So to be fair to you, whilst you were a member of the
10 IMT, you weren't there all the time?

11 A. No, I would not have been there all the time.

12 Q. Because you had specific tasks that take you outside of that
13 room?

14 A. Correct.

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. Okay. At paragraph 30 of your witness statement you said that
17 you observed Christopher Boodram being brought onshore
18 accompanied by Andrew Dopson.

19 "I saw him being aided and handed over to the ...
20 ambulance. Mr. Boodram was able to communicate with
21 people onsite and use a cell phone to contact a person
22 whom he identified as his wife."

23 Correct?

24 A. Yes.

25 Q. And Mr. Boodram has told us at page 51 of the transcript when
26 he gave evidence on the 22nd November, lines one to six and
27 he stated when he came out of the pipe he was focused and he

1 was debriefed and that Paria could have gotten everything they
2 needed from him. The question I want to ask you: Christopher
3 Boodram, from what you saw, as you said, was able to
4 communicate, was able to talk and he was conscious.

5 A. Yes, he was able to communicate, and he was conscious.

6 Q. And that you could have spoken to him and get information
7 from him?

8 A. I could have gotten some information from him.

9 Q. In other words, if you had instructions from the ICT to talk to
10 Boodram to find out what was the conditions in the pipeline,
11 you could have spoken to him?

12 A. I did speak to him.

13 Q. You did speak to him. Did you ask him the condition in the
14 pipeline?

15 A. No.

16 Q. Did the ICT give you any instructions to find out from him any
17 information?

18 A. No, but just to clarify, that is an oddly specific question.

19 Q. Sorry?

20 A. That's an oddly specific question to ask at that juncture.

21 Q. Oddly?

22 A. I don't know how to put it. Leh mih kinda clarify the situation.
23 So Mr. Boodram is coming off a vessel and we have the triage
24 area set up to receive him. So at this point in time, our main
25 focus is his wellbeing. There's nobody there who could tell
26 you that Mr. Boodram is out of the woods.

27 **Continued Examination By Mr. Maharaj SC:**

1 Q. He's what?

2 A. He's out of the woods. We can't tell his medical condition.
3 We can't say if he has internal injuries, or anything that he
4 could further succumb to. So the transition between that vessel
5 and him being in an ambulance leaving is about five minutes.
6 So the conversation at that time is limited. We don't know if
7 Mr. Boodram has sustained possibly life-threatening injuries.

8 Q. The bends, for example.

9 A. For example.

10 Q. He's been at 60 or 70 feet below sea level for the last two and a
11 half hours?

12 A. Correct. So the focus at that triage area is to get Mr. Boodram
13 to seek medical attention. So the conversation at that point in
14 time is limited. I know Mr. Boodram. I would have asked him
15 if he's all right, and I would have asked him what happened. At
16 that time he would have said to me in layman's terms, "We got
17 sucked into the pipeline", and he would have expressed his
18 wish that we would go back for the rest of the fellas.

19 At this time also, he's receiving questions from the
20 medical staff there who are attending to him. So they are
21 asking him medical-based question. So this is a four- to five-
22 minute gap. So—and that's why I say it's oddly specific that
23 somebody would be able at that transition period to ask him
24 about conditions in the pipeline.

25 Q. I could understand that. I could understand that. But you were
26 saying that you were concerned with the wellbeing of Mr.
27 Boodram?

1 A. Yes.

2 Q. But weren't you also—were you not also concerned about the
3 wellbeing of the other persons who were in the pipeline?

4 A. Of course, I was.

5 Q. And as a member of the ICT, wouldn't you have wanted to get
6 information from Mr. Boodram as to whether these persons
7 could be rescued, the condition in the pipeline, or anything like
8 that?

9 A. As I said, within the activity of putting Mr. Boodram on a
10 stretcher, putting on neck braces, administering oxygen, the
11 medical staff asking him different medical-based questions, I
12 would have asked him what happened. Right? I would not
13 have asked him the specific question, "Mr. Boodram, what are
14 the conditions in the pipeline?"

15 Q. You see, Mr. Yearwood, why I'm asking you that is that the
16 ICT members who have given evidence in this matter have
17 spent a lot of hours trying to get a video footage of what was in
18 the pipeline.

19 A. I understand that.

20 Q. And they were saying, well, they had to get that to see the
21 conditions in the pipeline before they considered: were any
22 rescue efforts could have been taken to send men in the
23 pipeline. So that is why I'm asking you, well, if you on your
24 own initiative did not do it—you would have communicated to
25 anyone that Mr. Boodram came out?

26 A. I would have been told that Mr. Boodram came out and that is
27 when I proceeded to the triage area.

1 Q. Right. So when, as far as you knew, the ICT knew that Mr.
2 Boodram came out? Around what time? How long after Mr.
3 Boodram came out, you think that the ICT knew, as a member
4 of the ICT?

5 A. Probably a couple minutes.

6 Q. A couple minutes. During those couple minutes, did they tell
7 you or are you aware of any steps taken by the ICT for either
8 you to go with Mr. Boodram in the ambulance to talk to Mr.
9 Boodram to get any information from Mr. Boodram?

10 A. So I would have asked for one of my team to accompany Mr.
11 Boodram in the ambulance.

12 Q. So did you ask for one of your team?

13 A. Yes, I did ask that question.

14 Q. And for what purpose?

15 A. So the—as we said, the primary purpose at that point in time is
16 to ensure that Mr. Boodram receives the best medical care.

17 Q. Yes. So Mr. Boodram is going to the hospital.

18 A. Correct. So I want one of my guys to go with him.

19 Q. Just to go with him? Not to ask him any questions?

20 A. Well, the person at that point in time would be able to get
21 information.

22 Q. Well, who was the person you asked to go with him?

23 A. I didn't ask anybody specifically to go with him. I would have
24 asked the attendants from GMRTT to allow one of my persons
25 to go with him.

26 Q. But did you do that?

27 A. Yes, I did.

1 Q. And did someone went with him?

2 A. No, no one went with him. The persons from GMRTT
3 indicated it's not their policy at that time to allow anybody to
4 go in the back of the ambulance with him.

5 Q. But as a man involved in safety—and this is your job for 13
6 years, you said, right?

7 A. Um-hmm.

8 Q. One diver came out of the pipeline.

9 A. Right.

10 Q. Four divers inside the pipeline. You would have known then—
11 there and then—that if you had to have a rescue of these men in
12 the pipeline it had to be done quickly.

13 A. Well, at that time I didn't know where the men were.

14 Q. At that time you didn't know where the men were?

15 A. I knew that Mr. Boodram came out a pipeline. I didn't know if
16 all the divers came up at the same time. I didn't know—

17 Q. No, but didn't you just tell us that Mr. Boodram told you—

18 A. Right. So he said to go back for them.

19 Q. Yes. Go back for them, well, where?

20 A. Well, I don't know.

21 Q. When he told you go back for them—

22 A. What I'm saying is, I do not know exactly what he meant when
23 he said go back for them.

24 Q. But did you ask him what he meant?

25 A. As I indicated, the situation at that time is a limited time
26 window with a lot of activity and we would have asked Mr.
27 Boodram what we could, given the circumstances.

1 **Examination By Mr. Chairman:**

2 Q. Just before you leave this topic, can I ask you, first of all,
3 you're saying that the ambulance staff told you when you made
4 the request for someone to accompany Mr. Boodram to the
5 hospital that it was not their policy?

6 A. They told me it was not permitted. I would have investigated—

7 Q. You said not their policy. Which is it? Not their policy or not
8 permitted?

9 A. I was not permitted to send somebody with him.

10 Q. Not permitted. I should scratch out "not their policy"?

11 A. You can scratch out that.

12 Q. Right. I'll scratch that out. Not permitted. They were not
13 permitted. Did they say why?

14 A. They didn't say why at that point in time. As I said, the
15 circumstance is dynamic, but I would have found out why later
16 on, and the reason was, at that time, we're still going through
17 Covid.

18 Q. Covid.

19 A. So that is why they were not allowing persons to go to the back
20 of the ambulance.

21 Q. So let me understand this. This man has come out of the pipe
22 after several hours of being in it. He is brought out by other
23 divers?

24 A. Yes.

25 Q. Held in the hyperbaric chamber for a little while because of the
26 bends?

27 A. Correct.

1 Q. He's then transported from there onto the—

2 A. No, there was no hyperbaric chamber there.

3 Q. Sorry?

4 A. Well, I don't know if they held him because of the bends.

5 Q. Whether they did or not, we've heard evidence about it. Either
6 way he was held in the hyperbaric chamber for a while for
7 whatever reason. All right? He's held there by other divers.

8 A. Correct.

9 Q. And then brought to the surface and on to the berth. Correct?

10 A. Correct.

11 Q. He's then taken from there onto a boat?

12 A. Correct.

13 Q. And transported by boat to the jetty?

14 A. Correct.

15 Q. All of that takes time, and he's with other people who were
16 trying to save his life?

17 A. Yes.

18 Q. Right. He's now on the boat. He gets to the jetty, and at the
19 jetty he's met by ambulance staff from the hospital, and by you,
20 and others. Correct?

21 A. Yes.

22 Q. He's then put on—five minutes whilst waiting there and then
23 he's put onto the ambulance. And at that point, you're being
24 told he cannot have someone accompany him because of Covid
25 regulations?

26 A. Well dah is wha' I would have found out after.

27 Q. You didn't understand it was Covid regulations at the time?

1 A. I didn't understand it was Covid.

2 Q. You subsequently discovered that he was not allowed to have
3 anybody else in the ambulance with him, because it was Covid
4 regulation not to?

5 A. Yes.

6 Q. Right. In any event, because you were not told—can I take it
7 you didn't ask why you were not permitted to have someone
8 accompany him in the ambulance?

9 A. I didn't ask the question. As it was a split-second decision and
10 I really wanted him to—

11 Q. No, no, I'm not criticizing that. I understand that this is a
12 dynamic situation, all rather suddenly.

13 A. As I said, you really want to get this guy to seek medical
14 attention.

15 Q. Yes. I get that. But he's alive. There are four other people in
16 the pipe who are not, perhaps, and what's important is, is for
17 you and the IMT to know as much as you possibly can about
18 the other four. Isn't it?

19 A. Yes.

20 Q. I mean, hallelujah, this man has managed to crawl out under his
21 own free will and through tremendous effort to get out of the
22 pipe. That's what he's done, isn't it? You knew that?

23 A. Yes.

24 Q. And the fact is that he was best placed, as Mr. Maharaj was
25 asking you, to tell you, the IMT, the conditions in that pipe.

26 A. Well, I believe he would have—what he told me is to go back
27 for the others.

1 Q. Right. So pausing there for a moment. If he's saying to you—I
2 think he was saying—we know; we've heard evidence that he's
3 saying, "Fyzie is right behind me". You know who Fyzie is?

4 A. Yes.

5 Q. Right. "Fyzie is right behind me; go back and get him; go and
6 get him." Was he saying to you that the others were alive and
7 in the pipe?

8 A. He didn't use the words "alive" at that point in time, but he
9 expressed, we need to go back for them.

10 Q. Right. So he didn't say to you they're actually alive. Did you
11 ask him?

12 A. I didn't ask that specific question. But I would assume that if
13 he's telling me to go back for them that—

14 Q. You assumed they were alive?

15 A. That they're alive.

16 Q. Right. So you knew or believed at that point in time that he's
17 got out of his own free will and that there are others in there,
18 and they're alive?

19 A. Yes.

20 Q. You also understood how important it would be to discover as
21 much as you possibly can, about the conditions?

22 A. So as I said before, when he said go back, at this point in time I
23 am at the landing. I don't know if all the divers came out the
24 pipeline and they're still in chamber. So when he says go back
25 for them, I don't know if he means go back in the pipeline—

26 Q. Maybe they all just came out together?

27 A. Maybe they all just came out together.

1 Q. All right.

2 A. So the focus for me at that point in time is to ensure that I have
3 enough medical assistance at that landing to cater for whatever
4 eventuality may come.

5 Q. Is it realistic, though, Mr. Yearwood, if they'd all came out the
6 same time that he would be the only one on the boat coming to
7 the shore?

8 A. Well, as I say, I didn't understand fully the circumstances; the
9 details are coming. So they may have been just at the surface;
10 they may be—but I would have been preparing to receive other
11 persons coming in.

12 Q. Anyway, nobody went with him in the ambulance?

13 A. Nobody went with him in the ambulance.

14 **Mr. Chairman:** Thank you. Mr. Maharaj.

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. Mr. Yearwood, but according to you, he told you go back for
17 them?

18 A. Yes.

19 Q. Where you thought the others were?

20 A. They could have been in the hyperbaric chamber. They could
21 have been just in the pipeline.

22 Q. But did you go back for them?

23 A. It wasn't my role at that point in time.

24 Q. Did you take steps to go back for them in the hyperbaric
25 chamber?

26 A. Sir, at the point in time—

27 Q. Did you take steps for them to go back in the hyperbaric

1 chamber?

2 A. Sir, at the point in time, I was assigned to do a specific duty.
3 For persons who understand the Incident Command system,
4 you play your role in that specific system.

5 Q. But here it is you are a member of the ICT. One man comes
6 out and he tells you go back for them. So what? Did you
7 communicate—did you try to find out where they were?

8 A. So what I would have done, I would have relayed all the
9 information that I would have gotten from Mr. Boodram at that
10 point in time to the members of the ICT including the Incident
11 Commander.

12 Q. You are the Safety Officer of Paria?

13 A. I'm the Safety Officer on the ICT.

14 **Examination By Mr. Chairman:**

15 Q. Could you help me with this? There's a record kept of the
16 events that were taking place in the—I keep calling it IMT or
17 ICT—it's the same thing. It's interchangeable. Right?

18 A. Yes.

19 Q. In the Command Centre there's a record being kept?

20 A. Yes.

21 Q. You understood there was a record being kept when you were
22 in charge of the first three hours or so, before Mr. Piper arrived?

23 A. Yes.

24 Q. That record is supposed to reflect all the major events that take
25 place, is it not?

26 A. Yes.

27 Q. So you're relaying the information that you had direct from Mr.

1 Boodram back to the ICT?

2 A. Yes.

3 Q. It should have been recorded, shouldn't it?

4 A. It should have been recorded.

5 Q. Yeah, it isn't. Or at least what you've been telling us, isn't.

6 That's a flaw, isn't it, in the system that was being adopted by

7 the ICT, that it doesn't record your telling the ICT precisely

8 what you had learned from Mr. Boodram? Because that's quite

9 important, isn't it?

10 A. Yes, it is.

11 Q. I mean, you're an HSE Officer of many years' experience.

12 Having what albeit limited information that you did, that was

13 something that they needed to know, which is why you were

14 telling them?

15 A. Yes.

16 Q. And it's something which ought to have been recorded—on any

17 view, ought to have been recorded?

18 A. I agree.

19 Q. I appreciate you weren't there so you can't say why. You can

20 look at it if you wish, but it's clearly the case. None of this is

21 being recorded in the ICT. You don't know why?

22 A. I wouldn't know why. I would have relayed the information as

23 I got it.

24 Q. When did you first discover that the reason why nobody was

25 allowed to accompany Mr. Boodram back to the hospital was

26 because of Covid restrictions?

27 A. Sometime later.

1 Q. How many hours later?

2 A. Not hours later; days later after the incident.

3 Q. Days later?

4 A. Yeah.

5 **Mr. Chairman:** All right. Thank you.

6 **Continued Examination By Mr. Maharaj SC:**

7 Q. Could you tell us—well, what was the purpose of you wanting
8 someone to go with Mr. Boodram?

9 A. I wanted someone to go with Mr. Boodram to ensure that he got
10 the best medical care. If there were any troubles or any
11 assistance that we could render to him, that person will be able
12 to relay that request directly to me.

13 Q. So it was not to get any information from Mr. Boodram as to
14 where the other men were or what were the conditions of the
15 pipeline or anything like that?

16 A. So I would have been in communication with that person, and if
17 Mr. Boodram was able to give that information, we would have
18 gotten it.

19 Q. But, as you said, he was conscious?

20 A. He was conscious.

21 Q. He was talking?

22 A. He was talking.

23 Q. I'm asking you as a safety officer on the spot on that day, you
24 wanted someone to go with Mr. Boodram—did you want
25 someone to go with Mr. Boodram to get information from Mr.
26 Boodram about the pipeline?

27 A. The person would have gotten information about the incident if

1 they went.

2 Q. Did you want them to get that information?

3 A. Of course, I wanted them to get as much information as
4 possible.

5 Q. Did you tell the ICT that you wanted to get that information and
6 they prevented you from sending someone?

7 A. The ICT did not prevent me from sending anyone.

8 Q. No, no, no. Did you inform the ICT that you wanted someone
9 to go with Mr. Boodram and that you were prevented from
10 sending someone to go with Mr. Boodram?

11 A. I informed the ICT that no one accompanied Mr. Boodram.

12 Q. Did you tell them that you wanted to get information from Mr.
13 Boodram?

14 A. I told them that no one accompanied Mr. Boodram.

15 **Mr. Maharaj SC:** No further questions.

16 **Examination By Mr. Chairman:**

17 Q. I do. Why didn't you send somebody in a car behind the
18 ambulance? If you couldn't go in the ambulance, at least
19 follow it. I mean, if your primary purpose was to ensure the
20 wellbeing of Mr. Boodram rather than getting information, then
21 it really didn't matter whether you were in the ambulance or
22 following it, did it?

23 A. No, it didn't.

24 Q. Right. So why didn't you send someone to follow the
25 ambulance?

26 A. So I would have—as I said, I would have relayed the
27 information to the ICT, and then I go back to my role.

1 Q. Yes, your role, as you told us—forgive me. Your role as you
2 told us was to focus on the wellbeing of those who were to be
3 rescued, if they were ever to be rescued?

4 A. Correct.

5 Q. That was your focus.

6 A. Correct.

7 Q. Your focus changed after you handed over to Mr. Piper. So
8 using that focus, did you not think the wellbeing of Mr.
9 Boodram was primary concern, and if you weren't allowed in
10 the ambulance, to follow him?

11 A. I would expect that I would have relayed the information to the
12 ICT, and they would have made necessary arrangements to
13 have someone go to the hospital.

14 Q. Whose job was it to do that?

15 A. At the end of the day, the decisions are made by the Incident
16 Commander.

17 Q. Is it Health and Safety Executive's job to do that?

18 A. No.

19 Q. No? Whose job is it then?

20 A. It was my job at the time to give the ICT as much information
21 for them to make a decision.

22 Q. It's not just information, though, is it? Surely, there's some
23 action to be done as well.

24 A. Yes. I would expect that the action would have taken place.

25 Q. You would have expected it. But who was going to do it? Who
26 was physically going to do? Somebody, one of your staff
27 would have to get in a car and follow the ambulance, wouldn't

1 they?

2 A. Yes.

3 Q. Right. Well, who then? Was it going to be you?

4 A. No, it wasn't going to be me.

5 Q. Right. It was going to be somebody else on your team?

6 A. Yes.

7 Q. Who was present? Who would have been present?

8 A. Yes.

9 Q. Right. And who would have told that person on your team to
10 follow the ambulance?

11 A. The instruction would have come from the Incident Command
12 Team.

13 Q. Not to you?

14 A. Not through me.

15 Q. So the Incident Command Team would have decided somebody
16 on your staff would have to follow the ambulance in their car?

17 A. Well, within the ICS structure, the Incident Command gives me
18 instructions, and I would—

19 Q. You're not allowed to take any initiative?

20 A. I can take initiative.

21 Q. You can?

22 A. Yes.

23 Q. Right. But when you asked, because you were so concerned,
24 for one of your team to go with the ambulance, why on earth
25 didn't you just say to that person, whoever it was going to be,
26 "Look, they won't let you go in the ambulance, but follow
27 them"?

1 A. I didn't make that decision at that time.

2 Q. No, clearly you didn't. But I want to know—and I do want to
3 know why that was not pursued either by you or the IMT?

4 A. As I said, the focus at that time at the triage area was to receive
5 more persons.

6 Q. You mean you thought they would all just come out
7 themselves?

8 A. I wasn't sure at that point in time where they were.

9 **Mr. Chairman:** Yeah. Thank you.

10 Right. Are there any other questions from anybody else?
11 Just one moment, please. I just want to make sure that there's
12 nothing myself I wanted to ask Mr. Yearwood to help me with.

13 All right. I think I've covered everything I want. Yes. Is there
14 anybody—before I ask, is anyone else going to be asking
15 questions or is it—yes. All right. Well, we'll hear, first of all,
16 from Ms. Alfonso, please. She's from the Trade Union.

17 **Cross-Examination By Ms. Alfonso:**

18 Q. Good morning, Mr. Yearwood.

19 A. Good morning.

20 Q. My name is Nyree Alfonso. I represent the interest of the
21 SWWTU, and I just have a few questions. Quite a few of the
22 questions that I wanted to ask have been asked by either the
23 Chairman or learned Senior, Mr. Maharaj.

24 Mr. Yearwood, I just want to carry you back to where the
25 Chairman just left you in terms of his questioning, and I won't
26 berate the point. You've been very clear as to, you know, your
27 priority when Mr. Boodram was in the triage area. Just clarify

1 for us. Aside from the medical personnel who may have been
2 asking him questions about, you know, his medical condition as
3 far as he knew it to be, he was also able to, I gather, borrow a
4 cell phone from somebody and have a conversation with his
5 wife?

6 A. I observed him using a cell phone while he was still on the
7 vessel.

8 Q. Okay, while he was still on the vessel? And in your witness
9 statement, you referred to he was speaking to his wife. So you
10 had to be close to him.

11 A. Well, I could hear.

12 Q. You could hear. Oh, so you were very close to him?

13 A. Well, close enough to hear.

14 Q. Okay, close enough to hear. He has—he's lucid. There's
15 medical personnel there but he's having another conversation?

16 A. Well, he's not having a conversation. He is talking to someone.
17 I wouldn't say that it was a conversation. I remember him
18 coming down. I remember him thanking Jesus. He's speaking
19 to somebody who he say is his wife. He's saying ah coming; ah
20 coming home; ah coming home. Thank Jesus. So it's not
21 really as if they are having a conversation.

22 Q. Just for my edification, Mr. Yearwood, what would you classify
23 that exchange to be?

24 A. I would classify it as somebody who just came out a difficult
25 situation and they are expressing their thanks and trying to
26 connect with someone.

27 Q. And he's speaking with somebody on a telephone?

1 A. He's speaking with somebody on a telephone.

2 Q. Okay. So he wasn't having a conversation. He was speaking?

3 A. He was speaking. You used the word, "A lucid conversation".

4 I wouldn't say—it's not a conversation as if we are having here.

5 Q. Well, thank you for that, Mr. Yearwood?

6 A. No problem.

7 Q. I would endeavour to be lucid. Mr. Yearwood, I said that—a
8 number of questions have been asked on this point, so I'll leave
9 you with that point. I would just ask you if you would agree
10 that—

11 *[Cell phone vibrating]*

12 **Mr. Chairman:** Somebody's phone is vibrating on a desk
13 somewhere.

14 **Ms. Alfonso:** Sorry. That appears to be me.

15 **Mr. Chairman:** Is that you?

16 **Ms. Alfonso:** Yes, guilty. I beg your pardon, Chairman. I
17 have it on silent, but it is vibrating.

18 **Continued Cross-Examination By Ms. Alfonso:**

19 Q. Mr. Yearwood, you wouldn't agree that in-between that
20 conversation, thanking God, and go back for the fellas, but you
21 didn't know where the fellas were you could, you know, slip in
22 a little question about where he came from or where the other
23 persons that you knew to be somewhere else other than the
24 hyperbaric chamber?

25 A. As I would have indicated, I did slip in that question, and the
26 question I asked him is what happened.

27 Q. And he simply responded, what? Remind me. What did he

1 say?

2 A. He would have indicated that they were in the pipeline and then
3 he indicated that he wanted persons to go back for them.

4 Q. So you knew—so, Mr. Yearwood, thank you for that. So you
5 knew, Mr. Yearwood, that the persons, the remaining divers
6 which would be four, were in the pipeline. You didn't think
7 they were on the surface as you said before. You didn't think
8 that they were in the hyperbaric chamber as you said before?

9 A. As I said, I would not be sure where the persons were. I don't
10 know if all the men came out at the same time. I don't know
11 where they exactly are. I'm speaking to somebody who's being
12 very repetitive, who would have been showing a great deal of
13 emotion at that point in time, and what he would have told me
14 is go back for them.

15 Q. But he told you go back for them and he would have added
16 "and they were in the pipeline" at some point in time in what he
17 was saying, since it's not a conversation; in what he was saying.

18 A. Right. So he did mention a pipeline as I said.

19 Q. And you would have known which pipeline was involved in the
20 works that were being conducted. Yes, Mr. Yearwood?

21 A. Yes.

22 Q. Thank you for that, Mr. Yearwood. Mr. Yearwood, just for my
23 clarification because I'm sure I got it wrong when I read your
24 witness statement. You would have said in answer to Mr.
25 Maharaj's questions earlier this morning that your department,
26 the persons that reported to you in your department, became
27 involved in the health and safety aspects of this contract after

1 the tender was awarded. Did you say that?

2 A. Yes.

3 Q. Okay. I want to carry you to paragraph 6 of your witness
4 statement, please, on page 1301. Could you read—you're able
5 to read that, Mr. Yearwood?

6 A. In or around June 20.

7 Q. Okay, let me help you out. I'm sorry. My bad. Second line.
8 What does that line start with? Second line in paragraph 6?

9 A. A specialist contractor to conduct certain subsea work on
10 Paria's 36 sealine riser at berth No. 6 following the tender
11 process.

12 Q. Prior to LMCS being awarded the tender, I assigned Mr. Ryan
13 Nanton, HSE Specialist (Kenson) to be part of the internal
14 multi-dimensional team to review the method statement, risk
15 assessment, emergency response plan.

16 **Mr. Chairman:** Multi-departmental.

17 **Ms. Alfonso:** I beg your pardon.

18 **Cross-Examination By Ms. Alfonso:**

19 Q. You see that sentence, Mr. Yearwood?

20 A. Yes, Ma'am.

21 Q. Okay. So would it be correct, Mr. Yearwood, now that you see
22 this part of paragraph 6, that Mr. Nanton was part of the process
23 of reviewing these documents that are detailed here prior to the
24 award?

25 A. No, that is not so. The documents would have been submitted
26 prior to the award and Mr. Nanton would have been on that
27 team after.

1 Q. Okay. So when it—so that, what is here in your witness
2 statement is incorrect, then?

3 A. Yes.

4 Q. It is. So what is more correct is what you said this morning?

5 A. Yes.

6 Q. I see. That your department didn't become involved till after
7 the award of the contract?

8 A. No.

9 **Examination By Mr. Chairman:**

10 Q. So that should say instead of prior to LMCS being awarded the
11 tender, you would say after LMCS were awarded the tender?

12 A. Correct. What it should say is that they reviewed the
13 documents that were submitted in the tender.

14 Q. Sorry, I didn't catch the last of—

15 A. Yes, so it would be after.

16 Q. So if I changed the word in your statement which says prior to
17 LMCS being awarded the tender to after LMCS were awarded
18 the tender, I assign Mr. Nanton, HSE Specialist, et cetera. Yes?

19 A. That will be correct.

20 **Ms. Alfonso:** Thank you, Mr. Chairman.

21 **Continued Cross-Examination By Ms. Alfonso:**

22 Q. Mr. Yearwood, aside from Mr. Nanton, you also assigned Mr.
23 Dopson?

24 A. Yes, I would have.

25 Q. Okay. And Mr. Dopson, you assigned to have some oversight
26 on behalf of your department?

27 A. I specifically assigned him to be the competent person with

1 regards to the hot work activities taking place on the site.

2 Q. Okay. Let me carry you to paragraph 10 of your witness
3 statement which is page 1302. Have you read it, Mr.
4 Yearwood?

5 A. Yes, I have.

6 Q. Thank you. Mr. Yearwood, could you tell me whether this is an
7 accurate representation of what Mr. Dopson was detailed to do
8 by yourself?

9 A. Yes.

10 Q. Okay.

11 A. So in his function as the competent person with regards to hot
12 work, he would have to make periodic visits to the site and
13 provide HSE oversight.

14 Q. Only for hot works, Mr. Yearwood?

15 A. Yes, Ma'am.

16 Q. Is that what it said there? You said this is your witness
17 statement; you wrote it. Is that what it said there?

18 A. It says that he would make periodic visits to the site and
19 provide HSE oversight.

20 Q. Okay. So that would include monitoring the job?

21 A. Yes, he would also do some monitoring of the job.

22 Q. He will do some monitoring of the jobs. So he will be
23 monitoring to see whether, you know, safe practices which are
24 in the tender, which are in the contractors' document, which are
25 in accordance with Paria's policies and procedures are being
26 followed. Yes?

27 A. I would expect him to provide oversight with regards to what

1 was to be done basis the permit to work.

2 Q. I see. Now, Mr. Yearwood, is it that you—

3 **Mr. Chairman:** Sorry. Before you move away from that—

4 **Examination By Mr. Chairman:**

5 Q. Can I just understand what you're saying about that paragraph?

6 You say you assigned Mr. Dopson, whom we've heard from,
7 make periodic visits to the site and provide some oversight,
8 HSE oversight?

9 A. Yes.

10 Q. His role was to support the maintenance technician assigned to
11 the job. Do you know who that was?

12 A. No, I don't know who that was on the particular day.

13 Q. No. The Maintenance Technician was—the man who was on
14 the site at the time, Kirt Scott, yes. Is that Kirt Scott?

15 A. No.

16 Q. Not him? I got it wrong. Who was it?

17 A. It would most likely be Mr. Houston Marjadsingh.

18 Q. Marjadsingh. And he was the Maintenance Technician
19 assigned to the job. Yes?

20 A. Yes.

21 Q. Did you understand that Mr. Kirt Scott was also assigned to the
22 job?

23 A. I don't know if he was assigned to the job.

24 Q. All right, you don't know. Anyway, so this Mr. Dopson, his
25 role was to support the Maintenance Technician, which is
26 Marjadsingh?

27 A. Yes.

1 Q. —assigned to the job to ensure that it was being done in
2 accordance with the risk assessment. Yes?

3 A. Yes.

4 Q. And the permit to work documentation?

5 A. Correct.

6 Q. So his job—as I understand it then, there were three people
7 whose task it was—I appreciate then that Mr. Scott was there
8 but we do—Scott, Mr. Marjadsingh, and Mr. Dopson, whose
9 roles it was to have some oversight of the work being done,
10 which included the permit to work?

11 A. Yes.

12 Q. And is it your understanding that if they were to stray from that
13 they should stop the work?

14 A. Yes.

15 **Mr. Chairman:** Thank you. Thank you very much.

16 **Ms. Alfonso:** Thank you, Mr. Chairman.

17 **Continued Cross-Examination By Ms. Alfonso:**

18 Q. Mr. Yearwood, is it that you live close to the location where the
19 ICT was—well, the compound of Paria?

20 A. Fairly close.

21 Q. Okay. So that you activated the ICT?

22 A. I would have contacted Mr. Piper and I would have been given
23 the instruction to activate the ICT, yes.

24 Q. Okay. But you activate it because you were close by
25 physically?

26 A. Yes, physically.

27 Q. Okay. So one of the people that you called aside from your

1 immediate superior—which is Mr. Archbald, yes?

2 A. Yes.

3 Q. Okay. You called somebody called Shelly Maharaj?

4 A. Yes.

5 Q. Okay. And you called Ms. Maharaj to act in what capacity?

6 A. I would have called her to specifically log events and data.

7 Q. Okay. For the ICT?

8 A. For the ICT.

9 Q. I see. Now, we've received some documents from Paria which
10 are in handwriting. Is it that Ms. Maharaj recorded certain
11 things in handwriting in the ICT while you were there?

12 A. Right. So, initially, I would have asked one of the technicians
13 to start recording on a whiteboard, and subsequent to that, Ms.
14 Maharaj would have arrived.

15 Q. And how did she record what was transpiring or telephone calls
16 or information being received by the ICT?

17 A. She may have written it down.

18 Q. Did you see her write it down?

19 A. No, I did not see her write it down.

20 Q. Okay. But you asked her to record things?

21 A. I asked her to record things.

22 Q. But you can't say if she recorded anything?

23 A. She would have arrived after I would have handed over to Mr.
24 Piper.

25 Q. I see.

26 A. Or somewhere within that vicinity.

27 Q. Are you able to assist at all whether she was handwriting things

1 on—well, as you say, on the whiteboard, in a piece of paper, in
2 a notepad, on a computer? Are you able to say?

3 A. So what I do know is the technician that I assigned before she
4 arrived, was writing everything on a whiteboard to allow
5 persons coming into that room to be able to easily see the
6 sequence of events that we would have recorded. She would
7 have come in some time later, and I wouldn't know how she
8 was recording at that point in time.

9 Q. Okay.

10 **Ms. Alfonso:** Could the witness be shown 1541 of the
11 supplemental core bundle—the corrected version?

12 **Mr. Chairman:** It might be helpful if he starts at 1538,
13 because I think there are photographs of the whiteboard.

14 **Ms. Alfonso:** Thank you for that, Mr. Chairman.

15 **Examination By Mr. Chairman:**

16 Q. You see that? Mr. Yearwood, does that look like the images
17 you're speaking of on the whiteboard? That's the first one,
18 which is a notepad. Forgive me. Then you go to the next page,
19 1539, and then 1540. These are screens. I don't know if it's a
20 whiteboard or a screen. It looks like a whiteboard to me. Just
21 identify whether or not that is or is not what you're talking
22 about?

23 A. No, this is not what I'm speaking about.

24 **Mr. Chairman:** It's not. Very well. Thank you.

25 **Continued Cross-Examination By Ms. Alfonso:**

26 Q. So the technician you referred to, you recall his name?

27 A. Yes.

1 Q. What's his name?

2 A. Nigel Sandiford.

3 Q. Nigel Sandiford. So did Nigel write these?

4 A. No. The colour of the pen he was using—not the pen, the
5 marker—was an orange colour.

6 Q. Well, if I follow—I'm not one, um, a techy person at all. This
7 looks like some sort of—like a photograph; I don't know, taken
8 with a cell phone and reproduced, you know.

9 **Mr. Chairman:** Go back to 1538. Go back to 1538, let's just
10 see where we are with these documents. Right?

11 **Examination By Mr. Chairman:**

12 Q. And do you see on the top left hand corner of 1538, it seems to
13 say "Nigel". I can't read the next word.

14 A. That is Nigel Bachoo.

15 Q. A different person?

16 A. Different person.

17 **Continued Cross-Examination By Ms. Alfonso:**

18 Q. And you don't think that Nigel Sandiford wrote these things?

19 A. No, Nigel Sandiford wasn't writing in a book. He was writing
20 on a whiteboard.

21 **Examination By Mr. Chairman:**

22 Q. Just on the whiteboard?

23 A. Just on the whiteboard.

24 Q. Right. And that's not what we see on the next page. Go over to
25 the next page, please. Not that?

26 A. No, it's not that.

27 Q. And not on the next page either?

1 A. No. What he would have been recording would have been
2 events, resources as they come in, and personnel coming in at
3 that point in time.

4 **Mr. Chairman:** All right. Thank you very much. I just
5 wanted to establish what they were, because I didn't understand
6 it either. Thank you very much.

7 **Ms. Alfonso:** Thank you. And I myself, I'm just trying to
8 ascertain.

9 **Continued Cross-Examination By Ms. Alfonso:**

10 Q. If we go to 1541 or 1542, any of those—well, that's a double
11 page—are you able to assist us with who wrote those things?

12 A. I don't know who would have written these things.

13 Q. Okay. Well, thank you for that. Now, Mr. Yearwood, I note in
14 your witness statement, I think it's paragraph 24, you say that
15 Kazim Ali Sr. did not provide you with any—with their rescue
16 plan, LMCS' rescue plan. You recall saying that?

17 A. Yes.

18 Q. Okay. Now, Mr. Yearwood, assuming that you are talking
19 about what? Something oral? Something in writing?

20 A. At this point in time, this is the first three hours. I would not
21 have expected anything in writing at that point in time. I would
22 expect that what would have been in writing would have been
23 the initial rescue plan detailing the ERP for the job and if they
24 had any modification to that, that would be a verbal
25 conversation, really. At that point in time, I wouldn't have
26 really attempted to interrupt LMCS in any way. So the reason
27 why we wanted somebody in the ICT was to figure out what

1 happened, firstly, because they were working there, and to see
2 if they would require any assistance from Paria to aid in the
3 rescue effort.

4 Q. So, Mr. Yearwood, I know—and I won't belabour it because
5 my learned Senior, Mr. Maharaj, would have traversed that
6 area. You were calling somebody. You wanted somebody
7 from LMCS to attend to the ICT?

8 A. Yes.

9 Q. As a representative of the Company?

10 A. Correct.

11 Q. And you complained to some extent that, you know, nobody
12 volunteered themselves or nobody was sent as a representative?

13 A. Well, I didn't complain; that's what happened.

14 Q. I'm just saying it from your witness statement. But, as I said,
15 that's not an issue I'm interested in. What I'm interested in is,
16 if you had received, whether orally—okay. Let me just deal
17 with what you just said. Thank you for that. You said you
18 were looking for some sort of modification on an existing
19 rescue plan? Did I understand that right?

20 A. Well, there would be a rescue plan for the job within the ERP—
21 granted the scenario, that may have been modified—but no plan
22 was made available to me.

23 Q. Okay. Would it be correct, Mr. Yearwood, that the emergency
24 response plan that you referred to would not have, or did not
25 contain any—what shall I say—any potential scenario, any
26 scenario by which one, four, five divers would find themselves
27 inside of the pipe?

1 A. Correct. But at that point in time, the focus was not inside the
2 pipe. This is the very early stages where the focus was still
3 very much in and around the pipe. So the search was there.

4 Q. Oh, I see.

5 A. So the real care to go inside the pipe was really after Mr.
6 Boodram came out. So I wouldn't have—what I wanted from
7 them is what their rescue plan is and what they are doing, and
8 what happened in the incident.

9 Q. And, Mr. Yearwood, I want to carry you back to what you said
10 earlier in your witness statement in respect to something else:
11 that Paria did not have the expertise or the experience, I
12 suppose, and expertise, basically to—I don't want to say
13 micromanage—okay, second-guess or to review or to, you
14 know, in any way challenge what LMCS had said with respect
15 to the actual tender and the contents of the tender. If you
16 received a rescue plan as you say, were you or are you in a
17 position or could you have been in a position at that time to
18 review it, or analyse it, or critique it in any way, evaluate it, any
19 of those things? You personally?

20 A. Yes.

21 Q. Yes?

22 A. Between me and my team. So what would happen is we have
23 the method, we have the risk assessment, and then we have the
24 ERP. If the risk assessment does not pick up the risk, then the
25 ERP doesn't cater for it. So if somebody says to me there's a
26 risk that these guys could enter the pipeline through a Delta P,
27 then you develop an ERP along those lines and that could be

1 evaluated by Paria.

2 Q. So somebody in your team—you yourself, Mr. Yearwood, or
3 somebody in the HSE Department?

4 A. I could do it.

5 Q. Okay. So you yourself are able to analyse and evaluate a rescue
6 plan surrounding—which largely would be a diving operation.
7 You yourself, because you are a senior person in the HSE—
8 much more senior than Mr. Dopson and Mr.—I've lost track of
9 the other one—Mr. Dopson and Mr. Nanton. That was the
10 other one.

11 A. No, I wouldn't say specifically for a diving operation.

12 Q. Okay. So even if a plan was provided to you, you would not—
13 unlike what you say in your witness statement at 24, you
14 yourself would not be able to sign off on it, to agree to it or
15 disagree with it, as the case may be?

16 A. It depends on the rescue plan. It may be very straightforward;
17 that they enter the water—

18 Q. But you're not a diver yourself?

19 A. I'm not a diver myself.

20 Q. You know anything tethering, and umbilicals, and surface air,
21 and helmets, and so on? You know anything like that?

22 A. No, but we could get the information.

23 Q. You could get the information. So when you were reviewing
24 the tender documents after the award, as you now clarified, you
25 could have gotten, as you say, the information; you could have
26 gotten the expertise to review the emergency plan, amongst
27 other things, when you got those document. Yes?

1 A. If it was necessary.

2 Q. You didn't think it was necessary at the time?

3 A. I said the documents were reviewed. LMCS had produced
4 several rescue plans for many diving operations, and they
5 would be similar in nature, and based on that we would have
6 determined it to be suitable and sufficient.

7 Q. With the benefit of hindsight, Mr. Yearwood, which is always
8 20/20 or better, do you think that that was a course of action
9 that Paria should have adopted to be able to rigorously test the
10 rescue plans that were presented?

11 A. Well, coming out of this incident, it is something that would be
12 considered.

13 Q. It is something that would be considered?

14 A. Yes.

15 Q. To your knowledge, Mr. Yearwood, is there any change in
16 policies, or procedures, or safety—in your department—I can't
17 ask you overall—in your department, that reflects taking into
18 account what happened in this incident?

19 A. Yes, changes have been made.

20 Q. Changes have been made. I'll take that, Mr. Yearwood.

21 **Mr. Chairman:** I won't.

22 **Examination By Mr. Chairman:**

23 Q. I'd like to know what changes, please?

24 A. Specific to rescue plans and diving?

25 Q. So changes that have been made—I'm going to make a note.
26 Changes that have been made by Paria HSE following the
27 incident.

1 A. No problem. Right. So we would have done extensive
2 retraining with regards to the permit to work system.

3 Q. Right. Extensive retraining on permit to work system. Yes?

4 A. We would have issued Terms of Reference for the development
5 of ERP.

6 Q. Sorry, you have to speak a little louder.

7 A. We would have developed a Terms of Reference for the
8 development of ERPs and issued it to all contractors.

9 Q. Terms of Reference for ERPs, emergency rescue plans. Yes?

10 A. We would have had the process of the review being more
11 rigorous.

12 Q. The review more rigorous. Yes. That's the review you spoke
13 of earlier with the team coming together?

14 A. Correct.

15 Q. Various different departments?

16 A. Correct.

17 Q. More rigorous in which way? Considering having an
18 independent person review the application in the event that if
19 something as serious or as hazardous as this particular job, or as
20 unusual as this job?

21 A. So we would have specifically considered diving, and it's not
22 specific to the HSE Department but to the entire Paria. And we
23 have had subsequent dives.

24 Q. Diving?

25 A. Where we have engaged specialists to look at the documents.

26 Q. Specialist have looked at the documents subsequently?

27 A. Subsequent.

1 Q. So where you've employed divers subsequently, you've had
2 specialist look at what the dive plan—

3 A. Yes.

4 Q. Have they considered the question of Delta P?

5 A. We haven't had any diving activity under chamber or anything
6 like that. It would be in the open ocean in and around things.
7 So Delta P wouldn't have come up, but we have chosen to
8 engage persons to look at these documents.

9 Q. Right. So, I mean, I asked you this earlier on, whether or not an
10 option was to have independent experts review a particular
11 project, given that it was an unusual and hazardous one. And
12 you said that that was an option.

13 A. That is an option.

14 Q. What you're saying is that now that option is actually being
15 taken up?

16 A. It has been considered as an option for diving.

17 Q. Has it been used?

18 A. It has been used.

19 Q. Right.

20 A. We have engaged Mr. Fuentes.

21 Q. Mr. Fuentes?

22 A. Yeah.

23 Q. Right. So experts—

24 A. And at least one occasion went diving.

25 Q. One occasion have been used to assess the dive plan. Yes?

26 A. Yes.

27 Q. And safety?

1 A. Safety.

2 Q. All right. Anything else?

3 A. I'll leave it there for now.

4 Q. Well, all right. You might leave it there for now. But, I mean,
5 is that what has been done post this incident?

6 A. That is what has been done.

7 Q. Is there anything else that I need to know about? You will
8 appreciate that the position for us is that we're going to have to
9 make recommendations to ensure this sort of thing doesn't ever,
10 ever happen again.

11 A. Yes, I understand.

12 Q. And for us to be able to do that, I want to know at this stage
13 whether or not you, your Company, have made any—taken any
14 action to change that which they did on the last occasion?

15 A. So those would be the major actions for now.

16 Q. Right. For example, has there been any drills of the IMT after
17 this event?

18 A. No, there haven't been any drills.

19 Q. Has there been any change of personnel on the IMT following
20 this event?

21 A. No.

22 Q. So if this were to happen again, the same IMT would be
23 convened. Correct?

24 A. Yes.

25 Q. Utilizing the same people; utilizing the same procedures?

26 A. Yes.

27 **Mr. Chairman:** Thank you. Thank you, Ms. Alfonso.

1 **Ms. Alfonso:** Thank you, Mr. Chairman.

2 **Continued Cross-Examination By Ms. Alfonso:**

3 Q. Just remind me. Did you say Mr. Fuentes was the diver that
4 you would have retained?

5 A. Yes. So I'm aware of at least one occasion where we had
6 diving operations, and we would have retained Mr. Fuentes to
7 look at the documentation.

8 Q. Okay. Mr. Yearwood, do you know whether there is diving
9 expertise available through Heritage?

10 A. Yes.

11 Q. So heritage has—I don't know if it's a dive team or, a dive
12 department, or diving personnel. You may know better than
13 myself. Do you know that to be the case?

14 A. I would know of at least one person who was recommended
15 during the incident as a dive expert.

16 Q. Would that be Mr. Rolph Seales?

17 A. Yes.

18 Q. Okay. So you know that he's employed with Heritage and you
19 know that there's some relationship between Paria and
20 Heritage?

21 A. Yes.

22 Q. Okay. So Mr. Seales or anybody else who is in his department
23 would be available to Paria on request—a sister or brother
24 companies. Yes?

25 A. I believe if the request is made.

26 Q. Okay. So a request could be made, though, as far as you know?

27 A. Yes, it could be made.

1 Q. Okay. And, certainly, a request was made of Mr. Seales on the
2 25th February. You're aware of that?

3 A. Yes.

4 Q. Right. So that Mr. Seales was somebody who could be on tap,
5 as they say, if so required, if so requested? I'm using your
6 words.

7 A. I don't know what the response to the request would be.

8 Q. Okay. But a request could be made?

9 A. But a request could be made.

10 Q. Okay. Thank you for that.

11 **Examination By Mr. Chairman:**

12 Q. Would that be entirely independent? If you wanted an
13 independent person to review the dive plan, would employing
14 someone by Heritage be regarded by the population, generally,
15 as being entirely independent?

16 **Ms. Alfonso:** Certainly when the tender came in, Mr.
17 Chairman. And if you lack that expertise—

18 **Mr. Chairman:** You're talking about now, though, aren't we?

19 **Ms. Alfonso:** Oh, no, no, no. I'm actually talking about the
20 time the tender came in and it was being evaluated, and so on.
21 That expertise didn't have to be outsourced too far.

22 **Mr. Chairman:** All right. I follow.

23 **Continued Cross-Examination By Ms. Alfonso:**

24 Q. And I understand if I'm—I may be incorrect—that Mr. Seales
25 is also a Kenson employee.

26 A. Not exactly sure if he's a Kenson employee.

27 Q. Okay. Well, he's a witness to come and we can always ask him

1 that, but I believe so. I'm just trying to establish that to say—
2 that expertise, aside from Mr. Fuentes and any other
3 independent person, would be available if you requested it?

4 A. I know the request could be made. I don't know how Mr.
5 Seales is occupied.

6 Q. Okay. Fair enough. Now, I'm taking you back—the telephone
7 call that—I think it's Shan Balkissoon?

8 A. Yes.

9 Q. Shan Balkissoon is one of your two employees who is
10 dispatched to the San Fernando General Hospital, somewhat
11 belatedly to speak to Mr. Boodram. Yes?

12 A. Yes.

13 Q. Okay. So that telephone call that we've heard that comes in
14 about ten o'clock in the night, came in on your phone?

15 A. Yes, it did.

16 Q. So Shan Balkissoon called you on your cell phone and you
17 were able to put it on speaker phone, which I presume he did as
18 well, so that both sides could hear each other. Yes?

19 A. Yes.

20 Q. The Paria ICT members who were present and Shan Balkissoon
21 and the other gentleman's whose name escapes me, and Mr.
22 Boodram?

23 A. Yes.

24 Q. Okay. So if I take you to 15—page 1541 of the same ICT
25 bundle, and that was a note that you saw previously, and I was
26 trying to get from you if you knew who had recorded that note,
27 and these documents were provided to us by Paria. So we don't

1 know who made those notes, but I'll ask that you look at the
2 notes and tell me if, from your recollection, that represents, in a
3 summary way, in a bullet point form, what Mr. Boodram would
4 have said in the conversation or some of the things that he
5 would have said in the conversation?

6 A. Yes, it does.

7 Q. Okay. And that is accurate?

8 A. That is accurate.

9 Q. Thank you very much for that. So if I take you to paragraph 34
10 of your witness statement, Mr. Yearwood, if you could just read
11 the six points that are numbered under paragraph 34 for me,
12 please?

13 A. He was sucked into the pipe.

14 Q. No, no, you can read it to yourself, Mr. Yearwood. Thank you.

15 A. Sorry.

16 Q. Read it to yourself.

17 A. Yes.

18 Q. Okay. So you will see that this contains information that is not
19 recorded in the handwritten note that we just showed you on
20 page 1541?

21 A. Yes.

22 Q. So, for instance—and I'll just point you out to “Blacks was a
23 body and he crossed over him.” That wasn't in the handwritten
24 note?

25 A. No.

26 Q. So that—I think this note was made contemporaneously while
27 the conversation was going on, and you were right there. Your

1 phone was being used?

2 A. Yes.

3 Q. The call came in to you?

4 A. Yes.

5 Q. Right. So Mr. Boodram, at about ten o'clock, is giving you
6 some information which would have been useful earlier, but he
7 was still giving you some information?

8 A. Yes, he is.

9 Q. He's telling you how many air pockets; he's telling you how
10 many weld seals he passed, and so on. You would agree?

11 A. Yes.

12 Q. So you had some information there. And that information
13 didn't include somebody was a body?

14 A. In the previous note, no.

15 Q. Okay. Right. But you have said the handwritten is accurate.
16 So I would leave it that the handwritten version is accurate.

17 Now, in paragraph 35 of your witness statement, you see
18 that the response from the experts were that they were reluctant
19 to enter the pipeline to attempt to rescue the divers due to safety
20 concerns. So let me ask you a few questions on that. Could
21 you tell us who the experts were that you're referring to?

22 A. Paria would have engaged several dive companies to look at the
23 situation with the information that we had and make a
24 determination if a rescue could be done and how it could be
25 done.

26 Q. Okay. Could you provide us with the names of those experts?

27 **Mr. Chairman:** Don't have all of this? We've got all of this.

1 **Ms. Alfonso:** No, there's something we don't have, Mr.
2 Chairman. So if you'd indulge me for just a question or two?

3 **Mr. Chairman:** Well, ask him that. Ask him that.

4 **Ms. Alfonso:** Okay.

5 **Continued Cross-Examination By Ms. Alfonso:**

6 Q. So would one of those dive places been Eastern—Eastern
7 Divers?

8 A. I believe so.

9 Q. Good. Did Eastern Divers or Eastern Emergency Response
10 Service attend on the ICT?

11 A. Could you clarify what you mean attend?

12 Q. Okay. Did they have input with the ICT? Did they call? Did
13 they come in personally on the Friday night?

14 A. I know there were several dive companies. I can't remember if
15 they actually came in. I don't know if—

16 Q. Okay.

17 A. —any evidence here would say that they came in.

18 Q. Okay. Let me ask you directly. Did Eastern Emergency
19 Response Services or Eastern Divers as I've seen
20 interchangeably, did they say, "We can't do the rescue"?
21 Refuse?

22 A. I really can't recall which company said what. What I do recall
23 is generally the companies that were engaged were reluctant to
24 enter the pipeline, and they were concerned about safety.

25 Q. Mr.—I'm trying to abide by the Chairman's direction. You
26 recall a company called OTSL?

27 A. Yes.

1 Q. Okay. You recall anybody in OTSL saying that they're not—
2 they're refusing to dive? It is unsafe to dive on Friday—on
3 Friday night? Let me clarify. That's my error. On Friday
4 night, do you recall anybody from OTSL relaying to the ICT
5 team that they were refusing to conduct a rescue, or undertake a
6 rescue, or participate in a rescue?

7 A. I can't remember any specific person.

8 **Mr. Chairman:** I'm going to stop this now, because I've
9 asked Mr. Mushtaq Mohammed to provide us with certain facts
10 which he said he would undertake to do, and I think this would
11 cover all of that.

12 **Ms. Alfonso:** Thank you, Mr. Chairman. That will be all my
13 questions, Mr. Chairman. Thank you.

14 **Mr. Chairman:** Thank you. Right. Somebody else had their
15 hand up at the back. You did tell me your name and you'll not
16 be surprised that I've completely forgotten it, so forgive me.

17 **Mr. Trebouhansingh:** That's quite all right, Mr. Chairman.
18 My name is Ved Trebouhansingh. I instruct Mr. Prakash
19 Ramadhar.

20 **Mr. Chairman:** Oh, right, you're responsible. Sorry.

21 **Mr. Trebouhansingh:** Indeed, I accept full accountability.

22 **Mr. Chairman:** That slipped out. I didn't mean it to. All
23 right. Please ask the questions. Introduce yourself to the
24 witness and tell him who you're asking questions on behalf of.
25 All right?

26 **Mr. Trebouhansingh:** Indeed, please, Mr. Chairman.

27 **Cross-Examination By Mr. Trebouhansingh:**

1 Q. Good morning, Mr. Yearwood.

2 A. Good morning.

3 Q. My name is Ved Trebouhansingh. I instruct Mr. Prakash
4 Ramadhar who represents the interests of the deceased family,
5 deceased Mr. Fyzal Kurban, and also the daughter of Mr. Yusuf
6 Henry, that is Aaliyah Henry. I have a few questions
7 concerning your role upon being notified that there was an
8 incident at berth 6. Particularly, when you were notified that
9 there was an incident, you would agree that you stepped into
10 the role as being the senior person at Paria for implementing a
11 response, an emergency response to the incident?

12 A. I would have been asked by the Incident Commander to set up
13 the ICT at that point in time.

14 Q. So by that fact, you would have been the person who was
15 responsible for implementing a response, an immediate
16 response, for an incident that you were notified of?

17 A. The person immediately responsible would be the contractor
18 who has an ERP—

19 **Mr. Chairman:** Make sure you're speaking into that
20 microphone. Move it slightly to your left, that way it will be—
21 then as you turn you'll still be in—

22 **Mr. Yearwood:** Thank you so much, Chairman.

23 **Continued Cross-Examination By Mr. Trebouhansingh:**

24 A. So the contractor is responsible for initiating the response.
25 Because of the nature of the response, the ICT was convened.

26 Q. When you say because of the nature of the response, what
27 response are you speaking of?

1 A. Well, because of the nature of the incident—it's a major
2 incident.

3 Q. So, therefore, you are responding to the incident?

4 A. Yes.

5 Q. And you were responsible for responding to the incident?

6 A. The contractor is responsible for the initial response.

7 Q. Please clarify whether you were responding to the incident or
8 the contractor's response?

9 A. I'm responding to the incident.

10 Q. And, therefore, you were responsible for your response?

11 A. Well, Paria will—

12 Q. It's a simple yes or no, in this regard.

13 A. Paria would respond to any incident on their compound.

14 Q. Of course. And I note in your witness statement, it even sets
15 out clearly in paragraph 5, subsection 11 where you would
16 agree that your role is also to assist in the management of
17 emergency response?

18 A. Yes.

19 Q. Now, can you recall what time exactly this happened, that you
20 stepped into this role?

21 A. As soon as I got the call.

22 Q. And do you recall what time that would have been?

23 A. It would be in the statement.

24 Q. And at that time, how long were you in that role for?

25 A. About two hours or so.

26 Q. And within that two hours, at any point in time did you consider
27 that it was important to ascertain what the conditions were in

1 the pipeline during this time?

2 A. At that time, nobody was sure that the persons were in the
3 pipeline.

4 Q. I'm asking you: did you consider what were the conditions
5 within the pipeline during this time?

6 A. As I said, that was not the major consideration at that point in
7 time. We hadn't ascertained that anybody was in the pipeline
8 during those first hours.

9 Q. Did you consider it to be a possibility?

10 A. At that point in time, no.

11 Q. And during this time, what were the possibilities you
12 considered to have occurred?

13 A. The major possibility that we would have considered is for
14 some reason, water would have entered the chamber and would
15 have washed the persons out of the chamber. The information
16 that we got at the start of the incident is that a splash was seen
17 on the camera.

18 Q. And that would have been the only possibility, or did you
19 consider anything else?

20 A. Well, we would make considerations based on the information
21 given to us, and that is why we would have asked for somebody
22 from LMCS to join the ICT so we will get more information.
23 At that point in time, we would not have been aware that any
24 plug was being removed. So really and truly, getting into the
25 pipeline wasn't really the major consideration at that time.

26 Q. And during this two-hour period whilst you were responding to
27 an emergency, were any further steps taken apart from what

1 you stated in your statement to formulate a response to figure
2 out what were the other possibilities? Were there any further
3 steps you took apart from—in your statement within paragraphs
4 12—15, sorry, you recited certain steps you took. Now,
5 paragraph 15 subsection 1 refers to you “Activated and
6 mobilized the ICS for the purpose of initiating a coordinated
7 emergency response”. Of course, at that point in time or around
8 this period, did you consider any further steps apart from what
9 you have set out in this paragraph?

10 A. Is this the paragraph he is referring to?

11 Q. No that isn't—paragraph 15.

12 **Mr. Chairman:** I think you should have a look at the whole of
13 this. Do you have in front of you a bundle—witness
14 statements? It should be behind tab 35. And if you go to page
15 1303, little numbers right at the bottom of the page, 1303, and
16 then you'll see at the top of that page paragraph 15. And then
17 you will see what you set out there as being the things that you
18 did once you were appointed. Just take a look at it, then you
19 can answer Mr. Trebouhansingh's question. Perhaps you
20 would repeat it.

21 **Mr. Trebouhansingh:** Yes, please.

22 **Continued Cross-Examination By Mr. Trebouhansingh:**

23 Q. So, I think the—

24 A. Yes.

25 Q. —I think the, the actions continue unto the next page as well.

26 A. Yes.

27 A. I think that that, that is what was done.

1 Q. So therefore, you are saying that there were no further steps
2 taken as it concerns the possibilities, in your mind, as to what
3 could have happened, nothing further?

4 A. Well that, that's why we would have contacted LMCS to get
5 that information there.

6 Q. And my question to you, Mr. Yearwood, is that during this
7 time, two hours have passed since an accident, an incident
8 occurred. Would you not agree that time is of the essence to act
9 as soon as possible to take steps?

10 A. Yes.

11 Q. And during this time, of course, I, I can ask this question in a
12 two-fold manner if perhaps at that time firstly, or even now in
13 hindsight, do you think that more could have been done during
14 this time?

15 A. Well, the, the, the actions during a emergency are based on the
16 information that you receive. So if more information was
17 received, maybe more could have been done.

18 Q. So based on the information received, you did all that you could
19 have done?

20 A. I did what I could have done with the information I had at the
21 time.

22 Q. Can you tell me what time—at what time did you consider that
23 determining the conditions within the pipeline were of
24 relevance to the ICT?

25 A. That would be after Mr. Boodram would have come out the
26 pipeline.

27 Q. So therefore you are saying that an estimate now of over three

1 hours have since passed since the incident and the first time that
2 considerations of the conditions within the pipe only arose at
3 that time?

4 A. Yes.

5 Q. Not prior?

6 A. Yes.

7 Q. Mr. Yearwood, in your witness statement again, particularly in
8 paragraph five, your duties are set out. One of those duties
9 include to ensure compliance with statutory standards and the
10 company's policies and procedures. So I can assume, and
11 correct me if I'm wrong, that you are familiar with the
12 Occupational Health and Safety Act of Trinidad and Tobago?

13 A. Yes.

14 Q. And, of course, as part of your role you would agree that you
15 are required to report an incident of this nature as soon as it
16 occurs, as soon as is reasonably possible of course for you to
17 report this to the Occupational Health and Safety Agency?

18 A. Yes. We usually have a 24-hour period to report.

19 Q. Do you recall doing this within this timeline?

20 A. I would have been trying to—placing all my efforts to have
21 these persons rescued.

22 Q. So therefore the answer is you did not make that contact?

23 A. The contact would have been made within the stipulated period
24 outlined by the law.

25 Q. And in relation to this contact that you made, what was the
26 response that you received?

27 A. I never said I made the contact. The contact—

1 Q. Do you recall who made that contact?

2 A. No.

3 Q. Are you familiar with—you are aware that the contact was
4 made?

5 A. Yes.

6 Q. Within the stipulated time frame?

7 A. Yes.

8 Q. But you're unaware of who made it and the particulars of that
9 contact?

10 A. I know it was—we would have been given advice that the
11 contact need to be made and the—during the course of the
12 incident we would have had communication with, with—

13 Q. Now you would agree that this area falls within your roles and
14 duties?

15 A. No.

16 Q. No?

17 A. But for the incident for the purpose of the ICT we have
18 different roles which may be different or separate and apart
19 from your substantive functions. So, within that, there's a
20 liaison officer on that organizational chart.

21 Q. Who would be that liaison officer?

22 A. I think it may be Mr. Archibald.

23 Q. And you cannot say whether he made contact and what was the
24 response from the Occupational Health and Safety Agency?

25 Q. Well the con—all I could say is the contact was made and I
26 don't know what their response at that time would have been.

27 Q. Did you, or were you privy to any steps taken by Paria to

1 preserve the scene of the incident after it occurred?

2 A. Yes. The incident site would have been cordoned after the
3 incident.

4 Q. Would have been coned? What does that mean?

5 A. It would have been barricaded and so forth after the incident.

6 Q. Were there any further steps taken to preserve the scene of the
7 incident after it occurred, anything further?

8 A. No, when, when you say after it occurred, after all the days,
9 after the first day?

10 Q. Immediately after the incident and thereafter.

11 A. Well, immediately after the incident occurred, we wouldn't be
12 in a mode to preserve anything. We are still in the mode where
13 we are looking to rescue people. After the incident, um, we
14 would have engaged the same Occupational Safety and Health
15 Authority, they would have—certain items would have been
16 handed over directly to them. It would have been documented
17 and photographed and handed over to them and the site itself
18 would have been barricaded.

19 Q. Thank you very much, Mr. Yearwood. I have no further
20 questions.

21 **Mr. Chairman:** Okay, thank you. Mr. Pegus?

22 **Mr. Pegus:** I have no questions for this witness, Mr.
23 Chairman.

24 **Mr. Chairman:** Thank you very much. Ms. Persaud Maraj?

25 **Mrs. Persaud Maraj:** I do have a few questions.

26 **Cross-Examination By Mrs. Persaud Maraj:**

27 Q. Good morning, Mr. Yearwood. My name is Kamini Persaud

1 Maraj and I'm representing LMCS. I would like you to clarify
2 something that is in your witness statement at paragraph 16.

3 **Mr. Chairman:** Sixteen?

4 **Mrs. Persaud Maraj:** Sixteen, one six, that's at page 1303.

5 **Continued Cross-Examination By Mrs. Persaud Maraj:**

6 Q. I'd like you to look at number five. Now, paragraph 16 you're
7 saying these are the key personnel that you would have
8 contacted and informed them of the incident?

9 A. Yes.

10 Q. Yeah? Now at five in particular you mentioned Collin Piper,
11 Paria Terminal Operations Manager at about 3.53 p.m. and then
12 you have, "who had already been notified of the incident prior
13 to my call."

14 A. Yes.

15 Q. My clarification is, is that the—you—at 3.53 p.m., that was the
16 first call that you would have made, you would have made to
17 Mr. Piper?

18 A. Yes.

19 Q. All right. So, I know you said in an answer to my learned
20 friend in relation to the time that the incident command, ICT,
21 was commissioned, it was—it's in your statement, correct?

22 A. Yes.

23 Q. All right. So, at your paragraph—well, that very paragraph you
24 said you spoke to Mr. Randolph Archibald, that's at number
25 one at about 3.12 p.m. That's correct?

26 A. Yes.

27 Q. And you would have first received—now paragraph 11,

1 paragraph 11, you said at 3.06 p.m. you would have been
2 informed of the incident?

3 A. Yes.

4 Q. Right. What I'm trying to establish is, with you activating the
5 incident command being that the in—being that the incident
6 commander was Mr. Piper, how did that remit went into your
7 charge? What was that process? Because it's not clear from
8 your evidence here what or how that came to be. Could you
9 explain that to us?

10 A. And so during the phone call he would have asked me
11 formally—

12 Q. Who?

13 A. Mr. Piper would have asked me formally to set up the incident
14 command.

15 Q. So that would have been at 3.53 p.m.?

16 A. Yes.

17 Q. All right. And you arrived at Paria's incident command centre
18 around 4.00 p.m.?

19 A. Correct.

20 Q. Or thereabout, right?

21 A. Correct.

22 Q. Yeah, it's somewhere in your statement. All right.

23 A. Right, so, notwithstanding that, before this I would have guys
24 on the team and we would have started to get guys to the site
25 and do certain things within the remit of the HSE department.
26 However, at 3.53 the formal request was made to initiate the—
27 to me, to have the incident command set up and that is what I

1 would have done.

2 Q. All right. I would like to take you to the board that you have
3 mentioned earlier in relation to what you had commissioned at
4 the incident command centre.

5 **Mr. Chairman:** Sorry, I'm sorry to interrupt. Can I just be
6 clear?

7 **Examination By Mr. Chairman:**

8 Q. Prior to 3.53 there was no incident command centre?

9 A. No.

10 Q. No IMT?

11 A. Well the members of the IMT would have been made aware but
12 I formally would have made that formal call to get the IMT and
13 that command centre prepared.

14 Q. Yeah, well Mr. Piper was the fifth person you called. And I
15 just want to understand, you knew he was going to be the head
16 of the IMT?

17 A. Yes.

18 Q. You didn't know where he was?

19 A. No.

20 Q. He might have been there for all you knew?

21 A. Correct.

22 Q. Right. In any event he was the fifth person you called and there
23 was no IMT until you spoke to him, and then he requested you
24 to set one up?

25 A. No. There would have been no physical IMT. I, I would
26 presume that all the members would have been engaged in
27 some way.

1 Q. Well, I don't understand that. I mean, you first find out about it
2 just after three o'clock as you've just been asked. You make a
3 number of calls which you set out in your statement. What I'm
4 interested to know is surely primary amongst all of that was to
5 set up the IMT?

6 A. Yes.

7 Q. Yet you waited until 3.53 before you spoke to the person who's
8 supposed to be the head of it?

9 A. Well, Mr. Piper could have asked anyone to set up the IMT.

10 Q. Anybody could have—anything could have happened. You're
11 HSE. What was happening before, between when you first
12 were told at 3.06 and you being asked to set up the IMT at 3.53,
13 nearly an hour later?

14 A. Information was being gathered, um, persons from the HSE
15 department would have been sent to the location.

16 Q. Well, did you know that?

17 A. Yes. I would have been engaging with Mr. Dopson and other
18 persons at that time.

19 Q. Okay, the first person you called, which I entirely understand, is
20 Mr. Archbald?

21 A. Yes.

22 Q. Who is your immediate superior, isn't he?

23 A. Correct.

24 Q. Right. And so you called him within six minutes or so of
25 having been told of the incident, all right?

26 A. Correct.

27 Q. And then after him, you—it's nearly 20 minutes before you

1 speak to Mr. Donawa?

2 A. Correct.

3 Q. Well what—first, before that happens, what did Mr. Archbald
4 say to you?

5 A. I can't remember the exact details of the conversation.

6 Q. No, did he say, well, set up the IMT, you know, let's get
7 moving here? This has happened now some time ago?

8 A. Yeah. So we would have had some discussion about the
9 incident, um, and we would have started to make contact with
10 our guys on the ground.

11 Q. Well the next person you called was Mr. Donawa, 20 odd
12 minutes later?

13 A. So I had to make contact with my guys via analogue radio and
14 give instructions.

15 Q. All right. So these calls that you've logged in your statement
16 are telephone calls?

17 A. These calls are telephone calls.

18 Q. Rather than using your radio?

19 A. Correct, because there would have been—

20 Q. Did you actually use your radio?

21 A. Yes.

22 Q. Well, none of that is in here so who did you speak to?

23 A. So it's very hard to verbatively write down every
24 communication via—

25 Q. No I understand that, but you could give us an overall view.
26 You say—

27 A. So whatever—

1 Q. So, once you were told—

2 A. Right.

3 Q. —just a moment, once you were told, Mr. Yearwood, look
4 there's been this terrible incident these guys have gone
5 missing—

6 A. Correct.

7 Q. —four or five of them that were in the habitat, they've just gone
8 missing, your immediate response to that was presumably that
9 they were in the ocean somewhere—

10 A. Correct.

11 Q. —and needed rescuing?

12 A. Correct.

13 Q. So you speak to your immediate boss within a few minutes,
14 that's fine, and then what happens? You get on the radio and
15 do what?

16 A. So I'm giving instructions to my guys.

17 Q. You keep saying that, to my guys. I don't understand what that
18 means.

19 A. I asked my team to go to the site of the incident to get more
20 information.

21 Q. Right.

22 A. I would have asked them to start to prepare in terms of the
23 ambulance service and to set up that triage. I would have asked
24 them to get information for me from the operations person, so
25 this is going back and forward, um—

26 Q. And this is all on the radio, is it?

27 A. This is all on the radio.

1 Q. Right. What's the range of your radio?

2 A. I could talk to my team in Paria right now.

3 Q. It's countrywide?

4 A. So it's countrywide.

5 Q. Right. So you're using the radio, you're getting your guys, as
6 you put it, to make various arrangements contacting—

7 A. Correct.

8 Q. —ambulance service and so on, right?

9 A. Correct.

10 Q. Okay. And you're making your way to the—

11 A. And I'm making my way to—

12 Q. Right. And so when you've logged here the phone calls that
13 you've made, have you—where have you got that from?

14 A. This is from my phone.

15 Q. So you looked at your phone subsequently—

16 A. Yes.

17 Q. —when writing this statement?

18 A. When writing this I would have looked at my phone and seen
19 the exact—

20 Q. Who you called and when?

21 A. —who I called and when.

22 **Mr. Chairman:** All right, thank you. Thank you.

23 **Continued Cross-Examination By Mrs. Persaud Maraj:**

24 Q. Mr. Yearwood, I would like to take you to the—

25 **Mr. Chairman:** I'm sorry, Mrs. Maraj, I've just seen the time.
26 How long do you think you have?

27 **Mrs. Persaud Maraj:** Mr. Chair, I just have a few questions.

1 **Mr. Chairman:** Well why don't we—

2 **Mrs. Persaud Maraj:** [*Inaudible*] at—no, um, perhaps about
3 10 minutes, if so much.

4 **Mrs. Persaud Maraj:** And may I ask Mr. Peterson do you
5 have any questions?

6 **Mr. Peterson SC:** No.

7 **Mr. Chairman:** No.

8 **Mr. Peterson SC:** No, Mr. Chairman.

9 **Mr. Chairman:** It's probably preferable if you use up your 10
10 minutes and then we'll take a break and that way you'll be able
11 to go, all right?

12 **Mr. Yearwood:** Thank you.

13 **Mr. Chairman:** All right, let's do that.

14 **Continued Cross-Examination By Mrs. Persaud Maraj:**

15 Q. Right. So Mr. Yearwood, I'd like to take you to a picture that's
16 at page nine three five of the witness statement bundle. You
17 weren't—no, next page. Right. So you mentioned earlier in
18 your evidence that there was and there was an orange colour
19 marker being used for the timelines that you would have
20 commissioned?

21 A. Yes.

22 Q. Would this be what you were referring to?

23 A. Yes.

24 Q. All right. In this log of events, the information being fed was
25 taken from various persons?

26 A. Yes.

27 Q. All right. At 1548, it says, "HSE personnel S. Balkissoon

1 reported chances of survival as slim.”

2 A. Yes.

3 Q. Yes?

4 A. I seeing that there.

5 Q. And you were made aware of the information as it was coming,
6 you just said that to the Chairman?

7 A. Well, this is a statement, so this log is everything—we’re trying
8 to get everything that comes out from the radio and that was
9 said.

10 Q. That was said. So when you would have spoken to Mr. Piper at
11 1553, your conversation with him, you would have already
12 gotten this information?

13 A. This, this would have been logged, correct.

14 Q. Right.

15 **Mr. Chairman:** I’m sorry I’m just struggling to find my copy
16 of this just—because I’d like to follow this. Where are we at?
17 This is in—

18 **Mrs. Persaud Maraj:** We are at page 935 of the witness
19 statement bundle.

20 **Mr. Chairman:** Yeah. That’s Volume II, I think. Nine thirty-
21 six? Nine thirty-five. Yeah. Yes, my copy is illegible, that’s
22 why I can’t read it at all.

23 **Mrs. Persaud Maraj:** Same with me too, Mr. Chair. So I’m
24 looking at it from the computer.

25 **Mr. Chairman:** Right. So let me just take—make a note that
26 page nine three five witness bundle to orange, yes. Sorry, I’m
27 going to ask you to start back again if you would please?

1 **Mrs. Persaud Maraj:** Right.

2 **Continued Cross-Examination By Mrs. Persaud Maraj:**

3 Q. So my question to Mr. Yearwood was the time that this
4 annotation is given, this, this log has been made, that HSE
5 personnel reports that the chances of survival are slim. It would
6 have been at 1548 which was prior to his conversation with Mr.
7 Collin Piper. And he answered—

8 A. Yes.

9 Q. —yes.

10 A. So this is a log of everything that is said on the radio.

11 Q. Yes.

12 A. The HSE personnel would have heard one of the divers make
13 that statement and they would have reported it. Right? So—
14 and it would be logged at the time it was reported.

15 Q. Right. And my question to you was that this information was
16 received by you prior to your conversation with Mr. Piper?

17 A. The, the times here are accurate so that's how the timeline.

18 Q. Right. Okay. Did you discuss this bit of information with Mr.
19 Piper in your conversation?

20 A. Specifically, no.

21 Q. At the time that these information would have been coming to
22 you and your conversation with Mr. Piper at around—at 3.53
23 p.m., you were the de facto, let's say, incident commander, yes?

24 A. Yes.

25 Q. And part and parcel of being the de facto incident commander
26 is that your concern with what has happened to the persons who
27 were gone missing?

1 A. Yes.

2 Q. Yes? And this would have been pertinent and relevant
3 information in relation to what efforts you are to make
4 thereafter in relation to these missing persons?

5 A. Well, this is information as it was said. As I would have said
6 before, the technician at that time, he would have heard this
7 statement made by one of the divers after going into the
8 chamber. So, the instruction to Mr. Sandiford at this point in
9 time is, whatever you hear just write it down. Right? So what
10 he heard is what he wrote down.

11 Q. Mr. Yearwood, can you be specific? One of the divers at the
12 site you're saying that you would have heard this from. Who is
13 that diver that would have given this information?

14 A. I would have believed at the point in time we were trying to
15 communicate with Mr. Farah to get somebody into the ICT and
16 that is the statement that was made.

17 Q. So it is your evidence that Mr. Farah made the assessment or
18 made the statement that these men, the chances of survival of
19 these men is slim?

20 A. It is my evidence that Mr. Ramkissoo would have reported
21 that.

22 Q. So you're not aware of who would have given this statement or
23 caused this assessment to be made?

24 A. Which is why I initially said one of the divers.

25 Q. No, are you aware? Are you sure? You're giving evidence.
26 This is, this is for consideration. We are dealing with at this
27 point in time lives and we're dealing with the assessment and

1 the process by which, as the de facto incident commander,
2 you're employing to respond to an incident.

3 A. I don't know what your question is.

4 Q. The question is, the information that you're saying that you've
5 gotten, how did you treat with it and from whom? Did you
6 verify it? You're saying it's just that they heard so it was just
7 by the way information, it made no difference, this is just a log,
8 you were just creating a log for—and I'm saying a lot of things
9 here I would like you to—

10 **Mr. Chairman:** I would like a question and answer.

11 **Mr. Yearwood:** I don't know what going on.

12 **Continued Cross-Examination By Mrs. Persaud Maraj:**

13 Q. My question is, how did you treat with this information that
14 was spewed and placed on the log—

15 A. The—

16 Q. —as the incident, de facto incident commander?

17 A. It was placed on the log and we continued to attempt to engage
18 LMCS to have somebody come to the IMT so that we could get
19 information that we would have sure would—we would be sure
20 that it was credible. As I said, that was a statement that was
21 relayed and it would have been documented as such.

22 Q. All right. And you spoke to Mr. Kazim Ali you said?

23 A. Yes I did.

24 Q. And that would have been around you said 4.50 p.m.?

25 A. Yes.

26 Q. Right. So that would have been some hours after you would
27 have gotten that initial assessment logged?

1 A. Correct.

2 Q. Right. And, you requested that he send persons to the shipping
3 building?

4 A. Correct.

5 Q. All right. Did you inform him at any point in time that there
6 was an incident command centre that was now—or team that
7 was now in place?

8 A. Yes.

9 Q. My instructions are that that never happened./

10 A. Well, he might be wrong.

11 Q. That's your answer to it?

12 A. I would have informed him to come to shipping building at the
13 incident command post.

14 Q. All right. And we also have on evidence, and this is also my
15 instructions, that Mr. Andrew Farah was, in fact, on his way to
16 the shipping building, but then, at that point in time Mr.
17 Boodram was, um—well, there was noise to which he returned
18 at the berth to deal with.

19 A. So after I handed over to Mr. Piper—

20 Q. Yeah.

21 A. —we were finally able to get Mr. Farah to, to, to proceed to
22 land.

23 Q. All right. So, you're aware of that. It's just that your statement
24 has nothing acknowledging the fact that Mr. Farah was on his
25 way to the shipping building?

26 A. Well he was on his way, as I said after I would have handed
27 over to Mr. Piper.

1 Q. Right.

2 A. At the time, when I was trying to get him to come, he seemed to
3 be in some distress. Um, the guys would have reported that he
4 was kind a lying on the berth.

5 Q. And you were—you were there? You observed that?

6 A. That, that is what was reported, Ma'am.

7 Q. And that's the report you received. Okay. I'd like to revisit
8 something that you spoke about this morning to Mr. Maharaj.
9 You said that part and parcel of the procedure that was engaged
10 in relation to the assessment of the, or the review, sorry, of the
11 method statement to the JHA was that there was a meeting of
12 both Paria personnel and LMCS.

13 A. Correct.

14 Q. Correct? When did that meeting actually take place?

15 A. I don't have the exact date.

16 Q. It's not in your evidence. That was the first time I heard of it.

17 A. Correct. I don't have the exact date.

18 Q. You don't have the exact date. My instructions are that that—
19 there was never any meeting. What say you?

20 A. I say that there was a meeting.

21 Q. Sorry?

22 A. I say that there was a meeting.

23 Q. There was a meeting. My instructions are in fact that the
24 mechanism and procedure by which the review was done was
25 LMCS was asked to email their documents to Mr. Terrence
26 Rampersadsingh and then those documents, meaning the
27 method statements and the JHAs and other accompanying

1 documents would have been reviewed, however it was
2 reviewed by your team, and then the approval of it notified to
3 LMCS. What say you?

4 A. So that's not the process that we used at Paria.

5 Q. Is that—say that again, sorry?

6 A. That's not the process employed by Paria.

7 Q. Okay. You say that's not the process employed. I'm asking
8 you what, in fact, happened.

9 A. There would have been a meeting.

10 Q. Sorry?

11 A. There would have been a meeting.

12 Q. There would have been a meeting?

13 A. Yes.

14 Q. So you've moved from there was a meeting so—to there would
15 have been a meeting?

16 A. There was a meeting.

17 Q. There was a meeting. All right. I would like to—in relation to
18 what my instructions are and what I've just put to you, I would
19 like to take you to an email trail that is at page two nine two
20 four of the witness statement bundle.

21 **Mr. Chairman:** Which number?

22 **Mrs. Persaud Maraj:** Two—

23 **Mr. Chairman:** I don't think we have witness statements that
24 go up to 2924.

25 **Mrs. Persaud Maraj:** I—it's 2924. This is the supplemental.

26 **Mr. Chairman:** Ah.

27 **Mrs. Persaud Maraj:** Yes. Right.

1 **Continued Cross-Examination By Mrs. Persaud Maraj:**

2 Q. I would actually like you to scroll to two nine two five. So the
3 email is actually in reverse order. Yes?

4 [*Document handed to Mr. Yearwood*]

5 **Mr. Chairman:** Right. Which part do you want to go to?

6 **Continued Cross-Examination By Mrs. Persaud Maraj:**

7 Q. So I would like—Mr. Yearwood, I would like to look at the
8 entire email trail starting at page two nine two five and you
9 would see that the first email and the date is actually on the
10 page two nine—

11 **Mr. Chairman:** Yes, it's the page before—

12 **Mrs. Persaud Maraj:** Yes.

13 **Mr. Chairman:**—starts the, the—at the bottom of the page two
14 nine two four.

15 **Mrs. Persaud Maraj:** Two four, correct.

16 **Mr. Chairman:** There's an email from Mr. Kazim Ali dated
17 the 4th of January, 2022 at 22 minutes past 1.00. Subject
18 installing subsea slip-on flange at 36SL berth 6. To Terrence
19 Rampersadsingh and it says, "See attached documents for the
20 above captioned job. They are method statement, job safety
21 analysis, lift plans", et cetera. The job here is to perform the
22 work of replacing the leaking section of SL36 riser. Et cetera.
23 These works will follow reduction of, yes. And then there's a
24 reply. You don't need any more than that, do you?

25 **Mrs. Persaud Maraj:** No.

26 **Mr. Chairman:** Then there's a reply of—back on page two
27 nine two four. Do you see that, Mr. Yearwood?

1 **Mr. Yearwood:** Yes.

2 **Mr. Chairman:** Yeah and the reply, “Good day”, this is from
3 Mr. Kazim Ali again, January the 4th, now 359, “Good day.
4 See attached documents for captioned job.”

5 **Mr. Yearwood:** So I’m seeing that there’s a review.

6 **Mrs. Persaud Maraj:** Yes.

7 **Continued Cross-Examination By Mrs. Persaud Maraj:**

8 Q. And then if we go higher—

9 A. So I believe this review—

10 Q. —on the email.

11 A. So I believe this review—

12 Q. Right.

13 A. —may have been, as you indicated there would have been the
14 meeting. If anything need to be reviewed it would have been
15 reviewed and—

16 **Mr. Chairman:** Sorry you’ve got to speak a little bit louder
17 because I’m not hearing you.

18 **Continued Cross-Examination By Mrs. Persaud Maraj:**

19 A. Right, so I’m seeing—I’m actually seeing that you, you said
20 there’s a review but there’s a Rev one to the method statement
21 so I would presume that the meeting would have been held
22 before this review would have been made. There must be a
23 basis for the review.

24 **Examination By Mr. Chairman:**

25 Q. We’re still on the 4th of January?

26 A. Correct.

27 Q. It’s now 20 past 4.00 in the afternoon and—from Mr.

1 Rampersadsingh sent to Mr. Ryan Nanton. That's one of your
2 men, isn't it?

3 A. Correct.

4 Q. In which he says: "Please review respective attachments. MS
5 was reviewed, updated, and is acceptable. Regards Terrence."

6 A. Correct.

7 Q. From Kazim Ali then, below that, we can see he's replied. But,
8 what's being asked is whether or not there was a meeting which
9 involved the contractor.

10 A. So the meeting that I'm speaking about would have been held
11 before this Review One of the method statement. I assume that
12 there may have been changes and this is the last line there is for
13 the guys to look at what was changed and say that they're okay
14 with it.

15 Q. Well it says here the MS was reviewed, updated and is
16 acceptable. The only one we've got, the only one I've seen is
17 the one that we've got that I showed you earlier on.

18 A. So, so we're seeing that there's a—some review on document.

19 [*Crosstalk with Mr. Maharaj*]

20 **Mr. Chairman:** Yes. The one that's attached to the permit to
21 work. [*Crosstalk with Mr. Maharaj*] But it's unchanged from
22 the previous.

23 **Mr. Maharaj SC:** It's revision zero.

24 **Mr. Chairman:** Revision zero. Yeah, exactly.

25 **Mr. Peterson SC:** That's the point I was making in—

26 **Mr. Chairman:** Earlier when we asked Mr. Kazim Ali about
27 it, yeah.

1 **Mr. Peterson SC:** Yes because Mr. Kazim Ali without
2 prompting, without prompting when it came up on the screen,
3 he said yes, 116, but he said there's a problem there. That
4 record is wrong because in the brackets where revision zero it's
5 supposed to have a number he said because he said it was
6 reviewed and I mean it wasn't a point of contention because—

7 **Mr. Chairman:** I don't think so.

8 **Mr. Peterson SC:** Yes.

9 **Mr. Chairman:** I think it—what we agreed that that was the
10 one that was ultimately being used—

11 **Mr. Peterson SC:** Yes but—

12 **Mr. Chairman:**—as the method statement.

13 **Mr. Peterson SC:**—as the revised final one.

14 **Mr. Chairman:** Yes.

15 **Mr. Peterson SC:** And I didn't challenge him on it because it
16 was understandable it was used.

17 **Mr. Chairman:** Quite.

18 **Examination By Mr. Chairman:**

19 Q. So, so, whether it's a typo or whatever it doesn't really matter.
20 We ended up with the same document. So the one that we
21 referred you to, that I referred you to earlier is the one that was
22 used as the method statement. I mean, the fact that it's written
23 here that it was really doesn't really matter because we are all
24 agreed there is the only that one that was ultimately used for the
25 purposes of the works.

26 A. Correct.

27 Q. I think the issue here is, really, the question that's being put to

1 you is that there was never a formal meeting which involved the
2 contractor, because you told me earlier on, and Mr. Maharaj,
3 that there is a review process which involves various different
4 departments—

5 A. Correct.

6 Q. —at Paria. You told us HSE, which is yours, technical and
7 operations and then momentarily you shortly after that added
8 the contractor was also represented. You remember saying
9 that?

10 A. Correct.

11 Q. So it's been put to you now that the contractor was never at that
12 meeting. Now do you think that might be the case, that in this
13 instance the contractor never did attend the meeting? It was
14 reviewed by your three departments without the contractor.

15 A. The information I had is that there was a meeting, um, and
16 that's the information I have.

17 Q. Yeah. Well that information is reliant entirely, is it not, on your
18 memory?

19 A. Yes.

20 Q. There is not a note, a minute, a email, a text message or any
21 other written document which identifies the persons who were
22 present at that review process?

23 A. No.

24 Q. I mean are you even able to tell us who, from the contractor,
25 attended?

26 A. I wouldn't, I wouldn't be part of the meeting.

27 Q. Are you able to tell us who from the technical department

1 attended?

2 A. No.

3 Q. Or the operations department?

4 A. No.

5 Q. No. So, we're entirely reliant on your best recollection from
6 the better part of what, nine months ago, nearly a year ago, as to
7 who was present, and that this meeting took place, is that right?

8 A. Yes.

9 Q. Okay. But do you think that there is a prospect that what's
10 being suggested to you might be right, that on this occasion the
11 contractor didn't attend?

12 A. It would be very odd. Um, this is a standard process that we
13 use for all—

14 Q. I know, but we've been going through years of oddness,
15 haven't we, with the COVID. I mean somebody might have
16 died but for some fairly narrow-minded view of the COVID
17 regulations, and then a person not being allowed to get into an
18 ambulance, so, it seems to me having a meeting which
19 involved, a personal meeting which involved the contractor,
20 unless you're saying it might have happened by a video?

21 A. All the meetings are—

22 Q. Were by video?

23 A. —by video.

24 Q. Right.

25 A. So all are Teams meetings.

26 Q. So, so—but all you can say is, to the best of your recollection, it
27 involved the contractor?

1 A. Yes, that's the—

2 Q. And that's the normal procedure?

3 A. That's the normal procedure for it, yes.

4 Q. But you're not able to—could you have ruled out the prospect
5 of it happening without the contractor?

6 A. I wouldn't like to say, yes.

7 Q. You wouldn't like to say, not that you wouldn't? But, um,
8 could you rule it out nonetheless?

9 A. No, I wouldn't be able to completely rule it out.

10 Q. You wouldn't be able to completely rule out?

11 **Mr. Chairman:** Does that deal with your point as best as you
12 were able?

13 **Mrs. Persaud Maraj:** Certainly.

14 **Mr. Chairman:** This is as far as you can take it with—

15 **Mrs. Persaud Maraj:** That's as far as I can take it with Mr.
16 Yearwood.

17 **Mr. Chairman:** Is there anything else?

18 **Continued Cross-Examination By Mr. Trebouhansingh:**

19 Q. Just one thing I'd like to confirm from you. You were never
20 part and parcel of the award of contract process, were you?

21 A. No.

22 Q. With anything to do with the, the content of the contractual
23 terms between Paria and LMCS?

24 A. No.

25 Q. All right.

26 **Mrs. Persaud Maraj:** That's it. Thank you.

27 **Mr. Chairman:** Right, thank you very much. Just before we

1 move on, there's one other thing I need to ask.

2 **Examination By Mr. Chairman:**

3 Q. The note that—in orange writing that was photographed on to
4 the board, I do now recall having seen it before. And the
5 position is this. Is that what is in that note is actually replicated
6 on page 1572. So whoever was writing the note on your behalf
7 entered it into the log that we have on one five seven two. I
8 think but for a couple of very minor words that are of no
9 consequence.

10 **Mr. Chairman:** [*To Mrs. Persaud Maraj*] It is a replication of
11 what's in that—on that page that you drew our attention to. It
12 is the same—

13 **Mrs. Persaud Maraj:** It is the same—

14 **Mr. Chairman:**—as what we see on this log here. I'm not
15 asking you to take it through. I've done it myself so I know it's
16 accurate.

17 **Mr. Yearwood:** No problem.

18 **Mr. Chairman:** Thank you very much. All right, and do you
19 still have no questions or is there anything you'd like to ask,
20 Mr. Peterson?

21 **Mr. Peterson SC:** We have nothing, Sir.

22 **Mr. Chairman:** Nothing to ask, but I think, Mr. Maharaj,
23 you—

24 **Mr. Maharaj SC:** I just wanted to point out to the—to you,
25 Mr. Chairman, that at paragraph nine of his witness statement
26 he said, "I was not involved in the review process in any
27 material way because, as mentioned above, Mr. Nanton was the

1 person. So he was really not at the meeting.

2 **Mr. Chairman:** Ah, right.

3 **Examination By Mr. Chairman:**

4 Q. Is that right? I've misunderstood. You were not at the meeting
5 at all?

6 A. No. That's what I've said.

7 Q. All right.

8 A. That's why I've said. I assigned someone.

9 Q. Then I have misunderstood. Thank you for that. I was about to
10 take a dim view of the fact that you couldn't recall, but the fact
11 is you weren't at this meeting at all?

12 A. No, I assigned somebody to the—

13 Q. So Mr. Nanton was at the meeting?

14 A. Yes.

15 Q. And he would be better able to tell us if there's anybody from
16 LMCS that was at the meeting?

17 A. Correct.

18 Q. You are saying you would have expected someone from LMCS
19 to be at the meeting?

20 A. That is the normal process, yes.

21 Q. That's the normal process, but because you were not actually
22 yourself at the meeting you can't say whether there was or not?

23 A. It's my information that it occurred, so—

24 Q. Sorry?

25 A. It's my information that it occurred, so—

26 Q. Yes. Well you're reliant, are you, on Mr. Nanton telling you
27 so?

1 A. Yes.

2 **Mr. Chairman:** Anything arising? I'm sorry, Mr. Wilson has
3 a question.

4 **Examination By Commissioner Wilson:**

5 Q. Good day, Mr. Yearwood.

6 A. Good day.

7 Q. Just saying on the topic of that meeting, what is that meeting in
8 service of, when you get, um, um, your multiple—your
9 departments and you invite the contractor to discuss the job,
10 what is, what is that meeting in service of?

11 A. Yes, so, it, it is there to, to, to, to bridge the gap between Paria,
12 um, letting the contractor know what their risks are and the
13 contractor letting Paria know what their risks are.

14 Q. I like the phrase you used, bridge the gap. What sort of
15 documents come out of those types of meetings?

16 A. The documents that come out of those meetings are the
17 revisions of the documents being reviewed.

18 Q. Now since you used the term bridge the gap, are you familiar
19 with the term bridging documents? I heard a list of your whole
20 qualifications so—

21 A. Yes.

22 Q. In this case and/or any other cases, is it the practice of Paria to
23 utilize bridging documents?

24 A. No. It's the practice at this time to review the documents as to
25 the guidance of the team.

26 Q. So how do you effectively bridge the gap if you don't use a
27 bridging document and/or equivalent?

1 A. I understand what you're saying. It's something that will be
2 considered.

3 **Mr. Chairman:** Please don't let your voice drop. I can't hear
4 what you're saying, sorry.

5 **Mr. Yearwood:** Sorry about that.

6 **Examination BY Commissioner Wilson:**

7 Q. So you said it's been considered so I want to go back to some
8 of your earlier testimony here where you said that
9 improvements have been made to some of your processes, and,
10 I mean, I asked it of some of your colleagues but I understand
11 you're more of an end user of it so I'll put it to you again. What
12 were the industry type processes like lessons learned,
13 continuous improvement, agility, used to come to those lessons
14 that you're now employing at Paria?

15 A. There would have been some consideration of the incident, um,
16 there would have been an extensive intensive engagement of the
17 regulatory bodies after and some of those would have come out
18 of that process. So they would have done a full—OSHA would
19 have done a full audit on the site on all our processes and so
20 forth. So some of those things would have come out of that.
21 There's also an internal investigation into the incident, so these
22 things are what would have triggered that.

23 Q. Okay. So as an HSE practitioner you're just solely depending
24 or solely dependent upon the incident report generated by Paria
25 to drive the lessons learned, because, what I'm not hearing
26 powerfully or not seeing powerfully and/or not getting from
27 Paria powerfully are any known industry processes that would

1 adequately, robustly capture lessons where they can be
2 implemented, interrogated going forward.

3 All I just hearing is, you know, we did A, B, C, D, but there's nothing
4 that I'm convinced, and it's quite relevant for the Chairman and
5 I when we're considering our recommendations, I don't want to
6 do dual work so I'm quite keen, especially in your capacity as
7 an HSE professional, what methodologies were employed to get
8 that.

9 A. So we would—we haven't formally gone through, um, any
10 specific methodology.

11 Q. Okay.

12 A. Right?

13 Q. Thank you. Right.

14 **Mr. Chairman:** Well we can ask Mr. Archbald who would be
15 next, so let's take a break. We've been going for a little while.
16 Let's take 15 minutes then please and then we'll have Mr.
17 Archbald. Thank you very much.

18 **11.47 a.m.:** *Enquiry suspended.*

19 **12.07 p.m.:** *Enquiry resumed.*

20 **Mr. Chairman:** Thank you. Right, Mr. Archbald, I believe.
21 Oh, Mr. Maharaj will be quite useful too.

22 *[Mr. Archbald and Mr. Maharaj enter enquiry room]*

23 *[Mr. Randolph Archbald sworn]*

24 **Mr. Chairman:** Yes, Mr. Archbald is it?

25 **Mr. Archbald:** Yes.

26 **Mr. Chairman:** The oath will be administered now.

27 *[Mr. Randolph Archbald sworn]*

1 **Mr. Archbald:** I, Randolph Archbald, solemnly swear that the
2 evidence I shall give to this Commission in this case shall be
3 the truth, the whole truth and nothing but the truth.

4 **Mr. Chairman:** Yes, Mr. Archbald, thank you for coming.
5 Make yourself comfortable. The water is there for your use.
6 What's going to happen is a summary of your evidence will be
7 given first of all by Ms. Maharaj. Please listen carefully to that
8 summary and hopefully you'll agree that it is accurate. If not,
9 tell me and we'll proceed from there.

10 After that, Mr. Maharaj will have some questions for you, and
11 then others may or may not, as the case may be. All right? So
12 listen carefully to Ms. Maharaj who is going to summarize your
13 evidence into. All right.

14 Can I, just before you do that, I've just been handed a further
15 supplement to your statement dated today, and that is your
16 statement. It's five paragraphs. That has now, I believe, been
17 posted on the website. It's only just been brought to my
18 attention, so, anybody who hasn't you can access it on the
19 website now. Thank you very much.

20 **Mr. Peterson SC:** That was just to formally account for the
21 emails that were disclosed and used earlier in the earlier
22 sessions.

23 **Mr. Chairman:** Lovely. Thank you very much.

24 **Mr. Peterson SC:** Just to cover it by way of evidence.

25 **Mr. Chairman:** All right, thank you. Yes. Ms. Maharaj.

26 **Ms. Maharaj:** Mr. Archbald declined to be interviewed by the
27 Commission but he provided a witness statement to the

1 Commission dated the 16th of August, 2022 which is at page
2 1312 of the witness statement bundle Volume IV, and, as
3 indicated he also provided a supplemental witness statement
4 today which is on the website. The following is a summary of
5 his first witness statement.

6 Mr. Archbald is the HSEQ lead at Paria. The HSEQ
7 department is guided by the HSE requirement for contractors
8 which is at the core bundle 12, page 12, the HSE orientation
9 procedure, which is at the core bundle page 11, the permit to
10 work procedure which is at the core bundle page 24, various
11 emergency response plans which is—which can be found at the
12 core bundle pages 39 to 90, and procedures in incident
13 reporting procedure effective 1st December, 2019 which can be
14 found at the core bundle page 101.

15 The HSEQ department monitors the work being done on
16 the site to determine the level of compliance with Paria's permit
17 to work procedure and other company standards and procedure.
18 Mr. Archbald was involved in the development of the permit to
19 work procedure and this procedure was developed to provide a
20 formal documented process for controlling risk associated with
21 certain work activities such as contractors and maintenance
22 works.

23 Without a permit to work being generated, no work can
24 be undertaken by a contractor. The procedure which is separate
25 and apart from a job risk assessment intended to, among other
26 thing, one, establish the requirements for identifying critical
27 information on jobs such as the nature and extent of the work to

1 be done, the exact location of the job, the equipment to be used,
2 the hazards involved and the precautions to be taken, ensure
3 that work is not carried out unless there is proper authorization,
4 clearly identify high hazard work and requirements and the
5 requirements or precautions to be followed, and establish
6 monitoring and auditing requirements for permit jobs.

7 The HSEQ department, independent of the permit to
8 work system, monitor the works being done by LMCS at berth
9 No. 6 through Paria's HSSE technicians who generated shift,
10 technicians daily logs and daily activity reports which was
11 submitted to Mr. Archbold and Mr. Yearwood. See for instance
12 core bundle pages 1021 to 1022. The HSEQ department
13 assessed the HSE documents submitted by LMCS in relation to
14 the 36 Sealine riser repairs at berth No. 6 and found them
15 satisfactory.

16 Those HSE documents included the emergency response plan,
17 risk assessment, job hazard analysis, site specific safety plan
18 and COVID 19 safe work practices.

19 Mr. Archbold first heard about the incident through Mr.
20 Yearwood at about 3.12 p.m. on Friday, 25th February. He was
21 also informed that whilst the men were conducting the works, a
22 splash was observed on the monitor showing the works. LMCS
23 dive supervisor Andrew Farah went into the chamber and
24 reported there was no one in the chamber. Mr. Archbold
25 informed OSHA the Ministry of Energy and Energy Industries
26 and the Trinidad and Tobago Fire Service of the incident and
27 requested support.

1 Upon Mr. Archbald's arrival at the incident command
2 post, the incident command team was already activated and
3 comprised Mr. Collin Piper as incident commander, Mr.
4 Archbald as planning section chief, Mr. Michael Wei as
5 logistics section chief, Catherine Balkissoon as operations
6 section chief, Paul Yearwood as HSSE or safety officer, and
7 Nerissa Feveck as information officer. Mr. Archbald obtained
8 an update on the status of the incident response and was
9 informed that the incident command team was then gathering
10 information about the incident and reaching out to various
11 agencies and parties for assistance, coordinating sutures
12 [*Phonetic*] and discussing rescue options.

13 At about 5.30 p.m. Mr. Archbald gave instructions for a
14 triage station to be set up with ambulances, oxygen, emergency
15 technicians and at around 5.45 p.m. Mr. Piper informed Mr.
16 Archbald that one of the five divers were rescued. Mr.
17 Archbald stated that he contacted Mr. Mark Rudder, Director at
18 the Ministry of Energy and Energy Industries, and informed
19 him that the diver was found in the chamber and that help
20 would be needed to extract the other divers believed to be in the
21 riser. Mr. Rudder advised that the coast guard should be
22 contacted, however Mr. Archbald informed him that the coast
23 guard was already engaged and other options were being
24 sought.

25 Mr. Archbald also spoke to the coast guard's Lieutenant
26 Hargreaves regarding assistance to rescue persons but was
27 advised that the coast guard did not have the equipment and

1 crew on site to do such a rescue as they came prepared to look
2 for persons in the open water.

3 Around 6.24 p.m., Mr. Archbald spoke to Commander
4 Maharaj of the coast guard who informed him that the coast
5 guard Interceptor, the vessel engaged in conducting an open
6 water such for the missing divers must return to Staubles Bay to
7 retrieve a coast guard dive crew and equipment to possibly
8 attempt a search and rescue exercise within the pipeline. Mr.
9 Archbald was advised that the coast guard crew had already left
10 for Staubles Bay.

11 The incident command team subsequently made contact
12 with diving experts and companies including Eastern Divers
13 Company Limited, Hull Support Services and Offshore
14 Technology Solutions Limited to provide assistance with search
15 and rescue efforts within the pipeline. It came to the attention
16 of the incident command team that persons were diving into the
17 pipeline in the wake of Mr. Boodram's rescue.

18 Mr. Archbald, based on his qualifications, knowledge
19 and experience in occupational health and safety advised the
20 incident commander that diving into the pipeline was not safe.
21 Furthermore, when he spoke to Mr. Dion Lawrence of OSHA,
22 Mr. Lawrence asked in a disapproving tone whether Paria was
23 allowing rescue divers to dive into the pipeline. Mr. Archbald
24 believed that it was unsafe to dive within the pipeline at the
25 time without a continuous air supply, with a tank and tether.
26 He stated that the divers would at least need a rope with them, a
27 supply of air and a tank to be on them as an emergency air

1 supply in case their regular air supply was interrupted.

2 Also, to his knowledge, LMCS did not discuss with or
3 present the incident command team with any rescue plan. The
4 incident command team agreed with Mr. Archbald and the
5 incident commander, Mr. Piper, made a decision based on the
6 information and advice received that further diving into the
7 pipeline should be suspended until it could be determined that it
8 was safe to do so. The decision was communicated to LMCS
9 employees at berth 6 at about 7.00 p.m., however, to Mr.
10 Archbald's knowledge, no attempt was made to enforce the
11 decision or physically interfere with LMCS' diving into the
12 pipeline. To the best of his knowledge, LMCS personnel
13 continued to do so.

14 At around 7.00 p.m. Mr. Archbald made arrangements
15 with Survival Systems Limited to provide filled air tanks to
16 LMCS as Mr. Archbald was informed that LMCS were running
17 out of compressed air. Mr. Archbald asked Kenson EMTs,
18 Nigel Bachew and Shan Balkissoon to go and interview
19 Christopher Boodram at the San Fernando General Hospital to
20 get information to assist with the rescue efforts. They arrived at
21 the hospital at 9.00 p.m. and about 9.58 p.m. they called and the
22 incident command team was able to speak with Christopher
23 Boodram on the phone.

24 Mr. Archbald stated that the coast guard crew returned at
25 around 11.00 p.m. and were informed of the information
26 obtained from Mr. Boodram, however, Lieutenant Hargreaves
27 advised that the coast guard would not be able to attempt a

1 rescue into the pipeline and it was too high risk and there were
2 too many unknowns. At approximately 1.37 a.m. on Saturday,
3 26th February, Eastern Divers, after visiting berth 6 to obtain
4 information, returned to the ICT and advised Mr. Archbald that
5 they were returning to their base to obtain the necessary
6 equipment for a possible rescue attempt.

7 At about 2.04 a.m., Mr. Archbald was advised that
8 Christopher Boodram was in a stable condition and that he
9 should undergo decompression treatments. Mr. Archbald says
10 that a hyperbaric chamber was at the time being—was at the
11 time being supplied with air from the compressor and there was
12 a risk that the compressor and the back-up compressor would
13 eventually fail. A 30-inch spool piece was therefore installed
14 on top of the riser to which a chamber was attached to berth 6
15 as it was felt that this would mitigate against compressor failure
16 and allow rescue divers to enter from on top rather than from
17 the chamber.

18 Mr. Archbald stated that a crawler was sent down
19 through the riser at berth 6 and reached a distance on 45 feet
20 along the horizontal portion of the line but could not progress
21 any further. He was informed that Hull Support Services and
22 OTSL advised that they would not be able to dive into the
23 pipeline to attempt a rescue. At around 8.11 a.m. on Saturday,
24 Mr. Archbald made arrangements for Christopher Boodram to
25 be taken to a Hull Support Services Limited facility at La Brea
26 to receive decompression treatment, however, there was a
27 subsequent change in his treatment plan by Mr. Boodram's

1 doctor.

2 Kazim Ali came to the incident command team on 26th
3 February. He wanted to send a diver down at berth No. 5,
4 however Mr. Archbald stated that a dip which is a device used
5 to show the presence of water, showed that the entire riser at
6 berth No. 6 was filled with water and that at berth No. 5 the
7 pipeline contained hydrocarbons and the riser was empty. This,
8 he stated, meant that the pipeline was blocked possibly with the
9 inflatable plug. Mr. Kazim Ali Sr.'s idea therefore was not
10 feasible and was not included in the incident command teams
11 forward plan.

12 Mr. Archbald also said that Mr. Kazim Ali Sr. informed
13 the incident command team that he knew a diver who would be
14 willing to go into the pipeline but he was not available until
15 Sunday. Mr. Archbald discussed the plan with him and Mr. Ali
16 Sr. advised that the diver would enter the pipeline first, feet first
17 and try to remove the obstructions in the pipeline which
18 prevented the progress of the crawler. At the end of the
19 discussions, Mr. Archbald states that Mr. Kazim Ali Sr. said, "I
20 am a practical man. My son is no more. This is now a
21 recovery."

22 No one from LMCS ever discussed with or presented to
23 the ICT any rescue plan for the missing divers as the only
24 discussion Kazim Ali Sr. had with Mr. Archbald was about
25 having a diver enter the pipeline from above to remove the
26 diving equipment, gear and other obstructions in the pipeline.
27 However, Mr. Archbald indicates that despite what Mr. Ali Sr.

1 said to him, no decision was taken at that time that Paria's
2 rescue operations would cease and move instead into recovery,
3 into the recovery phase.

4 The incident command team continued in conjunction
5 with the assistance of diving experts to try to develop a plan for
6 rescuing the missing divers. Mr. Archbald says that several
7 rescue options were considered by the ICT. This included the
8 option of cutting a test hole and inserting a camera to determine
9 the exact location of the divers, and the option of cutting a riser
10 to allow for access of a competent and willing diver, but both
11 options were deemed to be too risky and would have taken too
12 long to execute.

13 By Saturday evening, none of the diving companies
14 contacted by Paria were willing to attempt a rescue. The
15 incident command team then determined that the most practical
16 rescue plan at that time was to get to the divers by pumping the
17 water down from berth No. 6 riser. This would possibly have
18 introduced air into the pipeline. The ICTs forward plan at 5.37
19 p.m. on Saturday, 26th of February was as follows. First
20 remove the hyperbaric chamber, then install booms at berth No.
21 6 to collect any oil from the pipeline, pump down the water
22 from the riser at berth 6, inspect the pipeline with a crawler.

23 At 11.00 p.m. on Saturday, Mr. Archbald renewed
24 discussions with Eastern Divers. He says he pleaded with them
25 to attempt a rescue. However, ultimately they refused because
26 they thought the risk to their personnel was too high. At about
27 7.00 a.m. on Sunday, February 27th, Mr. Archbald indicated

1 that he contacted Mr. Kazim Ali Sr. in an attempt to get the
2 diver who Mr. Ali Sr. said would be available on Sunday and
3 discussed with him the possibility of attempting a rescue by
4 pumping down the water at No. 6.

5 Despite Kazim Ali Sr. indicating that he would get back
6 to Mr. Archbald, he never did. Mr. Archbald left the incident
7 command post at about 8.00 a.m. on Sunday and when he
8 returned at 3.00 p.m. the incident command team had taken a
9 decision to transition from rescue to recovery operations.

10 In his supplemental witness statement, Mr. Archbald
11 exhibits a thread of February 2022 emails between himself and
12 Mr. Ahmad Ali of LMCS. In paragraphs four and five of that
13 supplemental witness statement he states as follows.

14 “The email tread concerns an incident which occurred at
15 Paria on February 17th, 2022 where LMCS Limited
16 mobilized their barge to commence works on the job
17 which is the subject of the Commission prior to the
18 issuance of any permit to work by Paria. This incident
19 caused the suspension of the job by Paria and an
20 investigation into the incident to be launched by LMCS
21 Limited for Paria’s review.

22 The email thread contains an email sent on
23 February 17th, 2022 where I asked Mr. Ahmad Ali
24 several questions targeted towards the prevention of a
25 reoccurrence of a similar incident and his responses by
26 mail sent to me on February 18th. In his response to my
27 third question as to whether a self-check or checklist

1 system would be implemented, Mr. Ahmad Ali indicated,
2 among other things, that LMCS Limited felt that the
3 permit itself already served as the most powerful control
4 document in the existing system and it would be of little
5 value to add another form recapping the same
6 requirements as were already documented.”

7 Mr. Archibald, is this a correct summary of both your
8 first and supplemental witness statements?

9 **Mr. Archibald:** Yes.

10 **Ms. Maharaj:** Thank you.

11 **Mr. Chairman:** Right. Thank you for that. Mr. Maharaj I
12 think you have some questions.

13 **Examination By Mr. Maharaj SC:**

14 Q. Good afternoon, Mr. Archibald.

15 A. Good afternoon.

16 Q. At paragraphs 17 and 18 and 19 of your witness statement, you
17 gave evidence of the review—[*Document handed to Mr.*
18 *Archibald*—17, 18 and 19—the review and assessment which
19 was made by your department of the LMCS emergency
20 response plan, risk assessment, the job hazard analysis, site
21 specific safety plan and you stated that upon that review your
22 department found that the LMCS documents were satisfactory.
23 Is that correct?

24 A. Yes, Sir.

25 Q. And I want you to—I want to refer you to paragraphs 85 and 86
26 of Michael Wei’s witness statement which is at page 1286
27 Volume IV of the witness bundle in which he stated, if you just

1 look at it?

2 **Mr. Chairman:** Just a moment, yeah, you'll find it behind Tab
3 34. Yeah.

4 **Mr. Archbald:** Got it.

5 **Mr. Chairman:** Which paragraph again Mr.—

6 **Mr. Maharaj SC:** It's paragraphs 85 and 86 at pages 1286 and
7 1287.

8 **Mr. Chairman:** All right.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. In which he said that the accident was in respect of a Delta P
11 situation.

12 A. Yes, Sir.

13 Q. Right. And that was the cause the accident, correct? Would
14 you agree with me that in none of those documents which Paria
15 reviewed and approved was the—a latent Delta P hazard
16 identified as a risk?

17 A. Reviewed and accepted, um, rather than approved.

18 Q. Accepted?.

19 A. Yeah. Thanks. As far as I could remember, Delta P was never
20 mentioned or the—

21 Q. Delta P was never mentioned. Before this accident occurred, in
22 respect of a latent Delta P hazard, would I be correct to say that
23 you did not consider that these works would have had an active
24 Delta P situation?

25 A. You would be correct.

26 Q. I would be correct.

27 A. The contractor and LMCS did not raise Delta P to us as a

1 potential risk, and, that is correct, I did not consider it.

2 Q. Do you consider that persons in your department had the
3 necessary qualifications and experience to identify a Delta P
4 hazard situation?

5 A. No. I could explain a little bit more?

6 Q. Yeah.

7 A. Okay. So the—in the HSE department within Paria we work
8 within the oil and gas industry and the risks and the hazards and
9 threats that we're more accustomed with would be related to oil
10 and gas. So, for a diving activity, it would not be normal unless
11 somebody is—has worked somewhere else before, from, in that
12 industry and is working with us, it would not be normal for
13 someone to have that knowledge or that competence or
14 certification, and that is the case.

15 Q. And that is the case. So, would it be correct to say that, as far
16 as you were concerned in that department, you never envisaged
17 that any time that Paria was doing these works this kind of
18 works, there would have been a Delta P hazard?

19 A. That is correct. For this type of work, we never considered that
20 as a risk. It was never introduced to us, at least I could say I did
21 not think about it.

22 Q. You did not think about it.

23 A. That is a fact.

24 Q. And as far as—how long are you with Paria?

25 A. Its inception in December—

26 Q. Twenty nineteen?

27 A. —2018.

1 Q. Eighteen?

2 A. Yeah, so it's four years now.

3 Q. And as far as you're concerned, from what you know, Paria
4 didn't consider that or your department didn't consider it?

5 A. I, I really don't know if I can answer that question.

6 Q. Okay. Fair enough. Fair enough. Mr. Paul Yearwood who is
7 one of your officers—

8 A. Yes, he works with me, yeah.

9 Q. —he told us in his evidence that at paragraph seven of his
10 witness statement at page 1301, I'll read it to you, he said that
11 Paria did not have the competence and experience to execute
12 these works.

13 A. Paragraph seven?

14 Q. Yes. Last three lines.

15 "Because the works which were to be executed by LMCS
16 were highly specialized in nature and were not of a kind
17 which Paria had the competence or experience to execute
18 and Paria necessarily relied on the specialist expertise of
19 contractors such as LMCS."

20 A. Okay. I see it.

21 Q. Would you agree with that?

22 A. Yes. Yes.

23 Q. Well—

24 A. I would agree.

25 Q. You would agree?

26 A. Yeah.

27 Q. Something that has troubled me in this matter a lot and I

1 wonder if you could help me. If Paria did not have the
2 competence and experience to execute these works, how could
3 Paria have reviewed these documents from LMCS to accept
4 them to give the go-ahead to do these works?

5 A. Okay. How could Paria have done this?

6 Q. Yes. If, if, if, for example, you and your department do not
7 have the skill, the experience, the competence to review and
8 assess the works for the works to proceed and your officers
9 have been saying, and Paria has been saying, it did not have
10 that experience and competence, but yet it is asking to review
11 the works with its staff and give the go-ahead to do the works,
12 how, how—it makes me feel that something is not right.

13 A. Okay. So, it—

14 Q. Am I wrong?

15 A. Well let me give the answer.

16 Q. Yes.

17 A. And, um, the decision on whether you're right or wrong
18 would—

19 Q. Okay.

20 A. —would still be up for you to decide. The, um, the risks appear
21 in two basic areas, two basic forms, functional risks and
22 situational risks, situational being geographic or it could be
23 condition. So the functional risks are related to the job. So, for
24 example, if a contractor is building scaffolding in Paria and he
25 builds it in Port of Spain or wherever, it's his function. That's
26 the functional risks associated with the job. So he's the expert
27 and he understands those risks. The situational risk or the

1 geographic risks belong to Paria. That's our facility. We
2 understand those risks, so when we hire a contractor, he brings
3 to us the functional risks associated with the job.

4 He is the expert, he is doing the job, so he tells us, "This
5 is my method of doing the job and this are—these are the risks
6 associated with the job." And then we say to him, "Well this is
7 our facility and these are the risks associated with our facility",
8 and the two supposed to come together for the job to be
9 executed safely.

10 So in doing the risk assessment review or the JHA review
11 as in this particular case, our role was to introduce or inform the
12 contractor these are the facility risks. We have oil and we have,
13 um, hydrocarbon here, and this is the depth and that sort of
14 thing. These are the activities that we have taking place at this
15 point in time, and we inform him of that. We also are informed
16 of the functional risks associated with the job by him, and we
17 are also informed of the controls that he intends to implement to
18 manage those risks. And to a certain extent as well, once we
19 are able to, if there are any risks that are obvious to us that, um,
20 that relates to his job function, and it often happens that we are
21 able to, we introduce that to him as well if he missed out on
22 those.

23 Q. Mr. Archbald, the functional risks—

24 A. Yes.

25 Q. —must be associated with the situational risks because the
26 situational risk is at Paria, the site is at Paria, the works are
27 being done at Paria, Paria is the site authority. So the

1 functional risks are connected with the situational risks. So if
2 you're assessing risks, you would be assessing risks in order to
3 determine whether an accident can occur, people can get injured
4 or people can die. So if you are assessing risk for works to go
5 ahead on Paria's site, you want to ensure that these works can
6 go ahead safely without any injury or death to anyone. Am I
7 not correct?

8 A. That is exactly it and the—and I want to say again that the
9 contractor brings to Paria, in the case of a specialist contractor,
10 the, the functional risks that we may not be aware of and the,
11 and the company, Paria, brings to the contractor the facility
12 risks. So they come together to be able to get the job done
13 safely.

14 Q. But Paria is authorizing works which, if done, and proper risks
15 are not considered, can cause the death or injury to individuals.
16 Without Paria approving those documents, the works wouldn't
17 happen. So, did Paria consider that it had a duty of care? Did
18 your—in doing this, did you consider you had a duty of care to
19 ensure that the risks were properly assessed?

20 A. Paria has a duty of care as the occupier, the owner of the
21 facility. There's requirement under the OSH Act to do certain
22 things. The employer, which is LMCS in this case, has a
23 responsibility to provide a suitable and sufficient risk
24 assessment for the activities. The occupier is informed by the
25 employer about the functional risks.

26 Q. So, Mr. Archbald, are you telling us, I just want to understand
27 it, are you telling us that far as Paria was concerned in doing

1 this review and assessment, Paria did not have a duty to ensure
2 that the works which were being done and being authorized by
3 Paria were done safely and done in a way in which no one
4 would get injured and no one can die?

5 A. I would say in my opinion, that Paria should ensure, so far as is
6 reasonably practicable, that the risks are presented and
7 mitigated.

8 **Mr. Chairman:** Just a minute, Mr. Maharaj. [*Writing*] Thank
9 you.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. You had, um, you had an input in the permit to work rules, not
12 so?

13 A. Yes, Sir.

14 Q. And you're very familiar with them?

15 A. Yes.

16 Q. The applicant for this job was Paria?

17 A. For the job with the hyperbaric chamber the applicant was Mr.
18 Houston Marjadsingh, a Kenson employee contracted by Paria.

19 Q. Marjadsingh?

20 A. A representative of Paria, yes.

21 Q. So Mr. Marjadsingh was representing Paria?

22 A. Yes, Sir.

23 Q. So in substance Paria was the applicant? LMCS was not the
24 applicant?

25 A. LMCS was not the applicant?

26 Q. Who was the applicant?

27 A. Houston Marjadsingh was the applicant.

1 Q. All right. So he was the applicant representing Paria?

2 A. Yes, Sir.

3 Q. Right. I want to take you to the rules. It's at Volume I of the
4 core bundle, page 28.

5 A. [*Document handed to Mr. Archbald*]

6 Q. Now the applicant is Mr. Marjadsingh representing Paria. Look
7 at 5.1 on page 28.

8 A. Yes.

9 Q. "The applicant"—that is Mr. Marjadsingh representing
10 Paria—"must have the necessary competence to execute
11 the job or to supervise the execution of the job."

12 So these rules envisaged that either Mr. Marjadsingh
13 representing Paria would have had the competence to execute
14 the job or to supervise the execution of the job?

15 A. That is correct, yes, Sir.

16 Q. But you have told us that Paria didn't have that competence.

17 A. That Paria—yeah, I had told you I agree with all statement
18 that—

19 Q. You remember I, I—

20 A. —Paria did not have the competence—

21 Q. Right.

22 A. —to execute the job. May I explain?

23 Q. Paria did not have the competence to execute the job. Did it
24 have the competence to supervise the execution of the job?

25 A. In the opinion of the technical and maintenance department,
26 yes.

27 Q. Yes. So—

1 A. Because they but Mr. Marjadsingh, they assigned him to
2 supervise the execution of the job.

3 Q. So you are saying then that Mr. Marjadsingh had the
4 competence to supervise the execution of these works?

5 A. I think that might be implied but I didn't say that.

6 Q. Okay. So let me ask you specifically.

7 **Mr. Chairman:** Let's be clear please? We don't need
8 implication. You're here you can tell us what you understand
9 the position to be.

10 **Mr. Archbald:** Right. The technical and maintenance
11 department assigned Mr. Marjadsingh to supervise the
12 execution of the job.

13 **Examination By Mr. Chairman:**

14 Q. What does that mean? Sorry, what does that mean? They
15 assigned him, Mr. Marjadsingh, to do the job, what does that
16 mean?

17 A. To supervise the execution of the job?

18 Q. Yes.

19 A. They put him in charge of being the applicant and the duties
20 and the roles of the applicant are outlined in 5.1.

21 Q. Can we take it from that, that they would not have appointed
22 him if they did not believe he was capable of supervising the
23 execution of the job?

24 A. I could assume that, yes.

25 Q. Has there been a review since this has happened?

26 A. Of?

27 Q. Whether he was capable of supervising the execution of the job.

1 A. I'm not certain.

2 Q. Well, I don't know what that means, "I'm not certain." You're
3 the HSE, you're head, aren't you, at Paria?

4 A. [*Nodding head*]

5 Q. Has there been a review, since this happened, as to whether Mr.
6 Marjadsingh was someone capable of supervising the execution
7 of the job?

8 A. The—Paria did an investigation—

9 Q. No, no I'm familiar with that. I want to know from you, as the
10 head of the HSE whether—look, whichever—whoever is
11 responsible, whether there's nobody responsible, something
12 went wrong, because four people died. Right? So I'm
13 assuming you, as head of HSE, would want to ensure that
14 whatever the position is it doesn't happen again and that the
15 personnel who were in charge or responsible for the
16 undertaking of these works were the right people to do it. So,
17 has there been a review, to your knowledge, of whether Mr.
18 Marjadsingh was capable of supervising the execution of the
19 job?

20 A. Of this job?

21 Q. Yes, this job.

22 A. No. As far as I'm aware no review was done for Mr.
23 Marjadsingh—on Mr. Marjadsingh whether he was capable of
24 executing this past job.

25 Q. Right. So if there was another job similar to this, he might be
26 reappointed?

27 A. The review might be done.

1 Q. Well, let's, let's, let's—

2 A. The, the, the, the job, the job would be different. If it's the
3 same exact job, we have we have other things in place now to
4 address doing a job like this.

5 Q. All right, we'll, we'll, we'll turn to those in due course I'm
6 sure.

7 A. Yeah.

8 Q. All right, but as far as you're aware, no review has been
9 conducted by Paria as to whether or not the man who was to
10 supervise the execution of the work was fit to do so?

11 A. Correct.

12 **Mr. Chairman:** Thank you.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. Mr. Archbald, I want to give you an opportunity. Are you
15 telling this Commission that as the person, as the lead of this
16 department in Paria, are you telling this Commission today that
17 Mr. Marjadsingh had the specialist knowledge to supervise this
18 job?

19 A. I would like to explain.

20 Q. Well, it's a simple question but you could just give me the
21 answer and then explain.

22 A. Okay. Again—

23 Q. The question is—

24 A. —he was assigned by the technical and maintenance
25 department to be the applicant on this job, which is to supervise
26 the execution of the job.

27 Q. Okay that—

1 **Mr. Chairman:** Is the answer yes then?

2 **Mr. Archbald:** The question was whether in my opinion he
3 is—

4 **Continued Examination By Mr. Maharaj SC:**

5 Q. Whether in your opinion he has the specialist knowledge to be
6 given that duty to supervise this job?

7 A. For the diving aspect of the job?

8 Q. No, I talking about the works.

9 A. The works? No, I would say that Mr. Marjadsingh, there are
10 some aspects of this job that was out of his ability to be able to,
11 to supervise.

12 Q. Well what aspect of the job which was not out of his ability?

13 A. The aspect of the Delta P hazard.

14 Q. The Delta P hazard?

15 A. That's right. I am of the opinion, I believe that Mr.
16 Marjadsingh, and I don't know for sure, that he did not know
17 about Delta P.

18 Q. So when he was made by Paria the applicant for these works on
19 the date that this accident happened, according to you, he
20 should not have been the applicant? On the permit to—

21 A. Yeah, I, I think, I think I can agree that for some aspects of the
22 job that he should not have been the applicant and, and the
23 reason, the reason for that was that the, again, the Delta P
24 hazard was not something that he would have been
25 knowledgeable of.

26 Q. You know that this accident happened on the 25th of February,
27 not so?

1 A. Yes, Sir.

2 Q. And on the 25th of February is when they had the incident with
3 the plugs being pulled out?

4 A. Yes.

5 Q. And the Delta P occurred, right? You know that in respect of
6 those works on that day, Mr. Marjadsingh was the applicant?

7 A. Yes.

8 Q. So are you saying, are you telling us that Mr. Marjadsingh
9 should not have been the applicant for these works on that date?

10 A. I think I answered that just now, but just, just to be clear, um,
11 there are some aspects of this job that Mr. Marjadsingh would
12 not have had the competence or have knowledge of the hazards,
13 and the more appropriate thing to have done would have been
14 to split the permit so that Mr. Marjadsingh would be the
15 applicant for several aspects of the job and keep the, the area
16 that dealt specifically with the Delta P hazard under the
17 contractor.

18 Q. Under the contractor?

19 A. Yeah.

20 Q. With no representative from Paria? Did, did Paria have
21 anybody else than Mr. Marjadsingh to be the applicant for this
22 job?

23 A. No, no, the—

24 Q. No?

25 A. No, in, in, in circumstances like this, for example the diving
26 job, LMCS personnel were the applicant.

27 Q. LMCS?

1 A. LMCS was the applicant in that case.

2 Q. For the diving job?

3 A. For the diving job.

4 Q. On the 25th?

5 A. That's right. So, for example, Andrew Farah was the applicant.

6 So he was the one supervising the diving activity at that time.

7 Mr. Marjadsingh was the applicant for the hyperbaric works.

8 Q. Yes. And the hyperbaric works—

9 A. As—

10 Q. —for the hyperbaric works in the chamber there is where the
11 accident occurred?

12 A. And the hyperbaric works that I was referring to that he was the
13 applicant for, which is where his knowledge and competence is,
14 is supervising the execution of the pressure testing as well as
15 the installation of the flange.

16 Q. And the—and whatever works were to be done on that day,
17 whatever works were to be done on that day he was to
18 supervise it? In other words, he was to supervise the works
19 which were to be done in the hyperbaric chamber?

20 A. He was to supervise the execution of the works outlined in the
21 permit.

22 Q. Yes.

23 A. There was another job being—taking place, for which he did
24 not have the competence and the—LMCS was the applicant for
25 that.

26 Q. Mr. Marjadsingh in his witness statement to this Commission,
27 and I'm referring to page 3049 volume—of the supplemental

1 witness statement bundle and particularly at paragraph 15 of his
2 witness statement, said, “As a maintenance technician, I only
3 know of work relative to my field. I did not have specialist
4 knowledge about the job LMCS was doing.” He didn’t say part
5 of the job. The job LMCS was doing.

6 A. Right.

7 Q. He did not have the specialist knowledge about the job LMCS
8 was doing. Do you agree with his statement?

9 A. The—some of the activities—or, you want me to answer first?

10 Q. Answer first, please?

11 A. I don’t—

12 Q. Do you agree with his statement?

13 A. I don’t know what he meant. I could tell you, I could tell you
14 what I know.

15 **Examination By Mr. Chairman:**

16 Q. So you disagree with his statement?

17 A. I, I cannot agree or disagree.

18 Q. Well, hang on a minute. Who is he?

19 A. Sorry?

20 Q. Marjadsingh, who is he?

21 A. He works with Paria through Kenson.

22 Q. Right. And you’ve been there four years.

23 A. Yes.

24 Q. How long has he been there?

25 A. I’m not sure.

26 Q. Right. Longer than you?

27 A. No.

1 Q. No. All right. You knew who he was?

2 A. Yes.

3 Q. You knew his competencies?

4 A. No.

5 Q. You didn't know his competencies?

6 A. No.

7 Q. You were content for him to sign a work permit for these what
8 can only he regarded as hazardous works to be done, and yet
9 you didn't know his competencies?

10 A. No. The technical and maintenance department, according to
11 the permit to work process as well as the hiring process—

12 Q. I follow that. But you're in charge of safety, health and safety
13 at this site and for these works. That's your job. You're the top
14 man. Buck stops with you with health and safety, doesn't it?

15 A. Yes.

16 Q. Right. And you're saying that you were content for Mr.
17 Marjadsingh to sign off as the applicant for this work permit—

18 A. Yes.

19 Q. —doing these hazardous works without knowing his
20 competencies?

21 A. I accepted the assessment by the technical and maintenance
22 department and were satisfied with it.

23 Q. Right. Do you think, on reflection, it would be sensible for you
24 to know these competencies?

25 A. The, yes there is, there is a built-in review process now taking
26 place, yeah.

27 Q. A built-in review process as a result of this incident?

1 A. It started before. There was another incident last year that we
2 have been looking at.

3 Q. Yes, so we—but what I want to know really is whether or not
4 this new process involves you knowing the applicant's
5 competencies before agreeing to him being an applicant?

6 A. Yeah. The applicant's competencies with respect to being an
7 applicant, that process is in place and I could confidently say
8 that I am satisfied with his competence.

9 Q. Now?

10 A. For being an—no, for being an applicant before the job. His
11 competencies with respect to him doing—executing his
12 activities under technical and maintenance, that was not part of
13 an HSE review. There are two things. One is being an
14 employee of the technical and maintenance department—

15 Q. All right.

16 A. —to be able to execute or supervise the execution. The other is
17 his competency as an applicant in the permit to work procedure.

18 Q. Yeah, but the applicant has to be able to supervise the execution
19 of the job?

20 A. Yes.

21 Q. Doesn't he?

22 A. Yes.

23 Q. So all I'm asking you is whether or not you knew of his
24 competencies before agreeing to him being an applicant, which
25 involved supervising the execution of the job. and you've told
26 me you didn't?

27 A. No. That would—I—

1 Q. That's why I asked.

2 A. —like I said—

3 Q. Sorry, sorry.

4 A. I answered with respect to his competencies as an employee
5 under technical and maintenance department. With respect to
6 the permit to work system, we have a process in place.

7 Q. Yeah, but I'm on—forgive me. We're at cross-purposes, all
8 right? I want to be clear about that. I'm not undermining his
9 ability as an employee of the firm. I'm assuming if he was a
10 decent employee they'd be keeping him on. If he were no good
11 then they got rid of him. But the fact is that he, in this context,
12 in this matter that we're considering, is the applicant. The
13 applicant has a responsibility to supervise the execution of the
14 work. And I'm asking you whether or not you were satisfied as
15 to his competencies to be an applicant in these and therefore
16 supervise the execution of the work?

17 A. Yes.

18 Q. Right. Are you satisfied that he did have such competencies?

19 A. Yes.

20 Q. Even though you identified to Mr. Maharaj that there were
21 certain areas of his ability that clearly he couldn't supervise?

22 A. Which is the diving.

23 Q. Just the diving?

24 A. Well, as far as I could remember. He—the, the pressure testing
25 and the mechanical works, those fall within his competency.

26 Q. Right. And you were satisfied from your own knowledge that
27 he was capable of doing that?

1 A. Yes.

2 Q. Right. But you're satisfied that the diving aspect of it was not
3 something within his—

4 A. Correct.

5 Q. Right. And does it follow from that that therefore there was no
6 adequate supervision of that aspect the job?

7 A. Well, that is why we have a different permit.

8 Q. Right.

9 A. For the diving aspect.

10 Q. Okay.

11 A. The—and we asked LMCS to be the applicant for that permit.

12 Q. Well we can see that at page 1072 of the core bundle Volume
13 III. It says here, "To carry out diving activities, specific task to
14 carry out diving activities to assist with the maintenance work."

15 A. Yes.

16 Q. Yeah? So this is the work permit for that and if we go to the
17 bottom, please, you can tell me the applicant there is a squiggle.
18 I'm assuming that that's Mr. Farah?

19 A. Yes.

20 Q. Yes?

21 A. Well I know—

22 *[Document handed to Mr. Archbald]*

23 **Mr. Maharaj SC:** That's Farah.

24 **Mr. Archbald:** It is? Okay, thanks. Yeah I thought it was
25 Farah. I just don't recognize his signature.

26 **Examination By Mr. Chairman:**

27 Q. Well, I don't. I mean, I have no idea what his signature looks

1 like but assuming that that is Mr. Farah's signature, so he is the
2 applicant in this particular—

3 A. Yes.

4 Q. Right. So he is responsible for the diving part of it?

5 A. Yes, Sir.

6 Q. Right. And then we go—move on two pages to 1074, so that's
7 the work permit for the works to be done?

8 A. To remove and install the 50-inch flange, that would fall under
9 Houston Marjadsingh's competence, to remove and install the
10 30-inch riser pipe, that too would fall under his competence.
11 To remove the 30-inch solid blank, conduct pressure tests on
12 the flange weld, remove the chamber and blank the top of the
13 new riser, yes. All of those would fall under his competence.

14 Q. So you'd be satisfied that he would be an appropriate applicant
15 for that—

16 A. Yes, Sir.

17 Q. —that part the work? All right. And so—and therefore he is
18 the applicant at the bottom, we can look to the bottom of the
19 page please? We can see he is the applicant, all right? So
20 you're, you're able to assure us that he would have been more
21 than competent, or a competent at least to be able to supervise
22 those aspects of the job?

23 A. Yes. I am confident.

24 Q. Right. Thank you. That, that helps me considerably because
25 the previous work permit deals with the diving aspect.

26 A. Yes.

27 Q. And this part deals with the actual works to be carried out?

1 A. That's right.

2 Q. Now, the, um, there is inevitably a crossover between the two
3 of them?

4 A. Yes.

5 Q. And is it anticipated that in the crossover between the two Mr.
6 Marjadsingh would be liaising with Mr. Farah?

7 A. Yes. Yes. It would be. That's right.

8 Q. You would expect?

9 A. I would expect that.

10 Q. Right. And just so that I'm clear about this, Mr. Marjadsingh's
11 responsibility to supervise the execution of the work would
12 include that which is identified on page 1074—scroll back up a
13 bit please, thank you—where it says, um—keep going. That's
14 it. Stop. That's it. You see where it says, "Cleared of
15 process/hazardous materials", do you see that?

16 A. Yes.

17 Q. And then it says: "Yes, migration barrier to be used"?

18 A. Yes.

19 Q. Right? Now we'd been told that the migration barrier was to be
20 used in order to preserve the good air in the chamber and to
21 prevent anything falling into the pipe.

22 A. Yes.

23 Q. I, I summarized what we've been told.

24 A. Yes.

25 Q. But that's the essence of it because Delta P had not been
26 identified, all right?

27 A. That is correct.

1 Q. So the purpose of the migration barrier there was to preserve
2 the good health of those working in the chamber?

3 A. Yes.

4 Q. And the integrity of the pipe. Now, is Mr. Marjadsingh—

5 A. And, and the integrity of the pipe?

6 Q. Yeah, nothing falling into it.

7 A. Oh, yes. Well, it's not for the integrity the pipe, I suppose, but
8 it is for—inclusive of people as well.

9 Q. Well obviously it's inclusive of people but, I mean, when I say
10 the integrity of the pipe, I mean that there shouldn't be foreign
11 bodies in it, other than the—

12 A. Yes.

13 Q. —the oil that it was intended to carry.

14 A. Yes.

15 Q. Right. Given that that's the purpose, can we take it that Mr.
16 Marjadsingh would have prevented, had he known, the removal
17 of the migration barrier at all?

18 A. Yes. He would have known that because it's on the permit as a
19 control and he would have—

20 Q. And that somehow—

21 A. —if he had known that they were going to remove it, he would
22 have intervened.

23 Q. Right. Well, what, what it, what it amounts to is this. You're
24 content that Mr. Marjadsingh was competent enough to know
25 that the removal of the migration barrier would be something
26 that should not happen?

27 A. Yes.

1 Q. And if he were supervising the job, as he was required to do, in
2 the execution of that work, had he seen it or had been told of it,
3 or in some other way come to know that the migration barriers
4 were to be removed, he would have stopped it or should have
5 stopped it?

6 A. Yes. I believe that if anybody had told Houston that they were
7 going to remove the migration barrier or if somehow he were
8 able to see, um, then he would have stopped it. I believe that.

9 Q. Well thee somehow that he would have been able to see the
10 camera, isn't it?

11 A. Yes. Well I don't know if he would have been able to see from
12 the camera. I'm not certain because the migration barrier is a
13 couple feet below.

14 Q. Yes a few feet below.

15 A. So I don't know if the camera sees the migration barrier.

16 Q. Hmm. But in his monitoring the work we've heard varying
17 evidence as to how long this migration barrier would have
18 taken to be removed—

19 A. Okay.

20 Q. —two barriers.

21 A. Okay.

22 Q. If he's monitoring the work, or supervising it as it's described
23 in your document, one would have thought that it would have
24 been pretty obvious that somebody's putting a great big tool
25 down inside the pipe in order to remove it?

26 A. Well the—he, he is required to monitor.

27 Q. Uh-huh.

1 A. It's not—he's not required to be there 100 per cent of the time.

2 Q. No, no, I follow that.

3 A. Um—

4 Q. What would you say would be the appropriate period of time
5 for him have to an eye on it or be an inappropriate period of
6 time to have not had an eye on it, if you follow what I mean?

7 A. Well let me describe the situation.

8 Q. No, no. You help me first with that then you can describe the
9 situation, all right? You help me with what you say—

10 A. Okay.

11 Q. —supervising the execution of the job—

12 A. Yeah.

13 Q. —involves by way of a time associated with it? So, you know,
14 obviously he can nip off to go to the loo, have a cup of coffee
15 maybe, attend to one or two other things but would you expect
16 him to be away for an hour, a half an hour?

17 A. In this particular instance—

18 Q. Uh-huh.

19 A. —I would, I would say within maybe every two hours he
20 should visit.

21 Q. Right. I see. So you would be content, as the head of health
22 and safety, for Mr. Houston Marjadsingh to keep an eye on it
23 every couple of hours?

24 A. Yes. Can I explain?

25 Q. You can in a moment, and I will let you explain, but that—in an
26 ordinary working day, would that amount to three or four
27 visits?

1 A. Yes.

2 Q. And you think that's adequate, do you, in a job which on any
3 view is described as hazardous, dangerous and unusual? You
4 think that's sufficient, do you?

5 A. For the specific situation here, yes.

6 Q. All right. Good. Now you can explain why.

7 A. Okay. Mr. Marjadsingh was handling the job on berth 5 in
8 addition to berth 6. The diving aspect of the job, which was
9 being supervised by Andrew Farah, and, according to Andrew
10 Farah's dive plan that was submitted in the contract, he stated
11 in the dive plan that the blind, the pipeline, must be double
12 plugged in order to prevent any chemical contaminants from
13 affecting the people in the hyperbaric chamber.

14 Mr. Marjadsingh was aware that Andrew Farah was
15 supervising this activity 100 per cent of the time. It is a
16 contractor HSE requirement for the contractor supervisor to be
17 there 100 per cent of the time. Based on that requirement, I
18 would say that Mr. Marjadsingh's visit need not be as frequent
19 as every hour and possibly maybe even two hours might be
20 sufficient. However, in this particular instance, it is almost
21 irrelevant how frequently he should have visited because when
22 they broke for lunch was when the plugs were removed.

23 **Continued Examination By Mr. Maharaj SC:**

24 Q. When they resumed work after lunch?

25 A. We did—Paria did not know that they resumed work.

26 **Examination By Mr. Chairman:**

27 Q. Why not?

1 A. We were not informed.

2 Q. Well you mean Mr. Marjadsingh was on his two-hour break or
3 doing something else?

4 A. I don't know if he was on a two-hour break.

5 Q. All right. So you're saying, so far as you're aware, that the—
6 when the work resumed after lunch by LMCS, you, Paria, were
7 wholly unaware of the resumption of that work?

8 A. Yes.

9 Q. Right.

10 A. At least that is the evidence from Dopson and when Dopson
11 left—

12 Q. We've had the evidence from Mr. Dopson.

13 A. Well, yeah.

14 Q. We've had his evidence already.

15 **Mr. Maharaj SC:** We've had his evidence.

16 A. That's what he told me.

17 Q. Well, all right. I am conscious of what you're saying but I do
18 need to understand, because it seems to me quite important, you
19 regarded supervision of the execution of the every couple of
20 hours as being sufficient?

21 A. In this particular instance with the fact that Mr. Farah was
22 supervising 100 per cent of the time and that Mr. Farah himself
23 knew that the two plugs should have been inside there, I think
24 it's reasonable to expect that Mr. Farah would not have
25 supervised them removing the plugs.

26 Q. Yes. You say Mr. Farah knew the plugs should not be
27 removed. Where do you get that from?

1 A. In the tender documents there's a document called a dive
2 plan—

3 Q. Yes.

4 A. —that in it he has, um, that the two plugs should be in the line
5 to protect the men from chemical contamination.

6 Q. Right. Thank you.

7 **Mr. Chairman:** Thank you.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Mr. Marjadsingh, with the greatest respect to you, on the
10 minute—

11 **Mr. Chairman:** He's not Marjadsingh.

12 **Mr. Maharaj SC:** Sorry.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. Mr. Archbald—much obliged—Mr. Archbald, with the greatest
15 respect to you, on the permit to work that Mr. Marjadsingh was
16 the applicant—

17 A. Yes, Sir.

18 Q. —in his supervision of those works—

19 A. Yes.

20 Q. —according to you he had to ensure that the migration barrier
21 was used, correct?

22 A. According to the permit to work document—

23 Q. Does it show migration barrier to be used?

24 A. That's right.

25 Q. So he had to—that is one of the part of the job he's supposed to
26 supervise?

27 A. You asked me if he has to ensure.

1 Q. But is that what he had to supervise?

2 A. Among other things he was responsible for that, to supervise
3 the execution of the job and that is one of the controls, but, as I
4 said earlier, I don't know if he could have seen the plug.

5 Q. Well, whose duty it was to ensure that if Paria had to supervise
6 the works that the supervisor would be able to see what was
7 going on? Was that LMCS' duty or Paria's duty? If Paria had
8 to supervise the works and Mr. Marjadsingh was its agent to
9 supervise the works, whose duty it was to ensure that Mr.
10 Marjadsingh would be in a position to supervise the work?

11 A. I want to come back to this work permit to answer the question.

12 Q. Well would you answer the question first?

13 A. Whose duty was it to supervise this permit that is on the screen?

14 Q. Whose duty it was to ensure that Mr. Marjadsingh would be in
15 a position to supervise the works that he would be able to see
16 what was happening?

17 A. I think you're asking who is—who—I just want to make sure
18 that I get the question correct.

19 Q. Do you consider that it was Paria's duty to ensure that Mr.
20 Marjadsingh would have been able to see what was happening
21 in order to supervise the works?

22 A. The, the diving aspect of the job was not under—

23 Q. I'm not talking how the diving aspect. I'm talking about the
24 works on this work permit. I know what you want to say, Mr.
25 Archibald but I'm talking about the works on this work permit.

26 **Mr. Peterson SC:** I don't even know what he wants to—what
27 he—what he wants to say but could my learned colleague allow

1 the witness to answer the question? And the witness was going
2 to use a document to assist him in answering the question which
3 all witnesses ought to be allowed to do in all proceedings.

4 **Mr. Chairman:** Of course that's right. I think Mr. Maharaj
5 was trying to get an answer to the question is something I've
6 been engaged with many witness. Answer the question first
7 and you'll be given the opportunity to add anything you want to
8 afterwards, but if you can answer the question, sometimes or
9 most times it can be answered with a yes or no, but or however,
10 and I will always permit the but or however unless it's flippant,
11 I will permit that, so, if you can answer the question asked by
12 Mr. Maharaj, answer the question with a yes or no and if there
13 is a rider to add to it I'll have no difficulty with you adding that
14 rider to explain why you're saying yes or why you're saying no.
15 All right?

16 **Mr. Archbald:** Right.

17 **Examination By Mr. Chairman:**

18 Q. So, so, can we—so that we get where we are—

19 A. Yeah.

20 Q. —Mr. Maharaj will ask the question again, you'll answer it and
21 if there's a rider to be added, you'll be permitted—

22 A. Yeah.

23 Q. —to do so.

24 A. Thanks. I'm just having a little challenge with the length of the
25 question maybe. So—

26 **Mr. Maharaj SC:** Let's try and shorten it a bit.

27 **Mr. Archbald:**—let's go, let's go again.

1 **Mr. Chairman:** Oh dear.

2 **Mr. Maharaj SC:** I'll try and shorten it for you. Okay.

3 **Continued Examination By Mr. Maharaj SC:**

4 Q. Did you consider that it was Paria's duty to ensure that Mr.
5 Marjadsingh, as the supervisor, would have been able to see the
6 works while it was being done in order to discharge his duty?

7 A. Which works?

8 Q. The works described on the work permit, "Migration barrier to
9 be used"?

10 A. In this case, no.

11 Q. In this case no.

12 A. In this case, no.

13 **Examination By Mr. Chairman:**

14 Q. Do you want to explain why?

15 A. Okay. The, the, for example, the installation of the 30-inch
16 riser pipe has to be done inside of the chamber and I don't
17 know if it would have been possible for him to be—been able
18 to see that.

19 Q. All that we know that it is.

20 A. Sorry?

21 Q. We've we know that it would have been. We've seen video
22 footage inside the chamber from the original camera that was
23 located inside the chamber, and if there putting a riser on we'd
24 have seen it.

25 A. Okay.

26 Q. So we know that that is the case. You could see, certainly
27 could see a riser being put on. I accept immediately I don't

1 think you'd have been able to see the plugs at all looking into
2 the chamber—

3 A. Okay.

4 Q. —as it stands. So, take it from me that what we've seen so far,
5 and on the evidence we've heard so far, you would not be able
6 to see the actual plugs themselves in the pipe but you would be
7 able to see the riser, you'd have been able to see the flange
8 being but on it, you'd have been able to see the new riser
9 attached to that flange. All of that you'd have been able to see.

10 A. Okay, so, so because of the use of camera?

11 Q. Because of the camera, yes.

12 A. Okay. So, so Paria did make it possible to be able to see and
13 the question is whether Mr. Marjadsingh should have been
14 watching all of the time?

15 Q. No, that's not the question. Nobody says he should be there
16 100 per cent of the time.

17 A. Okay, what—

18 Q. The question is whether there was a duty for Paria to ensure
19 that Mr. Marjadsingh could carry at his job—

20 A. Yes.

21 Q. —which was to supervise the execution of the job.

22 A. Right. So then the presence of the camera would have made the
23 du—made it, um, possible, yes.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. So you would agree—

26 **Examination By Mr. Chairman:**

27 Q. No, no, no, that doesn't answer the question. Did you regard it

1 as Paria's duty to ensure that he could see sufficient to be able
2 to carry out his job? Was it your duty, your company's duty?

3 A. Yes.

4 Q. All right, thank you. Right. If you want to—like I've said
5 before to you and others, if you want to add anything to it,
6 you're more than welcome to do so. If you want to refer to a
7 document you're more than welcome to do so, but it helps me
8 and no doubt the questioner, if you answer the question with a
9 yes or no, where that is possible and here it is clearly. So yes is
10 the answer.

11 A. Thank you.

12 Q. It was their duty—

13 A. Yeah.

14 Q. —and if you want to add anything, feel free.

15 **Continued Examination By Mr. Maharaj SC:**

16 Q. So if he was in a position to see, as you say, right, if the
17 migration barrier was not being used, in his duty to supervise
18 the job he would have seen it?

19 A. We have just jumped from one work permit to the other.

20 Q. From one work permit to another?

21 A. The answer that I gave was with respect to the work permit that
22 is on the screen.

23 Q. Yes. So the—

24 A. But now you're talking about the migration barrier.

25 Q. The migration—the permit on the screen is the migration
26 barrier to be used?

27 A. Yeah.

1 **Examination By Mr. Chairman:**

2 Q. Well, I mean the diving, if I may say so, has nothing to do with
3 the migration barrier. The migration barrier is in order to carry
4 out these works. The diving is in order to get into the habitat in
5 order to carry out the works. The diving certificate that we've
6 looked at, I've pointed it out to you so you could see it so that
7 no one could suggest for a minute that you were being in any
8 way misled, all right? I've pointed out to you. That's got
9 nothing whatever to do, can I suggest, with the migration
10 barrier. If I'm wrong about that please tell me, because I am
11 proceeding on the basis, and have done for the last few weeks,
12 on the basis that the migration barrier is there in order to carry
13 out the very works that are set out in that work permit.

14 A. Yes, the migration barrier is there to set out the works.

15 Q. You don't need to be a diver to be able to put the migration
16 barrier in.

17 A. I don't know that it was necessary for him to be able to, to see
18 the migration barrier because—

19 Q. I accept that. I've said to you less than two minutes ago you
20 could not see, unless you were in it, in the chamber itself, you
21 could not see those migration barriers. I accept that completely.
22 So the question is, related to this work permit, nothing to do
23 with diving. So we're not jumping from one to the other. If
24 that was happening I'd stop it.

25 A. Okay so let's hear the question.

26 **Continued Examination By Mr. Maharaj SC:**

27 Q. So the question is that if the migration barrier was not being

1 used and he was supervising the works, he—

2 A. I don't understand what you mean by if it was not being used.

3 Q. Well on the work permit it says, "migration barrier to be used".

4 A. Yes.

5 Q. So if that was being contravened, that is to say the migration
6 barrier was not being used, it was being removed—

7 A. Okay. So if the migration barrier was being removed?

8 Q. He, he would—and he was supervising the works?

9 A. And he could have seen it?

10 Q. And he would have been able to see it?

11 A. If he was watching at that point in time?

12 Q. Yes.

13 A. Yes, he would have been able to see that something was being
14 done, but he would not have been able to see until it came out,
15 would it?

16 Q. Well he would see that it is being removed.

17 A. Well he would see that there was some activity of men looking
18 down into a pipe.

19 Q. And—

20 A. I, I still, I still don't think that the migration barrier could have
21 been seen from the camera. So if men are looking down into
22 the pipe, the only point in time that he would know that it's
23 being removed is after it has been removed. I don't know if
24 um—

25 **Examination By Mr. Chairman:**

26 Q. Forgive me, forgive me. Look, we're going round and round in
27 circles here. There is no question that the camera inside the

1 hyperbaric chamber did not show the actual barriers
2 themselves. There are two, correct?

3 A. Correct.

4 Q. The fact that there may have been one or two men around the
5 top of the pipe with a T-bar that I understand to be something in
6 the order of a couple or three feet long and a T coming across
7 being placed inside that chamber and being turned would have
8 been of obvious to anybody looking inside the chamber,
9 wouldn't it?

10 A. Yes.

11 Q. Well there couldn't have been any other reason for putting such
12 a bar inside the pipe, could there? Could there?

13 A. That was used to remove it?

14 Q. That's the only way you can remove it as I understand.
15 Someone tell me if that was wrong.

16 A. No, that, that, it was used—that was used to install it because of
17 the height of the spool and it would have been used to remove it
18 after the new spool was—

19 Q. Put on?

20 A. —put in. So I don't think that they used—is that the evidence?

21 Q. Well, I've understood it to be used as a smaller T-bar was being
22 used and then a longer one was necessary in the event that the
23 pipe was refitted, that it was necessary to use it. But even if
24 I'm wrong about that, I mean, they're taking spanners and
25 leaning inside and using a spanner to open it. Now, I appreciate
26 you might not have seen the spanner, but what else could they
27 be doing?

1 A. I agree. I agree that they—that that is what—

2 Q. Whether they're using a T-bar or a spanner or whatever it is,
3 right, there's one or more men reaching inside this pipe and it's
4 not something that takes just two minutes, it takes a bit of time.
5 From what I've seen there's 15 or 16 bolts to be removed—

6 A. Yes.

7 Q. —presumably not easily.

8 A. Yeah.

9 Q. All we're trying to establish, please, all I'm trying to
10 understand, Mr. Archbald, is that, and I, I hear what you say
11 two hours might be the appropriate time as far as you're
12 concerned but anybody who was watching inside that
13 hyperbaric chamber by virtue of a camera would have
14 appreciated that the barrier was being—the first barrier was
15 being removed, couldn't have been missed and someone with
16 Mr. Marjadsingh's experience would have immediately
17 understood that, surely?

18 A. Yeah I agree.

19 Q. Right. So, that's what—

20 A. It would at least would have assumed that.

21 Q. Yes, or at least said, "What are you doing?"

22 A. Yeah.

23 Q. You know, "What are you doing?" So let's assume that that's
24 where we are, okay? Now, of course, it seems apparent that
25 Mr. Marjadsingh either wasn't looking, or, if he was looking
26 didn't understand it. And so—

27 A. But Mr. Marjadsingh was not there.

1 Q. No, no, he was not there, all right.

2 A. They broke for lunch.

3 Q. Yes, I understand.

4 A. And they came back early.

5 Q. Umm. Umm. [*Inaudible*] how early, but anyway, the fact is, is
6 Mr. Marjadsingh did not observe what was happening. Had
7 someone been observing, they would have recognized it?

8 A. But Mr. Farah was observing.

9 Q. Yes, all right. Er, he didn't think there was anything wrong
10 with it, you see?

11 A. Yah, and, and Mr. Ali was observing too.

12 Q. Well, some of the time, yes. He, he dived down to provide
13 them with a spanner to do it, didn't he?

14 A. Yeah.

15 Q. Yeah. So they clearly thought there was nothing wrong with
16 taking it out. Did they? Must have done.

17 A. Yes.

18 Q. All right.

19 **Continued Examination By Mr. Maharaj SC:**

20 Q. Mr. Archbald, just, just, I want to show you 1072, the work
21 permit that you relying on.

22 **Mr. Chairman:** Can I ask you to find an appropriate moment
23 to wreak for lunch?

24 **Mr. Maharaj SC:** Yeah, just after this.

25 **Mr. Peterson SC:** [*Inaudible*]

26 **Mr. Maharaj SC:** Okay, just after.

27 **Continued Examination By Mr. Maharaj SC:**

1 Q. Page 1072 of Volume III—

2 A. Yes, Sir.

3 Q. —that is the one that—what Mr. Farah with the diving work
4 permit, right?

5 A. Yes.

6 Q. Nothing there had to do with migration barrier, nothing there. I
7 want you to look at it.

8 A. Okay, yes.

9 Q. Okay? All right. And the works which were being done—

10 A. Is, is there a question?

11 Q. Sorry?

12 A. Is there a question?

13 Q. The question is that there is nothing on that work permit had to
14 do with migration barrier.

15 A. No, that's a statement.

16 Q. Sorry?

17 A. So, so, so.

18 **Mr. Chairman:** I think he's looking for you to agree to that
19 statement, all right?

20 **Continued Examination By Mr. Maharaj SC:**

21 A. Okay, okay. So I agree with you but the dive plan says that the
22 double plugs must be in the pipeline.

23 Q. Okay, well I'm talking about the work permit, okay?

24 A. So the work permit is for diving and a dive plan is for diving.

25 Q. Well I am talking about the subsea maintenance work, the
26 offshore subsea maintenance work.

27 A. And so am I.

1 Q. Yes, okay.

2 A. I don't understand if you don't understand.

3 Q. Okay, Mr. Archbald, after lunch when we come back I will
4 show you some more things and probably you could help us
5 more, all right?

6 A. Okay.

7 Q. In the meantime, in the meantime, I would ask you to look at
8 the OSHA report which mentioned your name.

9 A. Uh-huh.

10 Q. Okay? Okay then.

11 A. Now?

12 Q. No, during the lunch break.

13 **Examination By Mr. Chairman:**

14 Q. I think he's suggesting you might want to remind yourself of
15 what's in the OSHA report.

16 A. Okay.

17 Q. So that you're not caught up.

18 A. No it's in here?

19 Q. No. I'll make sure you have a copy, all right?

20 **Mr. Peterson SC:** That's what I think. I don't think he has it,
21 Mr. Chairman.

22 **Examination By Mr. Chairman:**

23 Q. I'll make sure you have a copy, all right.

24 A. Thanks.

25 Q. And you can have that as a bit of lunchtime reading.

26 A. All right.

27 **Mr. Chairman:** All right, we'll break for an hour. Yes, we'll

1 break for an hour.

2 **1.27 p.m.:** *Enquiry suspended.*

3 **2.29 p.m.:** *Enquiry resumed.*

4 **Mr. Chairman:** Good afternoon.

5 [*Mr. Randolph Archibald re-enters Enquiry room and sits at*
6 *witness table*]

7 **Mr. Chairman:** Afternoon, Mr. Archbald.

8 **Mr. Archbald:** Hello, good afternoon.

9 **Mr. Chairman:** Mr. Maharaj, you're asking questions.

10 **Mr. Maharaj SC:** Yes.

11 **Continued Examination By Mr. Maharaj SC:**

12 Q. Mr. Archbald, you recall before lunch you said that Paria was
13 not monitoring the work after lunch on the 25th because they
14 did not know that the works were being monitored and Mr.
15 Marjadsingh wasn't there, because they did not know that the
16 works were being monitored?

17 A. He went for lunch.

18 Q. Yes, he went for lunch, and therefore when the work started
19 after lunch he was not there?

20 A. Correct.

21 Q. Correct?

22 A. Yes.

23 Q. And you maintain that?

24 A. Well as far as I know then Dopson would have advised that
25 he—

26 Q. I want to refer you to what Mr. Marjadsingh said—

27 A. Okay.

1 Q. —about that. And it is in the transcript of the 6th of December,
2 I'm sorry, the 7th of December, page 135.

3 **Mr. Chairman:** You're going to read from his witness
4 statement?

5 **Mr. Maharaj SC:** The transcript.

6 **Mr. Chairman:** Right, transcript it is, all right.

7 **Mr. Maharaj SC:** At—

8 **Mr. Chairman:** So this is what he gave as live evidence—

9 **Mr. Maharaj SC:** Live evidence.

10 **Mr. Chairman:**—on the 17th.

11 **Mr. Maharaj SC:** On the 7th.

12 **Mr. Chairman:** Seventh of December. Right.

13 **Mr. Maharaj SC:** From about line 3.

14 “Q. Okay, so I want to go to your responsibilities as
15 the applicant. Before I go there you told us that
16 you arrived at berth 6 at about 2.00 p.m.

17 A. About after that. I say around 2.00 or after that.

18 Q. What time did this work start that day, sometime in
19 the morning.

20 A. Yeah, correct.

21 Q. So you didn't monitor the morning period?

22 A. No.

23 Q. And the first time you start to monitor the work
24 was at 2.00 p.m.?

25 A. Yes, dah is when ah reach out at berth 6.

26 Q. That's after lunch?

27 A. Yeah.”

1 So, Mr. Marjadsingh was saying that, um, that he was there
2 after lunch, from about 2.00 p.m.

3 A. Okay. Thank you.

4 Q. Right. Then you—remember you said that, um, there was
5 nothing in the dive plan about the hyperbaric chamber?

6 **Mr. Chairman:** Just before you pass on from that—

7 **Examination By Mr. Chairman:**

8 Q. It follows, doesn't it, as a matter of logic, if he was there from
9 2.00 p.m., he had, first of all, the ability to supervise and
10 monitor, didn't he?

11 A. Yes.

12 Q. Right. And we know that the incident happened at about 2.45
13 or so?

14 A. Yes.

15 Q. So, whatever was taking place between two o'clock and 2.45,
16 when the Delta P occurred, must have involved the removal of
17 the two plugs?

18 A. I'm not sure what time they went for lunch but it would have
19 been definitely sometime, yeah.

20 Q. Well even if they removed the first plug I think someone
21 suggested that the—

22 A. Yeah.

23 Q. —first plug might have started to be removed before lunch.
24 But, either way, whatever was happening after lunch must have
25 involved the removal of the plugs?

26 A. Yeah, I believe the inflatable plug, as soon as it was started to
27 be removed, would have—the event occurred.

1 Q. Sure. So it follows, doesn't it, as I say, that between two
2 o'clock when he tells us that he was present, and 245 when the
3 incident occurred, the final plug at some point must have been
4 removed?

5 A. Yes.

6 Q. And there's no question that Mr. Marjadsingh had the ability at
7 least to look at what was going on?

8 A. Well if as you say he's on the berth after 2.00 p.m., yes, he
9 would have had the ability to look at the screen.

10 Q. Yes. Well he didn't have any other job on berth 6, did he?

11 A. I don't think so.

12 Q. You told us earlier that he had another job earlier before lunch
13 on berth 5.

14 A. On berth 5.

15 Q. Which was to do as we know with the ca something or other
16 test. What's it called?

17 A. CARBER.

18 Q. CARBER test, thank you, to do with the CARBER test with the
19 integrity of the weld, isn't it? So we know he had something to
20 do in the morning but by two o'clock he is telling us that he is
21 now on berth 6 and in a position, presumably for the first time
22 that day, to do some of the supervising and monitoring that he
23 was employed to do, correct?

24 A. Yes.

25 Q. And we're agreed, aren't we, that there wasn't any other task
26 that you had given him or that you knew of that he had?

27 A. As I said, I don't think that there was anything else—

1 Q. Right.

2 A. —other than the work on berth 6.

3 Q. So, apart from supervising and monitoring at that time, he had
4 nothing else to do?

5 A. Well, as far as I know, that's right.

6 Q. So if these plugs were being removed between two o'clock and
7 2.45 when the incident happened, one might have thought he
8 might have seen it?

9 A. That would have been very possible if he was on berth 6.

10 Q. Well he was, according to him.

11 A. Yes.

12 **Mr. Chairman:** All right. Thank you very much.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. Mr. Archbald, I also want to refer you to what Mr. Kirt Scott
15 said that he saw on the screen that day, okay, and that is at,
16 um—yeah, that is at the transcript on the 6th of December, at
17 page two two eight and two two nine starting from line 22 on
18 page two two eight. The line 21 says:

19 "I saw the top of the pipe where the flange was.

20 Right."

21 Have you got it before you? Yes, and it's on screen.

22 "And you could have seen that they were doing some
23 work at the top of the pipe.

24 Yes.

25 Taking out something from the pipe?

26 Yes."

27 Are you seeing it on the screen? Sorry.

1 A. One second.

2 Q. Sorry, well I'll wait and I'll start back.

3 A. That's okay. I am understanding what you're saying.

4 Q. You're understanding what I'm saying?

5 **Mr. Chairman:** Well everybody else has as well.

6 **Mr. Archbald:** Yes.

7 **Mr. Chairman:** I'm sorry. What line?

8 **Mr. Maharaj SC:** Line 21. You got it? Right.

9 **Continued Examination By Mr. Maharaj SC:**

10 Q. "A. I saw the top of the, um, the pipe where the flange
11 was.

12 Q. Right. And you could have seen that they were
13 doing some work at the top of the pipe?"

14 That's the question.

15 "A. Yes.

16 Q. Taking out something from the pipe?

17 A. Yes.

18 Q. What you saw they were taking out?

19 A. First I saw they was working, moving some bolts
20 from on the blank. Right, and, um, during another
21 time, um, another period because every time I pass
22 I would take a look. I saw personnel operating a
23 chain belonged turning something.

24 Q. And turning something? And if you see—I
25 wonder if we could show—I wonder if the witness
26 can see that mechanical plug on the screen? I want
27 to show you on the screen something and you will

1 tell me if you recognize it, okay?"

2 And he was shown something on the screen.

3 "A. Yes.

4 Q. Was it something like that that you saw them
5 working on?

6 A. Something like that I saw after take out of the
7 pipe."

8 So therefore, from that, you would agree that based on what
9 Kirt Scott said, who is an employee of Paria and he was looking
10 on the screen, they could have seen or you could have seen the
11 plug being removed.

12 A. Yes. But I, I, I understand that the, the—he must have seen that
13 they took it out.

14 Q. Yes.

15 A. Yeah.

16 **Examination By Mr. Chairman:**

17 Q. Was there any reason why he shouldn't know that it shouldn't
18 be removed?

19 A. Kirt Scott is in operations and this is a maintenance activity. I
20 don't know that Kirt Scott was briefed or taught or educated or
21 informed in any way about what the plugs looked like or what
22 they were—what they looked like.

23 Q. Yeah, never mind what they looked like. I mean, did he
24 understand, in any event, in any event, that there was certain
25 works that he was to be observing?

26 A. I don't know if he was supposed to be observing those works.

27 Q. What did you think he was there for?

1 A. I was told that Kirt Scott was there representing the operations
2 section and monitoring the activities with respect to the diving.
3 For example, one of the roles of the operators or the operations
4 department is while diving is going on to ensure that no vessels
5 are in the area to cause a harm to the people—

6 Q. Right.

7 A. —facility risk, as well as, if any work is going on that there's
8 no cause of pollution taking place as well.

9 Q. In other words, there should not be any of the gas from the pipe
10 going into the hyperbaric chamber?

11 A. No. Er, pollution would be liquid hydrocarbon from the lines.

12 Q. Coming out of the line?

13 A. From other lines on the berth.

14 Q. I'm not following you. On berth 6 to make sure there was no
15 oil leaks from any of the other pipelines, pipes?

16 A. Yeah.

17 Q. Well the only pipe inside the hyperbaric chamber was the riser,
18 correct?

19 A. Yes but the, the role of the operator is to monitor for pollution
20 on the berth.

21 Q. No, no, I understand that.

22 A. Yeah.

23 Q. I understand that. But the purpose—I mean, he's looking at a
24 screen. That's what he told us he was doing. Not all the time
25 but he was looking at the screen.

26 A. That was—I don't think that was his purpose for being there,
27 looking on the screen.

1 Q. Right. So the screen's not for his benefit?

2 A. The screen was not part of his job function.

3 Q. All right. That's what you understand it to be?

4 A. That is what I understand.

5 **Mr. Chairman:** All right. Thank you very much.

6 **Continued Examination By Mr. Maharaj SC:**

7 Q. Okay, and you remember before lunch you told us that in
8 respect of the dive plan it had nothing about the hyperbaric
9 chamber?

10 A. Did I, did I say that dive plan had nothing about the hyperbaric
11 chamber?

12 **Mr. Chairman:** No what he was saying was that the dive plan
13 contained reference to the plugs being in the pipe.

14 **Mr. Archbald:** Yes, that the pipe must be double plugged.

15 **Mr. Chairman:** That's what you were relying on.

16 **Mr. Maharaj SC:** Sorry.

17 **Continued Examination By Mr. Maharaj SC:**

18 Q. So I looked at the dive plan and it is at Volume III at page
19 1064. Tell me if you see anything there about the dive plan
20 requiring the plugs to be in the pipeline.

21 A. [*Document handed to Mr. Archibald*] No.

22 Q. No. So you made a mistake when you said that?

23 A. This is from where?

24 Q. This is the dive plan that—look at the date—

25 A. Yeah. What I was referring to was the—

26 **Examination By Mr. Chairman:**

27 Q. It's put, it's put in front of you.

1 A. Yeah.

2 Q. Have a look at the whole of it so that you—I don't want you to
3 be misled.

4 A. Yeah, I was referring to—I mentioned that it's in the contract
5 that was submitted, in the contract document. There's a dive
6 plan in the contact document.

7 Q. There is a dive plan in the contract document.

8 A. That's what I remember saying.

9 Q. Well, you said the dive plan. I don't know about contact, but
10 you said the dive plan. Let's be clear.

11 A. Is there a transcript that we could check back?

12 Q. Let's not worry about it.

13 A. Okay.

14 Q. It doesn't matter particularly.

15 A. Okay, all right, good, thanks.

16 Q. What you meant was the dive plan in the contract?

17 A. Yes, that's what I meant.

18 Q. The dive plan in the contract I think is in a different bundle,
19 core bundle two, isn't it?

20 **Mr. Maharaj SC:** Page seven one four.

21 **Mr. Chairman:** Seven?

22 **Mr. Maharaj SC:** One four.

23 **Mr. Chairman:** Right, seven one four.

24 **Mr. Archbald:** Yeah, I think this looks familiar.

25 **Mr. Chairman:** Yes. [*Document handed to Mr. Archbald*]
26 Can we—yes, there it is.

27 **Mr. Maharaj SC:** And this is dated?

1 **Examination By Mr. Chairman:**

2 Q. First of all, is that what you were talking about?

3 A. This is what I was speaking about.

4 Q. Right. And this part of the original contract—

5 A. Yes.

6 Q. —bundle of documents that were put together—

7 A. Thank you.

8 Q. —and submitted by LMCS?

9 A. Yes.

10 Q. All right. Yes, I'll leave it to Mr. Maharaj to ask you about it.

11 A. Thanks. Sorry, um, sorry about that.

12 **Continued Examination By Mr. Maharaj SC:**

13 Q. Well, can you show me where they talked about the plugs there,
14 not to be moved?

15 A. Um, under—there's a, there's a row talks about chemical
16 contamination. Show it to you, Sir?

17 Q. Yes, point out where it is.

18 A. Um, how do I do that?

19 Q. No, no, it's a—I'm not seeing the—

20 **Mr. Chairman:** Yeah, it's just on the—it's on the screen there
21 now, yeah.

22 A. [*Pointing to white board situated at back of witness table*]

23 Q. Yes, okay, okay. "Contents of riser removed and line double
24 plugged"?

25 A. Yes, Sir. That is what I was referring to.

26 Q. But it doesn't say that plug not—plugs to be used or plug not to
27 be removed. But is that what you're referring to?

1 A That is what I was referring to, and I—

2 **Examination By Mr. Chairman:**

3 Q Yeah, well, I need a little help with this because I don't really
4 follow, you see? You said in answer, certainly to questions I
5 was asking and some questions Mr. Maharaj was asking, that
6 you regarded the, um, the, er, the separation between the dive
7 work permit, permit to work and the works permit to work as
8 being two separate items, and I showed them to you so that you
9 could see what they were.

10 A Yeah.

11 Q The dive plan, I suggested to you, had nothing whatever to do
12 with the plugs.

13 A Yes.

14 Q It doesn't mention plugs at all. The other work permit did
15 mention the dive—the plugs were to be used. You remember
16 it?

17 A Yes.

18 Q To be used. And you said, well, the original dive plan did
19 mention plugs and your—what you were referring to is this
20 document?

21 A Yes.

22 Q Is that the only reference that you wish to make in relation to
23 diving and the plugs? There's nothing else, is there?

24 A I, I can't think of any other.

25 Q No. And I don't think there is anything else?

26 A Yeah.

27 Q The position is this. This is a document which was submitted

1 as part of the original contract, correct?

2 A. Yes.

3 Q. Do we see that the date of this is, if you scroll back the other
4 way, please, the 10th of May, 2020?

5 A. Yes.

6 Q. Scroll up please so that we can, everyone can see?

7 A. Yes.

8 Q. You see top right-hand corner. This is dated the 10th of May,
9 2020, yes?

10 A. Yes.

11 Q. Clearly something which apparently is drafted long before the
12 contract was entered into?

13 A. Correct.

14 Q. Long before, perhaps even a cut and paste?

15 A. I don't know.

16 Q. No. Nobody knows that for sure but there's no reason why the
17 10th of May would have been something—I don't think even
18 the contract was out for tender on the 10th of May.

19 A. Well, certainly, I don't know, but I am assuming that they
20 would have used this in the 2020 job.

21 Q. Yes. In other words, this looks to be in relation to an earlier
22 job—

23 A. And they—

24 Q. —which might have been cut and pasted?

25 A. And it was used in the tender submission.

26 Q. The fact remains, though, that has obviously been superseded,
27 hasn't it, by the document at page 1064 which is dated the 15th

1 of February, 2022, I believe the day of the initial works?

2 A. And this was used in the document—this was submitted?

3 Q. Yes.

4 A. Okay.

5 Q. This is, this is what has been supplied as part of the
6 documentation, and if you look over the page you can see it has
7 a—to the next page please—you can see it's signed by Mr.
8 Farah at the end, but, I mean, if you just look, if you just look
9 over the page—no, no, you've gone too far, I think. We're
10 1065. Yes, there we go. So at one oh six five you can see that
11 what it does is to set out a pre-dive checklist?

12 A. Yes.

13 Q. Yes? So, as part of the dive plan attached to it is this pre-dive
14 checklist.

15 A. Yes.

16 Q. And it has a whole range of different things that they're
17 considering and either are ticked or not ticked, correct?
18 Nothing to do with plugs.

19 A. Correct.

20 Q. And going back to the dive plan itself, if we can put that on the
21 screen as well please, if, it's at 1064, as I say, dated the, um,
22 15th of February, on any view appears to supersede anything
23 that might have been sent as part of the original contract on the
24 10th of May of 2020.

25 A. I don't know if the, if the risk or the hazard had been—has
26 disappeared. It's still there. It's the same hazard that existed
27 before.

1 Q. I beg your pardon?

2 A. But I, I, I agree with you that there's nothing in this document
3 that speaks about using the plugs.

4 Q. No. And the reason for that, can I say, it seems clear to me, is
5 because the diving has got nothing whatever to do with the
6 plugs in the pipe. Has it?

7 A. The diving that was done on the permit to work has nothing to
8 do with the plugs on the pipe?

9 Q. Yes. That's the question.

10 A. I, I don't know. I really cannot—

11 Q. No, no, no.

12 A. —I cannot say that.

13 Q. Forgive me. You are the head of health and safety. Is it the
14 position that the plugs, in relation to that pipe, have got
15 anything to do with diving or not?

16 A. The—

17 Q. If this had all been above water, would it have been any
18 different? Would the works that needed to be doing—if the
19 riser was being replaced above the waterline, you'd still use
20 plugs, you'd still have the same removal of the riser, you'd still
21 have the blind flange put on, you'd still have the new riser
22 fitted, all of that would have been exactly the same, wouldn't
23 it?

24 A. Yes.

25 Q. The only difference here is that this was below the water level,
26 correct?

27 A. Correct.

1 Q. So the dive plan relates only to diving in and out of the
2 hyperbaric chamber. Look at what it says. Method statement,
3 at the bottom of the screen or where you've got it there, method
4 statement, the last of that paragraph—you've gone too far on
5 the screen. Go back where you were—"Method statement, dive
6 from barge to chamber, access port at SL36 riser."

7 A. Yeah, I agree.

8 Q. And back.

9 A. I agree that this—

10 Q. "Use of barge ladder for water access and exit." This has got
11 nothing whatever to do with the, with the plugs.

12 A. I agree that this method statement has nothing to do with the
13 plugs.

14 Q. Well this is the method statement that was being used, isn't it?

15 A. Well I assume so.

16 Q. Well I'd hope so because it's dated the 15th of February,
17 2022—

18 A. Uh-huh.

19 Q. —when the work was being done.

20 A. I accept that.

21 Q. Good. So, where we are, then, is this, is there is a separate
22 work permit, permit to work, for diving, correct?

23 A. Yes.

24 Q. That permit relates to diving in and out of the hyperbaric
25 chamber?

26 A. Correct.

27 Q. There is another work permit that deals with all the work that

1 needs to be done which includes the question of the barriers?

2 A. That's right.

3 Q. And that was being supervised by Mr. Marjadsingh?

4 A. Yes.

5 Q. Thank you.

6 **Mr. Chairman:** All right, I've got it.

7 **Mr. Maharaj SC:** Okay, much obliged, Sir.

8 **Continued Examination By Mr. Maharaj SC:**

9 Q. Let's go to another issue, okay? Let's go to the—your witness
10 statement that you dealt with the question of rescue. Right?

11 A. Yes.

12 Q. At paragraph 35 you said:

13 "It came to the knowledge of the ICT that persons were
14 diving inside the pipeline in the wake of Mr. Boodram's
15 rescue and based on your qualifications, knowledge and
16 experience in occupational health and safety, you advised
17 the incident commander that diving into the pipeline was
18 unsafe."

19 And then at paragraph 37 this is what you said, and this is also
20 based on your qualifications, knowledge and experience,
21 correct?

22 A. Yes.

23 Q. You said:

24 "I believed it was unsafe to dive within the pipeline at
25 that time without a continuous air supply with a tank and
26 a tether. The rescue divers would have at least needed a
27 rope with them and supply of—and air—supply of air.

1 They would have needed a tank to be on them as an
2 emergency air supply in case their regular air supply was
3 interrupted. Air and a means in communication and
4 extraction were three things they needed for any rescue
5 dive inside the pipeline to be safe.”

6 And you still maintain that?

7 A. Yes.

8 Q. Yes. And so I want to point to you that as a member of the
9 ICT, were you aware that at 6.30 p.m. on the Friday, that when
10 a rescue plan was being offered when Conrad Beddoe arrived at
11 the scene, it was supported by commercial diving equipment
12 and experienced divers, and I refer to paragraph 40 of Andrew
13 Farah’s evidence that is at page 448 of Volume I of the witness
14 statement bundle, paragraph 40. Were you, as a member of the
15 ICT, were you aware of that?

16 A. At around 6.30—

17 Q. P.m.

18 A. —Conrad arrived with all of the surface supply equipment
19 which we brought onto the barge. The rescue plan was
20 modified so that we could now enter with commercial
21 equipment.

22 **Examination By Mr. Chairman:**

23 Q. Pause there please? I want to make a note of this. At around
24 6.30, Conrad arrived with all commercial equipment?

25 A. Yes.

26 Q. Well all the equipment?

27 A. With all surface supply equipment.

1 Q. Surface supply equipment. Yes.

2 A. And later on it says the rescue plan was modified so that we
3 could now enter with commercial equipment.

4 Q. Yeah.

5 A. I remember there was a—

6 Q. Yes. And you're agreeing with that?

7 A. Yes. Subsea Global came around that time and

8 **Mr. Maharaj SC:** No, later Subsea Global came.

9 **Mr. Chairman:** They came later.

10 **Mr. Archbald:** Or Conrad came with the equipment?

11 **Continued Examination By Mr. Maharaj SC:**

12 Q. Yes, Conrad came with equipment at 6.30 p.m.

13 A. Uh-huh.

14 Q. And at 7.14 p.m. Subsea came with dive support vessels, also
15 with all the necessary equipment that Mr. Alvin Seeterram told
16 us—

17 A. Okay.

18 Q. —that could be used to do a rescue.

19 A. Right. I know Sub—OI know Subsea Global came at some
20 time that night and that they had everything that was necessary.

21 Q. Yes.

22 A. Except for divers.

23 Q. Yes. Yeah because Subsea could not use their divers.

24 A. Yes.

25 Q. And, um—

26 **Examination By Mr. Chairman:**

27 Q. So I just want it clear, do you agree with this that you were

1 aware of that?

2 A. I was a—I did not know that someone named Conrad Beddoe
3 came.

4 Q. All right, forget his name.

5 A. Yeah.

6 Q. You knew someone came, a diver?

7 A. I—yes, yes, divers came.

8 Q. So as far as you're—leaving aside the names of the
9 individuals—

10 A. Yeah.

11 Q. —you in the ICT were aware that divers had arrived—

12 A. Yes.

13 Q. —with equipment?

14 A. I don't know what equipment they came with.

15 Q. Right.

16 A. But shortly after a lot of equipment came.

17 Q. And then Subsea Global arrived—

18 A. Yes.

19 Q. —whoever they were, and they had the commercial
20 equipment—

21 A. Yes.

22 Q. —necessary?

23 A. That's right.

24 Q. Right. So you knew that at the time that it was happening? Is
25 that the position?

26 A. Yes.

27 **Mr. Chairman:** Thank you.

1 **Continued Examination By Mr. Maharaj SC:**

2 Q. And you also knew that there were divers that LMCS had
3 available who had commercial diving experience?

4 A. Yes.

5 Q. Yes.

6 A. Yes because, because—I mean, there was an assumption, but
7 yes that was my assumption—

8 Q. Yes, yes.

9 A. —that they were, they were good divers, very well experienced
10 and trained.

11 Q. And before I refer you to the evidence that Catherine
12 Balkissoon gave us, you know Catherine Balkissoon—

13 A. Yes.

14 Q. —was a member of the ICT?

15 A. Yes.

16 Q. But before I refer you to that evidence, you also had
17 information at the ICT that they were willing to go into the
18 pipeline to do a rescue?

19 A. Yes, we got feedback from Catherine and I think whoever else
20 was on the—that, that, um, divers, people wanted to dive.

21 Q. And based on the evidence you have given that I just referred
22 you to, they had the commercial equipment, they had all the
23 equipment that a dive could have taken place?

24 A. Yes.

25 Q. Yes. Do you know whether the ICT, apart from the Catherine
26 Balkissoon talking to them and relaying the information to the
27 ICT, do you know whether the ICT as a—sent anybody to talk

1 to them?

2 A. No, Catherine was the person on the site.

3 Q. Catherine was the person on the site?

4 A. Yeah. She represented the ICT on the site.

5 Q. So she communicated all that information to the ICT?

6 A. Yes.

7 Q. And you agree to that, so the question now is, do you know
8 whether the ICT had any discussion with them?

9 A. Through Catherine. It would have only been through
10 Catherine.

11 Q. Through Catherine?

12 A. Yeah.

13 Q. And were that discussions that no diving should take place?

14 A. Well, at one point in time when we, we found out that, that at
15 least one person was diving, the, the decision was that it should
16 stop and that was communicated.

17 Q. Yes. So who—so the ICT made that decision?

18 A. Yes.

19 Q. And it was communicated by?

20 A. I think it was communicated by Catherine.

21 Q. By Catherine?

22 A. I think so.

23 Q. But who communicated it to Catherine, Mr. Piper?

24 A. Might have been. I could—I'm not sure. But I assume it's—it
25 would have been Mr. Piper.

26 Q. Now—

27 **Examination BY Mr. Chairman:**

1 Q. Time?

2 A. Around 7.00 p.m.

3 Q. So after Beddoe, I appreciate you didn't know his name, but
4 after the diver arrived and the equipment or before?

5 A. Well after the diver and before the equipment.

6 Q. Right, between the two?

7 A. Yeah.

8 Q. Right. When the equipment arrived, was there a review of the
9 no diving ban?

10 A. The reason why we said no diving—

11 Q. No, no, answer that question first then add whatever you like.
12 Was there a review of the no diving ban at the point at which
13 the equipment arrived?

14 A. Continually, yes, there was a review.

15 Q. Continually there was a review?

16 A. Yes.

17 Q. Did it change?

18 A. It never changed.

19 Q. So the ban remained in place?

20 A. Well the decision to not allow an attempted rescue to take place
21 remained in place.

22 Q. Not quite the question I'm asking you. The question I'm asking
23 you is, there was a general ban on diving or diving into the pipe
24 or diving into the hyperbaric chamber. Which was it?

25 A. There was an advice at some point in time and I don't know
26 that it was repeated. I don't know that it was enforced.

27 Q. Right. None of those answer my question. The question is,

1 first of all, was there a general diving ban or was it limited to
2 the pipe?

3 A. It was limited to a pipe rescue, yeah.

4 Q. Right. No diving in the pipe?

5 A. Correct.

6 Q. Right. That's the first thing. Right. Your understanding is that
7 that happened for the first time between the diver arriving,
8 experienced diver arriving, and the equipment arriving?

9 A. Yes.

10 Q. You said already about seven o'clockish which would fit in
11 with that timeline, all right?

12 A. Yes.

13 Q. So about seven o'clockish. There was a review of whether that
14 ban should remain in place once the equipment arrived. That's
15 what I understand you to say.

16 A. I, I don't know if there were—I don't know if we reviewed the
17 ban. I cannot say that the ICT reviewed the ban. The ICT—

18 Q. Well, that's what I'm asking you.

19 A. Yeah.

20 Q. Because obviously things were changing and I need to know
21 whether, once the equipment arrived that could have been used
22 to effect a rescue, whether there was a review of the no diving
23 ban.

24 A. No. There was no focus on a ban. There was a focus on a
25 rescue.

26 Q. Well, the initial ban was you can't dive into the pipe because
27 it's unsafe.

1 A. Correct.

2 Q. That was your position.

3 A. Yes.

4 Q. And that was the IMT position, right?

5 A. [*Nodding*]

6 Q. Equipment arrives that is capable of being used to effect a
7 rescue.

8 A. Correct.

9 Q. All I want to know is once you were made aware of the arrival
10 of that equipment, did you, as the head of HSE, health and
11 safety, did you say, “Look, we need to review whether or not
12 there should— we should be stopping them going into the
13 pipe”, or were you—what was happening once you knew this
14 equipment had arrived?

15 A. There was no focus on a ban.

16 Q. Right.

17 A. The focus was on a rescue.

18 Q. So it just remained in place?

19 A. Yes. And we needed several things to effect a rescue.

20 Q. Well you said so in your statement.

21 A. No, that was for a, for the dive. We needed more things than
22 that for a rescue.

23 Q. No, no. At paragraph 37 in your statement, it's been pointed
24 out to you by Mr. Maharaj already, paragraph 37, just bring it
25 up on the screen, it's at page one three two zero, there we are,
26 and you've got it in front of you, I think? I believed—

27 A. I'll see it on the screen.

1 Q. Yes.

2 "I believed it was unsafe to dive within the pipeline."

3 Well what was the purpose of diving within the pipeline?

4 A. I have no idea what the dive was about. My, my advice—

5 Q. Really? Really?

6 A. No, no, no hold on.

7 Q. Is that a fair answer?

8 A. Yeah I—my, what I understand from seeing on YouTube
9 subsequently was that it was an attempted rescue having
10 traversed vertically downward at about 10 feet into the
11 horizontal.

12 Q. Mr. Archbald, please? I'm only interested, for the moment at
13 any rate, in what you were thinking at the time at the IMT.
14 Never mind what you subsequently learned on social media, I
15 try to ignore it myself, but doing your best to place yourself
16 there at the time, you say, "I believed it was unsafe to dive
17 within the pipeline at the time." Correct?

18 A. Correct.

19 Q. And there's only one purpose for diving in the pipeline, wasn't
20 there? It wasn't for fun, that's for sure.

21 A. Certainly/

22 Q. No.

23 A. That is correct.

24 Q. And that was in order to effect some kind of rescue?

25 A. That's right. I believe so.

26 Q. You believe so. So what you're saying in this statement which
27 you prepared for us is this.

1 “I believed it was unsafe to dive within the pipeline at
2 that time without, one, continuous air supply, two, a tank,
3 three, a tether. The rescue divers would have at least
4 needed a rope”—that’s the tether—“with them and
5 supply of air”—which you’ve expressed. “They would
6 have needed a tank to be on them as an emergency air
7 supply.”

8 In other words if the—some sort of snag in the hose going up to
9 the surface, they had a separate air supply. That’s what you
10 meant by that, isn’t it, a separate tank? Yes?

11 A. Yes, yes.

12 Q. Yeah.

13 “And their regular air supply in case it was interrupted.
14 Air and a means of communication.”

15 So there’s a fourth thing, some way, although you could use the
16 rope presumably?

17 A. Yes.

18 Q. A means of communication and extraction were the three things
19 that needed—that they needed for any rescue dive inside the
20 pipeline to be safe.

21 A. Correct.

22 Q. Right. So just pausing in time, as Mr. Maharaj has asked you
23 about, these men have arrived, there’s been a ban put on diving,
24 these things have now arrived, haven’t they?

25 A. Those things have arrived, yes.

26 Q. Right. You had concluded at that point in time that it might be
27 safe or at least safer to dive into the pipe if you had those

1 things?

2 A. That is correct.

3 Q. Where did you get this from? You're not—are you a diver
4 yourself?

5 A. I got that from knowledge of confined space.

6 Q. Right. So you're not a diver, do I take it?

7 A. No.

8 Q. Right. But this, if I may say so, is a logical approach, isn't it, as
9 to the sort of things that you might think someone would need
10 in order to effect a rescue, correct?

11 A. Well it's based on my knowledge of confined space entry.

12 Q. Right.

13 A. On laned.

14 Q. All right. Well it seems reasonable enough for me I'm just
15 saying. But anyway that was your view at the time?

16 A. Yes.

17 Q. And once that equipment which you described yourself as being
18 the sort of minimum level of—

19 A. That's right.

20 Q. —of, of—in order to make it safe—

21 A. That's it.

22 Q. —once that had arrived, what were you saying in the IMT?
23 “Look, equipment's here, we've got the divers? Why don't we
24 do it?”

25 A. We did not have divers who were willing to traverse the
26 horizontal portion of the riser.

27 Q. Is that right?

1 A. As far as I know, as far as I believe.

2 Q. I thought you told Mr. Maharaj earlier that you knew that there
3 were divers who were prepared to dive?

4 A. I understand that there were commercial divers present but the
5 traversing in to the horizontal portion of the line, I don't know
6 if there were any of—any of the divers that were actually
7 willing to go down. When we—where—we at no time after,
8 after the first dive where they reached up to 10 feet, at no time
9 after that did any of the divers come with any plan or we were
10 not able to get any plan from them to go into the horizontal
11 portion of the line.

12 Q. Um, right. Okay. So you knew that someone had been into the
13 pipe and had gone a few feet into the horizontal?

14 A. Yes. Yes I—

15 Q. And had come out?

16 A. —I, I, think we might have heard about that that night. I'm not
17 so sure, but we know that they dived into the line.

18 Q. Yes. All right. Well you say you might not have known that at
19 the time?

20 A. I'm not so sure about the horizontal portion. I not certain. That
21 came out afterwards.

22 Q. And is it then your evidence that you didn't know, at that time
23 when this equipment had arrived, that there were divers
24 available and willing to go into the pipe, into the horizontal?

25 A. In—that—into the horizontal part.

26 Q. What, only just down to the end?

27 A. I think, I think that they would have been willing to go down to

1 the end. I think that was a—was safe enough. I think they
2 believed that that was safe enough but to start traversing the
3 horizontal portion, it seemed to me that none were willing to
4 come up, come forward with that.

5 Q. Where did you get this from?

6 A. From—well it was from the feedback from, from Catherine, I
7 should say, that none of the divers were—that there was no
8 plan.

9 Q. Yeah that's a slightly different thing, isn't it, because I've
10 recognized in the Enquiry that we've had so far and the
11 evidence given that there were—there was a need, certainly as
12 expressed by some, for a formal or informal dive plan, right?

13 A. Informal would be fine for me.

14 Q. But in any event, a dive plan?

15 A. Yeah.

16 Q. You're saying that you had no such dive plan ever advanced to
17 you?

18 A. Correct.

19 Q. Did you ever seek to try and obtain one, through Ms.
20 Balkissoon and the divers who were there?

21 A. No. No I, I cannot say that we actively went and asked them
22 for a dive plan.

23 Q. Why not?

24 A. When LMCS, when the incident occurred, the automatic trigger
25 was for LMCS to initiate an emergency response. That, that
26 was accepted. That is what Kazim was doing or leading.

27 Q. But you stopped them from diving in the pipe?

1 A. We arranged for as much resources as possible to facilitate their
2 diving.

3 Q. Uh-huh.

4 A. And when—after that first dive by Michael Kurban, there was
5 no effort coming forward at that point in time.

6 Q. Well pausing there, did you have a dive plan for Mr. Kurban to
7 go into the pipe?

8 A. No.

9 Q. Right. So what was different between Mr. Kurban going in the
10 pipe and somebody else going into the pipe a little bit later on
11 once all the commercial equipment was on site?

12 A. We did not know that Kurban had gone into the pipe.

13 Q. Until after he had done it?

14 A. Until after he had done it.

15 Q. But had come out?

16 A. Sorry?

17 Q. But he had come out?

18 A. That's right, and he had only traversed 10 feet. This now was
19 an effort to go further than 10 feet.

20 Q. Well yeah.

21 A. Probably much further, maybe 50, maybe a hundred.

22 Q. Maybe more.

23 A. Yeah. And the thought about going further in, well, I don't
24 know, I don't know what the divers were thinking. What I do
25 know is that none came forward to say, I am going to dive. At
26 least that is the evidence we have.

27 Q. None came forward to say they were willing to dive?

1 A. That's right. We did try—

2 Q. That's really the position? No one said, "I am willing to dive in
3 that pipe"?

4 A. That is correct.

5 Q. Including Mr. Kurban, including Mr. Farah, including Mr.
6 Beddoe and his brother, none of those people said, "I am
7 willing to dive in that pipe"?

8 A. On that night as far as we are aware, yes.

9 Q. Thank you. That's your evidence.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. But you agreed, you told us that Catherine Balkissoon told the
12 IMT—she was the representative of the IMT—

13 A. Yes.

14 Q. —that LMCS had divers who were willing to do a rescue?

15 A. Yes. They, they—yes, I have to say yes to that.

16 Q. Yes.

17 A. That they were saying they want to do a—

18 Q. Rescue?

19 A. —they have divers and—

20 Q. If it is that you or the IMT wanted to find out whether those
21 divers were prepared to go into or wanted to make sure they
22 were prepared to go into the horizontal section of the pipe, the
23 IMT could have asked them?

24 A. Well that's the thing. The IMT attempted to deal—yes we
25 could have asked them. IMT—

26 Q. And you had Catherine Balkissoon on the site?

27 A. Yes.

1 Q. And I want to read to you what Catherine Balkissoon said in
2 evidence here.

3 A. Certainly.

4 Q. So I could get your comments about it, okay? Catherine
5 Balkissoon's transcript of the evidence on the 14th of
6 December, 2022 on page 66 lines 8 to 24, it's on the screen for
7 you, and according—the question:

8 "Q. And according to my instructions, they made
9 several requests of that and they were told to stand
10 down several times?

11 A. At the very start around 7.00, right, they asked to
12 dive, that would have been around 7.00. And then
13 sometime after that and that would have been after
14 they got the—when I saw the people with the air,
15 commercial people came, he asked. Andrew Farah
16 asked. Right? And I told him stand down. I not
17 in charge. Let me talk to Collin Piper about it. So
18 definition of several, it's not like—it was like, um,
19 you know that, are we there yet? Movie? It was,
20 like, are you there yet? Are you there yet? That
21 every minute asking, he wasn't asking me like that,
22 if that's what you mean by several. I don't know.
23 He did ask me more than once."

24 So she was saying to us in evidence that the divers there were
25 prepared to go into the pipe, wanted to go in, she communicated
26 it to the ICT and they were told to stand down. Were you
27 aware of that?

1 A. Not to that detail, but I could tell you what—not to that detail.

2 Q. But you would agree with me that the IMT did not have any
3 discussions with the divers who were prepared to go into the
4 pipe with all the commercial equipment they have, to ask them
5 or to point out to them or to find out whether they would want
6 to go into the horizontal section if they had any objection of
7 going into the horizontal section?

8 A. Yeah. I, I don't know if they had any—I don't know if they
9 had—they were prepared to go into the horizontal section.

10 Q. You don't know?

11 A. The IMT sought to deal with an LMCS representative not
12 freelance divers at the first instance, and that would have been
13 Andrew Farah or Kazim Ali. There must be at least one leader
14 for us to have been able to lead with. Even if Conan Beddoe
15 had stepped forward to be the leader of that team, we would
16 have been able to meet with him and to say, "Look, this is—
17 let's work this out. Let's have that dynamic risk assessment on
18 this thing now", but there—it did not happen.

19 Q. Mr. Archbald, before I go into the evidence, because I want to
20 go, this is the last part of my cross-examination to you—

21 A. Uh-huh.

22 Q. —as to, I want to just put what I'm going to put to you and ask,
23 ask you to answer me in respect of some of the things that the
24 IMT did—

25 A. Okay.

26 Q. —as their form of rescuing, right?

27 A. Yes.

1 Q. But you would agree with me that these four men who were in
2 the pipe after Boodram came out—the—you or the IMT would
3 have recognized that any rescue to get them out alive had to be
4 within a short space of time?

5 A. As the planning section chief I really did not attach time frame
6 on it.

7 Q. So you did not—as a, as a—what you said as a planning?

8 A. Planning section chief.

9 Q. As a planning section chief you did not attach any time frame?
10 So as far as you were concerned, it could have taken 12 hours,
11 24 hours, 48 hours, it didn't matter?

12 A. I attached no time frame to it, Mr. Maharaj.

13 Q. No time frame?

14 A. Yeah.

15 Q. So you did not think that this was urgent to get a rescue done
16 from the pipeline?

17 A. By not attaching a time frame, I don't think that means that it's
18 not urgent. It was very urgent and very critical.

19 Q. But if it was very urgent and very critical, would you want to
20 take six hours to do it, ten hours to do it, 12 hours to do it or try
21 to do in three hours?

22 A. Immediately.

23 Q. Immediately. So therefore, if any rescue of the men from the
24 pipeline, and if Paria wanted to have a rescue done, a decision
25 had to be made urgently?

26 A. Definitely.

27 Q. Right. And therefore, if these men who were prepared to go

1 into the pipeline at the time at around seven o'clock from what
2 we just talked about, would you not agree that Paria should
3 have tried to see whether that rescue should have been effected?

4 A. From the information that we have, there was no safe dive to be
5 able to take place at that time.

6 Q. And there was no safe dive, as Paria was concerned, because
7 they wanted to see the conditions in the pipeline?

8 A. That—you mean with respect to the crawler?

9 Q. Well, with respect to everything that they wanted to send.

10 A. Well we got the crawler to be able to find out, to try to find out
11 where the men were. That was the main objective as far as I am
12 aware for the crawler.

13 Q. But you knew the men were in the pipeline?

14 A. To know where along the pipeline they were, sorry. I didn't
15 make myself clear. By sending the crawler down, if we had
16 been able to pinpoint whether they're a hundred, 200 or 300
17 feet—

18 Q. Okay.

19 A. —it would have been able to give us more information.

20 Q. Okay. So the reason for the crawler and the reason for—to
21 getting all this video footage was merely to find out how far in
22 the horizontal section the men were?

23 A. Not merely, what was—it was to try to find out where the men
24 were.

25 Q. Okay. Well, let me just point out to you what Paria did,
26 because Paria is relying upon this timeline to do a rescue and I
27 want to put it to you—

1 A. Uh-huh.

2 Q. —as a representative of the IMT.

3 A. What timeline is that?

4 Q. Yeah, I'll go through it.

5 A. Or, sorry.

6 Q. Good. Mitchell's was contacted at 4.30 p.m. on the 25th of
7 February, 2022 and they were told to be on standby by Paria
8 from 8.40 p.m. with surface supply equipment, and that is to be
9 found at paragraphs four and five of Fitzroy King's witness
10 statement, supplemental witness bundle page three zero one
11 seven. I wonder if we could put that up on the screen for the
12 witness to see. You see that?

13 A. Yes.

14 Q. Right. Then, could you put paragraph seven on the screen for
15 him at page 3o17? Based on Fitzroy King's statements they
16 were on standby and not given any further information until just
17 after 1.00 a.m. on Saturday when he, Rolph Seales, requested
18 him to view the video footage of the pipeline. Mr. King
19 assessed that his divers were too big to fit into the pipeline. So
20 that is from 8.40—from 4.30 p.m., 8.40 p.m., stand by and then
21 at 1.00 a.m. on Saturday morning. You see that?

22 A. Yes.

23 Q. Right. Let's go to Eastern Engineering responses. Eastern
24 Emergency Response Services were not contacted until 11.40
25 p.m. on Friday. See paragraph six—

26 A. They were not contacted until 11.40?

27 Q. Eleven forty p.m. on Friday. See paragraph six of Andy

1 Johnson, witness bundle Volume IV page 1526, and also
2 paragraph 11. The first part of the team arrived on site at 12.30
3 a.m. on Saturday. They were briefed at 1.25 a.m. by the
4 incident commander, that's at paragraph 11. The incident
5 commander advised Mr. Johnson that due to the variables
6 around the incident, Eastern should prepare themselves for a
7 retrieval and not a rescue due to the possibility that the divers
8 may have expired, paragraph 11, page 1527.

9 After viewing the video footage of the pipeline and visiting berth 6,
10 Eastern at 3.45 a.m. informed the ICT that they could not
11 perform a rescue because the pipeline was filled with water and
12 that the rescue required a diving team, paragraph 19, page 1529.
13 And then at 5.00 a.m., Eastern was placed on standby and at
14 7.00 p.m., that is on Saturday, they were called off their
15 assignment by the IMT, paragraph 21. You see that?

16 A. Yes.

17 Q. OTSL, OTSL was contacted in the afternoon of Friday, the 25th
18 of February. Look at paragraphs six and eight of Ian Bertrand's
19 witness statement at supplemental witness bundle page two
20 eight four two. On the afternoon of Friday the 25th of
21 February, 2022 and they arrived on site at 8.10 p.m. And
22 remained on standby until 5.30 a.m. Their evidence is that they
23 were not called upon by Paria to do anything.

24 **Mr. Chairman:** Remained on standby until when?

25 **Mr. Maharaj SC:** They remained on standby until 5.30 a.m.

26 **Mr. Chairman:** 5.30 a.m.?

27 **Mr. Maharaj SC:** A.m.

1 **Mr. Chairman:** And were stood down when?

2 **Mr. Maharaj SC:** And they were stood down—well they
3 arrived at the site at 8.10 p.m. at Friday evening and remained
4 on standby until 5.30 a.m. on Saturday morning.

5 **Mr. Chairman:** Right.

6 **Mr. Maharaj SC:** And their evidence is that they were not
7 called upon by Paria to do anything.

8 **Mr. Chairman:** Thank you.

9 **Mr. Maharaj SC:** And that is paragraphs six and eight of Ian
10 Bertrand's witness statement SWB two eight four two.

11 **Mr. Chairman:** Thank you.

12 **Continued Examination By Mr. Maharaj SC:**

13 Q. Then Hull Support Services, that is at SWB two nine nine zero
14 and two nine nine one. That's Andy—sorry, it's Gyasi
15 Woodley witness statement. And he said he received a call at
16 4.30 p.m. from Andy Fortune and he told Andy that he would
17 try to put a crew together. Hull did not go to the site as it could
18 not put a crew together. So that is the—that is Hull.

19 According to Michael Wei, at paragraph 103 at page
20 1289 Volume IV of the witness statement bundle, a request was
21 made by—for a camera by Paria at 6.30 p.m.—at 6.10 p.m. on
22 Friday. It arrived at 7.30 p.m. but could not be used as the light
23 was insufficient. Further, further, let me give you at paragraph
24 105 of Mr. Wei's witness statement at page 1290, Volume IV
25 of the witness statement bundle he said, further at around 9.00
26 p.m. a push rod camera from Atlantic LNG arrived on site at
27 9.00 p.m., that is on the Friday, and around midnight that

1 Atlantic LNG camera was used to perform an inspection but
2 could not go past the scuba tank in the pipeline.

3 Hummingbird was contacted at 10.50 p.m., see paragraph
4 107 of Michael Wei's witness statement at page 1290, 107. It
5 was contacted at 10.50 p.m. on Friday by Mr. Michael Wei to
6 make arrangements for a crawler with camera. You see that?

7 A. Yes, yes, Sir.

8 Q. Then Catherine Balkissoon said at paragraph 31 of her witness
9 statement, witness bundle page at 1333, that the pipeline
10 crawler went in at 3.00 a.m. on Saturday. They were still trying
11 to retrieve footage from that camera by 4.00 a.m. See
12 paragraph 79 of the statement of Mushtaq Mohammed page
13 1457 Volume IV of the witness statement bundle.

14 So, you see Mr. Archbald, that although Paria knew that
15 there were divers since seven o'clock on Friday evening,
16 prepared to go into the pipeline, Paria was engaged in these
17 activities that I pointed out to you without even talking to the
18 divers who were willing to go or making representations to
19 them?

20 A. I've heard what you read and if I could share what I know?

21 Q. But do you find that satisfactory?

22 A. I've heard what you read.

23 Q. As an IMT person—

24 A. Yes.

25 **Mr. Peterson SC:** Mr. Chairman, you say I have to—Mr.
26 Maharaj read a lot and—Mr. Maharaj read a lot and the witness
27 is saying, "I heard what you read but I want to tell you what I

1 know.” Because if it’s—the invitation to the witness is to
2 accept or dispute any or all of that, it has to be done seriatim.

3 **Mr. Chairman:** Yes, of course. I mean, I agree. Let’s take it
4 one step at a time. I think what Mr. Maharaj was doing was
5 just set the scene so that we understand the purpose of the
6 question. And I have no difficulty with that.

7 **Examination By Mr. Chairman:**

8 Q. You understand what has happened? He’s read to you what the
9 evidence that has been placed before this Enquiry has been, all
10 right?

11 A. Yes.

12 Q. Not all the of the evidence obviously, and there’s some
13 evidence that potentially contradicts it, all right, so, but this is,
14 this is the evidence that has been led before this Enquiry, either
15 in writing or by live evidence, right?

16 A. Well it’s bits and pieces of evidence.

17 Q. No, no, of course it is. It’s a selection. We’re not going
18 through the whole of the evidence for you to consider that.
19 That’s my job, all right? But you’ve been given a picture of the
20 activities in terms of finding people who were prepared to do
21 something, if anything, to rescue these divers by the IMT, all
22 right? He’s given you a picture. I accept it’s a snapshot, but
23 it’s a picture, all right? First of all, you said in answer to that,
24 first of all that you, er, you hear what he says or you hear what
25 has been read to you. Do you dispute any of what has been
26 read to you? I mean, are you able to say whether it is accurate
27 or not? If you can’t, then fine.

1 A. Well he read a lot.

2 Q. Of course he did, yes?

3 A. And it's rather difficult for me to say that I dispute with each
4 one now not having been able to comment on each one.

5 Q. Let's proceed on this basis then, shall we? Let's assume for a
6 moment that it is accurate, what he's read to you is accurate—

7 A. Umm.

8 Q. —recounting of the evidence. Doesn't mean to say we're
9 necessarily going to accept it. Do you follow that? But it's an
10 accurate recount of some of the evidence. Let's assume that for
11 the moment, all right? If that is true or if it's true, does it
12 represent to you what Mr. Maharaj has asked as a satisfactory
13 approach to the rescue of these men?

14 A. It's a difficult question to answer because, because, because the
15 bits and pieces that he read—

16 Q. Hmm.

17 A. —is not necessarily the facts that I have.

18 Q. You mean, you mean you may not accept them as being
19 accurate?

20 A. That's right.

21 Q. Right. All right. Let us assume they're not accurate.

22 A. Yes.

23 Q. Do you think that the efforts made to rescue these men, by way
24 of contacting different agencies, was satisfactory?

25 A. The outcome was that there was no rescue.

26 Q. No, not the outcome.

27 A. So—

1 Q. Not the outcome. Do you think that the efforts—

2 A. The efforts were satisfactory?

3 Q. —were satisfactory?

4 A. I think, yes, because we did all that we could have done, I think.
5 I don't think there was anything that we could have done that
6 we did not do.

7 Q. All right. Well that will be for us to determine, but, I think the
8 concern for Mr. Maharaj, and, to be frank to me is the answer to
9 question you made earlier and it's against that background I
10 suspect these questions have been asked of you, which is, was
11 there any kind of time frame or timeline that was applied by the
12 IMT, given that you accept that it was very urgent and very
13 critical and needed to be done immediately? You follow the
14 point, don't you, that if you're contacting, just take one of them,
15 you're contacting somebody saying we need help—

16 A. Yeah.

17 Q. —and you do that at 5.30, all right, and they tell you, well, they
18 can arrive by 8.10, and then they are on standby until 5.30 in
19 the morning, and not being called upon to do anything, that is
20 OTSL, if that is right, it doesn't really speak of a particularly
21 well-thought-out plan by the IMT as to how they should
22 progress, given that it was very urgent, very critical and should
23 be acted upon immediately?

24 A. Well if that—if it were right.

25 Q. Yes if it's right?

26 A. But I don't believe that it is—that is what occurred.

27 Q. You think it's wrong?

1 A. Yes.

2 Q. Right. So you think they were contacted before 5.30?

3 A. No. I think that the time they were contacted is correct.

4 Q. Right. Ten past 8.00?

5 A. I believe that that is also correct.

6 Q. Right. But you say they were called upon to provide some
7 assistance?

8 A. Yes.

9 Q. Right. All right, well let's assume that that is correct, at ten
10 past 8.00 when they arrived on the scene, well, go back at one
11 step. If at 5.30 they're saying they can't get there for the better
12 part of three hours, did you think that that represented to you
13 what was either very urgent or very critical? They can't even
14 get there for the best part of three hours.

15 A. I, I believe that that was the best they could have done.

16 Q. No I believe that too. But is it good enough for you?

17 A. Well it wasn't—it certainly was not good enough for the rescue.

18 Q. No.

19 A. But there was nothing else—these—this is the Friday afternoon
20 evening.

21 Q. Yes.

22 A. And you're calling upon persons to mobilize. Mobilization
23 doesn't take an instant. You're calling people out from their
24 homes possibly and they have to report to work and then to—

25 Q. No I understand it might take—believe me I've been stuck in
26 the traffic here just like everybody else, but I understand how it
27 works. The point about it is this. Is, if you had a timeline and

1 you, you know the incident happened at around 2.30, that they
2 disappeared, 2.30, 2.45, call it 2.45, all right? They disappeared
3 2.45. Two and a half hours later approximately somebody
4 comes out of the pipeline, alive. So at 5.30 or so that evening
5 you know for sure that there are people alive in the pipe.

6 A. We believe that.

7 Q. Yes, exactly. There must have been in your mind a critical
8 timeline upon which to work because at 5.30 you say, “Well if
9 we can get a team in there now we might save one, two, three
10 or all were of them. If we wait an hour, it’s to going take—we
11 may lose one. If it takes three hours we may lose two. If it
12 takes five hours we may lose them all.” Did you not work to
13 some kind of timeline?

14 A. No. And I think I understand the question.

15 Q. Good.

16 A. But I don’t agree with the basis.

17 Q. Right.

18 A. Um—

19 Q. That you’ll need to explain.

20 A. If, if you call upon someone for help and you want the help
21 now and they say, “I could make it there in a hour or two or
22 three”, do you tell them, “No, I don’t need you anymore”? No.
23 We did not do that. We called upon them for help and they
24 came and then we called upon another team for help and then
25 another team because we did not assume that one would be
26 good enough. We called upon everyone that we could—were
27 able to get in contact with. So that we turned away no one

1 because they were not able to reach immediately. They all
2 understood the urgency of why they were coming and I believe
3 that they came as quickly as they could have come.

4 Q. I believe that too.

5 A. Whether that was good enough, I mean, we know the result.
6 We know the outcome. But whether they could have done
7 better, I don't know.

8 Q. No, it's not about whether they could have done better, it's
9 whether you could have done better, you the IMT. I don't
10 mean you personally, although that may be an issue too, but the
11 fact is that if you call someone and they say, "Look, it's going
12 to take three hours to get there", there must be another plan, all
13 right? You say then you call someone else?

14 A. Yes.

15 Q. Then to come there, and another and another?

16 A. But we didn't tell them not to come.

17 Q. No, no, I appreciate that. There's no point in telling them not to
18 come.

19 A. Thank you.

20 Q. But, and I understand all of that. The point is, though, is it the
21 first arrival of anyone to give you any help is hours away, is
22 there not plan B? Is there not some other alternative?

23 A. LMCS was affecting the first plan which is to put together a
24 rescue team—

25 Q. Right.

26 A. —which we were helping with.

27 Q. You say you were helping with it. As I understand it, what was

1 happening is that you provided them a few tanks of air when
2 they say they needed more, but apart from that you were
3 prohibiting them from going into the pipe, weren't you?

4 A. The help that we provided to them was to get their divers down
5 to get air for them and to—well, they got their own vessel.

6 Q. Yeah. The help—

7 A. The very next—

8 Q. —that you provided, the help that you provided LMCS, as I
9 understand it, correct me if I've got it wrong, was that when
10 they say they ran out of air you provided them with some more
11 air tanks?

12 A. Yes.

13 Q. At the same time you were saying don't dive?

14 A. Correct.

15 Q. Right. So, er, what I want to understand from you is this, is that
16 you knew pretty early on that the best that you were likely to
17 achieve was that it was going to take hours, hours, for any of
18 the people you were calling to turn up and be able to help you.
19 That was the position, was it not?

20 A. Yes. Um, but I have to—the, the, the, the questions caused me
21 to have to ask this. What was the alternative?

22 Q. The alternative was to have a plan B which, bold as I might be
23 to make the suggestion as to what it might be, is to go to LMCS
24 and say, or go on the barge, the berth, and/or speak to them
25 directly, not through Ms. Balkissoon, if that wasn't working. I
26 mean, you knew, according to you, that the equipment had
27 arrived, you knew that there were people who were still in the

1 pipe almost certainly alive, and you knew that there were divers
2 who were available and willing. I mean, is it beyond the wit of
3 man to be able to put together a plan yourself?

4 A. No, we could have.

5 Q. Well why didn't you—I mean, you came up with your own
6 statement which you dated the 16th of August of 2022 with
7 what you regarded as the minimum requirements to be safe. It
8 didn't involve sending in a camera. It involved making sure
9 that the person who was going to go into the pipe was as safe as
10 he could be, didn't it?

11 A. That's right. And—

12 Q. And you had that.

13 A. And after seven o'clock, there was, as far as we know, as far as
14 I believe, there was no one willing to traverse the horizontal
15 part of the line.

16 Q. Do you think you might be wrong about that?

17 A. It is possible.

18 Q. Right. And if you are wrong about it, then a—somewhere
19 along the line there was a failure in communication of that,
20 wasn't there, if you're wrong?

21 A. Yes, yes, yes, um—

22 Q. And if there were willing people, if there were, if that's our
23 finding in due course that there were one, two, three or four
24 divers who both had the ability and the willingness to do it, you
25 say you at the IMT did not know that?

26 A. Right. So—

27 Q. Is that the position?

1 A. —I agree.

2 Q. Yeah. All right.

3 A. Um—

4 Q. And if that is so, there was a failure in communication, was
5 there not?

6 A. Definitely.

7 Q. Right.

8 A. But the willingness—

9 Q. The consequences of which may be death?

10 A. It may, but the willingness would not have effected a rescue.
11 The willingness would not have reflected a rescue.

12 Q. Well, you needed someone who was prepared to do it?

13 A. I still—if it is we could ask, we could ask those same people
14 who we think were willing and sit together with them and
15 develop a plan now, even now, after this incident, and say what
16 it actually entails to go down into the 30-inch line, traverse
17 horizontally and to remove the bottles and then to come back
18 up, then to go back again, this is—this must—

19 Q. Why would the bottles need removing?

20 A. To be able to get to the, to the first man.

21 Q. Why? A 30-inch pipe couldn't go past me in a bottle?

22 A. Well if the—in my, and I'm not a diver and I'm not a rescue
23 diver—

24 Q. I'm neither of those. I have dived a bit but I'm not a rescue
25 diver.

26 A. But if I—if, if, if the rescue diver is going down, he would have
27 on his helmet, the umbilical, he would need to have an extra

1 bottle for the person and a tether, um, it's—

2 Q. It's a smaller bottle? You know that, don't you?

3 A. Yeah, well, I—and, and he should probably go with, um, a
4 BCD, the vest, so that way the man would not have to swim or
5 be pulled up to the surface. That's what I think might have
6 been the better thing, so that they woulda used that to rise
7 vertically rather than to have to pull because to set up a pulley
8 at the top of the riser would have been almost impossible.

9 Q. All right. Well, let's not muse too much at this juncture
10 because I'm not sure that's going to achieve very much.

11 A. But—

12 Q. That musing that you're doing now is something that might
13 have been done then.

14 A. We did it then, because—

15 Q. I rather got the impression, from your statement, that you had
16 identified the things that you thought were necessary—

17 A. Yeah.

18 Q. —in order to effect a safe rescue.

19 A. We, we did that then and we worked—but there was the—with
20 the willingness from the LMCS supporters—

21 Q. That's the—right.

22 A. —was not enough to effect a rescue. It might have been
23 enough to dive but not to effect a rescue.

24 Q. I'm not sure I understand that.

25 A. Diving does not—

26 Q. As I understand it, and again if I've got this wrong, Mr.
27 Archbald, please tell me. You say the only impediment

1 ultimately at around 7.15 or 7.30 when the commercial
2 equipment arrived, the only impediment to a rescue at that stage
3 was the fact that there was no one communicated to you willing
4 to go into the horizontal part of the pipe. Have I got that right?

5 A. And that is the main impediment.

6 Q. All right. Thank you. The main impediment?

7 A. Yes, right.

8 Q. Thank you very much.

9 **Examination By Commissioner Wilson:**

10 Q. Just before we move on, Mr. Maharaj, I heard you just
11 mentioned that it was a possibility or even if now you were to
12 sit with the willing personnel, right, I think what has already
13 been established for me by Paria is that the ICT members are
14 ICS trained and you as the head, are you aware of a unified
15 command under ICT or a IMT philosophy?

16 A. Yes. The ICS teaches about a unified command approach, so
17 yes.

18 Q. Right, so a unified command would dictate very much what you
19 said, so even engage in the specialist and/or your outsource
20 stakeholders, under that philosophy you could have engaged all
21 your specialists, whether using technology, teleconference and
22 stuff to start enacting components into your tactical plan as
23 early as when you started engaging the first specialist.

24 A. The—all right. So the specialists that we contacted were on
25 site, and, well when they came on site we engaged them at that
26 point. The unified command—

27 Q. Uh-huh.

1 A. —um, it did not include an LMCS representative which is what
2 the Commissioner is saying.

3 Q. No, not necessarily. So I'm—so I'm even removing you from,
4 um, you know, any having to think about diving or confined
5 space rescue. I'm dealing with your expertise or competence in
6 ICS.

7 A. Yes.

8 Q. And since you're familiar with a unified command they're
9 multiple agencies that you engage, not concerned with the time
10 that they showed up.

11 A. Yes.

12 Q. I'm just trying to interrogate the philosophy or your
13 understanding of the unified command philosophy because it
14 speaks to a quality timeline that you could have gotten quality
15 information and/or started developing components into a
16 tactical plan—

17 A. Okay, so—

18 Q. —under the unified command.

19 A. Right.

20 Q. So the unified command won't only put you into LMCS as your
21 first responder—

22 A. Uh-huh.

23 Q. —because you've engaged Rolph Seales, you've engaged other
24 members.

25 A. Right.

26 Q. So even though if they were scattered across the country, and I
27 do appreciate February 25th, that was a carnival Friday—

1 A. Yeah.

2 Q. —you know, so, um, I think if you have a good understanding
3 and a good command of the unified command philosophy, and
4 I'm a bit challenged in terms of what I'm hearing, it seems as
5 though your outside stakeholders were engaged in silos and not
6 necessarily under the unified command philosophy.

7 A. I'm not sure which agency should have been in the unified
8 command that was not there. Yes, there may have been others,
9 um, but the, the—and if you consider the Planning P which is
10 the initial response and then the generation of the ICS two and
11 the incident briefing and the formation of the incident
12 command/unified command, right, unified command for larger
13 incidents, and before you get into the cycle, that, at that point in
14 time we actually did have TTCG, TTFS, Trinidad and Tobago
15 Police Service, we did not have the dive companies as yet, they
16 didn't arrive until about eight o'clock and I think what you're
17 saying is that we could have been online with them in order to
18 be able to start soliciting information?

19 We were not necessarily online over the phone with them
20 explaining what the situation was. The only—I think the only
21 person that actually responded affirmatively or in any definite
22 way what their position was, was Hull. The other three needed
23 to be on site to be able to assess before they could have made a
24 pronouncement. So, so the, the creation of the unified
25 command you could say did—it was started but the first tactical
26 plan did not take place until after the first site visits were done.

27 Q. But now I'm going to have to test the site visit because there's

1 nothing that came out to me, you know, what the diving
2 companies did in, in, in—

3 A. That's right.

4 Q. —as, as a—of a site visit.

5 A. That is absolutely correct, yes.

6 Q. But also under the ICS system, I mean again the thing about it
7 is command and control and overexaggerate.

8 A. Yes.

9 Q. So, I understand coast guard showed up, coast guard
10 immediately almost said, "Look, we're not going into the
11 pipeline", so I'm not hearing powerfully that a unified
12 command operated as advertised under the ICS system.

13 A. No, I would agree—

14 Q. Okay.

15 A. —that it did not operate as advertised in the ICS system and
16 that is actually one of our findings.

17 Q. Okay, so then really—

18 A. Yeah.

19 Q. So there are gaps in terms of the timeline?

20 A. Definitely. That's right. And, and the recommendation is to do
21 training with the, joint training, with the regulators and the
22 persons in rescue and that kind a thing.

23 Q. Understood. Thank you for that.

24 A. Yes.

25 **Mr. Peterson SC:** Mr. Chairman, sorry, just by housekeeping
26 are we likely to get to Mr. Osei Flemming-Holder? I see it's 5
27 to 4.00 and—

1 **Mr. Chairman:** We have to rise at 5.30 at the very latest.

2 **Mr. Peterson SC:** Yeah, that's what I was advised, so, at least
3 you could keep Mr. Seales and Mr. Fuentes at least so that we
4 dent lose time.

5 **Mr. Chairman:** No, quite.

6 **Mr. Peterson SC:** I can't see us getting to Mr. Osei.

7 **Mr. Chairman:** Well, what I would like to do, um, can you
8 just give me a moment please?

9 **Mr. Peterson SC:** Sure.

10 *[Mr. Chairman confers with Ms. Sinanan and Mr. Bissessar]*

11 **Mr. Chairman:** It seems to me that, you—how much longer
12 do you have do you think?

13 **Mr. Maharaj SC:** One question.

14 **Mr. Chairman:** All right, well ask that question then I'll deal
15 with where we are going to with the rest of this. Let's just go.

16 **Continued Examination By Mr. Maharaj SC:**

17 Q. Mr. Archbald, I have a duty to put something to you. You're
18 aware that OSHA conducted an investigation into this matter?

19 A. Yes.

20 Q. And you're aware that you were interviewed by OSHA?

21 A. Yes, Sir.

22 Q. And you're aware that OSHA made certain findings?

23 A. Yes.

24 Q. Well I should say preliminary findings?

25 A. Yes, I understand.

26 Q. And at page—and I want to ask you your view at it so that
27 you'll get an opportunity.

1 A. Okay.

2 Q. Yes. At page one two three nine and the core bundle Volume
3 III, under the heading 6.2.4 and what I'll do I'll read—it's on
4 the screen, and you can—

5 A. Yes.

6 Q. You can read it but I just want to put it to you and then ask you
7 two questions on it, okay?

8 A. Yes.

9 Q. Well OSHA stated that you had no experience in offshore
10 subsea maintenance works.

11 A. Yes.

12 Q. Do you agree with that or not?

13 A. Whether I have no experience or that I told them that?

14 Q. Well did you tell them that?

15 A. I don't remember saying that to them.

16 Q. You don't remember saying that to them?

17 A. But it's something that I might have said but I really don't
18 remember.

19 Q. Something you might have said?

20 A. I asked them to be able to tape the conversation and they said
21 no.

22 Q. So, so, so you agree with them, then, that you have no
23 experience in offshore subsea work?

24 A. Well I have never done diving or any sort of maintenance work.

25 Q. Offshore maintenance?

26 A. Offshore, yeah, I have never done any of that.

27 Q. Right.

1 A. So I—if that is what was meant here then, I—that is—I don't
2 have competency or qualifications or training in doing any sort
3 of offshore work.

4 Q. Great, okay. I thought I had a duty to ask you that.

5 A. Right.

6 Q. And, um, it went on to say that he admitted that his team does
7 not have the required competency in offshore subsea
8 maintenance work.

9 A. Well I don't know how the word required there, but, my team
10 does not do offshore maintenance work. We are HSE. We are
11 HSE professionals so we don't do the work. We understand the
12 risks associated with the work for the oil and gas industry.

13 Q. You do not understand the risks associated?

14 A. We understand the risks associated for the oil—as far as the oil
15 and gas industry pertains, but, but actually the doing of the
16 work, no, that is not our area of expertise at all.

17 Q. So you understand the risks in this job that was being done?

18 A. Well, as far as it pertains to the oil and gas, industry. The
19 diving aspect of it, the competent contractor would have
20 brought that to us.

21 Q. So you think that you were competent in Paria to assess the
22 method statement?

23 A. The, the JHA, the, the, the risk assessment?

24 Q. Yes, so yes—

25 A. So, so, to, to assess it for as far as to include the facility risks,
26 which is what I would have spent some time explaining earlier.

27 Q. All right, Mr. Archbald, thank you very much.

1 A. Okay, you're welcome, Mr. Maharaj.

2 **Mr. Chairman:** All right just wait one moment. Who wants
3 to ask questions of Mr. Archbald? [*Hands raised*] Three and I
4 take it you both will have some, or you may not have much?

5 **Mr. Peterson SC:** Just three questions.

6 **Mr. Chairman:** All right, all right.

7 **Mr. Peterson SC:** [*Inaudible*]

8 **Mr. Chairman:** Well I know when you say three you mean
9 three or maybe three and a half at the most. All right,
10 realistically I think that's—we're going to take a five-minute
11 break in a moment but I think realistically that's going to take
12 us at least half an hour, perhaps a little more. So I'm minded to
13 certainly to release Mr. Osei Flemming-Holder. That's his
14 name is it, Flemming-Holder. Right. Well he should be
15 allowed to go, I think. The question is whether I keep Mr.
16 Seales or Mr. Fuentes or both. My inclination at the moment is
17 to keep Mr. Seales. [*Crosstalk*] Well I'm being told to keep—

18 **Mr. Peterson SC:** Fuentes depending.

19 **Mr. Chairman:** Well, um, maybe we should just have Mr.
20 Fuentes. I think he is the one we should keep, and let Mr.
21 Seales go as well. I've got an appointment at six o'clock which
22 I have to keep and I need to do a little bit of reading before that,
23 so, um, so what I'm going to do is to keep Mr. Fuentes, ask Mr.
24 Seales and Mr. Flemming-Holder to come back tomorrow
25 morning. I'm sorry about that but if you ask them to come I
26 shall call them first. We'll have Mr. Seales first and then Mr.
27 Flemming-Holder. All right, and then the other two that are

1 fixed to come, Mr. Johnson from Eastern Emergency
2 Responses and Mr. Gill from Hull Support. All right, well
3 that's what we'll do.

4 **Mr. Peterson SC:** The time to be confirmed, Sir, I see, the
5 time for tomorrow. You need to tell them now.

6 **Mr. Chairman:** We're going to tell them now, yes.

7 **Mr. Peterson SC:** Okay.

8 **Mr. Chairman:** I'm going to rise for 5 minutes, everyone will
9 stretch their legs, and then we'll resume with, um—

10 **Mr. Peterson SC:** The start time.

11 **Mr. Chairman:** Yes, thank you very much.

12 **Mr. Maharaj SC:** I think Mr.—

13 **Mr. Peterson SC:** The starting time.

14 **Mr. Maharaj SC:** Tomorrow.

15 **Mr. Peterson SC:** If it—

16 **Mr. Chairman:** Tomorrow?

17 **Mr. Peterson SC:** Tomorrow, yes, if you—it's not on the
18 schedule.

19 **Mr. Chairman:** Right. Oh, it isn't, is it?

20 **Mr. Peterson SC:** It says to be, um, confirmed. Well I think
21 you did say nine o'clock or 9.30 or ten o'clock I think.

22 **Mr. Chairman:** Right. [*Laughter*] The question is this, isn't
23 it? Do you want to go home early or start early? Why don't we
24 start at 9.30 tomorrow? 9.30? All right, 9.30 tomorrow. Thank
25 you very much. I'll rise for 5 minutes all right? Just 5 minutes.

26 **3.59 p.m.:** *Enquiry suspended.*

27 **4.08 p.m.:** *Enquiry resumed.*

1 **Mr. Chairman:** Yes, Mr. Pegus has asked me in everyone's
2 absence if Mr. Seales could give evidence this afternoon rather
3 than Mr. Fuentes. I would have accommodated him but for the
4 fact that I must rise at 5.30, and I do not believe that we will get
5 through the remainder of Mr. Archbald and then Mr. Seales this
6 afternoon by 5.30. So I'm afraid I'm going to have to ask him
7 to come back tomorrow morning, otherwise he'll end up doing
8 both, this afternoon and tomorrow morning

9 **Mr. Pegus:** No problem with that, Mr. Chairman. Just to
10 clarify, I didn't ask for him to go in place of Mr. Fuentes. The
11 request was for him to be squeezed in, but when I spoke to the
12 Secretary, I understood the position and he has no difficulty
13 being here for 9.30 tomorrow.

14 **Mr. Chairman:** All right, but I think if he comes at 9.30
15 tomorrow, I mean, I can give him a reasonable assurance that
16 subject to hurricanes or something like that he will be first on
17 and be first away.

18 **Mr. Pegus:** And will be very happy for that because tomorrow
19 will be the third day he'd be appearing.

20 **Mr. Chairman:** No, I understand that.

21 **Mr. Pegus:** Yes.

22 **Mr. Chairman:** He's not the only one, I'm afraid.

23 **Mr. Pegus:** Yes.

24 **Mr. Chairman:** It's just what happens, as you know.

25 **Mr. Pegus:** Yes.

26 **Mr. Chairman:** All right. So what we're going to do is we'll
27 finish with Mr. Archbald, we'll hear from Mr. Fuentes and the

1 target time is 5.30 please, and then then we will hear from Mr.
2 Seales tomorrow morning at 9.30. Thank you very much. So
3 let's get on.

4 Now, who wants task Mr. Archbald some questions. Yes. So
5 first of all we'll hear from Ms. Alfonso, please?

6 **Ms. Alfonso:** Thank you, Sir.

7 **Continued Examination By Ms. Alfonso:**

8 Q. Good afternoon, Mr. Archbald. My name is Nyree Alfonso. I
9 represent the interest of the SWWTU and I have very few
10 questions for you. A lot of the stuff has been traversed already.
11 Mr. Archbald, you would have been involved in compiling an
12 investigative report, an incident investigation report in August
13 of last year?

14 A. Yes, Ma'am.

15 Q. Okay, thank you. And in that report, amongst other things, and
16 that report is to be found well, attached to Mark Rudder's
17 witness statement at 1743 in part three of the witness bundle, at
18 Appendix IV, so you would have come to two conclusions that
19 the incident which caused the—well five divers to be sucked
20 into the pipeline was caused by LMCS removing the inflatable
21 plug?

22 A. Yes.

23 Q. That's one.

24 A. Yes, um, and maybe I could have it.

25 Q. Sure.

26 A. Do you have it anywhere here?

27 Q. Sure. I don't know about in—I don't—I can't—

1 **Mr. Chairman:** Just a moment. You want the original
2 document? Let—

3 **Mr. Archbald:** Yeah, well to answer the question.

4 **Mr. Chairman:** Yes, well of course you should—

5 **Ms. Alfonso:** Yes, certainly.

6 **Mr. Archbald:** I'm not sure how many conclusions—

7 **Mr. Chairman:** Where are we, Ms. Um—

8 **Ms. Alfonso:** We are—the place that I found it is at Tab 59 in
9 the part three of the witness statement bundle.

10 **Mr. Archbald:** I don't remember how many conclusions but I
11 remember there were two recommendations.

12 **Mr. Chairman:** All right, just a moment.

13 **Ms. Alfonso:** I know it's in the core bundle but I accessed it
14 from the witness statement.

15 *[Mr. Chairman confers with Ms. Maharaj]*

16 **Mr. Chairman:** It'll just take a moment longer because there's
17 a central core bundle and then there are the ones that we're
18 using. So it's core bundle one one four three, is it? One one
19 eight five. Sorry. One one eight five.

20 *[Document handed to Mr. Archbald]*

21 **Mr. Archbald:** Right.

22 **Continued Cross-Examination By Ms. Alfonso:**

23 Q. Okay, so if I—and because we might be looking at totally
24 different versions, I have page 3 of 21, which I hope will be at
25 the—

26 A. Okay, yes.

27 Q. Right? Um, I would say the penultimate paragraph, if it looks

1 the same on that document, based on the information gathered?

2 Yes, there we are. You see that paragraph?

3 A. Yes.

4 **Mr. Chairman:** You'd best read it because we haven't all got
5 it unless we have it on our screens, so—

6 **Ms. Alfonso:** Okay. Mr. Chairman you'd like me to read it
7 or—

8 **Mr. Chairman:** Yes, or that part which you want to refer him
9 to.

10 **Ms. Alfonso:** Right.

11 **Mr. Chairman:** Because, unless we get our screens up we're
12 not going to be able to see the—

13 **Ms. Alfonso:** Okay, I'm sure. I will oblige.

14 **Continued Cross-Examination By Ms. Alfonso:**

15 Q. "Based on the information gathered, the incident
16 occurred due to the LMCS employees removing the
17 mechanical plug and attempting to remove the inflatable
18 plug. These actions took place without the knowledge or
19 permission of Paria's T and M personnel."

20 Technical and maintenance I suppose?

21 A. Yes.

22 Q. "LMCS employees did not follow the agreed work-plan,
23 failed to properly comply with the P—well—permit to
24 work procedure and acted outside the terms of the work
25 permit for the task. LMCS also failed to follow the
26 manufacturer's safety instructions for the preventing—
27 for preventing movement of or for deflating the inflatable

1 plug.”

2 Yeah?

3 A. Yes.

4 Q. Okay. So, would it be correct to say that’s what you deem to be
5 the root cause?

6 A. The root, yes. Um, well, direct cause.

7 Q. Causes, I beg your pardon.

8 A. Yeah, that, it’s really direct. It’s immediate or direct.

9 Q. Oh, immediate okay. I’m happy for that terminology.

10 A. Yeah.

11 Q. An immediate or direct cause. And you would have gone on,
12 and I could make it simple by just looking at the, in the
13 executive summary, which is the next page on, you’d have
14 made key findings and recommendations. So you basically
15 reiterated what you’ve just read there and you made two
16 recommendations, yes?

17 A. Yes.

18 Q. And that recommendation really was retraining of the
19 contractors on—or the contractors, including, I guess, LMCS
20 on the permit to work?

21 A. Yes. So arising directly out of the direct causes that the
22 investigation found.

23 Q. Okay. And, you would have also recommended that essentially
24 when contractors bring equipment that they be trained in the
25 use of their equipment?

26 A. That the employees also be trained in it and not be dependent
27 on—

1 Q. And that—and you have some way of—

2 A. Yeah.

3 Q. —of—some evidence of that fact be produced to Paria?

4 A. Yes.

5 Q. Yeah? Okay. So let me ask you having regard to your
6 evidence this afternoon—

7 A. Yes.

8 Q. —would you, do you still hold to that view, those two, those
9 findings and the recommendations?

10 A. Um, those are still the direct causes.

11 Q. Okay. So, you would have had access at all, Mr. Archbald, to
12 the In-Corr-Tech report?

13 A. Yes, yes.

14 Q. Okay.

15 A. Yes.

16 Q. And, I'm the most untechnical person you will ever meet so
17 forgive me in advance if I oversimplify. Is it that the In-Corr-
18 Tech report concludes that the removal of some of the—or
19 removal of a good quantity of the line contents caused a
20 gaseous accumulation in the pipeline and then that led to the
21 Delta P?

22 A. I believe so.

23 Q. Okay.

24 A. Um, I believe so. I'll, I'll give the but after.

25 Q. And again I say I'm the least technical person, so I would be, I
26 would be happy for the but.

27 A. Well, the thing about it is that the Paria investigation report

1 only looked at the direct immediate causes—

2 Q. I see.

3 A. —based on the lack of information at that point in time. If you
4 look at this report, we didn't even know if they were
5 intentionally removing the inflatable plug or if it slipped or if
6 they were fixing it and it fell, so, um, after this Enquiry we
7 would have a lot more information to be able to say not only
8 what are the direct or immediate causes but the underlying root
9 causes as well.

10 Q. Okay.

11 A. So we will be able to talk about things like Delta P and the
12 removal and suitable and sufficient risk assessments and that
13 kind a thing.

14 Q. So let me just ask you, Mr. Archibald.

15 A. Yeah.

16 Q. So again I just wanted to say, let me expand what I said earlier.
17 With the benefit of your evidence this afternoon with the
18 benefit of additional information that would have come to
19 Paria, and I know, to be fair to you I know this report is
20 completed even before your witness statement, I beg your
21 pardon, I'm wrong.

22 A. Is it the same one—

23 Q. Two weeks after?

24 A. Yeah, yeah.

25 Q. Two weeks after, right, but in the same month. So, with the
26 benefit of additional information, are you still of the view that
27 these findings, these conclusions in your report, are accurate,

1 spot on?

2 A. Well they are the direct causes. The removal of the plug is the
3 direct cause. If, if, if, if we had not—if the plug had not been
4 removed, then the event would not have occurred. So—but the,
5 the, er—but there are other contributory causes as well which
6 could be considered to be direct, I suppose, depending on the
7 methodology that we used, which is the, the um, emptying of
8 the line. To a certain extent that would have allowed the plug
9 to fall. So, yeah, that would definitely be part of the
10 contributory causes as well.

11 Q. And correct me if I'm wrong. If I follow what Commissioner
12 Wilson has explained previously as well as the In-Corr-Tech
13 report, isn't it that the line, the removal of the—okay the lack of
14 contents—

15 A. Yeah.

16 Q. —in the pipe allowed for the differential to exist?

17 A. Yeah.

18 Q. Because there was one pressure outside, I can't say anything
19 about, atmospheric pressure, eh, but there's one pressure
20 outside and there was one pressure inside?

21 A. Yeah the lack of the—

22 Q. Or, inside the pipe, I beg your pardon.

23 A. The lack of the contents caused the sudden drop in the
24 inflatable plug which then, at that point in time would have
25 caused the rush of water to come in.

26 Q. Okay.

27 **Examination By Mr. Chairman:**

1 Q. That's what you think, is it?

2 A. Yes.

3 Q. You think that the lack of fluid in the pipe meant that the—once
4 they, um, deflated the inflatable plug it fell?

5 A. Yes.

6 Q. What like in gravity fell?

7 A. No, no not gravity. No, not gravity.

8 Q. Well what do you mean then, fell?

9 A. The, the, the, um, the compressor was on.

10 Q. Yes.

11 A. And the, the line was plugged.

12 Q. Yes.

13 A. And there was about possibly maybe between six and seven PSI
14 of pressure acting down on the face of the inflatable plug.

15 Q. At the top?

16 A. At the top.

17 Q. Six or seven PSI?

18 A. Yes.

19 Q. On top?

20 A. Yes.

21 Q. And you didn't know what was on the other side?

22 A. No. It—there were six or seven PSI in addition to what was
23 on—higher than on the other side I should say.

24 Q. Right.

25 A. And then, um, so when—so that was, that was seven PSI over a
26 surface area of πR^2 in diameter which was about 4,000
27 pounds.

1 Q. Of pressure?

2 A. Of, of, of weight—4,000 pounds of weight.

3 Q. Yes. The equivalent of the pressure?

4 A. Yes, due, yeah, due to the pressure.

5 Q. Right.

6 A. So, so, I believe, when they started to slacken the plug, even if
7 it was chained and even if they were holding it, that that 4,000
8 pounds would have broken whatever restraints it might have
9 had and it fell.

10 Q. Even a substantial chain wouldn't have held it?

11 A. Yeah. And when it fell it created what, what we could describe
12 as a parcel vacuum in the space above it and that now caused
13 the flow of water into the line.

14 Q. Sucked everything the other side of it into the pipe with it?

15 A. Yes.

16 **Ms. Alfonso:** Thank you, Chairman.

17 **Mr. Chairman:** It's just the use of your word fall made me sit
18 up for a minute.

19 **Mr. Archbald:** Okay, right, yes.

20 **Mr. Chairman:** Sucked I think is—might be better.

21 **Mr. Archbald:** Well the plug was—maybe the better word
22 was pushed down.

23 **Mr. Chairman:** Yes, all right. Yes, still, yeah.

24 **Continued Cross-Examination By Ms. Alfonso:**

25 Q. Well I've heard a lot of terminology, vortex was created, a
26 sudden vortex was created.

27 A. I've seen that word been used, yeah.

1 Q. But it's a violent action?

2 A. Yeah.

3 Q. Right? It wasn't, I agree with the Chairman, fall.

4 A. Yeah, yeah.

5 Q. You know?

6 A. Well, the, the plug was forced down because of the weight of
7 the pressure and the water rushed in, and, because of the space,
8 the empty space underneath, the water created a siphon with a
9 vortex and then went in following the plug.

10 Q. Okay. So, one of those root causes we can, as a takeaway,
11 which you may not have had the benefit of in August of 2022,
12 is that you created, and it—the., the, and when I say you, the
13 job created the environment, the way that the job was
14 conducted, the pre-work for the job, and, I think that's the
15 better word—

16 A. Yes.

17 Q. —created the environment for this potential hazard which
18 unfortunately evolved into a real hazard.

19 A. Yes, yeah, the, the—yeah, there was a realization of the, of the
20 risk.

21 Q. So, that is something that is now in the, in the, in the psyche of,
22 of, of Paria, this is something that you are addressing in some
23 way, following on the, on this loss?

24 A. Yes, so specifically, specifically with respect to diving work or
25 works, any works related to diving where there could be the—
26 we have, we have addressed, we have built in ways to address
27 the risk in a different way.

1 Q. Okay. And that is by seeking external diving—

2 A. Yes.

3 Q. —expertise and so on?

4 A. Yes.

5 Q. Would you agree with me, Mr. Archbald, that that was also
6 available pre-February, or, to be fair to you, maybe July 2021
7 when the tender was being awarded, reviewing the plans and so
8 on that your department had to plan? That was available as
9 well, that external assistance?

10 A. External third-party advice is always available.

11 Q. Is always available?

12 A. Um, certainly, I mean, I could add more.

13 Q. Please do.

14 A. Certainly if LMCS had sought third-party advice, they would
15 have been able to present a suitable and sufficient risk
16 assessment to the client, Paria, outlining all of the risks as per
17 the requirements of the OSH Act section 13A for the employer
18 to provide a suitable and sufficient risk assessment.

19 Q. And would you agree, Mr. Archibald, by the same token, that
20 Paria could have sought that—

21 A. Yes.

22 Q. —third-party external assistance because—well, I'll let you
23 answer that before I ask the further question.

24 A. Yes, Paria could, could have also sought third-party review.

25 Q. Because you have admitted you didn't have that expertise
26 internally?

27 A. Correct.

1 Q. In your department?

2 A. That is right.

3 Q. I don't want to give you the—you have one department. So, if
4 you got a method statement, a risk analysis and so on, you
5 didn't have the expertise internally to interrogate it, to review it,
6 to analyze it?

7 A. The diving aspects of the job, correct.

8 Q. Good. But this job has a diving—

9 A. Yes.

10 Q. —component?

11 A. Yes.

12 Q. Yes? So, okay. Thank you for that, Mr. Archbald.

13 **Examination By Mr. Chairman:**

14 Q. Can I ask you in that regard please, um, there's no national
15 standard applied in Trinidad and Tobago for diving in this—
16 commercial diving of this kind, is there?

17 A. No, not that I'm aware of.

18 Q. OSHA haven't introduced any, um, regulation in relation to
19 diving—

20 A. Not as yet.

21 Q. —commercially in this country, have they?

22 A. No, no.

23 Q. There was nothing of course to stop Paria having their own
24 diving regulations?

25 A. No, no, there was nothing to have stopped.

26 Q. Which could have been adopted from, say, Canada or the
27 United Kingdom or wherever else this sort of work, I mean I

1 picked those because they both have—

2 A. That is correct.

3 Q. —oil and gas producing operations or from or from other parts
4 of the world. Could have been relatively easy, couldn't it, for
5 Paria to themselves have said, "You know what, there may not
6 be any regulation or law here but in order to ensure the safety of
7 those who are carrying out this hazardous work, we will impose
8 our own system."

9 A. Definitely.

10 Q. You could have done that?

11 A. That's correct.

12 Q. And you still haven't done that?

13 A. We haven't adopted a specific standard. What we have done is
14 introduced third-party verification—

15 Q. Right.

16 A. —who use standards of international standards to be able to
17 measure the contracts.

18 Q. Okay. Thank you.

19 **Continued Cross-Examination By Ms. Alfonso:**

20 Q. Thank you, Mr. Archbald. Mr. Archbald, I want to carry you to
21 paragraph 50 of your witness statement. That is on page 1322.
22 You have it before you?

23 A. I will. Yes.

24 Q. All right.

25 A. Yes.

26 Q. Now, my learned Senior, Mr. Maharaj, would have carried you
27 through certain timelines which I won't do, and also detailed

1 certain companies who were present at one point in time or the
2 other. Could you identify, so you—are you able to say that
3 Hull Services was asked to dive or OTSL was asked to dive and
4 they refused?

5 A. Yes. Well, well, as far as I know we asked them to, to, to be
6 able to do a rescue and they considered it, they assessed and
7 they advised subsequently that the risk was too high for them to
8 be able to initiate a rescue.

9 **Examination By Mr. Chairman:**

10 Q. When?

11 A. Sorry?

12 Q. When, when did you ask them?

13 A. From the time that we called them we explained the situation to
14 them and I think you might have read the timeline—the times
15 before, and when they came on site they did the assessment and
16 I'm not sure exactly at what time they would have arrived. I
17 know Mitchell and OTSL came at around 8.00, between 8.00
18 and 8.30.

19 Q. OTSL arrived 10 past 8.00.

20 A. Yes.

21 Q. Did you ask them then?

22 A. I, I'm not sure if we asked them before or at that point in time
23 but we would have asked them at some point in time that we
24 want to be able to rescue.

25 Q. No, no, no. That's a different question from the one Ms.
26 Alfonso was asking you. She was asking you, in relation to
27 these companies, whether or not there were divers who were

1 prepared to go into the pipe, were they, were they prepared to
2 carry out such a rescue?

3 A. Within the dive crew?

4 Q. Yes. No, the crew that they were bringing, whoever they were?

5 A. Oh, oh, oh if there were any divers—

6 Q. Yes. Were they prepared—did you ask them if they were
7 prepared to carry out a rescue? You said that, um, they refused
8 in your statement that you made. “I was informed that Hull
9 Services and two other diving establishments with which Paria
10 made contact for the purposes of assisting [*Inaudible*] advised
11 they would not be able to dive into the pipeline. I’m asking you
12 when, when was it that they were asked to provide that, to dive
13 into the pipeline?

14 A. Commissioner, I don’t know the exact time. That would be in
15 the statements of the persons who would have asked them.
16 But—

17 Q. Do you, do you accept—let me ask you it this way—the closer
18 to the time when there was a greater likelihood of the men
19 being alive in the pipe, might encourage people to carry out a
20 rescue? The later the time that men were in that pipe might
21 discourage people to carry out a rescue, because, when you
22 know they might be alive, it might be worth taking the risk.
23 When you know that there is a real likelihood that they’re
24 already dead, it is less likely you take that risk. Do you accept
25 that as a proposition?

26 A. I accept that.

27 Q. Right. So if the later that these people were asked to dive into

1 the pipeline, the less likely they were to entertain that risk?

2 A. That is—

3 Q. Do you accept that?

4 A. I accept that, but I don't think that at least for me—

5 Q. Umm.

6 A. —that—I really can't speak for the dive teams but I did not—

7 Q. No, no, I'm not asking you.

8 A. I did not think that within the first 24 hours was unreasonable.

9 Q. Within the first 24 hours? You really thought that there was a
10 prospect that these men would still be alive in a pipe filled,
11 apparently filled with fluid, at least for the most part with fluid?

12 A. We were continuing with rescue efforts until Sat—all until
13 Saturday evening we were still continuing with rescue efforts.

14 Q. No, no, the fact that you were still con—or saying that you
15 were conducting them is one thing. I'm interested to know
16 whether or not, and you seem to accept my propositions about
17 the risk involved, it followed, it is the case, isn't it, that it was
18 always going to be a risk? There was no 100 per cent
19 guaranteed safe way in which to extract these men from the
20 pipe?

21 A. No, there was not.

22 Q. It never was going to be, was there?

23 A. Yes.

24 Q. So it was always going to have a risk?

25 A. Yes, it's always a risk-based approach.

26 Q. Of course. If you're the man going into the pipe, you would
27 want to know what is the likelihood of them still being alive

1 before I risk my own life?

2 A. Yes. And to say it a different way, I would only go into the
3 pipe, not me, but, the rescuer, if someone is alive.

4 Q. If there was a reasonable prospect—

5 A. Yes.

6 Q. —of them being alive. You might never be sure that they're
7 alive but if there was a reasonable prospect—

8 A. Yes.

9 Q. —then you might be more willing to go in, mightn't you.

10 A. Definitely, yeah.

11 Q. So in the immediate aftermath of Mr. Boodram coming out or
12 within the hour of him coming out you might be more inclined
13 to go in?

14 A. Definitely.

15 Q. As each hour passes, the likelihood of your being willing to do
16 that, it is reduced, isn't it, lessened?

17 A. I, I suppose some people would think like that.

18 Q. Well, wouldn't you?

19 A. Well with each hour, maybe, maybe with each day you might
20 think like that but not with each hour.

21 Q. With each—isn't there reliance on air? Did you know how
22 much air was in the pipe?

23 A. No.

24 Q. Do you know how much fluid was in the pipe?

25 A. We—I believed that it was almost filled except for a couple
26 air—few air pockets.

27 Q. How did you think these men were going to survive for days?

1 How did you think they were going to live?

2 A. Well not days, I said that maybe 24 hours would be
3 unreasonable.

4 Q. Well, all right, a day, a day?

5 A. Yeah.

6 Q. How much—how long do you think a diver has with one tank?

7 A. Not tanks, air pocket.

8 Q. No, with one tank, how do you—how long do you think a diver
9 has?

10 A. It depends on how much the tank able to hold, maybe—

11 Q. No, unless—

12 A. —an hour, two hours. I don't know.

13 Q. A normal dive tank, did you ask anybody how long has man
14 got, a diver, an experienced diver, how long has he got with one
15 tank at 70 feet?

16 A. One hour.

17 Q. Good. So that was an estimate at best, an hour, all right? Did
18 you have any idea how many tanks might have been in that
19 pipe?

20 A. Yes. We—initially there were supposed to have been five.

21 Q. Right.

22 A. Um—

23 Q. So five hours for one man?

24 A. For one man.

25 Q. If he had all the tanks?

26 A. Yes.

27 Q. Right. So you had five men in that pipe.

1 A. Yes.

2 Q. Right. And the first man didn't come out for two and a half
3 hours so he—you knew he'd used some air, did you, from
4 tanks?

5 A. Yes.

6 Q. Right. So, you had no idea how much air was in the pipe but
7 you've just told me that you believed the pipe to be largely full?

8 A. Yes.

9 Q. All right? Correct?

10 A. Correct.

11 Q. Right. And insofar as there was any space in the pipe at one
12 point in time, it sucked in, on any view, a very substantial
13 amount of water?

14 A. We know that.

15 Q. Yeah?

16 A. Yes.

17 Q. We know that as a fact, don't we?

18 A. Yes.

19 Q. So, start from this premise, would you, please? You know how
20 long that pipe is. You know that that that topography, the
21 layout of that pipe, how much area there is inside the pipe?

22 A. Yes.

23 Q. Right. You know how much it was supposed to be originally
24 completely flooded with oil, wasn't it?

25 A. It—yes.

26 Q. You know how much you pumped out of it, should—

27 A. Well, I don't know how much was pumped out.

1 Q. No, no apparently neither does anybody but, let's assume that
2 you should have known how much was pumped out of it.

3 A. Uh-huh.

4 Q. Because you have a measure of control over that because you
5 were the ones pumping it, right?

6 A. Um, I think it was, um, LMCS that was emptying the line, air
7 blowing.

8 Q. They were air blowing but you—let me just go, sorry, it was
9 going into your, your tanks and your boats.

10 A. Yes, yes, yes.

11 Q. Right. So you—

12 A. So it was going into—we were receiving the product.

13 Q. You were receiving the product?

14 A. Yes.

15 Q. And you were able to measure what that product was?

16 A. We, we had the capacity to be able to measure what went into
17 the tank.

18 Q. Well, we've looked at quite a lot of charts to do with the
19 capacity, all right, so you should have been able to work out
20 how much had been taken out of the pipeline?

21 A. I can't answer that.

22 Q. Why not?

23 A. I, I don't know if I, if I could have done it, maybe, maybe.

24 Q. No, I'm not asking you personally to do it. I don't know
25 whether you're a mathematician any more than you are a diver
26 but somebody could, couldn't they? Once you know what's in
27 the pipe, which is particularly—I mean, it is a piece of pipe,

1 which is 30 inches in diameter. It's a pretty easy calculation to
2 work out what the volume of the pipe is, yes?

3 A. Once you know where it's going, yes, you will—well, should
4 be able to—

5 Q. You know how long the pipe is, you know how much it goes
6 along the vertical and the horizontal, so you have a complete
7 length. It's supposed to be completely flooded with oil. You
8 pump a certain amount out. That leaves a capacity, a gap
9 within that pipe, doesn't it, once you've pumped that amount
10 out?

11 A. Yes.

12 Q. All right. Okay. So you should be able to work out how much
13 had been taken out and therefore how much is left in there.

14 A. It is very possible that you would be able to do it.

15 Q. Right. You know. What you don't know is how much water it
16 sucked in.

17 A. Correct.

18 Q. What you don't know is the extent to which there was any air
19 pockets before the Delta P occurred?

20 A. Correct.

21 Q. Right. But you are in a position to be able to say the maximum
22 that it was likely to be going to be X and the minimum was
23 going to be Y.

24 A. Of air?

25 Q. Yes.

26 A. I, I don't know that.

27 Q. You don't know that?

1 A. No, I, I really—

2 Q. Let's say I'm wrong, all right, that it's not possible to work that
3 out at all, on any view it was going to be relatively small air
4 pockets. Do you agree?

5 A. I cannot agree to that either.

6 Q. Why?

7 A. I, I, I don't know the, the, um, the shape of the line, I don't
8 know how much air went in.

9 Q. You don't know the shape of the line? You're Paria, you
10 should.

11 A. I don't know how much air went in.

12 Q. How much air went in?

13 A. That's right.

14 Q. Or should any air have gone in?

15 A. Well the, um—we could possibly have worked out how much
16 air was in the chamber and—but we don't know how much air
17 was in the, the, um, the line and I'm assuming that's what you
18 mean that that's the total quantity of air.

19 Q. Exactly. You're sucking in everything that was in that
20 chamber, all the tools, all the bits and pieces, the air and then
21 the water—

22 A. Right.

23 Q. —and the men, all get sucked into this pipe. The pipe was
24 supposed to be flooded. It clearly wasn't. But what I'm saying
25 is this. Is that even if you were unable to give an accurate
26 picture of the amount of air pockets that there might have been
27 you could have estimated it from what information you did

1 have. That would have provided you, can I suggest, with a
2 timeline, a potential for how long these men could survive in
3 the pipe.

4 A. Okay, but that was not done.

5 Q. No, I appreciate it wasn't done. My question is why wasn't it
6 done?

7 A. Okay, I cannot answer that.

8 Q. Right, well, you might want to think about that for the future
9 but it does seem to me that you're talking about a 24-hour
10 window for these men to be alive is, is just a guess, a wild
11 guess.

12 A. Okay.

13 Q. Isn't it?

14 A. Well, for me, the, um, the incident command was on rescue
15 mode.

16 Q. And I, you know, I'm not interested in that. I'm asking you this
17 question. The idea that these men could survive in that pipe,
18 even after Mr. Boodram came out and there were four more left
19 in there, the idea that they might survive for 24 hours was
20 unrealistic, wasn't it?

21 A. It might have been—it might be unrealistic to other people but I
22 did not make that determination in my mind.

23 Q. Why not?

24 A. Because I continued to believe for them to be alive.

25 Q. No, you continued to hope.

26 A. Thank you.

27 Q. Didn't you?

1 A. I continued—if you want me to say hope I will say hope.

2 Q. Well it is a hope because it was a hope against the facts, wasn't
3 it?

4 A. Yeah.

5 Q. The facts were that these men were sucked into a pipe that was
6 filled with oil and then water, right? And the idea that you had
7 no timeline to work towards, other than 24 hours completely
8 ignores the facts as they were known to you.

9 A. The incident command system is command and control.

10 Q. Yeah I know.

11 A. This is the objective and this what I believed and—

12 Q. I know.

13 A. —continued to work.

14 Q. But, as each hour passes, and I don't, I simply don't accept your
15 days scenario, as each hour passes, the likelihood of these men
16 being alive lessened. Do we agree?

17 A. That is for sure.

18 Q. Right. And there had to be some sort of out—maximum period
19 that could be realistically considered?

20 A. That was not calculated.

21 Q. No, I appreciate it wasn't. Nobody seemingly made that
22 calculation and that is what, can I suggest, is what failed in the
23 IMT, because you were not able to measure the decisions being
24 made against a timeline as to the likelihood of them still being
25 alive. So it doesn't become as any surprise to me that there
26 were divers who were not prepared to go in the pipe after five,
27 six, seven hours of, of them—of Mr. Boodram coming out

1 because the likelihood, from their point of view as the experts,
2 was they are likely to be dead and I'm not risking my life to
3 save a dead body.

4 A. Well if that is what they said, well then I wouldn't argue with
5 that.

6 Q. No. But you had a window, you had a window of opportunity
7 where Mr. Boodram came out of that pipe and you didn't take
8 it, did you?

9 A. We did not send anybody into the pipe without a safe plan.

10 Q. All right. Sorry, I've—

11 A. That's all right.

12 Q. It's been a long time and I, I, I keep interfering and I shouldn't

13 **Ms. Alfonso:** Thank you, Mr. Chairman.

14 **Continued Cross-Examination By Ms. Alfonso:**

15 Q. So I, I—my position is, carrying you back to paragraph 50—

16 A. Yeah, I, I kinda forgot what we were talking about.

17 Q. Oh yeah sure, sure, sure and I will take you back to where we
18 were.

19 A. Yes.

20 Q. Paragraph 50.

21 A. Yes.

22 Q. Right? So my reading of that first bit of that paragraph, Mr.
23 Archbold, sorry, Archbald, right, is that OTSL and Hull
24 Support and two other dive establishments, that's four
25 altogether, refused to dive. That's my understanding of this.

26 A. Yeah.

27 Q. Am I correct?

1 A. Did I use the word refused.

2 Q. Um, I was informed—

3 A. It sounds so bad.

4 Q. Advised that they would not be—

5 A. They advised that, yeah—

6 Q. —would not be—

7 A. —they—no I didn't use the word refused. They advised that
8 it—

9 Q. Yes, absolutely, you did not use the word refused.

10 A. Okay.

11 Q. That's my terminology but it amounts to about the same, right?

12 A. They, they, they considered the risk that they would be putting
13 their men to and they were not able to do it.

14 Q. They were not able to dive into the pipeline to attempt a rescue
15 of the missing divers. I do not see anything else beyond that.

16 A. Okay.

17 Q. So I'm just taking you through the individual, um, four persons
18 you—or four entities you have identified.

19 A. Yes.

20 Q. Let's start the coast guard. You deal with the coast guard in
21 paragraph 45 of your witness statement—

22 A. Okay.

23 Q. —but—

24 **Mr. Chairman:** I mean, I really do think we've done the coast
25 guard. I mean, I—

26 **Ms. Alfonso:** No, I'm just breezing through the four entities.

27 **Continued Cross-Examination By Ms. Alfonso:**

1 Q. So coast guard said, "I'm not trained. I don't have the
2 equipment.

3 A. Yes.

4 Q. Agreed?

5 A. Yes.

6 Q. Um, Mitchell Profes—I'm dealing with the people called by
7 Paria, right?

8 A. Yes, yeah.

9 Q. Okay, or heritage, right? So Mitchell Professionals say, "My
10 divers are big fellas. Can't fit in a 30-inch pipe"?

11 A. And that they're too—it's too risky.

12 Q. No, but they say, "We can't fit."

13 A. Okay.

14 Q. We can't send a diver because our guys are too big. Yes?

15 A. I suppose he was taking into consideration the equipment as
16 well.

17 Q. Okay. Well, I'm just saying what I've read.

18 A. Yes.

19 Q. "My guys are too big."

20 A. Right.

21 Q. That's all it says, not, "my guys and equipment", right? Um, I
22 see no evidence that OTSL, which is where we were a little
23 while ago, was asked to do any diving.

24 A. Okay.

25 Q. You agree with that?

26 A. That you don't see any evidence or that there is no evidence?

27 Q. Okay well I, I—in my reading—from what you have said so far

1 this afternoon and, and, and going through the witness
2 statements submitted by OTSL, I do not see any request was
3 made—

4 A. All right.

5 Q. —of them—

6 A. So I would have to check.

7 Q. —by Paria.

8 A. I would have to—

9 Q. Okay.

10 A. —go back to the incident commander and the logistics section
11 chief to verify that—

12 Q. Okay.

13 A. —about the request, but, as far as I know it was requested of
14 them to dive.

15 Q. Okay. If I—if we carried you the witness statements, they're
16 very brief, of both Mr. Donawa and Mr. Bertrand?

17 A. Well I was actually referring to Collin and Michael.

18 Q. Okay. So we could also take it that if OTSL doesn't have that
19 they were asked to do any diving plan, rescue operation as the
20 case may be, that there may be some merit in that, yes?

21 A. Sorry, say that again?

22 Q. If, if we look at the witness statement submitted by OTSL—

23 A. Yes.

24 Q. —and there's no reference to Paria asking them to conduct a
25 rescue dive, rescue plan, rescue operation, any terminology—

26 A. Uh-huh.

27 Q. —we could agree that, at least from their evidence, that no

1 request was made of them?

2 A. So what we call them for? [*Laughter*] Sorry, um—

3 **Mr. Chairman:** All right, I'm going to bring this to an end.
4 Mr. Maharaj, I think very carefully, took a number of these
5 issues with the witness and he was not prepared to agree to the
6 detail as provided to Mr. Maharaj without looking at each
7 individual document himself, right? That's his entitlement. We
8 will be making the determination, ultimately, of what the
9 evidence shows.

10 I'm not sure that there is any value in your taking him
11 throughout again because we're simply going to get back to
12 where we were, which is, unless you show him each and every
13 single document he's not going to agree. It doesn't matter, it
14 seems to me, for these purposes. If you have a separate
15 question in relation to what the outcome of that all is then by all
16 means ask it, but I don't think there's any value in taking him
17 through it once again.

18 **Ms. Alfonso:** Chairman, all I was trying to elicit from him is
19 that these people that were called, and he said they brought out
20 all the resources, they were not asked to perform any task.

21 **Mr. Chairman:** And that point has been made. That's what
22 I'm saying. That point has been made, I think, quite
23 comprehensively by Mr. Maharaj. The witness has said what
24 he has said. You're not going to be able to persuade him to say
25 something different.

26 **Ms. Alfonso:** Thank you, Mr. Chairman. Then I have only one
27 more question for Mr. Archbald.

1 **Mr. Chairman:** All right.

2 **Continued Cross-Examination By Ms. Alfonso:**

3 Q. Mr. Archbald, you would have worked in Petrotrin or Trinmar,
4 one of those entities, prior to—

5 A. Yes.

6 Q. —the employment in Paria?

7 A. Yeah, I worked at Petrotrin.

8 Q. During the, I think four and a half years you said, prior to
9 joining Paria?

10 A. I was in the refinery for four and a half years—

11 Q. Okay.

12 A. —prior to Paria, yes.

13 Q. During your time in Petrotrin did any similar job as this one
14 take place to your knowledge?

15 A. To my knowledge, while I was in the refinery, I don't
16 remember.

17 Q. Okay. Well, thank you very much for that, Mr. Archbald, thank
18 you.

19 A. You're welcome, Ms. Alfonso.

20 **Mr. Chairman:** Mr. Trebouhansingh. Have I pronounced that
21 correctly, or close enough anyway?

22 **Mr. Trebouhansingh:** Yes, 100 per cent accurate, yes.

23 **Mr. Chairman:** Oh, marvellous. That's a first, I have to say,
24 for me, but anyway please proceed?

25 **Mr. Trebouhansingh:** I do not have any questions for this
26 witness.

27 **Mr. Chairman:** That makes it even better. Where is Mr.

1 Ramadhar?

2 **Mr. Peterson SC:** No, no, Sir, no.

3 **Mr. Chairman:** Um, all right.

4 **Ms. Mohammed:** Good afternoon, Commissioner.

5 **Mr. Chairman:** Good afternoon.

6 **Ms. Mohammed:** Yes I am Sharon Jaggernauth Mohammed.

7 I act with Mr. Ramadhar—

8 **Mr. Chairman:** Ah.

9 **Ms. Mohammed:**—for the families of Faizal Kurban and
10 Yusuf Henry's daughter, right? I just have one or two
11 questions, very brief, in the interest of time—

12 **Mr. Chairman:** Very well.

13 **Ms. Mohammed:**—for this witness. Right.

14 **Cross-Examination By Ms. Mohammed:**

15 Q. Good afternoon, good evening Mr. Archbald.

16 A. Hello. Hello.

17 **Mr. Chairman:** Remind me of your name again, please?

18 **Ms. Mohammed:** Sharon Jaggernauth Mohammed.

19 **Mr. Chairman:** Sharon Ramoutar Mohammed?

20 **Ms. Mohammed:** Jaggernauth Mohammed.

21 **Mr. Chairman:** Right. Okay, thank you.

22 **Ms. Mohammed:** You're welcome.

23 **Continued Cross-Examination By Ms. Mohammed:**

24 Q. Yes, um, Mr. Archbald, now, I heard you mentioned and you
25 gave evidence that you called several companies, Mitchell,
26 Eastern, OTSL, Hull and so on, right? Now, can you tell me if
27 you all considered calling any other companies such as, let me

1 suggest some, Well Services, Shell, I don't know if you all, um,
2 called them in that small window of opportunity you all had?

3 A. I dent know.

4 Q. You don't know?

5 A. I don't know if we called them, no.

6 Q. And you are the planning section chief, but you don't know
7 who was called and who was not called?

8 A. I don't know if that implies that the planning section chief
9 should have done doing the calling, but, no, I don't know.

10 Q. Right.

11 A. Normally it's the logistics section chief but—

12 Q. Thank you.

13 A. —I was not advised if, um, if any other companies were called.

14 Q. All right, great. Now, I know you all called NGC for the
15 recovery not the rescue. Now the reason I asked this is because
16 these companies they have big pipelines, like the one in Paria.
17 Now these companies, um, Shell I know Shell, well, NGC, they
18 would have vast amount of resources that would—you know,
19 equipment that could go into pipes such as the ROV. You
20 know? Did anyone call any of these companies for
21 assistance—

22 A. I would have to find out—

23 Q. —in that window of opportunity, sorry?

24 A. I would have to find out from the logistics section chief if any
25 of those companies were called.

26 Q. Right. Okay. So from, from that point, looking at Michael,
27 another issue—Michael went into this pipe, right? You said he

1 only went into like 10 feet into the horizontal?

2 A. Yeah that's what—

3 Q. Right?

4 A. —he reported, yes.

5 Q. Right. Now with that information, right, I mean you all did not
6 get the information in time but even when you did get the
7 information, did you think that if someone could go 10 feet,
8 why not 200 feet? Because he came back out. Let me explain,
9 he came back out, um, no set a oil, no set a, you know?

10 A. Yeah.

11 Q. You, you—the conditions were such that he could dive into the
12 pipe. So if you could dive into 10 feet what happened to the
13 next 200 feet?

14 A. I mean, I could, I could attempt to describe what—you, you—
15 the—you're entering vertically—

16 Q. Uh-huh.

17 A. —foot downward.

18 Q. Uh-huh.

19 A. It might take a 5 minutes, and then you—or 10 minutes and
20 then you start traversing. but would have to drag yourself
21 because you're moving forward with your feet—

22 Q. Uh-huh.

23 A. —in a 30-inch line. You're carrying with you rescue
24 equipment.

25 Q. Uh-huh.

26 A. And, um, you really cannot swim. You would have to be
27 dragging yourself. I don't know if I should get onto the ground

1 and imitate if necessary—

2 Q. Well—

3 A. —but—

4 **Mr. Chairman:** Please don't.

5 **Continued Cross-Examination By Ms. Mohammed:**

6 Q. Okay, accepted.

7 A. But, but, but, it's a 30-inch line and you cannot swim. You
8 have to—

9 **Mr. Chairman:** Where's Mr. Ramadhar when we need him?

10 [*Laughter*]

11 **Continued Cross-Examination By Ms. Mohammed:**

12 A. And, um, and, and, then, and then, and then at a certain point in
13 time you have reached I think your 75-minute limit and then
14 you have to come back, well according to the US navy tables,
15 again I'm not an expert, and you have to come back out, else
16 you would have to go through decompression, and, um, and
17 then you have to switch because divers need to take two or
18 three hours' break, I've read four.

19 Q. All right, all right, okay thanks. Thanks. I, I understand what
20 you're saying.

21 A. All right.

22 Q. Right? Um, one more thing, now, in terms of training, the
23 Commissioner did touch on this but do you all do international
24 training?

25 A. If we receive international training?

26 Q. Yes the—well you're responsible for training, so—

27 A. Yes, yeah. So, so, so we have never hired an international

1 company to come down and do training. But there are local
2 companies that offer international courses, right? And, and,
3 um, that is one of the things that we have access to.

4 Q. Do you think—from that question now, do you think if you all
5 had more training the IC team would have been able to handle
6 this situation better?

7 A. I, I, I don't know. I can't say that for sure. I, I, I don't know.

8 **Examination By Mr. Chairman:**

9 Q. Well when was the last time they drilled?

10 A. We do drills every year.

11 Q. No, no. When was the last time that this IMT did a drill?

12 A. Can I send you the records?

13 Q. I'd rather you tell me.

14 A. It's in a book in an outside room.

15 Q. You have it outside?

16 A. Yes.

17 Q. Well you can perhaps get it in a moment, but, um, was it within
18 the year of this event happening?

19 A. Yes. We, every, not every year, maybe twice over the last three
20 or four years we did, um, hurricane drills and we would have
21 done a—

22 Q. Did comp involve an IMT?

23 A. Yeah, we used the IMT for it, and then we used the, um—we
24 had a companywide drill that involved a berth on the, um—fire
25 on the berth and that was in 2019. We'd used the ICS system
26 for that. Um, now it takes an effort to really use the ICS system
27 because it's almost natural to get into emergency response

1 without following the system, but we have been using it so
2 often that we even attempted to use it on a, on a—ICS could be
3 used for anything, for any event, including an incident, and we
4 used it for the repair of 66 Sealine recently and we set up the
5 incident commander and the logistics section chief, so we used
6 it for a repair purpose.

7 Q. Yes.

8 A. So we have been using it.

9 Q. But the answer to my question is that there have been drills and
10 they took place in the year before?

11 A. Yes.

12 Q. Approximately?

13 A. Yes, yes, yes.

14 Q. All right, thank you.

15 **Mr. Chairman:** Yes, sorry to—

16 **Mr. Archbald:** Within 2022 that is, this year.

17 **Continued Cross-Examination By Ms. Mohammed:**

18 Q. Yes, Mr. Archibald, now, I've been hearing more problems
19 than solutions, and that's what we've been hearing from Paria,
20 problems, risk, but no real solution. What did you do or what
21 did you recommend to the team as a, um, conditions or
22 whatever could mitigate the, the risk factor of diving into the
23 pipeline or any part of the rescue?

24 **Mr. Chairman:** Well he set that—he sets that out in paragraph
25 37 and he's been asked about it.

26 **Ms. Mohammed:** Or.

27 **Mr. Chairman:** He has made it clear what he regarded,

1 whether others did or not is another matter, but he set out what
2 he regarded as being the minimum required to make it safe and
3 I've asked him about that, so I'm—

4 **Ms. Mohammed:** Okay.

5 **Mr. Chairman:**—not going to ask for his response again.

6 **Ms. Mohammed:** Guided Chairman. Right?

7 **Mr. Chairman:** Anything else?

8 **Ms. Mohammed:** Thank you and nothing else thank you.

9 **Mr. Chairman:** All right, marvellous. Thank you very much.

10 Mr. Pegasus?

11 **Mr. Pegasus:** Yes thank you very much. I do have some
12 question for Mr. Archbald.

13 **Cross-Examination By Mr. Pegasus:**

14 Q. Good afternoon, Sir.

15 A. Good afternoon, Sir.

16 Q. My name is Chase Pegasus and I represent the interest of Kenson.
17 Now, is it correct to say that you developed the permit to work
18 procedure?

19 A. My—no, no it's not correct, um, to say that. Um, I was part of
20 it.

21 Q. Okay. You had some involvement in the development of the
22 permit to work procedure?

23 A. Yes. Well, I—all—I could call the names.

24 Q. The names are not necessary, right?

25 A. Yeah. Good.

26 Q. So I have some questions on this procedure, and before I
27 proceed I want you to understand that I'm not faulting it in any

1 way? Right?

2 A. Good.

3 Q. Now this permit to work procedure, it pre-dated the contract
4 between LMCS and Paria?

5 A. Yes.

6 Q. Right. And before I proceed I would just like to, um, make it
7 clear from upfront, you were familiar with the contract between
8 LMCS and Paria, yes?

9 A. Yes.

10 Q. Good. And you were familiar, of course, with the scope of
11 works?

12 A. Yes.

13 Q. And you were familiar with the obligations of the parties under
14 that contract?

15 A. Yes.

16 Q. Right. The permit to work procedure, it was a generic permit to
17 work procedure, it was a general procedure, yes?

18 A. Well the permit to work procedure outlines how you should
19 proceed.

20 Q. Okay. It was not specific to the job that was being done on
21 berth 6, so that procedure, you could have used it for, let's say,
22 I don't want to say any other job but you could use that same
23 procedure were another set of work?

24 A. I think I understand—I would try to answer in this way. Um,
25 yes. The permit to work, yes, you can use it for other works.
26 The permit to work procedure provides the steps, the objectives,
27 the scope as well as the mechanism by which jobs can be done

1 which is the work permit document and the certificate.

2 Q. Okay. Thank you. Now, would it be correct to say that this
3 permit to work procedure and, um, maybe—well, I'm not sure
4 if I would make you refer to it, right. It would be correct to say
5 that the permit to work procedure would normally be used by
6 Paria regardless of the particular works that are being done?
7 That's a fair statement to make?

8 A. Well it outlines what type of works it is to be used for.

9 Q. Yes.

10 A. Contractor works, maintenance works and so on.

11 Q. Okay. The one that we are concerned with, it was not
12 developed specifically, and I and sorry if this was asked before
13 but I'm trying to—

14 **Mr. Chairman:** I think you asked it a few moments ago,
15 actually.

16 **Mr. Pegus:** Well, the question, I didn't finish the question.

17 **Mr. Chairman:** You can change it now.

18 **Continued Cross-Examination By Mr. Pegus:**

19 Q. Right. Now, this document that we call the permit to work
20 procedure, it basically lists the obligations of the different
21 participants that would be involved in the job, so they will have
22 obligations for the applicant, competent person, site authority,
23 et cetera?

24 A. Yes, Sir.

25 Q. Right. And these obligations were intended to be a general
26 guideline to be used in the execution of the works, yes?

27 A. I would rather say they're rules and responsibilities that must

1 be followed.

2 Q. Rules and responsibilities that must be followed.

3 **Mr. Chairman:** They're not just guidelines, are they?

4 **Mr. Archbald:** No, they're not just guidelines.

5 **Mr. Chairman:** Okay.

6 **Continued Cross-Examination By Mr. Pegus:**

7 Q. Right. Now, earlier you indicated that you are familiar with the
8 contract between LMCS and Paria, yes?

9 A. Yes.

10 Q. Mr. Chairman, can the contract be shown to the witness? I
11 have it at—well I'm on page 557 of the witness statement
12 bundle but it could also be found—

13 A. Got it.

14 Q. And the first heading we have there is the contractor
15 responsibility, yes?

16 A. That would be four point—

17 Q. Five point one, well 5.0 and we're going to focus on 5.1.

18 **Mr. Chairman:** I think you're in the wrong bundle. You're in
19 the wrong bundle.

20 **Mr. Archbald:** Oh, sorry.

21 **Mr. Chairman:** Right, remove that bundle from his desk and
22 give him some space. Exactly.

23 *[Document handed to Mr. Archbald]*

24 **Continued Cross-Examination By Mr. Pegus:**

25 A. Yes.

26 Q. Right. Now, take a look at 5.1.

27 A. Yes.

1 Q. Right. Now what we are concerned with here are the
2 contractor's responsibility, yes?

3 A. Yes.

4 Q. Right. These are LMCS' responsibility, yes?

5 A. Yes.

6 Q. Right. And 5.1 states that they were to supply adequate,
7 competent, certified/licensed labour for the job functions, full-
8 time supervision, et cetera, for the timely completion of the
9 scoped work.

10 A. Yes, Sir.

11 Q. Yes?

12 A. Yes.

13 Q. So, notwithstanding what the permit to work procedure says,
14 and we'll get back to that shortly—

15 A. Uh-huh.

16 Q. —your understanding is that LMCS had an obligation, under
17 the contract, to provide full-time supervision for the timely
18 completion of the scoped work?

19 A. Yes.

20 Q. Right. And part of the scoped work would obviously include
21 subsea works, yes?

22 A. Yes.

23 Q. Right. Now, Paria did not have a diver, a Paria employee, as a
24 diver on the job site, agreed?

25 A. Correct.

26 Q. Right, either through themselves or through the company,
27 Kenson. Agree with that?

1 A. Correct.

2 Q. Right. Now, as far as you are aware, the parties involved in the
3 execution the job knew that Paria's representatives on the site,
4 these are the Kenson workers, they knew that the Kenson
5 workers were not divers?

6 A. Yes. Well, I don't know if they knew that. I, I really ought not
7 to say that they were not.

8 Q. But you knew that?

9 A. Yes.

10 Q. Right. Now, I want to, before I embark on this, um, particular
11 area, read clause 5.12 to yourself.

12 A. [*Perusing document*] Yes.

13 Q. Right. Now, one of the limitations of the permit to work
14 procedure which my friend, Mr. Maharaj, learned Senior Mr.
15 Maharaj Senior Counsel referred to as rules, one of the
16 limitations of the permit to work procedure would be that the
17 applicant could not supervise subsea works.

18 A. Okay.

19 Q. You're, you're, you're willing to agree with that?

20 A. Could not?

21 Q. Okay. So, maybe I should do it a different way. Let's go to the
22 permit to work procedure.

23 A. Yeah, the applicant in this case was not able to supervise the
24 subsea works. Is that what you're asking?

25 Q. Yes.

26 A. Okay.

27 Q. You're willing to agree with that?

1 A. Er, yes.

2 Q. Now, clause 5.12—

3 A. Well, no, hold on. With respect to the removal of the plug, but
4 with the presence of the camera, I, I, I not sure, to me that's
5 what we had said, that it was poten—there was a possibility to
6 observe the installation of the flange and so on.

7 Q. Okay. Let's put aside that point for a minute.

8 A. Okay.

9 Q. And let's focus on what 5.12 says.

10 A. Uh-huh.

11 Q. Now we're still on the contractor's obligations, these are
12 LMCS' obligations, right?

13 A. Uh-huh, yes.

14 Q. They were obligated under the contract to maintain permits to
15 execute the entire job?

16 A. Yes.

17 Q. Full stop. The contractor shall become familiar with and
18 conform to Paria's permit to work procedure at his own
19 expense, any limitations, provisions or requirements in or
20 pertaining to the permits.

21 A. Okay, yes.

22 Q. The contract contemplated that there would be limitations in the
23 permit to work procedure. You're willing to accept that?

24 A. I, um—the contractor shall become familiar with and conform
25 to Paria's—at his own expense any limitations, provisions or
26 requirements in—any limitations, provisions or requirements in
27 or pertaining to the permits? Okay. Okay.

1 **Mr. Chairman:** What's the proposition you're putting?

2 **Continued Cross-Examination By Mr. Pegus:**

3 Q. The proposition that I'm putting is that the contract LMCS had
4 with Paria contemplated that there may have been possible
5 limitations to the permit to work procedure. That's the
6 proposition I'm putting.

7 A. I would have to go to the person who wrote this to find the
8 intent. I really—I don't want to make a pronouncement on this.

9 Q. Okay, so, I'm not asking you to make a pronouncement but you
10 are seeing the use of the word any limitations?

11 A. Yes.

12 Q. Right, good. So you're willing to accept that pursuant to
13 5.12—

14 A. Uh-huh.

15 Q. —right, the contractor, LMCS they were obligated to become
16 familiar with and conform to Paria's permit to work procedure,
17 yes?

18 A. Yes.

19 Q. At their own expense?

20 A. Yes.

21 Q. Any limitations?

22 A. Yes.

23 Q. Provisions or requirements in—

24 A. Yes.

25 Q. —or pertaining to the permits?

26 A. Right.

27 Q. Right. So quite apart from you not making a pronouncement,

1 you're seeing it in black and white?

2 A. Yes, black and white.

3 Q. Right. Now, in earlier in your evidence in answer to the
4 learned Chairman, you indicated repeatedly that you were not
5 sure. Are you paying attention to me?

6 A. Yes I am, sorry.

7 Q. I just making sure you're with me.

8 A. I was still mulling over the, um, limitations.

9 Q. Yes. So earlier in your evidence in answer to the learned
10 Chairman you indicated repeatedly, at least this is what I
11 gather, that you were not sure that the Paria's representative,
12 Mr. Marjadsingh, could look at the monitor and see whether
13 they were interfering with or attempting to remove the plug?

14 A. Yes.

15 Q. Right. Now, before we move forward, I would just like to draw
16 your attention to clause 5.1 of the permit to work procedure.

17 A. Yes.

18 Q. And I believe that is page 24 of the supplemental core bundle or
19 the core bundle, page 24 of the core bundle. Right, clause 5.1
20 please?

21 **Mr. Chairman:** I'm not sure you're in the right place, Mr.
22 Pegus.

23 **Mr. Pegus:** The permit to work procedure is at page 24 of the
24 core bundle. It's on the screen now.

25 **Mr. Chairman:** Ah yes.

26 **Mr. Pegus:** Right.

27 **Continued Cross-Examination By Mr. Pegus:**

1 Q. Right, now, what it says here is that the applicant must have the
2 necessary competence to execute the job or to supervise the
3 execution of the job.

4 A. Yes.

5 Q. Yes?

6 A. Yes.

7 Q. Good. Now, based on what we heard from you today, there
8 would be a limitation in terms of Mr. Marjadsingh supervising
9 or monitoring any interference with that mechanical barrier.

10 A. Yes.

11 Q. Good. Now, under 5.12, the same provision that you just read a
12 little while ago—

13 A. Uh-huh.

14 Q. —are you willing to accept that LMCS had an obligation to
15 become familiar with one such limitation, well with that
16 particular limitation?

17 A. I understand. So the question is, if LMCS knew that—sorry, I
18 just—

19 Q. Let me—

20 A. No, no, I know, I know, I know.

21 Q. That's not the question, so let me, let me try and, let me try and,
22 um, keep it simple. We have just identified a limitation under
23 the permit to work procedure. Yes?

24 A. We have identified that he would not be able to see the, um, the
25 plug directly.

26 Q. Right. And to the extent that the permit to work procedure
27 provides that he was supposed to supervise the execution of the

1 works, but he was unable to monitor or supervise simply
2 because it was under the water and from the monitor he wasn't
3 able to see?

4 A. Yes.

5 Q. Right? That's a limitation of the permit to work procedure.
6 Agree with that?

7 A. It's a limitation of the situation to allow him to be able to see.
8 If we could call that a limitation of the permit to work
9 procedure then I will go along.

10 Q. Right. Okay. Right. And I want to suggest to you, Sir, that
11 this is a limitation that would have been glaringly apparent to
12 the participants on that job. Agreed? Not only, not only, not
13 only Paria or Kenson, it would have been glaringly apparent to
14 anybody who look at that monitor.

15 A. Yeah it would—yeah, it, it—they would have known that, um,
16 that no one could see the plug.

17 Q. Good. And what I'm saying to you, what I'm suggesting
18 respectfully is that LMCS, the contractor under 5.12, they had
19 an obligation to become familiar with that particular limitation,
20 yes?

21 A. I understand what you're saying, yes.

22 Q. Right. So you're willing to accept the proposition, yes?

23 A. Yes.

24 Q. Good.

25 **Mr. Chairman:** Just a minute. Does not the limitation apply
26 to the permit to work?

27 **Mr. Pegus:** The permit to work, though, Mr. Chairman—

1 **Mr. Chairman:** The permit to work, what it says is the
2 contractor shall become familiar with and conform to Paria's
3 permit to work procedure, that is the procedure that gives them
4 the permit to work.

5 **Mr. Pegus:** Yes.

6 **Mr. Chairman:** Yes. And that permit to work grants them the
7 ability to do the job.

8 **Mr. Pegus:** Yes.

9 **Mr. Chairman:** Right? And that any limitations, provisions
10 or requirements relating to that permit to work, the procedure
11 for the permit to work—

12 **Mr. Pegus:** Relating on the permits.

13 **Mr. Chairman:**—has to be, has to be for something that the
14 contractor must be aware of?

15 **Mr. Pegus:** Yes.

16 **Mr. Chairman:** Right. And you're saying, are you, that the
17 limitation there is that he wouldn't be able to see or I should
18 have appreciated that he wouldn't be able to see the actual
19 plug?

20 **Mr. Pegus:** Yes.

21 **Mr. Chairman:** Is that your point?

22 **Mr. Pegus:** Yes, that's my point.

23 **Mr. Chairman:** Right. Okay.

24 **Mr. Pegus:** Yes.

25 **Mr. Chairman:** Do you accept that, um, that he wouldn't be
26 able to see the plug and that is a limitation?

27 **Mr. Archbald:** Yes.

1 **Mr. Chairman:** I think we all accept that.

2 **Mr. Pegus:** Am I allowed to proceed?

3 **Mr. Chairman:** You are. As long as it's not on the same
4 point.

5 **Mr. Pegus:** Right, thank you very much. Yes, good.

6 **Continued Cross-Examination By Mr. Pegus:**

7 Q. Now, the permit to work procedure, you were involved in the
8 development of the permit to work procedure?

9 A. Yes.

10 Q. This was always intended to be subordinate to the contract?

11 A. I—when we wrote the permit to work procedure, I did not
12 contemplate its subordination to a contract.

13 Q. But I'm asking you when you wrote it you didn't contemplate
14 the procedure being subordinate to the contract, right?

15 A. No.

16 Q. But it's not going to displace a contractual obligation which is
17 placed on a party?

18 A. I don't know if I have the competence to—it seems like a legal
19 question.

20 Q. Okay, All right.

21 **Mr. Chairman:** I'd agree with you. I think that is a legal
22 question and you can address me about that.

23 **Mr. Pegus:** Yes.

24 **Continued Cross-Examination By Mr. Pegus:**

25 Q. Now, I, I understand you don't want to, um—I understand you
26 don't want to give an answer because you think you don't have
27 the legal expertise, but we see in black and white an obligation

1 on LMCS to provide full-time supervision, yes?

2 A. Yes.

3 Q. Right. And what we're seeing in the permit to work procedure
4 is reference to the applicant playing a supervisory role?

5 A. Yes.

6 Q. Right. Are you willing to accept, from a commercial point of
7 view or on any point of view it would make absolutely no sense
8 were Paria to pay someone to provide full-time supervision and
9 then turnaround and pay another entity to supervise the first set,
10 you agree with that?

11 A. Well, I agree with that.

12 Q. Okay thank you.

13 A. Yes.

14 Q. Right. And you're also willing to agree that the supervisory
15 role, for want of a better term, which was placed on the
16 applicant under the permit to work procedure, is inconsistent
17 with LMCS providing—with LMCS' obligation, sorry, to
18 provide full-time supervision. You agree with that?

19 A. Yes it's not the same, if that's the question.

20 **Mr. Chairman:** Well it's not the question but I think it's—I'm
21 not sure what you're actually asking when you're saying one is
22 inconsistent with the other.

23 **Mr. Pegus:** Okay, let me try and clarify.

24 **Continued Cross-Examination By Mr. Pegus:**

25 Q. Under the contract between LMCS and Paria, there was a
26 contractual obligation to provide full-time supervision. We
27 established that.

1 A. Yes.

2 Q. Right. The obligation under the permit to work procedure—

3 A. Yes.

4 Q. —which places a duty on the applicant to supervise—

5 A. Yes.

6 Q. —is inconsistent with a full-time obligation on LMCS to
7 supervise?

8 **Mr. Chairman:** All right, why is that inconsistent?

9 **Mr. Pegus:** Well—

10 **Mr. Chairman:** You're putting it as a proposition, I don't
11 understand why you say one is inconsistent with the other.

12 **Mr. Pegus:** Right.

13 **Mr. Chairman:** An obligation on the part of LMCS to monitor
14 and supervise their own work, and then a supervisory role by
15 Paria, the contractor of their services, having a supervisory role,
16 why are those inconsistent?

17 **Mr. Pegus:** Well, the point I'm making respectfully, Mr.
18 Chairman, is that one party providing full-time supervision—
19 okay, an obligation on one party, sorry, to provide full-time
20 supervision for the duration of the works, that idea is
21 inconsistent with having another party providing periodic
22 supervision to the person who's responsible for full-time
23 supervision. It's a suggestion.

24 **Mr. Chairman:** Well, I don't—I frankly don't see that at all.
25 If I am LMCS and I am performing a job putting in bolts and
26 someone's watching me put those bolts in to make sure I put
27 them in straight, the fact that a company employs my company

1 to do that job and has periodic supervision over that seems to
2 me to be entirely consistent. If I was employing them at not
3 inconsiderable expense I'd probably want to actually make sure
4 they've been putting in the bolts correctly, notwithstanding
5 what LMCS might have been doing.

6 **Mr. Pegus:** Okay. What I will do, Mr. Chairman, is rest the
7 issue and then seek to address you on it, and not try to bring it
8 out in the form of an answer.

9 **Mr. Chairman:** No but, you put it that the two things were
10 inconsistent and I don't see that they are.

11 **Mr. Pegus:** Yes, and I'm guided.

12 **Continued Cross-Examination By Mr. Pegus:**

13 Q. Right, now, I just want to canvass the area of supervision, yes?
14 Right. Now, earlier in your evidence, I believe it was in answer
15 to the learned Chairman, you said that if Mr. Marjadsingh knew
16 hay were going to remove the barrier he would intervene and
17 stop it, yes?

18 A. Yes.

19 Q. Right. And what we established, both in your earlier testimony
20 and a few moments ago, is that he could not have done this by
21 simply looking at the monitor, yes?

22 A. Yes.

23 Q. Right.

24 A. I believe so.

25 Q. Now, what Mr. Chairman—

26 **Mr. Chairman:** Is that what was established? He established
27 that he couldn't see the plugs. Think I think—that much is

1 agreed. It doesn't mean he couldn't see what, for example, like,
2 um, Scott, whatever his name is, Kirt Scott said, he saw the
3 thing coming out of the pipe, the whole thing coming out the
4 pipe. The fact that he might not have seen it actually being
5 unbolted doesn't prevent them from arriving at a conclusion
6 that that's what was happening or that once it came out of the
7 pipe there it was. What I think everyone agrees is that it's not
8 possible to see into the pipe, I think that both Mr. Archbald and
9 certainly this Commission agree from what we've seen that that
10 is likely to be the case.

11 **Mr. Pegus:** Well, so my earlier question—well, I mean—

12 **Mr. Chairman:** What's your proposition?

13 **Mr. Pegus:** Okay, my proposition is that Mr. Marjadsingh
14 could not have seen the removal of this barrier. This is what we
15 established, unless I'm wrong.

16 **Mr. Chairman:** No, he couldn't have seen the actual barrier.

17 **Mr. Pegus:** He could not have seen the actual barrier—

18 **Mr. Chairman:** Correct.

19 **Mr. Pegus:** By simply looking at the monitor.

20 **Mr. Chairman:** Correct.

21 **Mr. Pegus:** Right. I am putting to this witness that he could
22 not have seen the act of removing the barrier by looking at the
23 monitor.

24 **Mr. Chairman:** All right.

25 **Mr. Archbald:** He could not have seen—

26 **Mr. Chairman:** The action.

27 **Mr. Archbald:**—them unbolting it. He could not have seen

1 them them—they would have to actually have been taking it out
2 and him standing there at the same moment for him to have
3 seen it, I believe.

4 **Continued Cross-Examination By Mr. Pegus:**

5 Q. Okay, good. Now, and this is something that I want to address
6 because, um, the Chairman pointed out to you that he arrived on
7 berth 6 at about 2.00 p.m., yes?

8 A. Yes, I remember.

9 Q. And the incident happened sometime after 2.00 p.m.?

10 A. Right.

11 Q. Good. As you understand it, his role was not to remain by that
12 monitor to look at the monitor non-stop when he was on berth
13 6. You're willing to agree with that?

14 A. No, certainly. That is definitely not his role.

15 Q. Of course. And I can't recall if it's in answer to Mr. Chairman
16 or to Mr. Maharaj—

17 **Mr. Chairman:** I think it was Mr. Maharaj.

18 **Mr. Pegus:** Well, right.

19 **Mr. Chairman:** I'm blaming him anyway.

20 **Mr. Pegus:** Right, good.

21 **Continued Cross-Examination By Mr. Pegus:**

22 Q. You indicated, right, and it may be in error, you indicated that
23 when he arrived on berth 6 he had nothing else to do but
24 provide this oversight or monitoring. You recall saying that?

25 A. I recall being asked if there was any other jobs for him to do
26 and I said I don't know, I don't think so.

27 Q. Okay. I want to suggest to you that another job that he had,

1 another function that he had, quite apart from providing this
2 oversight, he was responsible for, well, going to source
3 materials if needed. So if LMCS needed something from the
4 stock room, he would go and get that and bring it back. Are
5 you aware of that?

6 A. Yes. He—yes.

7 Q. Right. Good. And we're also willing to accept that this man
8 was not stationed on berth 6?

9 A. Yes.

10 Q. You're willing to accept that, right?

11 A. That's a fact.

12 Q. Good. Now, this obligation to supervise/monitor, that is placed
13 on the applicant under the permit to work procedure—

14 A. Periodically monitor.

15 Q. Well, periodically monitor, right? Thank you.

16 A. Yes.

17 Q. Right. It did not extend to work going on subsea?

18 A. As far as he could see it would have extended to it.

19 Q. Okay. As far as he could see. Are you willing to accept that
20 the whole system was set up in such a way that he was
21 supposed to be continually kept abreast by the LMCS
22 supervisor?

23 A. Yes, um, so, so there is a set work to be done and if there's any
24 deviation from that work, certainly, if there's any hazards that
25 arise, he definitely as a—the supervisor of LMCS has a
26 responsibility to inform him, and, um, if there were certain
27 reporting points he, the supervisor would have reported to the

1 applicant as well.

2 Q. Good. Right. Now—

3 **Examination By Mr. Chairman:**

4 Q. Can I take you up on the periodically supervise? Because the
5 applicant in your document is described as having a number of
6 tasks, one of which is said to be continually monitor the job to
7 ensure that it's performed in a safe manner and within the
8 conditions prescribed by the work permit. That doesn't sound
9 to me like periodically. Continually monitor. What do you
10 understand by continually monitoring? I asked about this
11 before.

12 A. Okay.

13 Q. You told me that you thought that every couple of hours would
14 do, but I, I am anxious to understand because you seem to have
15 adopted what Mr. Pegus is suggesting that, um, periodically
16 was even—it was enough?

17 A. The word continually is used, if we reference the ISO 45001
18 document safety management system, or ISO 14001
19 environmental management system.

20 Q. There is, there is absolutely no use to me at all I'm afraid
21 quoting various IS documents.

22 A. Yes.

23 Q. I'm reading your documents—

24 A. Right, so the—

25 Q. —which is what the contractor would be reading and it says
26 that one of the responsibilities of the applicant, Mr.
27 Marjadsingh, was to continually monitor the job to ensure that

1 it is performed in a safe manner and within the conditions
2 prescribed in the work permit. He may sign the renewal
3 section, et cetera, et cetera, but that's one of the requirements.
4 As I understand what you've said to me, was that you regarded
5 that as being every couple of hours. You've accepted from Mr.
6 Pegus that periodically, I'm not sure what periodically means in
7 this context but periodically. I take from continually monitor to
8 be something more than either periodically or every couple of
9 hours. What do you—you have to tell me because you're partly
10 the author of this, so, what do you understand by continually
11 monitor the job?

12 A. Continually means on and off periodically.

13 Q. Periodically?

14 A. Yes.

15 Q. And periodically to you is every couple of hours?

16 A. In—well in this particular instance because the dive supervisor
17 was over the screen, constantly, I would have said that every
18 couple of hours is sufficient.

19 Q. The dive supervisor's job is to supervise the diving part, isn't
20 it?

21 A. Yes.

22 Q. not the actual job itself once they were in the habitat?

23 A. Rudolph Gonzalez, the contractor official for this particular
24 permit—

25 Q. Right.

26 A. —had the responsibility for 100 per cent supervision. My
27 assumption is that the reason why he was not there supervising

1 it is because Andrew Farah was doing it as a delegate for him.
2 According to the contractor HSE requirements which is in the
3 contract—

4 Q. Uh-huh.

5 A. —the contractor supervisor the contractor official, according to
6 the permit to work, is supposed to be there 100 per cent of the
7 time.

8 Q. You said that before. I understand that. I understand they're
9 doing, they're, they're doing their—they were supposed to be
10 doing their job and I'm assuming they were, for these purposes.
11 I'm asking about your obligations which are to continually
12 monitor.

13 A. Yes.

14 Q. And your understanding of continually monitoring is
15 periodically, and that, in many instances is every couple of
16 hours? I mean he didn't do any periodical monitoring in the
17 morning because he was on the other berth?

18 A. Yes.

19 Q. I'm right about that, aren't I?

20 A. That is every couple of hours in this instance.

21 Q. Well, I absolutely follow that. I think they went out a little
22 earlier than that, but never mind. The fact is that there was no
23 monitoring at all in the morning and the first monitoring that
24 took place was at two o'clock when he says he arrived on the
25 berth. That's right, isn't it?

26 A. I am—I'm not sure if he was not on berth 6 at all if that is

27 Q. Well, very clearly he wasn't there. He was on berth 6, he was

1 on berth 6 from two o'clock.

2 A. We're referring to the morning?

3 Q. Yes, I am referring to the morning.

4 A. Yes.

5 Q. He wasn't there. He was on berth five.

6 A. Yeah. So if he wasn't there, he wasn't that.

7 Q. No, I appreciate that. I want to know from you, as head of
8 HSE, whether or not continually monitoring that is being
9 satisfied by being there at two o'clock.

10 A. The work that was being done in the morning was limited to
11 from about 9.30 till about maybe about 10.00, 10.00, 10.30.
12 They were waiting for the CARBER test to be completed berth
13 5 and then to come across to berth 6.

14 Q. That's your understanding of what they did?

15 A. And, and with—and that is where, yes—and that is where
16 Houston Marjadsingh was, if I'm not mistaken.

17 Q. Well, you thought that they'd been on the job for maybe less
18 than an hour?

19 A. Yeah they, they had—I think they started at around maybe 9.00,
20 9.30, and just a couple things, well, yeah, just about an hour
21 before, but I would have to go back and check the statement.

22 Q. Anyway, whatever the position is, there was no monitoring
23 until two o'clock, do you agree?

24 A. Correct, if Houston really did not go to berth 6.

25 Q. Right. There was no monitoring until two o'clock and if that is
26 correct, then—and you still regard that as being compliant with
27 your own regulation that there should be continual monitoring?

1 A. Yes.

2 **Mr. Chairman:** All right, thank you. Sorry, Mr. Pegus.

3 **Mr. Pegus:** Not a problem.

4 **Continued Cross-Examination By Mr. Pegus:**

5 Q. Now, Sir, as we're on the, on the issue of monitoring, the—his
6 obligation to monitor could only be limited to what he could
7 see, yes?

8 A. Yes.

9 Q. Right. Now, let's deal with, um—just a second please? Let's
10 go to Mr. Kirt Scott. Now earlier when you were giving
11 evidence, the transcript from Mr. Scott was shown to you.

12 A. Yes.

13 Q. And there was a specific portion which spoke to Mr. Scott
14 observing something being, well, I don't know if I'm being
15 loose here but something being removed, yes?

16 A. Uh-huh.

17 Q. Yes? Good. Now, let me suggest to you that Mr. Scott had a
18 specific role on the day in question, you're willing to accept
19 that, as operator?

20 A. I, I believe so, yes.

21 Q. Right. Now, part of his functions were to monitor the work
22 area for any signs of pollution, mainly oil pollution, yes?

23 A. Yes, yes.

24 Q. Rat. And to be on the lookout for any incoming vessels, yes?

25 A. Yes, I believe so.

26 Q. Right. And to ensure no work other than operation within the
27 defined area of berth 6 was being performed, yes?

1 A. I said that earlier.

2 Q. No, I'm putting my instructions to you.

3 A. Okay.

4 Q. You're willing—

5 A. I'm sure that Collin Piper might have said it, what is his exact
6 role and description.

7 Q. Right. Now you're willing to accept that he wasn't there to
8 monitor any work, that's number one?

9 A. He was not there to monitor the contractor.

10 Q. Good. And, it was no part of his business to stand by that
11 monitor which was on berth 6?

12 A. That is correct.

13 Q. And just to make it abundantly clear, he wasn't there to monitor
14 any subsea works?

15 A. That is correct.

16 Q. Good. Just a second, Mr. Chairman, let me just ensure that
17 [*Perusing documents*] Right.

18 **Mr. Pegus:** I have no further questions for this witness, Mr.
19 Chairman. Thank you very much, Sir.

20 **Mr. Chairman:** Thank you.

21 **Examination By Mr. Chairman:**

22 Q. Can I just ask you one more question—

23 A. Yes.

24 Q. —arising—again, to do with the responsibilities of the
25 applicant, because, in addition to continually monitoring the job
26 he has also the role, doesn't he, to stop the work if there are
27 changes in site conditions that increase the risk, or if new

1 hazards are identified, and to promptly notify the site authority
2 of these changes?

3 A. Yes, Sir.

4 Q. I think you agreed with me previously that he had the power to
5 stop the works?

6 A. Yes.

7 Q. And would have done had he known—

8 A. Yes.

9 Q. —that these plugs were being removed.

10 A. Yes.

11 Q. Or you would have expected him to?

12 A. Yes, Sir. He along with any employee, any contractor
13 employee, LMC S have the power to stop.

14 Q. Irrespective of how lowly that member of staff might be?

15 A. Yes.

16 Q. The fact is if he'd realized that there was something happening
17 that shouldn't have happened, he has the power to say stop?

18 A. Yes.

19 Q. And then call in somebody else?

20 A. Yes.

21 Q. Correct. And that would apply to Mr. Scott as well?

22 A. Yes.

23 **Mr. Chairman:** Thank you very much. All right, yes, Ms.
24 Maraj.

25 **Cross-Examination By Mrs. Persaud Maraj:**

26 Q. Good afternoon. My name is Kamini Persaud Maraj and I'm
27 attorney-at-law for LMCS.

1 A. Good afternoon.

2 Q. All right. So I'd just like to take you back to paragraph 5.12 of
3 page 571 of the core bundle to which you were referred by my
4 friend. This is in relation to the interpretation of limitation, any
5 limitation.

6 A. Yes.

7 Q. Right. So, you considered that the limitation proposition of my
8 friend to be a limitation of a situation. You accepted that to be
9 the meaning of limitation in this clause?

10 A. What did I accept it to be, sorry?

11 Q. A limitation of a situation, a factual situation?

12 A. I think Mr. Pegus was suggesting it's a limitation in the permit
13 to work procedure.

14 Q. A limitation of the permit to work procedure?

15 A. I think he was suggesting that, but, I am not comfortable with
16 making a pronouncement.

17 Q. Okay, that's fair. What I would like to ask you to consider is
18 whether or not this any limitation would actually mean a
19 condition in the permit to work system, the limitation that is
20 being referred to in this paragraph here meaning the condition
21 that would be set out in the—in any of the permits that is
22 issued?

23 A. Um, I'm not seeing that in the words.

24 **Mr. Chairman:** I think really both you and Mr. Pegus could
25 address me about that. I have certain views about it anyway
26 but—

27 **Mrs. Persaud Maraj:** Certainly.

1 **Continued Cross-Examination By Mrs. Persaud Maraj:**

2 Q. I would also like to take you to the PTW procedure that we
3 were now looking at, page 29. I know you already said that
4 continually is interpreted as periodic?

5 A. Defined as, yes.

6 Q. Right, and that's in relation to the applicant.

7 A. Yes.

8 *[Document handed to Mr. Archbald]*

9 Q. I would just like to draw your attention to 5.2—

10 A. Yes.

11 Q. —to the very last bullet point that appears there, and you would
12 see that it is specifically written, periodically check, and that's
13 in relation to what a competent person shall do.

14 A. Yes.

15 Q. Yes? It says periodically check the side and equipment to
16 ensure that the conditions for certification have not changed.

17 A. Yes.

18 Q. Right? Now my question is in relation to the interpretation that
19 you've given to continually and periodically. This is, this is a
20 document that you were part and parcel of drafting.

21 A. Uh-huh.

22 Q. Could you explain the difference between what you mean as
23 continually above in relation to the applicant as opposed to
24 periodically here?

25 A. There's no difference.

26 Q. There's absolutely no difference?

27 A. No, that's correct.

1 Q. But you'd appreciate you could have used periodically as
2 continually instead of having continually used in the description
3 of the roles and responsibilities of the applicant?

4 A. I appreciate. I agree.

5 Q. Okay.

6 A. Used words interchangeably, yes.

7 Q. It's used interchangeably. This morning you were explaining
8 there are two different kinds of risk situations.

9 A. Yes.

10 Q. And you would recall that you said that there is functional and
11 situation risk?

12 A. Yes.

13 Q. Yes. And in relation to the situational risk, that was risk
14 associated with the facilities according to your—

15 A. Yes.

16 Q. —um, explanation. Those risks would include risk associated
17 with, let's say, the pipe system, that is, is at Paria, assets?

18 A. Yes.

19 Q. Yes. All right. Would you be able to say to the Commission
20 whether or not—and these pipes, Sealine 36 hit has been out of
21 commission for some time?

22 A. I'm not sure how long it has been out of commission.

23 Q. All right. But we do know that there were repairs, clearly—

24 A. Yes, yes.

25 Q. —that had to have been done?

26 A. Yes.

27 Q. Yes, so they were not functional, yes?

1 A. Correct.

2 Q. Right. Was there any, to the best of your knowledge, any
3 condition report for both the internal and external system of
4 pipe on Sealine 36 that had been done for the entire Sealine that
5 had been done by Paria or even Petrotrin?

6 A. A condition report like an inspection report?

7 Q. Not just a mere inspection for—I know there's an inspection for
8 the part of the riser, that's on record and in evidence, but I'm
9 asking about the entire Sealine 36.

10 A. An inspection report—

11 Q. Yes.

12 A. —for the entire Sealine?

13 Q. Yes.

14 A. I don't know.

15 Q. You don't know. All right.

16 **Examination By Mr. Chairman:**

17 Q. Is there a topographical, probably a wrong expression, some
18 sort of map—we've been provided with one by Paria showing
19 the pipe and where it goes, still not a hundred per cent sure I
20 understand it, but can you tell me do you know, or does anyone
21 know, if the pipe in the horizontal is level?

22 A. We believe it to be relatively level because—

23 Q. Right. Yes.

24 A. —the bathymetric survey shows the surface of the ocean floor.

25 Q. Yes.

26 A. The line is 30 inches in diameter, quarter of an inch thick and
27 coated in three inches of concrete. It is hardly likely that there

1 would be significant deviation in the level.

2 Q. When it's installed and put into the seabed, it's in sections
3 obviously.

4 A. Yes.

5 Q. How long is each section?

6 A. Typically a length of pipe is 40 feet.

7 Q. Right. And is it already coated in concrete?

8 A. I'm not sure at—when, when it's coated in concrete. I believe
9 that it's coated and then lowered into place but I'm not certain
10 what would have happened in this line.

11 Q. Right. So, on the one hand, the first question is whether or not
12 it has any undulations in it at all. It's 1,200 feet?

13 A. Yeah. Undulations would be very slight deflections, if any at
14 all. Undulations is, is—no, hardly likely with the thickness of
15 the concrete.

16 Q. Yeah, well it bends when the concrete is put on, but, in your
17 estimate it's unlikely to have undulations?

18 A. No, well it's concrete right through, so the concrete would have
19 been put on before it was—hit the floor, yeah.

20 Q. But as each piece is put together, they're welded together,
21 aren't they?

22 A. Yes.

23 Q. Rather than flanged?

24 A. Yes.

25 Q. Right. So each section is welded together?

26 A. Yes.

27 Q. So one piece is lowered, put down onto the ground, the seabed?

1 A. Yeah.

2 Q. Then the next piece is lowered?

3 A. Yes.

4 Q. The two are joined together, welded?

5 A. I'm really not certain how this line was fabricated.

6 Q. Right. So you're not really able to say whether they were—in
7 other words when the two came together they weren't exactly
8 straight and were just—do you follow what I mean?

9 A. Oh.

10 Q. At an angle as it were—

11 A. It would have, it would have to have made a seal such that it
12 would pass the welding inspection.

13 Q. Sure.

14 A. So definitely it would have met that, which is very slight
15 deviations, if any.

16 Q. And I appreciate the slight deviations. My concern I suppose is
17 that over a length of 1,200 feet even a slight deviation might
18 produce a significant difference in height at different points?

19 A. Yeah, I, I think—that information is available at the, the—if
20 there's a difference in height.

21 Q. All right.

22 A. Whether there's any undulation, it's unlikely.

23 Q. All right so let's assume that there's no undulation in this pipe
24 at all, but you are able to tell whether it is higher at one end or
25 lower at one end?

26 A. Yes.

27 Q. And it follows from that that if it's lower at one end, when you

1 pour water or oil or any liquid in it, that will settle so the levels
2 of the liquid are the same height?

3 A. Yes.

4 Q. Whereas the down, the vertical part of the pipe might be longer
5 at one end than the other?

6 A. Yes.

7 **Mr. Chairman:** Okay, thank you.

8 **Continued Cross-Examination By Mrs. Persaud Maraj:**

9 Q. Are you familiar with one Mr. Ahmad Ali?

10 A. Yes.

11 Q. Right. On the 25th of—on the day of the incident, 25th of
12 February, 2022, did you meet with Mr.—did you meet Mr. Ali
13 at the shipping office?

14 A. I'm not sure.

15 Q. You don't recall that?

16 A. I'm not certain.

17 **Mr. Chairman:** Could you bring the microphone a little
18 closer, please?

19 **Mrs. Persaud Maraj:** Sure.

20 **Continued Cross-Examination By Mrs. Persaud Maraj:**

21 Q. So Mr. Ali's evidence is that he met with you at the shipping
22 office. What say you?

23 A. Well if Ahmad said that, then, he probably did.

24 Q. You have no recollection of it?

25 A. That day was very—I really not, I'm not certain. I don't doubt
26 that he did meet with me.

27 Q. You don't doubt. It would have been—well, okay. I accept

1 that. In your witness statement paragraphs 54 to 57, you deal
2 with—well, in fact from 53, sorry, to 57, you deal with a
3 meeting with Mr. Kazim Ali Sr..

4 A. Or yes.

5 Q. Yes? This was on Saturday the 26th of February?

6 A. Yes.

7 Q. Yes. And this meeting was with Mr. Ali and yourself and
8 Catherine Balkissoon?

9 A. Hmm. I'm not certain. I'm not absolutely certain. I just
10 remember, um, speaking to Kazim.]

11 Q. All right. So, I'm going to put this very quickly to you because
12 the version of what you have and what you've presented as to
13 your recollection of that meeting and what he said in that
14 meeting, right, Mr. Ali denies that.

15 A. Okay.

16 Q. Yes? Now, his instructions and evidence is that he was at the
17 meeting on the 26th for the purpose of convincing Paria to
18 allow a rescue.

19 A. Okay.

20 Q. Yes? Would you agree?

21 A. If I agree that that was—

22 Q. Would you agree?

23 A. —what his evidence is?

24 Q. No, would you agree that that is true?

25 A. No.

26 Q. That is his evidence.

27 A. No, that's not true.

1 Q. All right. So I'll put it to you that what you have said is untrue
2 and you can answer that.

3 A. No, this is.

4 **Mr. Chairman:** Untrue or inaccurate?

5 **Mrs. Persaud Maraj:** Inaccurate.

6 **Continued Cross-Examination By Mrs. Persaud Maraj:**

7 Q. You can say that is inaccurate. Your version from paragraphs
8 53 to 57—

9 A. Yes.

10 Q. —is inaccurate.

11 A. And what am I supposed to say?

12 Q. Well you tell me.

13 **Mr. Chairman:** Well, either it's accurate or it's not, meaning
14 it may be wrong.

15 **Continued Cross-Examination By Mrs. Persaud Maraj:**

16 A. No, this is—what I wrote here is correct.

17 Q. Right. That's what you say.

18 A. I remember this because I was shocked when I heard it and I
19 resolved afterward that he has surrounded himself with people
20 who also believe the same thing and I, you know, this is what—
21 it might have been understandable but at the time he said it, this
22 is what he said.

23 Q. All right. And—but you don't recall—

24 **Examination By Mr. Chairman:**

25 Q. Specifically, sorry, specifically he was shocked about what?

26 A. That he would say that his son is no more.

27 Q. And this was at what time?

1 A. I think it was about 1.00 p.m. I felt like—I feel like if it's
2 between 1.00 and 2.00 or somewhere around there.

3 Q. On Saturday?

4 A. Yeah.

5 Q. Early afternoon on the Saturday?

6 A. Yeah.

7 Q. Well, he's probably not wrong, was he?

8 A. I don't know.

9 **Continued Cross-Examination By Mrs. Persaud Maraj:**

10 Q. All right. Well, that's really all that I could clarify. I think
11 everything else has been dealt with. Thank you very much.

12 A. You're welcome.

13 **Mr. Chairman:** Mr. Peterson.

14 **Mr. Peterson SC:** Thank you, Mr. Chairman.

15 **Mr. Chairman:** I have to say I've moved my meeting to 6.30.

16 **Mr. Peterson SC:** Ah great, but that doesn't mean I would use
17 all the time. But can we first have up Mr. Houston
18 Marjadsingh's statement. It's at—I'm interested in page 303—
19 three zero—

20 **Mr. Chairman:** The supplemental bundle?

21 **Mr. Peterson SC:** In, yeah, the supplemental bundle, 3053 and
22 3054.

23 **Mr. Chairman:** Yes. Which particular paragraph you want
24 to—

25 **Mr. Peterson SC:** Paragraph 27 to start with. I'm interested in
26 27 into 28 actually.

27 **Examination By Mr. Peterson SC:**

1 Q. Mr. Archibald, you were taken by Senior Counsel Maharaj, my
2 learned friend, with respect to the transcript of the 7th of
3 December of Mr. Marjadsingh where you were pointed—you
4 were directed to his testimony. You wouldn't find it there. It
5 was on the screen earlier—

6 A. Yes.

7 Q. —where Mr. Maharaj showed that Mr. Marjadsingh was
8 speaking about having arrived on berth 6 from berth 5 at around
9 2.00 p.m.

10 A. Yes.

11 Q. That it was put to him in his cross-examination. So I'm trying
12 to interrogate that taking into account the event, if you look at
13 the, first of all, paragraph 27, and I'll show you why I'm going
14 there.

15 A. Yes.

16 Q. At paragraph 27 of Mr. Marjadsingh's statement he speaks
17 about upon arrival at berth 6.

18 A. Yes.

19 Q. He spoke to the LMCS dive master Mr. Andrew Farah. He had
20 a brief conversation, so I'm using his events to really test
21 whether the 2.00 p.m. is accurate. That's what I'm doing. So
22 let me tell you one time what I'm doing.

23 "I had a brief conversation with Mr. Farah to find out if
24 the team was getting through with the job. He said yes. I
25 went to the screen monitor on berth 6 and I saw one diver
26 in the chamber. I then moved away from the screen."

27 All right? So that is after his arrival he just gave that

1 description.

2 A. Okay.

3 Q. “After about 10 minutes”—so let’s give him that, give or
4 take a few minutes left and right of that, all right—“I felt
5 a shake on berth 6 and I heard a noise. I immediately
6 went back to the monitor to see if something had
7 happened in the chamber. I noticed the camera was not
8 focused in the chamber and it appeared to be showing the
9 wall of the chamber. When I went back to the monitor
10 area Andrew Farah was there.”

11 Now, we know, and I don’t—I think it’s beyond dispute that the
12 event that gave rise to the disappearance of the men into the
13 pipe occurred at about 2.50 p.m.

14 A. Yeah 2.45 I think.

15 Q. Two forty-five, 2.50. So if we were to anchor his arrival, brief
16 conversation and 10 minutes later, that must be somewhere post
17 2.30 p.m. Do you agree with my analysis?

18 A. Yes I agree.

19 Q. Right.

20 A. Yes, I agree.

21 Q. Because then that event occurred and I don’t think it’s disputed
22 that the—that’s what we have been using throughout, 2.45
23 thereabouts.

24 A. Yeah.

25 Q. Two-fifty.

26 **Mr. Peterson SC:** Mr. Chairman, I now wish to go to Mr.
27 Dopson’s statement.

1 **Mr. Chairman:** Just pause for me. I'd like to make a note.

2 **Mr. Peterson SC:** Of course, Sir.

3 **Mr. Chairman:** Right. [*Writing*] Thank you.

4 **Mr. Peterson SC:** Thank you, Mr. Chairman. I wish to take—
5 to go to Mr. Dopson's statement which is at page 3020 which in
6 the supplemental bundle is at page 183 of 378, so that's two
7 ways of finding it.

8 **Mr. Chairman:** Got it.

9 **Mr. Peterson SC:** Page 3.

10 **Mr. Chairman:** Dopson's statement in?

11 **Mr. Peterson SC:** The supplemental bundle, supplemental
12 witness bundle. There's a bundle I was using with—

13 **Mr. Chairman:** Yeah.

14 **Mr. Peterson SC:** The same bundle. Yes. It's at page 3020.

15 **Mr. Chairman:** Yep.

16 **Mr. Peterson SC:** I really in—I'm interested in paragraphs 12
17 and 13. You with me also, Mr. Chairman and Mr. Archbald?

18 **Mr. Chairman:** Yes.

19 **Mr. Peterson SC:** You found it? Right.

20 **Continued Examination By Mr. Peterson SC:**

21 Q. At paragraph 12 Mr. Dopson said this.

22 "At or around 1345"—which is 1.45 hours—"work in the
23 chamber stopped."

24 So at quarter to 2.00 the work stopped.

25 "I observed divers Kurban, Henry, Nagassar exited the
26 chamber."

27 So, let's picture this.

1 “I then left berth 6 and returned to shore for lunch.
2 Before leaving for lunch I informed victor Dhillpaul,
3 LMCS HSE officer, that I was going for lunch. He had
4 to be on site at all times. I did not have to be on site at all
5 times as my role on that day in question as directed by
6 Mr. Yearwood was to make the above periodical
7 checks.”

8 So he has gone for lunch at 1.45.

9 “At or around 1445”—which is 2.45 p.m.—“I called Mr.
10 Dhillpaul on his cell phone to notify him that I was
11 leaving shore to return to berth 6 to resume my periodical
12 checks. Mr. Dhillpaul told me he would call me back
13 and hung up the phone. He then returned my call at or
14 around 1450”—10 minutes to 3.00, hours—“and told me
15 the diving supervisor, Mr. Andrew Farah, reported that
16 observed a splash on the remote monitor which showed
17 the activities within the chamber and thereafter they lost
18 communication with the divers.”

19 So it is clear from Mr. Dopson’s account that when he went for
20 lunch the work seemed to have been suspended. But whilst he
21 was on lunch, just about an hour, usual lunchtime, even in this
22 Commission, just about an hour, the work resumed in his
23 absence.

24 A. Yes.

25 Q. Unsupervised by Mr. Marjadsingh.

26 A. Yes.

27 Q. Because the work ought not to have been taking place.

1 A. Yes.

2 Q. And that's when the event occurred.

3 A. Yes.

4 Q. I think it's consistent with your testimony here that you got a
5 narrative that the incident occurred during the lunch period
6 when there wasn't to be work?

7 A. Yes, that is what Dopson would have told me.

8 Q. Sounds very unauthorized to me.

9 A. Yes.

10 Q. Just tell me something, on the 25th of February, 2022 if there
11 were to be a permit to work issued for the removal for the
12 plugs, who would be the applicant in such a case?

13 A. I think Mr. Marjadsingh might have been used as the applicant
14 there, because it would have been mechanical work.

15 Q. Right. To remove the—

16 A. Taking out—

17 Q. —the barriers?

18 A. Yeah.

19 Q. Do you know of any permit to work issued for the removal of
20 those plugs on the 25th?

21 A. No, none was issued.

22 Q. So there was no question of supervision of the removal of those
23 plugs on that day?

24 A. Absolutely none.

25 **Mr. Peterson SC:** Mr. Chairman, that's all I have for this
26 witness, thank you.

27 **Mr. Chairman:** Thank you. I think Mr. Wilson has some

1 questions.

2 **Examination By Commissioner Wilson:**

3 Q. Yes. Good afternoon, evening.

4 Q. I just want to go back to direct cause from your incident report.

5 A. Yes.

6 Q. And I'm glad you used the terminology direct cause. I see that
7 in your incident report the direct cause will obviously point to
8 LMCS.

9 A. Yeah.

10 Q. Right? I believe I heard, I'm alive to correction, that you said
11 you're awaiting the outcome of the Commission?

12 A. Well no, not necessarily—sorry. More information that will
13 arise from this Commission.

14 Q. In service of the—

15 A. Yes, yes.

16 Q. More information from—

17 A. More information, statements and that sort of thing, things, um,
18 even from LMCS that they would have said they did with
19 Christopher Boodram.

20 Q. Understood. But you're waiting for more information from the
21 Commission in service of a report?

22 A. Oh yes, yes to be able to, to, not to redo but to complete.

23 Q. To complete the incident report—

24 A. Yes.

25 Q. —the incident report?

26 A. Yes.

27 Q. From your colleague prior, it's Archbald?

1 A. Paul Yearwood?

2 Q. Yearwood, it came out that no industry known root cause
3 analysis was employed by Paria.

4 A. For the investigation?

5 Q. For the investigation.

6 A. Okay.

7 Q. Is that so?

8 A. Well, we applied RCAT and something like 3 Whys.

9 Q. Three Whys?

10 A. Right? I know there's no 3 whys but five whys would take you
11 to your management system.

12 Q. Right.

13 A. But in order to be able to get to the direct cause I need to ask—

14 Q. Yes.

15 A. —a couple whys and I also did a cause and effect diagram.

16 Q. Okay, understood. Where I'm going with it is because a direct
17 cause would only point at one party. Would you appreciate if
18 you did a, which is industry practice, a root cause, it could
19 potentially flag the gaps that exist with Paria in the incident?

20 A. It would flag the gaps that exist at all levels.

21 Q. At all levels, that's correct.

22 A. And the more why we ask we reach straight to the regulators,
23 the, you know and so on.

24 Q. So why wouldn't you do a root cause analysis?

25 A. We would, but just not right now.

26 Q. Is it industry practice to wait a year after to do a root cause
27 analysis?

1 A. No, but the circumstances right now we were not able to get
2 information. The hyperbaric chamber is still at the base of the
3 sea, at the bottom of the ocean, and so it is necessary for us to
4 get—I did not interview any of the LMCS witnesses.

5 Q. Okay.

6 A. Now I have that information available.

7 Q. Okay, so, just to clarify it's—you're awaiting for more
8 information—

9 A. Yes—

10 Q. —coming out of the Commission?

11 A. Yes.

12 Q. Once you get that information are you now going to employ in-
13 house resources or external to do a quality root cause analysis?

14 A. I think we will do in-house for the, um, for the—up to the, the,
15 um, rescue, sorry, the emergency response, like a bow tie.

16 Q. Okay. But you do have an appreciation your direct cause
17 would just—it's just one component of this entire process that
18 went—and I feel comfortable in saying it went wrong.

19 A. Yeah.

20 Q. All right. Okay, thank you.

21 A. Okay.

22 **Mr. Peterson SC:** Mr. Chairman, could I have your ear? You
23 did ask me this morning to reconfirm the retrieval of the
24 hyperbaric chamber.

25 **Mr. Chairman:** Yes.

26 **Mr. Peterson SC:** We have been able to confirm with the
27 contractor that those are fixed dates. He would retrieve it

1 between the 1st to the 5th of February.

2 **Mr. Chairman:** Just a minute.

3 **Mr. Peterson SC:** So he's confirming that retrieval, and it will
4 be available for inspection from the 6th.

5 **Mr. Chairman:** At Paria's site.

6 **Mr. Peterson SC:** At Paria's site.

7 **Mr. Chairman:** Do I have to put all that kit on again?

8 **Mr. Peterson SC:** You still have it, Sir?

9 **Mr. Chairman:** No, you took it back. All right, thank you.
10 Sixth of February.

11 **Mr. Peterson SC:** Sixth of February. It's available from that.

12 **Mr. Chairman:** It will be available from that date?

13 **Mr. Peterson SC:** Yes.

14 **Mr. Chairman:** Okay, thank you. All right. I'm going to
15 reconsider whether or not we need to come on those two days
16 that I've currently earmarked but I'll come back to that, but
17 thank you for that. Appreciate it. Anything else? No.

18 Well, look, thank you very much for coming, Mr. Archbald. I
19 appreciate it. You're free to go and we will rise now. Thank
20 you very much. Tomorrow 9.30. We need to try and get
21 through as many of those witnesses as we can, so I think we're
22 going to have a full day tomorrow. All right, thank you very
23 much. Please feel free to get up and go. I'm going to collect
24 my papers so don't wait for me. Thank you.

25 **6.06 p.m.:** *Enquiry adjourned.*

26

27

1 **EVIDENTIARY HEARING DAY 13**

2 **9.31 a.m.: Enquiry Commenced.**

3 **Mr. Chairman:** Good morning, everybody. Okay. A few
4 things, first of all. First, I'd like to deal with witnesses for
5 OSHA. They, as you probably appreciate, were pencilled in for
6 Monday. I've reviewed their evidence with the team, and for
7 our part given that they have provided us with statements and
8 have been interviewed by us, we have no specific need to call
9 any of the witnesses from OSHA. I'm not going to make that
10 decision without asking, at least those who are here, whether
11 there was anything that they thought that they might need to ask
12 any of those witnesses from OSHA. I mean, obviously, they
13 weren't part of the IMT; it didn't seem to me to add anything
14 specific beyond that which they've already provided.

15 Does anyone have any representations to make about
16 that?

17 **Mr. Peterson SC:** Our view is that we don't need them either,
18 Sir. I don't think they add beyond what they have in their
19 statement.

20 **Mr. Chairman:** Yes, thank you. Is that the same for you, Ms.
21 Persaud-Maraj?

22 **Ms. Persaud-Maraj:** The body of what this Enquiry has
23 indeed gone through is what OSHA would have, and so, I
24 would adopt the same approach, please.

25 **Mr. Chairman:** Right. Good. Well, with that in mind, I then
26 release them from their requirement to attend on Monday. Mr.
27 Maharaj, I don't require them to attend. We got their evidence.

1 We'll utilize it for our purposes as we see fit. So that frees up
2 Monday. So that's good. There's still some evidence to be
3 heard, but let me just deal with one or two other matters.

4 I'd indicated, I think, two days ago, that I would come to
5 view the chamber on the 14th and/or 15th—sorry, the 23rd
6 and/or 24th February with a view to seeing the chamber once it
7 has been taken out of the water and keeping the 24th just in
8 case there was any need to hear any further evidence. I'm
9 going to vacate those dates partly because, as it's been pointed
10 out to me, this is a rather busy time in this country, and I
11 wouldn't want to upset Counsel who wish to attend the
12 festivities by having to attend the chamber as well. So I'm
13 moving it to the 14th and 15th March. That's the position. I
14 hope that fits in with everybody. The 14th would be the day on
15 which I would hope we will be able to come and see the
16 chamber, Mr. Peterson, if that was possible.

17 *[Pause]*

18 **Mr. Peterson SC:** Mr. Chairman, that conversation was just
19 about—Paria was concerned about the integrity between the
20 window; it lends itself to, most likely, unfounded allegations of
21 interference or tampering. So I think that could be addressed by
22 LMCS attending or being present, and supervise the emergence
23 of it from the waters, and after that—

24 **Mr. Chairman:** And confirming that that is as it is and could
25 do the same on the day of the 14th March, so that there's no
26 question of any interference with it in the interim period.

27 **Mr. Peterson SC:** I'm advising Paria to also take photographs

1 when it emerges from the water to see how best we could
2 preserve what actually came up from the ground.

3 **Mr. Chairman:** I was wondering whether it could be videoed
4 as it was being brought out and put on shore.

5 **Mr. Peterson SC:** I suggested videos also.

6 **Mr. Chairman:** Marvellous. Well, if that fits in then with
7 your timetable for viewing, I'll fix those dates, 14th and 15th.
8 The 15th is simply a pencilled in date for the purposes of
9 hearing any additional evidence if anybody thought that it was
10 absolutely vital. I hope that that's not going to be necessary,
11 but let's pencil it in for the moment. Once a decision has been
12 made not to utilize that day, I will communicate that through
13 Ms. Sinanan, so that everybody knows it becomes free. So I'm
14 grateful for that. Thank you very much.

15 Anybody who wants to attend on the 14th will need to
16 communicate with Ms. Sinanan in the same way as they have
17 done for the previous view and I take it that you want to limit
18 numbers in the similar way. I would hope that we'll be able to
19 manage one bus rather than two for this exercise. So, thank
20 you.

21 Next, I should tell you this: on Wednesday of this week
22 we received an additional series of videos provided by Mr.
23 Khan of In-Corr-Tech. I have now considered them and regard
24 them as important enough to want to show for the purposes of
25 this Enquiry, so they will be incorporated in his evidence which
26 is scheduled for next Tuesday. Can I say that I think that they
27 are sufficiently different from that which has been provided

1 before that I've asked for and I believe we will have today a
2 further statement from him setting out why they are different,
3 what they intend to show, what particular parameters he has
4 used. I urge you all, particularly Mr. Peterson, Ms. Maharaj, to
5 have a look because they do colour things in a slightly different
6 way to what has been the evidence hitherto. I'm anxious that
7 you should have it at the earliest possible opportunity. It is
8 now, I'm told—the videos are posted on the website. So they
9 are available. There are four. They're all quite short, but there
10 are four of them.

11 **Mr. Peterson SC:** And since Monday is a free day, Sir, we'll
12 have time to look at it in time for Tuesday.

13 **Mr. Chairman:** It won't be entirely free, I'm afraid, because
14 we've asked—Mr. Donawa who was due to come this week,
15 was unable to come this week, and I accommodated him for
16 Monday. That can't be changed now. So we are, I'm afraid,
17 sitting on Monday.

18 What I thought to do was to bring forward—which brings
19 me to the next topic, really—to bring forward the witnesses for
20 the family members from Tuesday to the Monday, so that we
21 would use up part of the morning, at least, before we rise, but
22 the remainder of that day will be free. I don't imagine either
23 Mr. Donawa or those witnesses will take very much time in the
24 morning, which will give you the remainder of the day. But
25 that's the current plan.

26 Can I say that at the moment those witnesses, in addition
27 to Mr. Donawa, are going to be Catherine Ali, Vanessa Kussie,

1 Jamie Menodath-Ali. I haven't heard yet back from Mr.
2 Ramadhar as to whether any of his clients are intending to read
3 their statements. I don't know if the lady who is here can help
4 me with that.

5 **Ms. Boodan:** Yes, please, Mr. Chairman. I would have sent
6 Ms. Sinanan some statements maybe about two days ago, I'm
7 not sure.

8 **Mr. Chairman:** I can't quite hear you. Sorry, say that again?

9 **Ms. Boodan:** I would have sent Ms. Sinanan two statements
10 from our clients about two days ago.

11 **Mr. Chairman:** No, no, I got the statements. It's a question of
12 whether they want to give them live or whether they want to
13 just put them in as statements.

14 **Ms. Boodan:** I don't have any instructions as yet, but as soon
15 as I receive those instructions, I will email Ms. Sinanan.

16 **Mr. Chairman:** Well, can I ask for it today, please?

17 **Ms. Boodan:** Yes, Mr. Chairman.

18 **Mr. Chairman:** I need to know today. And if they do, that it
19 will be on Monday, not on Tuesday. All right?

20 **Ms. Boodan:** Yes, Mr. Chairman.

21 **Mr. Chairman:** Well, I've said in front of Mr. Ramadhar what
22 my approach is to them giving that evidence. All right? So
23 he's aware of that. All right. As soon as you can advise me
24 today, before the close of business today, please.

25 **Ms. Boodan:** That's no problem.

26 **Mr. Chairman:** All right. Thank you.

27 So that will be Monday. I anticipate we'll finish before midday

1 on Monday. We'll start at 10.00 a.m. Tuesday, we will also
2 start at 10.00 a.m. when we will hear from Mr. Zaid Khan from
3 In-Corr-Tech. That will then be the conclusion of the evidence.

4 On Wednesday, I will hear three speeches: first from Mr.
5 Ramadhar at 10.30. We'll have a short break and then Ms.
6 Alfonso, I think, has indicated that of her team she's going to
7 be addressing me. Is that right? "Us" I should say.

8 **Ms. Alfonso:** Yes. Good morning, Mr. Chairman.

9 **Mr. Chairman:** Good morning.

10 **Ms. Alfonso:** That is, indeed, the case.

11 **Mr. Chairman:** Okay, right. So what we'll do is on
12 Wednesday, we will hear, first of all, from Mr. Ramadhar; we'll
13 have a break; then Ms. Alfonso; we'll have an early lunch, I
14 hope; and then hear from Mr. Pegus after lunch.

15 Then Thursday, we'll hear, first of all, from Ms. Kamini
16 Persaud-Maraj on behalf of LMCS and then we'll have,
17 hopefully, an early lunch. And then we will hear from—is it
18 Mr. Peterson or Mr. Mootoo? We're going to get the long or
19 the short version? You haven't decided yet.

20 **Mr. Peterson SC:** One of the offenders.

21 **Mr. Chairman:** One of the offenders, right. Well, as long as it
22 is only one of the offenders, that's fine. But we'll hear from
23 you, if we may, on Thursday afternoon after, what I hope will
24 be an early lunch.

25 Then on Friday in the morning at 9.30, please, Friday at
26 9.30, Mr. Maharaj on behalf of the Commission will address us
27 in the morning. I will have a few closing remarks to make once

1 he's concluded, which I anticipate to be about 11.30 for 10 or
2 15 minutes. And at the close of that, I would like to invite all
3 Counsel into the witness room afterwards as an invitation from
4 me for half an hour or so to conclude the Enquiry informally.
5 But that would be the position.

6 So can I ask, then, that everybody make a note of that.
7 That's the plan for the remainder of this Enquiry before we get
8 down to the business of having to prepare our report.

9 As I have indicated, and since this is being made public, I
10 make clear now that it is our intention that there should be a
11 draft report in the early part of April and that there will be a
12 final report after any—the supply of any Salmon Letters at the
13 earliest opportunity, if there are to be any, by the end of April.
14 So I hope to be able to provide the President with a copy of our
15 report by the end of April.

16 **Mr. Peterson SC:** I was just enquiring which President, but I
17 guess there's continuity of office.

18 **Mr. Chairman:** All right. Well, certainly, it would be
19 available to the Government in that way. Of course, it is a
20 matter entirely for them as to when they make it public. I will
21 do everything in my power to encourage them to do so pronto.
22 This is a matter which clearly has attracted considerable public
23 attention and involves the future of this industry and people's
24 lives. If there's any value in having this public Enquiry, it is in
25 making available our report as soon as humanly possible. To
26 that end is why we have worked as hard as we have to try and
27 make sure that it is available at the earliest opportunity. So

1 that's where we are at the moment.

2 Thank you all. We will proceed today. We've got five
3 witnesses to get through. Let's hope we do. Thank you.

4 Mr. Maharaj.

5 **Mr. Maharaj SC:** Mr. Chairman, the first witness is Mr.
6 Rolph Seales, and the summary will be done by Ms. Vijaya
7 Maharaj.

8 **Mr. Chairman:** Thank you.

9 Yes. Good morning, Mr. Seales. The oath will just be
10 taken from you.

11 [*Mr. Rolph Seales Sworn*]

12 **Mr. Seales:** I, Rolph Seales, solemnly swear that the evidence
13 I shall give to this Commission in this case shall be the truth,
14 the whole truth, and nothing but the truth.

15 **Mr. Chairman:** Right. Please take a seat. Thank you for
16 coming. I'm sorry you've been here, I know, a few times and
17 you've not been accommodated. So forgive us for that. We've
18 done our best to try and make sure that people aren't kept
19 waiting too long, but I'm afraid it doesn't always work, so
20 accept my apologies for that. The water is there for your use.

21 Ms. Maharaj who sits opposite you, is going to give you
22 a summary of your evidence to the Commission. Please listen
23 carefully. If you agree it, then great, and we will proceed from
24 there. Mr. Maharaj will then ask you a few questions and then
25 there'll be, I suspect, a number of other questions from some of
26 the other counsel. All right? So that's the plan.

27 All right. Thank you very much.

1 **Ms. Maharaj:** Thank you.

2 On Friday the 9th December, 2022, Mr. Rolph Seales
3 submitted a witness statement to the Commission. His
4 statement is at page 3130 of the supplemental witness statement
5 bundle.

6 Since 2019 he has been the Diving Operations Supervisor
7 Client Representative employed by Kenson and assigned at the
8 Point Fortin facility of Heritage Petroleum Company Limited.
9 His role is to coordinate all company contractor diving
10 activities at Heritage in accordance with the organization's
11 regulatory standards and international best practices.

12 He has over 25 years' experience in the field of marine
13 diving operations. He was previously employed by Petrotrin
14 for 22 years, 18 of which he was employed permanently as a
15 commercial diver.

16 On Saturday 25th February, 2022, at about 4.57 p.m., he
17 was requested by his line supervisor to mobilize Mitchell's
18 Professional Diving Services Limited to report to and provide
19 support, if required, at Paria because of an incident which
20 occurred earlier that day at Berth No. 6.

21 At 5.05 p.m. Mr. Seales contacted Mr. Fitzroy King of
22 Mitchell's who confirmed at 5.23 p.m. that Mitchell's would be
23 able to provide services. Mr. Seales was also requested to act
24 as liaison between Mitchell's and Offshore Technology
25 Solutions Limited and Paria in relation to Paria's request for
26 diving services.

27 At 6.00 p.m. he arrived at Heritage in Point Fortin to

1 facilitate Mitchell's retrieving their diving equipment from the
2 base. He left Heritage at 6.30 p.m. At about 8.20 p.m., Mr.
3 Seales arrived at Paria. He was informed that OTSL was
4 already moored at Berth 6 and was on the vessel, Gulf Stream
5 Eagle, standing by for further instructions.

6 At about 8.40 p.m., he was contacted by Mr. Fitzroy
7 King of Mitchell's who informed him that he and his crew
8 arrived at Paria's carpark and was standing by for instructions.
9 At about 9.00 p.m., Mr. Seales was given an update by
10 Heritage's Osei Flemming-Holder and Paria's Mr. Paul
11 Yearwood in an office downstairs of Paria's terminal
12 administration building. They informed Mr. Seales that the
13 divers were working to remove a plug in a 30-inch riser in a
14 chamber at 15 feet seawater when a splash was seen and contact
15 with the divers was lost. He was also informed that one diver
16 exited the chamber safely. He was shown a rough sketch of the
17 riser chamber layout which was a picture of a whiteboard on
18 someone's phone.

19 Mr. Seales responded to the briefing by indicating that
20 the chamber is called a habitat and the divers may have
21 experienced a Delta P scenario based on the explanation given.
22 At around 9.30 p.m., Mr. Seales proceeded upstairs in the
23 company of Osei Flemming-Holder to an unoccupied office at
24 Paria's terminal administration building to stand by for requests
25 and/or instructions from the Paria persons in charge of the
26 emergency response for the Paria Incident Command Team.

27 During the period 9.30 p.m. to midnight various

1 personnel were in and out of that office. At one time Mr.
2 Seales held a discussion with Mr. Collin Piper in the presence
3 of Paria's Mr. Michael Wei and Mr. Randy Archbald and was
4 shown a sketch of the riser chamber layout which was on a
5 whiteboard in the office. Mr. Piper told him that the divers
6 were working in the chamber on the 30-inch riser at 15 feet
7 seawater. They removed the first plug, and while they were
8 removing the second plug a splash was heard and observed on
9 the surface that all communication was lost. He responded by
10 repeating that based on what he explained the divers may have
11 experienced a Delta P scenario and he explained what it was.

12 Mr. Seales also asked if anyone knows the present state
13 of the habitat and of the second plug which the divers were
14 reportedly removing. No answer was given. Mr. Piper and the
15 other Paria personnel subsequently left the office.

16 At about 12.15 a.m. on Saturday, Mr. Seales attended a
17 meeting with Paria personnel, Coast Guard and others, in the
18 lobby area upstairs of the administration building. At the
19 meeting which was partially in person and partially virtual, Mr.
20 Collin Piper informed the audience that the camera which was
21 inserted into the pipeline encountered a blockage which
22 appeared to be a diving tank in the horizontal segment of the
23 pipeline. He said the blockage prevented the camera from
24 going any further. He then asked whether the Coast Guard
25 could go into the pipeline and remove a diving cylinder. The
26 Coast Guard's response was that they could not. Mr. Piper did
27 not ask whether Mr. Seales could send any of his divers to

1 remove the diving cylinder.

2 Mr. Seales raised the issues of risk and limitations
3 associated with this request by asking Mr. Piper questions. He
4 asked, "How are you going to introduce a diver?" Mr. Piper
5 said, "You could lower the diver with the use of a crane." Mr.
6 Seales asked what the height of the riser above the surface of
7 the water was. He was told eight to 10 feet. He then asked,
8 "How are you going to introduce a diver wearing surface supply
9 equipment", and whether the diver would be introduced into the
10 pipeline headfirst or foot first. He asked these questions so that
11 the Paria team and others at the meeting could get an
12 understanding of what the diving activity would have entailed.
13 Mr. Seales told Mr. Piper that he had no authority to send
14 anyone to remove the blockage and that Mitchell's and OTSL's
15 dive supervisors would be informed of the request to examine
16 the camera footage and determine whether they could enter the
17 pipeline to remove the blockage in the pipeline.

18 After reviewing the video footage at about 1.18 a.m., the
19 dive supervisors of Mitchell's and OTSL determined that the
20 risk was too high and they could not send their divers into the
21 pipeline to remove the blockage. Mr. Seales communicated
22 their decision to Paria's team.

23 Mr. Seales, during 1.40 a.m. to 2.00 a.m. on Saturday,
24 consulted with OTSL, Mitchell's and Hull Support Services to
25 explore the availability of a recompression chamber for Mr.
26 Boodram. He then instructed Mitchell's to return to their
27 facility in Point Fortin to ready their recompression chamber

1 and remain on standby to receive Mr. Boodram. OTSL's team,
2 however, remained on site.

3 After being informed that Mr. Boodram's treatment was
4 deferred to 8.00 a.m. on Saturday, Mr. Seales instructed
5 Mitchell's to stand down and instructed Hull Support Services
6 to ready their decompression chamber at their facility in La
7 Brea to receive Mr. Boodram. Mr. Seales then left Paria at
8 about 4.23 a.m. He arrived at Hull Support's facility at 7.00
9 a.m.

10 At 8.00 a.m., the Hull Support's facility was in a state of
11 readiness for Mr. Boodram's arrival. However, at 10.00 a.m.
12 Mr. Seales was informed that Mr. Boodram tested Covid
13 positive. As a result, Mr. Seales then held a meeting with Hull
14 Support Services to discuss what additional controls would be
15 required to safeguard their personnel. However, he was
16 subsequently informed that the decompression treatment was no
17 longer required.

18 On Sunday, 27th February at 4.15 p.m., Mr. Seales was
19 requested to attend a Teams meeting. He logged into that
20 meeting at 4.20 p.m. which was ongoing with the Paria team,
21 the Coast Guard, LMCS, Heritage team, Mr. Krishna Fuentes,
22 and others. LMCS was presenting a dive procedure at the time
23 to insert a diver into a 30-inch pipeline at Berth No. 6 to
24 remove the scuba cylinder which was preventing the camera
25 from going any further. A document was placed on the screen
26 and LMCS was reading the proposed procedure. The questions
27 which were discussed included how the diver could be

1 introduced into the pipeline; what equipment would have been
2 part of the safety parameters; and physically, how was the diver
3 going to perform the operation with the equipment on.

4 Mr. Seales' view was that the procedure did not
5 demonstrate how the steps would be safely executed but only
6 stated what steps were proposed to be done. In his
7 consideration, the proposed plan did not contain this
8 information which was necessary to assess whether it could be
9 safely executed. He also noted that the exercise was not to
10 rescue the divers, but to remove objects in the line. The risk of
11 the exercise had to be weighed carefully against its objective.

12 Discussion was held surrounding the presented diving
13 procedure and its lack of detail and inadequacies of control to
14 safeguard the proposed diver. Due to the fact that it was
15 ultimately not his decision to make, Mr. Seales stated that he
16 volunteered no further input to the discussions and his opinion
17 was not solicited. Mr. Seales did not review the documents and
18 the documents were not forwarded to him. The meeting
19 concluded with LMCS and Paria's team exploring other options
20 to safely recover the missing divers. Mr. Seales had no further
21 involvement in the matter.

22 Mr. Seales, is this an accurate summary of your
23 evidence?

24 **Mr. Seales:** Yes, it is.

25 **Ms. Maharaj:** Thank you.

26 **Mr. Chairman:** All right. Thank you.

27 Mr. Seales, now Mr. Maharaj has got some questions for

1 you. All right? And then, as I say, there'll be others. Mr.
2 Maharaj.

3 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

4 **Examination By Mr. Maharaj SC:**

5 Q. Good morning, Mr. Seales.

6 A. Good morning.

7 Q. You are a very experienced diver. Am I correct? Over 25
8 years' experience?

9 A. Yes.

10 Q. And could you explain to us when you said that: "I'm certified
11 as an unrestricted surface supply diver," what is that? Could
12 you explain what is that to us?

13 A. That's just the classification of the diver.

14 Q. Sorry?

15 **Mr. Chairman:** You're going to have to move—bring the
16 whole thing towards you; that's it. And if you don't mind, just
17 lean a little forward when you speak. Thank you.

18 **Mr. Seales:** That's the classification of the diver. So there are
19 different levels. Unrestricted is a level under the Canadian
20 standard.

21 **Continued Examination By Mr. Maharaj SC:**

22 Q. But to help us, the classification is a high classification?

23 A. Yes, it is.

24 Q. And according to your statement—I'm interested in the
25 timeline, right, so if you could try and help us. You first
26 became involved in this matter, according to paragraph 5 of
27 your statement, at 4.57 p.m. on the 25th February?

1 A. Yes.

2 Q. And that you said in that paragraph 5 that you were requested
3 by Mr. Fortune—and Mr. Fortune is at Heritage?

4 A. Yes, he is.

5 Q. Requested that you mobilize Mitchell's Professional Diving
6 Services Limited to report and provide support, if required, to
7 Paria. Correct?

8 A. Yes.

9 Q. And that you were told to do this because an incident occurred
10 earlier that day at Berth 6?

11 A. Yes.

12 Q. Were you told at that time what the incident was?

13 A. No.

14 Q. No. So based on the instructions you got, you contacted
15 Mitchell's?

16 A. Yes, I did. So I tried to gather more information to help inform
17 what equipment would be required, but there was no
18 information available at that time.

19 Q. But you contacted Mitchell at around 5.05 p.m.?

20 A. Yes.

21 Q. You spoke to one Mr. Fitzroy King?

22 A. Yes, I did.

23 Q. Right. And then you received information from Mr. Fitzroy
24 King at around 5.23 p.m. that Mitchell's would be able to
25 provide its services and they were actually engaged by
26 Heritage?

27 A. Yes.

1 Q. Right. Then at about 6.00 p.m. you arrived at Heritage Marine?

2 A. Yes.

3 Q. And then you received a call from Mr. Fortune who identified
4 Mr. Flemming and for—what that call was for—that call you
5 got from Mr. Fortune?

6 A. No, well, he just informed me of the contact persons.

7 Q. Sorry?

8 A. He informed me of the contact persons at Paria.

9 Q. Contact person at?

10 A. So I'll be contacting when I arrive at Paria.

11 Q. Right. And who was that contact person?

12 A. Mr. Osei Flemming.

13 Q. And he was associated with which company?

14 A. Heritage.

15 Q. Heritage. And you were asked to contact OTSL?

16 A. No. So I did not contact or engage OTSL.

17 Q. Who contacted OTSL?

18 A. I'm unaware.

19 Q. You're not aware. But at about 6.30 p.m. you departed
20 Heritage Marine and you—where did you go to, if I may ask,
21 after 6.30 p.m.?

22 A. Paria.

23 Q. Paria. And you arrived at Paria at 8.20 p.m.?

24 A. Yes.

25 Q. And you went to Paria's administrative building?

26 A. Well, not immediately.

27 Q. Not immediately?

1 A. No.

2 Q. But how long after?

3 A. So within that period, 8.20 and nine o'clock.

4 Q. Around nine o'clock?

5 A. Yeah.

6 Q. And you made contact with Mr. Rupert Paul of OTSL?

7 A. All right. So I would have made those calls when I arrived at
8 the location, which is Paria, just to ascertain where they were at
9 that time.

10 Q. And then according to my working it out, at around 8.40 p.m.
11 you were contacted by Mr. Fitzroy King of Mitchell—

12 A. Yes.

13 Q. Who informed you that the crew had arrived at Paria's carpark
14 and was standing by for instructions?

15 A. Yes.

16 Q. Am I correct?

17 A. Yes.

18 Q. And that was the crew from Mitchell's?

19 A. Yes.

20 Q. And then at around 9.00 p.m. you located Mr. Flemming in an
21 office downstairs of Paria?

22 A. Yes.

23 Q. And then at—then you were given an update of the incident as
24 to what happened that day?

25 A. Yes.

26 Q. At around what time that was given to you?

27 A. That will be around nine o'clock. When I say so, when I met

1 Mr. Holder, Mr. Yearwood was in the office, so they would
2 have just given a brief overview of the information that was
3 available at that time to them.

4 **Examination By Mr. Chairman:**

5 Q. Was that the first time that you learnt that someone had
6 emerged from the pipe?

7 A. Yes.

8 Q. So no one had told you that up until nine o'clock that night?

9 A. No.

10 **Continued Examination By Mr. Maharaj SC:**

11 Q. And you are an experienced diver for 25 years and no one told
12 you that?

13 A. No.

14 Q. And at—when you arrived at Paria and you were given this
15 briefing, you responded immediately to the briefing and you
16 said words to the effect that it would have been—it may have—
17 you said that the divers may have experienced a Delta P
18 scenario?

19 A. Yes, based on the explanation given.

20 Q. And then even after you got the briefing you were—you
21 remained at Paria?

22 A. Yes.

23 Q. And you were in contact with Osei Flemming-Holder at Paria
24 while you were there?

25 A. Yes.

26 Q. And they were on standby also?

27 A. Yes. Well, sorry, I can't say what role or function he was

1 performing at that time.

2 Q. Well, according to paragraph 18 of your witness statement, you
3 said that, “Around 2130 hours I proceeded upstairs to the
4 company of Osei Flemming-Holder to an unoccupied office of
5 Paria’s terminal building to stand by for...” Oh, so you were
6 asked to stand by—

7 A. Yeah.

8 Q —for a request. I’m sorry—from Paria. And who gave you
9 those instructions?

10 A. It wasn’t an instruction.

11 Q. But who informed you of that, to stand by?

12 A. What I’m saying, it wasn’t an instruction. So we proceeded
13 upstairs, right, and stood by, basically.

14 Q. And stood by. Okay. Then during the—

15 **Mr. Chairman:** Sorry, just pausing there, so that I follow.

16 **Examination By Mr. Chairman:**

17 Q. So it’s about half past nine in the evening now?

18 A. Yes.

19 Q. Right. You’ve been given some sort of a briefing as to what
20 had happened?

21 A. Yes.

22 Q. Were you told the time when this first happened, the time when
23 they first noticed that there had been an incident?

24 A. An incident?

25 Q. Yes.

26 A. [*No response*].

27 Q. It’s not a memory test, Sir. Let me see if I can help you. It was

1 about 2.45 that we know it happened—there or thereabout.

2 A. Yes.

3 Q. Between 2.30 and 2.34, some say 2.50. It's in that period. All
4 right? Were you told that this event which you were being
5 consulted upon had happened as long ago as 2.45 that day?

6 A. I believe so.

7 Q. Right. And you've already told me in answer to the question
8 that you only learnt that a man had emerged from the pipe at
9 about nine o'clock?

10 A. Yes.

11 Q. Were you told then when he emerged?

12 A. No.

13 Q. Did you ask them, "Well, when did this chap come out the
14 pipe?"

15 A. No, the conversation didn't [*Inaudible*].

16 Q. I mean, we know that it was more than three hours between the
17 time when he did emerge from the pipe and you telling us you
18 were informed that a man had come out of the pipe. And being
19 a diver of some 25 years' experience it does not behove me to
20 say to you that time is of the essence?

21 A. Yes, it is.

22 Q. Isn't it?

23 A. Yes.

24 Q. There are four men in a pipe who may be alive. Were you told
25 that?

26 A. No. There weren't conversations surrounding the other divers
27 and where they were.

1 Q. There were no conversations?

2 A. No.

3 Q. So when you were informed that a man had emerged from the
4 pipe at—when you were told that at nine o'clock but not told
5 when, you had no idea when it was that he had emerged from
6 the pipe? You were not told as to the fact that it was known
7 when he emerged from the pipe that there were still people in
8 the pipe alive?

9 A. Okay. At that time, I'm unaware if it was actually confirmed
10 that the men were in the pipeline.

11 Q. So when you were being told this at nine o'clock, no
12 confirmation that these men were in the pipe?

13 A. Not that I'm aware of.

14 Q. Or that they were alive in the pipe?

15 A. Not that I'm aware of.

16 Q. I mean, for you to be able to assist Paria and/or Heritage in this
17 tragedy as a diving expert in your own right, would you not
18 think those were the basic facts you would need to know?

19 A. Yes.

20 Q. And they didn't tell you? You just stood by? I don't mean that
21 offensively.

22 A. Yeah.

23 Q. You stood by because nobody was asking you to do anything?

24 A. Yes. Now, can I expand?

25 Q. Of course, you can, yes.

26 A. Now, remember I would have entered into an active
27 emergency—

1 Q. Sorry. Speak a little louder, sorry.

2 A. Sorry. Remember, I would have entered into an active
3 emergency response system. So Paria would have had their
4 Incident Command Team.

5 Q. Yes.

6 A. And—

7 Q. Were you part of that?

8 A. No.

9 Q. Were you ever invited in?

10 A. No. I would not say that.

11 Q. Right. So you were never invited in to actually address them,
12 even if you were not part of the Incident Command Team
13 yourself, but to explain to them that night what you considered
14 the position to be. You were never asked?

15 A. No.

16 Q. Right.

17 A. Sir, I didn't consider that my role.

18 Q. When you did hear such facts as you heard, you immediately
19 thought to yourself this sounds like Delta P?

20 A. Yes, the initial explanation, yes.

21 Q. And you communicated that to them, did you?

22 A. Yes.

23 Q. To whom was it that you communicated that please?

24 A. Well, it would have been on two occasions—

25 Q. The first occasion?

26 A. Yes. That would have been to Mr. Flemming and Mr.
27 Yearwood.

1 Q. Flemming and Yearwood?

2 A. Right.

3 Q. Did they appear to understand what you were talking about?

4 A. I can't say. I would have taken it for granted, because when I
5 explained initially, I didn't go in to explain anything at that
6 point in time. So it was just a response to an explanation
7 given—

8 Q. No. But you understand what I'm saying if they appeared to
9 understand what you were explaining to them? You see, if
10 somebody had said to me six months ago what is Delta P, I
11 might have started to guess at it, but probably didn't know. If
12 somebody had said that, I suspect, to most of the people
13 watching this or sitting in his room six months ago, they might
14 not have understood what Delta P was. Do you follow?

15 A. Yes, I understand.

16 Q. So when you were explaining, well, this sounds like Delta P,
17 did they seem to follow what you were saying, or did you have
18 to explain what Delta P was?

19 A. No. At that time, at the first instance, no. When I went upstairs
20 I explained it a little more. I didn't take it for granted.

21 Q. You didn't take it for granted, and you explained it to them?

22 A. A little more, yes, of what may have occurred.

23 Q. Right, what may have occurred. Obviously, from your point of
24 view, it was only your best guess?

25 A. Yes.

26 Q. But your best guess, if I may say so, with 25 years' experience,
27 is rather better than anybody who has not dived ever in their

1 lives. Yes?

2 A. Yes.

3 Q. Right. Thank you.

4 **Mr. Chairman:** Thank you, Mr. Maharaj.

5 **Mr. Maharaj SC:** Much obliged, Mr. Chairman.

6 **Continued Examination By Mr. Maharaj SC:**

7 Q. And just to continue, you stayed at Paria for Friday night?

8 A. Yes.

9 Q. Until Saturday morning?

10 A. Yes, Sir.

11 Q. And during that period of time, Paria did not request you to
12 assist with actually diving services?

13 A. The first request would have come at Saturday morning?

14 Q. Around what time?

15 A. So this would be a debriefing a little after 12 midnight.

16 Q. After—

17 A. Yes. So this is between twelve and one o'clock.

18 Q. Mr. Seales, we have had that evidence before this Commission
19 that Mr. Boodram came out of the pipe—that is one of the
20 divers—came out of the pipe at around 5.30/5.45 p.m. on the
21 Friday night. Okay? So bear that in mind. I want to ask you
22 your view on that. And he said that four other divers were in
23 the pipeline. Now, you knew that this was a 30-inch diameter
24 pipeline?

25 A. Yes.

26 Q. Right. If a rescue had to be done to take those men out of the
27 pipeline, if a rescue had to be done, would you agree with me

1 that a rescue had to be done urgently if the men were to come
2 out alive?

3 A. Yes.

4 Q. In your view, in your opinion, you have a vast experience from
5 what I'm reading here, very distinguished experience, and you
6 had to advise what timeline there was for a rescue to take place,
7 what timeline would you have given—approximately what
8 timeline?

9 A. My timeline would be within the first five hours of the incident.

10 Q. Within the?

11 A. First five hours of the incident occurring.

12 Q. First five hours of the incident occurring.

13 **Examination By Mr. Chairman:**

14 Q. Did anyone ever ask you your opinion for a timeline as to
15 effecting a rescue?

16 A. No.

17 Q. What you've just told us now, just this minute, five hours or so,
18 was never asked of you either by any of the people who were
19 engaging you or the IMT?

20 A. No.

21 Q. Had they asked you, would you have told them what you told
22 us?

23 A. Well, I would have asked for more information first—

24 Q. I dare say you would have because you weren't being given
25 very much from what you said. But can I understand hither,
26 doing your best now, if you'd been asked, that is the sort of
27 timeline—you now know what the facts are. So would that

1 have been your timeline, the same as what you've just told Mr.
2 Maharaj?

3 A. Yes, and that would be on the outer limits.

4 Q. That would have been the outer limit?

5 A. Yes.

6 Q. Right. Just to take that as a sort of scale, imagine you had a
7 whiteboard and you divided that whiteboard into five separate
8 sections, hour one, hour two, hour three, hour four, hour five,
9 yes, beyond hour five, they're not going to be around, are they?
10 Not alive anyway or pretty unlikely? That would be your view?

11 A. Unlikely.

12 Q. Yeah. So if you got this five-hour window at the outside, as
13 you put it, you'd look to see what could be done in the first
14 hour, because that's their best chance, isn't it?

15 A. Yes.

16 Q. Then you'd look to see what—in the second hour, and so on, by
17 way of a scale, wouldn't you?

18 A. Yes.

19 Q. You now know, I anticipate, if you didn't then but now know,
20 that the incident itself happened at about 2.30-ish, 2.45, just say
21 between 2.30, 2.45—let's call it 2.45—and we know that Mr.
22 Boodram came out of the pipe about three hours later, perhaps,
23 5.30 maybe a little bit less than three hours later—

24 A. Yes.

25 Q. So two and a half hours, as a minimum, had already been used
26 up, as it were, not—in fairness to everybody—nobody had
27 appreciated that they were necessarily sucked into the pipe.

1 And you weren't consulted until pretty late on in the day. But
2 be that as it may, about two and a half hours had already
3 passed, so half of your time has already been used, isn't it?

4 A. Yes.

5 Q. Renewed hope, I imagine, for those who were seriously
6 interested in rescuing these men when Mr. Boodram comes out
7 of the pipe, because he's alive?

8 A. Yes.

9 Q. And he's made his own way out, hasn't he?

10 A. Yeah.

11 Q. So renewed hope, as I put it, that the remainder of the men in
12 the pipe might be rescued still even two and a half hours after
13 the initial incident, do you see?

14 A. Well, what they will be taking into consideration is that he
15 would have been using the resources within that period also.

16 Q. Yes, clearly, which may shorten your five-hour timeline, isn't
17 it, rather than extending it. Were you made aware of whether or
18 not there were any air pockets in this pipeline?

19 A. At that time, no.

20 Q. You subsequently heard that presumably?

21 A. Yeah.

22 Q. All right. But in any event, your outer limit timeline is five
23 hours; two and a half hours were before Mr. Boodram comes
24 out—half the time used up. And as you now know, he had used
25 some of the air that was available to those men, which left you
26 with a two and a half hour window at best. Correct?

27 A. Yes.

1 Q. Tell me this: In assessing the risk to you and/or any other diver
2 in going into that pipe to rescue those men, is the timeline a
3 critical factor?

4 A. Timeline is a factor, yes, for the personnel, but effecting a
5 rescue you have to consider the risk to the rescuer.

6 Q. No, I follow that. But as you told us, I think, in the summary,
7 one of the factors you were considering is later on when you
8 were looking at going into the—you were being asked about
9 entry into the pipe to remove a bottle?

10 A. Yes.

11 Q. An air bottle? That is a factor, isn't it?

12 A. Yes.

13 Q. Am I really going to risk a man to remove an air bottle? It must
14 be the question that you ask yourself, wasn't it?

15 A. Yes.

16 Q. That is different if you'd known, for example, if there was a
17 man there alive where that bottle was, you might say, well, it is
18 worth risking a man to save that man. But to save a bottle or to
19 move the bottle out the way, it's a different dynamic, isn't it?

20 A. Yes.

21 Q. Yes. All right. So, really, I suppose what I'm asking you is
22 this, is that as more time passes, so the value in risking
23 someone's life to go and effect a rescue diminishes, doesn't it?

24 A. Yes.

25 Q. Thank you.

26 **Mr. Chairman:** Thank you, Mr. Maharaj.

27 **Mr. Maharaj SC:** Much obliged.

1 **Mr. Chairman:** I think Mr. Wilson has a question.

2 **Examination By Commissioner Wilson:**

3 Q. Good morning, Mr. Seales.

4 A. Good morning.

5 Q. Just listening to you there, I would like to have your opinion,
6 and I guess get a little more clarification. You're basing the
7 five hours in and around of probable survival based on you
8 knew a diver came out, yeah, that somebody survived and came
9 out. But with your knowledge of Delta P, and that's what I
10 needed clear, with that violent event, are you able to put a
11 timeline of survivability once you were made aware of initial
12 incident; men going into the pipeline; your training and your
13 knowledge indicates Delta P.

14 A. Yeah.

15 Q. Your first thoughts about that, men going into a pipeline after
16 suffering Delta P, you would still apply a survivability window
17 with you a—

18 A. No.

19 **Commissioner Wilson:** Okay, thank you.

20 **Examination By Mr. Chairman:**

21 Q. Well, when you say, no, you mean longer?

22 A. Shorter.

23 Q. So having identified Delta P, that five-hour window may even
24 be less?

25 A. Yes—and the emergence of Mr. Boodram. So the fact that you
26 could have applied survivability was Mr. Boodram supposedly
27 coming out of the pipe.

1 Q. Right. So you got—thank you. So you got Mr. Boodram
2 coming out of the pipe. Did you know that he had told those
3 who rescued him from the pipe that the others were in the pipe
4 and alive?

5 A. No. At time of—until later on that night into the wee hours
6 of—

7 Q. Into the wee hours of Saturday morning?

8 A. Saturday morning, yeah, that's when I would have got the
9 information.

10 Q. That's when you first knew that. When did you first know that
11 he had said there were air pockets in the pipe?

12 A. Could have been around that same time.

13 Q. Same time. So you didn't discover that until the early hours of
14 Saturday morning?

15 A. Well, yes, late Friday night into Saturday morning.

16 Q. Late Friday night into Saturday. So well past your window?

17 A. Yes.

18 **Mr. Chairman:** Thank you.

19 Thank you, Mr. Maharaj.

20 **Continued Examination By Mr. Maharaj SC:**

21 Q. So it may have been implied, but on the Saturday morning or
22 during the Saturday morning period or during Saturday was the
23 first time you were asked your advice and sought help in
24 respect of the men in the pipe?

25 A. Yes.

26 **Mr. Chairman:** Is there a time on that, Mr. Maharaj?

27 **Continued Examination By Mr. Maharaj SC:**

1 Q. Around what time was that on Saturday morning?

2 A. It is approximately 12.15.

3 Q. Twelve-fifteen?

4 A. Approximately.

5 Q. And at that time that would have been way past what you have
6 just told us, having known the facts, that timeline of about five
7 hours?

8 A. Yes.

9 Q. I just want to ask you one more question which I would like to,
10 I think, might help us. You said in paragraph 1 you are the
11 client representative and diving operations supervisor of
12 Heritage. Correct?

13 A. Yes.

14 Q. What those functions entailed at Heritage?

15 A. Basically, I coordinate and supervise all diving operations and
16 ensure compliance to HPCL's requirements and industry best
17 practice. I have other non-diving specific functions also and
18 administrative duties.

19 Q. If I may ask you this: if you were the client representative of
20 Paria, would you have the same kind of functions?

21 A. Maybe.

22 **Mr. Maharaj SC:** Okay. No further questions.

23 **Mr. Chairman:** Who else would like to ask Mr. Seales any
24 questions? [*Hands raised*] Right. Ms. Alfonso, please, first.
25 Please introduce yourself?

26 **Ms. Alfonso:** Thank you, Mr. Chairman.

27 **Cross-Examination By Ms. Alfonso:**

1 Q. Good morning, Mr. Seales. My name is Nyree Alfonso. I
2 represent the interest of the SWWTU.

3 A. Good morning.

4 Q. I just have a few questions to ask you. Are you yourself, Mr.
5 Seales, a Dive Supervisor?

6 A. Yes, I am.

7 Q. Okay. Are you still an active diver?

8 A. No, I'm not.

9 Q. Okay. Right. As part of your commercial diving experience—
10 and I agree with my learned senior; very impressive
11 credentials—you would have received training with respect to
12 the—part of your course would have been the rescue of divers?

13 A. Yes, it is.

14 Q. Okay. And also diving into confined spaces?

15 A. Not specifically, no.

16 Q. Not specifically. But rescue?

17 A. Yes.

18 Q. Okay, thank you. Speaking of which, you would have said that,
19 um, you are the client representative for—at Heritage?

20 A. Yes, I am.

21 Q. Are you in charge of a—or part of a diving department, or unit,
22 or any of those things? Or is it just you yourself?

23 A. No, it's just me.

24 Q. Oh, I see. But in Petrotrin you were part of a division, unit,
25 department?

26 A. Yes, a department, a Diving Department.

27 Q. Department, I see. So with the closure of Petrotrin, that

1 department, I guess, went the same way as Petrotrin?

2 A. Yes.

3 Q. I see. Now, you've said in your witness statement you were
4 only in communication with OTSL and Mitchell's Professional
5 Diving Service. Yes?

6 A. Yes.

7 Q. Okay. And specifically, you were in contact with the two
8 diving supervisors of each of the companies?

9 A. Yes, I was.

10 Q. On the Gulf Stream Eagle was—is it Mr. Paul?

11 A. Yes, it was.

12 Q. Right. And from rather MPDS it was Mr. King?

13 A. Yes, it was.

14 Q. Okay. So what I see from your witness statement is by 8.20
15 you've communicated with OTSL and they tell you we already
16 on site?

17 A. Yes.

18 Q. And they were in the Gulf Stream Eagle, a diving vessel. Yes?

19 A. Yes.

20 Q. Okay. And did they tell you, Mr. Seales, that they were on
21 standby waiting for instructions?

22 A. Yes.

23 Q. Did Mr. King tell you something similar?

24 A. Yes.

25 Q. And shortly thereafter he would have told you the same thing?
26 We started at 8.20—

27 A. That would have been approximately 8.40.

1 Q. Okay, thank you. So 20 minutes later. Now, we already know
2 from the information you just gave, you got very late and
3 limited information with regard to Mr. Boodram emerging from
4 the pipe and the timing in which he came out of the pipe. Did
5 you pass that information on to Mr. King or Mr. Paul?

6 A. No, not immediately.

7 Q. Okay. Did you pass it on at all?

8 A. No. The conversation I would have had with Mr. Paul and Mr.
9 King would have been after the request was made for our
10 support.

11 Q. Okay. Sorry, I don't think I followed you there. So you do
12 speak to Mr. King and Mr. Paul, one at 8.10, one at—sorry,
13 8.20 and one at 8.40?

14 A. Yes.

15 Q. Okay. By that time by your evidence this morning, you did not
16 know that Mr. Boodram had come out of the pipe, because if I
17 follow it is about nine o'clock?

18 A. Right. So at this time there was no communication of the
19 details surrounding the incident to Mr. King or Mr. Paul,
20 because I was also unaware.

21 Q. Okay. That I understand. So subsequently when you—nobody
22 could ask you to relay information before you get it.

23 A. Yes.

24 Q. So when you did get the information, which I believe is around
25 nine o'clock that night, that Friday night, did you communicate
26 that to the two dive supervisors?

27 A. No, I can't recall we had that conversation.

1 Q. So as far as you know, you remained on standby whether on
2 land or on a vessel?

3 A. Yes.

4 Q. Okay. You yourself, Mr. Seales, using that terminology
5 “standby” indicate from about 11.30 you are also on standby?

6 A. Yes.

7 Q. Awaiting instructions. To be fair, from your witness
8 statement—

9 A. Yes.

10 Q. You’re awaiting instructions from somebody from Paria?

11 A. Yes.

12 Q. Right. Did you ever receive such instructions? You say you
13 were waiting for instructions. So you’re a diver, so I assume
14 you’re waiting for instructions with respect to diving?

15 A. Yes. So the request came at approximately after 12.15.

16 Q. Okay. So the first request you get—you reached the building
17 where the Incident Command Team is, you reached at 6.30?
18 Yes, around 6.30 you reached?

19 A. No, no.

20 Q. No?

21 A. 9.30.

22 Q. Oh, yes, I beg your pardon. You departed Heritage premises at
23 6.30?

24 A. Yes.

25 Q. And you say yes. I hate 24-hour time. So it’s at 8.20 you
26 reached to Paria’s administrative building, you say?

27 A. Yes.

1 Q. Right. So the first request—and you go up to this office, this
2 vacant office you say, and you await instructions?

3 A. Yes.

4 Q. And the first time that somebody makes a request of you—
5 forget instructions—the first time somebody makes a request of
6 you is after midnight?

7 A. Yes.

8 Q. During the course of the night, Mr. Seales, would you have
9 reached out to somebody called Dr. Glenn Cheddie? I hope I'm
10 getting his last name right.

11 A. I may have. I can't recall.

12 Q. Is he one of the people you reached out to for a remote camera,
13 an ROV?

14 A. No, it may have been an unofficial request.

15 Q. Sorry?

16 A. It may have been an unofficial request. So overhearing
17 conversations, I may have called him to ask him if he knows of
18 an available ROV.

19 Q. Okay. And you may have done so because you know him to
20 have that kind of equipment?

21 A. Yes.

22 Q. Okay. So you do recall speaking to Dr. Glenn Cheddie?

23 A. Yes.

24 Q. Okay. Did Mr. Cheddie give you any suggestions—you would
25 have told him what transpired, of course?

26 A. Yes.

27 Q. You're not asking—

1 A. Well, [*Inaudible*].

2 Q. Okay. You must have told him, look, I want this because I
3 think some men are down in a pipe, or something like that?

4 A. No. Well, actually he was aware of an incident.

5 Q. Oh, he was aware. He was aware of an incident?

6 A. Yes.

7 Q. Did Dr. Cheddie volunteer—he's a diver himself, yes?

8 A. Yes.

9 Q. He's an instructor?

10 A. Yes, he is.

11 Q. Right. And a supervisor as well?

12 A. Yes.

13 Q. Okay, so he's a dive instructor. Did he volunteer any
14 information, Mr. Seales, with regard to—because he knew of
15 the incident?

16 A. No.

17 Q. He didn't volunteer any—

18 A. No.

19 Q. Methodology? Approach?

20 A. No.

21 Q. Suggestion?

22 A. No.

23 Q. No. Okay, thank you for that. In this conversation you referred
24 to on Saturday in the wee hours of Saturday, Mr. Seales, in
25 Paria's Incident Command Centre, you were the only diver
26 present?

27 A. Yes, that I'm aware of.

1 Q. Okay. And, Mr. Seales, why is it if you are the only—okay. So
2 questions were being posed, a proposal was being put out
3 there—in here, paragraph 24 of your witness statement. You’re
4 right—if you could probably look at that?

5 A. Yes.

6 Q. So Mr. Piper was asking you something about could you send
7 your divers to do something?

8 A. Yes.

9 Q. To remove the tanks, right?

10 A. Yes.

11 Q. Now, you just said you are the only diver in Heritage. So this is
12 either Mitchell’s Diving or OTSL? When it says, “my divers”,
13 who did you think that was?

14 A. No, well, again, it had to be probably the resources available.

15 Q. Okay. But the only resources that you were in communication
16 with was OTSL and—

17 A. And Mitchell’s.

18 Q. And Mitchell’s, okay. And then you posed a number of
19 questions?

20 A. Yes.

21 Q. You don’t volunteer information or volunteer methodology
22 based on your considerable experience?

23 A. No.

24 Q. So you are the only diver there and you asked Mr. Piper how is
25 this going to be done; how is the diver going to be introduced
26 into the tank; whether he will have this kind of equipment or
27 that kind of equipment?

1 A. Yes.

2 Q. Okay.

3 A. No, but this is not for Mr. Piper *per se*. It's a matter of, these
4 are considerations when you are planning the activity.

5 Q. Okay. So you were posing these questions so that—

6 A. Just to have an appreciation for what the activity entails or will
7 entail.

8 Q. Okay. As the only diver present, Mr. Seales, you know, you
9 didn't think that you the person could put forward a plan?

10 A. No. At that time, no, because it was a request for assistance. I
11 had no divers available to me in terms of under my direct
12 command. We have dive supervisors who have their dive team.
13 So what I would have done is gather as much information that I
14 could have to communicate to them to form an intervention if
15 required.

16 Q. Okay. But did you do—using your own words, did you do
17 what you just said?

18 A. Yes. So we—

19 Q. You gathered information?

20 A. Yes. So the questions that I would have asked, which one of
21 them would have been how high is the riser above the deck. So
22 earlier the question would have been—well, they would have
23 said that the riser was 10 feet from the sea surface.

24 Q. Eight to 10 feet you say in your witness statement?

25 A. Right, but that wasn't. So the question I asked was to, again,
26 gather information and have an appreciation for the site itself.
27 And that eight to 10 feet, the question I asked was above the

1 deck of the structure. So it wasn't from the splash zone or the
2 sea level. It would have been from the deck. So you would
3 have had an additional interface from the deck now to the sea
4 surface. So in an addition to the eight to 10 feet, you would
5 also have an additional distance from the deck to the sea
6 surface.

7 Q. Okay. I understand why you were asking the questions.

8 A. So this is information now that I would have gathered too, so
9 when I'm communicating to OTSL and Mitchell, I could
10 inform them of site-specific information.

11 Q. So my question was, did you relay this information that you
12 solicited or elicited from these questions—

13 A. Yes.

14 Q. —that you posed to members of the ICT team, one presumes,
15 yes?

16 A. Yes.

17 Q. So you relayed that information, that's after midnight?

18 A. Yes, and we would have also conducted a site visit.

19 Q. I see. Who is "we", Mr. Seales?

20 A. OTSL and Mitchell's.

21 Q. I see.

22 Thank you very much, Mr. Seales. That's all, thank you.

23 **Mr. Chairman:** Mr. Ramadhar, we missed you yesterday.

24 **Mr. Ramadhar:** After Mr. Peterson indicated that no one
25 liked me, I'm delighted to hear that I was missed yesterday.
26 Thank you so much for that.

27 **Mr. Chairman:** He's misrepresenting the facts.

1 **Mr. Ramadhar:** I'm so grateful for that. Thank you so much.
2 And it's good to be back before you, Sir.

3 **Cross-Examination By Mr. Ramadhar:**

4 Q. Good morning, Mr. Seales.

5 A. Good morning.

6 Q. First of all, let me thank you for the efforts that you would have
7 made of your personal time and energies to do what you could
8 to assist. Yes?

9 A. Thanks, Sir.

10 Q. Now, to be fair, you were there in a capacity as a resource to
11 Paria and a resource for rescue or whatever else would have
12 been required?

13 A. Yes.

14 Q. Yes. Tell all of us, please, for a decision to be taken, what is
15 the most important thing you would require? Not information?

16 A. Yes.

17 Q. Yes. And you had a wealth of experience as a diver. Correct?

18 A. Yes.

19 Q. Yeah. No trick questions here. So relax yuhself, okay? I do
20 mean we are grateful to you. So you being the only diver in the
21 environment where decisions were to be made, questions were
22 posed, and so—now, I want to be clear. The first time you
23 learnt that there may have been live men in that pipe, remind us
24 what time were you given that information?

25 A. That will be between—after 10, midnight.

26 Q. After 10 to midnight?

27 A. Yes, Sir.

1 Q. Did you consider for a moment that there might have been a
2 need for rescuing persons when you left Heritage to come to
3 Paria?

4 A. I would have said—I will say yes, because an incident would
5 have occurred.

6 Q. Yes. But when you got there, no one who greeted you
7 informed you, first of all, as we've heard that you told us very
8 frontally, that Christopher Boodram had exited the pipe before
9 six o'clock that evening. Correct?

10 A. Yes.

11 Q. Had you been given the information upon your arrival—well,
12 did you consider that to be critically important information to
13 help you give advice?

14 A. Well, to be honest, I wasn't there in the capacity to give advice.
15 So the fact that it wasn't forthcoming initially—because as I
16 would have explained earlier, I entered into an active
17 emergency management system. So LMCS should have had
18 their emergency response plan effected.

19 Q. We get all of that, we got all that, and we're grateful, right?

20 A. Yes.

21 Q. But you as a human being first—

22 A. Yes.

23 Q. —knowing what you do today as you sit here, did you not—
24 would you not now, reflecting upon it, consider that that bit of
25 information to have been critical—

26 A. Yes.

27 Q. —to be shared among the team of resources assembled like The

1 Avengers?

2 A. Yes.

3 Q. Yes. Had you known that Christopher Boodram had exited
4 alive from the pipe at around that time, would you have acted
5 differently? In other words, your decision-making process,
6 whether they asked you to or not, would you not have
7 volunteered some suggestion, "Listen, I'm a diver. These are
8 the things we can or cannot do"?

9 A. Yes.

10 Q. Thank you. Now, it shocked me, and I'm going to ask the
11 question again because I want to give you an opportunity to
12 reflect whether your answer is correct. When was the first time
13 you learnt that there would have been live men in that pipe?

14 A. Between 10 and midnight.

15 Q. Do you, sitting as you are today, find it shocking that that
16 information wasn't given to you upon your arrival? I'm not
17 blaming you, right?

18 A. Yeah.

19 Q. Garbage in, garbage out, as we say.

20 A. No. Well, again, to be fair, I can't say that information was
21 available at that time. That was the impression I got.

22 Q. The impression you got. What was the impression you got?

23 A. In terms of life; proof of life.

24 Q. Proof of life. So you got no impression when you arrived that
25 there was even the need for proof of life within the pipe or the
26 surroundings? Is that accurate?

27 A. Yes.

1 Q. In fact, wasn't it more an environment of death and disaster
2 honestly?

3 A. An incident.

4 Q. Yes. Was there any anxiety that you would have observed from
5 anyone from Paria, Piper, whomever, to endeavour any rescue
6 into the pipe? Even if you were not told about men being alive,
7 did you—I mean, you're there, you're observing, and your
8 reputation precedes you, right, in terms you are not—you are a
9 great—you know, you observe, and you're very sharp. Did you
10 observe any anxiety or even a discussion for a rescue into the
11 pipe?

12 A. I would say yes.

13 Q. Good. Rescue what, the tanks?

14 A. No, I would say yes in terms of they were feverishly working to
15 gather information and resources.

16 Q. To what end? That's the point.

17 A. I can't say.

18 Q. You didn't know. But the first time you—they made an
19 enquiry of you was to retrieve or remove a blockage?

20 A. Yes.

21 Q. And as the Chairman put it, to retrieve a tank, yes?

22 A. Yes.

23 Q. Up to that time nobody is saying men had been alive; one came
24 out alive, and at the time that you may have been present, they
25 may still have been alive. Nobody hinted that to you?

26 A. No. Well, at that time, which would be approximately 12.15,
27 they were trying to ascertain?

1 Q. Ascertain what?

2 A. Information in terms of from inside the pipeline.

3 Q. About the tanks?

4 A. Well, I would not say the tanks, because—

5 Q. When—because remember you just told us—I'll repeat. What
6 is the time you first learned that men had been alive at the time
7 you were there before? When? Not after 12?

8 A. No, just before—what I'm saying, so between 10 and
9 midnight—so between 12 and that conversation—

10 Q. Yes.

11 A. —the request to remove the tanks was for the camera to go
12 further into the line.

13 Q. Excellent, excellent. And were you even informed as to the
14 purpose the cameras going in? Was it for the furtherance of
15 exercising a rescue of human beings?

16 A. Yes.

17 Q. Really?

18 A. Yes, I would assume that.

19 Q. No, no, I ain ask you about assume. What were you told?

20 A. No, I wasn't—I wasn't going to say; I wasn't told to say—

21 Q. Right, okay. So you were kept out of that information loop.
22 Correct?

23 A. Yes.

24 Q. Yes. And you were there to grant whatever assistance possible.
25 You are the trained diver. You are aware that divers have
26 found themselves in difficulties within a confine of a pipe
27 before? Not personally, you know, but you are a well-read man

1 and in part of your training you know that that is part of the
2 dangers of a diver going into water in a pipe-ridden area?

3 A. Well, I can't say so.

4 Q. Why can't you say so?

5 A. It's not a common practice.

6 Q. Not common. I ain ask you 'bout common. But is it out of the
7 realm of the possibility that divers in a pipeline environment
8 could find themselves in problems within a pipeline?

9 A. Yes.

10 Q. Thank you very much. Now, you are the first one to tell these
11 noble gentlemen of Paria that there may have been a Delta P
12 situation. Is that accurate?

13 A. I can't say.

14 Q. Okay. But you are the one who told them about it. You told
15 them?

16 A. Yes. So in my conversation, I can say yes.

17 Q. Yes, right. You are at Heritage. You're in the industry for
18 many years. Isn't it by definition pumping, isn't it the use of
19 Delta P, pressure differentials?

20 A. Yes.

21 Q. To move oil, to move water? Isn't that the business of
22 pumping?

23 A. Yes.

24 Q. Thank you. So it will be stunning that if anybody would
25 suggest that a Delta P situation would not have been a credible
26 risk for men who are diving within a chamber with a pipe,
27 wouldn't that be stunning to you that a Delta P was not a live,

1 and clear and present danger?

2 A. Yes.

3 Q. Thank you. Now, you know Mr. Piper for many, many years,
4 isn't it?

5 A. No.

6 Q. When did you first know Mr. Piper?

7 A. At 9.30.

8 Q. First time you're meeting him?

9 A. Yes.

10 Q. Right. But he was the Commander of the Incident Management
11 Team?

12 A. Yes.

13 Q. He was the boss as far as you were aware?

14 A. Yes.

15 Q. Yes. You appreciate divers, first of all, are not like normal
16 landlubbing people, right? They take risks daily into going into
17 an unnatural environment, meaning that you can't breathe under
18 water unless you have devices. Is that accurate?

19 A. Yes, it is.

20 Q. Yeah. And, therefore, you are trained, first of all, differently
21 from the average landbound human being. Correct?

22 A. Yes.

23 Q. Yeah. You appreciate that you are prepared in that—would I
24 call it a hostile environment, under water? Would you consider
25 that to be a hostile environment with dangers of crocodiles,
26 sharks, currents?

27 **Mr. Chairman:** I'm not sure where you swim.

1 **Mr. Ramadhar:** Close to where Mr. Peterson is.

2 **Continued Cross-Examination By Mr. Ramadhar:**

3 Q. Yes. There are dangers there, inherently. Correct?

4 A. Yes.

5 Q. And, therefore, you are prepared to meet in that hostile
6 environment, challenges that may be not readily foreseeable.

7 Correct?

8 A. Yes.

9 Q. Yeah. Now, going into a pipe that may have oil, may have
10 water, and not the largest of pipes, a 30-inch diameter is
11 something that is doable, isn't it?

12 A. I would say no.

13 Q. No?

14 A. No.

15 Q. You have never gone into a confined space in all your years as
16 part of your practice or training?

17 A. Not a 30-inch pipeline.

18 Q. Okay. What's the largest you went into—or the smallest,
19 sorry?

20 A. No. Again, I never went into a pipeline.

21 Q. There you go. But you do know that it is not just possible but it
22 happens from time to time?

23 A. With careful consideration.

24 Q. And proper equipment?

25 A. And proper equipment.

26 Q. Yes. At the time you were at the scene, you observed
27 equipment, diving equipment, to be clear?

1 A. No. So the only equipment I would be aware of would be
2 Mitchell's and OTSL.

3 Q. Right. What time did you first go to the scene of the incident?

4 A. Berth 6, would have been—maybe around, I think, could be
5 around one.

6 Q. One o'clock, 1.00 a.m.?

7 A. On Saturday, yeah.

8 Q. Anything prevented you from going before—before one?

9 A. I would say, yes, because of, again, I entered into an active
10 system. So I wasn't free to do what I want.

11 Q. No, of course, of course. You're basically a pawn where
12 wherever they ask you to go, you go?

13 A. Yes.

14 Q. Whatever they ask you to do, you would do. That's why we're
15 grateful to you. But having gone there at this time, one o'clock
16 in the morning, you saw diving equipment?

17 A. No. Well, the diving equipment, again, that I would have seen
18 would have been on the Gulf Stream Eagle.

19 Q. Right. So let's get it clear now. To go into a confined space,
20 you certainly would need oxygen supply. Correct?

21 A. Yeah.

22 Q. Tell all of us here, what is the technology that is available and
23 was available in Trinidad and Tobago on the 25th February,
24 2021, to supply oxygen to a diver, apart from tanks?

25 A. Air. No, you're saying oxygen, right. So, air.

26 Q. Sorry, sorry, because you can't give 100 per cent, of course. I
27 appreciate that.

1 A. The equipment that available to—

2 Q. In Trinidad and Tobago or from your knowledge, what would
3 be used to supply air to a diver not using tanks under water?

4 A. Compressors.

5 Q. Right, compressors and a hose?

6 A. Yeah, umbilicals.

7 Q. Umbilicals?

8 A. Yeah.

9 Q. And you, of course, knew that that was readily available that
10 night?

11 A. Yes.

12 Q. Yeah. And as a trained diver there is a language of distress. I
13 don't know the terms, so you'll help me. When a diver is in
14 trouble and he's being tendered, how does he respond to let
15 those who are tendering him know that he has a problem?

16 A. No, you have communication, you have line pull signals.

17 Q. Sorry?

18 A. You have communication and line pull signals.

19 Q. Communication meaning electronic communication. Correct?

20 A. Yes, that's audio.

21 Q. And that part of the umbilical?

22 A. Yes, it is.

23 Q. Yeah. And also the oldest of technology is ah ol' rope, right?

24 A. Yes, and you could signal on the umbilical.

25 Q. Yeah, you could signal on the umbilical?

26 A. Yes.

27 Q. But also on a rope. Tell us if you're in problem, show us now,

1 because we want to learn. Right? If you are in severe danger
2 and you need assistance using the rope—forget the umbilical
3 and the technology of the electronics, tell us the oldest simplest
4 form of communicating that you have a problem and you
5 require assistance?

6 A. Yeah, line pull signals.

7 Q. Show us.

8 A. You tug on the line and there's a specific number of pulls—

9 Q. How many pulls?

10 A. It varies from department—from contractors.

11 Q. Okay. But you know when yuh gehing pull—

12 A. So they establish—yeah. So each pull have different—

13 Q. And what is the response when yuh geh dah pull being the
14 tenderer?

15 A. The tenderer would acknowledge the pull signals.

16 Q. And then what?

17 A. Retrieve the diver.

18 Q. Eh?

19 A. Attempt to retrieve the diver.

20 Q. And how is that done?

21 A. By pulling on the—

22 Q. Simple ol' technology, pull the rope, right? If they in difficulty
23 and they can't help themselves?

24 A. Well, it's depending on the circumstances.

25 Q. Of course; we know. But if after the four pulls you lose
26 communication as an example, what's the natural thing you do?

27 A. The—

1 Q. Tell us for the record. Tell us. It's not a trick question, brother.

2 Tell us, simple things. What do you do?

3 A. You recover.

4 Q. What does that mean?

5 A. No, you pull the—

6 Q. You pull them out. Correct?

7 A. Yeah.

8 Q. So that if a diver wish to go into this dangerous environment,

9 and I say that openly, of a 30-inch pipe, right, with some level

10 of blockage, a tank and some other things, maybe chains and

11 pulleys or whatever, and he finds himself in difficulty, could he

12 not be easily retrieved by the old pull method?

13 A. Not in this circumstance.

14 Q. Why not in this circumstance?

15 A. Because of the diameter of the pipeline. You also will be

16 working around a bend.

17 Q. Yes.

18 A. Now, there are certain requirements for certain activities. The

19 fact that he'll be working around a bend, he will require in-

20 water tender.

21 Q. A what?

22 A. Ah in-water tender.

23 Q. Right.

24 A. So that will be a person at the bend.

25 Q. Beautiful.

26 A. Because the fact that you have that turn, that tube turn—

27 Q. It may interfere with the communication?

1 A. You get that signal, you might not feel the signal, one, and two,
2 in trying to retrieve the diver, you may not be able to pull him
3 out of the pipe.

4 Q. I appreciate that. But did you—sitting as you are today, the 6th
5 January, important day in the United States—the 6th January,
6 2023, you are aware that Michael Kurban actually went in
7 beyond the bend, isn't it?

8 A. I would have heard that.

9 Q. Yes. So it was possible. And he came back out alive and well.
10 Well, I shouldn't say "well" because he lost his dad. But he
11 came back out alive. Correct? You know that?

12 A. I would have heard that.

13 Q. Yes. So it was not impossible. You agree?

14 A. I can't say.

15 Q. We're doing well, you know.

16 A. Yeah, yeah.

17 Q. I want you to say.

18 A. Nah, I can't say. I'm being honest, I can't say because I would
19 have heard. So I can't say exactly what was done. So I would
20 have heard.

21 Q. Right, okay. But you had no reason to doubt that? Whether
22 you have reason or not, the fact is, this is the evidence.

23 A. Yes.

24 Q. Okay. So you know now, assuming that to be correct, that it
25 was possible. Yes?

26 A. Okay.

27 Q. Yeah. Now, let's go a little further. A diver who has the

1 umbilical, meaning you have air supply, electronic
2 communication, and out of an abundance of caution a
3 secondary umbilical cord, ah ol' rope. Right? And that diver
4 goes in and encounters oil, as an example, and for whatever
5 reason, believes that, you know, it's too hazardous to move
6 forward. What would you—you as a diver, what would you
7 do?

8 A. Retreat.

9 Q. Retreat. Yeah. Are you aware at any time that whilst you were
10 there within the confines of the likelihood of life and before it
11 should be extinguished—I think you told us, is it five hours he
12 said? Five hours, yeah, that any effort was made by any of the
13 resources provided by Paria, by Heritage, or so, or any of the
14 dive companies to enter to effort a rescue?

15 A. Repeat the question, sorry?

16 Q. Of course. I know it's kind of long but it's simple when you
17 hear it again. Whilst you were there, did you become aware of
18 any effort by anybody provided by the resources of Paria or
19 Heritage to enter that pipe to try to rescue human life?

20 A. No.

21 Q. No. I understand there's a brotherhood within the diving
22 community. Correct?

23 A. Yes, there is.

24 Q. Yeah. You don't have to know somebody, but once they know
25 it's a brother diver, there's a heightened anxiety to ensure their
26 safety and wellbeing, isn't it?

27 A. Yes.

1 Q. The old golden rule from which that comes: Do unto others as
2 they have him do unto you. Correct?

3 A. Yes.

4 Q. You understand that? That is one of the most important rules
5 for life, for children to grow up with. Yes?

6 A. Yes.

7 Q. Yeah. Do you think, looking back on all you know today that
8 men were alive in that pipe up till 6.00—one came out alive and
9 indicated that there were others alive there—first of all, that it is
10 fair to those who perished that that information not be shared
11 with all those who could have helped?

12 A. Yes.

13 Q. Do you think it was fair to the divers who were alive that no
14 effort was made when we had the technology, the ol' rope, the
15 umbilical, and persons who were willing to go in, that such
16 persons were prevented from making an effort to save their
17 lives? Do you think that's fair?

18 A. I can't say.

19 Q. No, well, listen. Let me help you. Maybe you don't know.
20 There was a professional diver who knew all the risks. He
21 came and he gave evidence, and was willing, knowing all that
22 he did, to go in to rescue. Do you know that?

23 A. No.

24 Q. No? Nobody tell you that even. Isn't it? Because the time you
25 were there until you found out after the expiration or the
26 extinguishment of life, you didn't know that there were live
27 persons to be saved, isn't it?

1 A. No.

2 Q. No. And as a brother in the diving fraternity, do you think that
3 is right that they should be left to die with no effort made to
4 rescue them?

5 A. I can't say. I wouldn't say that's a fair statement.

6 Q. Oh, I am being unfair in the statement?

7 A. Sorry, no.

8 Q. I'm not understanding you. What is unfair about that?

9 A. No, you're saying to leave them to die.

10 Q. Yes, they were left to die, because no rescue was effected.
11 They made no effort to rescue them?

12 **Mr. Chairman:** Can you just pause for a minute, because I'm
13 struggling to hear with the noise going on outside? Just pause.

14 [*Sounds of sirens outside*]

15 **Mr. Ramadhar:** It is alarming evidence also.

16 **Mr. Chairman:** Never a lost opportunity, eh, Mr. Ramadhar.
17 All right.

18 **Mr. Ramadhar:** I missed you, Sir.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 Q. So—

21 **Mr. Ramadhar:** What was that question?

22 **Mr. Chairman:** While you are taking a break—

23 **Examination By Mr. Chairman:**

24 Q. Can I ask you a question? From what you were saying to Mr.
25 Ramadhar about the possibility of a rescue, do I understand you
26 to say that in your estimation whilst it might have been
27 possible, it was necessary for someone to go into the pipe to the

1 bend, and if he was going to go beyond the bend to have
2 another diver at the bend?

3 A. Yes.

4 Q. So in effect, you are putting two divers in the pipe?

5 A. Yes.

6 Q. Would that have anything to do with partly because of the
7 existence of the bend, obviously, and the tighter the bend, if it's
8 a right angle as opposed to a much softer type of bend, it makes
9 it more imperative, I imagine.

10 A. So recommended practice—

11 Q. Yes.

12 A. It's a diver around a bend, it is a penetration dive.

13 Q. Right.

14 A. The fact that that diver is going to make that bend, you lose the
15 opportunity to recover or retrieve in the event of an emergency,
16 one. Two, if he requires signalling, that bend would restrict the
17 ability to even use the line pull signals.

18 Q. So when you were raising these questions, when you were
19 finally being asked to provide your input in relation to the
20 retrieval of a tank, you raising a number of questions yourself
21 within those who were asking you, this would have been one of
22 the considerations that you would have had in mind—

23 A. Yes.

24 Q. —as to how you might ameliorate those risks?

25 A. Yes.

26 Q. Mitigate them. So assuming for a moment Mr. Ramadhar's
27 suggestion that there were willing divers prepared to undertake

1 that task, one to go down to the bend and then beyond and one
2 at the bend, would that facilitate, do you think, a diver being
3 able to go in headfirst, the front one, and the one at the bend
4 feet first, so as to make sure the extraction of diver who went in
5 headfirst could come out at the bend if there was a problem,
6 because otherwise I anticipate a 30-inch pipe if you're just
7 pulling someone out if there's some distress or you're not
8 getting any response and you have to just pull them out, their
9 legs could get in the way at the bend, couldn't it?

10 A. Right. So there'll also be the challenge of inserting a diver
11 headfirst.

12 Q. Sorry?

13 A. Inserting a diver headfirst—

14 Q. Yes.

15 A. There's a risk associated with that also.

16 Q. Exactly, yes. But by the same token, putting him in feet first
17 wouldn't particularly assist in trying to rescue the very divers
18 you're trying to get?

19 A. Exactly.

20 Q. So one way of meeting the difficulty of deciding whether they
21 should go in headfirst or feet first, would be to have one go in
22 headfirst, first, and the second man at the bend feet first.
23 Would that ameliorate the risk?

24 A. No.

25 Q. It's still a risk?

26 A. Yes, because, again, the fact of introducing somebody headfirst,
27 right, now, again, initially, we'd have established that the riser

1 is approximately 10 feet above the deck.

2 Q. Above the deck?

3 A. Yes.

4 Q. So you were told at midnight, or thereabouts, that the riser is
5 now 10 feet above the deck on the berth?

6 A. Right. So when we went to the berth, the opening of the
7 habitat—so the riser is within the habitat, so you'd have to
8 lower a diver from 10 feet above the deck. This is an air—

9 Q. Sorry, I just need to understand what you're saying. Are you
10 saying that the diver couldn't enter the pipe inside the habitat?

11 A. No.

12 Q. How did the diver come out?

13 A. No, that's what I'm saying. So there are different times. So—

14 Q. So by now—

15 A. Right. So the time that I'm aware of what was available would
16 be a riser above surface.

17 Q. Right. You mean the habitat being removed?

18 A. No, the habitat is still there and the riser is within the habitat,
19 and the habitat ends at approximately 10 feet—eight to 10 feet,
20 which is I was told, above the deck.

21 Q. Right.

22 A. So you are going to introduce a diver in an airspace, so you are
23 going to suspended a diver.

24 Q. Right.

25 A. So the diver could pass out.

26 Q. So that I understand it—Someone, perhaps, remind me when
27 the riser was added? [*Crosstalk*] About 10.00 p.m. that night.

1 Thank you. So by the time you were being consulted on this,
2 they'd already added this riser?

3 A. Yes.

4 Q. Were you aware of the fact that up until about ten o'clock you
5 could have accessed the pipe by going up into the habitat and
6 into the pipe—a little lower than the level, but, I mean, it was
7 within the habitat, because Mr. Boodram came out that way.

8 A. Yeah.

9 Q. It's only by about ten o'clock, I'm reminded, about ten o'clock
10 this new riser had been fitted to make it a lot longer so that it
11 came above the surface of the sea. And I get what you're
12 saying now. So in effectively, you're now suspending a diver
13 all the way down the pipe before he even hits any fluid?

14 A. Right. So you have 10 feet, approximately. Then you have
15 from the deck to the sea surface which may be what we would
16 have observed to be about five feet or more.

17 Q. Right.

18 A. Then you may not have fluid until below where the riser was
19 reattached, the flange, which is another 15 feet.

20 Q. So it's a long way to—

21 A. So you're looking at suspending a diver headfirst
22 approximately 30 feet.

23 Q. Yes, a pretty unenviable position, yeah.

24 A. Yeah.

25 Q. So, actually, adding the riser made it more difficult, not less
26 difficult, to go in headfirst, certainly?

27 A. Yeah.

1 Q. I mean, obviously, it would be much more efficacious, much
2 more practical to have someone going in headfirst if he's going
3 to try and rescue someone?

4 A. Yes, practically.

5 Q. Because feet first, it's very difficult to do anything once you hit
6 somebody?

7 A. Yeah.

8 Q. But in order to mitigate the going in headfirst, you'd need
9 someone, as a bare minimum, at that bend.

10 A. Headfirst or foot first. So despite which direction you enter the
11 tube, the pipeline, you need a tender—you need ah in-water
12 tender.

13 Q. Right. For the moment let's ignore the fitting of this additional
14 riser. Okay?

15 A. Yeah.

16 Q. Imagine we're just inside the habitat, so that you can—I
17 wouldn't say hop into, but you know what I mean, climb into
18 the pipe relatively easily, unlike being suspended by a chain
19 through maybe 30 feet of pipe. I mean, there's a difference,
20 obviously. But if I said to you at the time before this riser was
21 put on, what we're planning to do is put one diver in headfirst
22 within the habitat and the second diver in feet first; first diver
23 goes in the horizontal; the second diver stays at the bend, would
24 that meet some of the concerns that you might have?

25 A. No. Again, so headfirst will still be a challenge.

26 Q. Still a challenge?

27 A. Yeah, because you have to climb—

1 Q. So you would say don't go—

2 A. Don't go headfirst.

3 Q. Go in feet first?

4 A. Yes.

5 Q. Whatever you're going to do, do it feet first?

6 A. Feet first, yes.

7 Q. All right. So working on that premise, I mean, I'm just using
8 your skills now in the same way that perhaps the IMT might
9 have done. But let's just consider it for a moment. If you
10 went—I'm testing you as a diving expert. You're saying, okay,
11 you can't go in headfirst, you got to go in feet first. So feet
12 first, one diver goes in feet first with the appropriate equipment,
13 which I understand to be an umbilical cord, proper helmet of
14 some kind, communications, both electronic and the old style as
15 Mr. Ramadhar's, pulling a bit of rope; he has both of those—
16 going in feet first; lights, that sort of thing, yes?

17 A. Yes.

18 Q. So he's the first diver. The second diver went exactly the
19 same?

20 A. Yeah.

21 Q. He stays at the bend. You could presumably even see him
22 down there, 30 feet down?

23 A. No.

24 Q. Well, the water was clear we're told?

25 A. No, but I think the depth was approximately 50 to 60 feet.

26 Q. It is, yes, but there wasn't that much water in it?

27 A. Oh, no, but the bend that we're referring to is the tube turn, so

1 this is at the seabed. And this may even be below the mud line.

2 Q. All right. Well, either way he'd have torch and he'd see the
3 light presumably?

4 A. Not necessarily.

5 Q. Would he not?

6 A. No.

7 Q. All right. Well, I only asked because occasionally I've done a
8 little bit once or twice been diving myself and used a torch, and
9 it does shine quite a long way. But never mind. Be that as it
10 may, both divers are now in.

11 A. Yeah.

12 Q. They've both got communications, both old style and new style,
13 all right?

14 A. Yeah. And we're referring to entering where? At the habitat?

15 Q. Yes, entering through the habitat.

16 A. Right. So you'll need another tender.

17 Q. Oh, you need people in the habitat?

18 A. Another—no. You need another in-water tender, because that's
19 another bend.

20 Q. No, it's not.

21 A. So it's more complex.

22 Q. It's straight down.

23 A. Oh, no.

24 Q. In the habitat the pipe is open like this. It goes straight down.

25 A. Yeah. But to enter the habitat you'll have to pass on the outside
26 of the habitat, enter between the habitat and the riser and then
27 go back down.

1 Q. You mean the umbilical cord?

2 A. Yeah.

3 Q. Right.

4 A. So it actually have more turns now.

5 Q. They have to go two times, yes, to back up on to the surface.

6 A. One, two, three, yeah. So you'll actually have a bend at the
7 bottom of the habitat, another bend at the flange, and then
8 another bend at the tube turn.

9 Q. Like an S bend, yeah?

10 A. Yeah.

11 Q. So you'd have to have men stationed there making sure that—

12 A. And these men would be divers.

13 Q. One would have to be in the water all the time?

14 A. Yeah.

15 Q. One would be in the habitat. So that's the kind of plan you
16 would be looking at?

17 A. Yes.

18 Q. Right. What you're identifying to me is—what you're saying
19 to me is, look, this is all possible but this is what you need?

20 A. Yes.

21 Q. You need a man in the water outside the habitat; you need a
22 man inside the habitat to ensure the cable is going in; another
23 man at the bend; you need one in the pipe to go along to effect
24 the rescue; they've got to go feet first. All of these things are
25 things that you're identifying for us as a possible way that you
26 might rescue these men?

27 A. Considerations.

1 Q. So what you're saying is, is that it's not impossible to do but it
2 is difficult to do?

3 A. Yes.

4 Q. And you need the appropriate number of divers or personnel
5 who can be relied upon to carry out that task and a willingness
6 to do so?

7 A. Yes. And I notice we keep using the word divers, right, but it's
8 a team. And the supervisor of the dive is the person who would
9 be responsible for—so it's not a matter of willingness of a
10 diver. It's a matter of the person responsible for the dive
11 ultimately.

12 Q. So he has to take the responsibility?

13 A. Yes. So you have to have some—

14 Q. But when I say willingness, I mean no one would order
15 someone to go into the pipe.

16 A. Yes.

17 Q. It would have to be voluntary.

18 A. Yes.

19 Q. That's what I mean by willingness, if you follow what I mean.
20 I don't anticipate anybody would seek to force another to go
21 into the pipe in these circumstances. You would have to have
22 somebody say, "I am prepared to do it."

23 A. Yes.

24 Q. And, of course, a supervisor who's prepared to take the risk of
25 letting him do it.

26 A. Yes.

27 Q. And the responsibility.

1 A. Yes.

2 Q. Thank you. All right. Well, that's very helpful. That
3 conversation that we've just had about the possibilities or the
4 ways it might be effected was never conducted with you, was
5 it?

6 A. No.

7 Q. Nobody at the IMT or even outside the IMT discussed with you
8 those possibilities or those potential ways in which it might
9 have been achieved?

10 A. No.

11 Q. Do you know a Mr. Beddoe?

12 A. Not personally.

13 Q. You know of him?

14 A. Yes, I know his name.

15 Q. Do you know him to be an experienced diver?

16 A. I've heard his name, but I've never encountered him.

17 **Mr. Chairman:** Well, I can't ask you that. All right. Thank
18 you very much.

19 Well, I'm sorry for that interruption, Mr. Ramadhar. I
20 think you've managed to regain your thoughts as to what the
21 question was.

22 **Mr. Ramadhar:** I may have lost some, but I'm most grateful,
23 My Lord—Chairman. Thank you very much.

24 **Commissioner Wilson:** Mr. Ramadhar, just excuse, I just
25 wanted to take up from where the Chairman went.

26 **Examination By Commissioner Wilson:**

27 Q. Listening to the timeline. They said the contractor divers got

1 there at about 8.40, call it nine o'clock—8.40, nine o'clock—
2 and they were standing by whether it was an instruction or not?
3 So where I'm going with it is coming out of the whole room is
4 the site visit. So as to your awareness—because you've
5 mentioned the site visit—the site visit took place after the riser
6 was installed or when the contractors arrived? They did
7 conduct a site visit, and what did that site visit bring back or
8 what was reported from the site visit?

9 A. Well, I'll say no. I'm unaware of what—OTSL would have
10 been at Berth 6. I'm unaware if any personnel from OTSL
11 group went and view the chamber—

12 Q. Yeah, so it was just arrive and standby, then probably—

13 A. Arrive and standby, yes. The only official site visit that was
14 conducted would have been approximately one.

15 Q. So that's after the riser was installed?

16 A. Yes.

17 **Commissioner Wilson:** Thank you.

18 **Mr. Chairman:** Right. Mr. Ramadhar. Thank you.

19 **Mr. Ramadhar:** Thank you very much. Very helpful to me,
20 the questions from both Chairman and Commissioner.

21 **Continued Cross-Examination By Mr. Ramadhar:**

22 Q. Now, of course, we appreciate that this was no bed of roses
23 environment, right?

24 A. Yeah.

25 Q. We didn't have perfect circumstances. You agree with that?

26 A. Yes.

27 Q. You're aware that there are difficult rescues done throughout

1 the world and one of the most famous now, even on Netflix, is
2 the rescue of many persons from the Thai caves. You know
3 about that?

4 A. Yes.

5 Q. Where divers were used. Correct?

6 A. Yes.

7 Q. And in such claustrophobic environment that some of the
8 persons rescued had to be sedated in that environment to bring
9 them out, isn't it? You know that?

10 A. Yes.

11 Q. Good. So appreciating, no bed of roses, things are not going to
12 be easy as you have already answered to us, a rescue was
13 possible. Correct? Difficult but possible. Correct?

14 A. Yes.

15 Q. And you've given us—and we're grateful for your efforts. So
16 you required a longer umbilical to make all the turns. Correct?

17 A. Yes.

18 Q. You know an umbilical could be added to?

19 A. Not while online. But—and, again, the length—so—

20 Q. Did you know how much length of umbilical was available that
21 night?

22 A. No.

23 Q. I want to tell you now, and I could be proven wrong, but least a
24 thousand feet of umbilical. You're in no position, of course, to
25 deny that. No? You know the length of rope that was available
26 that night?

27 A. No.

1 Q. Several thousand feet of rope. You had several set of resources
2 coming in. You knew full well that there were several divers
3 available and several teams—thank you for that—several
4 teams. Correct?

5 A. Yes.

6 Q. Are you aware as you are sitting here today whether any of the
7 other dive teams knew that persons were alive in that line
8 before 12.00 or 12.50 a.m.?

9 A. I can't say.

10 Q. You can't say. And as the Chairman so poignantly referenced
11 earlier there's a fundamental difference in going in to save an
12 old air tank to saving a human life, a brother. Correct?

13 A. Yes.

14 Q. And you have to be a little bit crazy to go and risk your life and
15 go through all that with several turns and umbilicals to go and
16 pull out an old tank. You agree with that?

17 A. Yes.

18 Q. But it's not crazy to go in with all of those complications to
19 save a human life, isn't it?

20 A. Yes.

21 Q. If it were to happen to you, what would you expect? That they
22 will do all things that were possible to save your life? I don't
23 mean to get personnel but it's important, because we're dealing
24 with human judgment here.

25 A. No, well, seeing that you make it personal, honestly, no.

26 Q. No, what?

27 A. I would not expect it.

1 Q. Because of the people you deal with?

2 A. No. I'm at peace.

3 Q. You don't expect if you are in a position where you will die
4 within that time frame—

5 **Mr. Chairman:** Just a minute. You've asked him and you've
6 got your answer.

7 **Mr. Seales:** No, Sir. So I can explain?

8 **Continued Cross-Examination By Mr. Ramadhar:**

9 Q. No, wait, wait, wait, we'll jump to that.

10 A. I'm at peace, Sir.

11 Q. I just want to be clear I got your answer. You being stuck in a
12 pipe, right, knowing all that you do that in a period of time you
13 will die. You wouldn't want every possible opportunity be
14 taken to save your own life?

15 A. Not at the risk of other lives.

16 Q. You still working with Heritage?

17 A. I am at Heritage, yes.

18 Q. Yes, of course. And Paria is a sister company, part and parcel
19 of the same management, isn't it?

20 A. I believe so, yes.

21 Q. Yeah. So you would prefer to die rather than a risk, not the
22 certainty of death of the rescuer, right; there's no certainty of
23 death of the rescuer. Remember you told us a rescuer, if he's in
24 problem he could be pulled back out. You appreciate that?

25 A. Yes.

26 Q. And you are willing to die so that this fella wouldn't get his
27 foot wet with oil?

1 A. Sir, uh—

2 Q. Eh, what? Be honest here you know.

3 A. No, Sir, I am; I am being honest.

4 Q. Oh, well, wow.

5 A. So what I'm saying, I would not want anybody to put their lives
6 at risk. I'm at peace. So if I'm in that situation I would not
7 expect anyone or want anyone to risk their lives to save my
8 own. I'm at peace. If the shoe was on the other foot, I would
9 enter. I will make the attempt as an individual because I'm
10 accountable for my life.

11 Q. There you go.

12 A. So it's a decision that I would make for me.

13 Q. Thank you.

14 A. But I would not make a decision for someone else's.

15 Q. Nobody give you that godlike authority, you know. As the
16 Chairman rightly put it, nobody could instruct anybody to come
17 and save you. What's your name? Mr. Seales stick in a pipe;
18 go down there, risk your life and go and get him. Nobody
19 could do that. But you, Mr. Seales, knowing that it's possible
20 and you know the technology, you have the assets, you have the
21 equipment, you have the capacity, and the capability, and the
22 willingness, somebody say I want to go and save meh lovely
23 friend, Mr. Seales, you will say "Don't come; I'm going to die;
24 I'm willing to die"?

25 A. No, I won't tell them that. I can't; I'm stuck in the pipe.

26 [Laughter]

27 Q. Of course. So you think Mr. Kurban—exactly the point. In

1 your mind being stuck in the pipe and in a mindset, being stuck
2 in the pipe—when you say stuck, you mean physically they
3 couldn't move? Did you understand that? That they were
4 immobilized?

5 A. Okay, no.

6 Q. No. So they were not really stuck, but they were contained
7 within the pipe. You agree with that?

8 A. Yes.

9 Q. And all they required was for somebody to come and get them.
10 Isn't it? Eh?

11 A. Okay.

12 Q. Not okay, we talking life and death here. Four men died with
13 children, brothers and sisters.

14 **Mr. Chairman:** All right.

15 **Mr. Peterson SC:** Calm down.

16 **Mr. Ramadhar:** No, no, there's a—I'm on to another issue
17 here.

18 **Continued Cross-Examination By Mr. Ramadhar:**

19 Q. Because you, Sir, are a family man, isn't it?

20 A. Yes.

21 Q. Yes. You would want your family to endure your death—

22 **Mr. Chairman:** I'm going to stop this, Mr. Ramadhar.

23 **Mr. Ramadhar:** I beg your pardon. I will stop, I will stop. I
24 am well contained, Mr. Peterson.

25 **Mr. Peterson SC:** You are counsel.

26 **Mr. Ramadhar:** Yes, I am counsel for human beings.

27 **Continued Cross-Examination By Mr. Ramadhar:**

1 Q. Now, Sir, appreciating, as you have already told us, that this
2 thing was possible, right, as a diver, as the Chairman so well
3 and clearly put, time was of the ultimate essence, not just of the
4 essence. You agree with that?

5 A. Yes.

6 Q. Air running out. Correct?

7 A. Yes.

8 Q. Now, to be fair to you, you didn't know that there were live
9 men in there until after 12.00, very likely by which time, from
10 your calculations, they would have perished by then. Correct?

11 A. Unlikely.

12 Q. Yes?

13 A. Yeah, their survival would have been unlikely.

14 Q. Unlikely. When you got to Paria, isn't that the essence you
15 got? That, listen, them fellas gone already?

16 A. No.

17 Q. Did you even know how many persons were involved in this
18 incident?

19 A. No.

20 Q. You weren't interested to find out if it's one or 10?

21 A. Yeah.

22 Q. Right. So did you make an enquiry? Because you are coming
23 there to not just observe like a kunumunu, but to listen and to
24 advise if it's possible. Right?

25 A. Yeah.

26 Q. Did you not enquire how many persons were involved in this
27 incident that you knew right away was a Delta P?

1 A. No, I did not get a number.

2 Q. Eh?

3 A. No.

4 Q. Having not been given it, did you make any enquiry as a normal
5 Trinidadian? Forget you're a diver working for Heritage. You
6 weren't interested?

7 A. Yes.

8 Q. I'm only hearing they're muttering about we're going to eight
9 o'clock. You will not be going to eight o'clock, because they
10 go dead, according to you, by eight o'clock. Did you make any
11 enquiry, and the answer is no, as to how many?

12 A. Um-hmm.

13 Q. Come on, man, we don't want to wait till eight o'clock?

14 A. No.

15 Q. No. Sir, you know the word courage?

16 A. Yes.

17 Q. What is courage?

18 A. Bravery; willing to take risk.

19 Q. Um-hmm. Knowing what you do, knowing that there are
20 dangers you're still willing to do it?

21 A. Yes.

22 Q. And certainly for a worthwhile effort. Correct?

23 A. Yes.

24 Q. There are people who courageously do stupidity. You agree
25 with that?

26 A. Yes.

27 Q. And there are those who have courage to save lives?

1 A. Yes.

2 Q. Like every policeman every day put their lives on the line for
3 us. You appreciate that?

4 A. Yes.

5 Q. Every firearm, yes?

6 A. Yes.

7 Q. Every EMT ambulance driver, and so; all the first responders,
8 the doctors, the nurses, they put their lives on the line for us
9 every day. Correct?

10 A. Yes.

11 Q. You appreciate now, sitting as you are today, 6th January,
12 2023, men in a pipe with certainly limited air and in your mind
13 now reflecting five hours until they perish, extinguished lives,
14 that not making any effort to rescue them, or, in fact, they not
15 being rescued during that period, will lead to what?

16 A. Death.

17 Q. Eh? Lead to?

18 A. Death.

19 Q. Yes. Not a quiz that you don't know. Yes, certain death, isn't
20 it?

21 A. Yes.

22 Q. And a decision, not you, once again not your decision because
23 you were kept out of important information and had you known
24 these other things, your information would have helped you to
25 say, "Aye, aye, aye, fellas, we have to go and save these men",
26 isn't it? As difficult as it is?

27 A. Yes.

1 Q. And not doing it led to certain death, now that you know this.

2 Correct? You want to be part of that stain?

3 A. No.

4 Q. No, of course not. So Fyzal Kurban, you knew or you do know
5 today that Christopher Boodram had promised the men that he
6 coming back to get them or he sending help. Right? You know
7 that? Yeah?

8 A. I've heard, yeah.

9 Q. You appreciate that this was a brother diver rescuing himself
10 and making a promise that could not have been kept. You
11 appreciate that?

12 A. Yes.

13 Q. And through no fault of his own it couldn't have been kept.
14 You appreciate that?

15 A. Yes.

16 Q. You know that was communicated to the authorities when he
17 came out, that men were right behind; go and get them; go and
18 get them?

19 A. Yes.

20 Q. And nobody tried to fulfil that man's promise?

21 A. Yes.

22 Q. Yusuf Henry died. You know that now, right, the names?

23 A. Yes.

24 Q. Kazim Ali died—Jr. You know that?

25 A. Yes.

26 Q. Rishi Nagassar died. You know that?

27 A. Yes.

1 Q. And you know as you are today that even before your arrival
2 Fyzal Kurban's son, Michael, had gone into that pipe as far as
3 he could go with the limited resource at that time round the
4 bend. You know that today?

5 A. Yes, I've heard.

6 Q. And that he came back out unharmed, physically I mean.
7 Emotionally, that's another issue. Physically unharmed,
8 correct?

9 A. Yes, I've heard.

10 Q. Did you speak to each and every diver there that night as to
11 their willingness, capacity, ability to go in?

12 A. No.

13 Q. No. Oh, by the way, maybe you know or you don't know, these
14 companies that were called out, do you know whether they
15 were ever paid for their services that night?

16 **Mr. Mootoo:** What's the relevance?

17 **Mr. Ramadhar:** You will find how relevant that is.

18 **Mr. Seales:** I believe so, yes.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 Q. Thank you. You know the best things in life, as they say, free,
21 eh?

22 A. Yes.

23 Q. Do you know that Conan volunteered, he didn't think about
24 money? Do you know that?

25 A. No.

26 Q. But they're all waiting to retain companies to come, isn't it?
27 Isn't it? You only dealing with companies. Do you know how

1 much money was spent for all these resources that led or
2 resulted ultimately in the death of these four men?

3 A. No.

4 **Mr. Ramadhar:** Chairman, thank you.

5 **Mr. Chairman:** Mr. Pegus.

6 **Mr. Pegus:** I have no questions for this witness. Thank you
7 very much.

8 **Mr. Chairman:** Can I ask Ms. Persaud-Maraj, do you have
9 any questions?

10 **Ms. Persaud-Maraj:** I have no questions, please.

11 **Mr. Chairman:** No questions. Mr. Peterson.

12 **Mr. Peterson SC:** Thank you, Mr. Chairman.

13 **Cross-Examination By Mr. Peterson SC:**

14 Q. Morning, Mr. Seales.

15 A. Good morning.

16 Q. The exercise you went through with the Chairman a few
17 minutes ago with respect to options for diving, the divers you
18 placed at the first turn, the second turn, down at the bend—
19 that's one, two, three—I think I counted four so far. If you
20 were to send men after the bend along the horizontal,
21 approximately how many feet along the horizontal before it
22 becomes required or a requirement to place another—what they
23 call them, underwater—you used a term?

24 A. No, well, it's a straight—

25 Q. In-water I think?

26 A. In-water tender, no.

27 Q. Yeah.

1 A. So along the horizontal you would not need additional tenders.

2 Q. It doesn't matter the length?

3 A. But the excursion, you will have to take into consideration your
4 bail out endurance—

5 Q. The what?

6 A. Bail out endurance.

7 Q. What is that?

8 A. So the life cylinder on your back. Again, it has a certain
9 capacity or available gas to the diver. So in the event of an
10 emergency, that is the air supply that he'd be required to use.

11 Q. To retreat?

12 A. Yes.

13 Q. So going in and use and retreat?

14 A. Yes. So that's a calculation also.

15 Q. That's a calculation again?

16 A. So it's not just a matter of joining umbilicals and traveling
17 indefinitely. Right? These are considerations that you have to
18 factor in.

19 Q. And that calculation would be dependent on how far along the
20 horizontal they go?

21 A. You are traveling, yes.

22 Q. Right. Those divers—well, that would probably take us up to
23 about five—are those mere commercial divers or confined
24 space divers?

25 A. No, commercial divers. Commercial divers, all having the
26 relevant equipment.

27 Q. Right. Not confined space requirement?

1 A. No.

2 Q. You're sure about that?

3 A. Well, that's what I'm saying. I would not say specialized in
4 confined-space entry.

5 Q. You what?

6 A. I would not say specializing—because this, again, is a
7 penetration dive, so it's even different.

8 **Mr. Chairman:** Could you move your microphone just to your
9 left? That way when you turn you'll be—

10 **Mr. Seales:** Right. So it's a penetration dive. It's not just a
11 confined space.

12 **Continued Re-Examination By Mr. Peterson SC:**

13 Q. Right. It's not just a confined space, and it's not just—and not
14 all commercial divers are penetration divers specialist?

15 A. So, again, it's not really a specialty, it's a matter of planning.

16 Q. Oh, so penetration is not an area of specialty?

17 A. No. That's what I'm saying. So all this is part of your dive
18 plan.

19 Q. Right.

20 A. And all the mitigations and controls you need to put in place to
21 effect such a dive.

22 Q. Right. If you were to work out that plan, did you—well, since
23 this event, did you attempt to work out such a plan as a mock-
24 up for this incident?

25 A. No, not normally. I would have thought of different things but
26 it was more of a personal effort.

27 Q. Yeah, yeah, just out of interest, because you're a diver?

1 A. Yeah, right. So that's what I'm saying. So it's very restrictive
2 now. The pipeline is 30 inches, so a diver would have
3 approximately—an average person only has approximately four
4 inches on either side of his shoulder, first to begin with. You
5 are in a tube, right, so it is very difficult. You are in full gear.
6 So in terms of to navigate to move to function within that space
7 would be challenging.

8 Q. Would be challenging. And to add to that challenge would be,
9 first of all, the consideration that you were engaging with, with
10 the learned Chairman, with respect to whether you go in feet
11 first or headfirst?

12 A. Yes.

13 Q. And you said that there were risks to going in headfirst. Could
14 you assist us with what, in a nutshell, those risks would be?

15 A. No, well, basically to start with, if you're going to suspend a
16 person in air for period of 30 feet, approximately 30 feet before
17 you reach water, the diver could actually pass out before.

18 Q. Before he gets to the water?

19 A. Yeah. Right. You can also have flooding of your hat.

20 Q. Have what?

21 A. Flooding.

22 Q. Of the hat?

23 A. Yeah.

24 Q. Oh, wow. And when you get into the water headfirst or into the
25 pipe headfirst, what risks or challenges, if any, that you
26 envisage the diver would encounter?

27 A. No, well, again, there's still the possibility because we never

1 know what caused the scenario to subside. So there's still a
2 potential of a secondary Delta P—a consideration. There is a
3 consideration.

4 Q. So having evidence to eliminate the possibility of a second
5 Delta P is a crucial factor for any dive plan, wouldn't it be?

6 A. Yes.

7 Q. Right. And since it's intended to be a rescue, how is it
8 envisaged that, first of all, going in headfirst that that rescue
9 would be effected?

10 A. No, well, again, headfirst to me is not an option.

11 Q. Headfirst to you is not an option?

12 A. It's not an option, no.

13 Q. So the plausible step would be feet first?

14 A. Yes.

15 Q. And could you assist us how you envisaged feet first to be—in
16 the 30-inch pipe, feet first, four inches on either side of the
17 shoulder, with equipment, how is that to be effected?

18 A. It would be challenging.

19 Q. Challenging is kind of uncertain?

20 A. Right. So you're going down the vertical section. When you
21 reach the horizontal, you navigate the tube turn, if you're able
22 to. That might pose a little challenge with equipment on.
23 Right? If you were to turn over so you will have to turn over
24 on, let's use the word "all fours", on your belly.

25 Q. You have to turn over in the 30-inch pipe—

26 A. On your belly. So you'll have to be on your belly now. When
27 you reach the horizontal section—

1 Q. So you going down—your back first—on your back, and then
2 you're flipping to your belly?

3 A. Right. So you'll be going down feet first. When you reach the
4 horizontal section you will need to be on your stomach to be
5 able to travel along the pipeline.

6 Q. Uh-huh.

7 A. Right? Now, you still would not be able to raise in the pipeline,
8 because, again, because of the diameter of the pipeline. Right?
9 Any object or anything that you'll be meeting, you'll be
10 meeting foot first.

11 Q. Right.

12 A. Now, again, we have to envisage that we are in a tube. Right?
13 So it's not a 30-inch hatch and you spill out into a big space or
14 a void.

15 Q. It's a tube all the way?

16 A. You are confined within this tube. So any activity or action you
17 are doing is within this space or this tube.

18 Q. Yes.

19 A. So you'd be meeting objects foot first. You may not know, or
20 if you do know, based on some of the camera footage, the
21 objects that you meet, you would have to try to crouch.

22 Q. Just now. That is—don't factor in the camera footage yet.
23 We're still going blind.

24 A. Okay, you ain know nothing. Right. So you're just going.
25 Whatever your foot encounter, you would have to try to crouch
26 within the same tube to make contact with your hand to bring
27 this object forward, if you can.

1 Q. If you can.

2 A. Yes.

3 Q. But you're bringing the object forward and then putting it in the
4 space that you will be retreat—the passage along which you
5 will have to be—

6 A. No, well, again, you cannot just leave it there. So you would
7 have to remove items one by one. Whatever you put between
8 you and the surface—

9 Q. You now have to clear it?

10 A. —it would be advisable to clear that before you proceed any
11 further.

12 Q. Right. So if you have multiple—because I notice in your
13 statement you speak of tanks and other articles I think you said.
14 You have to clear that first?

15 A. Um-hmm.

16 Q. But having gone down there and clear that, then you're running
17 out of diving time as a diver?

18 A. Yes.

19 Q. So you're now—the four or five divers you have using, two of
20 them might have exhausted their time by then?

21 A. Yes.

22 Q. So you're looking for two more divers again, at least, to replace
23 them going back down?

24 A. Yes, yes.

25 Q. And assuming that they get to the point where the first diver
26 was before he was repelled, you're going further than that and
27 you don't know what you're encountering beyond that either?

1 A. Yes.

2 Q. The evidence is that there were four tanks in the line. Did you
3 know that?

4 A. No.

5 Q. Right. And let us assume—because some of the cross-
6 examination before was based on assumptions. Let us assume
7 clearing four tanks; that is at least four divers have to come out
8 and decompress, I think is the term?

9 A. No, well, in this activity there will be no decompression diving.

10 Q. Well, not decompress, but we gather the time to clear four tanks
11 and then if four tanks are to be cleared before. So, you see, all
12 of this we are speculating because of the uncertainty. Right?
13 Well, we're speculating, because we don't have certainty on all
14 these items?

15 A. Yes.

16 Q. But what would assist in that scenario that you are now
17 engaging with me on would be camera footage to give you
18 some level of certainty.

19 A. Yes.

20 Q. Which would be what you will have to factor in to make a final
21 determination as to whether you effect a dive?

22 A. Yes.

23 Q. Back out the camera footage again. Would you as a dive
24 supervisor in all those variables we just went through there,
25 send a man in blind?

26 A. No. As a dive supervisor, no.

27 Q. Right. You have ever been in control of a facility where you

1 have to authorize diving?

2 A. No.

3 Q. Right. But you know the concept of you could attract—this is
4 somewhat of a legal question but it's basically a commonsense
5 one. You could attract criminal liability if you authorize and
6 send persons to their death?

7 **Mr. Chairman:** I'm not sure that that's a question you should
8 answer.

9 **Mr. Peterson SC:** I would withdraw it or rephrase it. I'll deal
10 with it in addresses, Sir.

11 **Continued Re-Examination By Mr. Peterson SC:**

12 Q. But you—you said that day you weren't part of any decision as
13 to diving on the 25th?

14 A. Yes.

15 Q. You were taken by Mr. Ramadhar, I think, to the scenario of the
16 cave rescue. I think he's speaking about the cave rescue, the
17 international incident with the students in the cave?

18 A. Yes.

19 Q. Did you follow that incident?

20 A. No, I didn't.

21 Q. So you're not aware that that rescue took days of planning and
22 multiple countries and experts involved? You're not aware of
23 that?

24 A. Yes, I'm aware of that. I didn't follow it in its entirety. I have
25 an awareness of it, yes.

26 Q. But at least you know that rescue took days of planning and I
27 think—when I had checked I think was 20 countries were

1 involved and they were lending experts to that effort.

2 A. Yes.

3 Q. And the students had to be sedated to be brought out through
4 the confined spaces. You were aware of that too?

5 A. Yes.

6 Q. Right. That takes me to the point of—when we were going
7 through our narrative a while ago with respect to the difficulties
8 of that rescue on the 25th, did you factor in, in your—after you
9 said you were doing a personal assessment, did you factor in, in
10 that, the likely response of a diver in the pipe when the rescuer
11 encounter same to bring him out, what his state of anxiety may
12 be and whether that posed a difficulty?

13 A. Yes, it does.

14 Q. And why—tell us—expand a bit. Why you say it would pose a
15 difficulty?

16 A. No, he's in survival mode now.

17 **11.40 a.m.**

18 Q. He's in survival mode?

19 A. Yeah.

20 Q. And that means—and I know—

21 A. Yeah.

22 Q. —I know you think it follows, but—

23 A. Yes.

24 Q. —some of us don't know. Explain what—when you mean that
25 he would be in survival mode—

26 A. He could be in—

27 Q. what is that challenge with him being in survival mode?

1 A. Yeah, he could be erratic. He could be trying to do whatever is
2 necessary for him to get out of the pipeline—

3 Q. Yes.

4 A. —which is—yeah.

5 Q. Which is?

6 A. Yeah. You can be attacked.

7 Q. You can be attacked?

8 A. He can try to take your gear.

9 Q. He can take—try to take you air—because, understandably.
10 And also, did you factor in when you were doing your
11 assessment, your post 25th assessment, as to whether the person
12 may have been injured due to the violent, um, Delta P scenario?

13 A. Yes.

14 Q. Yeah. Because I think Commissioner Wilson had asked you
15 about that, that the person being drawn into the pipe on that
16 Delta P could, they could be injured?

17 A. Yes.

18 Q. And that will pose a further difficulty and as to embark upon a
19 rescue?

20 A. Yes.

21 Q. Yes. [*Crosstalk*] Right I'm interested—

22 **Mr. Chairman:** Your sotto voce is quite loud.

23 **Mr. Chairman:** I'm sorry.

24 **Mr. Mootoo:** I don't think it was intended to be sotto voce.

25 **Continued Cross-Examination By Mr. Peterson SC:**

26 Q. Mr. Seales, you were contacted, because I'm quite interested in
27 a lot of what I heard this morning, you were contacted on the

1 afternoon of the—

2 **Mr. Chairman:** Just pausing for a moment. If you're going to
3 be a little bit longer—

4 **Mr. Peterson SC:** Yeah I will be.

5 **Mr. Chairman:**—why don't we take a break now?

6 **Mr. Peterson SC:** Sure.

7 **Mr. Chairman:** Because we haven't had a break, we started
8 9.30—

9 **Mr. Peterson SC:** Sure.

10 **Mr. Chairman:**—so let's take a break now, and then you can
11 take as long as you need. All right. Thank you very much.
12 We're going to take a 15-minute break now so we'll resume at
13 five to 12.00 please, and then I'm told that the Prime Minister is
14 giving a press conference at midday and therefore our TV
15 coverage is going to be cut off. That is not the reason why I'm
16 suggesting we have the break now to resume at twelve o'clock
17 because your—but we'll be, we'll be available on YouTube and
18 on the website so people can follow your cross-examination on
19 YouTube and on the website. Thank you very much. We'll
20 break off now until just before twelve o'clock.

21 **11.43 a.m.:** *Enquiry suspended.*

22 **12.02 p.m.:** *Enquiry resumed.*

23 **Mr. Chairman:** Mr. Peterson, while the witness is coming,
24 you'll recall that I asked Mr. Mushtaq Mohammed if he would
25 provide me, and he agreed to provide me, with a list of the
26 various companies that were contacted, when they were
27 contacted, when they said that they would be able to be on site

1 and when they left.

2 **Mr. Peterson SC:** That is forthcoming, Sir. I was—

3 **Mr. Chairman:** Is that in hand?

4 **Mr. Peterson SC:** I was advised this morning that I think the
5 source of information is from both Paria and Heritage and it's
6 being correlated and put in a table.

7 **Mr. Chairman:** I'm very grateful.

8 **Mr. Peterson SC:** It's being presented in a table for ease of
9 reference.

10 **Mr. Chairman:** Thank you very much.

11 **Mr. Peterson SC:** My instructing attorney will get it to the
12 Commission.

13 **Mr. Chairman:** Yes, thank you. Right, Mr. Seales, you're
14 still on oath, all right, and you're being asked questions by Mr.
15 Peterson.

16 **Mr. Peterson SC:** Thank you, Mr. Chairman.

17 **Continued Cross-Examination By Mr. Peterson SC:**

18 Q. Yes, Mr. Seales, I just want, before I move on from what we are
19 dealing with, with respect to the rescue and the number of
20 difficulties that we chronicled in dealing with an intended
21 rescue on that day, the 25th into the 26th. I also want to add to
22 the list of difficulties that we dealt with. The evidence in this
23 Enquiry is that the men, or at least two of them, were injured
24 and you see that as an added difficulty in rescuing the men in
25 that pipe, they having been injured?

26 A. Yes.

27 Q. Most likely from the Delta P factor?

1 A. Yes.

2 Q. Right. And you also told me that a planned rescue would
3 envisage that the rescue diver, I call him the first man in the
4 line going into the line, would be going in feet first?

5 A. Yes.

6 Q. Help us with how you envisage he going in feet first, if he
7 encountered the blockages and he removed those things and he
8 encountered the first diver, how is it envisaged that there will
9 be the rescue after that? How is the contact, the rescuing, the,
10 the—what is to happen when he reaches him?

11 A. There will be tremendous difficulty—

12 Q. Beg your pardon?

13 A. —because of the confined space.

14 Q. Yes.

15 A. Tremendous difficulty because of the confined space—

16 Q. Yes.

17 A. —to work within.

18 Q. Yes, but then how he communicating to that person? You
19 thought of—you factor that in?

20 A. No, there will be no form of communication.

21 Q. So how, because it—

22 **Mr. Chairman:** Well unless they were in an air pocket.

23 **Mr. Peterson SC:** Well, yeah.

24 **Continued Cross-Examination By Mr. Peterson SC:**

25 Q. But assuming no air pockets or even assuming an air pocket,
26 how is he communicating with him?

27 A. No, well, assuming no air pocket, how would he be alive?

1 Q. Right. Well, assuming he has a tank, we're making some
2 assumptions here. You realize the amount of assumptions that
3 come.

4 A. The assumptions there are some good assumptions so it's
5 difficult to—

6 Q. So let us assume if he's in an air pocket, he breathing, he alive
7 he getting the air from the air pocket.

8 A. Yeah.

9 Q. Assuming no air pocket, assuming he had a tank with him, so
10 he's alive.

11 A. Yeah.

12 Q. Um, how is it envisaged with him with the tank that you're
13 communicating to him what you, the person with your feet
14 towards him, how you anticipate that that will happen after
15 that? Impossible, isn't it?

16 A. More or less, yeah.

17 Q. And also, the difficulty would vary depending on whether
18 you're meeting him with his headfirst or his feet first?

19 A. Yes.

20 Q. Another difficulty, isn't it?

21 A. Yes.

22 Q. Almost getting to the point of impossibility?

23 A. Yes.

24 Q. Thank you very much for that. Now, I want to take you to the
25 evening of the 25th or the afternoon. You were contacted by
26 Mr. Fortune?

27 A. Yes.

1 Q. And he contacted you at around three minutes to 5.00—1657
2 you have in your statement.

3 A. Yes.

4 Q. And if you, in fairness to you, you have your statement there
5 with you, right? Paragraph five.

6 A. Yes, yes.

7 Q. And he made a request of you to mobilize Mitchell Professional
8 Diving?

9 A. Yes.

10 Q. Because there had been an incident at Paria?

11 A. Yes.

12 Q. So you know it was a diving incident at least, because you did
13 not activate mechanics or, or any other expertise?

14 A. It had to do with the water.

15 Q. It had to do with water, yes.

16 A. Uh-huh.

17 Q. But you recognize it was an emergency?

18 A. Yes.

19 Q. But he gave you no further details on that?

20 A. No, none was available at the time.

21 Q. No. He, he—

22 A. That's right. No, he did not, no.

23 Q. He, all he told you; emergency at Paria, activate Mitchell
24 Diving?

25 A. Yes.

26 Q. And get there to assist?

27 A. If required, yes.

1 Q. All right. He said if required?

2 A. It might not be his exact words.

3 Q. Well, give us what he might have said that caused you to come
4 to that conclusion.

5 A. Well, it was [*Inaudible*] yes.

6 Q. Didn't he—well it must have been; get Mitchell divers and get
7 to Paria to assist in the incident?

8 A. Yes.

9 Q. Because, if you weren't to assist, you could have just called
10 Mitchell and tell them, "Ey boys, all yuh get down to Paria and
11 see what all yuh could do down there", but he asked—your
12 supervisor asked you to go to assist and lend support?

13 A. My role?

14 Q. Yes.

15 A. To liaise. So I would have been the point of communication
16 rather than everybody—Mitchell goes, everybody else talking,
17 they don't know who they're dealing with.

18 Q. Right.

19 A. I would have been the focal point for communication to
20 Mitchell.

21 Q. Right. Because Mitchell is contracted by Heritage?

22 A. Yes.

23 Q. On a spot-hire contract basis?

24 A. Yes.

25 Q. So you could give them instructions?

26 A. Yes.

27 Q. Right. Having gotten that request at 1657, what time you got to

1 Paria?

2 A. I would have arrived at Paria approximately 8.20, I believe.

3 Q. That's three and a half hours after being told of an emergency?

4 A. Yes.

5 Q. That's a long time, wouldn't you agree?

6 A. Yes.

7 Q. You weren't in emergency mode, it would appear?

8 A. Yes I was.

9 Q. And what took you three and a half hours thereabouts?

10 A. Because there were mobilization and logistics, so, my role was
11 to—

12 Q. Speak into the mike.

13 **Mr. Chairman:** I'll ask you to move the microphone a little
14 further to your left. Move it to your left so that when you turn
15 left you're speaking into it.

16 **Mr. Peterson SC:** Yes.

17 **Continued Cross-Examination By Mr. Peterson:**

18 A. Yes, so, I would have had to facilitate in the mobilization of
19 Mitchell's. Right. So, if you would notice the time I would
20 have arrived, so, my urgency would be reflected in my time of
21 arrival at Heritage base in that I would have been activated and
22 responding to the incident in my capacity.

23 Q. Yes.

24 A. So, in terms of the mobilization of equipment for Mitchell's,
25 there would have been logistical support required because it's
26 diving equipment.

27 Q. Yes.

1 A. Because they would have gone to the base—now, this would
2 have been an off day also.

3 Q. This would have been a?

4 A. Off, you were off.

5 Q. Yes.

6 A. Right? So I wasn't at work, I was home.

7 Q. Right.

8 A. So I would have responded and went to Heritage base in Point
9 Fortin to facilitate any request for them to get their equipment.

10 Q. And then?

11 A. The equipment is bulky so it may, it may have involved
12 mobilizing forklift operators and so forth, transportation
13 depending on what type of equipment you were going to carry
14 up to Paria.

15 Q. Yes.

16 A. So there were a lot of activities prior to arriving at Paria.

17 Q. Right. I understand that. I'm interested in that, in that, what
18 determined what equipment to be moved from Heritage to
19 Paria?

20 A. Right, so, with the lack of information, we would have carried
21 the basic equipment to effect a dive.

22 Q. Right.

23 A. Right.

24 Q. And the basic equipment took forklift and all of that to move?

25 A. Yes. And a decision was also taken when we found out that
26 there would have been further support in the, er, form of Gulf
27 Stream Eagle which would have had additional diving

1 equipment, certain things were left in an effort—

2 Q. Certain things were?

3 A. —were left, in an effort to reach on site—

4 Q. Right.

5 A. —in a timely manner.

6 Q. So, when did you know that you were getting further support
7 from Gulf Stream?

8 A. While I was on—at Heritage base

9 Q. And at that point, you still did not know that—what was the
10 nature of the event?

11 A. No.

12 Q. All right.

13 A. At that point all you would have heard now might have been
14 the mention of a habitat and that's it, not where the habitat was
15 or what the activity was.

16 Q. Right. But the fact that you were aware, whilst you're at
17 Heritage site, that a habitat was involved—

18 A. Uh-huh.

19 Q. —Delta P start occurring to your mind?

20 A. No.

21 Q. Okay. Right. So, you got to Paria at around 8.20?

22 A. Yes.

23 Q. It's a known fact that that was carnival Friday. Did the fact of
24 carnival Friday pose any difficulties, further difficulties to you
25 in mobilizing men and equipment?

26 A. The only thing might have been traffic.

27 Q. Okay.

1 A. Because we were mobilizing from Point Fortin.

2 Q. Nobody on their way to Soca Monarch or anything?

3 A. Not that I'm aware of.

4 **Examination By Mr. Chairman:**

5 Q. I'm sorry to interrupt, but you all know the distances involved
6 and I don't, so could you just give me some idea, how far away
7 you lived from Heritage's site and then how far it was to get
8 from Heritage's site to get to Paria's site? What are the
9 distances we're talking about?

10 A. Right, so, from where I live to Heritage site in Point Fortin,
11 within 10 minutes.

12 Q. You lived within 10 minutes of Heritage—

13 A. Yeah, that's—

14 Q. —and that's a short journey. Right.

15 A. Yes and you have over a hour from Point Fortin to San
16 Fernando.

17 Q. You have a—it's over an hour?

18 A. Yeah.

19 Q. Is Heritage's site in Port of Spain?

20 A. No, it's in San—no, Point Fortin. Point Fortin.

21 Q. It's where?

22 A. Point Fortin.

23 Q. I don't know where that is, so, er—

24 A. It's further South.

25 Q. Further South?

26 A. Yes.

27 Q. Than Port of Spain?

1 A. No, than Paria.

2 Q. Right. Oh, it's in the other direction?

3 A. Yeah.

4 Q. I am with you, okay, right. So it's about an hour from there to
5 get to Paria?

6 A. No, more than that.

7 Q. More than that?

8 A. Yes, Sir.

9 Q. And that's in ordinary traffic or in heavy traffic?

10 A. In ordinary traffic.

11 Q. Ordinary traffic. Was the traffic heavier on that day?

12 A. Yes.

13 Q. Thank you.

14 **Mr. Chairman:** All right, sorry, I—sorry to interrupt. I just
15 needed to have a picture of the distance.

16 **Continued Cross-Examination By Mr. Peterson:**

17 Q. So you got to Paria. All you had at that point, as far as
18 knowledge is concerned, that it was a incident, emergency
19 involving diving?

20 A. Yes.

21 Q. Right. You arrived there with Mitchell or ahead of them?

22 A. Ahead of them.

23 Q. Right. When you got to Paria, what did you do?

24 A. I called OTSL to find out where they were.

25 Q. Yes.

26 A. Right? And I also called Mr. Holder to find out where he was.

27 Q. That's Mr. Osei Flemming-Holder?

1 A. Yes.

2 Q. Right. And he told you where he was? Where was he?

3 A. Er, he tried to describe the room but I wasn't aware of it so it
4 was downstairs the building.

5 Q. You were downstairs of a building?

6 A. Yes.

7 Q. And you later get to know that that's the shipping building?

8 A. I'm still uncertain because it wasn't the main building, so I'm
9 not aware of the name of the buildings.

10 Q. Right, and where—and you went to that building?

11 A. Well I didn't know where it was so I asked around in the car
12 park and somebody eventually—

13 Q. Took you there?

14 A. —took me to him.

15 Q. Right. You met Mr. Paul Yearwood also? You know him?

16 A. He was there when I entered the office.

17 Q. Right. And you met Mr. Piper at that same building?

18 A. No.

19 Q. Where you met him?

20 A. Upstairs.

21 Q. Well, the same building?

22 A. No, as I say I don't think it was the same building because I
23 think this was a building to the side of the main building.

24 Q. Okay, right. And you were taken upstairs to Mr. Piper?

25 A. I was taken upstairs, yes.

26 Q. And you met Mr. Piper there. Who you told you before you did
27 not know, but—

1 A. At one time, yes, at one time I met him, yes.

2 Q. When you say at one time what do you mean?

3 A. What I—I, I wasn't, I wasn't taken to meet him or—I went into
4 an office.

5 Q. Uh-huh.

6 A. He came into the office later on.

7 Q. But you start to speak to him at around what, shortly after
8 around nine o'clock?

9 A. So yes, no, between 9.30 and 10.00.

10 Q. Well, we are instructed that—all right, well, I wouldn't, I
11 wouldn't hold you too closely to that but you met Mr. Piper
12 along with Mr., um, Mushtaq Mohammed, Mr. Paul Yearwood?

13 A. No.

14 Q. You remember that meeting?

15 A. No.

16 Q. Who you met, Mr. Piper only?

17 A. No. It was Mr. Piper—the first encounter with personnel from
18 Paria, other than Mr. Yearwood, would have been Mr. Andy
19 Archbald and Michael Wei.

20 Q. Archbald, Randy Archbald, Michael Wei, Collin Piper?

21 A. Yes.

22 Q. And Paul Yearwood?

23 A. No, he wasn't there at that time.

24 Q. Right.

25 A. I don't think so.

26 Q. Well, look at paragraph 24 of your statement—um, no, no, not
27 your statement. I want to refer you to paragraph 24 of Mr.

1 Flemming-Holder's statement.

2 A. No problem.

3 Q. All right. He said that, and that's at page one four—

4 **Mr. Chairman:** Yeah, let's just get it.

5 **Mr. Peterson SC:**—page one four nine five, Mr. Chairman, of
6 the bundle.

7 **Mr. Chairman:** Just a minute. One four nine five, do you
8 say?

9 **Mr. Peterson SC:** One four nine five, paragraph 24.

10 **Mr. Chairman:** Yes. Yes, thank you.

11 *[Document was handed to Mr. Seales]*

12 **Mr. Peterson SC:** Proceed, Mr. Chairman?

13 **Mr. Chairman:** Yes, sorry, thank you, yes.

14 **Continued Cross-Examination By Mr. Peterson:**

15 Q. Yes. You see paragraph 24—

16 A. Yes.

17 Q. —where he said that the dive supervisor, Mr. Seales, Mr. Rolph
18 Seales, arrived at the shipping building at around 9.00 p.m.?

19 A. Yes.

20 Q. Right.

21 "I took him to the ICP and gave him an update of the
22 incident and the emergency response."

23 You saw that there?

24 A. Yes.

25 Q. What do you say about that.

26 A. Right, so I arrived at nine o'clock.

27 Q. Yeah.

1 A. He took me—it does not say that I met or he introduced me at
2 that time, you know—

3 Q. Okay.

4 A. —at nine o'clock. So the time that I would have gone, my
5 initial contact with Mr. Holder would have been around nine
6 o'clock.

7 Q. Right.

8 A. The only person present would have been Mr. Paul Yearwood.

9 Q. Yes.

10 A. Right. Subsequently, which would have been around 9.30—

11 Q. Uh-huh.

12 A. —we went upstairs; he took me upstairs.

13 Q. Right. That's what I told you earlier I wouldn't squeeze you on
14 the half an hour. So let's, let's—

15 A. So, so, within that period, right, so within that period—

16 Q. Yes.

17 A. —Mr. Mushtaq, I was never introduced or met Mr. Mushtaq at
18 that time.

19 Q. Well, that's why I tell you I wouldn't—so forget the 9.00, 9.30,
20 give or take, I mean, I wouldn't hold you—that's why I said
21 about 9.00, 9.30.

22 A. Yes.

23 Q. So I wouldn't hold that—I wouldn't hold your hand to the fire
24 on that.

25 A. Right so at this—so in this statement—

26 Q. Yes.

27 A. —right, I would not have been introduced when I would have

1 gone upstairs to Mr. Paul Yearwood because I met him
2 downstairs.

3 Q. Yes.

4 A. Right? The only persons I would have met upstairs would have
5 been Mr. Piper and Mr. Randy Archbald, Michael Wei.

6 Q. Well, Mr. Holder is saying—

7 A. Yes.

8 Q. “I told him that one of the divers was rescued from the
9 pipeline and that there were four missing divers. I also
10 introduced him to Collin”—which is Collin Piper,
11 “Randy”—which is Archbald—“Michael”—which is
12 Michael Wei—“Mushtaq”—which is Mushtaq
13 Mohammed—“Paul and the scribe.

14 Right?

15 A. And the scribe.

16 Q. The scribe is the person—

17 A. No.

18 Q. —who was recording in that, in that ICT, um, ICP room.

19 A. Uh-huh.

20 Q. So, what are you disputing here?

21 A. That’s why I’ll say, I’ll, I’ll say no. The, the circumstances of
22 the events—

23 Q. Yeah.

24 A. —and the introductions was not like that.

25 Q. All right.

26 Q. Let me give you that again. Let us say that he didn’t introduce
27 you to Paul because you say you met Paul.

1 A. Yes, yes, right.

2 Q. Let us say that you can't re—he didn't introduce you to Mr.
3 Mushtaq Mohammed.

4 A. No.

5 Q. So we have that he introduced you to Collin Piper who you
6 didn't know before you said?

7 A. Yes

8 Q. Randy Archbald you knew before?

9 A. No.

10 Q. Right, right. And Michael Wei?

11 A. No, and, and I didn't know him.

12 Q. Right, so you accept that at least that part, that you were
13 introduced to those persons by Mr. Holder, Flemming-Holder?

14 A. Upstairs, yes.

15 Q. Right. I now want to deal with the elephant in that paragraph,
16 that he gave you an update of the incident and the emergency
17 response. What say you?

18 A. No. No, Sir, I said, as I said, what was communicated to me
19 when I—

20 Q. I know what you said.

21 A. Right, so—

22 Q. I just want to know what you say about Mr. Osei Flemming-
23 Holder, the Heritage Petroleum Limited HSSE Manager, what
24 he saying about you there, is that a lie, well, untrue?

25 A. Well, it's a, it's a broad statement.

26 Q. No, it's not broad, it's very narrow.

27 A. So I would not say—I would say it's inaccurate.

1 Q. You say it's inaccurate?

2 A. Yes.

3 Q. Right. And the inaccuracies is that he did not intro—well,
4 forget the introduction, he did not update you on the incident
5 and the response?

6 A. The update on the incident was as I indicated. It was just a
7 brief explanation of what would have occurred, I was—

8 Q. Which—tell us—well tell us that.

9 A. Right. So, er, the divers were working and while removing a
10 plug, a splash was seen.

11 Q. Seen, right.

12 A. Yeah, and communication was lost.

13 Q. And you—

14 A. And—

15 Q. —right away recognized that splash—divers working in a
16 chamber, splash—

17 A. The pipeline.

18 Q. —disappear, pipeline, loss of communication—

19 A. Plug.

20 Q. —Delta P event?

21 A. Yeah, plug. Plug.

22 Q. Plug—right, thank you, plug removed, Delta P event?

23 A. Yeah.

24 Q. Right.

25 A. May have.

26 Q. What?

27 A. Go ahead.

1 Q. No, but you right away realized Delta P event?

2 A. Yes.

3 Q. From your experience. Having come to the conclusion based
4 on that narrative that you were given by Mr. Holder—

5 A. Yes.

6 Q. —Delta P event, where you thought the men were?

7 A. I can't say because it's dependent on the severity of the Delta P.

8 Q. No. Right—

9 A. Right, now we're using—

10 Q. Let us deal with the most—forget the quality of the Delta P,
11 whether slight or severe, Delta P. Let's go with severe. Where
12 you think the men would be if it's severe?

13 A. If it's severe, yes they could be in the pipeline.

14 Q. Yes, they could be in the pipeline?

15 A. If it's severe, yes.

16 Q. And if it's medium?

17 A. They could have been on the seabed.

18 Q. Right, okay. And if it's either no Delta P they would still be in
19 the chamber?

20 A. At which time?

21 Q. Well, no Delta—I taking it to the next extreme.

22 A. Yeah.

23 Q. No Delta P, just a splash, loss of communication, they could be
24 in the chamber?

25 A. I don't know.

26 Q. Right. So, you don't know at that stage whether the men are in
27 the pipe?

1 A. No.

2 Q. Right. And you're saying that Mr. Osei Flemming telling you
3 that one of the men in the pipe and four missing that, that was
4 never communicated to you?

5 A. Repeat, sorry?

6 Q. You are saying that when Mr. Holder says at paragraph 24—

7 A. Uh-huh.

8 Q. —that he told you, or that you were told that one diver was
9 rescued from the pipeline and that there were four missing, that
10 that was never said to you?

11 A. Wasn't from the pipeline, was rescued.

12 Q. He told you one was rescued?

13 A. Yes.

14 Q. All right, let's deal with that. Did you ask him—since at that
15 point you're telling me that you did not know whether the men
16 were in the pipe or not in the pipe or the seabed, you didn't ask
17 them where that one was rescued from? The one that you now
18 know was rescued—

19 A. Yes.

20 Q. —where he was rescued from?

21 A. No. I did not interrogate the situation. So I was told—so he
22 gave an explanation of what had occurred and the conversation
23 didn't progress.

24 Q. And he said one was rescued?

25 A. Yes, one diver exited, yes.

26 Q. Right. So we could tick off that part of, that part of paragraph
27 24 that he told you one diver was rescued. Right. Up to that

1 point, right? You thinking Delta P, not knowing the severity,
2 you didn't ask them, well, if it's severe—well, ask yourself, if
3 the Delta P is severe, men in the pipe. If it's not severe, they're
4 in the seabed, so you would now want to know whether it's
5 likely to be in the pipe or on the seabed because you don't
6 know severity. So, the next question that would assist you is
7 where was that one man rescued from? You would agree with
8 that, right?

9 A. Yes.

10 Q. All right. You sent there by your supervisor to lend support,
11 you're up in the ICP, you're there in a open room with
12 discussion, you didn't ask a question? "That one man all yuh
13 rescue, where all yuh get him from?"

14 A. In a open room with a discussion, er—

15 Q. Ah, I see why you—see why you have problems.

16 A. No.

17 Q. No, what?

18 A. No, I didn't ask them where they rescued—where he was
19 recovered from exactly.

20 Q. Is—but you realize that that's a logical question to ask?

21 A. Yes.

22 Q. And let me put to you, the reason you didn't ask it is because
23 Mr. Flemming told you the pipe—from the pipeline and that
24 four men were still missing. That's why you didn't ask the
25 question.

26 A. Four men were missing?

27 Q. Right? So we could tick that off, or he told you that?

1 A. No.

2 Q. So why you didn't ask the question? And I'm putting to you
3 the reason you didn't ask is because you knew. He told you
4 from the pipeline.

5 A. No.

6 Q. Well then explain to me why you didn't ask the question.

7 A. Sir, we are putting numbers on the divers and so forth in
8 industry practice, right—

9 **Mr. Chairman:** A little louder, please?

10 A. Right. In industry practice—

11 Q. Uh-huh.

12 A. —it would not have even been imagined that more than two
13 people would have been in the water first to begin with.

14 Q. Just now, industry practice we would not have envisaged—

15 A. Yeah.

16 Q. —that more than two persons would be in the water?

17 A. That all your divers are in the water.

18 Q. You lost me there, sorry.

19 A. Exactly, so in the conduct of activity—

20 Q. When you say exactly, what you mean? You intended to? But
21 I lost. But go ahead.

22 A. Right, so you're carrying out a task in the water. There's really
23 no need to have more than two divers in the water. Remember
24 I'm approaching something. I am unaware of what was being
25 done or the activity that was being conducted.

26 Q. Uh-huh. Let's stick a pin there.

27 A. Uh-huh.

1 Q. The fact that you don't know the activity that is being
2 conducted. you cannot conclude that two men would be the
3 appropriate number to have in the water, you agree with that?

4 A. Yes. No I don't.

5 Q. So whatever you're doing two men in the water?

6 A. In best practice—

7 Q. Uh-huh.

8 A. —and no matter the nature of the activity it's highly unlikely
9 that you would have had more than two divers in the water
10 working at one time.

11 Q. Right.

12 A. You would use rigging—

13 Q. Yes.

14 A. —to facilitate any additional support you may require.

15 Q. Right. Let's pause on that for the time being. Back to the one
16 diver rescued.

17 A. Yes.

18 Q. So, four missing, you said coulda never been possible?

19 A. No I would not say not possible.

20 Q. Because that's a fact now?

21 A. Yeah.

22 Q. Right. So, what I'm trying to get from you is that Mr. Holder is
23 saying "I told"—he was told that.

24 A. Okay.

25 Q. No, not okay. Because this is serious because, you see, let me
26 tell you why it's serious, because, it is being alleged against
27 Paria in this course of events that they kept you in the dark. So

1 I want to demonstrate that that is not fair and not true. So let's
2 stick with it.

3 A. Okay.

4 Q. Knowing that one man was rescued, you did not enquire from
5 the pipe or where?

6 A. Yes.

7 Q. But you realized that one man being rescued, you must then
8 ask, where is the other man? According to you, it's only two,
9 eh. It's only two by industry best practice and standards. Only
10 two men could be in the water at the same time. So, one man
11 recovered, according to you they ain't tell you from the pipe, so
12 your next question is, where the next man?

13 A. No, I did not question.

14 Q. So as far as you were concerned, you call out all this equipment
15 and you're going to be looking for one man?

16 A. No, Sir.

17 Q. All right. How many men you thought you would have been
18 looking for when you were upstairs there?

19 A. Sir, I don't know. I was informed. So, when I arrived it was
20 not—I was informed of what was transpiring. So, as I indicated
21 what was communicated to me, was the event at the time. It
22 wasn't a back and forth communication where—

23 Q. No I ain't—I not into all of that. I am dealing with you upstairs
24 9.30—

25 A. Yes.

26 Q. —up in the ICP—

27 A. Yes.

1 Q. —where you introduced to Randy, Collin, Michael, Paul, and
2 Flemming. As far as you're concerned, that operation in that
3 ICP at that time at 9.30—

4 A. Yes.

5 Q. —concerned looking for one man, as far as you were
6 concerned?

7 A. No.

8 Q. How many men you think the operation was about?

9 A. It wasn't a conversation about who they were looking for.

10 Q. Not conversation, your knowledge. As far as you were
11 concerned as an expert diver of 25 years, two men in the water,
12 one found, two minus one, one man this operation concerned—

13 A. Uh-huh.

14 Q. —at that point, 9.30 as far as you were concerned?

15 A. Umm.

16 Q. Is that so?

17 A. Yeah.

18 Q. So at 9.30, as far as you're concerned, we're looking for one
19 man, one man missing?

20 A. No.

21 Q. How many men?

22 A. It was—I didn't put thought—the question I had asked was if
23 they knew the condition of the—

24 Q. Where the man?

25 A. No, I didn't ask on the personnel, I asked on the condition of
26 the habitat and the condition of the plug that they were
27 removing. No answer was given.

1 Q. You asked about the condition of the habitat?

2 A. The reason why I asked—

3 Q. Just now, wait, we'll get your reason.

4 A. Uh-huh.

5 Q. That's how we're doing it here. We answer first and then you
6 come with your buts and reasons after. You were concerned
7 about the condition of the habitat and the plugs, right?

8 A. Yes.

9 Q. Why you needed to know? I tell you I go give you a chance. I
10 fair, you know. Why you wanted to know about the condition
11 of the habitat?

12 A. No, that would help inform what might have happened.

13 Q. Right.

14 A. Further inform.

15 Q. And what you need to know about the plugs?

16 A. Right. What had happened when they were removing the
17 plugs, if anybody knows what—where the plug is, what's the
18 current status of the plug. They would have been deflating the
19 plug supposedly, right? Did they completely deflate it? Is the
20 habitat flooded at present? What is the condition of the habitat
21 at that point in time? Is the habitat—whether atmosphere
22 reestablished? Is it void? Is it full with water?

23 Q. You wanted to know that?

24 A. That would have informed also where the divers might have
25 been.

26 Q. So the earlier information, flooding, splash, loss of
27 communication, flooding habitat—

1 A. Uh-huh.

2 Q. —plugs out, men missing, you still at that point did not think
3 that the men were in the pipe?

4 A. No. It wasn't confirmed.

5 Q. No, nah, no confirmed but—

6 A. No.

7 Q. —thinking.

8 A. No.

9 Q. All right.

10 A. I don't, I don't know.

11 Q. So you don't know.

12 A. Yes.

13 Q. One man rescued?

14 A. Uh-huh.

15 Q. You don't know, you got all that information about splashing
16 and all of that before. One man recovered, you don't think—

17 A. I, I did not know from where.

18 Q. I know.

19 A. Yes.

20 Q. That is what we find difficult to accept. All of that you don't
21 know. You inquiring about plug and habitat whether it flooded
22 still and you hear one man recovered—

23 A. Uh-huh.

24 Q. —but you realize that where that man was recovered is pivotal
25 to any opinion as to where the others might be? Well the other
26 one as far as you're concerned?

27 A. Yes.

1 Q. Hmm?

2 A. Yes.

3 Q. And you didn't ask a question?

4 A. No.

5 Q. You asked about plug and habitat and nobody answer you.
6 Well I could understand why.

7 A. Umm.

8 Q. What you asked about the pipe? Did you ask anything about
9 the pipe? You asked about the plug, the habitat.

10 A. It had no further communication.

11 Q. You didn't ask about the size of the pipe?

12 A. I knew the size of the pipe from downstairs.

13 Q. You knew the size of the pipe?

14 A. Initially they would have informed me of the size of the pipe.

15 Q. Who informed you?

16 A. It would have been Mr. Holder.

17 Q. So he—what he was telling you? Well, let we hear this. What
18 he told you about the size of the pipe downstairs? You now
19 realize you're having more information than you told us earlier
20 right? But go ahead.

21 A. No it's a 30-inch pipe. The diagram that they showed would
22 have indicated it's a 30-inch pipe.

23 Q. A diagram?

24 A. The sketch?

25 Q. We're coming to the sketch. I'll hear about the sketch just now.
26 Mr. Holder tell you about a 30-inch pipe when? And in what
27 circumstances?

1 A. When they would have shown me the sketch on his phone, it
2 was a picture of a sketch, the white—well I'm saying a sketch.
3 It's a sketch on a whiteboard—

4 Q. Okay. So just now. Wow. That's before you go upstairs?

5 A. Yes.

6 Q. Right. Before you go upstairs where I tell you Mr. Holder tell
7 you one man recovered from the pipe and four missing?

8 A. Yes.

9 Q. Which you're denying that part about the four men missing and
10 pipe. So downstairs now I got the impression earlier that you
11 were just introduced to him when all yuh gone upstairs 9.30.

12 A. No.

13 Q. So tell us what happened downstairs now with this phone and
14 diagram and thing? First time we hear—you realize first time
15 we're hearing this?

16 A. No. It's in my statement.

17 **Mr. Chairman:** Pause for a minute, please? Pause for a
18 minute. That is not entirely fair. It's set out in his statement—

19 **Mr. Peterson SC:** Yes, Sir.

20 **Mr. Chairman:**—at paragraph 16.

21 **Mr. Peterson SC:** I am talking about viva voce. That's what
22 I'm talking about.

23 **Mr. Chairman:** I know. But you'll appreciate that the
24 summary that's being given for every witness doesn't cover
25 everything.

26 **Mr. Peterson SC:** Sir, I'm not—with the greatest of respect
27 I'm not speaking about the summary, I understand that. I am

1 speaking about earlier—

2 **Mr. Chairman:** No but you just said—

3 **Mr. Peterson SC:**—he—

4 **Mr. Chairman:**—I know, but you just said this is the first time
5 we're hearing about it and—

6 **Mr. Peterson SC:** I—and I didn't finish, Sir. I was going to
7 say, in your narrative today—I—Sir, I'm being fair. I—one
8 thing I, with the greatest of respect, I don't want to blow my
9 own trumpet, is known for is being fair and in all my cross-
10 examinations.

11 **Mr. Chairman:** One no one is suggesting for one moment—

12 **Mr. Maharaj SC:** So I was going to take him—

13 **Mr. Chairman:** One moment.

14 **Mr. Peterson:** I would have taken him there, Sir, I was
15 speaking—

16 **Mr. Chairman:** Mr. Peterson, Mr. Peterson, there's—no one
17 is suggesting for one minute that you're anything other than
18 entirely fair—

19 **Mr. Peterson SC:** Yes.

20 **Mr. Chairman:**—save that you may have overlooked the
21 paragraph 16 when you made the suggestion that this is the first
22 time we're hearing about it. The fact of the matter is that he has
23 mentioned it before and it wouldn't be entirely right for you to
24 be able to put to him that it's not—that it's something new.

25 **Mr. Peterson SC:** No, Sir. Yeah, I would agree with that. Sir.

26 **Mr. Chairman:** And I didn't want that impression to be
27 created. All right?

1 **Mr. Peterson SC:** Sir, I will never create that impression.
2 What I was putting to the witness is the first time we were
3 hearing that in his narrative of having arrived, having
4 encountered and go upstairs and when he first heard certain
5 things.

6 **Mr. Chairman:** Well, certainly that's—

7 **Mr. Peterson SC:** Then I would have taken him to his
8 statement and say, but, okay you didn't tell us that for the first
9 time. Look it's in your statement.

10 **Mr. Chairman:** Right.

11 **Mr. Peterson SC:** So I would, I would—I amend that if that is
12 the impression created, Sir.

13 **Mr. Chairman:** Certainly it was the impression I got.

14 **Mr. Peterson SC:** Right.

15 **Mr. Chairman:** And I know that you would not have intended
16 that to be the case.

17 **Mr. Peterson SC:** No, Sir.

18 **Mr. Chairman:** But he has the statement in front of him, it is
19 not a memory test and he's entitled to look at the statement if it
20 assists him in answering any of your questions.

21 **Mr. Peterson SC:** I agree with you, Sir. When I started I
22 wanted to make sure he had his statement in front of him. I
23 asked him that.

24 **Mr. Chairman:** All right.

25 **Continued Cross-Examination By Mr. Peterson:**

26 Q. Right. So you got to Mr. Flemming and he showed you a
27 diagram? Paragraph 15 of your statement—

1 A. Yes.

2 Q. —16 of your statement, the last sentence.

3 **Mr. Chairman:** It's in front of you. I suggest you have a look
4 at it.

5 **Continued Cross-Examination By Mr. Peterson:**

6 A. Yes.

7 Q. All right. He showed you a sketch about the riser. That is the
8 pipe?

9 A. Yes.

10 Q. The riser and slash chamber.

11 A. Yeah.

12 Q. Right? So we're not focusing on seabed anymore, we're
13 focusing on pipe, isn't that so?

14 A. Yes.

15 Q. All right. Having been focused on a pipe, you all then moved at
16 some point to upstairs?

17 A. Yes.

18 Q. He told you one man was recovered?

19 A. Yes.

20 Q. Having been focused on pipe, did he not tell you from the
21 pipeline?

22 A. No.

23 Q. So he just tell you focus here on pipe downstairs, all yuh gone
24 upstairs, one man recovered and pipe not part of that
25 discussion?

26 A. Sir, the habitat is part of the discussion.

27 Q. I know. Habitat. He ain't mention pipe?

1 A. Uh-huh.

2 Q. Hmm? Isn't that so?

3 A. Yes.

4 Q. Right. That is your version and I gave you an opportunity to
5 critique what Mr. Holder is saying he told you, right?

6 A. Yes.

7 Q. I'm being fair. So Mr. Holder, according to you, only told you,
8 "Look at mih sketch on mih phone downstairs, pipe", we come
9 upstairs, he tell you upstairs one man—well let me be fair to
10 you, did he tell you downstairs one man was recovered?

11 A. Yes.

12 Q. So he told you that downstairs?

13 A. Yes.

14 Q. And you asked him—showing you pipe, well, better yet, focus,
15 look pipe, one man recovered, and you ain't ask him, thinking
16 about Delta P that you had in your mind, you told me earlier
17 you had in your mind, you ain't ask if from the pipe?

18 A. No.

19 Q. What you expect in a Delta P event, violent or moderate to take
20 the men from the habitat into where?

21 A. Where the man was at the event.

22 Q. No, where would the Delta P take the man? Having occurred,
23 the Delta P having occurred, where you expect the Delta P to
24 have taken the man?

25 A. That would depend on the severity of the Delta P.

26 Q. I know.

27 A. Yes.

1 Q. But you don't know the severity yet.

2 A. Yes.

3 Q. So you're factoring in severe, moderate, slight. Moderate,
4 severe, where you expect it to take the man?

5 A. There's the possibility that the man can be taken into the
6 pipeline.

7 Q. Right. I agree with you. So having heard he recovered or
8 rescued—

9 A. Yes.

10 Q. —you didn't ask about the pipe?

11 A. Yeah.

12 Q. Nobody tell you about the pipe?

13 A. That he didn't end up in the pipe.

14 Q. Hmm?

15 A. There is the possibility that he was not in the pipe.

16 Q. I know, but you didn't know which of those?

17 A. Exactly.

18 Q. So he having—you having been told he's recovered, not
19 knowing whether outside the pipe, inside the pipe, your next
20 obvious question as a 25-year experienced diver, is, "Where
21 you recover this man from?"

22 A. Okay.

23 Q. You must agree that that question jumps out to be and begging
24 to be asked, right? Don't you agree?

25 A. Yes.

26 Q. Right. And the—you were asked to assist with a risk
27 assessment?

1 A. Yes.

2 Q. Who ask you?

3 A. Mr. Holder.

4 Q. When?

5 A. That would have been downstairs.

6 Q. Before going upstairs the 9.30?

7 A. Yes.

8 Q. Right. A risk assessment to do what?

9 A. A diving risk assessment.

10 Q. To dive where?

11 A. Exactly, no.

12 Q. Huh?

13 A. That was the conversation. It was a diving risk assessment.

14 Q. So you—but a risk assessment would depend—doing that
15 exercise in any meaningful way must depend on where you're
16 diving?

17 A. Yes.

18 Q. In Mr. Mootoo's swimming pool, no big risk.

19 A. No, it didn't, it didn't go like that.

20 Q. In open sea? Well Mr. Mootoo, he have a real big pool. In
21 open sea, different risk assessment. Into a pipe, different risk
22 assessment. Penetration dive, different assessment. You agree?

23 A. Yes.

24 Q. Right. So you being asked to do a risk assessment by Mr.
25 Flemming, Flemming-Holder, you will want to know assess, to
26 dive where?

27 A. Yes.

1 Q. You ask him?

2 A. I guess. There's no information.

3 Q. No, you ask him?

4 A. No.

5 Q. So you didn't say, "Mr. Flemming, with the greatest respect to
6 you, you're just telling me assess, assess a risk to dive?" Let
7 me suggest to you that you're being inaccurate. Do you accept
8 your inaccuracy, in that, I am putting to you Mr. Holder asking
9 you to do a risk assessment for a possible rescue of divers from
10 inside the pipeline. And at paragraph 16 of Mr. Holder
11 Flemming's statement, Mr. Chairman. It's on page one four
12 nine three. I am putting to you that you're inaccurate because
13 Mr. Flemming-Holder told you or requested of you a risk
14 assessment for a possible rescue of the divers from inside the
15 pipeline.

16 A. No.

17 Q. Do you accept that?

18 A. No.

19 Q. So you're asking us to accept that all he say is, um, "Mr.
20 Sealesie, all I—I want you to do an assessment for me to dive."
21 That's it, right?

22 A. Yes.

23 Q. How you went about that exercise?

24 A. It was not—

25 Q. That request?

26 A. It was not conducted.

27 Q. You tell him you wasn't conducting it?

1 A. No.

2 Q. So Mr. Flemming-Holder is your manager HSSE at Heritage?

3 A. Yes.

4 Q. He's your boss? He's superior, he, um—

5 A. Superior, yes.

6 Q. —senior to you?

7 A. Yes.

8 Q. He asked you, in an emergency, to do an assessment and you
9 decide you ain't doing it.

10 A. No.

11 Q. What you decided?

12 A. I didn't decide anything. We left—we subsequently left.

13 Q. No, we go deal with the—I know—I want to know why you did
14 not do the assessment.

15 A. When I arrived he was at the computer doing something.

16 Q. I get all that already. We're not dealing with him, we're
17 dealing with you.

18 A. Yeah.

19 Q. Why you—he told—he requested of you an assessment. You
20 tell me that all ready. Why you didn't do it?

21 A. No, I was not instructed to do an assessment.

22 Q. All right.

23 A. Yes.

24 Q. He asked you. He ain't instruct you he ask you.

25 A. No. He didn't ask me.

26 Q. You can't have all—

27 A. No, that coincide—

1 Q. —the marbles, eh.

2 A. It's a matter—

3 Q. I have to pitch too.

4 A. It's a ma—

5 Q. You can't have all the marbles.

6 A. It's a matter of phrasing and how the conversation went, right?

7 “Do you have a diving risk assessment?”

8 Q. That's what he asked you?

9 A. If I had a diving risk assessment or if I can do a diving risk
10 assessment.

11 Q. No, wait, no, no, no. He asked you—

12 A. Yes.

13 Q. —if you have a diving risk assessment?

14 A. Yes.

15 Q. From where?

16 A. There are basic fundamentals in planning a dive.

17 Q. Yeah.

18 A. I don't know if he's just looking—was looking for a template to
19 start processing a risk assessment.

20 Q. And the second one you tell me—you tell me one, he, um—he
21 asked you if you had one or he asking the second, the second
22 part was what? Did he request it? Give me two options. You
23 said he have—you had one?

24 A. No, so it's not—right, so, it was not for you or meaning myself
25 to prepare a diving risk assessment to rescue divers from a
26 pipeline.

27 Q. What he asked you?

1 A. So, in essence probably when I arrived he was doing something
2 on a desktop.

3 Q. Forget him.

4 A. No that's what I'm saying. So, if—

5 Q. Yeah.

6 A. —that is what he was doing at the time of my arrival, it may
7 have been assistance he was seeking to formulate a risk
8 assessment for a diving. It was not specific to rescue divers.

9 Q. It wasn't what?

10 A. A risk assessment to rescue divers. That wasn't the
11 conversation.

12 Q. So he just interested in diving generally? That's what you're
13 telling us? In an emergency situation?

14 A. Yes.

15 Q. You responding to an emergency.

16 A. Yes.

17 Q. Bear that in the back of your mind.

18 A. Yes.

19 Q. So when he asked you about this general diving risk
20 assessment, what did you do? What did you say?

21 [*Interruption*] That is true. What did you say?

22 A. To prepare a risk assessment?

23 Q. No. When, whatever you are saying—

24 A. Uh-huh.

25 Q. —Mr. Holder communicated to you—

26 A. Yes.

27 Q. —what did you say in response to that request, instructions,

1 invitation. I know what it is now.

2 A. Yeah.

3 Q. Yeah what did you say?

4 A. I can't recall.

5 Q. You didn't say, "Boss, I can't do that. I don't have enough
6 information", according to what you're saying?

7 A. Yeah.

8 Q. You said that?

9 A. No, I didn't say it like, what I saying, I can't say exactly what I
10 would have said to him.

11 Q. But he is saying, Sir, that he asked you, which, to my mind
12 make a little more sense than what you're saying with the
13 greatest of deference to you—

14 A. Yes.

15 Q. —I—to do a risk assessment for possible rescue of divers from
16 inside the pipe, so you're saying that was never said to you? I
17 giving you the chance because Mr. Holder coming, eh—

18 A. Yeah.

19 Q. —and he saying that he tell you that.

20 A. Yeah.

21 Q. That never happen?

22 A. No.

23 Q. Right. He finish on the computer and thing and all yuh gone
24 upstairs. At this stage you still ain't know about pipeline, right,
25 and men in the pipe?

26 A. Men in the pipe, no.

27 Q. Right. You gone upstairs. What you saw on the whiteboard

1 when you went upstairs?

2 A. It would have been the same, more or less the same as the
3 picture that was shown on the phone.

4 Q. Right.

5 A. So it was the configuration of the habitat and the pipeline.

6 Q. Right. And you still at this stage even you ain't saying, "But
7 why all yuh men wasting all yuh time and focusing on this
8 pipeline? The men could be on the seabed." You ain't do that?

9 A. No.

10 Q. You ain't wondering all that time what is this obsession with
11 this pipeline about?

12 A. No, there was no obsession with a pipeline.

13 Q. But they was focused—

14 A. No.

15 Q. —on the pipeline?

16 A. No.

17 Q. Remember you tell me downstairs when the Chairman take me
18 to—for beating you up earlier with saying you didn't say it
19 before?

20 A. Yeah.

21 Q. On the phone, you tell me they was focused on the pipeline, on
22 the phone, they showing you on the phone

23 A. No. They're not focused on the pipeline.

24 Q. Well they're focused on the whiteboard only?

25 A. They are focused on the event.

26 Q. Mr., Mr., um, Seales—

27 A. Yes.

1 Q. —please? You arrived in the building, the first thing Mr.
2 Holder run and push in your face is the phone with a pipeline
3 on it. You told us that. He took you to the phone and showing
4 you the pipeline and asked—well, I am putting to you, asking
5 you about a dive into that?

6 A. No.

7 Q. So he just show you the pipeline?

8 A. He show me what the configuration of the operation was in
9 terms of the habitat, the configuration of the pipeline itself and
10 where the habitat was—

11 Q. Show you the configuration—

12 A. —and what they was doing, and so it's a drawing of a U
13 basically—

14 Q. Uh-huh.

15 A. —with the habitat on one end.

16 Q. Uh-huh.

17 A. Men were in the habitat.

18 Q. Uh-huh.

19 A. And they were removing plugs.

20 Q. Uh-huh.

21 A. That was the explanation that was given.

22 Q. And having removed—in the removing plugs and splash and
23 flush and all of that, what—

24 A. Yes. Communication was lost.

25 Q. Right.

26 A. Yes.

27 Q. Delta P?

1 A. Yes.

2 Q. Delta P is pulling men into the pipeline. Come on, Mr. Seales.

3 **Mr. Ramadhar:** Your seal is broken.

4 **Continued Cross-Examination By Mr. Peterson:**

5 Q. Mr. Ramadhar say your seal is broken.

6 A. [*Laughter*]

7 Q. No, this is serious.

8 A. Yes.

9 Q. Because, you see, it's serious.

10 A. Yes, I'm listening.

11 Q. Where would the men be? In that scenario, Mr. Seales, 25
12 years' experience, diving experience, you told us you had—you
13 know about Delta P.

14 A. Yes, so based on the explanation, exactly as I said. Based—it's
15 likely that that could have happened but again they don't have
16 to be in the pipeline.

17 Q. Yes. But one of the grave, the great possibility is that they're in
18 the pipeline?

19 A. Yes.

20 Q. And you did not factor in any part of your thoughts; pipeline,
21 you're only on seabed?

22 A. No.

23 Q. Right. So you thought they could have been in the pipeline?

24 A. Yes.

25 Q. When you thought that first? In that scenario I—arriving,
26 phone and all that, when you first thought that?

27 A. No, within the whole scenario, yeah.

1 Q. No.

2 A. There would have been a possibility of various things
3 happening.

4 Q. I know.

5 A. That would have been—

6 Q. When did you first think—listen to the question.

7 A. Yes.

8 Q. When did you first think that the men could have been in the
9 pipeline in your arrival, phone being shown to you, pipeline,
10 habitat, line, flashing, flooding—

11 A. Uh-huh.

12 Q. —all of that? When did you first think the men could have
13 been in the pipeline?

14 A. Within the whole scenario of the explanation?

15 Q. Within the whole scenario of the explanation—

16 A. Yes.

17 Q. —downstairs before going upstairs.

18 A. Yes.

19 Q. Right. That is it. Having had the lingering thought that these
20 men could have been in the pipeline downstairs, you want to
21 change that now?

22 A. No.

23 Q. All right. Having heard a man was rescued, what came to your
24 mind then, having thought that they could have been in the
25 pipeline?

26 A. Yeah, the—

27 Q. Not even, not only—curiosity ain't ask you—

1 A. Umm.

2 Q. —to ask; “Dah man rescue from the pipe?” So, so you could
3 eliminate your thoughts that the men could have been in the
4 pipe? You realize that, right?

5 A. No, because the fact that he was rescued doesn’t necessarily
6 mean that he was in the pipe.

7 Q. I know that. You didn’t know that either.

8 A. Yeah.

9 Q. What I’m trying to get from you is that you there to assist to
10 search for men, well, according to you, two men, you’re
11 thinking pipeline or seabed, right? Could be pipeline, could be
12 seabed. Isn’t that so?

13 A. Yes.

14 Q. Because that’s what the rescue has been done—the evidence is
15 that, that was being done before they realized a man came out
16 the pipeline, eh, they were searching seabed and around
17 because they don’t know.

18 A. Yes.

19 Q. So you have those two options in your mind. You will want to
20 narrow it down, wouldn’t you? Because you’re there to help
21 and lend support, eh. Isn’t that so?

22 A. Yes.

23 Q. So you want to eliminate?

24 A. Yes.

25 Q. So if you hear a man is rescued, you either, he found on the
26 seabed or in the pipe. So you want to eliminate one of them as
27 possible and you ain’t ask, well where them find he?

1 A. No.

2 Q. And that is why I tell you it's more plausible, and I'm putting to
3 you that you were told, so let's move on. You were told that
4 the men—the man was rescued from the pipe and four other
5 men were missing. I'm putting that to you right, so we could
6 move on. And you deny that you were told that?

7 A. Yes.

8 Q. Right. But you know I, subject to correction, I got the
9 impression that you were just put on standby. The impression
10 you gave, at least me, and I'm infallible, that you, no requests
11 were made of you, you were just put, brought there?

12 **Mr. Chairman:** Did you say infallible?

13 *[Laughter]*

14 **Mr. Peterson SC:** I always get it wrong, Sir. I always try to
15 tell myself I fallible and I always getting it wrong.

16 **Mr. Chairman:** So you're fallible, then?

17 **Mr. Peterson SC:** I'm fallible, yes. I always try to get it that
18 way but I always getting it wrong. *[Laughter]* *[Crosstalk]* My
19 colleague tell me nowhere.

20 **Continued Cross-Examination By Mr. Peterson:**

21 Q. Now, I got the impression, that you were conveying to us that
22 you were called there, you got there and you were put on
23 standby and no requests were made of you.

24 A. Yes.

25 Q. But you realize at least one request so far was made of you?

26 A. Yes.

27 Q. And an important one to do an assessment for a dive?

1 A. Yes.

2 Q. So, do you now accept that the evidence is not accurate when
3 you said Paria had you there and no requests were made of
4 you? You must accept that because we just went through that,
5 and I want to finish quickly.

6 A. Yeah.

7 Q. So you're inaccurate on that, right, at least that?

8 A. Yes.

9 Q. Right. You're upstairs now, board and everybody upstairs,
10 going with you for Collin Piper, Randy Archbald, Michael Wei,
11 um, Paul Yearwood, Osei Holder, what were you all—what
12 was being discussed at that time?

13 A. Right. Paul Yearwood, as I could recall, was not there. As I
14 said, so, Mr. Collin Piper came into the room, was Michael
15 Wei, Randy Archbald, was the same diagram, they explained
16 what had happened, I asked—as I said, I asked the question of
17 what is the status trying to again—

18 Q. What is the status of what?

19 A. The habitat and the plug, if anybody knows? Now this is, er,
20 9.30 in the night to 10.00n. They appeared that they didn't
21 know because no answer was given and they subsequently left
22 the office.

23 Q. But, at least at that conversation the surviving diver was
24 revealed?

25 A. Yes.

26 Q. Mr. Boodram?

27 A. Yes.

1 Q. Well we got through that already you say you didn't—and then
2 what happened after that? They were just—you just—

3 A. That was it, they left.

4 Q. Right. And when they left, all you knew is that there was all of
5 this information, this drawing on the board and all of that, a
6 man was recovered, rescued, and that's it? That's all you
7 knew?

8 A. Yes.

9 Q. And you remained silent throughout all of this, apart from
10 asking those two questions about the habitat and the plug?

11 A. I was no longer in their presence.

12 Q. No, whilst you were in their presence those are the only two
13 questions you asked?

14 A. At that time, yes. No answer was given for those questions and
15 they left.

16 Q. You ain't tell them, "I feel them men could be in the pipe, you
17 know. Let's do up an assessment for the pipe"?

18 A. No I did not.

19 Q. Why not?

20 A. As, as I said earlier I entered into an active emergency
21 management system, Paria's team would have been
22 functioning, their incident command team, LMCS may have
23 had a emergency response plan active, I do not know who Paria
24 was in communication with, what resources they had available
25 and what was being done or conducted at that time.

26 Q. Right.

27 A. So when they came into the room and they asked those

1 questions or not even asked the questions, they showed me to
2 give me an idea of what was transpiring and I made my
3 comment, that did not go any further. They left. So there
4 wasn't a conversation.

5 Q. So they showed—

6 A. So I—

7 Q. Right, they showed you the stuff because you have expertise to
8 bring?

9 A. So—

10 Q. Did you tell them you had Mitchell on site to conduct a dive?

11 A. Yes. All that was communicated on my arrival in terms of what
12 resources was available at that time when I arrived.

13 Q. Right.

14 A. So that's why I got the information from Mitchell when they
15 arrived

16 Q. Right.

17 A. I called OTSL to find out where they were and I would have
18 communicated that.

19 Q. Right. And the assistance you brought through Mitchell, at that
20 stage, your equipment that you brought was intended for a
21 seabed dive, or a pipe dive also?

22 A. To effect a dive. It doesn't matter—to effect a dive.

23 Q. It could be both?

24 A. Yes.

25 Q. Right. When you up in that erm, room upstairs in the ICT, you
26 didn't indicate that you had equipment standing by to do a dive
27 into the pipe also?

1 A. No. There was no conversation to effect a dive or request to
2 effect any dive or anything surrounding diving.

3 Q. Right.

4 A. That's what the—

5 Q. So when this, according to you persons left the ICT, you, what
6 time you left the ICT room after having arrived there around
7 9.30?

8 A. No, and that was not the ICT room.

9 Q. Well the room—

10 A. This is a room separate and apart from incident command.

11 Q. Right.

12 A. So they came into a room where I was.

13 Q. Right.

14 A. I do not even know what office that was.

15 Q. Right.

16 A. So this was a brief conversation and they left.

17 Q. And they left you?

18 A. Yes.

19 Q. But that room had the whiteboard?

20 A. It had a whiteboard.

21 Q. A whiteboard?

22 A. Yes.

23 Q. With the drawing on it?

24 A. Yes.

25 Q. Right. They left there and left you there?

26 A. Yes.

27 Q. Right. That was around what time?

1 A. That's what I say. That would be after 9.30.

2 Q. Right. And you remained there by yourself for how long?

3 A. Yes, Mr. Flemming would have been there, I would have
4 walked out in the hall, but that's the area I was stationed.

5 Q. Yeah, for how long? Until what time?

6 A. Until, er, will be the 12.15 when they would have had the
7 briefing in the lobby where the—when I—where a request was
8 made for diver intervention.

9 Q. So that would have been about two and a half hours later?

10 A. Yes.

11 Q. When did you—when was this request made about diving to
12 remove the blockage in the pipeline?

13 A. Twelve-fifteen approximately.

14 Q. And you were privy to that? You were present for that?

15 A. Yes.

16 Q. Right. When they made this request, who they made it of?

17 A. They made the request of the coast guard. They declined.

18 Q. No, just now, in your presence?

19 A. Yes.

20 Q. Right.

21 A. Correct. So it was a briefing in the lobby area of that building.

22 Q. Yes.

23 A. Right? He gave a briefing of—

24 Q. Who?

25 A. Mr. Piper.

26 Q. Right.

27 A. —of what the camera would have encountered.

1 Q. Yeah.

2 A. Right, and then he made a request for intervention. The initial
3 request was made of the coast guard—

4 Q. Yes.

5 A. —to remove the blockage.

6 Q. Right.

7 A. They declined.

8 Q. Yes.

9 A. And then he asked me—

10 Q. He asked you what—

11 A. —if I could send my divers.

12 Q. Into?

13 A. The pipeline.

14 Q. For what purpose?

15 A. To remove the blockage which would have been a cylinder
16 what the camera would have encountered.

17 Q. Why would—and you declined that also?

18 A. No.

19 Q. Well, you send the men in?

20 A. No. I had no—what I saying, so I indicated that I had no divers
21 and I asked questions in terms of—

22 Q. No, but you had control over Mitchell divers.

23 A. Which I explained later on, so I told him, because it was a
24 direct question, if I can send my divers.

25 Q. Yes.

26 A. So just for it not to be misunderstood, I have no divers.

27 Q. Right.

1 A. Mitchell's and OTSL have divers, have a dive team and a dive
2 supervisor.

3 Q. Right.

4 A. What I could have done is made a request through them.

5 Q. Right.

6 A. So I made that clear.

7 Q. Right. Twelve-fifteen—

8 A. Yes.

9 Q. —you ain't saying, "But why are we so obsessed with this
10 pipeline?"

11 A. No, by that time we would have known because you would
12 have, you would heard of the conversation.

13 Q. Which conversation?

14 A. By this 12.15, this is after Mr. Boodram would have been
15 recovered.

16 Q. I know.

17 A. So their focus—

18 Q. Mr. Boodram come—

19 A. Exactly.

20 Q. —out about 5.30, eh.

21 A. Right. So their—in their communication at that briefing, they
22 looking at going into the pipeline, they have the information
23 that it's possible that men are in the pipeline. So at 12.15 this
24 conversation is to effect a dive into the pipeline.

25 Q. To remove the tanks?

26 A. Yes.

27 Q. To get clearance to do a rescue?

1 A. Yes.

2 Q. Right. So at 9.30, that conversation didn't take place?

3 A. No.

4 Q. Well I am putting to you it did. In fact, I'm putting to you that
5 you were immediately, on entering the building, taken to the
6 whiteboard, you were told that Boodram was recovered. I'm
7 putting that to you.

8 A. Yes.

9 **Mr. Chairman:** Is this at 9.30? Can I understand is that is at
10 9.30?

11 **Mr. Peterson SC:** Yes, Sir.

12 **Mr. Chairman:** Nine-thirty or thereabouts?

13 **Mr. Peterson SC:** At 9.30 thereabouts.

14 **Mr. Chairman:** Is this when he had the meeting with—

15 **Mr. Peterson SC:** Upstairs.

16 **Mr. Chairman:**—upstairs with Mr. Wei—

17 **Mr. Peterson SC:**—in the room.

18 **Mr. Chairman:** Right. Thank you very much.

19 **Mr. Peterson SC:** Sir.

20 **Continued Cross-Examination By Mr. Peterson:**

21 Q. Yeah, I'm putting that he was informed that the men were
22 missing, that Boodram had been taken out the pipe, well
23 rescued out of the pipe.

24 A. That is—

25 Q. I'll put that to you. All right.

26 A. He was rescued.

27 Q. So. Yeah.

1 A. Well, sorry, well—

2 Q. Yeah, well, yeah I know. We get that already. I don't want to
3 cover ground twice. So we're now at 12.15?

4 A. Yes.

5 Q. So the request was made of Mitchell through you?

6 A. Yes.

7 Q. Through the supervisor. What did they say about going into
8 remove the, um—

9 A. No, after reviewing the footage they declined.

10 Q. Right.

11 A. So that would have been—

12 Q. You have 25 years' experience in diving at that stage?

13 A. Yes.

14 Q. You had any difficulty with that declining?

15 A. No.

16 Q. All right. You think it was a reasonable position?

17 A. Yes.

18 Q. You had any difficulty with the request to clear the line before
19 going in further, to clear the obstacle before sending in divers?

20 **Mr. Chairman:** Well it was sending divers in to clear the—

21 **Mr. Peterson SC:** To clear the—yes, yes, thank you Sir,
22 thanks.

23 **Continued Cross-Examination By Mr. Peterson:**

24 Q. You had any difficulty with they sending divers in to clear the
25 obstacle to effect the rescue?

26 A. This is at—after reviewing the video footage?

27 Q. Yeah.

1 A. Yes.

2 Q. What was the difficulty?

3 A. As I would have indicated earlier in terms of, er, the size of the
4 pipeline, how you accessing the pipeline, the equipment that
5 would have been required to effect the dive, what position the
6 diver would have been in, right, er, how do you rescue, your
7 rescue plans in terms of—

8 Q. Yeah. I got all that before. Yeah, I don't mean to cut you off.
9 I mean we got that before. I don't need to spend time. I'm also
10 instructed that you weren't just parked aside and put on hold.
11 You were being consulted at different stages for your advice
12 and assistance. Is that not so?

13 A. No.

14 Q. So after 12.15 what happened?

15 A. No, sorry, after 12.15—

16 Q. Yeah.

17 A. Or, no.

18 Q. No. Between you arriving—

19 A. Yes.

20 Q. —and the declining to send men into the pipe—

21 A. Yes.

22 Q. —to clear, you were being consulted at different points for your
23 input and assistance?

24 A. No.

25 Q. So after 9.30 thereabouts, the next time you got engaged is
26 12.15 thereabouts in the lobby meeting?

27 A. Yes, for that intervention.

1 Q. After you declined, well, through—Mitchell declining through
2 you, what was your participation thereafter?

3 A. A request was made for chamber support.

4 Q. For what?

5 A. For recompression chamber support for—

6 Q. Yeah, all right. That is, yeah—

7 A. No, well, and, and—

8 Q. No, I mean apart from—okay, go ahead. Go ahead.

9 A. So, and right, and that would have occurred at the time when
10 we were reviewing the video footage at berth 6. So my focus
11 would have transitioned from facilitating that request in terms
12 of the treatment for Mr. Boodram—

13 Q. Yes.

14 A. —which would have been mobilizing a chamber, the chamber
15 support.

16 Q. That's Mr. Bood—right.

17 A. So that's my involvement. So again, this is within the same
18 timeline of having the request to go to berth 6 to review the
19 video with Mitchell's and OTSL.

20 Q. Uh-huh.

21 A. The other request at that time would have been for a treatment
22 for Mr. Boodram.

23 Q. I got all of that. I—

24 A. Yes.

25 Q. —commendable. You had 25 years' diving experience. You
26 were in charge of the diving wing of Heritage. Right? If I
27 could call it a diving wing?

1 A. Yes.

2 Q. Paria is a sister company. When I say sister—

3 A. Yes.

4 Q. —under one kind of umbrella. You went there in an emergency
5 to assist. Bringing your experience to bear you didn't ask these
6 men, "When we diving? When we looking for this man?"

7 A. No.

8 Q. You just sat there waiting to be questioned?

9 A. No.

10 Q. You didn't say, "I have the command of Mitchell's diving. I
11 could put five men in the water within the next half an hour.
12 Can I do that?"

13 A. No, Sir, that's not how it works.

14 Q. Or. That's not how it works?

15 A. No, Sir.

16 Q. What you mean by that's not how it works?

17 A. Sir, it's a emergency response system that has been activated.
18 Everybody have roles and responsibilities. I cannot arrive on
19 location—er, there was no directive of, okay, you are here, you
20 and your team take command of anything. The operation was
21 ongoing. Incident command team which is, I am unaware of
22 what resources, other resources and what was actually taking
23 place at berth 6 on LMCS barge, what resources LMCS had,
24 what communication was taking place between LMCS and
25 Paria or any other external resources. I was sent there to
26 support, if required. So that's what I'm saying, I am there into
27 a system. I am not there like I am at the Commission today. I

1 am not here to do as I please or what I think. I am under the
2 command of—

3 Q. The Chairman?

4 A. Yes.

5 Q. Yes.

6 **Mr. Chairman:** That is not just you either. [*Laughter*]

7 **Continued Cross-Examination By Mr. Peterson:**

8 Q. Mr. Ramadhar. You have—right, so, you got—right, I like
9 that. You got into a command system—

10 A. Yes.

11 Q. —that was already activated?

12 A. Yes.

13 Q. That is good, but dealing with the human side of you now—

14 A. Yes.

15 Q. —and taking for—well, I doing this as a risk—taking what Mr.
16 Ramadhar say—

17 A. Uh-huh.

18 Q. —about a brotherhood of divers—

19 A. Yes.

20 Q. —you know divers are missing?

21 A. Yes

22 Q. Notwithstanding the activation of this system, I understand
23 from examination earlier in the Commission by Commissioner
24 Wilson about a command system—

25 A. Yeah.

26 Q. —and a structure and, the human side of you now—

27 A. Yes.

1 Q. —I know a diver is also human but I mean the human side of
2 you—

3 A. Yes.

4 Q. —ain't saying well, "Men missing, I mean I want to dive.
5 What all yuh doing?"

6 A. Yes, I would say things to my myself.

7 Q. No, no, no, that's you to you, not you to you, although I say
8 some things to myself in this Commission already.

9 A. No, well, so I—

10 Q. But, you understand what I'm saying?

11 A. Yes.

12 Q. And you did nothing?

13 A. Yes.

14 Q. Even when, at least the one request you admitted to so far was
15 made of you, you didn't do it, to do the assessment?

16 A. Yes.

17 Q. The dive assessment to rescue men, isn't that so?

18 A. No.

19 Q. You did the assessment? You did nothing, pursuant to a
20 request to do an assessment to dive, not for gold, to dive to
21 rescue men, isn't that so?

22 A. No, that wasn't—when I say it was not concluded. It's not, it's
23 not clear-cut as into a request was made to do a rescue dive and
24 I said I'm not going to do a risk assessment for a rescue dive. It
25 was a conversation, subsequently we left to go upstairs—

26 Q. Uh-huh. But your—but you gave advice at some point that a
27 dive is not advisable?

1 A. It would not have been in the form of advice, it would have
2 been communication from—

3 Q. Well—

4 A. Yes.

5 Q. —suggestion?

6 A. So, so yes.

7 Q. You suggested that a dive was not advisable?

8 A. Yes. You can say that.

9 Q. Because it was too risky?

10 A. Yes.

11 Q. And that was the dive into the pipe, or all dives?

12 A. All—no, this is a 12.15 conversation.

13 Q. Yeah.

14 A. Yes, so, in terms of diving intervention this would have been
15 the conversation after the review of the video footage, after
16 consultation with Mitchell's and OTSL dive supervisors, that
17 would have been communicated to ICT.

18 Q. And your professional opinion, you agreed with the—

19 A. Yes.

20 Q. —dive supervisor that it's too risky?

21 A. Yes.

22 **Mr. Peterson SC:** Thank you very much Mr. Chairman.
23 Thank you, Mr. Seales.

24 **Mr. Chairman:** You have some questions?

25 **Examination By Mr. Chairman:**

26 Q. Yes I do have a few questions just if you can help me please?

27 First of all, can I, in order to try and pin down the time when

1 you first arrived at Paria—

2 A. Yes.

3 Q. —and, um, what happened thereafter, can we—can I ask—is,
4 put up is page one five seven three which is the supplemental
5 core bundle Volume II which contains the, um, actions as
6 recorded by Paria's, um, on—scribe at the scene?

7 A. Yeah.

8 Q. At the IMT and I forget what it's called, the command centre,
9 all right? The person who's scribing as events take place. Well
10 what we can see is, if you go please to the next page, twenty-
11 one forty-one, do you see that there's an entry there, roll up
12 please, 2141, I'm afraid the timing of this is not always
13 chronological but 2141, do you see it? Yes, there we are. Do
14 you see, thank you, you can see at 2106 there's a discussion
15 with Kazim Ali Sr. and then there's information from Mr.
16 Kazim Ali Sr., and then at 2141 the next entry it says,
17 "Discussions with Heritage personnel." Do you see that line?

18 A. Yes.

19 Q. Right, that's at 2141, do you see?

20 A. Yes.

21 Q. Right? Now, you told us that you, between 2130 and 2400
22 hours there were various personnel in and out of the meetings,
23 in and out of the office, but, at around 2130 you had a meeting
24 which involved a number of the personnel at Paria, correct?

25 A. Yes.

26 Q. Right. And that's the meeting that has been put to you by Mr.
27 Peterson and others, and I just want to try and identify the

1 timing of this, because, if this document drafted by Paria is
2 accurate—

3 A. Yes.

4 Q. —the discussion is taking place at 2141, do you see?

5 A. Yes.

6 Q. Right. So do you think that might be right when you were in
7 this meeting with these people from Paria? You said 2130.
8 This is 2141.

9 A. Possible, yes.

10 Q. Right. We can see that the next thing that happens at 2143 is
11 that someone's trying to contact the hospital in order to try and
12 make arrangements to speak to Mr. Boodram.

13 A. Yes.

14 Q. Now were you present in the meeting where Mr. Boodram
15 spoke to Paria?

16 A. No, I wasn't in the meeting.

17 Q. You weren't in that meeting?

18 A. No.

19 Q. Right. So whatever the timing was that you were in the
20 meeting, it's cut off by what we know, from other evidence,
21 Mr. Boodram was speaking to members of the team in the
22 incident room. And we know that to be shortly before ten
23 o'clock. So it's around 2141, there or thereabouts if that's, if
24 their note is accurate?

25 A. Yes.

26 Q. Now, in that meeting at that time, is it the case that—you had
27 already spoken with Mr. Flemming-Holder?

1 A. Yes.

2 Q. And at 2141 if that's the right time you're in this meeting
3 you're now explaining or it's being explained to you what did
4 or didn't happen. There's a dispute, I appreciate, between
5 what's being suggested and what you've put in your statement,
6 all right?

7 A. Yes.

8 Q. And I'm not really for the moment, for the purpose of my
9 questions, interested in that dispute. What I'm interested to
10 know is this. Whether it is right or wrong that you were told
11 certain things or not told certain things, on any view, the first
12 time you knew anything about the detail of this event, this
13 incident, was the, at the earliest possible time, would have been
14 at 2100 hours—

15 A. Yes.

16 Q. —when you first arrived at the scene and saw Mr. Flemming-
17 Holder?

18 A. Yes.

19 Q. Am I right about that?

20 A. Yes.

21 Q. Right. So, whatever the position, whatever you've been told,
22 whatever you weren't told or were told, it is not suggested that
23 you knew anything other than the very basic fact that there was
24 an emergency to which you were required to attend, yes?

25 A. Yes.

26 Q. Until 2100 hours?

27 A. Yes.

1 Q. All right. At 2100 hours when you were being told something,
2 whatever it was, were you, and I would ask you to reflect on
3 this, please, were you told then how long it had been since Mr.
4 Boodram had emerged from the pipe?

5 A. No.

6 Q. Think about it please? It's quite important this, all right? Do
7 you think there's even the possibility that you were told how
8 long it had been since Mr. Boodram had emerged from the
9 pipe?

10 A. No.

11 Q. All right. Would you regard that as an important fact to be
12 told?

13 A. Yes.

14 Q. You told Mr. Peterson that you were asked at an early stage, I
15 say early, sometime after 2100 hours, about a risk assessment?

16 A. Yes.

17 Q. Right. First of all, were you asked if you were capable of
18 preparing a risk assessment?

19 A. No.

20 Q. Were you asked to carry out a risk assessment?

21 A. No.

22 Q. What was it that you were asked about a risk assessment?

23 A. If I had a diving risk assessment.

24 Q. Did you have one? You were asked that, were you?

25 A. Yes.

26 Q. Right. And did you—

27 A. Well, again, it would not be specific because the risk

1 assessment is site specific.

2 Q. Site specific?

3 A. For the—

4 Q. And—

5 A. For the dive.

6 Q. —you see Mr. Peterson is saying, not unreasonably, if that is
7 the case, if a risk assessment is site specific wouldn't that lead
8 you inevitably to be asking questions?

9 A. Yes, and there was no information available.

10 Q. Right.

11 A. That's why nothing ever—

12 Q. Well, let's take it one a step at a time see? The first question is,
13 did you ask the questions? Because I rather understood your
14 answer to Mr. Peterson was that you didn't.

15 A. No.

16 Q. Right. So do you recognize now that perhaps you should have?

17 A. Yes.

18 Q. Right. So you should have—what you're saying is you didn't
19 ask the questions but perhaps you should have done?

20 A. Yes, I should have interrogated, yeah.

21 Q. Right. Because that—once you've got—once you started
22 asking those questions you would, you would presumably be
23 given the answers if they knew them?

24 A. Yes.

25 Q. Yeah. All right. So that's, that's with Mr. Flemming-Holder,
26 all right?

27 A. Yes.

1 Q. And then after that, about a half an hour later or 41 minutes
2 later if that record is correct, you're now in a meeting with a
3 number of others, yes, you've told us Mr. Wei—

4 A. Yes.

5 Q. —um, Mr. Piper and others, yes?

6 A. Yes.

7 Q. And in that meeting, were you asked anything about a risk
8 assessment—

9 A. No.

10 Q. —in that meeting?

11 A. No.

12 Q. Bearing in mind that we're now pushing ten o'clock, knowing
13 what you know now, that Mr. Boodram emerged from the pipe
14 at about 5.45, something like that, all right, what were the—
15 what was the likelihood of anybody being alive, in your mind,
16 at ten o'clock?

17 A. Highly unlikely.

18 Q. Were you willing to risk, either your own life or anybody
19 else's, in effecting a rescue of anybody who is highly unlikely
20 to be alive?

21 A. As a diver or my own?

22 Q. I'm sorry?

23 A. As a diver or my own?

24 Q. I, I, I'm sorry I just didn't catch that.

25 A. Right, so, the question you asked was if I would have been
26 willing to risk my life—

27 Q. Yes.

1 A. —or anybody else's.

2 Q. Yes, bearing in mind we're now, what is it, four plus hours after
3 Mr. Boodram has come out of the pipe and nearly seven hours
4 after the incident.

5 A. Yes.

6 Q. Would you be willing to risk yourself or others to effect a
7 rescue of somebody who you think highly unlikely to be alive?

8 A. No.

9 Q. You were asked a little about the time that it took between your
10 being first alerted to this just before I think six o'clock, forgive
11 me, no, I think it's just before five o'clock, yes, literally
12 minutes before five o'clock when you were first told about the
13 incident and asked to attend. Do you remember?

14 A. Yes.

15 Q. So let's, for the sake of a couple of minutes call it five o'clock,
16 all right? So five o'clock you first learn of this and you're
17 asked to attend, you told us you did the best you could to speed
18 yourself up to get there, you realized it was an emergency. But
19 between that time and arriving at the Paria site, you told us you
20 went first of all to Heritage and I asked you about how far it
21 was—

22 A. Yes.

23 Q. —and so on. So, just so that I understand this please, was there
24 anything to prevent you being informed en route what the
25 issues were and what might be done to effect a rescue? I mean,
26 were you on the phone, for example? Were you available on
27 the telephone?

1 A. I had my phone but I was not in communication with anyone
2 from Paria.

3 Q. No, no. I appreciate that there's no evidence to suggest that
4 you did actually speak to anybody at Paria, but, I simply want
5 to know whether or not you were available to be called—

6 A. Yes.

7 Q. —by Paria or anyone else?

8 A. Yes.

9 Q. And, had you been called, would you have been in a position to
10 have provided them with such expertise or knowledge as you
11 had?

12 A. Yes.

13 Q. But that didn't happen?

14 A. No.

15 Q. So the hours of delay between, if that is the right expression,
16 between your first being alerted and arrival at Paria, would not
17 have prevented them from speaking you to if they had wished
18 to do so?

19 A. No it would not have.

20 **Mr. Chairman:** All right. Thank you. That's quite a lot so if
21 anybody wants to ask any questions in particular, Mr.
22 Peterson—

23 **Mr. Peterson SC:** One question.

24 **Mr. Chairman:** Yes, of course.

25 **Continued Cross-Examination By Mr. Peterson:**

26 Q. Following from that last question, nothing prevented Mitchell,
27 your supervisor, Mr. Fortune, Heritage, anybody calling you.

1 Anything prevented you, as a human being, from volunteering
2 knowing that there's a diving emergency and you have 25
3 years' experience? Calls work—phone calls work both ways
4 unless your phone was on one way?

5 A. Sir, in my opinion the emergency was being managed by the
6 resources available so—

7 Q. I know and I'm not—

8 A. —I, I, who-

9 Q. I get that.

10 A. So who would I have called?

11 Q. I am dealing with the human side of you, a diver, brother divers
12 missing, nobody ain't calling you, according to your evidence,
13 you must say—for example if I hear Mr. Mootoo missing;
14 nobody ain't have to call me. I calling around everybody I
15 know, who could dive, who could fly, who could do whatever,
16 let's look for Jason. You didn't do any of that?

17 A. Sir, so, who was I to call? It's a question.

18 Q. Mr. Fortune, to say, "Ey, you only tell me activate", your
19 supervisor, "Ey you only tell me activate so and so and so. I
20 have a boss man a HSE man called Mr. Holder. What Holder
21 and them doing? Anybody, what we doing, what we doing?
22 Who missing? How many men missing?" Divers missing,
23 brothers missing, anything like that?

24 A. No.

25 Q. On reflection, you should have done that, right? Come on?

26 A. [*Shaking head*]

27 Q. On reflection as a human diver.

1 A. Sir, in knowing the little that I know now, yes.

2 Q. The little you know?

3 A. Yes.

4 Q. Okay. Thank you.

5 **Mr. Peterson SC:** I'll leave that there, Mr. Chairman.

6 **Mr. Chairman:** Mr. Ramadhar.

7 **Mr. Ramadhar:** Just a few questions, Sir, and I'm very
8 grateful to Mr. Peterson's cross-examination.

9 **Cross-Examination By Mr. Ramadhar:**

10 Q. So, Mr. Seales, did it ever come to your attention that the
11 survivor, Mr. Boodram, had given an indication as to how deep
12 into the pipe he would have been?

13 A. No.

14 Q. You appreciate the pipe at its full length was like quarter mile,
15 correct?

16 A. Yes.

17 Q. You knew that—

18 A. [*Inaudible*]

19 Q. From before?

20 A. Yes.

21 Q. That is quite intimidating a distance, isn't it?

22 A. Yes.

23 Q. Yeah. So in answer to Mr. Peterson, when you spoke about the
24 difficulties, you appreciate if it was a thousand feet in, that will
25 be very difficult, correct?

26 A. Yes.

27 Q. But if it was less, it would be less difficult?

1 A. Yes.

2 Q. And if it was far less, for instance, less than 150, maybe 160
3 feet, that is doable with all of the difficulties that would have
4 been identified, correct?

5 A. Less difficult.

6 Q. Thank you. And doable? And doable?

7 A. Yes.

8 Q. Thank you.

9 **Mr. Ramadhar:** Most grateful to you, Sir.

10 **Mr. Chairman:** I think Mr. Wilson had some questions and
11 then I'll come back to counsel.

12 **Examination By Commissioner Wilson:**

13 Q. Morning again, Mr. Seales. I just have three direct questions.
14 So I heard that your official title in Heritage is Dive Supervisor
15 and client representative.

16 A. Yes.

17 Q. And client representative.

18 A. Yes.

19 Q. Have you had any formal training to be a client representative?

20 A. Yes.

21 Q. From which institution?

22 A. JFD.

23 Q. Sorry?

24 A. JFD, James Fisher—

25 Q. JMB [*sic*] okay, great. So, you—

26 **Mr. Chairman:** Now move the microphone the other way, so
27 right, okay?

1 **Examination By Commissioner Wilson:**

2 Q. All right, um, are you aware of your obligations as a client
3 representative under your training or industry best practice as
4 you quoted?

5 A. Yes.

6 Q. Okay. I'll go here, just a slightly different question to the room.
7 I heard you mention your awareness that an ICT was stood up
8 but, um, and hopefully I'm not repeating the question but, um,
9 when you arrived at Paria, what upon your arrival indicated that
10 an ICT was stood up and an incident was being managed?
11 What—

12 A. I would have taken it for granted that it's industry best practice.

13 Q. Okay.

14 A. So when I was taken upstairs and introduced to the personnel I
15 wasn't formally introduced identifying each—

16 Q. Uh-huh.

17 A. —individual's role.

18 Q. Uh-huh.

19 A. But it was assumed.

20 Q. So you only identified—just to be clear, you only felt like an
21 incident was being managed when you was taken upstairs?

22 A. Yes.

23 Q. And that's when you first became aware that an ICT is stood
24 up?

25 A. Yes.

26 Q. And an incident is being managed. Being aware of your roles,
27 responsibilities and/or obligations as a client representative, not

1 as a dive supervisor, I don't know or I'm going to ask how
2 much experience you've had in terms of managing an
3 emergency response?

4 A. None.

5 Q. Any training or awareness, not even diving related, but any
6 other sort of training or familiarization courses?

7 A. No.

8 Q. All right. And I think what came out into the room, but I'd also
9 like to test with you, at any point in time did you feel, as a
10 client representative, that you felt that you could have injected
11 yourself into the IMT, given that you are a subject matter
12 expert?

13 A. No.

14 Q. No.

15 A. Based on my assumptions of, again, I didn't know what
16 resources were available to Paria's team, who they were in
17 communication with and what LMCS had in place.

18 Q. I understand that.

19 A. Right?

20 Q. Um, but it would be more the injection of your expertise—

21 A. Yeah.

22 Q. —into the conversations. Was that—what I'm asking then is
23 not your awareness, your awareness of those resources would
24 come after your offer—

25 A. Yes.

26 Q. —for your consideration, that would come after you inject
27 yourself into the ICT conversations and stuff?

1 A. Yeah.

2 Q. Yeah? All right. My third question would be around the
3 decompression chamber.

4 A. Yes.

5 Q. I heard that a request was made for that but also I heard that the
6 decompression chamber was no longer required. Who
7 indicated that, that the chamber no longer required?

8 A. I would have been informed through Heritage personnel that—
9 via the doctor, so it was a communication.

10 Q. Okay, so there was a doctor or a hyperbaric doctor—

11 A. Yes.

12 Q. —involved in that decision?

13 A. Yes, so that—

14 Q. That decision didn't come from you?

15 A. No.

16 Q. Okay, great, and that doctor was part of Heritage's emergency
17 response, if you're aware?

18 A. No, I'm unaware, so, again, I was just facilitating requests.

19 Q. Uh-huh.

20 A. So, communication and requests came from individuals through
21 Heritage, yeah.

22 Q. Understood, understood. Thank you. Right.

23 **Mr. Chairman:** Mr. Maharaj.

24 **Mr. Maharaj SC:** Yes. I just have a few questions.

25 **Further Examination By Mr. Maharaj SC:**

26 Q. In answer to Mr. Peterson, when he asked you, well, why you
27 didn't offer some advice, some men are missing, men need to

1 be rescued, you said you were aware that the ICT was
2 activated?

3 A. Yes.

4 Q. And therefore you couldn't do that, right? You remember—

5 A. Yes.

6 Q. —you said words to that effect? If you were invited by the ICT
7 to give the ICT advice on rescue efforts for these men, would
8 you have done that?

9 A. Yes, but it would have required going to the site.

10 Q. It would have required?

11 A. Going to the site and being more informed and involved.

12 Q. Yes. And if you were permitted to do all of that by the ICT,
13 would you have been prepared to do that?

14 A. Yes.

15 Q. Yes. And you would have been able to answer some of the
16 questions that were asked of you today as to the considerations
17 in having a rescue plan for that particular situation on that day?

18 A. Yes.

19 Q. But you were never asked to do that?

20 A. No.

21 Q. As a matter of fact, according to paragraph five of your
22 affidavit, you were asked specifically to mobilize Mitchell's
23 Professional Diving Services Company Limited to report to and
24 provide support, if required, at Paria Trading Company
25 Limited?

26 A. Yes.

27 Q. And you kept to your instructions, what you were instructed to

1 do?

2 A. Yes.

3 **Mr. Maharaj SC:** That's all for this witness.

4 **Mr. Chairman:** Yes. Thank you. Right. We'll take lunch
5 and resume at half past 2.00 please? [*Crosstalk*] I'm sorry,
6 yes, that's right. You are free to go, Mr. Seales, forgive me it's
7 been a long morning. Thank you very much. I appreciate you
8 coming and you're now free to go and you can stay or leave as
9 you please, all right, but thank you very much. Thank you. All
10 right, yes, we'll rise now and we'll resume at half past 2.00
11 please, half past 2.00

12 **1.36 p.m.:** *Enquiry suspended.*

13 **2.32 p.m.:** *Enquiry resumed.*

14 **Mr. Chairman:** All right, good afternoon. Yes. Given the,
15 um, time we've taken this morning, and that we have time on
16 Monday, I have released two of the witnesses for this afternoon,
17 that is, Mr. Andy Johnson and Mr. Anderson Gill. They've
18 been released for this afternoon so we have two witnesses to get
19 through, I've had a request that we rise by 5.30 and let's see if
20 we could make that happen. All right, thank you very much.
21 Yes, Mr. Maharaj.

22 **Mr. Maharaj SC:** Our next witness is Mr. Krishna Fuentes
23 and Mr. Ronnie Bissessar will do the summary.

24 **Mr. Chairman:** Yeah, there's no actual summary, is there?

25 [*Pause*]

26 [*Mr. Krishna Fuentes enters Enquiry room and is sworn*]

27 **Mr. Fuentes:** I, Krishna Fuentes, solemnly swear that the

1 evidence I shall give to this Commission in this case shall be
2 the truth, the whole truth and nothing but the truth.

3 **Examination By Mr. Chairman:**

4 Q. All right, good afternoon, Mr. Fuentes.

5 A. Good afternoon, Sir.

6 Q. Thank you for coming. I see you've brought a file with you.
7 All right, now, first thing I should say to you is this, is that in
8 the first instance at any rate you'll not be allowed to utilize that
9 file to answer any questions, all right, save where you feel you
10 can't answer the question without consulting some note or
11 whatever you might have. Do you follow? At the consequence
12 of your relying on anything that you look at in that file will
13 mean that anybody else interested in asking you questions
14 would also be able to look at your file. Do you follow?
15 Because you can't have something private in front of you
16 without us knowing what it is. All right?

17 A. Okay.

18 Q. So this, I'm anxious to impress upon you as it is with everyone,
19 is not a memory test. You're not required to remember dates
20 and times and things like that without assistance, all right, if
21 that assistance is available. However, you've not provided a
22 witness statement for us. What we do have is email
23 correspondence. Mr. Bissessar who sits opposite you there is
24 going to summarize that correspondence so that you can hear
25 what it is that we have of what you say about the matter
26 hitherto.

27 Listen carefully to what he says. If he gets something

1 inaccurate, you'll tell me at the end of what he has to say all
2 right? Otherwise, if you accept that what he says is a fair
3 summary of the position then you'll say so. What will then
4 happen is, Mr. Maharaj who sits next to him will ask you a few
5 questions, all right? When he is finished any other barrister
6 who I permit will be permitted to ask you some questions, all
7 right?

8 I want to apologize to you. I think you've been here on
9 several occasions and so, um, I appreciate your coming and I
10 know that sometimes it's very inconvenient but I appreciate
11 your coming, so you put that file to one side. If you need to
12 refer to it, you refer to me first and I will consider it, all right?

13 A. I will gladly share this. It's a page with notes, diving
14 documents, references, diving laws and I will gladly share it
15 with the room.

16 Q. Well, Mr. Fuentes, if you need it—put it into your file please?
17 If you need it for any purpose just tell me, all right? So you'll
18 be asked some questions in due course and if you need to refer
19 to it in order to answer the question, you say that to me and then
20 we'll see where we go, all right? You put that to one side
21 please for the moment? Thank you.

22 Could we have some water for Mr. Fuentes if he needs it,
23 like most witnesses? I have a little stash here of my own. You
24 can give him that one would you please? All right, Mr.
25 Fuentes, there's bottled water if you need it.

26 A. Thank you.

27 Q. Okay. So listen first of all to what Mr. Bissessar has to say all

1 right?

2 **Mr. Bissessar:** Thank you, Chairman. Mr. Krishna Fuentes is
3 an IMCA Diving Supervisor, a dive system auditor and a diving
4 client representative. Mr. Fuentes did not provide a witness
5 statement to the Commission nor did he accept the
6 Commission's invitation for him to be interviewed by the
7 Commission's legal team.

8 By letter dated 17th October, 2022, this is at page one six
9 six of the correspondence bundle, the Secretary to the
10 Commission invited Mr. Fuentes to be interviewed. By an
11 email sent on 18th October, 2022, and this is at page three one
12 five seven of the supplemental witness bundle which is on the
13 screen, Mr. Fuentes responded advising that he was not directly
14 involved in the accident and asked to be removed from any
15 further investigation of the incident. The full email is as
16 follows. It's a fairly brief email, Chair, and I'll just read it out.

17 "Good evening, Ms. Sinanan. Thank you for your email
18 dated 17th October, 2022. As per our conversation
19 today, this is my response: As you already know, my
20 name is Krishna Fuentes of Diego Martin. I have 24
21 years' experience in the diving industry with
22 qualifications as an IMCA diving supervisor, a dive
23 system auditor and a diving client representative. In your
24 email to me, there was a letter attached. The paragraph
25 three implied that I was directly involved in the Paria
26 diving incident that occurred on February 25th, 2022.
27 This statement is not factual, as I was not involved in that

1 project in any way, nor was I involved in any aspect of a
2 rescue or recovery operation of the bodies. On February
3 27th, 2022, I received a telephone call from Patricia King
4 requesting my participation in a diving procedure and
5 risk assessment. This was scheduled to take place on the
6 same day at 1600 to 1630 hours. The review was solely
7 and specifically focused on a diving operation by LMCS
8 to recover three scuba bottles from inside the 30-inch
9 pipeline at Paria and nothing more. This had absolutely
10 nothing to do with a rescue mission. February 27th, 2022
11 was the first time that I was ever contacted by Paria Fuel
12 Trading in my 49 years of existence. I attended the
13 team's online meeting at 1600 hours that day. My two
14 points of input at that meeting were, one, the three scuba
15 bottles that were inside the 30-inch pipeline would not be
16 able to clog the pipeline if they decided to pump water
17 from the other end of the pipeline. Two, that it would
18 have been detrimental to send a diver inside of the 30-
19 inch pipeline without the required PPE and additional
20 safety measures in place. It was my honest opinion,
21 based on industry operating standards, combined with my
22 experience in the field, that this may have resulted in
23 injury or a further loss of life. I was asked to fill out a
24 NDA document which I complied with. I was asked my
25 opinion solely on making that dive to recover three scuba
26 bottles, and absolutely nothing else. In service to my
27 country and industry I participated and gave my

1 requested opinion free of charge out of goodwill. The
2 emails that were sent to me from Mr. Paul Yearwood of
3 Paria fuel are all attached as supporting documentation.
4 This includes the meeting invitation, the diving
5 procedure, risk assessment and a document that includes
6 my comments on the diving procedure that was written
7 by LMCS. The LMCS procedure clearly states that the
8 operation was to recover three scuba bottles. The above
9 information defines my involvement in a scuba bottle
10 recovery operation. As such, based on this information, I
11 ask that you remove me from any further investigation
12 relating to this incident. Please feel free to contact me
13 for any clarifications. Thank you.”

14 By further letter dated 20th October, 2022, and this is at
15 page 168 of the correspondence bundle, the Secretary requested
16 Mr. Fuentes to, inter alia, reconsider the Commission’s request
17 for him to be interviewed. On the 25th of October, 2022, and
18 this is at page one seven zero of the correspondence bundle
19 which can be put on the screen, Mr. Fuentes responded in the
20 following terms.

21 “Good morning, Ms. Sinanan. I refer to previous
22 correspondence ending with your letter dated 20th
23 October, 2022. I am very concerned that having
24 provided you with all the facts relating to my
25 involvement which made clear that I was nowhere near
26 berth 6, Pointe-a-Pierre on 25th February, 2022, you
27 persisted in insisting that I was directly involved in the

1 tragic incidents which occurred on 25th February, 2022.
2 You, on behalf of the Commission, appear to have
3 already formed a view adverse to my interest. That being
4 the case, I have consulted my attorney and decline to
5 participate further, by either attending an interview or
6 providing a statement as you have suggested. I have
7 already provided you with all the information that I have
8 in my possession and there is nothing further that I wish
9 to say. Please be guided accordingly.”

10 Thereafter, in obedience to a witness summons, Mr.
11 Fuentes made himself available to the Commission. The
12 witness summons was issued on the 9th of November, 2022 and
13 it's at page 10 of the witness summons bundle.

14 Mr. Fuentes, do you agree that what I have presented is a
15 true and faithful summary of your correspondence with the
16 Commission?

17 **Mr. Fuentes:** Yes I agree.

18 **Mr. Bissessar:** Thank you.

19 **Examination By Mr. Chairman:**

20 Q. All right, thank you very much for that. Mr. Fuentes, may I
21 reassure you that there is no adverse inference to be drawn or
22 conclusion that has been drawn to your interests by this
23 Commission at all. The only reason you're here is because we
24 feel that you are in a position to provide us with some
25 additional assistance, all right? I don't anticipate that will take
26 very long. If you listen to what Mr. Maharaj has to ask you and
27 you answer his questions and then those of the others, I'm sure

1 you'll be gone within a short space of time.

2 A. Thank you.

3 Q. Mark what I say, if there is something that you want to refer to,
4 ask me first and then we will see where we go. All right?

5 A. [*Nodding*]

6 **Mr. Chairman:** Mr. Maharaj.

7 **Examination By Mr. Maharaj SC:**

8 Q. Mr. Fuentes, after this incident which occurred on the 25th of
9 February, 2022 last year, you have been retained by Paria as an
10 expert client representative to assess diving plans for Paria. Am
11 I correct?

12 A. Somewhat. Not retained but on a freelance basis, when—to
13 review diving documentations.

14 Q. And have you been—have you done any such review since
15 your retention?

16 A. Yes I have.

17 Q. How many?

18 A. Twice.

19 Q. Twice.

20 A. Two documents, two, two diving operations.

21 Q. Okay.

22 A. And it's not retention. I don't get a retainer or anything of the
23 sort.

24 Q. Well how you want to describe it?

25 A. On a freelance basis.

26 Q. Freelance basis.

27 A. Yes.

1 Q. So in other words, you do it and you do not get any payment?

2 A. I get paid for it.

3 Q. Or you get paid for it?

4 A. Yes. On a freelance basis.

5 Q. On a freelance basis.

6 A. Not a retention basis.

7 Q. Okay.

8 A. There's a difference.

9 Q. Okay. All right.

10 **Examination By Mr. Chairman:**

11 Q. You're not employed as an employee?

12 A. No.

13 Q. You're a free-standing—

14 A. Independent—

15 Q. —enterprise of your own, independent, and they engage you
16 from time to time as and when they need you?

17 A. Correct.

18 Q. Right; and you've done that on two occasions.

19 A. Okay.

20 Q. For which you've obviously been paid or you're—

21 A. It's in the process.

22 Q. Well, well, yeah, I know what you mean, right? [*Laughter*]

23 **Mr. Chairman:** All right.

24 **Continued Examination By Mr. Maharaj SC:**

25 Q. Okay. Now you consider yourself an experienced diver?

26 A. Yes. I have 24 years—

27 Q. Twenty-four years'—

1 A. —in [*Inaudible*]

2 Q. —experience?

3 A. Yes.

4 Q. Can I ask you scuba diving with scuba?

5 A. In, in—

6 Q. Are you a commercial—

7 A. In my early days of diving I may—I would have done some
8 scuba diving.

9 Q. But are you a commercial diver?

10 A. I'm a commercial diver.

11 Q. And how many years' experience as a commercial diver?

12 A. I have 12 years as a diver and 12 years of oversight supervisory
13 experience.

14 Q. And as a commercial diver with experience—

15 A. Yes.

16 Q. —and having regard to your total experience as a diver—

17 A. Yes.

18 Q. —you would have known that there have been diving to rescue
19 persons from confined spaces?

20 A. Can you repeat that, Sir?

21 Q. As a diver with experience—

22 A. Yes.

23 Q. —that you have stated—

24 A. Yes.

25 Q. —you are aware that there have been rescue of divers from
26 confined spaces?

27 A. Globally there could have been rescues of divers from confined

1 spaces. I'm not—you have like factual information, like actual
2 cases?

3 Q. Okay, I'll take your answer.

4 A. All right.

5 Q. Do you consider—well can—do you think that you can do a
6 rescue from a confined space?

7 A. Could I look in there?

8 **Examination By Mr. Chairman:**

9 Q. All right, what do you—what is it you want to ask at? I mean,
10 it's a question really that's personal to you, isn't it? You're an
11 experienced diver. Do you believe you are able to effect a
12 rescue from a confined space?

13 A. Okay.

14 Q. It would depend on all kinds of parameters, but—

15 A. All right, um—

16 Q. —it's very broad question.

17 A. It's a very broad question. [*Pause*] The possibility exists to
18 rescue a diver from a confined space. Right?

19 Q. Right.

20 A. This, this, this, this incident goes a bit further and deeper than
21 just a confined space.

22 Q. Mr. Fuentes—

23 A. This—

24 Q. —pause there for a minute. I think you'll find it much easier if
25 you just confine yourself to answering the question that's been
26 asked, which is, is it possible to rescue people from a confined
27 space and your answer I think is yes. Obviously it will depend

1 on the parameters of what that confined space is?

2 A. Yes, but this was more than a confined space.

3 Q. Yeah, well we're not talking about this one at the moment.

4 A. This was a physically confining space, which is even—

5 Q. Mr. Fuentes—

6 A. —a more of a risk.

7 Q. —we're not dealing with this one yet. He's asking you
8 generally first of all, all right?

9 A. Okay, go ahead.

10 Q. If we come to the specifics, if he comes to the specifics, you'll
11 be able to tell us all about it.

12 A. Okay.

13 **Continued Examination By Mr. Maharaj SC:**

14 Q. The next question, Mr. Fuentes, would you not agree with me
15 that it is possible to rescue a diver from a pipeline that is 30-
16 inch in diameter?

17 A. Diving in pipelines is not a thing. Honestly, it's—divers don't
18 go into pipelines. There's no task on the installation of
19 pipelines, the repair of pipelines, the inspection of pipelines,
20 there's no task that requires a diver to go inside of a pipeline.
21 All work is done on the outside of a pipeline.

22 Q. I agree with that, Mr. Fuentes.

23 A. Right? So dive—entering a pipeline is not a thing. We do not
24 go inside pipelines.

25 Q. Okay, but suppose there is an accident and a diver ends up
26 inside a pipeline, and the question of rescuing that diver arises,
27 do you think from your experience, if there's a 30-inch

1 diameter pipeline and that the diver is inside that pipeline and
2 there is water in the pipeline, okay, obviously there's water,
3 let's say the pipe is even filled with water, do you think that it is
4 possible to rescue a diver from that pipeline? It is possible,
5 whether it is possible?

6 A. A rescue diver would have had three thing against—three
7 things against him. It's a penetratory high-risk activities, right?
8 It's, it's a penetration dive, one. Two, into contaminated
9 waters; three, with the possibility of further Delta P.

10 Q. Okay.

11 A. Right?

12 Q. I take that.

13 A. Okay.

14 Q. So those are the risks that would have to be considered?

15 A. Major risk, yes.

16 Q. Right. And there could be a consideration of those risks and
17 there could be a—if it is possible the dive can take place?

18 A. With the proper gears and steps, additional steps, safety steps in
19 place, yes.

20 Q. Thank you very much.

21 **Mr. Chairman:** Does anyone have any question of this
22 witness? I see shaking heads. It is shorter than you might—ah,
23 I believe there is. Yes. Mr. Mootoo.

24 **Cross-Examination By Mr. Mootoo:**

25 Q. Good afternoon, Mr. Fuentes.

26 A. Good day.

27 Q. My name is Jason Mootoo. I represent the interest of Paria.

1 A. All right.

2 Q. And Heritage.

3 A. Okay.

4 Q. Just a few questions for you—

5 A. Sure.

6 Q. —by way of clarification. In answer to Mr. Maharaj you said
7 with further steps being taken. What are those steps?

8 A. Can I look at my page of notes, please?

9 **Examination By Mr. Chairman:**

10 Q. What are they?

11 A. What are what?

12 Q. What are the page of notes? What is it?

13 A. The answer to his question.

14 Q. You can't remember it?

15 A. You said it's not a memory game.

16 Q. No, that's true, but you wrote the notes. You wrote the notes.

17 A. Right.

18 Q. You had them just before you came into this building, yes?

19 A. Well, may I look at my page, please?

20 Q. Well, if you think that that is the only way in which you can
21 answer the question—

22 A. It is the best way.

23 Q. The best way?

24 A. And I can give him all the information that way.

25 Q. All right.

26 A. I may omit something with—

27 Q. No, no, it's not—you're, you're, you're right to remind me

1 exactly what I said to you, it is not a memory test so can I have
2 a look at the note first, please?

3 A. You?

4 Q. Yes, me.

5 A. All right, excuse me.

6 Q. No, no, wait there.

7 A. Okay.

8 *[Document retrieved from Mr. Fuentes and handed to Mr.*
9 *Chairman]*

10 Q. This is all you want to look at, is it?

11 A. Yeah.

12 Q. Right, thank you. *[Perusing document]*

13 A. More, more towards the bottom of the page.

14 Q. Yeah, I understand. It's really the part in the box that you've
15 created at the bottom, yes, I understand. Yes I have no
16 difficulty with you using this to remind yourself of what you
17 wrote on it. But—and if anyone else wants to see it they're
18 welcome to do so. Thank you.

19 *[Document returned to Mr. Fuentes]*

20 A. Thank you.

21 Q. Yes, perhaps you'll repeat the question, Mr. Mootoo, so that he
22 can—

23 A. All right, could you—

24 Q. —in order to—

25 A. —please repeat the question once more?

26 **Mr. Mootoo:** Sure.

27 **Continued Cross-Examination By Mr. Mootoo:**

1 Q. It may be slightly different but in answer to Mr. Maharaj I
2 believe you said the rescue, I'm using my words, a rescue might
3 be possible, provided that certain steps were undertaken.

4 A. Right.

5 Q. Could you indicate what those requirements would be?

6 A. Okay. For, for example, the contaminated water scenario, what
7 is actually is in—was in that pipe is unknown to a point. In that
8 case it should be looked—we should look at it as a worst-case
9 scenario. From a diving perspective, divers should have a full
10 contamination suit to enter that pipe with, with an appropriate
11 headpiece, diver's helmet, suited for the job, designed for
12 contaminated waters. In terms of a penetration dive, additional
13 steps such as a wet tender in place at the 90—

14 Q. Sorry, can I ask you to explain what is a wet tender?

15 A. All right. So for the diver to enter the—he would enter the
16 riser, descend, past the 90 degrees and start to travel along a
17 horizontal section of pipe to an unknown distance. Right? Um,
18 divers' umbilicals get snagged very easily so once a diver goes
19 beyond that, he himself may be unrecoverable because his
20 umbilical could get hung up on the 90.

21 **Examination By Mr. Chairman:**

22 Q. You mean the umbilical as it goes from—

23 A. Correct, round the bend.

24 Q. As he goes round the bend?

25 A. Yes.

26 Q. Yes.

27 A. Yes. Ease—it happens very easily.

1 Q. And going into the pipe?

2 A. Yeah, correct.

3 Q. Yes. In cases like that, you put an additional diver at that bend
4 to tend his umbilical however far he needs to go. So that's,
5 that's what a wet tender is.

6 **Continued Cross-Examination By Mr. Mootoo:**

7 Q. Okay, understood.

8 A. Right? Um—

9 **Examination By Mr. Chairman:**

10 Q. And is that the position at each time that umbilical goes around
11 the bend, at each place you would have someone, ideally
12 someone placed to tender the umbilical?

13 A. Ideally, yes, but, to, to, for that to actually be done is, is almost
14 impossible then you, you have three, four divers in the water
15 the same time which, which is a no no. It's, it's not done.

16 Q. Right, we've heard some things about you know there's this
17 hyperbaric chamber or—

18 A. Right.

19 Q. —habitat over the pipe?

20 A. Yes.

21 Q. So the umbilical we're told would have to come from the shore
22 down into the—

23 A. Right so you'll have someone at the entry point—

24 Q. Yes.

25 A. —and depending on the distance horizontally that he needs to
26 go, you would need a tender there as well.

27 Q. So you might need one under the water as it comes into the

1 chamber, yes. As it comes into the hyperbaric chamber before
2 it goes into the pipe.

3 A. Yes, yes.

4 Q. Yes.

5 A. Someone to tend his umbilical there.

6 Q. To tend there; and somebody in the chamber as he goes into the
7 pipe?

8 A. Possibly.

9 Q. Right, yeah. Yes so that's three or four minimum really?

10 A. Or they could—if, if—I have not seen—

11 Q. Stop looking at him.

12 A. I have not seen this chamber—

13 Q. Yes.

14 A. —so it, it could have been possible to coil his umbilical there—

15 Q. Right.

16 A. —and have one person tend it down inside the riser.

17 Q. So there are other ways of doing it—

18 A. Yes.

19 Q. —that might have avoided the necessity of having that many
20 tenders?

21 A. But the risk, the risk would be his umbilical getting snagged on
22 the 90.

23 Q. Yeah, I got you. Thank you very much.

24 **Mr. Chairman:** Yes, Mr. Mootoo.

25 **Mr. Mootoo:** Right.

26 **Continued Cross-Examination By Mr. Mootoo:**

27 Q. You were identifying the other, other requirements?

1 A. Right, um, a third umbilical on board, so you have three dive
2 umbilicals so if one diver penetrating, one diver tending, you
3 need a standby diver on deck just in case anything goes wrong
4 with any of those two divers.

5 **Mr. Chairman:** Standby diver.

6 **Mr. Fuentes:** Right?

7 **Mr. Chairman:** Standby diver. That's what you're—

8 **Mr. Fuentes:** Yeah.

9 **Mr. Chairman:** That's right, is it? Yes. Standby diver. Yes.

10 **Mr. Fuentes:** Where they have—

11 **Continued Cross-Examination By Mr. Mootoo:**

12 Q. With his own umbilical, right?

13 A. Sorry?

14 Q. Standby diver with his own umbilical?

15 A. With his own umbilical. Yeah. So a third umbilical.

16 Q. Yes?

17 **Examination By Mr. Chairman:**

18 Q. Is that right? I mean, if somebody's inside the habitat and
19 they've got, which is I understand it about 20 feet into the water
20 thereabouts, would scuba not be sufficient for that, a tank
21 breathing—because, first of all, he's in, he's in a—

22 A. Scuba is, scuba is if, if you, you want to go to Tobago to look at
23 the reef, that's what scuba is for.

24 Q. I do actually, but, that aside—

25 A. That's the only use—

26 Q. Yeah.

27 A. —a good use of scuba.

1 Q. Well, first of all, the person inside the habitat, the person—I
2 mean, all the works were being carried out inside the habitat
3 without any equipment at all because it's a dry—well not dry
4 but you know what I mean they don't need—

5 A. It's dewatered.

6 Q. It was, it was pressurized and they were breathing air.

7 A. It was dewatered.

8 Q. Dewatered? Is that what it's called?

9 A. Yes.

10 Q. Right. Okay, thank you. So that remained the same, so why
11 would it be necessary for the person who is tending, wet
12 tending, to be wearing an umbilical at all?

13 A. No, no, no he won't be wearing an umbilical.

14 Q. Right.

15 A. If anything goes wrong with the two divers that are inside the
16 pipeline—

17 Q. Right.

18 A. Then you need to send—or have someone to be able to get to
19 them.

20 Q. You mean to go down—a third diver—

21 A. Yes.

22 Q. —to go in to rescue the two divers who are already in—

23 A. Yes.

24 Q. Right. Would they not just be on a rope and pulled out?

25 A. Sorry?

26 Q. Would they—those divers not be on some sort of harness with a
27 rope to pull them out if anything went wrong?

1 A. They may have been pulled out, or they may have been snagged
2 and not be able to be pulled out. I can't say that.

3 Q. Right. Okay. Anyway, from your point of view you think
4 you'd need—the safe course would be to have a third diver with
5 an umbilical who could go in and get them?

6 A. Yeah.

7 Q. Right, okay, I've got you. Thank you very much. So, Mr.
8 Mootoo's right when he says with his own umbilical.

9 **Mr. Mootoo:** Thank you.

10 **Continued Cross-Examination By Mr. Mootoo:**

11 Q. Yes, any additional requirements?

12 A. And they would have had to have a sufficient quantity of, of air
13 to make a penetration dive.

14 **Examination By Mr. Chairman:**

15 Q. Er, you need—

16 A. As well as they had a compressor or if they were using—

17 Q. You mean either by way of a—well, a compressor for the
18 umbilicals?

19 A. Correct, yes.

20 Q. And then spare tanks to take with them—

21 A. Yes.

22 Q. —these little mini tanks that will help them out if the umbilical
23 goes wrong?

24 A. Now, if, if they were using big banks to supply the divers, they
25 would have had to have an enough supply to make a penetration
26 dive.

27 Q. Right. But, so that I understand that—

1 A. If it was compressor supplied, then they would have had an
2 unlimited amount of air.

3 Q. Yes.

4 A. All right.

5 Q. So that's in the umbilical?

6 A. Yes, to supply the umbilical.

7 Q. Right, to supply the umbilicals. But would they need also
8 additional spare tanks—

9 A. Yes, on their backs.

10 Q. —that they would take with them? Just in case?

11 A. Definitely, yes. Every dive needs that.

12 Q. Right.

13 A. Every dive.

14 Q. So if the umbilical went wrong, got snagged—

15 A. You crack your valve—

16 Q. —torn, they turn on the valve and they got their own source of
17 air. Got you.

18 A. And you, yeah, and then you—

19 Q. And then you get them out?

20 A. —you abort your dive, yes.

21 Q. Got you. Thank you very much.

22 **Continued Cross-Examination By Mr. Mootoo:**

23 Q. Any other requirements?

24 A. No, that, that, that's, that, that's it.

25 Q. Okay. Are you aware as to whether full contamination suits are
26 red—I think the term you used was full contamination suits?

27 A. Yes.

1 Q. —are readily available in Trinidad?

2 A. No they're not.

3 Q. They are not available?

4 A. They're not available.

5 Q. Readily or at all?

6 A. They may have a contractor that may have a old one laying
7 around.

8 Q. Right?

9 **Mr. Chairman:** One laying around.

10 A. But to say go into a store to buy it or to get it here, no.

11 Q. No, okay.

12 A. No.

13 **Examination By Mr. Chairman:**

14 Q. Right, so, so that I understand what you're saying, this
15 contamination suit, right, is not one that's available anywhere
16 on Trinidad, as far as you know?

17 A. That you can—as a, as, as, far as I'm aware, it's not readily
18 available.

19 Q. Right.

20 A. I said a contractor may have one laying around. I don't know
21 what condition it would have been.

22 Q. Have you seen one in Trinidad in your 24 years of working
23 here?

24 A. Yes.

25 Q. Have you seen one?

26 A. Probably seen, seen one, yeah.

27 Q. You've seen one. Where is that?

1 A. Where was this? Laying around in someone's warehouse. I, I
2 can't recall where it was.

3 Q. Thank you.

4 **Continued Cross-Examination By Mr. Mootoo:**

5 Q. Right. The Enquiry has received some evidence about risks
6 associated with a rescue attempt in this pipeline and the
7 methodology that would be employed in order to effect a
8 rescue. So I just want to take you to some of those areas now
9 and I'm going to ask you whether you agree with some of the
10 evidence that has been given here. It's been suggested, that, for
11 the rescue to be effected, and on the basis that—the undisputed
12 basis that there were certain items in the pipeline, like diver's
13 tanks and so on—

14 A. Like, like, like what?

15 Q. Diver's oxygen tanks.

16 A. Okay, yes.

17 Q. What would have to happen is that when a rescue diver goes in,
18 he would have to retrieve the equipment, if there's blockage,
19 one by one, each item, and then take it out and then re-enter the
20 pipeline, so to do it in a methodological manner. Do you agree
21 with that?

22 A. That the scuba tanks would have blocked a rescue?

23 Q. No. That in order to rescue the men, one should employ a
24 procedure and the procedure would be if the diver goes into the
25 line and encounters a blockage, or a tank, if he can free the
26 blockage—

27 **Mr. Chairman:** Can I ask you, Mr. Mootoo, to skip the word

1 blockage for the moment?

2 **Mr. Mootoo:** Tank.

3 **Mr. Chairman:** Let's just deal with each item if you want to,
4 but, a tank in the way.

5 **Mr. Mootoo:** Yes.

6 **Examination By Mr. Chairman:**

7 Q. So he's going down, he's doing the rescue using your own
8 criteria, and obviously it's a risk, but he's going down and he
9 encounters a tank, a scuba tank—

10 A. All right.

11 Q. —all right, presumably with the spider attached to it, all right?

12 A. Right.

13 Q. So, um, would he have to remove that first by going back
14 again?

15 **Continued Cross-Examination By Mr. Mootoo:**

16 Q. In circumstances where, if he—

17 A. If, if I were—

18 Q. —he has his umbilical attached, he has a tank on him as well,
19 and he has to go further in the pipeline, does he remove that,
20 take it out and then come back in?

21 A. He would have to make that call at that point in time, that diver.

22 Q. Okay. Why would he—

23 A. On, on, on his comfort level.

24 Q. Right.

25 A. If he feels comfortable slipping by the tank—

26 Q. Right?

27 A. —and continue, he, that will, that will be his call at that point in

1 time.

2 Q. In order to do it safely, what would your recommendation be
3 that he take it out?

4 A. Not really, not particularly.

5 Q. Okay.

6 A. No.

7 Q. But if he encountered more and more equipment, more and
8 more tanks along the way, would you accept that continuing to
9 enter further into the pipeline becomes more risky without
10 removing those items?

11 A. Yes, that sounds logical. The more, the more debris that's there
12 is the more things that can go wrong.

13 Q. Yes. And, in terms of entry into the pipeline, we've heard some
14 evidence that if a diver were to go in, he would have to go feet
15 first as opposed to headfirst. Would you agree with that, for the
16 purpose of effecting a rescue?

17 A. That would depend on the diver.

18 Q. Okay. Would your recommendation be feet first?

19 A. I am uncertain. I, I, I not sure.

20 Q. Okay.

21 A. I don't—it, it would depend on the size of the diver as well.

22 Q. Okay.

23 A. I would send a kind of small—

24 **Examination By Mr. Chairman:**

25 Q. Send a small diver.

26 A. A small diver.

27 Q. And a small diver, yes.

1 A. Yes. We have small divers.

2 Q. Yes. Well, I'm sure. Can I ask you this? I'd suggested to
3 somebody else before, and the first diver in, you know, you've
4 told us about having a tender, a wet tender at the 90-degree
5 bend.

6 A. Yes.

7 Q. And I was suggesting it might be possible for the first diver to
8 go in headfirst, the second diver feet first so that when the first
9 diver who's gone in is coming, backing out, the second diver
10 might be able to assist him. I mean, the problem is this, isn't it?
11 On the one hand, you're going to effect a rescue much more
12 effectively if you're headfirst?

13 A. Correct.

14 Q. Right?

15 A. Yes.

16 Q. On the other hand, getting yourself out of the pipe afterwards
17 once you've—let's say you've found somebody and you're
18 pulling them out, when you get to that bend you've now got to
19 come out, there's only one way out for you—

20 A. One way out.

21 Q. —that's, and that's upside down isn't it?

22 A. Yes.

23 Q. Your, your, your feet are going to be coming out of the top of
24 the pipe first?

25 A. Correct.

26 Q. And that might need some, somebody at the bend might be able
27 to help you with that to a degree, but even that person's feet, if

1 they went in the way I'm suggesting, their feet would be at the,
2 at the, at the wrong end as it were, yes?

3 A. Right, yes.

4 Q. So, I mean, it's really—I could see why you're suffering with
5 same dilemma that I would. Um, I mean clearly it would be
6 safer for that rescue diver to go in feet first, I think—I don't
7 think there's any dispute between, between us on that. The
8 question is how, how efficacious would it be for a diver to go in
9 feet first of all to try and rescue someone.

10 A. To try and rescue someone.

11 Q. As it's been pointed out to us, that person may be injured. He
12 may be feet first himself?

13 A. Correct.

14 Q. Or feet after, as it were, so it's foot to foot. What would you
15 then be able to do in 30 inches of pipe?

16 A. In zero visibility.

17 Q. Yeah, and, and maybe zero visibility, quite.

18 A. Not, not, maybe, definitely.

19 Q. Definitely. Well we know that there was some water in the first
20 part of the pipe and that there was some visibility because
21 we've seen the camera going in with some visibility, so we
22 know that there was, certainly to start with, some visibility. I'm
23 not suggesting it's as good as it can be if we're just diving in
24 the ocean. But, it wasn't completely dark. It became that, I
25 suspect, as it became thicker with oil, but, um, yes, I mean, so
26 you wouldn't make a judgment call on that? You'd leave that
27 to the individual diver?

1 A. Individual diver at that point in time.

2 Q. Yes. All right, thank you very much.

3 **Mr. Chairman:** Thank you, Mr. Mootoo.

4 **Mr. Mootoo:** Thank you, Mr. Fuentes. No further questions.

5 **Mr. Fuentes:** Okay.

6 **Mr. Chairman:** Or, hands are coming up now. Well, I'm not
7 sure I'm going to allow this. Um, you had your opportunity,
8 chose not to. Tell me what it is please, that you want to ask,
9 Ms., Ms., um—

10 **Ms. Alfonso:** Thank you, Mr. Chairman. Mr. Chairman, I
11 actually did raise my hand, um, when you asked originally
12 for—

13 **Mr. Chairman:** Not very high, obviously.

14 **Ms. Alfonso:** But I'm shorter than Mr. Mootoo, I apologize.

15 **Mr. Chairman:** All right, Ms. Alfonso. Do you have any—

16 **Ms. Alfonso:** Right. And I, I would not—I would not, I would
17 not say that I raised my hand if I did not, in fact, raise my hand.

18 **Mr. Chairman:** No, no, I do—I wouldn't think that for a
19 moment. If you did, I'm sure you did and it's my fault for not
20 seeing you.

21 **Ms. Alfonso:** And next time I would stand so that—I'm not,
22 um, I'm not blessed with, um, with great height.

23 **Mr. Chairman:** Very well. I will permit you, of course, to ask
24 questions. Ms. Alfonso will ask you some questions as well, all
25 right?

26 **Ms. Alfonso:** Thank you, Mr. Chairman.

27 **Cross-Examination By Ms. Alfonso:**

1 Q. Good afternoon, Mr. Fuentes.

2 A. Good afternoon.

3 Q. My name is Nyree Alfonso and I represent the interest of the
4 SWWTU. I want to go back to that full contamination suit that
5 you may or may not have seen some number of years ago in a
6 warehouse. The purpose of—I, I, I don't understand; if you
7 could assist me. The purpose of the contamination suit would
8 be what?

9 A. To prevent oil from—and other contaminants from making
10 contact with the diver's skin.

11 Q. Uh-huh.

12 A. And it's mated to the hat so it also prevents entry of gases or
13 liquids accidentally into the diver's helmet.

14 Q. Okay, so please assist me further, Mr. Fuentes. I imagine a
15 commercial diver would be wearing a full wet suit, yes?

16 A. Pardon?

17 Q. I imagine a commercial diver would wear a full wet suit?

18 A. Sometimes, not all the time.

19 Q. Okay.

20 A. Sometimes they just wear coveralls. Many divers in Trinidad
21 only wear coveralls.

22 Q. Okay, thank you for that. I really didn't know that. Maybe too
23 much television.

24 A. Okay.

25 Q. So that if, um, one of the commercial divers, if any commercial
26 diver had to enter this pipeline, they could wear a full wet suit.
27 Would that not protect them, their skin from—

1 A. No that's porous. That's—

2 Q. —contact with the oil?

3 A. No, a wet suit is porous material.

4 Q. A wet suit is porous material?

5 A. Yes.

6 **Mr. Chairman:** That's why they call it a wet suit—

7 **Ms. Alfonso:** Oh yes.

8 **Mr. Chairman:**—as opposed to a dry suit—

9 **Ms. Alfonso:** I, I was just—

10 **Mr. Chairman:**—which will keep out water.

11 **Ms. Alfonso:** And that was my next—

12 **Continued Cross-Examination By Ms. Alfonso:**

13 A. So, so the contamination suit will keep—he will actually be dry
14 on the inside.

15 Q. Okay. So my next question the Chairman just alluded to.
16 Okay, so is an alternative to a wet suit a dry suit?

17 A. An alternative?

18 Q. Okay, so let me be clear. If it is that—

19 A. Yes.

20 Q. —generally—I accept entirely what you say, Mr. Fuentes, that
21 a full contamination suit—

22 A. All right.

23 Q. —is not generally available in Trinidad and Tobago?

24 A. Right.

25 Q. So if, if a rescue had or an entry, let me forget rescue, if an
26 entry into this pipe had to be made—

27 A. Yes.

1 Q. —in default, for want of a better term, of having access to a full
2 contamination suit, could one wear a dry suit to protect the
3 diver's skin as you say?

4 A. Yes.

5 Q. Okay.

6 A. Providing it can mate to the helmet.

7 Q. Okay. Well that would depend on what kind of equipment was
8 available?

9 A. Right.

10 Q. So it will be possible—and dry, okay I should ask that question.
11 Are dry suits generally available to a commercial diver in
12 Trinidad?

13 A. No.

14 Q. No?

15 A. Well, I don't know, I don't—I'm not certain if any contractors
16 have them. I'm not privy to their—

17 Q. Okay.

18 A. —to their assets. Um, we don't use dry suits in Trinidad.

19 Q. Okay.

20 A. The temperature is not required, is—we don't use it.

21 Q. Okay. It's for cold temperatures or some—

22 A. It's for freezing waters, yes.

23 Q. Freezing waters.

24 A. And contaminated waters.

25 Q. And contaminated waters.

26 A. Yes.

27 Q. Okay. So—and I'm, I'm corrected by the Chairman and

1 yourself, and I'm thankful for that, so a wet suit would allow
2 some interaction between the diver's skin and whatever he's
3 diving in?

4 A. Yes.

5 Q. Okay.

6 A. Not some, well, it's porous.

7 Q. Okay, so a lot?

8 A. Yeah.

9 Q. A lot?

10 A. Whatever is on the outside will get on the inside.

11 Q. I see.

12 A. Yeah.

13 Q. Now, you spoke of the word, "contamination". We are talking
14 about the contents of the pipe as contaminants, yes?

15 A. Yes.

16 Q. Okay. So that is—I think if my reading was correct I recall my
17 early reading, that pipeline had previously carried crude oil.
18 You know that to be true or you don't know?

19 A. I believe I heard that. I, I cannot confirm it.

20 Q. Okay. So if—okay let's say it's hydrocarbons, so it could be
21 crude, it could be refined product.

22 A. Right.

23 Q. But it would be some kind of hydrocarbon?

24 A. Hydrocarbon.

25 Q. Okay. So—

26 A. And condensate.

27 Q. And condensate. Now you're letting me know that I didn't do

1 chemistry at high school.

2 A. Right.

3 Q. Okay, so, um, that being said, would there be a substantial
4 danger to a diver exposed to that environment for an hour, two
5 hours?

6 A. Oil is toxic.

7 Q. Oil is toxic?

8 A. And it releases toxic fumes. It is toxic.

9 Q. I'm aware of the toxic fumes.

10 A. Toxic, yeah.

11 Q. But, so if, if—so if you got oil on your skin for an hour or
12 two—

13 A. Miss, it is toxic.

14 Q. Okay. Well, okay. So—

15 A. Toxic is poisonous.

16 Q. Okay, yes, and—but there are some things which are going to
17 kill you that are toxic and some things are not going to be so
18 good for you and will not kill you. So, let—let's, let's start. So
19 if you were exposed to what we believe might be the type of
20 contents in this line, for an hour or two, do you think with your
21 experience of 23 years, I believe, or 24, that would lead to a
22 fatality?

23 A. The possibility exists.

24 Q. Oh, so that if a diver went down in a wet suit into the
25 environment, he will be exposed to death because oil is in
26 contact with his skin?

27 A. Not only the oil, the fumes entering his helmet, hydrogen

1 sulfide, we have to assume the worst.

2 Q. Okay. Mr. Fuentes, the—okay, so we spoke about umbilicals
3 earlier, yes? The air that a rescue diver or a diver entering—I
4 say I don't want to use rescue—

5 A. Right.

6 Q. —a diver entering that environment, the environment we think
7 that was there, he will be breathing what, not from the
8 umbilical?

9 A. Yes.

10 Q. His umbilical?

11 A. Yes.

12 Q. Air, I'm sure that's not the technical—

13 A. Yes, yes, air from his umbilical—

14 Q. Okay.

15 A. —through the helmet, yes.

16 Q. Okay. So are you suggesting that noxious fumes from the line
17 contents would be interacting—he would be breathing that
18 instead of what is in the umbilical?

19 A. It is possible, because depending on the diver positions himself
20 and the angle he looks up within the helmet, fumes can enter
21 the helmet through the neck down.

22 Q. Okay.

23 A. Or, or liquids in this case.

24 Q. Mr. Fuentes, so these full dive helmets and the lighter versions
25 that they have now which are, I don't know, band mask and so
26 on—

27 A. Yes.

1 Q. —those allow external liquids—

2 A. Yes.

3 Q. —and fumes to enter?

4 A. Yes.

5 **Commissioner Wilson:** Can I offer some clarification?

6 **Mr. Fuentes:** It can happen. It happens.

7 **Ms. Alfonso:** I would be happy—

8 **Commissioner Wilson:** Yes I'd like to offer some
9 clarification. What you're trying to refer to is called NORM
10 and it is a consideration if you're going to dive into a pipeline.
11 NORM, the acronym is Naturally Occurring Radioactive
12 Material, and you'd find that type of material within pipelines
13 with the vintage in Paria. It is a hazard that divers would have
14 to take into account if entering that pipeline. Without a hazmat
15 suit and KMB mask and the mask that you're referring to, they
16 are being phased out in terms of being used for the exact reason
17 that is being identified., you'd have a lot more ingress
18 coming in with that band mask. I agree with you that you'd be
19 breathing air from the surface but NORM is a credible factor
20 that has to be considered when entering a pipeline of the
21 vintage that we have at Paria. Yeah?

22 **Ms. Alfonso:** Okay thank you for that, Commissioner Wilson.

23 **Continued Cross-Examination By Ms. Alfonso:**

24 Q. So, Mr. Fuentes, Mr. Boodram who came out of the pipeline
25 after two, two and a half, more than two hours, more than two
26 and a half hours, and he did come out covered in oil, so I'm not
27 suggesting that he didn't come out with some material from

1 inside the pipeline. It does—I, I, I—well I want to be hesitant
2 to say he was carried to hospital in an ambulance, he was
3 treated at the San Fernando General Hospital, I think if I follow
4 from his evidence he remained with much of that oil on him for
5 a day or 2. I don't know, perhaps the—

6 **Mr. Chairman:** Three.

7 **Ms. Alfonso:** Three, three. I'm corrected by the Chairman.

8 **Continued Cross-Examination By Ms. Alfonso:**

9 Q. So he was exposed to the same environment that we, we, we are
10 theorizing what it would be because clearly it had—if they—
11 clearly it had water in the pipe.

12 **Mr. Chairman:** I just want to know where this is going. What
13 the witness has said—just a moment, Mr. Fuentes. What the
14 witness has said is that in order for him to ameliorate the risks
15 as he saw it, he identified to Mr. Mootoo, three separate
16 features, one of which included a contaminated water—full
17 contamination suit. That's my note of it. From what it—what I
18 understand him to mean by that is he wants a—he would want
19 to consider a suit that would be able to protect the diver from
20 the very thing that Mr. Wilson has identified called NORM, as I
21 understand it a relatively new phenomenon, not new in its
22 existence but recognized as a potential danger and a perfectly
23 reasonable concern, it seems to me.

24 Does it really matter whether not the particular suit lets in
25 a little bit on one side or a little bit on another side, or does it
26 really matter what the basis of that contamination is? He's just
27 giving you his opinion as an expert of 24 years that that is a

1 consideration and that it should be considered. I'm not sure
2 what you're asking, what is it you want him to say.

3 **Ms. Alfonso:** Well, there's nothing that I want him to say
4 because I said Mr. Fuentes is a diver and I am not, but if—

5 **Mr. Chairman:** Yes, but you're asking medical kinds of
6 questions. I'm not going to permit you to ask—

7 **Ms. Alfonso:** No I'm not asking any medical type question.

8 **Mr. Chairman:** What is it you want?

9 **Ms. Alfonso:** If Mr. Fuentes has indicated that it would be
10 toxic and lead to death to have this, er, whatever the line
11 contents to be in contact with the line contents, and really—

12 **Mr. Chairman:** Well, you're not suggesting it's not toxic, are
13 you?

14 **Ms. Alfonso:** No.

15 **Mr. Chairman:** Right.

16 **Ms. Alfonso:** But certainly, as I said, there are some things that
17 are toxic, but if you're exposed to them for a short period of
18 time—

19 **Mr. Chairman:** Sure.

20 **Ms. Alfonso:**—they will most certainly not kill you.

21 **Mr. Chairman:** Of course. Look, the bleach next to my
22 lavatory seat is toxic, but that's not really the point, is it? What
23 Mr. Fuentes is saying is that it is a proper consideration before
24 asking a diver to go into a pipeline with material of that kind,
25 and—so, so that's fine.

26 **Ms. Alfonso:** Well then let me ask Mr. Fuentes that direct
27 question, Mr. Chairman.

1 **Mr. Chairman:** All right.

2 **Continued Cross-Examination By Ms. Alfonso:**

3 Q. So Mr. Fuentes, if these things that you have outlined this
4 afternoon were present, you know, all the tenders, you know,
5 the tenders in the water, the tender on thing, proper umbilicals,
6 proper air compressors and so on, and the only diver's suiting
7 that was available would be a wet suit, would you be able to
8 advise or would you be able to advise on a dive plan to go into
9 a pipeline like that, with that equipment, minus the full
10 contamination suit because we say that's not available, and the
11 dry suit is not generally available or in use in Trinidad?

12 A. Miss, you've confused me with that question.

13 Q. Okay. Okay. I—

14 **Examination By Mr. Chairman:**

15 Q. Can I, can I see if I can help, Mr. Fuentes? I think what's being
16 asked of you is this? All other things being equal, would you
17 have been in a position, do you think, to have given some sort
18 of dive plan for this rescue if you had been asked?

19 A. Could you say that once again, Mr. Lynch?

20 Q. Yes. Do you think you would have been able, if you'd been
21 asked, would you have been able to come up with your own
22 dive plan for a rescue? Do you think you would have been able
23 to do that if someone had asked you?

24 A. I would have had to been—for me to do that rescue I think I
25 would have been—I, I needed to have been the supervisor—

26 Q. Yes.

27 A. —there and then—

1 Q. Yes.

2 A. —at that point in time.

3 Q. On the berth?

4 A. Yes.

5 Q. Yes.

6 A. At the time of the incident.

7 Q. Right. So when it actually happened?

8 A. And for the few minutes afterwards. The 5, 10 minutes after
9 that. Then I could have attempted a rescue.

10 Q. A rescue plan?

11 A. But, yeah, but—

12 Q. Well whether it would go ahead or not would depend on a
13 number of factors which you've already identified in answer to
14 Mr. Maharaj and to Mr. Mootoo and to me. All right? And I
15 think everybody understands that this is not straightforward on
16 any view.

17 A. Right.

18 Q. And you've been very fair in identifying things that concern
19 you as an expert before you would consider going into the pipe.
20 Can I ask you this, which arises a little from what has been
21 asked of you? I get the impression, so I need you to correct that
22 if I've got it wrong, all right?

23 A. Okay.

24 Q. I get the impression that the things that you have identified
25 would ameliorate and mitigate some of the dangers as you saw
26 them. All right? But that much of that would also depend on
27 the individual diver. Would he be prepared to take this risk or

1 that risk or whatever it is, and it would be a matter for him
2 having pointed out what those risks are?

3 A. Absolutely.

4 Q. Would you agree with that?

5 A. It would be a personal decision on that diver at that point in
6 time.

7 Q. Right. So, for example foot first, headfirst that sort of thing?

8 A. Yes.

9 Q. Whether he wears a particular type of suit—

10 A. Are you willing to go?

11 Q. Sorry?

12 A. Are you willing to go?

13 Q. Are you willing to go. I've got you, yes, yeah. Nobody could
14 be ordered—

15 A. No.

16 Q. —to go into the pipe, could they?

17 A. No.

18 Q. You wouldn't conceive of that I imagine. All right.

19 A. As a supervisor I would not ask anyone to go—

20 Q. No.

21 A. —where I would not go myself.

22 Q. Right. And you might even say to him, "Look, this is not a
23 good idea. Please don't do it."

24 A. Right. Right.

25 Q. "I want to do it please, let me go." You'd say, "Well it's on
26 you." Would that be a fair way of putting it?

27 A. No. If I say no—like if—

1 Q. If you say no, that's it.

2 A. —[*Inaudible*] I say no, is no.

3 Q. So because you're a diver supervisor?

4 A. Right.

5 Q. So once you say no that cuts it—

6 A. Dah is it.

7 Q. —off completely, no matter what they might say?

8 A. No matter what they might say.

9 Q. I've got you, right. And you would not be prepared to put
10 together a plan unless you were the diver supervisor?

11 A. Correct.

12 Q. Got you. Thank you very much for that.

13 **Mr. Chairman:** Ms., er—

14 **Ms. Alfonso:** One more question, um, Mr. Chairman.

15 **Mr. Chairman:** Right, thank you.

16 **Continued Cross-Examination By Ms. Alfonso:**

17 Q. Mr. Fuentes, diving into a confined area like this pipe that is
18 now the subject of this Enquiry, isn't that called penetration
19 diving?

20 A. Yes.

21 Q. Okay. Isn't the most common form of penetration diving,
22 diving into something like a pipe, something enclosed where
23 you don't have direct access to the surface?

24 A. It happens, there are instances, yes.

25 Q. They're instances?

26 A. Yes.

27 Q. And, um—

1 A. But, as I said, divers don't go into pipelines. That's not—that is
2 not a thing.

3 Q. Sorry?

4 A. We do not go into—divers do not go into pipelines.

5 Q. Okay. So—

6 A. That's not done.

7 Q. So the reason that I asked particularly about penetration diving
8 and the, and the, and the, you know, whether it would include
9 going into an area like the pipe because you said it wasn't a
10 thing.

11 A. For, for example, a wreck on the seabed—

12 Q. Yes.

13 A. —diver going, makes entry into it through a hatch, that, that is
14 penetration—that's what we call—that's penetration diving.

15 Q. Well I want to—where I got my information with respect to
16 penetration diving and so on is the—and I want to get the, I
17 hate acronyms, ADCI International Consensus for Commercial
18 Diving and Underwater Operations. You're familiar with that
19 standard?

20 A. Yes.

21 Q. Okay, so they actually say, the classic example of penetration
22 diving is diving into a pipeline and moving along the horizontal
23 in a pipeline in particular.

24 A. That was an example they gave but they didn't—

25 Q. They say it's the classic example. I'd want to say so.

26 A. It was an example but it was not, it was not a contaminated
27 pipeline with oil and there was no possibility of a Delta P.

1 That's an—in I—what—that document you referred to is it
2 refers to an ideal situation. This was not.

3 Q. And it also provides, to be fair, in the same guidelines for
4 diving where Delta P scenarios have happened and are possible.
5 You would agree?

6 A. Could you repeat the last bit?

7 Q. Okay. That same standard that I carried you to, also provides
8 diving in situations where there have been Delta Ps or where
9 Delta Ps are possible or probably or could occur. Would you
10 agree? That same, same AD, AD—

11 **Mr. Chairman:** Well, I'm going to stop this again, I'm afraid,
12 Ms. Alfonso.

13 **Mr. Fuentes:** Yeah, yeah please.

14 **Mr. Chairman:** Because, um, like, like Mr. Fuentes I'd like
15 my own file which had the document in it. If you're going to
16 refer to a document like this, you really do need to have it given
17 to us in advance, we can put it on the screen and then
18 everybody can understand exactly what it is you're saying
19 because, you know, making that assertion, and I'm sure you're
20 reading it accurately, but we need to read around it as well and
21 very often there are things, as you know, which might help
22 answer the question. So I, I, I—if you're going to rely on this I
23 would ask you to provide it to us, we can put it on the screen,
24 we can see what it says and, um—

25 **Mr. Fuentes:** I have it here.

26 [*Laughter*]

27 **Mr. Chairman:** I shoulda guessed. He has it.

1 **Mr. Fuentes:** I really do.

2 **Mr. Chairman:** I'm sure you do. If you tell me you do I'm
3 sure you do.

4 **Ms. Alfonso:** Mr. Chairman, in our defence we have, in fact,
5 supplied or assisted Dr. Glenn Cheddie with a witness
6 statement which contains the extracts of that particular
7 manual—

8 **Mr. Chairman:** Yes, well I haven't got his statement and,
9 er—er, look, Ms. Alfonso, really, if we're going to be dealing
10 with this specifically, I must have the document, I must have it
11 in advance, I don't want it sprung on me now and I'm grateful
12 to Mr. Fuentes for having it with him, but, it's no use to me as a
13 complete lay person to see a document like that just handed in
14 without my being given an opportunity to read it myself. And I
15 would wish to do that.

16 Now, if you want to rely on this, you're going to have to get a
17 copy to us, we can have it for Monday and then we can see
18 where we can take it from there and if you—and I won't stop
19 you from making any submissions about it in the opportunity
20 you're going to be given next week to make submissions. I'm
21 not sure that Mr. Fuentes can help you. If it's contained in the
22 document, it's contained in the document, and you can refer to
23 it, but you'll need to supply it us to, all right?

24 **Ms. Alfonso:** And, and I'm just indicating, Mr. Chairman, that
25 we have, and accepting immediately that it is belatedly but that
26 is because, as I said, we're only assisting somebody in putting
27 in a witness statement.

1 **Mr. Chairman:** Yeah, well I—you know, I'm not, I'm not
2 moaning about it being late. I'm concerned about cross-
3 examination of a witness, which I'm supposed to follow and
4 everybody else is supposed to follow, without having the
5 document. So, um, if you want to provide the document and
6 then make your points on it, please do.

7 **Ms. Alfonso:** I accept that, Mr. Chairman.

8 **Mr. Chairman:** All right? Thank you very much. Do I take it
9 that's your questions, then?

10 **Ms. Alfonso:** Yes indeed. Thank you to Mr.—

11 **Mr. Chairman:** Yes. I think, Mr. Ramadhar, you wanted to
12 jump in after your turn?

13 **Mr. Ramadhar:** Well—

14 **Mr. Chairman:** What is it you want to ask?

15 **Mr. Ramadhar:** Very simply this we heard about snags and I
16 just want to explore the, the—

17 **Mr. Chairman:** You want to explore what?

18 **Mr. Ramadhar:** The issue of the snagging, the ability to snag
19 on the umbilical.

20 **Mr. Chairman:** Well why didn't you ask when it was your
21 turn?

22 **Mr. Ramadhar:** Well, it only came out under cross from—

23 **Mr. Chairman:** Yeah, but that's not how it works. You know
24 that's not how it works.

25 **Mr. Ramadhar:** I'm entirely in your hands. I—

26 **Mr. Chairman:** Mr. Ramadhar, you know that you have an—
27 we have an order in which this is being done and you're out of

1 order to seek to make the cross-examination after Mr. Mootoo
2 has.

3 **Mr. Ramadhar:** Well, with all due respect—

4 **Mr. Chairman:** Are you applying to go out of turn as an
5 exception to the normal rule to be allowed to cross-examine this
6 witness after Mr. Mootoo? Is that your application?

7 **Mr. Ramadhar:** It is.

8 **Mr. Chairman:** Tempting though it is to refuse it, I'm going
9 to allow you.

10 **Mr. Ramadhar:** Thank you.

11 **Mr. Chairman:** Don't do it again.

12 **Mr. Ramadhar:** No I shan't and I'm hardly out of order
13 before is, is, um, Mr. Chairman.

14 **Cross-Examination By Mr. Ramadhar:**

15 Q. It is simply this. Mr. Fuentes, you speak of the curve, sorry, the
16 angle into the pipe where—

17 **Mr. Chairman:** It's called 90-degree bend.

18 **Mr. Ramadhar:** Ninety-degree bend.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 Q. But it is not, as far as you're aware, is it, a literal 90-degree
21 bend. It's an elbow isn't it?

22 A. It's, it's a curve.

23 Q. A curve.

24 A. Yes.

25 Q. And the likelihood of snagging on a curve is far less than a
26 sharp-edged corner isn't it?

27 A. Umbilicals are caught on the side of a ship. A simple thing as

1 the side of ship—

2 Q. Yeah.

3 A. —will snag an umbilical.

4 Q. Right. And in the perfect world none of that would occur, the
5 snagging and so, but you appreciate that this is not a perfect
6 world and it was not a perfect scenario that evening?

7 A. Correct.

8 Q. And lives were at stake?

9 A. Yes.

10 Q. And therefore risks needed to be taken? It was not a perfect
11 environment. You agree with that? Lives were at stake.

12 A. I don't agree, um—

13 Q. Lives were at stake.

14 A. —the risks, risks needed to be taken is subjective, it's—

15 Q. Of course.

16 A. Yeah, yeah.

17 Q. And as you rightly pointed out, it depends on the willingness of
18 the person, the diver themselves, as to what they're willing to
19 take, risk wise?

20 A. In, in all safety courses, first aid courses that we go through, we
21 are always taught; make the area safe—

22 Q. Correct.

23 A. —first before you render assistance to anyone.

24 Q. And you would—

25 A. —and that doesn't specify if it's your family, your friend or
26 your foe.

27 Q. Yes.

1 A. Right?

2 Q. Appreciate all that?

3 A. Make it safe.

4 Q. We appreciate that. But do, do the best one can to save lives is
5 the highest priority, isn't it?

6 A. Sorry?

7 Q. Do the best that one can to be safe?

8 A. Preservation of life, of course, yes.

9 Q. Thank you so much. And in terms of—

10 **Mr. Chairman:** That includes the rescuer.

11 **Mr. Ramadhar:** Exactly the point.

12 **Continued Cross-Examination By Mr. Ramadhar:**

13 Q. So that the rescuer is entitled to make that decision in a large
14 part too, for his own well-being, what he considers too risky or
15 safe enough or worth the risk?

16 A. Please repeat that, Sir?

17 Q. Of course.

18 A. Please?

19 Q. There is a personal decision to be made by the rescuer—

20 A. Well—

21 Q. —that it may be too risky, it may not be risky at all—

22 A. Right.

23 Q. —or it is worth the risk.

24 A. Yes, but that is only after the dive team agrees to make the dive.
25 He can't—one diver can't just decide he—

26 Q. No, we know that. We know that.

27 A. —going to dive and res—the dive team, the supervisor in

1 charge come up with a plan and made this rescue.

2 Q. Thank you. We appreciate all of that.

3 A. Right.

4 Q. But at the end of the day there are a lot of personal decisions to
5 be made because the supervisor could say, "Yes I agree", but
6 the dive himself could say no, I do not.

7 A. Yes.

8 Q. Or the diver himself could say, "Yes I will."

9 A. Correct.

10 Q. Correct. Now, did you have any idea how far they needed to go
11 into the pipe to do the rescue?

12 A. If I had an idea?

13 Q. Yes.

14 A. They were—no I hadn't—

15 Q. Absolutely.

16 A. I had no clue.

17 Q. Right. You were clueless. So, in terms—

18 A. Clueless.

19 Q. —of the distance that one had to go, will determine the level of
20 danger to the rescuer, isn't it? The further—

21 A. The further, the more dangerous.

22 Q. Beautiful.

23 A. And the less one had to go, it would be less risk. Less, less
24 likelihood of a risk.

25 Q. Thank you very much. And in terms of to save four lives
26 maybe 150 feet into a pipe, right, with all the risks and possible
27 risks that you would have identified, do you think that is way

1 too much to ask to save four lives to go in 150 feet of pipe?

2 **Mr. Chairman:** I'm not sure it's a fair question. He doesn't
3 have—

4 **Mr. Ramadhar:** Ah good.

5 **Mr. Chairman:**—all the facts of the particular scenario.

6 **Mr. Ramadhar:** That is so true, yeah.

7 **Mr. Chairman:** He was never apprised of them, and I do think
8 it's a little unfair to—

9 **Mr. Ramadhar:** All right, I don't want to be unfair.

10 **Mr. Chairman:**—ask him to answer that question.

11 **Continued Cross-Examination By Mr. Ramadhar:**

12 A. Yeah, I can't answer that Mr. Ramadhar.

13 Q. Of course.

14 A. Sorry.

15 Q. I appreciate, I appreciate it may appear unfair. But, but, as
16 we—

17 **Mr. Chairman:** Well I've just said it is.

18 **Mr. Ramadhar:** Yes. Thank you.

19 **Continued Cross-Examination By Mr. Ramadhar:**

20 A. And as I said before the, the time for rescue would have been
21 immediate.

22 Q. Long gone, of course. And therefore what you're looking at
23 here, and that's the point, I'm so grateful, Mr. Chairman, it's
24 more academic now looking back on it. You didn't have to
25 deal with it in the moment? You agree?

26 A. Correct.

27 Q. Dealing with it in the moment where there is a possibility of

1 saving lives, very different from looking back upon it almost
2 academically, textbook, isn't it?

3 A. Uh-huh.

4 Q. You agree I with that?

5 A. Yeah.

6 Q. But the Friday evening when they were alive, was not a
7 textbook environment that you had to deal with. You had to
8 deal with real-world circumstances, correct? Eh?

9 A. Yeah, well lives were at stake.

10 Q. Thank you. And therefore rescue should have been a high
11 priority and a risk of course attends to that?

12 A. Again, preservation of life.

13 Q. Thank you. Both sides?

14 A. Both sides.

15 **Mr. Ramadhar:** Thank you so much, Mr. Chairman.

16 **Examination By Commissioner Wilson:**

17 Q. Good afternoon, Mr. Fuentes.

18 A. Good afternoon, Mr. Wilson.

19 Q. I've just been advised by my Chairman I need to say that we
20 know each other from previous jobs and you,—you recognize
21 me?

22 A. [*Inaudible*]

23 Q. All right, um, I just want to ask you a few questions coming out
24 of the enquiry in the room. I have an appreciation you wasn't
25 there on Friday but because of the conversations came into the
26 room I just want to also bring clarity to the room using your
27 expertise, if I may, and/or your opinions. We're talking about

1 the listing that or the components of a rescue that you would
2 consider that needed to be had. What I want to interrogate is,
3 um, once we are planning dives, do we have to consider the
4 manning levels or manning levels of, of—

5 A. Yes.

6 Q. In your opinion, what is the manning level if we—if a rescue
7 had to be enacted as you were describing utilizing the
8 components you have?

9 A. Seven, eight.

10 Q. I would've come on seven, right, as well. Um, because we, in
11 that scenario that you were describing to the Enquiry, utilizing
12 the surface air—

13 A. Yes.

14 Q. —and in-water tenders.

15 A. Yes.

16 Q. —we have to, or would you consider the ingress point
17 umbilicals have to go in the pipeline for, in water tenders, to
18 facilitate traversing the horizontal of the pipeline?

19 A. Yeah.

20 Q. You would?

21 A. Yeah.

22 Q. So, that pipeline is about 30 inches. How many people would
23 be ingressing the pipeline with umbilicals under the scenario
24 which you were interrogated earlier?

25 A. Well, anyone—well they would all be on umbilicals.

26 Q. Correct. Okay. Fair enough. So now I want to kind of—I'm
27 trying to picture the umbilicals going ingressed in a 30-inch

1 pipeline.

2 A. Uh-huh.

3 Q. It—

4 **Mr. Chairman:** Bring your microphone a little closer to you
5 so I can—yes.

6 **Examination By Commissioner Wilson:**

7 Q. So, having an in-water tender into the pipeline, umbilicals
8 going into the pipeline, would you consider if that now, two
9 divers are going in, ingress point, would pose some sort of
10 restricted access or restricted movement of the umbilicals?

11 A. Yes.

12 Q. Okay. And restricted access versus confined space, is there a
13 difference?

14 A. Yes.

15 Q. Okay. Do you care to explain the difference?

16 A. So physic—so physically confined space—

17 Q. Uh-huh.

18 A. —and a physically confining space, that's what you asked,
19 right? That is your question.

20 Q. Yeah, your comment on it, just as I listed—

21 A. So, for example, if this room were a storage tank or a oil
22 separator—

23 Q. Uh-huh.

24 A. —on land—

25 Q. Uh-huh.

26 A. —not designed for human occupation—

27 Q. Uh-huh.

1 A. —and there's a small entry hatch—

2 Q. Uh-huh.

3 A. —and you have to go in—you have to unbolt it, enter to go
4 inside to do an inspection—

5 Q. Uh-huh.

6 A. —as a—that's confined space entry.

7 Q. I'm following you so far.

8 A. If you ask that same inspector, just say we're working on land
9 now right on the surface, on the dry—

10 Q. Uh-huh.

11 A. —you ask that same inspector to go inside a 30-inch pipeline—

12 Q. Uh-huh.

13 A. —to inspect it, it is a confined space entry but—

14 Q. Uh-huh.

15 A. —it's also a physically confining space where he cannot rotate
16 180 degrees.

17 Q. Understood, yes.

18 A. And that's the difference.

19 Q. Okay. Thank you for that. So, with that restricted access into
20 the pipeline I now want to go to the positioning of a potential
21 rescue diver going in.

22 A. Uh-huh.

23 Q. You as a supervisor, I heard it come out into the room, if one
24 was to come across some sort of debris like a tank and stuff—

25 A. Yes.

26 Q. —if you would pass it along the body. Now, I want to walk
27 you through that. You are the dive supervisor, we have

1 communications, so you have all the things as Mr. Ramadhar
2 said, in the perfect world. We have the communication so your
3 diver indicates to you topside, come across something appears
4 to be a tank.

5 A. A scuba tank?

6 Q. Yes.

7 A. Right.

8 Q. Given this restricted access given the umbilicals, his equipment
9 in a 30-inch pipeline, as a supervisor, he might want to pass that
10 past his body but you, having direct communication with the
11 potential rescue diver and as a supervisor, ultimately do you
12 have the responsibility for that diver?

13 A. Yes.

14 Q. Would you advise him to pass the bottle beyond him, given the
15 restricted access that we're envisioning and/or would you
16 advise him to come out with the bottle?

17 A. It would depend.

18 Q. Okay.

19 A. If he could slip by easily, because remember this is a rescue,
20 time is of the essence—

21 Q. That's what I'm saying, it would be restricted access.

22 A. If he could slip by easily, easily enough for his comfort, go for
23 it.

24 Q. So let me provoke you a lil more.

25 A. Yes.

26 Q. Are you seeing if he could slip by easily or are you just going to
27 take his word or are you prepared to take that responsibility

1 because debris could now have that diver—

2 A. As a supervisor—

3 Q. Yes.

4 A. —listening to my divers I, I would be able to make that
5 judgment call at that point in time.

6 Q. Understood. Okay, so thank you for that.

7 A. All right.

8 **Examination By Mr. Chairman:**

9 Q. So, well I need to understand that.

10 A. All right.

11 Q. Because if, um—what you're saying and what I understood you
12 to say earlier—

13 A. Yeah.

14 Q. —was that this is matter for the individual diver. If he felt
15 comfortable doing it, that is to slip by that tank, you would be
16 comfortable?

17 A. Yeah.

18 Q. If he had any hesitation about it, you might say, "Look, I think
19 the best thing is get rid of that tank. Let's take it out."

20 A. Yes.

21 Q. And that's the approach you would take?

22 A. Yes.

23 Q. With all debris that he might come across?

24 A. Yes.

25 Q. You just said in answer to the question by Mr. Wilson, um, that
26 your concern is that the diver himself might be thinking, "Time
27 is of the essence and therefore I'm prepared to go past this—

1 A. Yeah.

2 Q. —this tank, and look for to rescue the men that are beyond it?

3 A. Yeah.

4 Q. And of course it's a bit cumulative as I think Mr. Mootoo has
5 suggested before that if there were more than one tank, once
6 you get to the second one, now it becomes a potential bigger
7 problem. The more debris there is, the more of a problem
8 might exist?

9 A. Yes.

10 Q. But each—at each point in the first instance your view is, as the
11 dive supervisor, that it would be up to the individual diver to
12 make a judgment call, and frankly he shouldn't be in that pipe if
13 he wasn't capable of making that judgment call. Is that, is that
14 the position?

15 A. Combined with my interpretation of that judgment call.

16 Q. Of what he says, yes. Yes, exactly.

17 A. Yes, how he says it.

18 Q. Yeah. Yeah, yeah. I, I, I, I entirely accept, ultimately, if you
19 say no that's it?

20 A. Yes.

21 Q. Yes, I get it. Thank you very much. Thank you. Mr. Wilson.

22 **Examination By Commissioner Wilson:**

23 Q. All right, so I wanted to go with the responsibility. So now I
24 want to deal with the positioning of a potential rescue driver
25 and potential fouling because, again, debris in the pipeline.
26 Potential for—

27 A. Yes.

1 Q. —fouling, so, that's why I saying if you're taking responsibility
2 of passing debris and the diver continuing, but as you said
3 you're prepared to take that responsibility. If a diver goes
4 headfirst and he has an in-water tender, and for some
5 unforeseen reason he goes unconscious, would you consider
6 retrieving that diver from that position an unconscious diver—

7 A. Uh-uh.

8 Q. —physics and physiology, his legs would pose a problem
9 pulling him back this direction?

10 A. It is possible, yes.

11 Q. So the positioning of the diver is a serious consideration into a
12 potential rescue?

13 A. Yes.

14 Q. Um, I would even offer, I don't know of the awareness, that
15 there are special harnesses for, as the lady from the SWWTU
16 for dives—

17 **Mr. Chairman:** Alfonso.

18 **Commissioner Wilson:** Ms. Alfonso, sorry, you know—he's,
19 he's, um, good with not remembering names. I can't—could
20 never remember it. So, mistake and can't remember.

21 **Examination By Commissioner Wilson:**

22 Q. So, um, so more so to your articulation around penetration
23 dives, in order in the unlikely event that a penetration dive
24 needs to be engaged—

25 A. Right.

26 Q. —all right, most penetration dives, in your opinion and
27 experience, they have been so processed out, it's only advised

1 to do to known standards, practices.

2 A. Yes.

3 Q. And to try and—because we have a saying in industry safety is
4 written in in blood.

5 A. Correct.

6 Q. So that's in our industry safety is written in blood—

7 A. Yes it is.

8 Q. —which drives a lot of the processes, procedures, standards and
9 trade associations by which we practice our trade?

10 A. Absolutely.

11 Q. So, in order to execute a penetration dive, that requires a
12 substantial amount of planning. In your opinion would you
13 agree?

14 A. To procedure and risk—heavily risk assessed.

15 Q. Yes. And is it a common thing in industry to dive into a
16 pipeline?

17 A. Into a pipeline?

18 Q. Yes.

19 A. No.

20 **Mr. Chairman:** He said it's not a thing?

21 **Examination By Commissioner Wilson:**

22 A. It's not a thing.

23 Q. Well, again, the standards address it, so, they address if we have
24 to go into a pipeline, so—um, but to your knowledge where I
25 was going with it is, to your knowledge, do those standards
26 employ any or communicate any limitations in the event divers
27 have to do a penetration dive, like limitations on the—

1 A. Umbilical length and stuff like that?

2 Q. No, like, um, maybe the diameter of a pipeline or—

3 A. Not that I, I—not that I'm aware of.

4 Q. Okay.

5 A. I've not—I don't recall seeing a limitation into the size of, of—

6 Q. Uh-huh.

7 A. —being allowed to—

8 **Examination By Mr. Chairman:**

9 Q. Well there's a physical limitation.

10 A. Yes.

11 Q. I mean, if there's a 12-foot pipe—12-inch pipe—

12 A. Yeah.

13 Q. —you're not going to be able to get inside.

14 A. Yeah.

15 Q. So, I mean, there's a physical limitation. I think what Mr.

16 Wilson's asked—

17 A. Yeah, I don't—but I don't think there's a written—

18 Q. Yeah.

19 A. —you know, physical limitation in, in any—

20 Q. Sure. I mean, obviously a 50 inch pipe would be a lot easier.

21 A. Yes.

22 Q. Because you could turn around with it?

23 A. Yes.

24 Q. Whereas a 30-inch pipe, you can't?

25 A. Yes.

26 **Examination By Commissioner Wilson:**

27 Q. Yes. So where I was going was if you are aware of any known

1 recommended practices in terms of penetration diving?

2 A. There's some reference in the ADCI documents—

3 Q. Yes.

4 A. —and, and IMCA documents—

5 Q. Yes.

6 A. —which both state they must be heavily risk-assessed—

7 Q. Uh-huh.

8 A. —and all risks removed before doing such.

9 Q. And I'd end it here. Even in addition to that, there's a
10 recommendation in our own voluntary guideline in the Trinidad
11 and Tobago Bureau of Standard, you know? So thank you, Mr.
12 Fuentes.

13 A. Okay.

14 **Mr. Chairman:** Mr. Maharaj?

15 **Mr. Maharaj SC:** No.

16 **Mr. Chairman:** Does anybody have anything arising from Mr.
17 Wilson's questions?

18 **Mr. Mootoo:** Yes.

19 **Mr. Chairman:** Just one minute.

20 **Mr. Mootoo:** There's only one question.

21 **Further Cross-Examination By Mr. Mootoo:**

22 Q. Is there, is there a limitation to your mind, whether by way of
23 standard or, or even applying your own experience, is there a
24 limitation on the length of an umbilical that you would use for a
25 penetration dive? And, if so, what would that be?

26 A. I do not recall ever seeing a limitation, as stated, a numerical
27 limitation on a penetration dive.

1 Q. Okay.

2 A. The excursion limit would be based on the length of umbilical.
3 The, the longer—the more umbilical divers paying out is the
4 more risk. There's more risk attached. You want him closer.
5 The further away he is, means he's further away from being
6 able to be rescued.

7 Q. Right, but in, in your—what I'm asking is, in your experience is
8 there a limitation that you would say, right, I am not going to
9 engage in an activity for a penetration dive that requires an
10 umbilical greater than X? And, if so, what would X be?

11 A. That would be a judgment call by the supervisor at the point in
12 time on the job, depending on the job on the scenario, yeah.

13 Q. Okay. Thank you.

14 **Examination By Mr. Chairman:**

15 Q. I mean, there's obviously an outer limit, isn't there? I mean,
16 you wouldn't want an umbilical that was a mile long?

17 A. No.

18 Q. No, quite.

19 A. Or you—

20 Q. So there's an outer limit. Precisely where that limit is would
21 depend on the circumstance?

22 A. Yes.

23 Q. Um, I mean here we know there would be a couple of bends
24 for—at least to go around in order to get into the horizontal
25 section of the pipe?

26 A. Horizontal. All right.

27 Q. Once in the horizontal section of the pipe we know two things.

1 It's very slippery so one—that would assume—one assumes
2 that that would make it easier for the pipe to pass—the
3 umbilical to pass along and it is straight?

4 A. Right.

5 Q. Which also makes it easier?

6 A. Yes.

7 Q. But it's still got to get round these bends, doesn't it—

8 A. Yes.

9 Q. —before it gets there, so, I mean, really, I think Mr. Mootoo is
10 asking you is, are you able to put a sort of final length on what
11 you would regard as safe if you were in the position as being
12 the supervisor on the day?

13 A. Off the top of my head, I could say a hundred feet.

14 Q. Right. So once you—

15 A. It's from what—and that's, and that's, and that's in an ideal
16 situation without contamination and without Delta P possibility.

17 Q. So the realities are that you would be very reluctant for anyone
18 to go beyond, particularly in this scenario, where we've got a
19 number of contaminants clearly in that pipe?

20 A. Yes.

21 Q. I mean, a lot of it was water. We know that that was the case
22 but there's clearly contaminants in there as well.

23 A. Yes, there will be.

24 Q. There will be [*Inaudible*]

25 A. I don't think the line was pigged. Was the line pigged and
26 cleaned? No.

27 Q. No.

1 A. I doubt that very much, so—

2 Q. No.

3 A. No.

4 Q. No it wasn't.

5 A. All right.

6 Q. So, the line was supposed to be full. It clearly wasn't. And
7 that's what caused—

8 A. That was the problem.

9 Q. —I suspect the Delta P.

10 A. That's the problem.

11 Q. Yeah, but, um—so that the issue really is, is, once you've got to
12 that 90-degree bend., how far would you allow someone to go
13 along the pipe before you say, "Well, you know, I think that's
14 probably far enough."

15 A. right.

16 Q. And, and you're saying the outer limit is about a hundred feet?

17 A. If, if I was supervising a diver?

18 Q. Uh-huh.

19 A. Yeah. Off the top of my head, yeah.

20 **Mr. Chairman:** Right, I hope that helps, Mr. Mootoo, yes.

21 **Mr. Mootoo:** Yes, very much, thank you.

22 **Mr. Chairman:** Thank you. All right, Mr. Maharaj, any other
23 questions? Well in spite of your reluctance, if I may say so,
24 Mr. Fuentes, you've been very helpful. Thank you very much
25 indeed for coming. I appreciate it.

26 **Mr. Fuentes:** I try to be helpful to everyone.

27 **Mr. Chairman:** Well, yes, well you certainly have been since

1 you've been here.

2 **Mr. Fuentes:** But it's—

3 **Mr. Chairman:** All right? Thank you.

4 **Mr. Fuentes:**—it's, it's the, it's, it's, it's the wording.

5 **Mr. Chairman:** Please take your file with you and you're free
6 to go. As I say, you can stay or go as you please. Can we take
7 5 minutes before we have the next witness, please? Thank you.
8 Yes, just go that way.

9 **3.59 p.m.:** *Enquiry suspended.*

10 **4.05 p.m.:** *Enquiry resumed.*

11 **Mr. Chairman:** All right, who have we got next?

12 **Mr. Maharaj SC:** The next witness is Mr. Osei Flemming-
13 Holder.

14 **Mr. Chairman:** Ah, yes. Page?

15 **Mr. Peterson SC:** One four nine zero.

16 *[Mr. Osei Flemming-Holder enters Enquiry room and is sworn]*

17 **Mr. Chairman:** Good afternoon, Mr. Flemming.

18 **Mr. Flemming-Holder:** Hi, good afternoon.

19 **Mr. Chairman:** Take the oath, please?

20 *[Mr. Osei Flemming-Holder sworn]*

21 **Mr. Flemming-Holder:** I, Osei Flemming-Holder, solemnly
22 swear that the evidence I shall give to this Commission in this
23 case shall be the truth, the whole truth and nothing but the truth.

24 **Examination By Mr. Chairman:**

25 Q. Yes, sorry to have kept you quite so long but hopefully we'll—I
26 intend to deal with you today, all right, so you'll be free to go.

27 A. No problem.

1 Q. So first thing is this Mr. Flemming-Holder, who is it that's
2 going to do the summary? All right. So Mr. Bissessar here is
3 going to summarize your evidence, all right? Please listen
4 carefully and, um, see if you agree with his summary? All
5 right? If not you'll tell me afterwards, um, and then once he's
6 finished Mr. Maharaj has a few questions for you and then
7 there'll be questions I suspect from one or two others of the
8 lawyers that are here, all right?

9 A. Sure.

10 Q. That's going to be the procedure. We're aiming for 5.30, all
11 right? So everyone have that in mind. That would be helpful.

12 **Mr. Chairman:** Yes, Mr. Bissessar.

13 **Mr. Bissessar:** Thank you, Chairman.

14 **Examination By Mr. Bissessar:**

15 Q. Mr. Flemming-Holder, I understand, before I summarize your
16 evidence, that you wish to make an adjustment to paragraph 27
17 of your witness statement?

18 A. Correct. The time that was stated there is in—

19 Q. Just one second. It's being brought up at—27 reads:

20 "At around approximately 8.00 p.m., I was called by
21 Collin to the office next to open area, the shipping
22 building."

23 Is that the sentence that you wish to make a correction to?

24 A. No, that was the one with Boodram's, um—the time that I was
25 called, um—

26 Q. Oh, I see.

27 A. So that was 9.55.

1 Q. If you can look at the screen and just tell us at what line of
2 paragraph 27 and the correction?

3 A. So right here this will be 9.55.

4 **Examination By Mr. Chairman:**

5 Q. Yes, that was the section he read so at around approximately
6 8.00 p.m., you want to change the 8.00 p.m. to 9.55?

7 A. Yeah.

8 Q. That's pretty precise. Did you get that from somewhere else?

9 A. No, no it was the—

10 Q. Yes, all right. We're going to change it from 8.00 p.m. to 9.55
11 is it?

12 A. That's correct.

13 Q. All right, thank you very much.

14 **Mr. Chairman:** Yes, Mr. Bissessar.

15 **Mr. Bissessar:** Thank you so much, Chairman.

16 Mr. Flemming-Holder is the Operations HSSE Manager at Heritage
17 and served as incident commander at Heritage from 13th
18 December, 2021 to 23rd January, 2022. He says he is trained in
19 major emergency management. Mr. Flemming-Holder
20 provided a witness statement dated 22nd September, 2022,
21 that's at WB 1490, to the Commission but declined to be
22 interviewed by counsel to the Commission.

23 At about 4.45 p.m. on Friday, 25th February, 2022 Mr. Flemming-
